GUIDE TO THE FO42 RUNDI FILE

[The following peoples, inhabitants of the dual kingdom of Ruanda and Rundi and adjacent areas, are included in this file: the Tutsi, Hutu, Twa, Hima, Ruanda or Banyaruanda, Ha, and the Vinza. All of the names given here are the basic or root forms which often appear with any of several prefixes, such as Ba- (people) or Mu- (person). The Tutsi, Hutu, and Twa are stratified ethnic sub-groups occuring together in both Ruanda and Rundi areas. The specific category 563 for such sub-grouping is usually applied in this file only when relations and differences between two or more of the sub-groups are being discussed. The Hima are of similar ethnic origin to the Tutsi, but are principally nomadic pastoralists whereas the Tutsi are sedentary. The Ruanda are inhabitants of Ruanda; the Rundi, strictly speaking, of the kingdom of Rundi. The Ha and Vinza are peoples living on the margins of the dual kingdom. There are only occasional references to these latter two groups in this file.

The ten sources which have been processed for this file cover the period from 1907 to the present. 1:Vanhove (translated from the French) is an account of native laws and customs from the legal viewpoint, based on questionnaires submitted to natives and touching on various aspects of the culture. Particularly, it indicates the means by which the ruling Ruanda maintained their dominance. 2:Meyer (translated from the German) is based on personal experience and extensive literary research. Although a broad treatment of the culture is presented, geographical and economic subjects are emphasized. 3:Smets is a brief work focusing on social and political organization and the factors of the culture most readily affecting it. 4:Maquet centers on a discussion of values and cosmology, and stresses the relationship of these aspects to each other and to other parts of the culture. 5:Pages (translated from the French) discusses primarily persons and customs encountered in and about the royal court. 6:Czekanowski (translated from the German) is a general ethnography of the Rundi which is thorough though not exhaustive, covering a wide

GUIDE TO THE FO42 RUNDI FILE (cont.)

range of subjects. 7:Roscoe is a brief but clear treatment dealing almost exclusively with the Batuse (Balyanwanda) of Ruanda, especially their political and social organization. 8:Hall deals with native court records and how they reflect the law and customs, chiefly those related to marriage arrangements. 9:Maquet is a reconstruction of Ruanda socio-political structure as it existed in the first decade of the twentieth century. 10:Albert is a discussion of the goals of Rundi society and how Rundi women may achieve them. The file was processed between 1959 and 1965.]

Essay on the Common Law of Ruanda

J. Vanhove

Preface

101 Beyond the eastern shore of Lake Kivu extends a country of
563 high hills called Ruanda. Nestling in banana groves, innumerable huts cling to the hillside, their smoke rising to the sky, and on the summits the brisk wind sways the pink grasses of the pastures where long-horned cattle graze. The exceptionally dense population con-
[161] sists of about 3,000,000 Bahutu of Bantu origin who are dominated by some tens of thousands of Batutsi, Hamitic shepherds who have probably come down from the Ethiopian plateaus. Finally, here and there, Batwa pygmoids, potters and hunters, live apart from the other natives who despise them.

183 Europeans who first studied the customs of the country dis-
671 covered to their surprise that they showed a number of points in common with our feudalism. The tenure of land and of cattle as well as the dependence of persons are under a [4] strict regulation which the
[643] ruler of Ruanda has the absolute power to modify but which has, in fact, remained unchanged throughout the ages.

177 Our occupation has obviously had the effect of modifying the
183 customs in many ways. For example, we could not approve of the brutal evictions and attempts on life and liberty made in the name of the right of the strongest. Evangelization has also introduced into the heart of the native society notions of justice and gentleness which are very different from the natives' original conceptions. However, despite
177 the efforts of our civil servants and our missionaries to attack what is
183 most to be condemned in it, native customs still largely holds its
563 sway due to the influence of the great Batutsi chiefs, who are eager to maintain their authority intact, and also due to that of the sorcerers, toothsayers, rain makers, and many others, who attempt to maintain the traditional law by playing on the credulity and superstitious mind of the Banyarwanda [Banyaruanda] and thus protect their prestige and their revenues. In addition, while realizing the protection we give them in repressing arbitrary actions, the Bahutu submit to the changes we

133 western part is the tail end of a range of Archeozoic folded mountains; it consists of crystalline slate with many granite intrusions and outcrops. The boundary between the two formations is a sharp threshold or drop in the terrain running north to south approximately at the longitude of the Mugera missionary station. Toward the east the slate-quartzite plateau also slopes down in an extended gradient at high altitude toward the gneiss and granite plateau of Unjamwesi which I consider an eroded escarpment. A huge tectonic fault scarp is found in the steep western slope of the highland toward the central African graben and toward Lake Tanganyika. Smaller fault depressions in several places extend over the country of Urundi; in fact, the entire interlacustrine region is rich in such tectonic faults. (Cf. the map on opposite page.)

[648] [4] Only a few times have determined enemies invaded Urundi across the high ridges and escarpments in the west and southeast, but this has happened more often from the flatter, more open fronts in the north and northeast. In the north are [101] the proud, warlike neighbors, the Ruanda, in the northeast the restless tribes of the Lake Victoria region: the Bassuwi, Basindja [Linza], Wassumbwa [Sumbwa], and others.

The slate-quartzite plateau of eastern Urundi has been leveled by erosion from meteorological forces over many thousands of years into a large peneplain with long, broad, low ridges (Plate 1a), while in the west the older mountain periphery still rises to a considerable altitude although it has also been worn down and rounded for the most part. The plateau region has an average altitude of 1,600-1,800 meters; the peripheral mountains rise to as high as 3,000 meters. More recent block movements renewed again the process of erosion which had been slowing down, so that in many regions the streams have carved recent, deep valleys into the plateau and the mountain ranges which then divided the region into a great number of large blocks and bastions. However, in still more recent times this process of erosion was again considerably slowed down by other developments. This is apparent from the fact that at present there are rapid streams only in the mountains of the west (Plate 1b), while in the plateau region of the east almost

[122] Chapter 6

Population Elements

563 The population of Ruanda is made up of three elements which anthropologically and culturally are very different, although they speak the same language.

The ruling group are the Batutsi [Tussi] herdsman who are anthropologically quite close to the Bahima [Hima] of Mpororo. There is a great gap between them and their subjects.

The Bahutu [Hutu] farmers make up the bulk of the population.

The Batwa [Twa], an outcast hunting tribe who also engage in rainmaking and pottery, form the third element.

197 Batutsi. The language of the Batutsi is identical with that of their Bahutu subjects except for certain phonetic dialect differences as yet unexplained by scholars. Nevertheless, the Batutsi, as well as the Bahima, must be linked with the Nilotic-Hamitic pastoral tribes on the eastern edge of the Nile Basin as well as those on the bank of the Nile to the south of the great Nile swamps. The Batutsi form the main part of an older migrating group which was wedged in between Lake Victoria and the forests of the Congo Basin. The Bari and their relatives probably broke out later in a northwesterly direction towards the Uele Basin. The Massai [Masai] group apparently poured into the regions to the east of Lake Victoria.

101 174

197 If we consider the word "Hamite" as a purely linguistic designation, the Batutsi are not Hamites at all, and even less Semites, as they are called by Rehse (1) and Kandt (2). They simply belong

[113]

1. Rehse, H., Kiziba, Land und Leute [Kiziba, Land and People] (Stuttgart, 1900), p. 110.

2. Kandt, R., Caput Nili [The Head of the Nile] (Berlin, 1904), p. 339.

the interlacustrine group of the Bantu language family.

131

on German East Africa. Mitteilungen aus den Deutschen Schutzgebieten 1911, p. 348.

In the northwestern part of the above-mentioned axis the Batutsi are less numerous. Only in Bwischascha and above all in the district of Lubengera do they appear in larger numbers. (3)

3. Kandt, R., Caput Nili (Berlin), p. 505.

The Batutsi of Bugoye settled there only a few generations ago. They came there from Mukinjaga. The few Batutsi in Mulera came there a short time ago from Nduga.

101 167 The Batutsi have also migrated to the west across the eastern edge of the graben [Rift Valley]. Dr. Kandt (4) says the following about the Batutsi in Kishari:

4. Ibid., p. 456.

"Here (Tshove, Kishari) many Watussi visited us, simple, friendly people but less handsome and aristocratic than those of Urundi and Ruanda; they have to work. Here they are not the rulers of the country, but cattle breeders living in villages isolated from the original inhabitants who are agriculturalists. (It is indeed strange how sharp a boundary the Ruzizi River and Lake Kivu form in this respect: to the east whole groups of Watussi live as kings and chiefs of subject peoples; to the west they appear sporadically or, as in Kishari, in larger numbers, but in neither case as rulers.)... Later I heard that Kishari is the refuge for all Watussi who for some reason have had to flee from their homeland." [124]

241 558 Despite the fact that conditions are very favorable for agriculture, the Batutsi have remained herdsmen, and only seldom have poverty-stricken Batutsi taken up agriculture. This happened to a family of Bagwabiro in Bugoye. Those Batutsi who till the

563 entirely different. In fact, with a little practice, one can recog-
191 nize members of the herdsman aristocracy by their pronunciation. This leads one to believe that the pronunciation of the Batutsi has special phonetic characteristics which may throw light on their former idiom.

563 Bahutu. The difference between the Batutsi and their subjects is so great that by comparison all local differences in individual provinces disappear, and the country seems a homogeneous whole. The herdsmen in the minority are the most conspicuous because of their privileged position. They are closely united and give the entire country its homogeneous stamp.

Numerically the Batwa are so weak and so little in evidence that even in the west where there are more of them, they are not conspicuous. Also local differences are not apparent. Consequently territorial differentiation in the country is manifest chiefly in the second population element, the Bahutu farmers.

563 They make up the conservative element which supports the
178 entire edifice of the state and ensures the stability of the established order. However, they have little capability for independently organizing large states. They do, however, maintain the established forms and even preserve the traditions of a vanquished political organization. Indeed, traces of former conditions are found where individual provinces have given up their independent political existence and have been absorbed into a highly centralized state.
[184] The Bahutu of the individual provinces show important differences
[101] and are themselves aware of these. Thus, when they speak of the Bagoye, Balera, and Banyanduga, they always mean the Bahutu. It is only in Kissaka that the term Banyakissaka stands for the inhabitants in general, and here memories of the state that united Bahutu and Batutsi are still very much alive. We must also not
•[101] overlook the fact that the Bahutu of Bgisha in the southern part of Rutshuru call themselves Barundu or Barondo. For this reason it seems to me that the names of the countries of Urundi and Ruanda should be associated with the Bahutu substratum living there.

563 [129] The Bahutu are essentially more heterogeneous than
142 the Batutsi, although throughout the country they have many common traits. They are strikingly different from the herdsman aristocracy

563 in their smaller stature, their squarer build, and their shorter legs.
142 The contrast is strongest in Mulera and Bugoye where the Bahutu gradually show transitions to the Bantu of the Congo forest. In central Ruanda the Bahutu show a not inconsiderable Batutsi influence. Here their features are more regular and more finely chiseled, their bodies not so stocky, and their heads longer. It is probable, [144] therefore, that the Muhutu owes the characteristics which distinguish him from the Bantu of the Congo forest chiefly to the "Hamitic" influence of the Batutsi. However, we must not lose sight of the possibility of a concurrent Nilotic influence which is so striking among the Massai and Bari.

167 Emigrants from the Congo state have played an important
101 role in the settlement of Mulera and Bugoye. Dr. Kandt (1) uses

1. Kandt, R., Caput Nili (Berlin, 1904), p. 290.

the name Bakiga (Wakiga) for the immigrants. He translates it as "inhabitant of Pori." My inquiry revealed that "Bakiga" is the general term for the inhabitants of mountains, in contrast to "Banyamuyaga," the inhabitants of plains. On his surveyor's
103 sketch of the map of Mpororo, Lieutenant Schwarz calls the country southwest of Buischingato (Luizigatu) "Rukiga." This was formerly called Ndorwa, since it is mountainous. The region southwest of Nyundo is also called Rukiga. Father P. Barthelèmy, who knows the country and is versed in the language, believes that the name of the Rugege Forest in the southeastern part of Kivu is derived from Rukiga.

167 The immigrants from the Congo are closely related to the
101 Banyaruanda. On the Belgian map (2) the inhabitants of the

[113] 2. Carte de l'État Indépendant du Congo [Map of the Independent Congo State]. Scale 1:100,000. Lith. Justus Perthes, Gotha, 1907.

western edge of the graben [Rift Valley] are designated simply as

167 Barundi [Rundi]. Bashi or Bahunde are the terms the Bagoye use
●101 in referring to the people from Bunyabungu, Itambi, Buyungu,
Kishari, Butundwe, and even Bgisha, with whom they can easily
make themselves understood. The first designation supposedly
[194] alludes to the sibilants which are so prominent in their dialect.
In their culture the Bashi also show many similarities with the
Congo Bantu. Thus, the anthropological and cultural transition
to the Forest Bantu takes place within the Kirundi language area.
The similarity of the Bahutu who were not influenced by the Batutsi
to the Forest Bantu argues in favor of the view that the population
of Ruanda is the result of a metamorphosis caused by contact with
the Batutsi.

563 [130] Batwa. The Batwa comprise the third element in the
144 population of Ruanda. They stand out because of their relatively
small stature. The contrast between them and the very tall Batutsi
is so striking that the altogether erroneous identification of Batwa
with Pygmies has gained credence even among such an outstanding
expert on the country as Dr. Kandt. (1) I have taken a great many

1. Kandt, R., Caput Nili (Berlin, 1904), p. 303.

measurements, and I am forced to conclude that this assumption is
not valid. I agree with Lieutenant Von Parisch (2) who found that

[113]

2. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903 [Two Journeys Through Ruanda, 1902 to 1903]," Globus, Vol. 86 (1904), p. 76.

the Batwa were only slightly shorter than the Bahutu.
Prof. Hans Meyer (3) made the same observation. He says:

3. Travel Reports of Prof. Hans Meyer on German East Africa. Mitteilungen aus den Deutschen Schutzgebieten 1911, p. 349.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The Twa are thought to have been the first inhabitants of Ruanda. This may be inferred from the general reconstruction of the vast human migrations that are supposed to have taken place in Africa in the remote past, and according to which Pygmies and Pygmoids would appear to be the most ancient inhabitants of that part of Africa. Whatever the validity of this hypothesis, the Twa, being hunters and collectors of fruits, seeds, and roots, did not greatly modify the natural vegetal cover of the country.

It was left to the Hutu hoe-cultivators to begin the transformation of the country. The time of their arrival, either after or contemporary with that of the Twa, is immaterial in this connexion. The important fact is that the Hutu had to begin the clearing of grasses, shrubs, and bushes and eventually the felling of forests to make their fields. The extent to which this process of deforestation had been carried out before the arrival of the Tutsi is difficult to assess. It is unlikely, however, that the Hutu were so numerous as to have to cultivate such considerable tracts of the country as to disrupt its natural equilibrium. It is very likely that the increase of population and the cattle-pressure following the Tutsi arrival has been a determining factor in this process.

The Tutsi immigration into the country is an historical fact attested by the traditions of Ruanda and of neighbouring peoples. Their occupation of Ruanda is an episode of the great southbound pastoral migration which resulted in the formation of the different societies which Baumann terms *Circle of the Lakes*,[7] Schapera, the *Lacustrine Bantu*,[8] and Meinhard, the *Interlacustrine Province*.[9] Pastoral peoples who according to Seligman's classification were 'half Hamites' (probably of eastern Hamitic origin),[10] for an unknown reason migrated with their large herds of long-horned cattle into an area delimited in the west by the Central African rift valley from Lake Tanganyika to Lake Albert, in the north and east by Lakes Kyoga and Victoria, and in the south by a line running westwards from Muanza Bay (Lake Victoria) to the Malagarasi River. Incorporating the Bantu agriculturists previously settled in that area, they constituted a number of political units (such as Nyoro, Toro, Nkole, Ganda, Sogo, Mpororo,

[7] Baumann and Westermann, 1948, pp. 215-23. [8] Schapera, 1929, p. 83.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

174 Ruanda, Burundi, Ha, Karagwe). It is not known where these
101 pastoralists came from.

Because of cultural and physical similarities the Galla or Somali country of Southern Abyssinia has been advanced as their possible place of origin. As the invaders have completely adopted the Bantu language of the agriculturists, the lack of linguistic clues so important in such questions is a great setback to any historical reconstruction. It should be noted in this connexion that the use of
[119] the linguistic term 'Hamites' to denote Tutsi, who do not speak a Hamitic language at all, is unfortunate and misleading. Dr. Meinhard's suggestion of using a term not burdened with linguistic connotations such as 'Ethiopians' or 'Ethiopoids' should be considered.[11] The population movement which brought the
174 invaders to Ruanda is probably at least four centuries old. The
643 present ruler is traditionally the fortieth king of Ruanda. We know the names of thirty-nine predecessors, but it is possible that the list is incomplete. On the other hand it seems that the first nineteen are legendary figures. Taking account of this and assuming that a reign lasts about twenty years, we go back to the sixteenth century.[12]

174 As the Tutsi migration seems to have been gradual and peaceful, an infiltration rather than a conquest, it is probable that at the beginning their cattle grazed on the unoccupied grasslands. But the population increased as more Tutsi kept on entering the country and more land had to be tilled to feed them. Cattle were also increasing and the Hutu had to move from the most fertile soil, in the bottom of valleys, because during the dry season these places were the only ones where cattle could find fresh grass. This process must have been in operation for a few centuries to produce the situation as we know it now.

161 Statistics are not available for the 1900–10 period, with which
[174] this study is concerned, but we may from the present figures (with some modifications) get a fairly good idea of the situation at the beginning of this century. The population was estimated on 31 December 1949, to be 1,870,410 souls: in 1956, 2,374,136, which

[11] Cf. Meinhard, 1947a, p. 3.

[12] According to Meyer, 1913, the pastoral invasion took place in two ways. The first, at the beginning of this millenium reached the north-east of the Province; the second, in the fifteenth and sixteenth centuries brought them farther southward. According to Kagame and Delmas, the first Hamitic populations invaded the country in the eleventh and twelfth centuries. (Gouvernement du Ruanda-Urundi), (1956), p. 9.

648 The kings of Ruanda also headed numerous expeditions into the Congo with no definite results other than pillage.

133 [137] As a whole, Ruanda is a high, rolling plateau. It was deforested to get rid of wild beasts and to supply pastures and fields for cultivation.

The northwest is a broken, picturesque, wooded region. There stands the chain of volcanoes, practically all of which are extinct today. /24/

The highest peaks are the Karisimbi (1), which is 4, 506 meters

[103 301]

1. Karisimbi, from the word amassimbi, a kind of white shell which the Batutsi of Urundi and Ruanda wear at the neck as an ornament. Because of its color it served to designate the snow that covers the summits, and by extension the highest mountain.

high; the Mikeno (2), or Mukuru mubi (3), which is 4, 380 meters high;

[103]

2. Mikeno, from the verb gukena, "to be bare."

[103]

3. Mukuru mubi, "a peak of difficult access."

the Muhabura (4), which is 4, 127 meters high; the Sabyinyo (5), which

[103 487]

4. Muhabura, from the verb guhabura, "to set on the right path," because this mountain serves as a landmark for travelers.

[103]

5. Sabyinyo, "big-toothed father," owing to its volcanic ridges.

133 is 3, 647 meters high; the Mago (6), which is 3, 711 meters high; the
103

6. It is found wrongfully designated under the name of Visoke on some maps. /Visoke/ is a derivation of the term Bisoko, which is the name of the region itself.

Gahinga (7), which is 3, 474 meters high; etc.

7. Gahinga, "the little summit."

Father Paul Barthélemy, the founder of the Nyundo mission in the Bugoyi, was the first to climb the Karisimbi. This is why the name of Barthelemy peak is given on some maps to the highest peak.

The Mikeno, which had until now been regarded as inaccessi-
133 ble, has had its impregnability violated by daring explorers (8). Each

8. During the summer of 1927, on July 25, Fathers Van Hoef and Depluet and Mr. and Mrs. Leonard succeeded in surmounting all obstacles by using a rope and a small ladder. They reached the southern peak, which is separated from the other by an abyss. The summit forms a sloping esplanade covered with volcanic gravel.

of its two slender points ends in an immense and nearly vertical rock, from 300 to 400 meters high.

The so-called "Plain of the Volcanoes" extends between the Rutchuru and Lake Kivu. It is strewn with blocks of lava and hundreds of craters of varying size.

Among the active volcanoes, let us mention the Nyiragongo (3, 496 meters) of perfectly classic shape. The /25/ main crater, with

133 Then there are in order of size: Mohazi in the Buganza, Mugessera and Sake in the Gissaka, Ruhondo (at an altitude of 1, 750 meters) and Bolero (at 1, 065 meters) in Mulera, and Karago in Lwankeri plain.

In the Bugessera there are several ponds: Murago, Mirayi, Kagomasi, Chohoha, Gaharwa, Kilimbi, etc. The small land of Bgiriri, which is adjacent to Gissaka toward the south, includes Birira /pond/.

The two rivers that wind through Ruanda are: the Nyabarongo /Nyawarongo/ (1) and the Akanyaru (2). The former, to which

[103] 1. Nyabarongo, from the verb kulongora, kulongoroka, "to go far away." This river was called thus because it flows throughout Ruanda.

[103] 2. Akanyaru, from the verb kunyaruka, "to rush." The speed of its flow gave rise to this name.

Mr. Kandt, the last German resident, gave the name of Caput Nili ("Source of the Nile") in a well-known book, is formed by the junction of two rivers, the Mwogo (3) and the Lukarara.

[823] 3. The violence of its flow and the volume of its waters during the rainy season occasion numerous tragic accidents, hence the expression: "Mwogo! Thou doth not kill men, thou only taketh away those who come (of their own accord) to meet death," Mwogo! ntiwich' abantu, wicha abakwizaniye.

[539]

133 These two torrents have their source in the southwestern part of Ruanda. Their headwaters flow impetuously on a bed littered with rocks and pebbles.

Among the many subsidiaries of the Nyabarongo, let us mention in alphabetic order: the Base, Mukungwa (which comes out of Lake Ruhondo), Nyabugogo, which serves as an outlet for Lake Mohazi, etc.

The Akanyaru, whose basin is less extensive, also originates in the southwest and combines its waters with those of the Nyabarongo at the level of theBugesserá. /28/

After they join, these two rivers change their name to Kagera (1). Under this new name they enter the Victoria into which they

[103] 1. Kagera. This word comes from the verb kugera, "to deepen."

The Kagera slowly wanders through the plain, and its lazy waters overflow into large ponds and marshes infested with crocodiles and mosquitoes. [136]

pour their yellow waters loaded with silt.

Lake Kivu receives only a small part of the waters of Ruanda. Its outlet is the Ruzizi River, which flows into /Lake/ Tanganyika after a tumultuous course of about 120 kilometers.

131 Ruanda, whose surface may be estimated at 30, 000 to 35, 000 square kilometers boasts a population that is believed to reach two 161 million souls.

It is made up of three quite distinct ethnic groups: the Batutsi, 563 or Hamites, the Bahutu of the Bantu group, and the Batwa, or Negrillos (Pygmies).

The Batutsi, who are thought to be of Egyptian or Abyssinian 141 origin, (2) are tall in stature. Some measure as much as 2 or even

000 2. From an ethnological point of view the physical appearance of the Ethiopian people is an exception in

173 The varied origins of the tribes which occupied this area explain the multitude of autonomous groups found by the newcomers. The northern populations came almost in their entirety from the Mpororo and Ndorwa.

To the west, the Bagoyi on the east shore of Lake Kivu came from the Bgisha, Gishari, Mushari, Kamuronsi, and Bunyabungu, all of which are areas situated north and west of the lake. To the southwest, the Kinyaga inhabitants are a mixture of Banyabungu and Barundi /Rundi/. To the south and to the east, the population seems closely related to that of Urundi and Karagwe.

The most powerful tribe seems to have been the one that inhabited the Nduga. In the times of Kigeri I and /76/ Mibambge I Mutabazi, the tribe was ruled by the famous diviner-sorceror Mashira, who held the combined functions of king and priest. The reputation of this chief was due less to his military exploits than to the supernatural powers with which legend endows him. On the present soil of Ruanda there stood, among many others, the tiny kingdoms of Marangara, Bwana-Mkali (the Barenge), Burwe, Bgishaza, Budaha, Kingogo, Bugamba, Bushiru (1), Buhoma, Luhengeri, Bukonya, etc.

1. A province with a symbolic and meaningful name. The memories it calls to mind could not be expressed better.

[103] Bushiru is a noun derived from the neutral verb gushira, which means "to end," "to die out." It was lent this area whose inhabitants were incorrigible quarrelers and fighters who scorned death, who were always at war, who exterminated one another, and who killed those travelers who were sufficiently foolhardy to venture into the region.

173 The last one, Yuhi III Gahindiro, is mentioned only in connection with the fact that he raised a Mutwa /Batwa/ to noble rank and gave him his own daughter (Mulangamirwa) in marriage. The descendants of this couple make up the Basiete clan.

Where did those monarchs live? Which were their capitals?

The ancient royal residences (ibigabiro, ibisozi, imirwa), which are easily recognizable by the clumps of trees that mark the sites, are found most everywhere through the various provinces of Ruanda. They are found especially in the vicinity of Kigali, in the Nduga, after one crosses the Nyabarongo River, along the road to Nyanza and beyond, up to the Bwana-Mkali. Judging by the number of their dwellings, it seems that the Hamitic princes had made this central part of Ruanda their most select location, their favorite abode.

Matrimonial relations between conquerors and conquered were so frequent in the Nduga that the Bahutu of that province are strongly tinted with Hamitic blood. In order to explain the profusion of ancient residences, it must be added that certain monarchs such as Ruganzu II and Lwabugiri moved about readily and had many residences while their predecessors maintained only three or four (1).

● 103

1. Royal residences around Kigali:
Ntora, Kabuye, Rutare, Mwulire, etc.

In the Nduga:

Gibara (Lwogera and Lwabugiri), Runda (Musinga), Ishèru (Lwogera), Idjuru (Yuhi-Mazimpaka), Rukoma (Mibambge), Kanshyiri (Lwogera), Rugobagoba (Lwogera), Kamonyi (Lwabugiri and Musinga), Buhoro and Kivumu (Gahindiro), Mata, Lwamabare, Nyundo, etc.

In the Bwana-Mkalé:

Buhimba (Lwogera and Lwabugiri), Gikirambga (Mutara), Gisseke (Lwabugiri, Musinga), Ishyanda (Lwogera, Lwabugiri), Mwurire, Kisanze, Lussagara, etc.

773 This is how the young prince became willy-nilly the father of the
821 present Bashara, or rain-maker, lineage, which has inherited his
614 vocation.

If they wish to bring rain, these people[1] go outside, look at
789 the sky, and spread out their arms. If they wish to favor only the
821 hill they inhabit, they must sit. If they wish to benefit the entire land with their astonishing power, they must stretch out at full length and spread out their arms at the same time. The storytellers add that this is how the descendants of Rushara have acted ever since that time.

Up to these last few years, rain makers were exposed to
[686] serious dangers. It was not unusual to hear that one or another of those unfortunate creatures had been killed or thrown into the river for failing to produce the needed rain on time.

According to another interpretation of the same legend which
[773] is very popular in the central province of Nduga, Rushara disobeyed the orders of the sorcerer at the proddings of the demon of curiosity after he had crossed the Nyabarongo. The water ran out of the pot and spread onto the ground. Nyamukama was informed and replied that in order /431/ to get rain, all that was needed was to build upon the spot where the water from the vessel had been spilled, and to dig into the hill (mubuz' imvura, mwubake, muhafukure). Many of the kings of Ruanda have indeed elected this hill as one of their favorite capitals.

In times of drought it is customary to scratch its soil lightly as though searching for a spring, and it is said that Nyamukama's prophecies always come true. This is why the area is appropriately
[103] called Bgeramvura (kugera imvura), that is to say, "the place where rain comes forth."

It is for the same reason, and to obtain the same results, that at Mata in Marangara, people dig into both sides of the hill.

The first of the two holes is called "the fountain of milk" (iliba ry'amata) and symbolizes abundance. Cows will then yield more milk. The other hole is called by the name of "source of rain" (iliba ry'imvura). Just by dealing it a few blows with a hoe, a favorable influence is exercised upon the clouds, which will give forth a beneficent rain.

[1] [i.e., the Bashara. - Ann Ist]

643
644
178 sticks so that the custom should not altogether lose its penal character.

2. Another improvement over the past has been the complete suppression during the two preceding reigns of the odious custom which prompted each new prince when he ascended the throne to send his troops into the Russokovu, between the Bugamba and Kingogo, to make war and receive their baptism of fire.

This was called "to make the king's spear drink blood" (guhir' icchumu ry' umwami).

Just as the Banyarwanda have the habit of leading their herds to the watering hole (guhir' inka) at the /463/ beginning of the day, a traditional custom also made it necessary for the king to make his spear drink blood (kunywesh' amarasso icchumu ry' umwami) upon his accession to the throne.

After killing some unfortunate people, the victorious warriors returned home.

The beginning of a reign could not be augured more auspiciously.

773 Ruganzu II Ndori was the first to launch such an expedition, which later became traditional.

He did this to punish the killers of his father. According to one version, which has already been cited (1), old King Ndahiro was

1. Cf. Book III, Histoire du règne de Ruganzu II, /History of Ruganzu II's Reign/ /not translated/.

killed at Russokovo, by the Bakongoro (a segment of the great Banyabyinshi faction) who had rebelled against him and whom he had set out to subjugate.

The expedition ended in disaster. Ndahiro, so the tradition adds, died there along with many of his followers. The rebels seized the king's drums and had them burned. Only the Kalinga, or palladium of the realm, escaped the conquerors. This is why the [103] place where the defeat took place has been known since by the name

773 of Rubi rw'inyundo, meaning "the evil of the hammer," to recall that
[103] the weapons wrought by the blacksmiths' hammers were fatal there to Ndahiro and his warriors (2).

2. There are numerous variations on this historical theme. The inhabitants of the Bugamba insist that Ruganzu II was smoked out of Kirengo Cave by the Banyabyinshi. Hence the custom, they say, of leading two of the inhabitants of the land to the capital, where they were beaten, in memory of and punishment for this misdeed. Others believe that it was Chyilima-Rugwe who was fatally injured by the Bakongoro and who, pursued by his enemies, came to die near Gasseke, where his skeleton was later found. These tragic circumstances would explain the 15 annual days of mourning in June, if the disaster was such as the chroniclers lead us to suppose.

178 3. Fortunate, too, is the abolition of the custom which prompted
643 the young king to kill one of his maternal uncles (nyirarume) with his own hands, an act which was political as well as /464/ superstitious, and which often followed close on the murder of the princes who were the monarch's relatives by marriage.

The prosperity of the realm was believed to depend on the fulfillment of cruel customs.

The abolition of these barbarous practices would be wholly to the credit of the Banyarwanda were it not for the fact that in 1895, at the time when Mibambge-Rutalindwa was deposed, the victorious Bega faction then in power committed innumerable atrocities toward

173
778

2. Many of those former royal residences recall historic events which took place at the site or in the vicinity.

It was at Mwurire that Mutara I, a son of Ruganzu II, vanquished the king of Urundi, a Mutaga, whose lands extended that far at the time.

On Ruchunchu hill, not far from a former residence of Lwabugiri's at Rubugurizo (that is to say, [103] according to the etymological sense of the word, "at the spot where the king's sons played backgammon"), the natives point out the spot where Mibambge-Rutalindwa, Lwabugiri's appointed heir, set fire to himself and his people /relations and friends/ in 1896, in some hastily built huts, when he found himself about to be captured by partisans of the powerful Bega family who had rebelled against him. In the Bumbogo, at places called Mbilima and Matovu, some tall fiscus trees mark the site /533/ of a dwelling formerly occupied by an important chief of the Batsobe clan who had married King Lwabugiri's own mother.

The latter, having grown up, wanted to wreak vengeance for what he regarded not only as a serious infringement of court custom but also as a crime of high treason.

His warriors surrounded the hill one day.

563 in their smaller stature, their squarer build, and their shorter legs.
142 The contrast is strongest in Mulera and Bugoye where the Bahutu gradually show transitions to the Bantu of the Congo forest. In central Ruanda the Bahutu show a not inconsiderable Batutsi influence. Here their features are more regular and more finely chiseled, their bodies not so stocky, and their heads longer. It is probable, [144] therefore, that the Muhutu owes the characteristics which distinguish him from the Bantu of the Congo forest chiefly to the "Hamitic" influence of the Batutsi. However, we must not lose sight of the possibility of a concurrent Nilotic influence which is so striking among the Massai and Bari.

167 Emigrants from the Congo state have played an important
101 role in the settlement of Mulera and Bugoye. Dr. Kandt (1) uses

1. Kandt, R., Caput Nili (Berlin, 1904), p. 290.

the name Bakiga (Wakiga) for the immigrants. He translates it as "inhabitant of Pori." My inquiry revealed that "Bakiga" is the general term for the inhabitants of mountains, in contrast to "Banyamuyaga," the inhabitants of plains. On his surveyor's
● 103 sketch of the map of Mpororo, Lieutenant Schwarz calls the country southwest of Buischingato (Luizigatu) "Rukiga." This was formerly called Ndorwa, since it is mountainous. The region southwest of Nyundo is also called Rukiga. Father P. Barthelèmy, who knows the country and is versed in the language, believes that the name of the Rugege Forest in the southeastern part of Kivu is derived from Rukiga.

167 The immigrants from the Congo are closely related to the
101 Banyaruanda. On the Belgian map (2) the inhabitants of the

[113] 2. Carte de l'État Indépendant du Congo [Map of the Independent Congo State]. Scale 1:100,000. Lith. Justus Perthes, Gotha, 1907.

western edge of the graben [Rift Valley] are designated simply as

775 823 sometimes large quantities of these reach the outside world. I repeatedly heard this explanation of volcanic activity. It sometimes happens, however, that Ryangombe drives spirits into the outer world as a punishment. Then they torment the living, who must make sacrifices so that Ryangombe will take the spirits back and thus free the living from molestation by these homeless.

[103] People from the region of Bobandana, whom I met on the way to Rutshuru, called Mount Nyiragongo Kilima ya Mungu, "Mountain of the Gods."

Lieutenant Von Parisch (1) also says that Ryangombe allegedly

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902-1903 [Two Journeys through Ruanda 1902-03]," Globus, Vol. 86 (1904), p. 78.

lived in Muhawura with his court which consists of the souls of the babandwa dedicated to him. Only the souls of the nsigo, that is, the profane and those initiated into other cults, go to Nyiragongo after death. However, he concedes that, according to other accounts, Ryangombe lives in Nyiragongo.

The volcanoes play a very important role in the supernatural world of Ruanda. Captain Von Beringe (2) mentions that the birunga

2. Beringe, Captain Von, a report on his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, pp. 36, 37.

(plural of kirunga, "volcano") are named after the spirits which are said to live in them, such as Sabinio, Karisimbi, Mikeno, Nyamlagira, and Gonga. The last is the oldest among them. Formerly Nyamlagira, who was later exiled, was said to have lived with him. The later event is perhaps an allusion to the recent origin of the youngest volcano in this group.

[532] [300] Memorial Trees. There are no pictorial representations of the dead in Ruanda. I saw no sculpture or wood carvings that referred to them.

104 GLOSSARY--definitions of native terms frequently used in the sources; orthographies and transliteration systems. See also:

Word lists and vocabulary. 199

133 When I now attempt to describe the inhabitants of Urundi, the Barundi (1), the following question must first be briefly

[104] [194]

1. In the spelling of Barundi, Bahima, Batussi, Bahutu, Batwa, Baganda, Banjoro, Banjaruanda, Banjankole, etc., I am following the example of J. Czekanowski (Nos. 38 and 48). In this connection, it should be noted that the phonetic value of this b is often close to our w i.e., an English v and in correct phonetic terms might be more clearly transcribed by a v specially marked, but for the purpose of my study the common b corresponds more closely to the orthography of the tribes between the lakes. On the other hand, one must write Wanjamwesi, Wasukuma, Waschaschi, etc., since these tribes pronounce the w in all clarity.

answered: What does the country look like, the soil which supports and nourishes the people and upon which its economic, social, and political life takes place? Urundi is a mountainous country, the southern part of the interlacustrine region to which belong Ruanda in the north, the Kisiba states and Uha in the east, and in the south also Uha and part of Ujiji. On all sides Urundi has good natural boundaries: in the north the rivers Akanjaru and Kagera, in the east the long plateau sloping down toward Uha, in the south the upper course of the Malagarasi, in the west Lake Tanganyika and the Ruzizi River. To the north the region has a broad front toward Ruanda, while to the south it tapers off in wedge-shaped form to Lake Tanganyika.

In its geological structure Urundi is divided into two large regions whose landscapes differ. The larger eastern part is a section of the Paleozoic slate and quartzite plateau (Plate 26) probably belonging to the Cape formation. This plateau covers almost the entire interlacustrine region. The narrower, tapering

/20/ Preface

104 Note: When we cite proper names, geographical terms, and
192 other common nouns, we shall write them with the article (1) and the
193

1. The article (a, i, u), which varies according to word classes, is designated in Runyarwanda works already in existence under the term "euphonic vowel."

nominal prefix (indicating the singular or plural) (2), which are joined

2. The nominal prefix, which indicates the singular or plural, also varies according to noun class.

to the word itself as follows:

Class	Singular	Plural	Class	Singular	Plural
Class I	mu	ba	Class VI	u	n
II	mu	mi	VII	ka	tu
III	n	n	VIII	bu	ma
IV	ki	bi	IX	ku	ma
V	i	ma	X	ha	ha

Article	Number Singular or Plural	Word Root	Meaning
u	mu	ntu	man
a	ba	ntu	men
u	mu	tutsi	Hamite
a	ba	tutsi	Hamites
a	ba	hutu	serfs (cultivators)

904

192	a	ba	twa	Negrillos
193	u	ru	go	palisade
	i	n	go	palisades

It would be more logical to give only the root itself as follows: /les/ ntu, /les/ tutsi, /les/ hutu and, in the singular, /le/ ntu, /le/ tutsi, /le/ hutu. It would be a matter of habit but the euphony would suffer a little by this.

blood of the animal and placed on the chests, the foreheads, and, last of all, the backs of those present. Then the mubandwa spreads out small bundles of green twigs, muyambo, on the animal. When he has given the order to disperse, everyone begins to move. One person after another walks over the sacrificial animal and goes home without looking back; otherwise the sacrifice would lose all its meaning. In this procession the father goes first, then the sons, then the chief wife, followed by the other wives and their daughters. The mubandwa and his attendants remain at the place of sacrifice. [318] If someone passes in the vicinity of the sacrificial remains, he takes care to pick up a leaf, spit on it, and throw it in the direction of the remains, saying: "Do not pursue me (spirit, umuzimu, misfortune, or illness)." This refers to the fact that the evil, the spirit, or whatever has been cast off through the sacrifice might attack a passer-by at the crossroads.

The Batutsi sacrifice cows, sheep, and chickens, whereas the sacrificial animal of the Bahutu is the goat and, more rarely, sheep.

As far as I could ascertain, the meat of sacrificed cows is distributed to all present if the prophecy is favorable. If the entrails prophesy unfavorably, the meat is given to the Batwa. The family of the donor does not eat the meat of sacrificed sheep, but gives it to the mubandwa and his helpers who have performed the sacrifice. The ceremony described by Father Van Thiele thus undoubtedly refers to the sacrifice of a sheep, which he forgot to mention. The meat of sacrificial goats is eaten by the Bahutu who

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

I have given Ruanda words in the orthography now customary in Ruanda-Urundi. Articles and prefixes have been omitted wherever possible, as for instance in the words *hutu*, *tutsi*, *twa*, *ruanda*, *garagu*. The prefix has been kept in words widely used and which, if reduced to their radicals, might not be easily recognized. This is the case with the words *mwami* and *buhake*, whose roots are *-ami* and *-hake*.

104

suggestions there are of the effect of latter-day conceptions in superimposing themselves upon and modifying primitive law. Before going on to this, it should be added (what does not appear from the record) first, that the society of Bugufi is symbiotic, with a pastoral Tusi aristocracy, headed by a chief, dominating a semi-servile Hutu agricultural population, who largely outnumber the Tusi: secondly, that there have in Bugufi been strong forces making for change, quite apart from European administrative control. To go into these changes in detail is quite outside the scope of the present paper. It may be briefly mentioned, however, that the relative status of Tusi and Hutu is in process of rapid alteration, owing to the opportunities afforded to the Hutu under modern conditions of acquiring independent wealth, both through their labour (chiefly in Uganda) and latterly by the establishment in Bugufi of an economic crop, coffee. This change has meant maladjustment of the tribal structure. The chief sees in the economic independence of the Hutu an encroachment on his rights: and the Hutu regard the assertion of those rights as oppression. This conflict, together with the mental immaturity of the chief and the distance of the chiefdom—four days' march—from an administrative station, made it necessary for the government to establish a check in the form of a 'Native Adviser'. This system continued until early 1930, by which time an administrative station had been opened near the chief's head-quarters, and, he having shown signs of development, it was felt that an opportunity should be afforded the chief of ruling his country without the restriction of an adviser who was really a controller most of the time. These advisers, three in all, were alien to Bugufi. The first came from Bukoba, on Lake Victoria, where he later became town headman: the second was of Arab descent, having come from Urundi to live in Bugufi, where he had been settled for many years and enjoyed considerable respect: the last, a native of really fine character, who made every effort to train the chief for his work, was a Muziba from Bukoba District. All of them were charged with the dispensing of justice according to native law and custom—subject to altered concepts of crime, already imposed by the European régime, and to a general instruction to curb the oppressiveness of the chief, an instruction the interpretation of which might depend partly on the system of native law under which the adviser had been brought

105

Identification

The Ha (Abaha, Waha), with whom are included the kindred Jiji (Wajiji) and Vinza (Vinsa), are a Bantu nation of the Interlacustrine group similar in language and culture to the Rundi. They have a total population of 180,000 on 10,000 square miles.

Basic Economy

A dual economy -- herding by the dominant Tusi (Hima) and agriculture by the subject Bantu population. Since the reduction of cattle through Ngoni and Masai raids, the balance has shifted in favor of agriculture, which is done with the aid of irrigation. The staple crops are sorghum and maize, but other crops include bananas, manioc, sweet potatoes, groundnuts, pumpkins, legumes, and possibly millet [intimation by Meinhardt]. In addition to cattle, many goats, sheep, and chickens are kept, and also bees and pigeons. Fishing is important, and hunting is moderately productive. Trade is extensive, and there are markets.

Sex Division of Labor

The men hunt and tend the livestock. Both sexes cultivate the fields [Hore says women only among the Jiji].

Property

Livestock is the standard of wealth and prestige; salt is used as currency; slaves and beads are also valued possessions. Land is communal property, individuals enjoying usufruct rights only so long as they cultivate it.

Inheritance is inferentially patrilineal.

Social Stratification

There is mild and unimportant slavery. The pastoral Tusi (Hima) and the subject Bantu agriculturists form distinct social classes.

Marriage

Incidental mention of a bride-price.

General polygyny prevails.

105

Kin Groups and Exogamy

Exogamous, non-localized, totemic patri-sibs.

Settlement Pattern

Griffiths reports scattered hamlets, each occupied by a family group; another source [probably Grant] reports palisaded villages in contrast to the scattered hamlets of the Rundi. Domes beehive huts probably prevail [Meinhardt].

Local Government

There are local sub-chiefs.

State

The Vinza have a sultan and district chiefs. The Ha are organized into a number of petty states under Tusi "sultans," who are supported by bribes, court fees, etc. They have the character of divine kings; are not allowed to die a natural death but are throttled in extremis; pandemonium reigns for a period after their death; the body is mummified and tended indefinitely by women.

Warfare

Warfare is common.

105

Identification

The Ruanda (Banyaruanda, Rwanda) are a Bantu nation closely akin to the Rundi. They had a total population in 1952 of 2,133,000, representing a density of 89.7 per square kilometer. The original inhabitants were Pygmies, whose survivors are the Twa hunters. They were largely displaced by Bantu, the present Tussi agricultural caste. About four centuries ago the country was infiltrated by Nilotic pastoralists, who became the ruling and aristocratic caste of Tussi. The Tussi today speak only Bantu.

Basic Economy

Primarily agricultural, with hoe cultivation, but animal husbandry is also important and is the dominant activity of the aristocratic Tussi. The staple crops are sorghum and eleusine, but maize, sweet potatoes [important], manioc, bananas, beans, peas, and some yams, gourds, watermelons, peanuts, onions, tomatoes, and peppers are also grown. Cattle are the principal domestic animals; their meat is rarely eaten, but milk and butter are staples of the Tussi diet. Goats and sheep are also kept; mutton is not eaten, and only the Hutu eat goat meat; ewes are not milked, and goat milk is consumed only by children. The Twa specialize in hunting [their women in pottery manufacture]. Despite the lakes, little fishing is done. There are few markets.

Sex Division of Labor

Men clear land, hunt, gather honey, and herd and milk the livestock. Both sexes engage about equally in agricultural work.

Property

Cattle constitute the chief wealth and the prevailing unit of value. Eminent domain in all land and cattle is vested in the king, but private property in both is recognized. A man can acquire rights to land by inheritance, by gift from a chief, or by bringing untilled land under cultivation. Owners of land and cattle can grant usufruct rights to others; in cattle such rights consist in their milk, their flesh (when they die), and their male offspring. Collective land ownership [by lineages] is found only among the Hutu of the north.

Inheritance is patrilineal -- by sons, and in default thereof by brothers, then male ortho-cousins, then grandsons, then brothers' sons, then paternal uncles. Ordinarily a man gives part of his estate to each son when he marries; on his death the remaining sons share the rest. One son, usually the eldest, is selected by the father to succeed him as family head.

Social Stratification

Slavery formerly prevailed. Slaves were recruited from war captives, and the status was apparently non-hereditary. There are three castes: (1) the Tussi (Batuse, Batusi, Tutsi, Watuzi), a pastoral aristocracy of Nilotic descent; (2) the Hutu (Bahutu, Wahutu, Wakhutu), an agricultural peasantry of Bantu descent; (3) the Twa (Batwa), a Pygmy caste of hunters. In percentage of the population they constitute, respectively, about 10, 85, and 5 percent. The Twa are completely endogamous, and marriage between Tussi and Hutu is rare and disfavored. A feudal relationship of patron and client is common. It is established between persons of superior and inferior status, and can be terminated by either party by specifying the reasons, but otherwise the relationship is continued by the heirs of both parties. It is established by the patron entrusting the client with one or more cows and the usufruct in them. The client accompanies the patron to court or to war and renders him material aid when needed, and in return the patron renders legal and other protection and material assistance when needed, There is a royal sib.

Marriage

Virginity is demanded in a bride. Marriages are arranged by the fathers, often in infancy. Girls marry when their breasts are fully developed; boys at about 15 among the Twa, at 17-18 among the Hutu, at about 25 among the Tussi. All groups pay a bride-price; this consists of liquor among the Twa, of a cow or 12 goats among the Hutu, of 20 or more cows among the Tussi.

Polygyny is permitted, and its incidence is reported to be slightly higher than 20%. It may occur in the sororal form, but this is non-preferential and rather rare. Both the junior sororate and the levirate with the husband's eldest surviving brother are preferential. A man enjoys sexual privileges with the wives of his brothers and

his parallel and cross cousins, and also with the sister or ortho-cousin of his wife. He also has a semi-sanctioned right to sleep with his SoWi, but does so ordinarily only as a means of punishing his son. In a polygynous family each co-wife has her own hut and plot of land.

Family

The normal residential unit is an independent nuclear or polygynous family, to which domestics and dependents may be attached.

Residence

The prevailing rule is patrilocal, but there is occasionally an initial period of matrilocal residence with bride-service.

Kin Groups and Exogamy

Some of the earlier sources suggest a tendency toward local exogamy.

Marriage and sex relations are forbidden with any primary or secondary consanguineal relative and also with a parallel cousin, WiMo, or an uncle's wife, but not with SoWi. Unions with FaSiDa and MoBrDa are permitted but not looked upon with favor.

Descent is patrilineal. There are about 30 agamous, totemic, non-localized, and non-corporate patri-sibs (ubwoko), which are divided into corporate patri-lineages that are exogamous with respect to both sex relations and marriage. The lineage functions in ancestor worship and blood vengeance, and in some instances is a land-holding unit. Each lineage (inzu) has a chief and a council of adult males. Intermediate between lineage and sib is the sub-sib (umulyongo), which is exogamous and sometimes has a chief. A sub-sib consists of people who would belong to the same lineage if this had not split into geographically separate groups.

Kinship Terminology [from Maquet]

Fa--data. Mo--mama. Ch, BrCh[ms]--mwana [addr.]. So, BrSo(ms)--muhungu. Da, BrDa(ms)--mukobwa. Wi, BrWi(ms)--mugore. Br, Si, FaCh--mwene-data. Elder full or half sibling of the same sex--mukuru. Younger sibling or half sibling of the same sex--murumuna. Br(ws)--musaza. Si(ms)--mushiki.

MoCh--mwene-mama.

FaBr--data wacu ["our Fa"]. MoBr--marume. FaSi--masenge. MoSi--mama wacu. BrCh(ws)--musengeneza. SiCh(ms)--mwishywa. GrFa--sogokuru. GrMo--nyogokuru. GrCh--mwuzukuru. FaWi, FaBrWi--muka-data. FaSiHu--mugabo wa masenge. MoSiHu--mugabo wa mama. WiFa, HuFa--data-bukwe. WiMo, HuMo--ma-bukwe. SoWi--mukazana. DaHu--mukwe. HuWi, HuBrWi--mukeba. HuBr--mugabo. WiSiHu--musanzire. BrWi(ws), SiHu(ws), HuSi, WiSi, WiBr, WiBrWi--muramu.

Cross-cousin--mubyara. Sibling terms extended to parallel cousins.

Joking relationships exist between grandparent and grandchild and between cross-cousins of opposite sex. A man shows respect toward his FaSiHu, MoSiHu, WiFa, WiMo; a woman toward HuFa and HuMo. There is also considerable restraint between MoBr and SiSo. Marriage and sex relations are forbidden with WiMo and WiBrWi.

Settlement Pattern

The Ruanda live in neighborhoods of dispersed homesteads. Only the royal capital approaches the composition of a village. Dwellings are thatched huts of beehive shape. A homestead consists of three or more of them in a circular enclosure surrounded by banana plantations.

Community Organization

Lineages seem to have been localized as clans, at least formerly.

Local Government

Each neighborhood has a headman, who collects taxes and organizes corvees. He is often [if not usually] a lineage head.

State

Lineages are aggregated into "hills," each with a single sub-chief. "Hills," in turn, are aggregated into 70-90 administrative districts or provinces. Each of these has two chiefs, who are independent of each other -- a land chief who collects taxes in agricultural products and a cattle chief who collects taxes in livestock. Hutu and even Twa may be hill chiefs, and Hutu may be land chiefs, but only Tussi can be cattle chiefs. In general, Tussi fill most of the hierarchical administrative offices, which siphon off roughly two thirds of all taxes raised, the rest going to the king. The Ruanda are organized in a strong state with an absolute monarch (mwami)

with divine attributes. The king is supreme judge, maintains a court in a capital village, and has his symbol a sacred drum. Ranking with him is a Queen-Mother (umugabekazi), the king's own mother or a substitute if she is dead, who has her own court, herds, and clients. The king is assisted by a number of high dignitaries (abiru), who are concerned largely with ritual and protocol. They do not form a council, but are exempted from taxes. Their offices are hereditary from Fa to So, but the king may depose an incumbent and appoint his son. There is also a council of major chiefs, of whom one is a sort of prime minister.

Warfare

The king has a standing army consisting of several regiments, each with 4-5 companies of 150-200 men each. There are defensive and offensive encampments on the borders.

Identification

The Rundi (Barundi, Warundi) are a Bantu nation occupying the Belgian-administered country of Urundi. Their language is closely akin to the speech of the Ruanda, Nyambo, and Zinza. In 1943, the Rundi and Ruanda together numbered 3,830,000, of whom roughly half were Rundi, living on 20,115 square miles.

Basic Economy

Primarily agricultural, with hoe cultivation, use of animal manure and ashes as fertilizer, and considerable irrigation. The staple crops are bananas and beans (Phaseolus vulgaris), but peas (Pisum sativum), maize, and eleusine are also important. Lesser crops include peanuts, sorghum, yams, onions, sweet potatoes, manioc, pumpkins, gourds, and arrowroot. Animal husbandry is the chief occupation of the aristocratic Tussi. The chief animals are cattle, but goats, sheep, dogs, and chickens are also kept. Milk and blood are drunk, butter is made (for anointing the body), but meat is rarely eaten and chickens and eggs practically never. Hunting is done only by the Twa; the Tussi and Hutu abjure game. Fishing is done on the lakes and rivers, but elsewhere only by the Twa. Gathering is done by all groups, but is important only among the Twa. There is some internal trade in wax, hides, and salt, and external trade in palm oil is conducted on Lake Tanganyika. There are markets.

Sex Division of Labor

Men hunt, clear land, and do all the herding and milking. Tussi and Twa men do no agriculture, but Hutu men assist the women to a substantial extent.

Property

Land belongs to the king and is allocated by sub-chiefs to individuals, who hold heritable usufruct subject to revocation for misuse, tax delinquence, or sometimes mere whimsey. Water rights are distributed by district chiefs. Movable property is individually owned, subject to occasional confiscation by chiefs.

Inheritance is patrilineal, usually by primogeniture. The ElSo, or another son designated by the father, inherits most of the property, but a certain amount is divided among the younger sons.

Brothers inherit in default of sons.

Social Stratification

Society is divided into three ethnic castes: (1) the aristocratic pastoral Tussi, who are of Nilotic origin; (2) the agricultural Bantu commoners or Hutu; (3) the Twa, Pygmy hunters and gatherers who do a little agriculture. These castes tend toward endogamy, though there is some Tussi-Hutu intermarriage. At the apex of the society is a royal lineage, and at the bottom there was formerly some sporadic slavery. As among the neighboring Ruanda, a special client-patron relationship with reciprocal obligations is important.

Marriage

The Tussi and Hutu require a bride-price, but the Twa do not. It consists mainly of cattle among the Tussi, of hoes among the Hutu.

Polygyny occurs exclusively in the non-sororal form. It is favored, but in actual fact is very rare among the Twa, relatively uncommon among the Hutu, and not particularly frequent among the Tussi. The first wife is chief wife, but each co-wife has her own hut. Both junior levirate and junior sororate are preferential. Secondary marriages are forbidden with WiMo but permitted with SoWi.

Family

The residential unit, occupying a household or kraal, is a monogamous or polygynous family, though patrilineally related families commonly reside nearby. Patrilocal extended families are reported for the Twa.

Residence

Patrilocality is the norm, but neolocality also occurs.

Kin Groups and Exogamy

Marriage is forbidden with any primary or secondary consanguineal kinsmen and with a parallel cousin, but cross-cousin marriage is preferential.

7

105

There are exogamous totemic patri-sibs, presumably divided into lineages. Among the ruling Tussi, sibs tend toward endogamy rather than exogamy.

Kinship Terminology [from Bourgeois]

Fa--data, so, se. Mo--mama, nyoko, nyina. So, SiSo(ws)--umuhungu. Da, SiDa(ws)--umukobwa. Hu--umugabo. Wi--umugore. Co-wife, HuBrWi--umukeba. Elder sibling of same sex--mukuru. Younger sibling of same sex--murumuna. Br (ws)--musaza. Si(ms)--mushiki. FaWi--mukadata.

FaBr--sewabo. MoBr--inarume. FaSi--senge. MoSi--mamawacu. SiCh(ms)--umwishwa. BrCh(ws)--umusengezana. BrSo(ms)--umhungwacu. GrFa--sogokuru. GrMo--nyogokuru. GrCh--abuzukuru. WiFa, HuFa--databukwe. WiMo, HuMo--mabukwe. DaHu--umukwe. SoWi--umukazana. SiHu, WiBr, WiSi, WiBrWi--muramwanje. HuBr--umugabwacu. HuSi--muramukazacu. BrWi(ms)--umugoracu. BrWi(ws)--muramukazanje. WiSiHu--bendahamwe. HuSiHu--muramwacu.

Cross-cousin--umuvyara. Parallel cousin terms are derived from those for siblings.

Settlement Pattern

Except among the Twa, who live in migratory bands, the prevailing settlement pattern is a neighborhood of dispersed homesteads. Concentrated villages, however, are found in Uzige and on Lake Tanganyika. Dwellings are of beehive shape--nearly hemispherical--and are made of thatch laid on plaited reeds over a wooden frame. In wealthier families they are grouped in compounds.

Community Organization

There is possibly some tendency toward lineage localization.

Local Government

Each community has a headman and a council of dignitaries. A headman may be replaced by a district chief, but succession is normally patrilineal.

State

The Rundi are organized in an autocratic feudal state under a divine king, who is also chief priest. The royal emblem is a drum. The king is assisted by a supreme council, a chief minister, and various specialized officials, and his mother exerts important influence at court. The state is administratively divided, for tax collection and other purposes, into provinces and districts, each with chiefs. Provincial governors are members of the royal lineage or of the four other lineages into which the king may marry [he may not marry the daughter of a royal prince]. Most offices are filled with Tussi, but district chiefs are occasionally Hutu. Succession to all offices is patrilineal, and usually by primogeniture.

Warfare

Internal warfare is common, especially strife over succession to the kingship. Neither cannibalism nor headhunting is practiced. The Rundi were formerly almost perpetually at war with the Ruanda.

/Although the subject matter of this article centers on values and cosmology, many aspects of Rundi society are discussed because of their relationship to the main theme. Among these are the tri-partite caste system, economic factors such as the control of cattle by the aristocracy, interpersonal relationships, individual and group status, and the conceptions of inequality, authority, and reciprocity in exchange transactions. Directly related to the central subject are the author's discussions of man's relation to material and spiritual worlds, mythological origins, ideas of death and afterlife, and the role of divination and sorcery. The article especially reveals the close interrelationship of various aspects of the culture. The author is an ethnologist at

/Books II, III, and V have not been processed for the files. These chapters deal primarily with mythology and historical matters. In the sections processed, the following subjects are treated: Physical and ethnological make-up of the Ruanda, political and social organization, psychology of the people; a short historical

5: Pagès, G.

account of the Hamitic invasion of Ruanda; the Royal court personnel and activities; and funeral practices. Almost all discussion of Rundi culture by the author is based on observations made in and about the royal court. Although much of the author's writing is derived from personal experiences among the Rundi, it is apparent that a good deal of his data was obtained from unidentified informants and perhaps suffers from having been transmitted orally through several individuals. The author makes a number of general statements about "blacks" which, if interpreted as "Rundi," may have some authority; but if taken at face value, seem to be unfounded generalizations. The author was a missionary of the White Fathers. -- Analyst/

9: Maquet, Jacques J. The Premise of Inequality in Ruanda: A Study of Political Relations in a Central African Kingdom. London: Oxford University Press for the International African Institute, 1961.

Pp. viii, 200; introduction; 7 photographs; 2 maps; 4 diagrams; 3 appendices including bibliography; index.

Yale: DT449 R8 M36

[This study is primarily a reconstruction of Ruanda social structure as it existed in the first decade of this century just prior to significant modifications resulting from European influences. Maquet focuses upon the political system, but the first 4 chapters provide the necessary contextual information. Particularly good is the material on kinship, which includes a very thorough analysis of kinship terminology and kin behavior, a description of the patrilineal descent groups, and a discussion of marriage and family relations. Subsistence patterns, habitat, and economic organization are treated more briefly. The pivotal factor in Ruanda social and political relations is the caste system composed of 3 groups: the pastoral Batutsi who constitute c. 10% of the population and

9: Maquet, Jacques J.

are the dominant group; the agricultural Bahutu - c. 85% of the population; and the more or less outcaste hunting and gathering Batwa - c. 5% of the population. More strictly political structures consist of the central government headed by the king, and the territorial-administrative system which serves mainly as a channel by which tribute is collected and distributed. Significant political functions are also fulfilled by the military organization and the clientage structure (buhahe) which conforms to a type of interpersonal relationship which has been called "feudo-vassalage." The premise of the inequality of individuals and groups, particularly with reference to caste, underlies all of these structural arrangements which are designed to accomplish two major but antithetical functions - economic exploitation and the maintenance of social cohesion.

Since this is a reconstruction based upon interviews rather than a description of observed behavior, Maquet's methods are of crucial importance to an evaluation of the reliability and validity of his structural analysis. He has had extensive field experience in Ruanda, and while the basic data for this book were obtained in the period 1949-1951, these were supplemented by materials derived from fieldwork in 1952-1955, and 1956-1957, as well as from the voluminous published literature. His informants

9: Maquet, Jacques J.

were almost entirely Tutsi who were familiar with the pre-European political system, particularly from direct experience. Detailed questionnaires on major topics were developed and administered, and an unusual feature of the book is Maquet's careful specification of the extent of agreement by informants on given issues. (Cf. Appendices 1 and 2 for a reproduction of the questionnaire on political organization and a tabulation of the results obtained.) The picture which emerges from all of this of traditional Ruanda social structure is a generalized and formalistic one, but it is internally consistent and convincing. It is of value both in its own right and as a base line for the study of social change. --Analyst]

[Using as the central core of her study the Rundi ideals of the acquisition of political power and authority, wealth (in the form of cows, land, material goods, money, and the things it can purchase), respect and love from one's dependents, and elegance of appearance, manners and material possessions, the author attempts to show how a woman in Rundi society, despite her low social status, may achieve these goals through careful manipulation of her "environment," providing that she starts with a common denominator of relatively high caste position, intelligence and just plain luck. The author, a professional anthropologist, also presents a detailed study of the various social roles played in the society by a woman as mother, wife, co-wife (in a polygynous union), mother-in-law, sister-in-law, and unmarried girl. Caste differences in status are also clearly indicated here.

The differences between Tutsi, Hutu, and Bemba childrearing are summed up in a final chapter. --Analyst/

197 the language of the Nandi in the Uganda protectorate. The language of the Nandi, of all the languages of East Africa, seems to resemble most closely the pure Hamitic language type since the Nandi probably are the remnants of a former Galla invasion. (A. W. Crabtree, "The Languages of the Uganda Protectorate," Journal of the African Society, January, 1914, pp. 158 ff.)

194 An exact study of the peculiar manner in which the Batussi speak the Bantu idiom, Kirundi, will also yield many intimations and indications in this respect, for it is obvious even to an observant layman that the Batussi differ from the Bahutu in speaking Kirundi. They have a different accent, pronounce certain sounds differently, and combine the syllables differently. In general, it seemed to me that in both Ruanda and in Urundi the Batussi speak Kirundi with a much softer intonation and also that they have a tendency to swallow the vowels of the final syllables. Instead of the 's' or 'ss' pronounced by the Bahutu, they use a very soft 'sch' or 'dsch': instead of Munjahasi they say Munjahasch'; instead of Lanongo, Lanong'; instead of Lubassa, lubasch'. It is also often difficult to say whether the final vowel pronounced is an 'a,' or 'e.' It is also difficult to hear the difference in the pronunciation of 'r,' 'l,' and 'd.'

●113 It would serve no purpose to list examples of modern Kirundi at this point since one may consult the comprehensive Dictionnaire Français-Kirundi by Father J. M. van der Burgt and the small Dictionnaire Français-Kirundi et Kirundi-Français by Father F. Ménard which is specifically intended for missionary use (No. 29). Van der Burgt reproduces a few examples of stories, fables, songs, and hymns with an interlinear translation in his Dictionnaire, pp. 96, 292-293, 332-334, 339-342; I myself cannot add anything to them. In conclusion, however, I should
539 like to add a few proverbs which are noteworthy for their sharpness of observation and brevity of expression (No. 19, p. 470).

whenever goods are given to someone, a return is expected. This return is not the exact counterpart of what has been provided and is not due immediately or at a precisely determined time. By the granting of a favour, an almost permanent relationship is established between two persons, extending eventually to their immediate relatives. Undoubtedly some obligations are more formalized, such as those resulting from some kinds of exchange (*kuguza*), loan (*gutiza*), &c. But many relations which, in Western culture, would result in strictly defined obligations, do not have the same consequence in Ruanda. The man who receives a service or a gift is not expected to return its equivalent immediately. Such behaviour would even be frowned upon. He should wait till he is asked to return other services or goods. This is indeed the intention of the man who grants the favour: to put somebody under an undefined obligation.

There are several reasons for these relations of reciprocity. First, in an economy in which there is no standard value in relation to which everything may be assessed, it is not easy to determine a precise equivalent for goods. Second, where there is no standard medium of exchange, such as money, which can be accumulated without deteriorating, it is usually difficult to have the required equivalent to hand. Third, in a material culture in which the technological development does not allow of specialization, one has to rely on many people. It is thus very useful to have permanent debtors. Finally, and this is very important, the principle of reciprocity is much more consistent with other parts of the Ruanda culture than are alternative methods. In that culture people are not regarded as independent and equal. Consequently any relation will be so interpreted as to magnify the elements of dependence and inequality implicit in it. Moreover, to have power over somebody is an ultimate value for the Batutsi. They will thus prefer to keep a debtor under the vague obligation to do something, some day, rather than receive immediate compensation.

Population Elements

563 The population of Ruanda is made up of three elements which anthropologically and culturally are very different, although they speak the same language.

The ruling group are the Batutsi [Tussi] herdsman who are anthropologically quite close to the Bahima [Hima] of Mpororo. There is a great gap between them and their subjects.

The Bahutu [Hutu] farmers make up the bulk of the population.

The Batwa [Twa], an outcast hunting tribe who also engage in rainmaking and pottery, form the third element.

197 Batutsi. The language of the Batutsi is identical with that of their Bahutu subjects except for certain phonetic dialect differences as yet unexplained by scholars. Nevertheless, the Batutsi, as well as the Bahima, must be linked with the Nilotic-Hamitic pastoral tribes on the eastern edge of the Nile Basin as well as those on the bank of the Nile to the south of the great Nile swamps. The Batutsi form the main part of an older migrating group which was wedged in between Lake Victoria and the forests of the Congo Basin. The Bari and their relatives probably broke out later in a northwesterly direction towards the Uele Basin. The Massai [Masai] group apparently poured into the regions to the east of Lake Victoria.

101 174

197 If we consider the word "Hamite" as a purely linguistic designation, the Batutsi are not Hamites at all, and even less Semites, as they are called by Rehse (1) and Kandt (2). They simply belong

[113]

1. Rehse, H., Kiziba, Land und Leute [Kiziba, Land and People] (Stuttgart, 1900), p. 110.

2. Kandt, R., Caput Nili [The Head of the Nile] (Berlin, 1904), p. 339.

the interlacustrine group of the Bantu language family.

144 The word "Hamite" is, however, also used in a different sense. We speak of a "Hamitic anthropological type." This designation refers to the anthropological element so characteristic of the tribes who have mixed relatively little and who speak Hamitic languages, the Somal [Somali] and Galla, for example. In this sense [123] one may count the Batutsi among the Hamites. The Hamitic anthropological type is more obvious in them than in the Massai to the east and the Bari and Kakwa in the northwest. They are less "Negroized."

173 131 According to their traditions, the Batutsi come from the north, which, however, refers essentially to the Buganza district south of Lake Mohasi, not to the distant lands on the other side of the Victoria-Nile, the Bukedi, traditional homeland of the Babito. This might mean that the Batutsi have been in their present country long enough for the other, older traditions to have faded, leaving only those concerning the founding of the Ruanda state.

Karagwe, however, is also mentioned in these traditions. Perhaps this has something to do with the older migration of the Ruanda Batutsi. Presumably this migration took place along an axis extending from the steppes in the northeast, along the Karagwe border, and across Lake Mohasi to Nduga and Mukinjaga. It is along this axis that one finds the strongest concentration of Batutsi.

131 Dr. Kandt states that the original homeland of the Batutsi is the Mhogo Basin (districts of the upper Nyawarongo). Kissaka also has a large percentage of Batutsi. Baumann (1) mentions

[113]

1. Baumann, O., Durch Massailand zur Nilquelle [Through the Land of the Masai to the Source of the Nile] (Berlin, 1894), p. 204.

isolated groups of Batutsi in the mountains in the northwestern part of Tanganyika. Only in the Muwissi Mountains, in the southwestern part of Issawi, are there reputedly very few Batutsi. (2)

2. Travel reports of Prof. Hans Meyer

181 563 military virtues. In view of this, it is difficult to explain the rule of the Batutsi minority. We are obliged to assume either that after the formation of the large states the herdsmen enjoyed an era of peace long enough to cause such a far-reaching psychic re-orientation or that the privileged position of the Batutsi is the result of intellectual superiority.

563 [578] The present power of the Batutsi is due to the clever way in which they play the Bahutu off against each other. The Bahutu are powerless against outsiders because of their internal feuds. In contrast, the Batutsi always present a solid front and defeat them because of their superior internal organization. The Bahutu, therefore, regard them as great magicians and are very much afraid of them.

Dr. Hans Meyer gives the following account of the conditions in the southern regions:

"In Urundi and in Uha the Watussi are much less prominent in public affairs and in dealings with Europeans than they are in Ruanda. You see few of them in the villages, often only one in every community, namely, the mtuale [official] of the chief who lives away from the main roads. Their domination over the Wahutu is by no means as great as in Ruanda." (1)

[113]

1. Travel reports of Prof. Hans Meyer on German East Africa. Mitteilungen aus den Deutschen Schutzgebieten 1911, p. 355.

[162] [128] The Batutsi make up barely a tenth of the population of Ruanda. Their number is greater in Kissaka and Nduga, but in the northwest there are probably less than 120,000. The Batutsi [163] are said to be less fertile than the Bahutu. Whether their lower infant mortality compensates for this I do not know.

The Mututsi is by nature entirely different from the Muhutu, even if one disregards the obvious anthropological differences. He [48] moves differently and carries his spear in an entirely different 563 fashion, grasping the end of the lower eighth of the weapon and 191 leaning it against his shoulder. His accent in speaking is also

563 in their smaller stature, their squarer build, and their shorter legs.
142 The contrast is strongest in Mulera and Bugoye where the Bahutu gradually show transitions to the Bantu of the Congo forest. In central Ruanda the Bahutu show a not inconsiderable Batutsi influence. Here their features are more regular and more finely chiseled, their bodies not so stocky, and their heads longer. It is probable, [144] therefore, that the Muhutu owes the characteristics which distinguish him from the Bantu of the Congo forest chiefly to the "Hamitic" influence of the Batutsi. However, we must not lose sight of the possibility of a concurrent Nilotic influence which is so striking among the Massai and Bari.

167 Emigrants from the Congo state have played an important
101 role in the settlement of Mulera and Bugoye. Dr. Kandt (1) uses

1. Kandt, R., Caput Nili (Berlin, 1904), p. 290.

the name Bakiga (Wakiga) for the immigrants. He translates it as "inhabitant of Pori." My inquiry revealed that "Bakiga" is the general term for the inhabitants of mountains, in contrast to "Banyamuyaga," the inhabitants of plains. On his surveyor's
103 sketch of the map of Mpororo, Lieutenant Schwarz calls the country southwest of Buischingato (Luizigatu) "Rukiga." This was formerly called Ndorwa, since it is mountainous. The region southwest of Nyundo is also called Rukiga. Father P. Barthelèmy, who knows the country and is versed in the language, believes that the name of the Rugege Forest in the southeastern part of Kivu is derived from Rukiga.

167 The immigrants from the Congo are closely related to the
101 Banyaruanda. On the Belgian map (2) the inhabitants of the

[113]

2. Carte de l'État Indépendant du Congo [Map of the Independent Congo State]. Scale 1:100,000. Lith. Justus Perthes, Gotha, 1907.

western edge of the graben [Rift Valley] are designated simply as

167 Barundi [Rundi]. Bashi or Bahunde are the terms the Bagoye use
101 in referring to the people from Bunyabungu, Itambi, Buyungu, Kishari, Butundwe, and even Bgisha, with whom they can easily make themselves understood. The first designation supposedly
[194] alludes to the sibilants which are so prominent in their dialect. In their culture the Bashi also show many similarities with the Congo Bantu. Thus, the anthropological and cultural transition to the Forest Bantu takes place within the Kirundi language area. The similarity of the Bahutu who were not influenced by the Batutsi to the Forest Bantu argues in favor of the view that the population of Ruanda is the result of a metamorphosis caused by contact with the Batutsi.

563 [130] Batwa. The Batwa comprise the third element in the
144 population of Ruanda. They stand out because of their relatively small stature. The contrast between them and the very tall Batutsi is so striking that the altogether erroneous identification of Batwa with Pygmies has gained credence even among such an outstanding expert on the country as Dr. Kandt. (1) I have taken a great many

1. Kandt, R., Caput Nili (Berlin, 1904), p. 303.

measurements, and I am forced to conclude that this assumption is not valid. I agree with Lieutenant Von Parisch (2) who found that

[113] 2. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903 [Two Journeys Through Ruanda, 1902 to 1903]," Globus, Vol. 86 (1904), p. 76.

the Batwa were only slightly shorter than the Bahutu.

Prof. Hans Meyer (3) made the same observation. He says:

3. Travel Reports of Prof. Hans Meyer on German East Africa. Mitteilungen aus den Deutschen Schutzgebieten 1911, p. 349.

563 "The Batwa at Musinga's court and in the Issawi region, as well
144 as those in northwestern Urundi, are not very different from the Wahutu, and there is doubtless considerable blood relationship."

Baumann (4) goes still farther and maintains that the Batwa

4. Baumann, O., Durch Massailand zur Nilquelle (Berlin, 1894), p. 215.

are no smaller than the Barundi.

The latter opinion is also erroneous. Anthropological analysis (5) proved that the Batwa do have a Pygmy element as

[113] 5. Czekanowski, J., "Verwandtschaftsbeziehungen der zentral-afrikanischen Pygmäen [Aspects of Kinship of the Pygmies of Central Africa]," Korrespondenz-Blatt der Deutschen Gesellschaft für Anthropologie, Ethnologie und Urgeschichte, 1910, pp. 101-109.

one of their components. Although other, subsequent mixtures have lessened the importance of this element, nevertheless it accounts for many characteristic features of the Batwa.

The Batwa are strikingly similar to the Forest Bantu and stand midway between the latter and the Bahutu. This conclusion, unexpected at first glance, is simply explained if we assume that the more isolated Batwa were less open to outside influences and that anthropologically they are relicts of an older order in Ruanda. If we assume that formerly the population of Ruanda was more closely related to the Forest Bantu, then the Batwa, from whom we may learn about former conditions, must also be similar to the Forest Bantu. This is, in fact, the case. Apart from their anthropologi-
563 cal relationship, the Batwa are also said to resemble the Forest
266 Bantu in a very characteristic custom. They are cannibals, at least in northwestern Ruanda among the western group of volcanoes. Nonconflicting rumors about this custom have been reported by both Count Von Götzen (6) and Von Parisch (7).

[113] 6. Götzen, G.A., Count Von, Durch

563
266
[113]

Afrika von Ost nach West [Through Africa From East to West] (Berlin, 1899), p. 233.

7. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903," Globus, Vol. 86 (1904), p. 77.

[131] My research has led me to the same conclusion. The Pygmies of the Ituri Forest are not cannibals, as is well known. This is the chief difference between them and all their neighbors.

411 Like the Forest Bantu the Batwa are said to put traps and poisoned thorns on their paths and to guard them with poisoned hand darts. They also use a bow with a rattan string. Otherwise the Batwa differ very little from the Banyaruanda in their material culture. I shall speak of this in more detail later.

197 Whether the Batwa have their own language must be left as an open question. The Kitwa ["Ki-," a prefix indicating a language] words collected by Father J. Van der Burgt (1) are

[113]

1. Van der Burgt, Father J.M.M., Eléments d'une Grammaire Kirundi [Elements of a Kirundi Grammar]. Supplement. Langue des Watwa (kitwa)-Pygmées [The Language of the Watwa Pygmies, Kitwa]. Mitteilungen aus dem Seminar für Orientalische Sprachen zu Berlin 1902, Section III, Afrikanische Studien [African Studies], pp. 79-108.

familiar in Ruanda and are said to belong to an archaic local dialect of Kirundi.

194 Father L. Classe (2) points out that the Batwa have difficulty

621
[113]

Dr. Kandt (2) mentions, however, that there are also Batwa

2. Kandt, R., "Bericht über meine Reisen und gesamte Tätigkeit in Deutsch-Ostafrika [Report on my Journeys and Entire Work in German East Africa]," Mitteilungen aus den Deutschen Schutzgebieten 1900 [Reports on the German Protectorates 1900], p. 246.

living in the forests of Sabinio.

In Ndorwa the following influential Batwa chiefs were mentioned.

5 and 6. Ngurube and Katulenge. Ngurube's Batwa are called Puniu. (3)

3. Parisch, F.R. Von "Zwei Reisen durch Ruanda 1902 to 1903," Globus, Vol. 86 (1904), p. 76.

7. The Batwa on Idjwi Island were visited by Dr. J. Mildbraed and Dr. H. Schubotz and are supposed to be more similar to the Pygmies than the rest of the Batwa.

8. Batwa of southern Ruanda. There are large colonies of Batwa in the Rugege Forest and in the forests in the southwestern part of the province of Nduga. This [134] group is called Mashami or Machaba. Their forest belongs to the Njaruguru country which was formerly under the jurisdiction of Chief Kaizuka (1).

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903," Globus, Vol. 86 (1904), p. 76.

9. Batwa from Kabgaye. Apart from these larger groups, I met a colony of 20 to 25 who lived in the vicinity of the Kabgaye Mission (Marangara) and were potters.

10. Finally there are Batwa in Nyanza who live there in order to serve the king. From time to time they are relieved by fellow tribesmen.

412 have a sharp, chisel-like blade (igembe) which fans out at the cutting end. Its narrower part (intereri) fits into the hole (intoboro) at the thick end (impumo) of the handle (omuhini). The bush knife is entirely forged out of iron. The upper third is wide and has one sharp cutting edge (lulimi). The upper half (isatuliro) of this third is bent like a sickle and comes to a point. The remaining two thirds is round. The lower third is driven into a wooden [140] handle (kilindi) that is slightly thicker at the lower end and reinforced above with wire or smoothly forged iron.

313 As a result of the extensive deforestation, the lumber shortage is a very important economic problem. In some places wood
372 must be brought in from long distances. In the northeast where wood is hard to come by, dried cow dung is used for fuel.

245 Under the influence of Catholic missions the natives have
197 begun to plant trees. Moreover, outside the missions' sphere of influence I saw new plantings of mussavi in Ruangeri on the road to Kisenyi, four and a half hours from Ruasa.

231 Animal Husbandry. The inhabitants of Ruanda keep cows, goats, sheep, chickens, and dogs. Stockraising plays an important role in the economic and political life. Cattle farming is almost exclusively the [141] occupation of the ruling Batutsi. Sheep and especially goats are raised chiefly by the agricultural Bahutu. It is only in Mulera and Bugoye that the Bahutu commonly have cows. The animals are cared for by the men. Out in the pasture, however, one sometimes sees a girl tending a cow or a small herd of goats.

231 Cattle raising is considered the most distinguished occupation
554 a man can have. This phenomenon is explained by the superior social position of the Batutsi. "In Uganda, where cattle raising is despised, it is almost impossible to persuade a Waganda [Ganda] to go into it." (1)

with a percussion drill (umutwero).

Industry. In Ruanda, as Dr. R. Kandt's (1)

463

[113]

1. Cf. the monograph "Gewerbe in Ruanda [Industry in Ruanda]," "Zeitschrift für Ethnologie, 1904, pp. 329-372.

studies have already pointed out, industry has the character of handicraft or hired work. There are few branches of industry on the level of home industry where at times surplus goods not used in the household are sold. This is true, for example, of basketry which generally is produced by the women.

Beer which is brewed in every household seldom figures in business transactions and then

Fig. 41. Oar from Mulera. (1/12 actual size. III E 13731. 181 centimeters long.)

only between friends, in exchange for the care of cows and for rented fields.

Potters and woodworkers are craftsmen who produce for the market, whereas metalworkers are wage earners who work on order. Wiredrawers [149], as well as the producers of barkcloth, reputedly work at the home of their employers.

439 Aside from trade in hides, there is an old, respectable foreign trade. Iron hoes are imported from the Congo state and salt from Lake Edward. These are paid for chiefly in goats. Goats are also used to pay for ivory and rubber smuggled out of the Congo.

438 Internal trade consists above all in the exchange of local products between producer and consumer. Barter is carried on in food, iron, clay products, sheep and goats, salt, etc.

The people of Issawi get their salt from Njaruguru. It is brought there from Urundi. They buy their hoes in Mukinjaga. This province does not manufacture them; they are imported from Bunyabungu. The northern provinces get their iron from Bgisha and their salt from Katana on Lake Edward where salt from Kagwe is sold in large quantities. Salt is also prepared within the country, in Mulera, and, according to Dr. Kandt (1), in a

1. Kandt, R., Caput Nili (Berlin, 1904), p. 513.

southern bay of Lake Kivu. I do not know whether Busindja salt (2)

[113]

2. Capus, R.P., "Eine Missionsreise nach Uha and Urundi [A Missionary Journey to Uha and Urundi,]," Petermanns Mitteilungen 1898, p. 185.

which is obtained in Kigoma west of [163] Mumurumba on the southern border of Ujungu, reaches Ruanda.

Copper is imported in small amounts from Urundi and in larger amounts from Busindja in payment for ivory. Goats are exported from Mulera, Kissaka, and Njaruguru. Sheep are exported from Mulera. Mukinjaga produces the prettiest mats. The colored mats of the Batutsi are made in Nduga. Bamboo baskets are made in Bwischascha, Bugoye, and Mulera. Ndorwa exports otter skins. The most beautiful spears and the best arrows are made at Mount Ndisa. All these goods are also traded within the country.

438 484 This trade is conducted by native middlemen who, in contrast to foreign traders (bachuruzi), are known as bagenza. They

304 body with the point of the knife. Later, when the design stands out due to the skin injury, short, deeper incisions are made with the razor. The incisions, or rather the punctures, are made while the skin is pinched and lifted with two fingers. The skillful artist does not draw blood, and the punctures close with the appearance of lymph. After a few days the scabs are scraped off and rubbed with butter and cow dung (kisheshe). No pigment is used. After the wounds have healed, the thickened skin at each incision forms a raised design.

If the tatooing is done clumsily, keloids form where the incisions have been made. This condition is quite common in Mulera where tatooing is done chiefly by Batwa. Keloids are a sign of the Lake Edward region, for among the Bakondjo living there very large keloid formations are intentionally produced, particularly on the back. In Nduga, the country of tatoo artists, and among the Batutsi, the designs are very delicate. The price of the operation is a goat. A person gradually builds up a collection of designs during a lifetime.

Fig. 89. Tattooing Patterns from Ruanda.

Tatooing, in Kissaka at any rate, seems to have no religious meaning and is performed without any kind of ceremony.

Circumcision is not practiced in Ruanda, but it is not unknown. This is proved by the proverb: "In the compound through which many people pass, circumcised children are born."

At initiation ceremonies and, according to Father
302 Schumacher (2), at [184] weddings, people are painted with kaolin

●[113] 2. Schumacher, Father P., "Die Ehe in Ruanda [Marriage in Ruanda]," Anthropos, 1910, p. 878.

(runoni). However, the practice does not seem to be limited to these occasions, for twice I saw painted children. One child was completely covered with a mixture of clay and ocher. The other had only an oblique line drawn across its forehead over the eyes. There was no question of initiation in this case, for the children were only five and seven years old.

411 The Batwa carry a reinforced bamboo bow. It consists of a split bamboo staff, the hollow of which is reinforced with a stick of wood. The bow is more than one and a half meters tall and more than half of it is reinforced. The finished bow is bound with grass along its entire length, so the reinforcement does not show. The accompanying illustration of a child'w bow which I saw in Mulera clearly shows the manner of this reinforcement. This bow, however, is not made of bamboo, and therefore the reinforcement is not fitted into the natural groove, but it is in the proper position, namely, on the outside, away from the archer as he pulls the bowstring.

In Ruanda the string of the Batwa bow is made of a strip of bamboo braided at either end before it is strung. (1) The rattan

[13]

1. Luschan, F. Von, "Bogen und Pfeile der Watwa vom Kiwu-See [Bows and Arrows of the Watwa of Lake Kivu]," Zeitschrift für Ethnologie, Verhandlungen, 1899, pp. 634-640.

string is wound with grass for protection against wear.

Lieutenant Bischoff discovered that the Urundi Batwa used a forehead bow [Stirnbogen]. These forms are not familiar to me in Ruanda, but they are said to occur in Butembo.

Arrows, like bows, can be divided into two groups. The first group includes the arrows for Ruanda bows. They have a [190] notch into which the twisted bowstring fits. The second group includes arrows that correspond to the Batwa bows, and these are characterized by smooth, often bulbous ends, similar to the head of a drumstick.

The arrows of the first group have inserted iron points and three radial segments of clipped feathers. The split feathers are laid along the shaft and bound securely to it. The two ends of the shaft are also bound to protect against splitting. At the nock end the binding is narrow, while at the point it is about five centimeters wide. The arrows are made of wood. The points of the arrows usually have the form of sharply tapered, long pyramids

841 adornment at the proper time (first menstrual period after mar-
302 riage), one of the partners will die young. After her head has
585 been shaved the wife receives gifts from her husband.

585 When the woman has put on her cowhide, she pays her
574 parents a visit. It sometimes happens that if the menstrual period is early this visit precedes the gift of the first hoe. On the way to her parents she has her head wrapped in the skin and is wearing her best jewelry. At her parents' house she grinds flour and fills a basket, piling it high. She removes as much as is piled over the edge of the basket and takes this to her husband. It is cooked
[842] to a stiff mush, and husband and wife eat it together. This ceremony is also supposed to guarantee numerous descendants.

593 Children are prominent in the family. The parents love them tenderly and treat them well. Although the intimate relationship between mother and child excludes the father somewhat, nevertheless the husband and wife show a certain attachment and tenderness toward one another. This is said to be true particularly of the Batutsi.

In Mulera, when a man goes on a journey, his wife pours off a little beer from each jug used and puts it aside. If the man returns and finds no beer, he concludes that his wife has [redacted] thought of him and has been unfaithful to him.

586 In Nduga, as we have mentioned before, marriages are of only moderate duration.

585 The Mulera wedding has been beautifully and completely described by Father Felix Dufays (1), and the marriage customs in

[113]

1. Dufays, Father F., "Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda [Song and Singing during Courtship and Marriage in Mulera-Ruanda]," Anthropos, 1909, pp. 847-878.

other parts of Ruanda were discussed by Father P. Schumacher. (2)

2. Schumacher, Father P., "Die Ehe in Ruanda [Marriage in Ruanda]," Anthropos, 1910, pp. 870-906.

631
642 The modern European who is accustomed to sharply demarcated administrative districts and has no idea of social equilibrium based on the interweaving of economic interests finds this principle of administration absurd. That is how Captain Göring (1)

[13]

1. Captain Göring, "Zu den Unruhen in Urundi [On the Unrest in Urundi]," Deutsches Kolonialblatt, 1911, p. 552.

judged conditions in Urundi. He says: "The division of the country is entirely without system. One often finds watuale who own various lands widely separated from each other."

I was told that Lwabugiri's policy is being followed by Musinga. He is said to prefer appointing chiefs who are directly responsible to him and to give them lands. These unimportant, free persons, mindful of the king's protection, form an element [268] independent of and even hostile to the high chiefs. They guard their own interests and resist the particularistic tendencies of the powerful.

This policy tends to erase the boundaries of individual provinces, and one encounters great difficulties if he asks about the political division of the country.

After this brief discussion of the central organization of the state which is made up of the king and a dozen and a half powerful feudal lords, we shall now touch on the political conditions in the individual sections.

The organization of Kissaka has the following pattern. The largest part of the country is divided among three large feudal lords, Kanuma, Niamutezi, and Lutangabo. Their lands are interspersed in such a way that no separate provinces can be formed. This increases their opposition to each other. Hence the dignitaries check on one another and fight one another with accusations and intrigues. In this way mutual control, which is very useful to the state, is established, as well as a quite stable equilibrium.

These three high chiefs of Kissaka live almost constantly at the court of Musinga in Nyanza, and when they obtain permission to visit their holdings, their sons remain behind as valuable hostages, a guarantee against possible separatistic

651 Parisch. (1) He mentions: [272]
635

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903 [Two Journeys through Ruanda 1902-1903]," Globus, Vol. 86 (1904), pp. 74, 78.

Province or Region	Chief (mutware)	
	Ku butaka	Ku muheto
Bugoye	Bushakwe	Bushakwe
Mukinoni	Bushakwe	Rudegambia
Bwischascha	Bushakwe	Rudegambia
Mukinjaga	Lubilinda	Rudegambia
Niantungu . . . . . (between Bwischascha and Nduga)	Bushakwe	Kabare
Munjaga . . . . . (belongs to Nduga)	Lujondo	Kanuma
Kawagali . . . . . (belongs to Nduga)	Bushakwe	Bushakwe

Von Parisch also mentions the mutware ku muheto Balahanda who led the attack on Count Von Götzen.

651 The butaka, it seems, is always collected by the chief to whom the land is granted. The muheto tax, on the other hand, goes to the chief who is entrusted with the king's cattle in the district. He has the right to pasture cows on the harvested fields of the farmers, which is a very considerable burden to the population. Thus, for example, the grass on many hills in Bugoye belongs to Rudegambia, although Bushakwe is the high chief of the region. On my way to Kisenyi I saw many uncultivated fields that had to lie fallow because the Batutsi removed their cattle too late for planting.

Dr. Kandt (1) also speaks of two chiefs in the provinces. He

[113] 1. Kandt, R., "Ein Marsch am Ostufer

65/
[113]

des Kiwu [A March along the Eastern Shore of Lake Kivu]," Globus, Vol. 86 (1904), p. 213.

calls one the chief of the people and the other the chief of the cattle.

The ilali tax seems to be collected by special officials who at the same time are entrusted with the supervision of the Europeans who travel about the country. In some cases this office is carried out by batware ku muheto or batware ku butaka.

The amount accruing to the chiefs when they collect the taxes is called musogongero and is fixed for the butaka and muheto. For the ilali this does not seem to be the case. The amount varies from one situation to another, in proportion to the size of the caravan of Europeans that has to be provided for.

In order to describe the taxes somewhat more in detail, we herewith give the tax burden carried by the three communities on Katebe and Kitebe which we have discussed before.

[273] Taxes for the Communities on Katebe and Kitebe -

	Baishaza	Balyolyo	Bagwabiro
Population (including bagaragu)	104	61	41
Male clan members among these	47 + 2[1)]	21	21
Butaka for Musinga	9 Kaniki = 27 hoes	10 hoes	6 hoes
Musogongero for Chief Bizira Kuzama	6 hoes	?	?
Muheto	3000 butega	1000 butega	1000 butega
Musogongero	3 hoes to Makobi	Goat for 5 hoes to Murahangubo	
Ilali (through Gamuji)	1 package of beans	Small pot of beer, basket of sweet potatoes, basket of beans	1 load of beans
Buletwa	none	none	none

1) Two sons-in-law.

685 except through the mediation of the chiefs. They try to pay
[867] them back by thievery. Parents try to teach their children not to steal by burning their fingers.

684 Crimes against established morals are also severely punished in Ruanda, although it is commonly maintained that these punishments are being mitigated. Formerly seduced girls of Kissaka, as well as their seducers had to pay with their lives. They were either thrown into the water or hanged from the roof of the hut above the burning hearth. At the present time the severest punishment is to banish the girl.

681 The official death penalty in Ruanda is to break the criminal's neck (kuhotora) or to impale him. In Lwabugiri's day, when the death penalty was more frequently administered, it is said that criminals were also thrown into the swamp with their arms and legs cut off. However, among the skulls collected by my men in Nyanza, in the swamp into which executed criminals were thrown, [279] there were some that showed traces of blows from a bush knife.

In the kuhotora type of execution, the head is put between two pieces of wood and twisted back with this leverage device.

The royal executioner, the Mutwa Muhenehene, is said to kill the king's victims with a spear.

The bodies of those executed in Nyanza are allegedly given to the king's dogs to devour.

The impaled criminal whom Dr. A. Römer had an opportunity to observe was tied between two bamboo sticks running the length of the body, one in front, the other behind. His hands were tied together in front. A stake three or four centimeters thick ran through his body from the perineum to the cranium, without injuring the neck externally. The corpse had no lower leg bones. It was already so decomposed that one could not tell whether these bones had been picked off by hyenas or chopped off by the executioner. The natives who were questioned were not in agreement about this. Dr. Kandt (1) gives the word kuvamba for impaling.

[113] 1. Kandt, R., "an account of his travels and research in Ruanda in Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 120.

175 Mutara Lwogera was also a successful warrior. He conquered
643 Bugoye and in 1876 added Kissaka to Ruanda by force of arms.

Lwabugiri Kigeri who was visited by Count Von Götzen, the first European to do so, was also a very belligerent ruler. He increased Ruanda's possessions in the Rutshuru Basin as far as Lake Edward.

175 In order to characterize the personality of Lwabugiri some-
643 what more exactly, we must mention that one of his chief delights
661 was stealing cows. If the owner of the cattle resisted, he was punished with confiscation for having the boldness to act against the muami [ruler]. If he did not resist, his cows, which he had learned to conceal, were simply taken away from him. These cow thefts with which Lwabugiri consciously promoted the splitting up of feudal possessions, as well as the constant wars, made him very troublesome to the Batutsi.

175 Without doubt the rule of Lwabugiri was a period of great
643 expansion and glory for Ruanda. The state enjoyed such a high reputation that neither the Arabs nor Stanley and Emin Pasha ventured to enter it. Lwabugiri undertook numerous campaigns, among them an unsuccessful one to Nkole (1891?). He wanted to get King Ntare's cows in order to supplement his own herds which had been very much decimated by disease. He waged war three times with Urundi, twice with Idjwi Island, three times against Bunyabungu, and twice with Kissaka. Moreover, he laid waste the country of Mulera three times in order to punish rebellious subjects, and he pillaged the Gana Mukari (1) three times in his

[113]

1. Brard, A., "Skizzen aus Ruanda [Ruanda Sketches]," Afrikabote, 1900-1901, p. 99.

ancestral province because of the revolt which was supposed to have taken place there. He was unsuccessful in his expeditions against Urundi. The two kings, Lwabugiri and Mwezi Kisabo (?), made peace with each other and built their settlements on the border between the two states, on the Akanjaru. The wars with the inhabitants of Idjwi Island were also only temporarily successful.

175 Kabare is said to have killed all of Lwabugiri's sons except Musinga,
643 the son of his sister Kanzogera, after their mighty father died.
These accounts agree with a note by Von Beringe (2) referring to

[113]

2. Beringe, Captain Von, a report on his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 39.

Mumusa, the queen of Mururwa in Mpororo: "Mhumse claimed that she was a wife of the deceased Sultan Lwabugiri of Ruanda and that she was sent here by him to escape the persecution of Chief Kawalle who [292] killed four of his sons. However, there is no longer any connection between Mhumse and Ruanda."

Mibambwe who was temporarily proclaimed king after the death of Lwabugiri was burned to death in his hut along with his entire family (1). Most of his brothers died also. Only

1. Kandt, R., Caput Nili (Berlin, 1904), p. 263.

Ishirangabo, however, was not considered for the rulership because he was a man dedicated to the spirit Ryangombe. Bilegea, a son of Lwabugiri, was missing from the time of his youth and was always regarded as a possible, dangerous pretender to the throne. His return to the country was very much feared by the rulers. (2)

Ibid., p. 264.

Musinga, whose father had cast him out, was taken in by a Muhutu and reared by him. It was only because no other son of Lwabugiri came to be considered that the neglected son of Kanzogera was appointed king. He ascended the throne as Juhi Musinga. As a result of his plebeian upbringing, the king had learned to eat goat's meat. This custom is said to have been adopted by the court Batutsi out of courtesy.

175 This fact would probably have caused the young ruler great
643 difficulties if it had not happened that three years after the death
648

175 of Lwabugiri Captain Ramsay came to the country in 1897.
643 Musinga was recognized as the ruler. Captain Ramsay entered
648 into a special pact of blood brotherhood with him or at least with the man that was introduced to him as Musinga. (3) He reports:

[113]

3. Ramsay, Captain, an account of his expeditions to Ruanda and Lake Rikwa, Verhandlungen der Gesellschaft für Erdkunde zu Berlin, Vol. 25 (1898), p. 315.

"Thereupon I had to tie a string around Juhi, and he tied several strings around me; then we shook hands vigorously, and the king of Ruanda and I became blood brothers."

Since that time Musinga has been energetically supported by the government, which, through him, again has the entire country in hand. Musinga has at his disposal the Askari of the guard troops who in an emergency can teach his rebels a lesson. I had occasion to observe this in 1907 in Mulera. With the intervention of this new factor, the country has become orderly to an extent that formerly did not seem possible.

173 Kissaka. The history of Kissaka cannot be traced as far back as that of Ruanda.

Banyakissaka traditions about ancient times say that they, like the Banyoro and Baganda, came from the north, not from the south, like the Wasukuma.

[293] Kissaka has been a state since very ancient times. According to Busindja (1) tradition, the Kissaka rulers were Basinga.

[113]

1. Van Thiele, Father H., "Businza unter der Dynastie der Bahinda [Businza under the Bahinda Dynasty]," Anthropos, 1911, p. 499.

One of these rulers was married to Nyakachende, the daughter of Ruhinda, and she bore him a successor. From then on the rulers of Kissaka were referred to as Bayango of Ruhinda.

173 some Batwa living there. The Batwa were in part driven out, in part assimilated. The latter are known as Batwa bikyugu "Batwa of the inhabited land." Very many colonists came from Kishari and Kameronse, regions north of Lake Kivu. They were driven out of their homes by raids of the cannibalistic Balioko, probably Manyema, or perhaps also of the Babira who were driven out by the Manyema. To this emigration we can probably attribute latent traces of Bakondjo in Bugoye. Besides this wave, the Bambari clan from Ndorwa came to Bugoye, as well as the Bagwabiro from the region of Ischangi on the southern shore of Lake Kivu. The latter are impoverished Batutsi who till fields and own but few cows.

805 Chronology. Time in Ruanda is divided into years, seasons, months (moons), and weeks. The weeks have only five or six days. Thanks to the kindness of Father Buisson, I can herewith give the names of the months used in Kissaka and Ussuwi, opposite the Mulera calendar. The data on Nkole have been taken from Meldon (3). [295]

[113]

266 the blood tax, is said to have existed until just a few years ago.
782 The Bahutu of Bukunzi in Mukinjaga once stole the cows of King
651 Ruganzu and ate them. The next morning the herdsmen found pieces of meat hanging on spears; that was all there was left of the animals. The criminals were recognized by their spears. As a punishment their country was burdened with a special tax. Every year they were obliged to deliver a maiden and a youth. The youth was slain on the way, and his blood brought to the king; the young girl became a mûja (slave) of the king. I heard that this sacrifice was last paid three years ago (1904) and then was discontinued by Musinga.

[643] Furthermore, when the king ascends the throne, a boy and a girl are reputedly sacrificed and a drum is beaten with a human thigh bone (1). We must not forget that in Buganda (2) human

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902-1903 [Two Journeys Through Ruanda]," Globus, Vol. 86 (1904), p. 77.

[113] 2. Roscoe, J., The Baganda, Their Customs and Beliefs (London, 1911), p. 331.

beings were sacrificed in large numbers.

266 [328] Cannibalism is said to be practiced by the Batwa in
575 the north and by poisoners (balozi). Koch (1) confirms its occurence
794

1. Koch, R., "Anthropologische Beobachtungen gelegentlich einer Expedition an den Victoria Nyanza [Anthropological Observations on an Expedition to Lake Victoria Nyanza]," Zeitschrift für Ethnologie, 1908, p. 465.

among the balogu of the western shore of Lake Victoria: "It is a fact that at present there is still a secret order here which digs up corpses and eats them, and for this reason the families station

Buddu and on the Sese Islands assembles at night and devours corpses. Johnston (3) characterizes the inhabitants of the Sese

3. Ibid., p. 693.

Islands as notorious cannibals who gave up this passion only when they were forced to by the Baganda.

Ruanda's western neighbors, the Bahunde, are likewise cannibals, as Dr. Kandt (4) has determined. He reports the

4. Kandt, R., Caput Nili (Berlin, 1904), p. 449.

following discovery: "Here lay the head of a human being that had been slaughtered not more than two days ago. The ears, the lips, and the flesh of cheeks, neck, and chin had been cut away, and the large hollow bones had been broken, apparently to suck out the marrow and the blood. The place where the fire had been, marked by ashes, was still visible; the blood-soaked apron of barkcloth and the straw and wire rings of the slaughtered person lay strewn about in the grass. I called the guides. They knew the man and said that if we wanted to look around we could find many other remnants of this kind, but I had no desire to do so."

From these facts we may conclude that formerly cannibalism was common in the entire interlacustrine region from the western lakes to the Sese Islands. Only recently suppressed, it has left definite traces in the cult and in secret societies.

boys of Kanuma performed another dance of the same type (2).

Ibid., p. 119.

The dances are divided into two distinct groups, the kwamiriza and the kuhyereka. In the first group the dancers hold a spear or an arrow in their hands and swing them rhythmically. The martial bearing of the dancers indicates that this is a war [534] dance. In these dances the dancers wear iron bells on their ankles and move in a closed circle or in a line from left to right. This type seems to be representative of all true Batutsi dances.

The second group is the kuhyereka. This is danced by one or two dancers, very rarely by three. In this dance the dancer rocks back and forth with his arms outstretched and often bent backward. This position is called kutega amaboko. For the kuhyereka the bells, if they are used, are fastened under the knee. It is very characteristic that in these dances, which were probably originally Bahutu, the bells are worn in the place where the Bakondjo, who are not influenced by the Batutsi, wear their leg rings.

[334] The dances which I had an opportunity to observe in Mulera belonged altogether to the kuhyereka group. The dance was performed by two soloists, and the passive participants accompanied their movements with singing and hand clapping to maintain the rhythm. The dance was sometimes also accompanied by the playing of the inanga. That only the kuhyereka type of dance appears in Mulera shows very definitely that it belongs to the lower Bantu stratum.

524 Play. Rattles are the common toys for children. Bigger boys like to play with small bows. A discus game is played with bow and arrow. There are two teams, with seven boys on each side. One team throws soft discusses cut out of a banana stalk;

128 To investigate systematically the social significance of kinship terminology, some procedure should be adopted whereby every term is analysed from a set of relevant viewpoints. In order to do this we are setting them in the following table. The table recapitulates the sixty-one kinship terms mentioned in the preceding sections and for each of them gives eleven characteristics. In this [113] choice I have followed closely the chapter 'Analysis of Kinship' in Murdock's *Social Structure*.[17]

Women of Burundi: A Study of Social Values

[3]For the most part, what is here said of Burundi was true also of the people of the neighbouring kingdom of Ruanda. Significant differences will be footnoted. For the hierarchical principle in Ruanda, see: J. J. Maquet, *Le Système des Relations sociales dans le Ruanda ancien*, Annales du Musée Royal du Congo Belge, Tervuren (Belgique), Sciences de l'Homme, Ethnologie, vol. I, 1954.

[3]Burundi is changing its laws. Thus, women and other social inferiors increasingly enjoy legal privileges and rights.

[4]In Ruanda, the queen-mother shared the royal power with her son, the *mwami*. This was not the case in Burundi.

[5]Very little will be said about religion in Burundi. The cult of Kiranga, the ancestor cult, and every other aspect of traditional religion and belief have been legally suppressed. About one-third of the population have been converted to Christianity. Religion, traditional and contemporary, is always important in the life of a society, but it may be concluded from the behaviour, the interests and the values of the Rundi that their society is secular rather than sacred.

[6]The word "caste" is not entirely satisfactory for describing the social distinctions of Burundi. However, there does not seem to be any better translation for the term, *aboko*, which connotes racial differences and to which are attached taboos and marriage regulations which separate rather rigidly these divisions of Rundi society.

[7]Although the terms "Hamitic" and "Bantu" are, properly speaking, linguistic terms, they will be used here, for lack of anything better, in their common acceptation as referring to social-cultural groups.

[8]In Ruanda, the Twa are more respected than the Hutu. Moreover, caste distinctions in Ruanda are social rather than racial. *Cf.* J. J. Maquet, *op. cit.*

[9]When the *mwami* of Ruanda gave a Tutsi wife to a man of an inferior caste, he raised the man to the higher caste.

[10]*Cf.* Jean Hiernaux, *Analyse de la Variation des Caractères physiques humains en une Région de l'Afrique centrale: Ruanda-Urundi et Kivu.* Annales du Musée Royal du Congo Belge, Tervuren (Belgique), Sciences de l'Homme, Anthropologie, vol. 3, 1956.

[11]Since 1952, polygamy is no longer permitted. Nevertheless, there are still a good many plural marriages. In the past, a prince might easily have had 20 wives. The average Rundi, however, would not have been wealthy enough to pay for more than two or three.

[12]These taboos are not known in Ruanda.

[13]The Hutu husband is obliged to build and to make repairs on the house, to take care of the banana grove that encircles the homestead, and to brew banana beer.

[14]In the past, there was only one harvest each year. There are now two, but the second one is relatively light.

[15]Almost nothing is known about the Twa, except that the men go to the marshes for the clay needed by the women to make pots and then sell them. The work in the fields is done by the women, but it appears that the men are often home and help.

[16]It has been suggested that anæmia explains the physiological condition interpreted by the Rundi as a prolonged pregnancy.

[17]Blinded by the ideas of my own culture about men's interest in their children's paternity, I wasted a great deal of time in the field seeking confirmation from Hutu and Tutsi, the Europeanized and the traditional. I was finally convinced of the lack of interest in biological paternity. This is, in any case, in keeping with the rather liberal rules pertaining to sexual relations in the kinship system.

177 have brought to their customs rather than truly adhere to them. This
183 passive attitude is due to an inveterate fatalism which makes them
563 bow before the undisputed master, the Mututsi, and also to the antiquity of custom which makes it as respectable as an almost divine institution.

671 As is the case in the Belgian Congo and generally in [5] Black Africa, the common law contains not only juridical rules applicable to persons, property, and society, it also contains religious and magic regulations, various recipes, etc. Such as it is, it forms a disparate yet solid whole which gives the solution to problems arising from the individual and collective life of the Banyarwanda.

The common law of Ruanda, applicable to a homogeneous
671 population, is the same everywhere, except in the north on the
184 frontier of Kivu and Uganda, where the authority of the Batutsi over
563 the Bahutu could not assert itself as in the rest of the country. This independence has resulted in the substitution of the administration of the Bahutu clan and family chiefs for that of the Hamite officials.

Those who have known Ruanda and its people best are the
● 114 members of the Society of Missionary Fathers of Africa. The Reverend Fathers Lupias, Schumacher, Arnoux, Pagès, and Hurel have published, in the Anthropos and Congo reviews (among others) and in numerous monographs, elaborate studies on different aspects of the social, political, religious, and intellectual life of the Banyarwanda. The territorial governors Lenaerts and Sandrart have also brought fruitful contributions to the knowledge of Ruanda common law.

121 Nevertheless, we do not believe that a more or less complete account of the customs of private and public law of Ruanda has ever been prepared. This is what we have modestly attempted to do in the
[125] present work by inserting observations gathered in a questionnaire set up especially to facilitate [6] the study of native law (1). We have

1. J. Vanhove, Questionnaire de Sociologie juridique, Brussels, printer Lesigne, 1939.

not been able to go into the details of all the institutions of which some, particularly those relative to cattle contracts, would alone require a whole volume.

124 But, in spite of the limited time we could devote to this account of the customs, we believe we have given the essential points

778 643 placed in the hut called rwimiringa (lit., house of copper objects (2),

2. Kalinga means "royal drum"; Karinga means "small copper object."

[727] built inside the king's boma, where the war trophies are kept. The Kalinga is guarded night and day, for it is the emblem of the grandeur of the kings of Ruanda.

4. The Court of the Mwami

644 At Nyanza, the royal residence (ibgami), flocks of people of every rank come to attend court or to inform the Mwami of the affairs of their region: Bahutu or even Batwa villagers hoping to obtain some benefit from the Mwami or his mother, dignitaries of various ranks and functions, and servants of both sexes (3).

•[114]

3. These duties and functions have been minutely described by the Rev. Father Pages in his fine book, Un Royaume hamite au centre de l'Afrique [A Hamite Kingdom in the Center of Africa] (ed. I.R.C.B. [Institut Royal Colonial Belge], Brussels, 1933). This work constitutes a veritable and priceless monument for the knowledge of Ruanda and its people. We cannot do better than suggest that the reader refer to it for everything concerning the organization of the Royal Court.

5. The Council of Ministers

645 787 In serious circumstances, such as war or famine, the Mwami is obliged to convene the great chiefs (abatware b'intebe) in council (inima). The soothsayers (abapfuma) then consult the oracles and

Chapter 1

Survey of Land People (1)

(Cf. the map [colored in the original] at the end of the book.)

114 1. Part of this chapter is taken from a lecture which I gave at the 19th German Geographers' Conference in Strasbourg in the spring of 1914.

1. The Land Urundi

131 In the extreme west of German East Africa lies one of the regions of Africa least known until now: Urundi. To the north it borders on Ruanda, to the east on Ussuwi and Uha, to the south also on Uha, to the west on Lake Tanganyika and the Ruzizi River. Since Urundi has an area of almost 29,000 square kilometers, i.e., approximately twice that of the Kingdom of [161] Saxony, and since it has over one and a half million inhabitants (according to van der Burgt, around two and a half million), it deserves attention for this reason alone. However, although 648 it has been German territory for over 25 years, we know little about it. Because of the recalcitrance of its population, the government had almost completely closed off the area to travel from the outside, and until 1911 political influence was limited to the establishment of a station with a resident and a company of colonial troops in Usumbura on Lake Tanganyika. It was not until 1912 that the seat of government was moved on a trial basis to Gitega in the interior of the region.

648 797 Oskar Baumann in 1812 was the first European who traveled through northern Urundi to the source of the Nile on the upper Ruvuvu. There followed then between 1896 and 1898 several military expeditions by colonial army officers, Ramsay, von Trotha, Langheld, von Langenn-Steinkeller, Fonck, and Dr. Kandt; and between 1896 and 1899 the Catholic Mission of

648 the "White Fathers" founded the stations of Usumbura (later
[797] moved to Marienheim), Mujaga, and Mugera in central Urundi. However, this advance of the Europeans was met with hostility by the Barundi [Rundi], so that from 1900 on German colonial troops under their leaders, Bethe, von Beringe, and von Grawert, had to contend with Kisabo, the king of Urundi, whereupon the Barundi finally recognized the sovereignty of the Germans. This recognition, however, is only nominal, for our power there is much too small to permit the establishment of a German administration in Urundi as yet.

114 Under such circumstances the exploration of Urundi could make no substantial progress. Ethnology alone has been advanced to a high degree by Father J. M. M. van der Burgt, who for many years was active in Urundi as a missionary and published the results of his excellent ethnological studies in Dictionnaire Français-Kirundi which appeared in 1903 through the Dutch Missionary Publishing House at Bois le Duc. The extremely extensive ethnological and ethnographical data, however, are so interspersed in this book with all kinds of historical and [2] linguistic digressions that it is difficult to extract and methodically collate the ethnological data of scientific value.

In view of this situation I decided to devote part of my 1911 expedition to the investigation of Urundi. Therefore, I worked there for a few months, sufficient time to obtain an over-all view which I have endeavored to supplement, as far as possible, by inquiries, correspondence, and other kinds of studies. Setting out from Ruanda in the northwest, I first crossed the northwestern mountain region, the "Mountains of the Moon" with my two companions, Lieutenant Tiller and Dr. Houy, then descended to the great central African depression into the valley of the Ruzizi, then crossed in dugouts the northern end of Lake Tanganyika to the residency, Usumbura, and thereupon traveled through the whole of central Urundi from west to east in a month and further through northern Uha and the Ussumbwa states, until finally, at Tabora, I reached the central railroad by which I traveled to Dar es Salaam.

3. Physical Characteristics

114 I have not undertaken anthropological measurements of the Barundi since I was completely occupied by my geographical and ethnographical tasks. My medical companion, Dr. R. Houy (unfortunately murdered in the Cameroons in 1913), whose own field was anthropology but who was at the same time very interested in zoology, found such a rich field in collecting and observing the peculiar fauna of this country that he, too, abstained from the time-consuming anthropological measurements. Thus I had to limit myself to the occasional use of the tape measure and the color scale, and for the rest I can only report general somatic observations.

[8] The most impressive of the Barundi people are naturally
144 the ruling tall Batussi (Plates 11, 12, 14). Aside from their heads which in most cases are smoothly shaven, they physically very much resemble their fellow tribesmen in Ruanda. At first glance their Hamitic origin is apparent. On my earlier travels I had often been among the Somali and Galla, and when I was among the Batussi of Urundi and Ruanda it seemed that I had been transported again into the midst of the former, especially the Galla.
141 In one trait, however, the Batussi have an advantage over the Hamites of northern East Africa: they are, on the average, much taller. The most convenient yardstick I carry with me is provided by my own height, and against this I could easily make approximate measurements of the many hundreds of Batussi whom I met. I did not find any adult smaller than 1.77 meters (measured by a tape), few below 1.80 meters, the majority between 1.80 and 1.90 meters, many (about 10 per cent) between 1.90 and 1.95 meters, some few between 1.95 and 2 meters, and a very small number over 2 meters up to an upper limit of 2.08 meters (measured by tape). In spite of their extraordinary
142 height, their body parts are exactly proportioned in relation to each other; not merely are their legs and arms very long but also their torsos which are often so narrow and extended that one can hardly imagine how the internal organs are distributed inside. The impression of abnormal height is further increased by the

3. Clans, Exogamy, Totemism

614 In addition to the social stratification resulting from the different ethnic strata of the population with the Bahima conquerors, Batussi, as the upper class, there is in the entire interlacustrine region a subordinate social structure determined by kin groups or clans consisting of blood relatives. Depending on their nature, there are clans of Batussi, of Bahutu, and of Batwa. As a group of families related by blood, the clan is the basis of the entire social organization of both Ruanda and of Urundi, and also of Karagwe, Kisiba, Ankole, etc., while the political state is organized on the feudal system. Unfortunately, we 614 know very little about the clans of the Barundi since my pre- 114 decessors have given little attention to this institution and since the natives are reluctant to give information about these conditions, more from fear of the evil results of mentioning names [551] than from their religious concepts (see p. 111, 112). These things are much clearer in Ruanda where Czekanowski, assisted by the missionaries and Christianized natives, was able to obtain much interesting information about the clan structure (No. 48, Chap. 11). What I am able to convey below I owe -- except for my own findings in the field -- to information received from Capt. von Langenn-Steinkeller and Father van der Burgt.

"In his Dictionnaire Français-Kirundi, van der Burgt refers to a few privileged Batussi families from whom the kings customarily choose their wives (see pp. 99, 101, also p. 182 of original text [not translated]), but he fails to mention anything about an organization of the entire population into clans which is of decisive legal, social, and political importance. In reply to my direct inquiry, Father van der Burgt sent me the following information: "Formerly I held the belief for a long time that no clan organization at all existed in Urundi. Both in Unjamwesi and in Kisiba (No. 31, p. 5) one always hears people speak of their luganda (families, cognatio) and their kisse (pl., visse), i.e., clan; for example, whenever one asks a woman for her name, she first gives the name of her clan, e.g., "I am a Magana" or a "Njamurega" or a "Kundwa," etc. In central

614 Urundi, however, I only once heard a woman say that she was
114 a Magana. Thus, I would say that clan organization is not as pronounced in Urundi as it is in Unjamwesi, Ussuwi, Kisiba, etc. In Kirundi I am not familiar with a word like the Usâmbiro "kisse" [99] but the Warundi often speak of their "umurjango" which also means kin group, clan. However, in Ruanda clan organization seems to be well developed. In northern Urundi (Mariensee Mission) where there are many Wanjakissaka immigrants, they often speak of their clans, but this does not apply to the Warundi who live there.

"Whether there are few or many such clans in Urundi I do not know. I discovered the names listed below, but I cannot guarantee that they are genuine Urundi clan names. I rather think that they originate from the periphery of the country: Wajango, Wamagana, Wassindi, Waschambo, Wasinga, Wajambo (Wanjambo), Wasigawa (Wasigaba), and others. Incidentally, although the population is divided into clans, the members live all over the area without rule or restraint, i.e., not localized."

Van der Burgt further lists (see p. 183 [not translated]) the Wakundo, Warwanda (Wawanda, Babanda?), Wenengwe, Wanjakarama, Wasigaba, and Waterwa (Watoirwa?) as the families closest to the royal family. On the other hand, Capt. v. Langenn informs me that the Batussi families of the highest rank are the Banjakarama, Benengwe, Banjakissaka, Baschunguka, and Boschoka, after which there follows a second series of families, also very distinguished, the Bawanda, Bahondogo, Bassawu, Bawejuru, Baschama, Bega, Bawankundu, Babile, Basindakire, and others. A few of these family names, like the Bega, the Bawanda, the Bakundo, and the Baschama, were repeatedly mentioned to me in Urundi, and in addition the Baschambo, Basito, Bagessera, Bakango, Balenge, Baransi, Balesi, Bakono, Basseke, Bassabu, Bajosi, and Barire.

If we compare these names with the family names listed by Czekanowski in his clan tables from Unjoro, Toro, Ankole, Mpororó, Kjamtwara, Kisiba, and Ruanda (No. 48, pp. 41, 88, 233-251) and with those mentioned by Kandt, van der Burgt, van Thiel,

614 Stuhlmann, P. Schumacher, Meldon, Roscoe, Rehse, and
114 others, we rediscover over half of the Barundi names also in these lands, especially in Ruanda. This indicates the direction of the closest relationship to the Barundi families. According to legend, the Basinga, Bagessera, and Basigaba are the oldest kin groups there (see p. 153 [not translated]). Probably these clans of Urundi and the northern Bahima states which have the same name are mere offshoots of one original clan which split up as the result of a large increase in numbers or from being harrassed by war and spread over the area by migration. Throughout Urundi, Ruanda, and the northern areas of the interlacustrine region, the Bawanda, Bega, Bakango, Baschambo, Bagaia, Basindi, Basinga, Basito, Bajango, Basigaba, Bajubu, and others are most widely dispersed, while the Bahondogo, Bassabu, Baschunguka, Babile, Basindakire, Barire, and Basseke seem to be restricted to Urundi, although future investigators may discover them in other areas. Perhaps their blood relatives and namesakes may be found father south and west, rather than in the north.

614 The majority of the clans listed above are those of the Batussi, but the Bamagana, Bajango, Basseke, Basjubu, Barire, and others are Bahutu. In addition to this, there are numerous Batwa clans whose names, however, I was unable to ascertain. Some clan names refer both to Batussi and to Bahutu clans. In fact, a few, as, for example, the Bagessera and Basinga, even refer to Batussi, Bahutu, and Batwa clans. It appears that the type of clan structure, the internal organization and the hierarchy of the clans, their social role, and their mutual legal relationships among the Batussi differ essentially in only a few characteristics from those of the Bahutu and the Batwa, namely, in those institutions and rules whose aim is to keep the Batussi blood pure and to maintain the exclusive position of their race and thus its authority. [100] Remnants of earlier endogamy still exist among them (see p. 101), while otherwise the clans are strictly exogamous. Probably the Batussi adopted the clan organization of the older ethnic elements in Urundi, just as they adopted many

614 Wherever monarchy with its state organization has not yet
621 dissolved the clans and dispersed their members all over the various feudal districts of the Batussi state (see p. 89), wherever the clans have preserved the main elements of their ancient solidarity and autonomy, as is the case particularly in the more or less independent border provinces of Urundi (and Ruanda), the clans form small or large communities under an elected clan elder (umugabo). This is especially true of
614 the Bahutu clans that existed in the area before the period of
423 Batussi rule. The office of the umugabo is hereditary in
621 many cases. The central communalistic element in the organization of these clans is the communal ownership of the land occupied by the clan. The land belongs to the clan community probably because it was originally appropriated and cultivated by the clan. The individual clan members is merely entitled to the use of the land he cultivates or of the pasture where his cattle grazes. Only the hut built on this ground is the real property of the individual, in addition to the inventory of implements, tools, weapons, and the cattle he has raised from the herd with which he has been vested by his feudal lord (see p. 93).

614 E. Johanssen, a missionary who in 1907 founded the first
182 Protestant missionary stations of Dsinga and Kirinda in Ruanda
[114] and who is an eminent student of the Banjaruanda, makes the following comment on the social importance of the Ruanda clans: "These kin group organizations hand down the old customs and traditions from one generation to the next. In this way they preserve the national characteristics against intermixture and decay. The easier it is to loosen the ties of the family group in its narrowly defined sense as a result of polygamy and by the dissolution of marriage, the greater is the [105] importance of the stable, indissoluble, religiously determined kin group. The destruction of this group would cause the entire nation to disintegrate and to split up into isolated groups which would be exposed to any outside influence. There can be no doubt that the kin group, as the

794 the fraternity of the ababandwa existed long before the histori-
575 cal Riangombe. It is most probably an extremely old element
171 of Negro religion in East Africa which has been preserved in its pure form in Urundi, Uha, Ruanda, Karagwe, the eastern Congo (Bunjabungu) (No. 44, p. 291), and in a degenerate form in Unjamwesi and Ussumbwa. Many parallels to it can be found in the secret societies of the Bantu and Sudan Negroes of Loango, the Cameroons, Togo, the Gold Coast, etc. Ac-
794 cording to van der Burgt, the Kubandwa cult in Urundi is part
575 of the Bantu religion of the Bahutu and has been taken over
114 by the Batussi. However, the king may not participate in the cult while the Batwa are very dedicated to it, particularly to that of Kiranga. In his dictionary van der Burgt defines the ababandwa as a "société religieuse et secrèt" (No. 19, pp. 220, 463), but according to a more recent written communication he regards the Kubandwa not as a real "secret society" but as a gathering for a mysterious cult act to which not everyone is admitted, for example, children. Captain von Langenn, however, regards it as a religious secret society in which old sorcerers play the leading role; admission to it follows special ceremonies. Missionary Johanssen, too, describes the analogous institution in Ruanda as a "society of the initiated or of mediums" who are in contact with the world of the spirits and join Riangombe after their death, in contrast to the laymen, the insigo, who are excluded from this community (No. 39, p. 96). Father van Thiel likewise refers to the initiated persons of the Kubandwa cult in east Ussuwi as a "soeiété secrète" whose leader is the sorcerer (No. 24, p. 49).

[793] In Ruanda a high priest (kiranga) is the head of the
794 ababandwa. He is appointed by the king, but he may also be
644 dismissed by him. In Ruanda the king appoints the mpara as his
575 assistants. They are a group of ababandwa who enjoy the privilege of offering their sacrifices to Riangombe in the kraal of the king. It is noteworthy that they are all Bahutu. This is probably a concession to the old Bantu origin of the Kubandwa cult. These mpara, in addition to the Batwa who live at the k king's court (see p. 13), are the bodyguards and the "guardians of the royal sleep," and much confidence is placed in them (No. 44, p. 292).

173 their history, but they regard it as a hallowed secret of the Batutsi which belongs to the category of ibanga [secrets].

173 Father F. Dufays and Father P. Loupias succeeded in learning about one of the traditions of ancient times from a Mututsi whom ●114 I personally know very well but whose name I must withhold out of consideration for his own safety. The man clashed with his fellow tribesmen [287] and told his story to the missionaries to express his gratitude for their protection.

173 According to this story, human beings in former times lived in heaven as well as on the earth. The children of Nyina Kigwa, 173 Kigwa, Lututsi, and their sister, Nyina Batutsi, were cast out from heaven as a punishment for their mother's loquacity. They fell to earth in Bugansa, Ruanda, and discovered the following Bahutu families in the country: the Basinga, Bagessera, and Bazigaba. In the forest they found the Batwa. The Bahutu and Batwa had been expelled from heaven before them. The new immigrants brought fire, agriculture (hoe culture), cattle raising, and industry (iron technique). In this way they gained influence, and Kigwa became the ruler of Ruanda. Kigwa married his sister, Nyina Batutsi, and became the protoplast of the Banieginia who are descended from his three sons and still rule Ruanda. Lututsi emigrated to Karagwe and married one of Kigwa's three daughters. He became the protoplast of the Bega who supply the kings of Ruanda with wives and mothers who are their peers. Kigwa and his descendants kept in touch with heaven through Batabazi redeemers, who came to their aid in times of great need. There are three chief Batabazi mentioned. The first protected the children of Nyina Batutsi and brought animals to Ruanda; the second was Kihana, son of King Ndahiro; and the third, Kyamweru, was the son of King Luzugira Iwijuru.

[117] This tradition contains some details of Christian legends, which we shall not go into here. Its origin will probably be determined some day, but at present it is a mystery. However, the statement that the children of Nyina Kigwa (referring doubtless to the Batutsi) brought fire and hoe culture into the country can be written off as historically incorrect. In any case, it is certain that this story tells us about the settling of the Batutsi in Ruanda and the establishment of their rule in Bugansa, and that at this time Bagessera,

INTRODUCTION

THE greater part of this work is directly concerned with the description and analysis of the political organization of Ruanda. The first chapters, however, are devoted to other aspects of the social system: kinship and affinity, marriage and family. As the whole system of social relations in Ruanda constituted a closely knit fabric, it was thought that an understanding of the political institutions necessitates also some treatment of the other structures of human relations. Moreover, a brief account of the physical environment, the quest for food, shelter, and health, and some demographic data have been included because these elements, if external to the pattern of political relations, set the limits within which the Ruanda system of domination grew.

This study refers to the period immediately preceding the time when Ruanda was submitted to the influence of Western culture through its European agents. That is to say, in the continuously moving historical stream, we have chosen to study the particular configuration of the Ruanda political organization at the moment when it had been moulded by the action of many forces, but not by the full impact of European contacts. For reasons mentioned later, the 'zero point' of direct European influence on Ruanda society is not difficult to assess. It is in the first decade of this century. Ruanda social structure did not undergo any significant modification due to European influence until roughly 1910. This date is fortunately not very distant, and around 1950 it was still possible to interview many people who had been young when the old régime was still a working concern. As far as we know, there had been also no direct and continuous contact between Arabs and Ruanda prior to that time.

To remind the reader that we are describing structures and institutions which no longer exist, at least in their entirety, my account is given in the past tense even when it refers to features which are still functioning today. The expressions 'today', 'now', 'at the present time', &c., refer to the period 1950–1 during which basic research was carried out in Ruanda.

As a social anthropologist of the *Institut pour la Recherche Scientifique en Afrique Centrale*, I carried out field work in Ruanda

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

114 for two years, from December 1949 to November 1951. During that period information was secured by continuous observation and by informal interviews with Africans and Europeans. Some administrative officers and missionaries, keenly interested in the society and culture of the Ruanda, have contributed much information and stimulating opinions.

[121] In addition to this work, three systematic inquiries on specific subjects have been completed: political organization, kinship and family structures, and cosmological and ethical systems. Each of these inquiries was prepared by a preliminary survey on the subject, on the basis of which schedules of topics and specific questions were framed.

125 114 The preliminary survey of political organization enabled me to collect a considerable amount of information on that subject. Consequently, a later inquiry could aim primarily at checking and making more precise what was already known. To achieve this purpose a hundred-question schedule was devised. It was the object of each question that it should fulfil as adequately as possible the following conditions: to be neutral (formulated in such a way as not to suggest that the investigator preferred one answer rather than another), significant (likely to clarify obscure or controversial issues), concrete (such as 'Were there more or less people in group A than in group B?') rather than abstract (such as 'Give a definition of the administrative organization'), and simple (to be answered by 'yes', 'no', or one word). This last requirement was particularly important as it made possible a summing up of the answers. A translation of this questionnaire is given as Appendix One.

124 The choice of informants was made according to the following procedure. About a dozen persons, Africans and Europeans, who had been living for many years in Ruanda and had been in close contact with many members of the African community, were asked to give a list of Ruanda (Hutu, Tutsi, and Twa) who, in their opinion, would be familiar with the pre-European political structure, particularly from direct experience. The importance of listing people living in all the different regions of the country was stressed. By collating the various lists I finally obtained a set of about 350 names of men scattered everywhere in the country.

In order to interview them, I had to move between seventy-four different places which were about evenly distributed through the

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

124 [115] informant. Sixteen Hutu and twenty Tutsi informants were interviewed. Two junior administrative officers, Messrs. E. Finoulst and G. De Clercq, who were taking a six-month course of training in anthropology, participated in the different stages of this inquiry, as did Mr. S. Naigisiki, who acted as assistant and interpreter.

The inquiry into the cosmological and ethical systems was carried out on similar lines. A schedule of thirty-five headings, under each of which several points were listed, was used in several collective and individual interviews.

114 This research from 1949 to 1951 forms the main basis for my *Système des relations sociales dans le Ruanda ancien*, published in 1954. But I have spent two other research periods in Ruanda (December 1952–December 1955 and September 1956–September 1957) on more specific topics. What was observed in these later periods, however, bearing on the topic of the earlier study, has been taken into account in the present volume.

Secondarily, the present study of Ruanda is based on literary 127 sources published both before and after 1954. These are fully listed in the Bibliography.

• • •

122 All my field work in Ruanda was sponsored by the *Institut pour la Recherche Scientifique en Afrique Centrale* (I.R.S.A.C.) for which I am deeply grateful. At the same time I assumed the 114 functions of Head of the Scientific Research Centre of I.R.S.A.C. in Astrida. I wish to extend my thanks particularly to Professor L. van den Berghe, Director of I.R.S.A.C. The late Professor 000 F. Olbrechts, when he was Chairman of the *Commission des Sciences de l'Homme* of I.R.S.A.C., also greatly encouraged my research.

For guidance in planning the research project on Ruanda and for supervision of all its later stages, I gratefully acknowledge my indebtedness to Professor Daryll Forde.

I should also like to thank Miss Barbara Pym, of the International African Institute, London, who very kindly corrected the first typescript, and Dr. R. J. Apthorpe, of the Rhodes-Livingstone Institute for Social Research, Lusaka, for his patient and invaluable help in preparing this edition of my book.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The Twa are thought to have been the first inhabitants of Ruanda. This may be inferred from the general reconstruction of the vast human migrations that are supposed to have taken place in Africa in the remote past, and according to which Pygmies and Pygmoids would appear to be the most ancient inhabitants of that part of Africa. Whatever the validity of this hypothesis, the Twa, being hunters and collectors of fruits, seeds, and roots, did not greatly modify the natural vegetal cover of the country.

It was left to the Hutu hoe-cultivators to begin the transformation of the country. The time of their arrival, either after or contemporary with that of the Twa, is immaterial in this connexion. The important fact is that the Hutu had to begin the clearing of grasses, shrubs, and bushes and eventually the felling of forests to make their fields. The extent to which this process of deforestation had been carried out before the arrival of the Tutsi is difficult to assess. It is unlikely, however, that the Hutu were so numerous as to have to cultivate such considerable tracts of the country as to disrupt its natural equilibrium. It is very likely that the increase of population and the cattle-pressure following the Tutsi arrival has been a determining factor in this processs.

The Tutsi immigration into the country is an historical fact attested by the traditions of Ruanda and of neighbouring peoples. Their occupation of Ruanda is an episode of the great southbound pastoral migration which resulted in the formation of the different societies which Baumann terms *Circle of the Lakes*,[7] Schapera, the *Lacustrine Bantu*,[8] and Meinhard, the *Interlacustrine Province*.[9] Pastoral peoples who according to Seligman's classification were 'half Hamites' (probably of eastern Hamitic origin),[10] for an unknown reason migrated with their large herds of long-horned cattle into an area delimited in the west by the Central African rift valley from Lake Tanganyika to Lake Albert, in the north and east by Lakes Kyoga and Victoria, and in the south by a line running westwards from Muanza Bay (Lake Victoria) to the Malagarasi River. Incorporating the Bantu agriculturists previously settled in that area, they constituted a number of political units (such as Nyoro, Toro, Nkole, Ganda, Sogo, Mpororo,

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

174 Ruanda, Burundi, Ha, Karagwe). It is not known where these
101 pastoralists came from.

Because of cultural and physical similarities the Galla or Somali country of Southern Abyssinia has been advanced as their possible place of origin. As the invaders have completely adopted the Bantu language of the agriculturists, the lack of linguistic clues so important in such questions is a great setback to any historical reconstruction. It should be noted in this connexion that the use of [114] the linguistic term 'Hamites' to denote Tutsi, who do not speak a Hamitic language at all, is unfortunate and misleading. Dr. Meinhard's suggestion of using a term not burdened with linguistic connotations such as 'Ethiopians' or 'Ethiopoids' should be considered.[11] The population movement which brought the invaders to Ruanda is probably at least four centuries old. The 174 present ruler is traditionally the fortieth king of Ruanda. We 643 know the names of thirty-nine predecessors, but it is possible that the list is incomplete. On the other hand it seems that the first nineteen are legendary figures. Taking account of this and assuming that a reign lasts about twenty years, we go back to the sixteenth century.[12]

174 As the Tutsi migration seems to have been gradual and peaceful, an infiltration rather than a conquest, it is probable that at the beginning their cattle grazed on the unoccupied grasslands. But the population increased as more Tutsi kept on entering the country and more land had to be tilled to feed them. Cattle were also increasing and the Hutu had to move from the most fertile soil, in the bottom of valleys, because during the dry season these places were the only ones where cattle could find fresh grass. This process must have been in operation for a few centuries to produce the situation as we know it now.

161 Statistics are not available for the 1900–10 period, with which this study is concerned, but we may from the present figures (with [174] some modifications) get a fairly good idea of the situation at the beginning of this century. The population was estimated on 31 December 1949, to be 1,870,410 souls: in 1956, 2,374,136, which

[11] Cf. Meinhard, 1947a, p. 3.

[12] According to Meyer, 1913, the pastoral invasion took place in two ways. The first, at the beginning of this millenium reached the north-east of the Province; the second, in the fifteenth and sixteenth centuries brought them farther southward. According to Kagame and Delmas, the first Hamitic populations invaded the country in the eleventh and twelfth centuries. (Gouvernement du Ruanda-Urundi), (1956), p. 9.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

and Tutsi compounds. Only the size and number of huts and enclosures were different.[24] 361

These compounds, usually surrounded and more or less hidden by banana groves, were scattered throughout the country. They were on the top or on the slopes of hills, never in the valleys which were flooded every year at the end of the rainy season. They were usually rather isolated but even when they were not far from each other (and they were never so near together as to have two adjacent hedges) they did not constitute villages in the sense of concentrated clusters of dwellings situated near the centre of the territory worked by the inhabitants. There was, however, some grouping 621
on a predominantly local basis of people who were all personally acquainted with each other. They could be described, following Murdock's terminology, as *neighbourhoods*.[25] These neighbourhoods were made up of a certain number of compounds (from twenty to sixty) situated on a hill (*umusozi*) or a part of a hill (*umurenge*). The people living there had a few common activities: mutual aid in the building of huts and in the performance of [496]
certain agricultural tasks, and recreational gatherings (such as dancing, jumping competitions, arrow shooting, &c.). They showed a certain *esprit de corps* in taking the side of one of their members in a dispute against a member of another similar community. The word used to designate the members of such groups expressed this idea of neighbourhood. They were called *abazimya muriro*, 'those who put out the fire', people very often needed. One 622
important person in the group such as a lineage-head, was appointed as neighbourhood-head (*umukoresha*) by the traditional administrative authority to take charge of the collection of dues and tribute-labour of a hill or, more frequently, of a group of hills (*umutware w'umusozi*). He acted as an intermediary between his neighbours and the hill chief. The group could refuse the appointment of a certain person and another would be chosen. These neighbourhoods had no communal place for meeting, 621
exchanging goods, or worshipping.

The same pattern of local grouping was to be found throughout Rwanda.

[25] Murdock, 1949, p. 80. The definition of village given in Royal Anthropological Institute, 1951, p. 64. ('a territorially separate collection of homesteads, which is regarded as a distinct unit and of such a size that its inhabitants can all be personally acquainted') cannot be applied to the Rwanda type of local community. [119]

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

for instance with a widow, intercourse took place with a brother or a parallel cousin of the deceased husband.

Among the Hutu when the inzu as such possessed fields (*ingobii* or *ubukonde*), as happened particularly in the northern area (Bugoyi, Mulera, Ndorwa), the individual member had a right to a plot (*isambo*). He could not sell such a plot, but could let it (at a rent of about one hoe for two years). If the ancestor has received cows from a lord (*shebuja*), these cows, or rather their offspring, were the property of the inzu which happened to have some pasture land. Among the Tutsi there were usually no land rights vested in the inzu. Tutsi as well as Hutu inzu had no sacred place other than the ancestor's shrine in the *rugo* (enclosure) of the lineage-head and the small huts in the enclosure of each descendant.

From this one may infer that the lineage group at the end of the nineteenth century was not a group with a territorial basis. It is very likely that a territorial lineage group was common among the Hutu and had persisted in the north where Hutu were predominant and where Tutsi occupation had always been scanty and superficial (there were very few Tutsi settlers in that region, apart from administrative chiefs).[9] On the other hand all the activities of the inzu just described implied a rather close co-residence (which is, of course, different from the concept of a territorial basis). These frequent gatherings, blood-feuds, and the rendering of help in difficult circumstances would hardly have been possible if the members of the group had been living in scattered places several days' journey apart. This explains also the crucial importance of the change of residence in the formation of a new inzu. When a branch of an inzu had to leave and settle elsewhere, it was bound to become a new inzu because the former relations with the members of the inzu who did not move could not have been maintained, at least among the Hutu and ordinary Tutsi. This was less important for Tutsi chiefs who were in any case moving about and travelling frequently.

(c) *Social roles within the inzu*

Following the authors of *Toward a General Theory of Action*, social role is understood here as the totality of reciprocal

[9] For an account of the specific structure of the kinship system in the north of Ruanda, the present-day districts (*territories*) of Kisenyi, Ruhengeri and part of Biumba, see Hertefelt, 1959.

[P.64]

CHAPTER III

MARRIAGE AND THE FAMILY

1. MARRIAGE

121 59 THE family, the social group characterized by common residence, economic co-operation, and reproduction[1] had in Ruanda a conjugal basis[2] that we shall consider in this section.

Married life will not be dealt with here but only the ways and conditions of the establishment of that 'union between a man and a woman such that children born to the woman are then recogized legitimate offspring of both partners'.[3]

(a) *The choice of a spouse*

582 In a primary marriage (the first that an individual contracts) there were few positive socially recognized criteria of choice and none of them indicated one or a few individuals as preferential partners. Among close kin cross-cousins were possible spouses, but it was generally an unfortunate circumstance that obliged a man to marry his cross-cousin. It was usually either because he was not able to pay bride-wealth immediately, or because his cross-cousin had become pregnant by him. We should add that there was no restricted or generalized exchange among the [114] Ruanda in Lévi-Strauss's sense. On the contrary I was told that because they limited connexions, exchanges were not in favour except in some special circumstances.[4]

In the preceding chapter we have mentioned persons whom Ego was prohibited from marrying because of his relations of kinship or affinity with them. Let me sum up the different categories of these persons.

We may start with that which seems fundamental in the sense

[1] Murdock, 1949, p. 1.
[2] Linton, 1936, p. 159.
[3] Royal Anthropological Institute, 1951, p. 110.
[4] Lévi-Strauss, 1949, pp. 189, 322. There is restricted exchange if, when a man of group A gets a woman from group B, it results in a man of group B claiming a woman from group A. Exchange is generalised if when a woman of group A is given to a man of group B, a woman of B must be given to a man of C and a woman of C may be claimed by a man of A.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

585 Firstly, all these ceremonies did not take place when the bride had already been married before or when the girl had been struck by lightning because, as I was told, she was considered to have [493] been raped by the king (thunder being one of the symbols of the king). Secondly, the spreading of the herbs and milk mixture had to be done by surprise and the girl had to cry immediately afterwards. Thirdly, in the first intercourse the girl had to struggle and penetration had to be achieved by force.

For about ten or twelve days the young couple lived semi-secluded in a hut in the groom's father's homestead. Then, at the end of that period, there was another ritual celebration (*gutwikurura*) attended by those who were present at the marriage. The central rite of the ceremony was a dance by the new couple in public. After that, the young wife was allowed to cook for her husband for the first time. The latter was given by his father his [428] share of inheritance, and the couple settled in a compound of their 591 own. Residence was occasionally neolocal but usually patrivirilocal (at the HuFa's).

(*d*) *Polygynous unions*

595 Ruanda may be said to be a polygynous society in two senses. Firstly, polygynous unions were culturally preferred. Secondly, probably thirty per cent. of the unions were polygynous.[7] It was no grand scale polygyny. A man rarely had more than four wives. Usually a polygynous Tutsi had two wives, a Hutu three or four, and a Twa two.

Supplementary wives were an economic asset for rich people, [556] as a Tutsi having herds of cattle in different places found it very useful to be able to put a wife in each of his homesteads as manager; but if he had only such cattle as he could care for himself, a second wife was an expense. It was the same for a Hutu: if he had so many plots that he could not cultivate them all by himself and with the help of his wife, a second one was very useful. If not, she was rather expensive.

To have several wives was also to have many children, which [842] were very highly valued by all Ruanda. For Tutsi occupying very high positions, plural union was a means of establishing useful

[7] 'Any society in which plural unions, however strongly favoured, actually [119] occur in less than this percentage [set arbitrarily at 20 per cent.] of all marriages, is considered monogamous with respect to the family [. . .]' (Murdock, 1949, p. 28).

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

cross and parallel cousins. Lévi-Strauss's crucial assertion that parallel and cross-cousins 'from the point of view of the degree of biological proximity are strictly interchangeable',[11] would not be considered true by the Ruanda. For them any paternal cousin is *biologically* much closer than a paternal cross-cousin. The former, so to speak, originates from the same seeds as Ego, those of a common grandfather, whereas the latter comes from other seeds. This should be a relevant argument in the discussion of Lévi-Strauss's theory, since surely what matters here is not the biological conceptions of the anthropologist but those of the society which in this case differentiates parallel from cross-cousins.

Many characteristics of individuals were thought to be innate, a view coherent with the ideology of a caste society. Features were expected to be similar to those of the father (and, our informants say, this was the only way to be sure of who was the genitor). The complexion was supposed to be inherited from the mother. Psychological traits and temperament were said to come from the father, particularly in the case of his sons. Daughters were often regarded as more similar to their mothers.

The birth of a child was nearly always welcomed by a married woman, even if she were actually divorced. The only exception was in the case of twins of different sexes. This was regarded as caused by a particular intervention of Imana and as a sign of ill-luck. The diviner had to be consulted about it and often the only way to escape the evil consequences was to let one of the twins, usually the boy, die. If such a thing happened to cattle, the steer had to be killed. But a newly born baby was never unwanted. On the contrary, when it was not very clear to what group he belonged, the child was usually claimed by more than one.

The general rules were as follows: the husband was the pater of any child borne by his wife. The genitor had no right over the child even if he had been conceived in such circumstances as for instance during a very long absence of the husband in which there was no doubt about the genitor. A child borne by a divorced woman belonged to her father's inzu, though the genitor could pay a 'child-wealth' and have the child. This did not mean that he married the woman; he was redeeming the child from those who had rights in the mother's fertility. A genitor who was a married man could pay the child-wealth as well as a bachelor. If the

[11] Lévi-Strauss, 1949, p. 156.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

It was not impossible, though it was rare, to be the client of more than one lord, I was told. Firstly, the services required were such that it was not easy for the same person to perform them twofold. Secondly, a lord did not like to enter into *buhake* relations with somebody who was already the client of another *shebuja*, because such an arrangement was very likely to result in a considerable lessening of each lord's control on his client.

571 675

2. ANALYSIS OF THE CLIENTAGE STRUCTURE

(a) *Notion of feudality*

If the term 'feudal' is to be legitimately applied to the social structure described in the preceding section, it must be understood as a notion covering more than the historical sense of that term as used when referring to the Western Middle Ages. Feudality is here an 'ideal-type' in the Weberian sense.

114 642

Feudality is a particular ordering of certain human relations. This organization is based on an agreement between two individuals who unequally partake in the symbols of wealth and power culturally recognized in their society. The person who, in that respect, is inferior to the other, asks the other for his patronage, and, as a counterpart, offers his services. This is the essence of the feudal régime which must be found in any social system qualified by that term. Feudality is manifold in its modalities. The latter differ in many respects. For instance, obligations of each party may vary and be more or less definite in measure; the symbols and proofs of the feudal relation may be very dissimilar. Thus, in the European Middle Ages, the symbol and the proof of the feudal agreement was the tenure of a tract of land granted by the man in the superior position to the other. That piece of land was called a fief and the parties concerned became suzerain and vassal as soon as the tenure had been granted and accepted.

It seems that the qualification 'feudal' may be applied to the organization of social relations between a *shebuja* and a *garagu* described in the preceding section. At the root of that relation, there are two individuals having a different social status. From one of these individuals, there is a demand for aid and protection, and from the other a promise of assistance in counterpart of services. Granting the usufruct of a few cows to the man of inferior status is the symbol and proof of the agreement.

571 675

The word 'agreement' is employed here rather than 'contract' which is more frequently used in this connexion. I do not consider

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

178 possible that when Tutsi first came into the country, the difference
564 was greater than at the beginning of this century. It was not, however, to be compared with the difference existing, for instance, between the material culture of the Europeans in Central Africa and of the Africans during the nineteenth century and at the present time. A large and complex material culture is one of
114 the most important factors not only in conquest but also in the
55A maintenance of a dominant group's superiority. Motor vehicles, dwellings in permanent materials, electric power, European kinds of food are so fundamentally different from the traditional Central African means of transportation and habitat that it is easy for those who have the almost exclusive use of them to maintain high prestige and great power.

55A Except for cattle, Tutsi material equipment did not allow them
564 to impress on Hutu minds, to a comparable extent, the idea of
178 their superiority. Certainly they had more spacious compounds,
184 they were better dressed than the Hutu, they drank better beer, and when travelling, instead of walking, they were frequently carried on a litter by Hutu or Twa servants. All these differences, important as they were, were only, however, differences of quantity and degree, characterizing two strata which had not the same access to the good things of life, rather than essential differences. By 'essential' is meant here that the Tutsi equipment did not include elements such as steam-machines, electricity or gun-power, which, when possessed exclusively by a group, are sufficient to secure an easy domination. Tutsi power did not rest on a superiority in material culture.

Another relevant background factor was the ratio between Tutsi and Hutu. As was previously stated, it is not possible to
[162] know that ratio very accurately. It is very likely, however, that it was never greater than ten or fifteen per cent. This fact was extremely important, because an economic exploitation of land tillers for the benefit of cattle-raisers would have been impossible if the Tutsi had numbered much more than this percentage of the total population. If, for instance, the Tutsi had constituted fifty per cent. of the population, the Hutu would not have been able to provide them with the foodstuffs and labour necessary to
[171] comfortable subsistence. Oberg makes similar comments on the ratio between pastoralists and agriculturalists in Ankole.[1]

[1] Oberg, 1940, p. 126.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

184 it is certain that there were (and still are) Tutsi and Hutu physical
564 stereotypes socially recognized. Such characteristics regarded as
826 significant were, for the Tutsi, to be slender, tall, and light
178 skinned; for the Hutu, to be short and stout with coarse features. To conform to one of these types was not sufficient to make of a man a Tutsi or a Hutu. Indeed there were some Tutsi and Hutu who did not possess the physical characteristics of their caste.

•114 Sociological and psychological studies devoted to racial problems, and particularly to anti-semitism, have stressed the importance of the physical stereotypes of groups. It is immaterial whether the stereotypes are verified in the majority of cases, or only quite rarely. What *is* important is that they provide a basis on which many moral, psychological, and occupational characteristics are crystallized and form a simple picture. This picture, haunting the imagination of those it is supposed to represent as well as of the others, makes everyone extremely conscious of his group participation and of the differences that separate his group from the others.

178 The fact that a group is characterized by a physical type
564 differentiating it from the others is a factor which may act both
826 ways from the standpoint of social and political power. A minority
184 endowed with a stereotyped physical appearance will have a very great social visibility. If that minority is at the bottom of the hierarchy, its members are constantly despised, and develop attitudes characteristic of those who are looked down on by those with whom they have to live. Consequently, they are hopelessly confined to their group and enjoy almost no opportunity to increase their power. This was the case of the Twa. Their physical stereotype stressed all the features which could be interpreted as ape-like.

If, on the contrary, that physically stereotyped minority is at the top of the power structure, it avails itself of its appearance, regarded as 'beautiful', to support its claims to an innate superiority. Consequently, it is an asset to its power.

Tutsi have been able to use the three different stereotypes of the
[554] physical characteristics of the Ruanda castes as a confirmation of their superiority: they have convinced all Ruanda that to be slender and light skinned is much better than to be stout and dark
[531] (this was even aesthetically translated in the patterns used in the ornamentations of baskets: they manifested a preference for elongated slim forms). They used the stereotypes also as a proof

[P.160]

CHAPTER VIII

THE PREMISE OF INEQUALITY

1. DEFINITIONS

121 d19 THERE is in a culture much more than can be observed (artifracts, behaviour) or known by direct questions (myths, religious beliefs, &c.). There are conceptions concerning the place of man in the world, his destiny, his main values, his attitudes to his fellow men, the meaning of the invisible world, &c. That covert part of a culture is partly or totally implicit in the sense that these fundamental conceptions and values remain for the culture bearers unexpressed or even unconscious. They are thus reached by induction, some by immediate inference from observation, some by a process encompassing several states of abstraction.

Some elements of the covert culture are particularly fundamental because they underline different cultural phenomena which hitherto might have appeared unrelated. They act as a principle in the logical order from which a set of conclusions may be deduced. This is why the word 'premise' has been preferred here to others such as 'configuration',[1] 'sanction',[2] and 'theme'.[3]

On the other hand, the word 'premise' should not be thought to imply that the relationships between the cultural principle and its cultural consequences obey the strictest laws of rational logic. This relationship may be said to be logical only in a very broad sense. Or more accurately, we must clearly distinguish between 'logical' and 'rational'. There are relationships which are meaningful although they express a sequence which is emotional or 'psychological' or even unconscious rather than rational. Such relationships, however, may be said to be 'logical' in the sense in which we speak of a logic of sentiments or emotions. This simply means that we expect them, 'understand' them.[4]

114 To make the point clear, let us take an example of a logical but not rational relationship between two social phenomena. In the past, a positive correlation has been noted between low economic

[4] Maquet, 1951, p. 185.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

indices and the lynching of Negroes in the Southern States of the Union. There is evidently no rational means for the whites of the south to impute the responsibility for the lack of rain—which was then the cause of the poor cotton crops—to Negroes. This typically irrational behaviour, however, becomes comprehensible if we accept the frustration-aggression sequence. In this sense, it can be said that the relation between the two phenomena, economic crises and lynching, is a logical relation.[5]

Ruanda political relations disclose one of the premises of that culture. Underlying the political and feudal structures there was a general assumption about human relations. In order to formulate it as accurately as may be possible, I shall first consider more closely the social roles of the superior and inferior in the field of political and feudal relations. In the following section the words 'ruler' and 'subject' refer to superiors and inferiors in the administrative, military, and clientage structures.

2. THE RULER'S AND SUBJECT'S SOCIAL ROLES

The analysis of the political organization of Ruanda indicates that the ruler was expected to assume a complex role towards his subject. The two poles of it were protection and profit. The subordinate was somebody whom one protected: he was also a resource from which it was normal to draw some advantage.

Protection was not restricted to a certain field of action, but potentially encompassed the whole of the subject's life. When the inferior needed some help, any help, he was expected to apply to his ruler even if the issue was completely alien to the sphere of the main relations between the ruler and the subject. A client could ask his *shebuja* for aid in matters not pertaining to cattle and *buhake* services. It was even thought proper for the ruler to interfere in difficulties which his subject through his own misdemeanour had run into as, for instance, when an inferior had been caught stealing from somebody. When protection was refused, it was not because the question was not the ruler's concern, but on other grounds, such as disloyalty.

The extent of that protection was not strictly defined. It did not constitute for the ruler a set of particular and fixed obligations. The subordinate had a general right to be protected but very few claims to particular advantages. In *buhake*, when one offered one's

[5] Dollard, 1939, p. 44 (quoted by Maquet, 1951, p. 166).

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

571 services to a lord in order to become his client, one was entitled to
829 receive usufruct of his cattle. But the number of cows was not
156 determined. It could be one or twenty or fifty or even more.
641 It was up to the ruler to decide if any protection was to be granted and to what extent. Of course the pressure of public opinion obliged him not to refuse aid to his subordinate unless he had some socially accepted reason to do so (such as the subordinate's disobedience), but the measure of the protection depended on his own will and pleasure.

These characteristics of the protective attitude (care of the whole of the subordinate's life, its very variable extent being left to the superior's judgement) allow us to apply to it the qualification of
128 'paternalistic'. Paternalism is understood here as 'the principle of
114 acting in a way like that of a father towards his children. Because of the total dependency of the human offspring, during their first years, on those who nurse and educate them—and they are usually their parents—the latter's authority ranges over the whole of the life of the child. In everything he needs his parents, in everything they have to direct and control him. Moreover, parents sovereignly judge what they are going to give their children. Undoubtedly, their social groups force them to secure for their children the protection they need to live and develop but the children may not require such or such a particular service. Parents decide without further ado what is suitable for the child and think that better than he they know what is 'best for him'.

571 A paternal relation does not exclude profit. In describing the
829 Ruanda's father's role towards his sons, I mentioned that the
156 father's interests were usually thought to be predominant in
641 respect of the children's interests. When inferiors were not the superior's children but his subjects or clients, that aspect of profit was much more emphasized. All those who occupied the inferior position in the relations of the political and feudal structures had dues to give and tribute labour to perform for the profit of their superiors, and some of these obligations were heavy. It did not appear at all unusual to Ruanda that power brought many privileges to those who had it. If one is a chief, is it not fitting to draw advantages from one's situation? Here, again, the extent of the subject's obligations was left within very broad limits to the superior's discretion.

The ruler's role seems to have been that paternalistic blend of

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

shaped the new Ruanda situation according to their ideology. Again, it is possible that some themes and types of organization of the Hutu cultivators were particularly capable of being used in the formation of the Ruanda ethos as I have described it. But a conquest evolving into a caste structure is sufficient to account for an inegalitarian premise. Even if prior to the conquest each of the two groups concerned has an egalitarian ideology, the establishment of hereditary groups, whereby the status of vanquishers and vanquished is perpetuated, suffices to give birth to a theory of inequality.

I am of the opinion that such a theory is a necessary 'superstructure' (in the Marxist sense) of a caste system. Undoubtedly, a body of inheritance laws, opportunities for a certain kind of education restricted to the wealthiest, a difference in languages, &c., may maintain for some time a high social power in the hands of the conquerors' descendents, even if the cultural ideology is that all men are born equal. But such a lack of internal coherence ('all men are born equal' versus 'political and economic power is restricted to those who are descendants of the conquerors') is very likely to result rapidly in an evolution from a caste system to a class society. A 'racial' theory seems the only ideology perfectly consistent with a caste structure. It is very probable that conquerors adopt it not only for consistency's sake, but because it is more efficient, more easily understood and accepted, particularly when different physical traits are characteristic of each caste.

It should be understood that when we speak of 'the adoption of an ideology by the conquerors', it is not meant that one day the conquerors made a conscious choice among various possible ideologies. Rather, once a caste system operates, the patterns of political domination and of economic exploitation require people to behave as if the upper caste members were by nature different from that of the lower caste members. When the 'idea behind' these behaviours is made more or less explicit, as in tales and proverbs, it is rationalized in terms of fundamental and inborn inequality.

If there is such a necessary link between caste systems and the premise of inequality, then to know whether the conqueror's ideology, prior to the conquest, was egalitarian or not is only an historical question; when the vanquisher settles and establishes a caste system, the inegalitarian ideology is produced, as its corollary.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

The question of the previous premise of the conquerors' culture, however, remains very important in another connexion: to what extent does an anterior egalitarian ideology deter the conquerors from establishing a caste system? Is the conqueror, if imbued with an ethos of egalitarianism, inclined to admit that his principles are valid also in his relations with the vanquished group? Or does he think that obviously the conquered groups are different people? Because of our ignorance of the Tutsi cultural premises before they entered into Ruanda, these questions have to be left unanswered in the case of ancient Ruanda.

FO42 Rundi FO42

WOMEN OF BURUNDI: A STUDY OF SOCIAL VALUES*†

Ethel M. Albert

SUCCESS IN REALIZING the central values of Rundi society is, for men and women alike, dependent on inherited caste position, intelligence and "luck".[1] In this feudal, patriarchal society, the central values are political power and authority; wealth—especially cows and lands and, today, money and the goods and services it can purchase; respect and love from one's dependants; and elegance of appearance, manners and material possessions. What is needed before all else for obtaining the good things of life, the Rundi say, is the favour of *Imana*, the Supreme Being or Providence. Divine favour is also requisite to the realization of such other important values as numerous children, protection against one's many enemies, and the retention of goods already obtained. The chief terrestrial asset for realizing values is position in the social hierarchy.[2] The likelihood of happiness is greatest for the *mwami*, the king, and for the men and women of the royal and princely patrilineages. Opportunity and hope diminish progressively with decreasing status in the hierarchy, through the patrilineages of the Tutsi herders, the Hutu farmers and serfs, and, at the bottom, the Twa, potters and pariahs.

Women, in so markedly patriarchal and patrilineal a society as

*Author's translation.

†The research upon which this paper is based was supported by a Fellowship from the Ford Foundation, African Program (1955-1957). The field work was done between March, 1956 and July, 1957. Thanks are due also to I.R.S.A.C. (Instut pour la Recherche Scientifique en Afrique Centrale) for having granted me the privileges of *Chercheur Associé*. Changes since the period of the research render the present tense historical.

124 of the complex customs of Ruanda. The value of our information,
[115] emanating from the principal abiru, guardians of the customs of the Court of Nyanza, and from the seminarists, sons of the great provincial chiefs, as well as the cross-checking we have done, make us hope that we will present an essay from which all fantasy has been eliminated.

121 We hope that it will be possible for all those, both clerical and lay, who work in the "country of the cow and the drum," as well as ethnologists needing a basis for research, to have a clear picture of an organization, of a mechanism both complicated and precise, that takes us back mutatis mutandis both to the atmosphere of the ancient City and to that of the medieval world. THE BATUSE OR BALYANWANDA OF RUANDA

CHAPTER XXVIII

THE TRIBE AND ITS GOVERNMENT

The clans—government—powers of the chiefs—taxation—murder—homicide—death in battle—suicide—the chief priest

115 THOUGH much of the Ruanda country became Belgian after the war, there is still a large part of Kigezi which is British Ruanda. My information with regard to these people was derived from two chiefs who were political prisoners in Mbarara. One of them was a prince of Ruanda who had fought against the British during the war and had been captured, and both were exiles from their own country because their king regarded them as dangerous to him and wished to kill them.

THE CLANS

614 The tribe was divided into clans which were totemic, having both primary and secondary totems. Sub-divisions of several clans were mentioned, but the information given was so imperfect as to be of little value. The names given were the same as some of the main clans and details as to the totems were lacking. The list, however, is given to show the existence of such sub-divisions:

1. Abanyiginya, totem, *mpekhi* or *opu* and *efuti*, a calf born feet foremost?

This was the royal clan and had three sub-divisions with the same totems:

(*a*) Abasindi.
(*b*) Nabaganzo.
(*c*) Abene, which had also a third totem, an unmarried girl with child.

2. Abega, totems, *mpekhi* and *efuti*.

Sub-divisions with the same totems:

(*a*) Abakono.
(*b*) Abaha.

[p. 184]

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

762 When a man committed suicide, he was buried as usual;
766 but a medicine-man was summoned to tell by augury whether
787 the house had to be deserted or was still fit to live in.

Religion

773 I received a statement respecting the religion of the Batuse
[115] from Captain Phillips, the District Commissioner. They were,
[776] he said, monotheistic and had a chief priest who was initiated
into his office by a journey up a certain mountain where there
[778] was said to be a flock of sheep sacred to the god. This was a
[782] dangerous exploit, but before a man was accepted as priest
he had to go there with a sheep, which he offered to the god.

This chief priest kept all the fetishes and carried out all religious observances for the king, who kept neither fetishes nor priests about him. When there was any illness or other trouble, the king sent a bull, a sheep, or a fowl (in the case of
[787] war, a bull, a ram, or a cock) to the priest, and an augury was taken from the flow of blood and from the markings on the lungs and intestines.

CHAPTER XXIX

THE KING

The kings of Ruanda—government and taxation by the king—food of the king—wives of the king—heir to the king—death of the king—mourning—burial—accession—the king's mother and her brother

643 The list of the kings of Ruanda was given as follows: Kigwa,
173 who came from heaven—his son, Kimanuke, who begat Randa — Merano — Kobo — Gihanga — Kalyaruanda — Ruganza — Kirimu — Kigeri — Mutabazi — Gahima — Ndahiru — Ndole — Muhenzi — Namuhesera — Sekalongoro — Huhi — Kirima — Ndabalasa — Mubamwhe — Gahiridirwa — Lwogera — Lwabugiri — Lutariridwa, who was killed by his brother Musinga, who still reigns.

692 The king's court was the court of appeal for all his subjects
645 and his council was composed of the high chiefs.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

whole area of Ruanda. This took several months. With the help of two assistants, Messrs. G. Sebyeza and M. Sekanyambo, to whom I had given some training in interviewing and recording data, 326 informants were eventually interviewed. The aim of the inquiry was explained to them in small groups, but each interview was privately held to prevent informants from influencing each other's answers. In order to make sure that answers could be accurately recorded, the questionnaire had been printed and the answers of each informant were written on a separate copy.

As might have been expected, the more competent persons on political organization were Tutsi and in fact more than ninety per cent. of our informants were Tutsi. Since the number of Hutu and Twa was too small to be of any significance (there was, in fact, only one Twa!) their interviews were not taken into account in the computation of the results. A few more interviews were discarded on other grounds (such as suspicion about the sincerity or the mental ability of the informant). In the end the number of interviews used in the summing up was reduced to 300.

To count up the answers, some questions had to be modified. For instance, the question, 'Give the name of your patrilineage head', was replaced by, 'Do they know the name of their patrilineage head?' The computation of answers for the whole of Ruanda is given as Appendix Two.

Obviously, this class of 300 informants does not constitute a random sample representative of the total Ruanda population: the informants are practically all Tutsi and have been chosen according to certain criteria. This does not invalidate our procedure, however, as our aim was not to assess the opinions and knowledge of the whole of the Ruanda population on their past political organization, but to discover as accurately as possible what that organization was. This is why we attempted to interview only the most informed persons on the subject and to take into account the divergence of their views.

On kinship, family, and related subjects, the preliminary survey did not give as much information as the preliminary political survey revealed. Consequently, another procedure had to be adopted. A very comprehensive schedule of topics to be brought into the interview was elaborated. There were 542 items distributed under sixty-two headings to be covered with each

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

124 [115] informant. Sixteen Hutu and twenty Tutsi informants were interviewed. Two junior administrative officers, Messrs. E. Finoulst and G. De Clercq, who were taking a six-month course of training in anthropology, participated in the different stages of this inquiry, as did Mr. S. Naigisiki, who acted as assistant and interpreter.

The inquiry into the cosmological and ethical systems was carried out on similar lines. A schedule of thirty-five headings, under each of which several points were listed, was used in several collective and individual interviews.

114 This research from 1949 to 1951 forms the main basis for my *Système des relations sociales dans le Ruanda ancien*, published in 1954. But I have spent two other research periods in Ruanda (December 1952–December 1955 and September 1956–September 1957) on more specific topics. What was observed in these later periods, however, bearing on the topic of the earlier study, has been taken into account in the present volume.

120 Secondarily, the present study of Ruanda is based on literary sources published both before and after 1954. These are fully listed in the Bibliography.

• • •

122 All my field work in Ruanda was sponsored by the *Institut pour la Recherche Scientifique en Afrique Centrale* (I.R.S.A.C.) for which I am deeply grateful. At the same time I assumed the 114 functions of Head of the Scientific Research Centre of I.R.S.A.C. in Astrida. I wish to extend my thanks particularly to Professor 000 L. van den Berghe, Director of I.R.S.A.C. The late Professor F. Olbrechts, when he was Chairman of the *Commission des Sciences de l'Homme* of I.R.S.A.C., also greatly encouraged my research.

For guidance in planning the research project on Ruanda and for supervision of all its later stages, I gratefully acknowledge my indebtedness to Professor Daryll Forde.

I should also like to thank Miss Barbara Pym, of the International African Institute, London, who very kindly corrected the first typescript, and Dr. R. J. Apthorpe, of the Rhodes-Livingstone Institute for Social Research, Lusaka, for his patient and invaluable help in preparing this edition of my book.

Essay on the Common Law of Ruanda

J. Vanhove

Preface

101 Beyond the eastern shore of Lake Kivu extends a country of
563 high hills called Ruanda. Nestling in banana groves, innumerable huts cling to the hillside, their smoke rising to the sky, and on the summits the brisk wind sways the pink grasses of the pastures where long-horned cattle graze. The exceptionally dense population con-
[161] sists of about 3,000,000 Bahutu of Bantu origin who are dominated by some tens of thousands of Batutsi, Hamitic shepherds who have probably come down from the Ethiopian plateaus. Finally, here and there, Batwa pygmoids, potters and hunters, live apart from the other natives who despise them.

183 Europeans who first studied the customs of the country dis-
671 covered to their surprise that they showed a number of points in common with our feudalism. The tenure of land and of cattle as well as
[643] the dependence of persons are under a [4] strict regulation which the ruler of Ruanda has the absolute power to modify but which has, in fact, remained unchanged throughout the ages.

Our occupation has obviously had the effect of modifying the
177 customs in many ways. For example, we could not approve of the
183 brutal evictions and attempts on life and liberty made in the name of the right of the strongest. Evangelization has also introduced into the heart of the native society notions of justice and gentleness which are very different from the natives' original conceptions. However, despite
177 the efforts of our civil servants and our missionaries to attack what is
183 most to be condemned in it, native customs still largely holds its
563 sway due to the influence of the great Batutsi chiefs, who are eager to maintain their authority intact, and also due to that of the sorcerers, toothsayers, rain makers, and many others, who attempt to maintain the traditional law by playing on the credulity and superstitious mind of the Banyarwanda [Banyaruanda] and thus protect their prestige and their revenues. In addition, while realizing the protection we give them in repressing arbitrary actions, the Bahutu submit to the changes we

177 have brought to their customs rather than truly adhere to them. This
183 passive attitude is due to an inveterate fatalism which makes them
563 bow before the undisputed master, the Mututsi, and also to the antiquity of custom which makes it as respectable as an almost divine institution.

671 As is the case in the Belgian Congo and generally in [5] Black Africa, the common law contains not only juridical rules applicable to persons, property, and society, it also contains religious and magic regulations, various recipes, etc. Such as it is, it forms a disparate yet solid whole which gives the solution to problems arising from the individual and collective life of the Banyarwanda.

671 The common law of Ruanda, applicable to a homogeneous population, is the same everywhere, except in the north on the
184 frontier of Kivu and Uganda, where the authority of the Batutsi over
563 the Bahutu could not assert itself as in the rest of the country. This independence has resulted in the substitution of the administration of the Bahutu clan and family chiefs for that of the Hamite officials.

114 Those who have known Ruanda and its people best are the members of the Society of Missionary Fathers of Africa. The Reverend Fathers Lupias, Schumacher, Arnoux, Pagès, and Hurel have published, in the Anthropos and Congo reviews (among others) and in numerous monographs, elaborate studies on different aspects of the social, political, religious, and intellectual life of the Banyarwanda. The territorial governors Lenaerts and Sandrart have also brought fruitful contributions to the knowledge of Ruanda common law.

121 Nevertheless, we do not believe that a more or less complete account of the customs of private and public law of Ruanda has ever been prepared. This is what we have modestly attempted to do in the
[125] present work by inserting observations gathered in a questionnaire set up especially to facilitate [6] the study of native law (1). We have

1. J. Vanhove, Questionnaire de Sociologie juridique, Brussels, printer Lesigne, 1939.

not been able to go into the details of all the institutions of which some, particularly those relative to cattle contracts, would alone require a whole volume.

124 But, in spite of the limited time we could devote to this account of the customs, we believe we have given the essential points

124 of the complex customs of Ruanda. The value of our information,
[115] emanating from the principal abiru, guardians of the customs of the Court of Nyanza, and from the seminarists, sons of the great provincial chiefs, as well as the cross-checking we have done, make us hope that we will present an essay from which all fantasy has been eliminated.

121 We hope that it will be possible for all those, both clerical and lay, who work in the "country of the cow and the drum," as well as ethnologists needing a basis for research, to have a clear picture of an organization, of a mechanism both complicated and precise, that takes us back mutatis mutandis both to the atmosphere of the ancient City and to that of the medieval world. [7]

SECTION I. PERSONAL STATUS

CHAPTER I. THE FAMILY AND THE CLAN

1. Generalities

596 The family sensu stricto (rugo) (1) is more inclusive than in

[196] 1. The rugo is the enclosure in which are the hut, the granaries, and the stables. By extension, this word designates the family in the strict sense of the word. In the plural: ingo.

our countries. It includes the father; his wives and their children, whether married or not; the father's brothers; and their wives and children. Formerly, the slaves taken in war (abanyagano) (2) were

[567] 2. Cf. also Marriage, p. 15; Birth and Filiation, p. 29; Government and Administration, Nationality, p. 70; Social Classes, p. 91; Right of War, p. 92.

also part of it.

[566] The Bahutu, serfs of the Batutsi, have their own rugo. The Ruanda family is of the patriarchal type. Filiation counts in the [611] paternal line (3); the child does not necessarily take the name of his

3. The children are nevertheless considered, in a way, as belonging to both father's family and the mother's. The Banyarwanda say: Umuntu akomoka iwabo wase nanyina, that is to say, "the man proceeds from both (families), his father's and his mother's."

596 591 father (4); paternal authority is exercised by the father, and the wife

4. This was even rare before European penetration.

596
[591] comes and lives with her husband (5). [8]

[575] 5. The polygamous Mututsi does not occupy his own dwelling. He visits in turn each of his wives in their individual dwellings.

597 Adopted children are also part of the family. Thus a child-
596 less man (inchike) can adopt a son of his brother (umuhungu wachu), failing this, a son of his sister (umwishywa), or that of a friend. A
[563] Mututsi cannot adopt a Muhutu child, and vice versa.

As the women cannot inherit, adoption provides a means for a
[428] brother to give his sister the benefit of certain advantages, for it has
[562] the effect of establishing a nephew as heir (kulaga, lit., to promise his property).

The adopted child acts exactly as if he were the son of his adopted father; he pays homage to the chief for him, he orders his affairs, he defends him in court, etc. The daughters call him brother
[586] and if they are divorced they ask him for shelter.

It may also happen that the umwishywa may become at the same time head of his maternal uncle's rugo and chief of the maternal clan (umutware w'umulyango ya nyina).

597 The adopted child may keep the inkazibiti (1) received from
428

1. Cf. Property, Ownership of Cattle, p. 41.

his true father, but may no longer share in the division of the latter's inheritance. It may also happen that he receives his share (indemano) (2)

2. Cf. idem, p. 42.

before going to his adopted father; in this case while being a client (umugaragu) (3) of the latter, he remains also, by the indemano, a

3. The patron is called shebuja.

client of his true father.

If the adopted child is disobedient or ungrateful to his adopted father, the latter may curse him and send him away empty-handed.

614 The clan (umulyango) (4) or inzu includes all those who claim

4. Not to be confused with umúlyango, "door."

a common ancestor who is founder of the [9] race. In the course of time the clan has become divided into several subclans (imílyango).

The clan and the subclan have names (ubgoko) that recall the name of the founder. Thus the members of the umulyango of the Abanyiginya are the descendants of Kimanuka who is the Umunyiginya (the first of the Abanyiginya). Ndabarasa, son of the Mwami Rujugira Chyirima, who became king under the name of Kigeri, was the Umurabarasa, the first of the umulyango of the Abarabarasa or Ibigina. This last name is what they are called at the present time.

614 775 Each umulyango possesses one or several animal totems (ibiziro). For example, the totems of the Abanyiginya are the crested crane (umusambi) and the ox-pecker (inyange); that of the Abega is the toad (igikeri); that of the Abagessera is the wagtail (inyamanza). The member of a clan will never kill such a bird, for example, because he believes that it contains the spirit of an ancestor.

614 563 The Bahutu belong to the same umulyango as the Batutsi and possess the same totems. However, they have a different name. For example, those who live with the Abega and the Abanyiginya are called respectively Abasavere and Abasindi.

2. The Head of the Family and of the Clan

596 The head of the family sensu stricto (umutware w'urago rwa se, lit., the head of his father's rugo) is normally the father. After his death, one of his sons, not necessarily the eldest, succeeds him. It may happen that the widow of the family head provisionally directs the rugo if her husband has died without designating his successor or when his sons are still children (1). [10]

614 1. While still forming part of her [own] umulyango, the wife is, so to speak, incorporated into her husband's inzu if she has children. But she does not take the name of her husband's umulyango. The

614 wife always remains a stranger to her husband's clan and keeps her own totem.

596 The umutware w'urugo rwa se is only slightly important and
614 this word is seldom used. More important is the umutware w'urugo rwa bo (lit., of them), also called umutware w'umulyango, who has command both of his rugo and the umulyango.

614 The umulyango is a social entity without any political value. Thus Rwabutogo, chief of the umulyango of the Abega, owns only the province of East Buganza. In matters of family and cattle he commands Rwagatakara, who in turn commands Rwabusisi, chief of Buliza and South Buganza.

614 The umutware w'umulyango exercises a paternal jurisdiction
689 over all the members of his group. If they disobey him seriously he
425 can drive them out and seize their cattle (indemano, inkazibiti) except for the animals they have received as a gift from the king (ingabane) (1). However, it is the Mwami who has the right of

1. Cf. Property, Ownership of Cattle, p. 42.

[166] eviction. In addition, if the king sees that an injustice has been committed, he authorizes the one who has been the victim to settle elsewhere so as to remove himself from the jurisdiction of the chief of the umulyango, without however ceasing to belong to the clan. If the Mwami asks the umulundo (2) from the chief of the umulyango,

2. That is to say, lit., "wishes to see the cattle of his cattle." He takes only one or two animals.

the latter can in turn claim some inyiturano (3) from his family. On

3. Cf. Property, Ownership of Cattle, p. 43.

the other hand, the chief of the umulyango can show his favor to those of his relatives with whom he is satisfied by giving them some ingabane.

3. Laws of the Family and the Clan

614 1. It is forbidden to marry a person belonging to the same umulyango, whatever the degree [of relationship]. Only the Abanyiginya, the clan from which the kings come, may marry [11] within their [own] inzu (1) and a fortiori into the other imilyango.

1. The reason for this endogamy must be sought in the fact that, according to legend, Kigwa married his sister Nyampundu.

However, marriage is forbidden with the Abatshyaba, the Abungura, and the Abakomankali. They usually marry the Abega.

The Abega (the family providing the queens), the Abagessera, the Abakono, the Abaha, and the Abasinga may not marry within their [own] umulyango nor into the other inzu. They are allowed to marry the Abunguru and Abakomankali, but not the Abatshyaba.

[426] [672] 2. The active and passive solidarity [joint and separate liability] in the matter of debts exists only on the paternal side (iwabo wa se) and not in the mother's umulyango (iwabo wa nyina).

The same is true in penal matters unless it is a case of a blood debt.

4. Table of Names Indicating Relationship through Kinship and Marriage

601 Those who are members of the same umulyango are called abagil'ichyobahuriycho, abagil' ichyobapfana, or, and it is the most frequently used and most precise term, abafit'isano.

Husband: umugabo
Wife: umugore
The husband of two wives: umugabo z'ishyali
One of the wives speaking of the other: umukeba wa njye
The husband speaking of one or the other [of the wives]: umukeba we

5. The Blood Pact

608 The blood pact (kunywana) is practiced throughout the whole of Ruanda and particularly by the Bahutu. Blood brothers (abanywanyi) can depend on each other completely. They must help each other in the most difficult circumstances of life and may even mutually dispose of their property (1) and their wives (2).

1. By special agreement.

2. With the consent of the wives.

The interested parties, each one assisted by a witness who will guarantee the other party's observation of the pact, sit down on a mat in the hut of one of them. Each of the witnesses cuts a leaf of coral erythrin (muko) and removes the stalk; he rolls the leaf into a cone shape and pours into it a little sorghum flour. Then with a small knife he makes an incision below the navel of the one he is assisting. He presses the sides of the cut to make the blood flow, collects it in the cone, and mixes it with the flour, using the leaf stalk. Then each party drinks the mixture called gihango (lit., blood) presented to him by the other's witness. The witnesses then pronounce imprecations (kutanga) in the name of their respective clients in order to seal the pact: "If you find me ill or wounded on the road and do not help me, may the gihango kill you."

608 "If you refuse to give me lodging or food, may the gihango kill you."

The two blood brothers then lie down on the mat side by side for a few moments to indicate that they will be indissolubly united in good as in bad days.

Then the one who is the visitor takes a handful of herbs and throws it on the hearth, saying: "If you come to my house and [18] I am away you may drink my beer and warm yourself with my wood, and may the gihango do you no harm, for you will not have wanted either to steal my beer or to burn my hut. But if my wife refuses to give you the beer and the wood, it is no concern of mine, for my wife is not bound as we are by the blood pact."

The abanywanyi then offer gifts to the witnesses such as hoes, necklaces, etc., and give each other presents of hoes, goats, and cows, according to their means, in order "to free themselves from the mat on which the blood pact has taken place," (kwichara ku kirago).

CHAPTER II. MARRIAGE

1. Kinds of Unions

583 The word ugushaka (to have a wife) designates marriage in general.

The typical marriage with payment of a dowry (inkwano) to the girl's father is called kurongora.

A umugeni w'ubuntu (lit., betrothed given as a present) may [572] be given as testimony of affection to a friend. Later the man can give a dowry, but he is not obliged to do so. If the friends quarrel, [562] the dowry may then be reclaimed. A powerful chief can also give his mututsi client a young girl as a gift (umugeni w'ingororano).

587 To marry a divorced woman or a widow is called gutshyura umusumbakazi (lit., to bring home a woman who has already been married). These unions are frequent, especially among the Bahutu. When they start keeping house, the husband only gives the bride's paterfamilias a jug of pombe, but if the couple have children he must give a dowry. [19]

(Official photograph, Colonial Office.)

583 A young man may carry off a young girl (kwiba umugeni) in order to force the consent of her parents. But the young man's father subsequently gives a dowry.

588 There are ibyomanzi (vagrant women) who stay with a man for indefinite period of time according to the circumstances of their wandering lives (kubuyera or kohoha). The fate of these unions is obviously precarious. If, against all probability, their common life lasts for several years, the woman may introduce her concubinary to relatives [or parents]. If children are born, the man may be obliged to give a dowry. The marriage is then regularized.

583 It may also happen that two men, each with a sister whose dowry they may claim, will exchange wives: abageni b'ubuntu bunyuranye (lit., the betrothed as gifts).

In all these marriages the fate of the wife and children is the same as in the typical marriage. If the husband does not pay any dowry, the wife's father may take the children away and keep them as hostages until their father has fulfilled his obligations.

567 583 Formerly, children who were prisoners of war (abanyagano) married later, usually amongst themselves. The master could also give a captive girl in marriage to one of his clients. He collected the dowry but on the other hand, he had to pay a dowry for one of his slaves who wanted to marry a woman of the same region.

The slave, his wife, and their children continued to be part of the master's household. If one of these children wished to get married in his turn, his father would pay the dowry for his son or collect it for his daughter, and by that very act, his son or daughter was freed and became munyarwanda.

567 If the master married a slave woman, the children of this union would be of the same status as their [20] father, even if he already had other children with a munyarwanda woman.

2. Types of Marriage

595 Polyandry does not exist in Ruanda.

Polygamy (polygyny) is universal, except among the Christian natives, and particularly among the Bahutu, who have an average of two or three wives and sometimes even four or five.

The Batutsi most often have two wives. The great chiefs have, in addition to their wives, a certain number of insholeke (concubines).

595 The Batwa usually have four or five wives.

One of the wives has a special name, inkundwakazi (the loved one, the favorite). She is thus called because of her qualities: her cleanliness, her ability to make pombe, her faithfulness, her careful supervision of the crops, the good treatment she extends to the abagaragu, the constant care she takes of the cattle, the friendly reception she reserves for her husband's friends, the care with which she has the master's orders carried out in his absence (1).

1. The inyungwakazi is quite the opposite of the inkwundakazi. She is a wife without any domestic qualities, who is disobedient, even adulterous. If her husband does not repudiate her, he keeps her at a distance and has no relations with her.

[836]

As to the other wives, the husband, in speaking of them, simply says abagore banjye (my wives). However, the favorite may not give them orders. Only the husband can give orders to his wives.

Children of different mothers (or of different fathers) are on the same footing and considered as real brothers and sisters. [21]

[848] Adulterine children belong to the husband of the unfaithful wife.

Whether legitimate or not, the children are not treated differently according to their mother's condition. But if the children of a concubine show themselves to be unbearable, people will not fail to contemptuously call them abana bo mu milombero (children of the hedges).

858 595

3. Obstacles to Marriage

582 1. Exogamy.

The Batutsi (except the Abanyiginya) and the Bahutu may not take a wife from within their father's family and clan, whatever the kinship. Parallel cousins (1) therefore cannot marry each other, but

1. Parallel cousins are those whose fathers are brothers or whose mothers are sisters.

582 marriage is allowed between crosscousins (2), for the sister's children

> 2. Crosscousins are those of whom the father of one is the brother of the other's mother.

belong to their father's family. An uncle may never marry his niece.

Endogamy (kwisabira ku mugongo, lit. to find one's self on one's back) and exogamy both exist at the same time among the Abanyiginya. However, they may not marry the daughter of their brother or their sister. Similarly, they may not take a wife among the Abungura, the Abasinga, and the Abatshyaba.

587 When a man dies, his father or his brother may marry one of his widows. Similarly, the son who succeeds him as head of the family may marry his father's wives, other than his own mother, on condition that they do not belong to his mother's family.

The husband of the deceased's sister may marry his sister-in-law (muramukazi), but not the latter's daughter (umukobwa wachu). Similarly, the brother of the deceased's wife may marry his sister-in-law, but not her daughter (umwishywa w'umukobwa). [22]

Marriage is permitted with the widow of a blood brother but not with his daughter.

582 The Batutsi may marry Bahutu women. For example, a patron
563 might give his daughter in marriage to one of his clients of whom he is particularly fond. But an umugaragu is forbidden to ask his shebuja for permission to marry his daughter.

2. Impuberty.

582 In the past a young man and a girl could not get married before the age of twenty-five and eighteen respectively. A little girl (inshube) and a little boy (ingimbi) were sometimes betrothed, but they remained with their parents until the time of their marriage.

Nowadays a young man usually gets married when he is eighteen and a girl when she is fourteen.

3. Lack of consent.

584 The father chooses the wife for his son. If he is dead, one of his brothers takes his place in this undertaking. The son who is head of the family finds wives for his brothers and receives marriage proposals

584 for his sisters. The girl and the young man must obey the will of the paterfamilias. Even if their feelings are not in agreement, they cannot refuse to marry. This is particularly true when the fathers are friends and wish to avoid quarreling. Obviously, marriages entered into under these conditions are unstable and nearly always last only a short time.

This rule is not sanctioned with any penalty, but anyone who did not comply with it would expose himself to public contempt. Nowadays, more and more frequently, the young man makes the choice himself and asks his father to take the necessary steps with the family of the girl he has chosen. [23]

4. The Dowry

583 The purpose of the dowry (inkwano) is to buy back the children that will be born of the marriage. In fact if it is not paid to whom it is due (the wife's father or brother), he will take the children as hostages.

Also the dowry contributes to the stability of the marriage. The relatives, who have to refund the dowry if the marriage is broken, are certain to encourage the husband and wife to become reconciled.

Among the Batutsi the dowry consists of cows. Formerly, well-to-do people gave eight cows, hence the word umunani (lit., eight, implying, heads of cattle). Today, these cows, of which there are only two but which have kept the name of umunani, are brought to the girl's father during the engagement and kept by him in trust. One of them is for the gukwa (1), the other for the gutebutsa (2). On the

1. Literally, "to take the necessary steps to conclude the engagement."

2. Literally, "to hasten" (implying, the marriage).

day of the wedding, the girl's father keeps for himself the cow that has given him the most calves, or the finest heifer, and returns the other to the young man's father.

585 In Buganza, Buliza, Nduga, and Bugessera, where cattle is plentiful, the Bahutu also give a cow as dowry. Elsewhere it consists of hoes, usually four, and about thirty jugs of beer. It may also happen that an imbata (3) or an ingabane (4) is claimed in addition

3. Cf. Property, Ownership of Cattle, p. 40.

4. Cf. idem, p. 42.

by the Muhutu father-in-law.

Among the Bakiga (region of Rukiga) the dowry is paid in goats (ibuguma) or in sheep (iliza). One of the wife's relatives with large hands seizes a leg of each animal, holds them together and tries to [24] assemble as many as possible. He repeats this operation twice and thus manages to collect about 20 animals. In Rukiga the dowry also sometimes consists of indundu and ingwate cows (1).

1. Cf. Property, Ownership of Cattle, p. 49.

The Batwa give only one hoe and a pot of beer on the day of the engagement and four hoes as dowry.

The custom of re-using the dowry — that is, the father of a son and a daughter does not pay the dowry for the marriage of his son until after having received the dowry for his daughter — does not exist in Ruanda.

The Batutsi do not give any present to the mother-in-law. Among the Bahutu, on the day of the wedding, before the girl leaves her father's house, the young man sends his betrothed's mother a jug of beer called irizeneko (lit., quartering) to recall the suffering she endured in giving birth to her daughter.

If the dowry has been paid in cows, the father-in-law on the day of the wedding gives his son-in-law an indongoranyo cow (2).

2. Cf. idem, p. 44.

If it consists of hoes, the husband also receives a hoe as indongoranyo.

5. Betrothal and Marriage

584 If the young man has not made his choice, the father draws his attention to such and such a girl whom he would like to have as a daughter-in-law, after having made sure of her father's approval and agreed with him on the date of the official betrothal (gusaba umugeni, lit., to ask a girl in marriage).

On the appointed day he returns to the home of the girl's parents accompanied by one or two clients (3) carrying a new hoe and

3. One of his relatives among the Bahutu.

a jug of hydromel and leading a cow [25] called y'ilembo (lit., in order to enter the rugo). He is let into the rugo. The young man's father and the girl's father, as well as his brothers and brothers-in-law, sit on mats, drink, smoke and talk of this and that. Meanwhile, the mother and the girl keep themselves hidden in a near-by nook and follow the conversation eagerly.

After this preamble which is merely a distraction, the talk turns to the marriage. This often gives rise to a lively discussion during which each of the parties defends his interests. When agreement is finally reached, the father says: "we give you our daughter, but the cow is not fine enough (1); bring us some others." An umugaragu is

1. Even if the animal is magnificent.

then ordered to bring seven other cows to complete the umunani (2)

2. As we have seen above (cf. Dowry) the girl's father nowadays only keeps one out of the two cows for himself.

and to ask the girl's parents for their approval as to the date of the wedding.

[831] Sexual intercourse is strictly forbidden to the betrothed.

The wedding usually takes place at the home of the young
585 man's father (3).

3. The marriage ceremonies have been

585 minutely described by the Rev. Father Schumacher (Anthropos, 1910, pp. 870-906) and the Rev. Father Pages (Congo, 1922, Vol. I, pp. 645-63 and Vol. II, pp. 42-68). We merely refer the reader to these articles. This matter concerns folklore rather than common law. Hence we are intentionally leaving it out of our report.

584 If, after having accepted the dowry, the girl's father does not keep his promise and refuses to give his daughter or gives her to another, he must immediately return the dowry. But by that very act, he breaks all bonds of friendship with the young man's parents, and in the future no one of the young man's family will marry a girl of the other family. The same is true if the suitor breaks the engagement.

[26] 6. Domestic Life

591 Marriage in Ruanda is patrilocal, that is to say, the woman leaves her parents to go and live with her husband. If the wedding has taken place in the woman's family, the young couple remain there for some time (gutahira), then go and settle with the husband's family.

585 Among the Batutsi, about two months after the wedding, the wife's parents send their daughter the intwikururano (from gutwikurura, lit., to unveil, to uncover), consisting of beer, sorghum flour, and milk. The purpose of these gifts is to allow the young woman to come out of the retreat imposed on her the day after the wedding and to show herself in public. For his part, the husband's father gives his daughter-in-law a cow called y'itshyali (lit., of the nest). The young couple then leave the dwelling they have occupied provisionally and go and occupy the rugo that has been built for each of them [sic]. A little later they go and spend a night with the wife's parents (gucha mw'ilembo, lit., to cross the threshold, or gusubya amaguru, lit., to return on foot) and also confer gifts on them on this occasion.

592 The Batutsi women each occupy her own rugo with her chil-
595 dren, women servants (abaja), and cattle given by the husband. The concubines live one or two together in separate huts inside the rugo of a legitimate wife.

Occasionally, the Bahutu wives occupy the same hut, but only for a rather short time.

574 The wife is not required to return occasionally to her parents.
787 However, the auguries may decide that childbirth will be more successful in her own family. [27]

7. Rights and Obligations of Husband and Wife

593 According to custom, the husband has the general duty of aiding and assisting his wife (kukamira umugore, lit., to milk [a cow] for his wife). He must provide her with clothing and ornaments (1),

[301] 1. In the past the husband spent a great deal to provide his wife with ububutega (rings made of grasses) which she wore by the hundred on her legs. This finery which weighed down the Banyarwanda woman's figure and interfered with walking was considered the height of elegance,
[481] for it gave her the gait of cows that are universally admired in Ruanda.

and nurse her when she is sick. In the same way, a wife who abandoned her husband when he was ill or in trouble would be disgraced.

593 Separation of property exists between husband and wife. The
421 wife owns her rugo, her field, and in addition, among the Batutsi,
563 some inyarulembo cattle (2) and some abagaragu that she received

2. Cf. Property, Ownership of Cattle, p. 44.

from her husband.

462 Among the Bahutu the man assumes the heavy work, construction of the rugo, and clearing of the land; the wife, helped by her husband and those children who are old enough, cultivates the fields. Domestic work is also shared: carrying water and wood, milking the cows, and making the beer are the husband's jobs, while the wife cooks, makes the butter, and keeps the rugo and kraal clean.

593 842 In a way marriage emancipates the munyarwanda woman, but only motherhood gives her the rights which make her a privileged person as compared to her sisters of Black Africa. The more children a woman has, the greater the esteem in which she is held (3).

[163] 3. Families with six, seven, eight, and even ten children are numerous in Ruanda; this prolificacy accounts for the fact that the country's population doubles in about twenty-five years.

593 562 The Mututsi wife is truly the nyirarugo (mistress of the house), the nyirabuja (boss). Her husband consults her [28] in matters of interest, asks her advice on the subject of the children's marriages, etc. In addition, among the Batutsi, she directs the servants, supervises the work of the hill people who come to do the customary labor and also the work of the abagaragu. She cannot, however, dismiss a client or make any important decision without the consent of her husband. If she did so and the husband did not interfere, he would be the laughingstock of the neighborhood and he would be called inganzwa (man without character who is dominated by his wife).

The Banyarwanda have an expression to describe a good wife. They say that she "builds for her husband" (kubakira umugabo).

A Muhutu never fails to make use, on the slightest pretext, of his right of marital castigation. A Mututsi, on the contrary, cannot strike his wife without falling from esteem except for a very serious reason.

The duty of fidelity exists for both husband and wife. But 837 custom is very tolerant of infractions of conjugal fidelity committed by the man, at least if he belongs to the same social class as the deceived husband.

837 586 The husband's adultery obviously displeases the wife but she nearly always will accept it. However, she sometimes leaves her

837 husband and returns to her parents. The latter will attempt to persuade
586 her to return to her husband, for if she refused they would be obliged to refund the dowry.

The husband who finds out that his wife has committed adultery (gusambana, lit., to take another man) enjoins her not to do it again. The second time he strikes her. If she continues, he repudiates (gusendwa) her publicly. A repudiated wife is brought into disrepute and finds it difficult to marry again. Sometimes the adulterous wife is sent away at night, out of consideration for the family, so that her offense is not known by everybody. [29]

837 Formerly, if the husband surprised his wife in the act, he
586 would have the man arrested and beaten. Then before witnesses he
684 would repudiate his wife. If the accomplice was a nobleman like
563 himself, he was allowed to leave with the woman. But, usually, if he was married, he would return to his wife who would merely make a jealous scene. When the lover was a Mututsi umugaragu he was deprived of his property and exiled far away. If he was a Muhutu, the husband could demand from the Mwami permission to impale him like a cattle thief, or else he would thrash him soundly and have him driven away from the hill. An accomplice of the Mwami's adulterous wife was always killed. In none of these cases was the woman seriously ill-treated.

684 Our occupation has put a stop to cruel punishments, and at the
586 present time the wife's accomplice is not punished at all. Adultery
177 leads only to pecuniary reparation (itshyiru) by the lover. On the other hand, divorce is pronounced to the husband's benefit and the dowry is refunded to him, at least if there are no children by the marriage.

848 If the adulterous woman is pregnant, she will always claim that
586 the child she is expecting is her husband's. Being in doubt, the hus-
837 band takes the child (umusambanano) (1) as soon as it is weaned. He

1. General term designating an illegitimate child, including that born of adultery or incest.

also provides for his wife's needs but does not consent to take up again their life in common.

If the husband is sure that the child is the fruit of adultery, he has nothing more to do with his wife, and her parents adopt the child.

837 It may also happen that the accomplice marries the mother of his child. A complaisant husband, or one who, knowing that his wife is unfaithful, keeps her in spite of all, [30] is the object of ricidule by his neighbors and friends, who do not hesitate to call him inganzwa.

837 586 Among the Bahutu, the adulterous wife is beaten by her husband and sent back to her family. If there are no children from the marriage the husband will claim the dowry paid to the wife's parents.

837 Among the Batwa, adultery is hardly important. If a wife is unfaithful her husband forgives her, and if she is pregnant he considers the child his own.

8. Extramarital Relations

836 684 Sexual relations have always been strictly forbidden to young Batutsi and Bahutu girls. Violation of this interdiction would bring great misfortune to the families, says the voice of the people. In the past, pregnant girls (ikinyandaro) (1) were often even killed with their

1. According to the beliefs of the Banyarwanda, a girl taken by force does not become pregnant.

children, or else they were led beyond the froniters of Ruanda to a desert island in Lake Kivu where they died of hunger, unless the Banyabungo came to their rescue. Sometimes they were led to Urundi where they had to remain until they gave birth. The child was killed or abandoned to the Barundi.

Today these cruel sanctions no longer exist, but a girl-mother is always considered a disgrace (inshyano) to her parents. The latter, however, usually take in the child.

Nevertheless, the young nobles do not deprive themselves of having sexual relations with the abagaragu girls placed with their fathers as servants. On the other hand, the Mututsi young man caught with a girl of his own caste was punished in the past in the same way as the accomplice of a married woman. [31]

837 [574] The great chiefs who possess concubines (insholeke) put them at the disposal of their visiting friends and relatives.

Blood brothers or friends sometimes exchange their wives for a night (guhan'ingo, lit., to exchange the ingo).

837 Up until recent times, the father-in-law and even the brothers-
606 in-law had the right to spend one or several nights with the wife of
607 his son or brother. The father-in-law had the right to claim this right without discussion, while the brothers-in-law had to have the brother's permission. The wife who refused to share her bed with her father-in-law or one of her brothers-in-law could be driven away. The husband even had the right to compel his wife to give her favors to one of his friends.

CHAPTER III. DISSOLUTION OF MARRIAGE

1. Death

765 Two days after a death, the whole clan arrives to assist the widow and orphans in their mourning. The mother and her children shave off their hair, take off their bracelets, and abstain from washing their clothes (kwirabura, lit., to become black). One of the brothers of the deceased lights a fire that burns in the rugo without cease for two days (igitshaniro). When it has gone out, the children and their uncle take the ashes and go in secret to throw them in a marsh.

[834] Mourning lasts for two months during which time the married sons may not have intercourse with their wives.

On the first day of the third month the members of the family return. In the evening they all assemble, swallow [32] great quantities of beer, and sing happily (kwera, lit., to become white). The brother of the deceased who took charge of the igitshaniro, or in his absence, another brother, must share the bed of the widow (kweza). The married sons, in the order of their birth, simulate the sexual act with their wives.

The following day, the widow and the wives of the married sons put milk in the churns and make butter (1). Then all the members of

1. During the mourning they could not touch the churns. A stranger to the family of the deceased came and made the butter.

the family rub themselves with chalk, put on white garments, and go

765 to the watering place. A brother of the deceased goes down in the near-by well, draws out water with a jug, and empties it into the watering trough. Then he passes the jug to the male children, beginning with the eldest, and each one imitates his gesture (2). In

2. During mourning, only the cowherds fill the watering trough.

the evening the guardians milk the cows; then after the mother, with the help of the paternal uncle, has removed the butter from her own churn (gutshyura igisabo, lit., to bring the churns back), the married sons and their wives do the same thing with theirs.

The son then gives a heifer to the uncle and a bull calf to the sister who has removed the cow dung (gukuka) in the kraal.

768 The night is spent in drinking, and the following day the uncle proceeds to choose a new head of the family if the father had not already designated one before dying.

765 If the wife has not had any children or if the marriage has lasted only a short while, her death gives rise to no ceremony and the husband wears mourning for only a week. (3)

3. All these curious ceremonies show the deep sorrow of the deceased's relatives. Above all, their purpose [33] is to prevent misfortune descending on the family of the one who has disappeared (guhumana, lit., to be soiled, to change color, to contract a serious illness).

Although they are extraneous to the common law itself, we have deemed it desirable to make a brief sketch of these ceremonies, in order to show that the whole life of the Banyarwanda is encircled in a close web of prescriptions of a magic nature.

[33] 2. Separation and Divorce

586 It may happen that the husband's and wife's characters are not in harmony, that the wife complains of her husband's stinginess,

586 or that the husband finds his wife to be capricious or disobedient. In such cases the couple can separate for a while (kwahukana). But this separation often makes them think it over; either the husband makes amends and fetches his wife from her parents, giving presents to the latter and to his wife (beer, cloth, or goats), or else the wife, realizing that she was in the wrong to leave her home, returns of her own will.

During the time of separation, the children, except nurslings, remain with the husband.

If an understanding is definitely impossible, divorce (kwahukana rwose, lit., to separate definitely) can be requested by one of the couple.

Causes of divorce in favor of the husband (repudiation) are: repeated adultery; dirtiness; negligence in the care of the household and the supervision of servants; the evil eye (1) that will cause illness

1. Cf. preceding page, note 1.

of the husband or cattle; and, above all, stubborn disobedience.
[34] Sterility may be a cause for divorce, but if the husband is pleased with his wife he will keep her and merely take another who will be able to give him children.

Illness, even when prolonged, is not a cause for divorce. [34] If the marriage has been fruitful, the husband cannot take back the dowry, but keeps the indongoranyo he received from his father-in-law.

If there are no children, the husband who has received the indongoranyo is not authorized to claim the inkwano. He can do so, in the opposite case, but the wife's parents, in order to avoid this obligation, give him another of their daughters.

If the dowry has been paid in full, the children remain with their father, except those that have not been weaned.

The wife can ask for a divorce if the husband does not pay the dowry, does not provide her with cloth and ornaments, continually
[16] ill-treats her, or if the children's, dying one after another makes her believe in the malevolent influence of her husband.

If there are children, the husband may keep the indongoranyo. In the opposite case, he takes back the dowry unless he has received the indongoranyo.

586 After they are weaned, the children return to their father, unless the dowry has not been paid in full.

CHAPTER IV. BIRTH AND FILIATION

[843] A pregnant woman continues with her work until the moment of her delivery. A Muhutu woman may even give birth while working 844 in the fields. This must not be considered the result of her hard lot but is due to the influence of tradition. Seeing her relatives and neighbors behaving in this way, she would never imagine that she might remain inactive while awaiting her child's arrival.

[787] When the event is near, the auguries are consulted to find out the most favorable place for the [35] birth. It might take place at the home of the wife's parents.

846 During the week following the birth, the woman rests; her husband surrounds her with attention and sees that she lacks nothing, meat, milk, beer, etc. (guhemba umubyeyi, lit., to reward the mother). In addition, the wife's parents also bring her presents. About 553 the eighth day the mother begins to go out again on condition that the 292 day is an even one (1). For this occasion, she puts on her finest clothes,

[805] [777] [461] 1. The week in Ruanda has four work days and one day of rest. Uneven days are considered ill-omened.

a dress of cowskin (ikanda), or if she is a Mututsi, a leopardskin with which she covers her shoulders. On her head she puts on a kind of crown (urugori) made of sorghum straw (2) which she will proudly wear

2. Among the rich Batutsi, the urugori is trimmed with beads.

from then on, for it is the emblem of a mother's dignity. The young 553 mother places herself near the door of the rugo with her husband. If the child is a boy, the father slips a miniature spear, bow, arrow, and shield between his fingers so that he will be brave. The

553 neighborhood children are then invited to eat a dish consisting of a gruel of sorghum and beans. But before eating they wait for the child to relieve himself, hence the name of this meal, ubunyano (from kunya, to defecate). Then the father recites a few names he would like to give the child, and those present choose one of them. If the parents have already lost a child, in order to turn away the evil spirits, the newborn child is baptized with an objectionable name such as Kangurube (little pig child). The same day the husband is obliged to have intercourse with his wife lest a misfortune happen to the child.

[845] Twins (impanga) are given names that resemble each other, Karengera and Karinganire for example. [36]

851 The rule pater is est quem nuptiae demonstrant is universally 848 applied. Normally, therefore, the husband is the child's father and [611] filiation is established in the patemal line. Children born after the father's death are considered legitimate if the wife was pregnant at the time of his death.

There is no special word to designate the legitimate child.

However, the rule mentioned above has certain exceptions. If a man marries an ikinyandaro, the child to be born, who is only an umusambanano for the husband, will belong to his natural father. But the husband may claim that the child is his if at the time of the marriage the girl is only a few months pregnant.

It may happen that a girl does not know the name of the man who has taken her (1). The natural child then belongs to the inzu of

1. This is especially the case with abajakazi (mistress-servants), who live at the Mwami's Court or with the great chiefs and who are put at the disposal of their master's guests.

the girl's father. Today there are many ibyomanzi who, eager for their independence, have left their parents and wander throughout the country. Their children are called abana b'umugore, but they do not belong to the maternal inzu, for the ibyomanzi no longer have any family.

The adulterine child belongs to the husband because of the dowry that has been paid. If the dowry has not been paid, the child is supposed to belong to the family of his mother's father. The incestuous child belongs to the husband. When a child is born to an unmarried

848 851 girl, the girl's father takes over the child.

In the past, during the wars, the owner of a woman slave [567] sometimes married her. The children of this marriage were considered legitimate and [37] had their fathers' status, even if he already had children from marriage with a munyarwanda wife.

Children born of the master and a woman slave were also considered legitimate.

CHAPTER V. PATERNAL AUTHORITY

593 The patria potestas is exercised by the father. In the past it implied the right of life and death over his children. Today the father does not have such power, but his authority still remains sovereign and extends even over married sons. The latter must in particular, give him cows if he asks for any to increase his herds and to replace animals that are sick or have died.

A bad son can be cursed by his father and driven out of the family and even from the hill (igitshibwa or ikivume, the accursed one). He goes off with empty hands, and his brothers divide his property.

As a counterpart to his authority, the father is obligated to support his children and to establish his sons by paying the dowry.

The children must obey their mother as well as their father.

[604] Simiarly they must be deferential to their paternal uncles and aunts, and to a lesser degree, to their maternal uncles and aunts. Sisters must obey their brothers, and younger brothers, their older ones.

603 604 The loss of paternal authority does not exist as such. If the father is unworthy or incapable, the grandfather or paternal uncle has charge of the children. [38]

CHAPTER VI. TUTELAGE AND EMANCIPATION (1)

1. Cf. also, Inheritance, Guardianship of Children, p. 60.

429 When the father is dead, usually one of his brothers watches over the widow and orphans. In the absence of a paternal uncle, guardianship goes to a maternal uncle.

604 The paternal uncle may marry his sister-in-law. He has the
429 same rights over his nephews and the same obligations to them as their father. If the widow marries a stranger (umwinjila), the latter becomes the guardian of the children, but as a rule he has not much authority. And if he does not fulfill his obligations, he may be driven out by the paternal uncle and has to go away empty-handed.

Similarly, if the uncle who is guardian does not fulfill his obligations, the children may complain to their father's patron, or, if they have no cattle, to the hill chief. When they have grown up, they may even drive out the unworthy guardian.

Only through marriage do the sons gain independence unless previously they have freed themselves with violence from the guardian's authority.

593 Nevertheless, even when they are emancipated by marriage, male children are not freed of their obligations to their parents (1).

1. Cf. also, Inheritance, Guardianship of Children, p.60.

[39] CHAPTER VII. MAJORITY AND INTERDICTION

[881] In Ruanda there is no initiation ceremony to mark the entrance
885 of boys into social life any more than there are age classes. But when a young man has become ingaragu, his father then looks upon him as a man; he speaks to him of cattle and crops, allows him to share his meal, and sends him in his place to the patron to pay homage, etc.

732 Lunatics (abasazi), the dumb (ibirazi) and the deaf (ibipfamatwi) move around freely and, except for the first, may marry.

The property of a spendthrift (ikarara, lit., half mad, exalted)
593 is managed by his parents.

As for the bad son who is disobedient and insolent, he can be cursed by his father (igitshibwa or ikivume).

561 CHAPTER VIII. TABLE INDICATING THE NAMES USED TO DESIGNATE THE DIFFERENT AGES OF LIFE (1)

1. The age given in years is obviously

561

approximate, since the civil status of the natives has not yet been organized in the territories under mandate.

Men	Women
1) Uruhinja, from birth to the first steps	1) Same word
2) Igitambambuga, up to four or five years old	2) Same word up to three years old
3) Inchuke, up to seven years old	3) Same word up to six years old
[40]	
4) Ingimbi, up to ten years old	4) Same word, up to eight years old
5) Umwana ugimbutse, up to fifteen years old	5) Same word up to twelve years old
6) Ingaragu, up to twenty years old	6) Umwangavu, up to fourteen years old
7) Umusole, up to twenty-five years old	7) Inkumi, up to sixteen years old
8) Umusole uhamye, up to thirty years old	8) Inkumi inhamye, up to eighteen years old
9) Igikwerere, up to forty years old	9) Iliza, (lit., before her first child) up to twenty years old

SECTION II. PROPERTY

1. Property in General

421 The Banyarwanda have a less abstract idea of property than we have. It is comparable to that of possession.

On the other hand, no differentiation is made between personal property and real estate. Property is given different names according to its nature and use. The Banyarwanda divide their property [into the following categories]: amatungo (animals); ibintu, a generic name applicable to the rugo, imilima (fields); ubgatsi (pasturage); imyaka (crops); and urutoke (banana plantations); ibiti (trees); intwaro (weapons and cutting instruments); ibikolesho (hoes, pickaxes, baskets, churns); imyambaro (clothing).

2. Landed Property

423 True landed property exists in Ruanda, while in the Belgian Congo the natives consider that the bare ownership of the land belongs to the souls of the departed and that they themselves only have usufruct.

[643] All the land in the country belongs to the Mwami who relin-
423 guishes its use successively to the various chiefs and subchiefs. These,
425 in turn, cede an isambu (land sold) or concede an umwatano (land
427 leased) to the Bahutu in consideration of a price or a payment consisting of a certain percentage of future crops (ichyata umulima, lit., gift in order to have a field).

The Muhutu holds his land in a more or less precarious way. Even if he makes his payments regularly [42] his land may be taken away from him one day, if, for example, he neglects to pay the customary dues to the chiefs and the king. In this case he may be deprived of all or part of his land, but the last crop is not taken from him (1).

423 184 1. An appreciably different administration of property exists in the western part of Bunyambiriri, the extreme north of Ndiza,

423
184

and in Rukiga (provinces of Mulera and Bugoyi) where the land cleared and cultivated by the Bahutu are subject to a right of family property. This right is sacred and the Batutsi, whose power in these regions is rather nominal, know that they cannot dispute it without exposing themselves to serious miscalculations and even to bloody reprisals.

423 [622] [425] The hill chief also has the right to take a plot of land (ubugerure) from the Bahutu in order to form an ubuka which he wishes to give to someone else or to keep as his own property (imilima y'inyarulembo). The part of the plot that is left to the Muhutu is called isagu.

[428] The Muhutu can transmit his right of exploitation to his son by inheritance. Land that passes from one generation to the next is called indeka.

[596] Land is sometimes held collectively by a family in the person of its head (isambu or ingobyi y'iwabo). Members of the family pay him no rent and, to the exclusion of strangers, have the right to cut firewood and graze their cattle there.

[622] There are also communal woods (itshanya). The hill chief reserves part of them for himself and allows the hill people to exploit the remainder.

[563] The Batwa claim to be the legitimate occupants of the forests. For this reason they often enter into disputes with the Bahutu living near the wooded regions.

[622] Mines and quarries of clay are the property of the chief, but he allows his people to [43] supply themselves there in exchange for a payment (a hoe or some pots).

The boundaries (imbibi) of fields are usually marked by small ditches (impavu) or piles of stones (ibishyinga).

There are no neutral zones between lands.

425 423 An inkungu is a piece of ground that has been abandoned because of the holder's voluntary departure or death without leaving an heir. A man who has been cursed by his father or driven out by the chief because of repeated thefts of cattle, for example, must also abandon his plot. The chief can offer an inkungu (or an ubugerure) to a stranger to the hill who asks to settle there. If he is a Muhutu, he is

423 obliged to submit to the same obligations as his predecessor. If he
[425] is a Mututsi, he is not required to pay any ground rent, and the chief gives him a pasture in addition.

Rights of way and of access are not private. The hill people may move about freely on each other's land. This is also true of the cattle for which special paths are made.

622 In the case of a dispute in matters of landed property, litiga-
692 tion is taken to the hill chief who goes to the place and, after having heard the witnesses, decides between the plaintifs.

3. Customary Law of Hunting

224 Customary laws of hunting are very numerous. Of these we will quote only a few of the most frequent cases.

A native hunting alone who has killed an ordinary antelope (impongo) takes the meat and skins the animal.

224 Hunting with beaters is organized by the chief who decides on
622 the land to be beaten after having taken the advice of the [44] expert Batutsi or Bahutu hunters and following the indications of the trackers. The chief also chooses the beaters from among the least good shots. To stimulate their zeal in this thankless task, he promises them pots of beer if the hunt is successful.

224 The natives are required to take part in the hunt, but they fulfill this obligation willingly as it is a much appreciated entertainment and also a source of profit.

Whoever first wounds an animal during a battue or beat, is presumed to have killed it. He is entitled to the skin and one rear leg. The meat is divided among all the Batutsi and Bahutu hunters. The hunter who has killed several antelopes may keep the skin of one animal.

224 Whoever finds an animal that has been killed must return it to
643 the hunters. At least theoretically, game belongs to the king and skins of any value (1) must be turned over to him, especially those of

281 1. Skins of marsh antelopes are much appreciated by the Batutsi because of their long silky fur with which they make bed coverings. Skins of the "bush bock" and

281 leopard are used as dance ornaments by the intore pages.

224 the otter (inzibyi or igihura), the marsh antelope (mpala), the
[643] "bush bock" (inzole), the lion, and the leopard, as well as ivory tusks.

If a wild beast such as a lion or leopard has been killed,
[622] its skin must be turned over to the chief who in exchange gives the hunters a sterile cow as ingororano (2).

2. Cf. Property, Ownership of Cattle, p. 48.

224 When the hill chief hunts with his people, he keeps some of
622 the skins and gives the others to the provincial chief, who in turn
643 keeps some of them and, if he considers it advantageous to himself, sends the others to the Mwami. If the hill chief has killed a lion or a leopard, the skin must be turned over to the Mwami. If there are two skins they are divided between the king and the provincial chief. The [45] hill chief may keep a leopardskin only if the hunt has been particularly fruitful.

224 The native who has killed three elephants has the sole right to the tusks of the third animal killed.

Finally, a hunter is forbidden to take any part of a crocodile
224 he has killed. The animal with its paws loaded with stones must be
825 thrown to the bottom of the river, for the Banyarwanda believe that the body of the saurian contains a violent poison and they want to prevent its being used.

224 When an animal is pointed out, the beaters who have gone forward into the thickets where they are almost invisible and the hunters who have followed them must indicate their presence by a low whistle. Hunting accidents are regulated by customary law (1).

1. Cf. Penal Law, p. 98.

4. Ownership of Heavy Cattle

422 231 a) Generalities.

[643] The Mwami is the owner of all the cattle in Ruanda or at least of all females kept for breeding purposes. The great chiefs (abatware) are charged by the king to watch over his cattle in the different provinces. Also, the sale of heifers cannot take place without his permission.

On the other hand, the holder of sterile cows or bulls may give away or slaughter these animals as he wishes.

In a province the native who has acquired a cow for breeding [643] purposes has usufruct and has no redress if the Mwami takes away the animal he has bought along with its young. The umutware w'umukenke (2) can oppose the removal of cattle from the province.

2. Cf. Government and Administration, Political Division, p. 85.

422 622 628 Any native who settles in another province must abandon his cattle [46] unless he has the chief's permission to take it with him. When a native leaves his province, leaving his cattle behind, to settle in another, his new chief usually gives him a herd of the same size as the one he has lost. If he escapes from his district carrying off his cattle surreptitiously, his former chief claims the herd. In the past if he was refused he would endeavor to capture a herd of equal value belonging to the deserter's new chief, and an armed clash would invariably result from such a dispute. Today the dispute must be submitted to the Mwami. He eventually orders the new chief to return the cattle, and if the latter is unwilling to do so, he may take from him one or more herds.

Before the European occupation a dissatisfied chief could take all or part of his cattle without previous permission from the Mwami. In this case the chief was "Mwami of his umugaragu."

422 231 The cowherds (abashumba) in the service of the cattle holders are authorized to keep for themselves part of the milk from the animals entrusted to them. They can be discharged in case of negligence.

231
192

b) Classification of Cattle According to Color

Amanya, blue-grey
Ibihogo, dark brown
Ibihogo bitose, darker brown
Igaju, light brown
Igaju ly'intukura, yellow-brown

Igisa, café au lait [coffee-colored]
Igitare, white
Ikibamba, black with large white spots
[47]
Ikibayi, grey-brown
Ikijugu, light grey
Isine, white with small brown spots
Itshyasha, with a white spot on its forehead
Ubugondo bw'izagiriza, white with small brown spots
Umukara, black
Umusengo, brown with small white spots
Urwirungu rwumugoroba, black and white
Urwirungu rw'amarwa, pinkish tan

c) Classification of Cattle According to Age

1. MALE CATTLE

Umutavo, newborn
Ingimbuke, a fortnight old
Umushishe, a month old
Incharwatsi, that eats grass for the first time
Umukulira, that goes to pasture for the first time

Inchuke, weaned

Ikimasa ly'umukangara, a little larger than the inchuke
Karasiga inkivyondo, good for paying a fine
Igitobyi, ready to breed
Imfisi umutore, that has bred once
Ubukombe, adult bull
Umutaza, old bull

2. FEMALE CATTLE

Up to being weaned, same name as male cattle
Ishashi ikata, pregnant heifer
Iliza, first calf
Impete, second calf
Impetule, third calf
Ijigija, fourth calf
Ibuguma, cow that still calves but whose calf is too weak and dies
Inshura, old cow that no longer calves

231
192

c) Classification by age (cont'd)

2. FEMALE CATTLE

Isave, cow sterile from birth (thin)
Urubeheri, cow sterile from birth (fat)

d) Classification of Cattle According to Horns

Igaritse, with large spreading horns
Impotore, with horns whose points are slightly twisted
Ingarure, with twisted horns whose points go forward
Inkungu, without horns
[48]
Intenderi, with horns whose points point toward the ground
Inkungu y'indegeri, with small mobile horns
Ikubis'ihembe, with one vertical and one horizontal horn
Itigey'inyuma, with horns whose points point backwards
Itez'akamosdu, with crossed horns
Urubindo, with horns whose points point towards the ears
Itegey'ijuru, with large almost vertical horns

e) Classification of Cattle According to Common Law

422 231 [622] [192] IMBATA. Head of cattle received as dowry, as a present, or bought in the market, and whose owner is the true proprietor. But if, in putting himself under the patronage of the hill or provincial chief (1) he receives from either of them one or several cows called

1. See further on, Obligations and Contracts, p. 63.

inkazibiti or ingabane, according to whether he is a Muhutu or a Mututsi, all the imbata cows can be taken away from him with the others, should he lose his status as a client, by an arbitrary decision of his patron.

422 231 427 If a Muhutu receives from a Mututsi some heads of cattle in virtue of the contract called ubugaragu (lease of livestock) (1),

1. See further on, Obligations and

Contracts, p.63.

231 and if after a few years by selling the young bulls, the skins, the
422 horns, the milk, and the butter, he has made enough money to
427 buy a head of cattle, the latter is not an imbata, but an impahano (2).

2. Cf. Property, Ownership of Cattle, p. 43.

422 If a Muhutu, the umugaragu of a Mututsi, marries his
583 daughter and receives a milch cow as dowry, the latter is not an
192 imbata, but an inkwano, and the shebuja of the son-in-law can take
231 it back. In effect, it is the social position of the Muhutu which entitled him to collect a dowry in cattle. If he had not been a client of a Mututsi, he would have received as dowry only hoes or goats. [49]

231 INTUNDANO. (1) Cow bought in the market with the salary
422
192

1. From kutunda, "to do business."

earned at the mines in exchange for goats or baskets of beans. It is an imbata.

INDUNDU. Cow acquired in immediate full ownership without the condition that the buyer should later make an additional payment. Indundu is opposed to ingwate (2).

2. See further on, p. 46.

[431] INKAZIBITI. Cows given without fee by the patron to a client who has paid homage (guhakwa). To take possession of cows promised by the shebuja is called kujya ku ilembo (lit., to cross the threshold of the rugo). The first cow received under these conditions is called inka y'igiti (3); the second, impetano; the others

3. Literally, "cow of the tree trunk."

do not have a special name. A father can also give some inkazibiti to his wives and sons.

231 INGABANE. When a Mututsi who has paid homage to the
422 Mwami receives from him a hill with cattle and abagaragu, the said
192 cattle is called ingabane (4). A herd of ingabane consists of at
431

4. From kugabana, "to receive."

least 30 heads of cattle, cows, calves, heifers, and young bulls.

A simple Mututsi with no political authority may receive some ingabane and some inkazibiti. But the favor of the Mwami makes him considered an important person. He is the Mwami's umugaragu.

The Bahutu usually receive only inkazibiti.

INDEMANO. (5). a) Cows of the same color and age, given

5. From kulema, "to create," "to form," "to assemble."

by a father to his son when the latter is about to get married. The whole of the indemano is called iminani.

[50]

b) By a patron to a client of whom he is fond and who is going to get married.

c) By a husband to his wife.

The indemano are also ingabane.

After these various distributions, the cattle remaining to the master make up the ingarigari (reserved cows).

422 INGARIGARI. Cows which the master keeps for his own
231 pleasure and personal use without giving any to his wives, sons, or
192 friends, or without leasing them out to any abagaragu.

425 INKUKE (1). a) A son, who has received from his father
231
192

1. From gukura, "to take away," "to remove."

indemano, returns a milch cow (inkuke) to his father which has been taken from among the indemano. When it no longer gives any milk the father sends it back to his son.

425 b) A Mututsi umugaragu is obliged to send the Mwami an inkuke
192 from among the ingabane he has received. When the cow no longer
231 gives milk, the client must bring other animals.

c) An umugaragu can receive some indemano from his patron. Usually these are old cows or bull calves which he then exchanges for heifers. When they are full grown, he gives one or several of these inkuke to his patron.

d) An umugaragu of the Mwami must occasionally send him a milch cow from among the ingabane he has received.

INDWANYI. Full-grown bull given annually to the Mwami by each provincial chief, for sacrifice to the spirits of the departed or slaughtered for the use of the king, his Batwa, or his foreign guests: Bahima, Barundi, Baganda, etc.

[51]

IBINIHA. Sterile cow given under the same conditions and meant for the same use.

[187] INTORWA. Bull calves or young rams to be used for consulting the auguries or for the cult of ancestors.

YO KUBIKA. Cow brought to the Mwami by the successor of a provincial chief who comes to announce the death of his father.

IY'UBUNTU (1). Cow given as a present. It belongs in full

1. From ubuntu, "generosity." Ineza, "good will," is also said.

ownership to the one who receives it, who is held under no obligation to the donor. Ubuntu cows are not ingabane; they are imbata when they are placed among the imbata that are already in the rugo, and keep the name of inka y'ubunta, without possessing any of its privileges, in all other cases [sic].

INYITURANO. Cow given in return by the one who has received an ubuntu. When a man who has bestowed ubuntu on certain of his friends dies, his children can claim an inyiturano cow from each of them.

IMPAHANO (2). Cows bought under the same conditions as

2. From guhaha, "to fetch, to procure."

the intundano and received as a gift or dowry. They have the same character, but if their owner attaches himself to a patron they become ipso facto cows of an umugaragu.

425 INYARULEMBO. Cows which continue to belong to a
231 Mututsi shepherd, but which may be at the home of one of his wives
192 or of an umugaragu. They remain near the master's dwelling, for they are to provide the milk needed for him and his family. Indemano given by a [52] cattle owner are called inyarulembo. Cows bought by a Mututsi umugaragu (intundano) are also called inyarulembo. On the other hand, those acquired by a Mututsi who has entered into a clientele contract become ingabane.

583 INKWANO. Milch cow given or received as dowry for the
231 marriage of a daughter or sister. It becomes imbata.
192

INDONGORANYO (1). Head of cattle given to the young

192
431
231

1. From kurongoranya, "to help set up housekeeping."

couple by the wife's parents, and sometimes by the husband's parents. Among the chiefs, the indongoranyo is given immediately after the marriage as a sign of friendship. Among the other Batutsi, the indongoranyo is given to the young woman by her father when she visits her parents after the birth of her first child.

IY'URUGORI (2). Milch cow or heifer which a young mother

[301]

2. From the name of the sorghum-straw band worn by Banyarwanda mothers on their heads.

receives from her father or her father-in-law, unless she has already had an indongoranyo bestowed on her. If the marriage is broken, the urugori is not claimed from the wife's family.

[602] IY'ICHYARI. The daughter-in-law is not allowed to see her father-in-law during the first days of marriage. When he lifts the interdiction, the father-in-law can give an ichyari to the young couple. Among the Bahutu, a sheep or a goat is given instead of a cow.

431 IY'IGISAGE. Cow given by a father to his son when the
192 latter reaches the age of six or seven years old. At that moment,
231 the hairdress he has worn until then (igisage) is changed to one called
302 amasunzu (3). The Muhutu child receives at the same age two or three banana trees.

3. Hair dressed in the shape of a coxcomb or a crescent.

000 three banana trees.

192 [53] INKAMWA. When the father of a family dies, one of
764 his sons or grandsons is chosen to put between his hands a jug of
231 milk. The cow that has given this milk is called inkamwa. It is given to the one who has placed the jug of milk between the hands of the deceased and is not included in the division of the inheritance.

This cow cannot be sold or killed. Its young are not subject to this interdiction. If it dies, it is eaten by the Bahutu in the owner's rugo, and its bones are buried there.

Among the Bahutu a sheep is used as the inkamwa.

IY'UMUGANGU. When the father of a family dies, the eldest son slaughters a bull calf, which is eaten by the family. The skin is worn by the eldest son for two months so that the cows will not die like their master.

192 IY'UMULIRO and INSHUMBUSHANYO. 1) If lightning has
231 destroyed the herd (or even one animal) held by the umugaragu, the
731 latter can obtain from his shebuja the umuliro (lit., the fire cow), either a cow or a bull calf.

When several cows are given by the patron to indemnify his client, the first one is called umuliro, the others inshumbushanyo.

425 2) If the patron deprives his client of his whole herd to punish him
231 for not performing one of his obligations, the umugaragu begs the protection of another shebuja who gives his new dependent a cow and a bull calf or only a bull calf.

192 IMPONOKE. When the herd of the patron, the provincial chief,
731 or the king is decimated by cattle plague (muryamo), the abagaragu
231 give some cows to fill the gaps caused by the epizootic disease.

[54] INDORANO (1). At the death of the king's child, wife,

192
231
768

1. From kurora, "to see."

brother, and also in the case of death in a great chief's family, the provincial chiefs and the hill chiefs, if they are directly subject to the Mwami, each bring two cows to the Mwami, and only one in the other event. A cow is also given by the abagaragu. The cow given to a friend on the occasion of deep mourning is also called indorano.

192 IMPONGANO. A cow given to appease the anger of the king or
231 one of the provincial chiefs.
431 2) A cow given to a friend of the Mwami to thank him for his intervention with the king.

IZIMANO. The first time a great provincial chief goes to visit another, the host gives his guest a milch cow.

Similarly, if the king or a provincial chief visits one of their abagaragu, he is given a calf.

INJISHYWA. A cow that accompanies a noble Mututsi when he visits a provincial chief or the Mwami on business or to pay homage. It is meant to provide him with the milk necessary for food.

427 INDAGIZO. (2). A cow which the depositor (uwaragije) entrusts
192
231

> 2. From kulagiza, "to give on trust in order to pasture."

to someone who owns a better pasture than his, but the trustee (uwaragiywe) does not become umugaragu. The latter must return the cow when it has calved, but he has the right to the milk for two months if the cow is young, and for a fortnight if it is not. If the calf dies, the trustee has the right to the milk one day out of four.

[55]

231 INTAHIRA (1). This is the best of the cows held by an umugaragu.
192

> 1. From gutahira, "to come in front," "to precede," "to lead."

He always makes it walk at the head of the herd. The holder can take its milk (intagemura, lit., to keep the milk for one's self), but the calves must return to the owner.

192 INGWATE. Primus, who owns a bull calf (inguzwa) or a sterile
231 cow (also inguzwa), asks Secundus, who has a heifer (ingwate), if he is
437 willing to exchange on the following conditions:

a) If the heifer has a female calf (umukangara), Primus will keep it and its mother for a length of time to be agreed upon, usually two years. Secundus will then take back the cow and its calf and in addition will keep the inguzwa.

192 b) If the heifer has a male calf, Secundus takes it at once and Primus
437 keeps the mother for two years. The milk is divided between the two
231 contracting parties as follows: Secundus has the right to the milk for four days, Primus for two days, and the shepherd one day a week.

c) If the heifer dies before having a calf, Primus takes the skin and Secundus keeps the inguzwa. To avoid leaving the heifer with Primus for two years, Secundus gives the other contracting party a pregnant cow (ingenzura) and takes back the ingwate and its young (female or male calf). There are then two possibilities:

a) The ingenzura bears a female calf; Primus claims it.

1) Secundus accepts and takes back the ingenzura.

2) Secundus refuses. Primus keeps the ingenzura and its calf, and does not give any of the milk until another cow is given him. [56]

b) The ingenzura gives birth to a male calf.

1) Secundus agrees to give Primus an umukangara and takes back the cow and its calf.

2) Secundus refuses. Primus keeps the ingenzura and its calf. He will return the calf only after it is weaned. He waits for the cow to have a female calf.

IGICHANIRO (1). Primus who wishes to have a bull calf gives

1. The igichaniro is, strictly speaking, the fire lit in the kraal to protect the cows from the cold.

all his cows as a pledge (kugwatiriza) to Secundus, yet keeps them at his home. After two years, Primus gives a female calf to Secundus. If he refuses, Secundus would have the right to take a milch cow (gukubitira).

If the contract concerns goats, the fact that Secundus pays himself if Primus refuses is called gufatira.

192 INDABUKIRANO (2). 1) At the accession of the king, his abagaragu
431
231

2. From kurabukira, "to offer an accession gift to the king."

and all the provincial chiefs must each give one or two cows in homage to the king.

2) When an umutware w'intebe, an ichibiri, or an igisonga (3)

3. Cf. Government and Administration, Political Divisions, p. 85.

192 is appointed, the owners of several heads of cattle must present him with
431 a cow. The abagaragu can, but are not obliged to, do likewise.
231 3) When the king or an umutware dismisses or despoils a chief, the abagaragu of the new chief can also each give him an indabukirano.

The Bahutu give goats, sheep, and hoes. [57]

192 INTORE. 1) Like the king, certain great chiefs possess a corps of
231 intore (dancing pages) (1) (2). A rich Mututsi's child who goes to a
695

1. From gutora, "to take," or gutorana, "to levy," "to choose."

2. Cf. Government and Administration, The Intore, p. 78.

provincial chief to become a page brings him a y'intore cow, which is given to the umutware y'intore (commander of the pages), who thus becomes in a way the shebuja of the child's father. The latter however is not held by any bond like an ordinary client.

192 2) Also called intore are the cows given compulsorily by the
231 abagaragu to a noble Mututsi who succeeds his father as head of the
651 family.

3) Tax paid in cows.

INGORORANO (3). Cow given to reward a warrior for his courage

192
231
431

3. From kugurorera, "to gratify."

or for a service rendered. Whoever has cared well for the master's cows (inyarulembo) or ingarigari) or who has cultivated his fields well may receive a cow. To reward the umutware w'intore for his instruction, the father of a page also gives an ingororano.

192 UMUHETO. A cow taken with a bow and arrow (umuheto). This
231 used to be war booty. In the past this name was also given to the tax paid
727
651 by warriors.

IMIGOGORO (4). A cow sent every day to the white people to

192
234
574

4. From mogogoro, "fatigue," "annoyance," "imposition." Before the Belgian occupation these cows were called imbyukuruke (lit., parade).

192
234 supply them with milk. In Kinyaga (Shangugu) and in Bugoyi, it is
574 called umuheto. In Ndorwa it is called kibere. [58]

IMBYUKURUKE. A choice cow destined to be shown to a visiting high personage and to provide him with milk during his stay.

192
431 IBIHEMBO. Gift of cows to the wife of the king, a great chief,
231 or a patron when she has a child.

The gift made by the Bahutu consisting simply of milk or beer is called y'ibihembo.

192
231 INTIZO (1). 1) A man who has been despoiled by his chief re-
426

1. From gutiza, "to lend."

ceives a cow from a friend as a loan (intizo) until justice is done. The friend may perhaps only give him milk (intizo), because by sending a cow he would ostensibly show his friendship and would thus risk incurring the wrath of the chief.

192
231 2) A cattle owner must give at least one milch cow to his cow-herd (umushumba) who does not have time to cultivate for himself.

3) A Muhutu who cultivates the fields of a Mututsi receives
[465] milk (intizo) from him morning and evening.

4) A cow is given to two farmers who share the milk and the payments required in exchange (2).

2. Milking a cow is equal to the salary for one day of cultivation.

[681] IMPONGANO. A cow given in reparation for an offense or as a
431] present to the one (inshuti) whose intervention may help to win the lawsuit.

INGURANO. A redemption cow given by a patron or the head of a
[696] family to keep the guilty one from being condemned. [59]

192
437 INKUNGURANYO (1). Primus, owner of a heifer approaches
231

1. From gukunguranya, "to exchange two cows of equal value definitely and irrevocably."

Secundus to ask him to exchange the cow for a female calf or for two bulls. They must not give anything in addition in order to have an absolute right over the exchanged object, but neither of them has the right to take back the exchanged value.

5. Small Domestic Animals

422 231 The Mwami has a rather theoretical right of ownership of small livestock which are considered valueless by the large stockbreeders.

Consequently, the Bahutu can sell or keep for their own consumption goats and sheep.

[235] Poultry also belongs to the Bahutu who are required to provide, without remuneration, the chicks needed for divinatory sacrifices. Hens and eggs are not eaten by natives and therefore, except in the neighborhood of European posts, have no commercial value.

Small livestock as well as poultry are the exclusive property of men.

[224] The Banyarwanda are very fond of their hunting dogs. The Batutsi will pay as much as one or two cows for a dog that is known for its hunting qualities.

6. Other Personal Property and Real Estate

423 Among the Batutsi, the husband and each of his wives live in their individual rugo, but all these dwellings belong to the husband. In the same way, among the Bahutu, the hut and its annexes belong to the husband.

422 Work tools belong to the husband. The wife and children may not lend them without his permission, except for a short time.

[60] Household utensils given the wife by her husband remain his property. But the ibirongoranywa (1), that is to say,

1. Cf. note 1, p. 44.

the objects, utensils, and clothing, given by the father to his daughter at the time of her marriage, often equal to the value of several cows, or even consisting of cows, belong to the wife. She may dispose of them as she chooses, except in the case of cows.

SECTION III. INHERITANCE

1. Basis of the Law of Inheritance

428 The principles regulating the laws of inheritance are:

1) Wives and daughters are excluded from inheritance for they can neither bequeath nor inherit valuables.

2) In principle, the inheritance remains in the male paternal line (2);

> 2. A boy may also inherit from his mother's family but only if the deceased, a relative of his mother, has expressed his wish before dying and also, of course, if he has no natural heirs. It may also happen that a stranger inherits from the deceased, if the latter has no heirs.

3) The new head of the family is normally, but not necessarily, the eldest of the sons, with no distinction made between mothers.

2. Designation of the New Head of the Family

[765] The period of mourning (kwirabura, lit., to become black) and the
596 purification ceremonies (kwera, lit., to become white) being over, that
428 is, two months after the death (3), the [61] designation of the new head

> 3. The time is reduced to a few days if the couple have not had any children.

of the family (umutware w'urugo rwa se, lit., the head of his father's rugo) takes place.

If the father has died without having been able to make his wishes known, this choice is made by the chief of the umulyango who asks beforehand the advice of the elders. It matters little whether the sons are of different mothers (polygyny, or successive marriages), whether they are legitimate, born of a concubine, or adulterine. Only the qualities required of a future head of the family are taken into consideration.

[763] Usually, feeling his end to be near, the father calls the chief
596 of the umulyango and two friends. He dictates to them his last wishes.
428 The wives of a polygamous man do not hesitate to intrigue in favor of their sons and attempt to circumvent their husband -- or even his brother -- using both their charms and their most subtle arguments. The situation is the same in the case of successive marriages.

It is easily understood that often the other sons, especially if they are of different mothers, feel themselves wronged, rightly or wrongly.
[691] But they are given the opportunity of demanding justice from the Mwami, the provincial chief, or the hill chief, according to whether they are sons of umutware w'intebe, of igisonga, or simple Batutsi or Bahutu. These authorities will ratify the choice made by the father or the uncle, or else will decide what other young man will succeed his father.

If there is no male descendant, the high position of head of the family falls on the oldest brother of the deceased. In this case, the heir will be both head of his rugo and of his brother's.

[614] He may also be, at the same time, chief of the umulyango, that is to say, of the clan. This is the umutware w'umulyango (or the umutware rwa bo).

If all the brothers have disappeared, their sons inherit by right of primogeniture. [62]

If the deceased has neither sons, nor brothers, nor nephews in his line, his father will succeed him, or in his absence, the father's brother or one of his male descendants by right of primogeniture.

The Bahutu and the Batwa have their own umutware w'urugo. But they are dependent on the same umulyango chief as the Batutsi.

3. Composition of the Inheritance

428 In addition to the high position of head of the family, the inheritance includes:

1) The heavy cattle
2) The clients (abagaragu)
3) Particularly among the Bahutu, the goats and sheep
4) Landed property (1)
5) Movables, personal property (1)

1. Cf. Property, Property in General, p. 34.

428 Gifts (kugabira, to make a donation) made by the father to one of his sons, called inkazibiti, if they consist of cows, remain the property of the receiver, except in the case of unworthiness such as marked disrespect, repeated disobedience, etc. (kunyaga, to take back).

The active as well as the passive obligations are passed on to the [672] heirs. If they are unable to pay a debt, the descendants of the deceased [426] in direct line -- and only they -- are required to work one or two days a week for the benefit of the creditor's heirs, whether sons or even brothers, until the debt is completely wiped out.

4. Transmission of Property

The property is assigned to the heirs two months after death among the Batutsi, one month after among the Bahutu. However, the tools and objects may be used immediately. [63]

The son who is cursed by his father (igitshibwa or ikivume) must make restitution for everything he has received from him (inkazibiti, indemano); he is obliged to go far away all alone, without his wife or his children, abandoning all his belongings.

To clarify the mechanism of the transmission of property, we will choose four types of inheritance that commonly arise and make a diagram of the four cases.

Case 1. Inheritance of a Rich Mututsi(Provincial Chief or Umugaragu of the Mwami)

Nyirimigabo, chief of a province, dies, leaving five sons born of two wives. These are:

Bihutu, son of Mujijima, married
Nyagatoma, son of Mujijima, married
Nturo, son of Nyirampunga, not yet married
Rusagara, son of Mujijima, still a child
Mahira, son of Mujijima, still a child

On the death of his father, Nturo, the third son, becomes head of the urugo rwa se.

428 The property will be divided as follows (1):

1. For the definition of the different names designating the inherited property which consists of cattle, cf. Property, Ownership of Cattle, pp. 40-50.

COWS. Nturo, not yet married, receives:

1) The ingarigari of his father, 2,000 heads, for example.

2) The indabukirano given by the abagaragu (simple option).

3) The intore given by the same (obligation).

4) The indabukirano given by his brothers, Bihutu and [64] Nyagatom, by Mujijima in the name of Rusagara and Mahira who are still children, and by his father's friends (option).

5) Part of the inyarulembo of his mother Nyirampunga.

6) In addition, his abagaragu and his friends may each bring him an indoramo cow.

Bihutu, the eldest, receives nothing. But, having married while his father was alive, he received from the latter at the time he was established the iminani, a herd of indemano cows.

Nyagatoma receives some indemano which Nturo withdraws from his inyarulembo (twenty-five, for example). In this way, as he is about to take a wife, he will be able to establish himself. His father [sic] gives him in addition a few inkazibiti (four or five).

Rusagara receives some inkazibiti from Nturo. Being still young he remains with his mother Mujijima, who will later give him some indemano taken from the inyarulembo she received from her husband.

Mahiri, like his brother Rusagara, continues to live with his mother. Nturo also gives him some inkazibiti, and later he will give him some indemano, for his mother will presumably not have enough inyarulembo to give him any.

The inyarulembo of Mujijima stay with her; she reserves some of them to give to Rusagara as indemano, and she keeps the others. The inyarulembo of Nyirampunga are taken by Nturo, who leaves a certain number of them to his mother.

When one of his married sisters comes to announce the birth of a child, Nturo gives her either a y'urugori or a y'ibihembo cow.

428 CLIENTS. The abagaragu whom Nyirimigabo had acquired by giving them some inkazibiti are all left to Nturo. [65] They are given the same as a herd of indemano cows, that is iminani.

The brothers of Nturo, as soon as they are provided with cows, also find for themselves some abagaragu.

The cowherds (abashumba) who look after the cows of the deceased's wives have the same fate as the inyarulembo of the wives: those of Mujijima remain with her cows, until some of them accompany the cows given as indemano to Rusagara and Mahira.

FIELDS, BANANA PLANTATIONS. As head of the family, Nturo can choose the fields wherever he wants on one of his father's hills.

Bihutu and Nyagatoma, who had received a field at the same time as their umanane, no longer have the right to ask for more.

Rusugora and Mahira will receive a field from their mother or from Nturo.

PASTURES. Rules regulating the assignment of fields apply to that of pastures.

RUGO. Each wife of the deceased continues to live in her own rugo, which is surrounded by banana plants, some land for cultivation, and a pasture.

WEAPONS, TOOLS, ETC. They belong by right to the head of the family.

CLOTHING. The same applies to these, but the head of the family usually distributes them to the servants.

Case II. Inheritance of an Average Mututsi (Hill Chief)

Gakire, son of Kanziga, married while his father Gafuku was living, received thirty indemano and three inkazibiti. Kagabo, son of Ligoga, also married, received from his father twenty-five indemano and three inkazibiti. [66]

Kinyogote, son of Ligoga, still a child, received from his father two inkazibiti.

Kanziga and Ligoga each received twenty inyarulembo from their husband.

At his death Gafuku owns an ingarigari of eighty animals.

COWS. Gakire, made head of the family, takes:

1) The eighty ingarigari.

428 2) The indabukiramo given by his brothers and the clients, as well as the intore given by the abagaragu.

3) Part of his mother Kanziga's inyarulembo.

Kagabo can receive nothing.

Kinyogote remains with his mother. When he is old enough to be married, he will receive from Gakire twenty cows of which the latter will take ten from his inyarulembo, five others from Kanziga's inyarulembo, and five from Kagabo's indemano. In addition, Kinyogote will receive five inyarulembo from his mother Ligoga. In this way he will have twenty-five indemano.

CLIENTS. Kanziga's servants remain in her own rugo. Those of Kanziga belong to Gakire who leaves a certain number of them to his mother. Gafuku's clients are also passed on to the new head of the family.

FIELDS AND PASTURES. Gakire chooses new fields for himself on the hill.

Kagabo receives nothing.

Kinyogote will remain with his mother until his marriage, when Gakire and Kagabo will each give him a field and a pasture. [67]

RUGO. Each widow remains in her rugo until her death, her return to her family, or her remarriage.

WEAPONS, TOOLS, CLOTHING. Their distribution is the same as in Case II [sic].

Case III. Inheritance of a Simple Mututsi

Gakuba, a humble man although a Mututsi, had four children from his marriage with Kampororo.

Karekezi, who married during his father's lifetime, received from him two inkazibiti cows. Gakuba is too poor to give his sons enough cows to merit the name iminani. Besides Karekezi has received a real inka y'igiti.

Kambanda, who is also married, has also received two cows of which one is a real inka y'igiti.

Gapyisi and Kayibanda were still small children when their father died and have received nothing from him.

When he died Gabuka left twenty inyarulembo cows.

428 COWS. They are divided as follows:

Kambanda, appointed head of the family, receives seven cows and in addition one as itako ry'umutware (1) (lit., chief's thigh).

1. In order to provide for the needs of his brothers and sisters.

Each of the other sons receives an equal number of cows (four). It may happen that some cows are not distributed. If there is only one, it belongs jointly to all the sons. If there are two, each of them belongs to two of the sons.

CLIENTS. There are hardly more than two or three and they go to the head of the family. [68]

FIELDS AND PASTURES. The two oldest received a field and a pasture at the time of their marriages. Of the land owned by the father when he died, Kambanda will take two thirds, and the remaining third will be divided later among the younger sons.

URUGO. It continues to be occupied by the mother.

WEAPONS, TOOLS. Are Kambanda's share.

Case IV. Inheritance of a Muhutu

Kimonyo dies, leaving five sons born of three wives:

Tabaro, son of Nyiramgunzu, married during his father's lifetime and having received a field from him

Fuku, son of Nyirambeba

Shumbushu, son of Nyiramgunzu

Karifuni, son of Nyirambeba

Nzabandora, son of Nyiramatama

FIELDS AND TREES. Shumbushu, appointed head of the family, remains with his mother. He receives as itako ry'umutware, in bare ownership, a large part of Nyiramgunzu's banana plantation, the remainder being divided in equal parts between him and his brother Tabaro (also in bare ownership).

Fuku and Karifuni will also each receive half of their mother's field and banana plantation.

428 Nzabandora is assigned Nyiramatama's field and banana plantation.

However, Shumbushu has the right to collect an itako on his brothers' property.

COWS, PASTURES. Usually the Muhutu does not own any pasture and, for even if he has one or two cows, they are inkazibiti and rarely imbata. These animals [69] belong jointly to the sons of the deceased, who go and ask a well-to-do Mututsi for permission to continue taking their animals to pasture on his land.

SMALL LIVESTOCK. The flock of goats and sheep is divided among the sons. The head of the family in addition takes the itako.

RUGO, CROPS. Each of the wives remains in her rugo and disposes of the surrounding crops.

WEAPONS, TOOLS. Are taken by the head of the family.

Inheritance of a Mutwa

The inheritance of a Mutwa amounts to very little, a few goats and sheep, some tools and utensils. He may however own a small field (ingobyi y'urugo), or sometimes even a fairly large tract of land (igikingi), usually received for choreographic skill.

5. The Fate of Widows

587 When the time of the kwirabura and kwera has expired, the widow (umupfakazi) may remarry.

If she accepts as her new spouse a member of her husband's family, such as the head of the family (except for her own son) (1), one of her

1. The son who is head of the family may take as wife one or several of his father's widows if they do not belong to his mother's family. An uncle may not marry his niece.

brothers-in-law (her husband's brothers), or her father-in-law, then the wife remains in the rugo where her new husband will visit her. No dowry (inkwano) is paid for a widow who remarries, and the wedding takes place without the customary ceremonies.

768 If the woman[1] refuses all offers of marriage in order to devote herself to the education of her children, she will be allowed [70] nevertheless to remain in her rugo. She keeps the inyarulembo cows, her servants, the field and the pasture she had received from her husband with the right to reap the benefits thereof. This property does not constitute a dowry for her but is kept by her provisionally. Actually she merely manages it in the interest of those of her sons who are minors and who stay with her. In this way she may continue to live in the same manner as in her husband's lifetime, with no fear of poverty. Furthermore, even when her sons take part of this property in order to establish themselves, they do not cease to show a tender solicitude for their mother and to provide for her needs.

If the widow wishes to return to her family, she must then abandon the rugo and its contents, except for her personal belongings. Her children must be left to the father's family as soon as they are weaned, that is to say, when they are about four or five years old -- unless the dowry has not been paid in full.

587 It may happen that a widow with children marries a stranger to the deceased's family. In principle, she is not forbidden to live in her rugo with her new husband. But these marriages, which are not well looked upon, are usually precarious. At the slightest difficulty, the deceased's relatives intervene, and the second husband is driven out without being able to carry anything away and is even obliged to abandon the children he has had with the woman.

768 As to the childless widow, she must return to her family unless she agrees to marry a member of the deceased's family.

1 [i.e., a widow.—Analyst]

6. Situation of the Widower

Usually the death of a wife does not bring to an end the relations of the widower with his family-in-law, especially if there are children born of the marriage. [71]

The parents-in-law have the option of giving their son-in-law one indorano cow (1) and sometimes even two.

1. The Bahutu give jugs of beer as indorano.

587 If the widower is left with very young children, the parents-in-law usually suggest to their son-in-law that he take one of their other daughters as a wife (2) so that the children do not have a stranger as

[765] 2. The widower may not remarry until after a month of mourning. During this time he does not shave, does not wash his clothes, and may not have intercourse with another woman.

stepmother. Far from claiming another dowry for her, they offer on the contrary an indongoranyo cow (3) which normally, however, is

3. A hoe, among the Bahutu.

the counterpart of the dowry paid.

A widower without children may claim restitution of the dowry. He usually does not do so because he knows that his parents-in-law, to avoid returning the dowry, will find him a new wife among their own daughters or those of their kin.

7. Guardianship of Children (4)

429
768 4. Cf. Personal Status, Tutelage and Emancipation, pp. 31 and 32.

The widowed mother who does not remarry outside the family continues to live in her rugo where she brings up her children until their marriage, which emancipates them, at least so far as the boys are concerned.

The son who is named head of the family actually replaces his father, provided he is old enough to do so. He has the same rights and obligations as his father, especially that of establishing his brothers (by giving them some indemano) and marrying off his sisters. If later one of his sisters happens to be repudiated, she takes refuge with her mother or her brother, who finds her a new husband.

If all the boys are minors, the paternal grandfather or, in his absence, the paternal uncle who seems the best [72] qualified is

429 chosen as guardian. In this capacity he exercises the prerogatives
768 of the paternal authority and manages for his wards the property left by the deceased.

If the male relatives on the paternal side have died, one of the maternal uncles will be guardian. In effect as each of the couple continues to belong to his and her umulyango, the children are members of both families.

429 Emancipation, which occurs normally at the moment of marriage comes when the young man reaches eighteen years of age. But it may happen that the children, having reason to complain of their guardian, go and seek justice, according to their rank, from the hill chief, the provincial chief, or the Mwami. When they are grown they may even emancipate themselves (proprio motu) by driving out their unworthy guardian.

8. Irregular Inheritance

428 While daughters are excluded from inheriting by the law of inheritance, they are always presented with gifts by the new head of the family, at least when he is their brother.

As far as the Bahutu are concerned, the following case may arise? A Muhutu, umugaragu of a rich Mututsi, has a daughter who is a servant to his master and who is married to another servant. When his client dies, instead of taking back the cows, the master can give them to the daughter's husband, who thus becomes his umagaragu.

When a wife dies, the few ornaments she owns (necklaces, bracelets) do not go to her daughter, but to her stepdaughters (her husband's daughters). With the political chief's permission, the mother may also give them to her son who was living with her and who will later on give them to his wife.

428 A man who has no sons (inchike) or who has cursed them may adopt
597 a son of his brother (umuhungu wachu) [73], or in his absence, a son of his sister (umwishywa). He promises him his inheritance and his inheritance and his nephew becomes his true son (1).

1. Cf. Personal Status, the Family and the Clan, p. 4.

428 A man who has concluded the blood pact (kunywana) (2)
608
429

2. Cf. Personal Status, The Blood Pact, p.13.

inherits from his blood brother (umunywanyi) if the latter dies without leaving any male relatives. He may marry the wife of the deceased but not his daughter, who is considered as being his child, and he exercises paternal authority over the orphans.

429 If the deceased is tied to a patron by a lease of livestock and has no brother, the guardianship of the children who are minors belongs to the shebuja (kumuremera). In the opposite case, the shebuja shares it with a paternal or a maternal uncle of the orphans. If the patron has paid his client's dowry, he will take the dowries given for his umugaragu's daughters and will keep them to enable the boys to marry. Thus, in this case, a Mututsi becomes chief of the Muhutu's rugo.

9. Reversion of Property in Escheat

428 As women do not inherit, in the unlikely case of the deceased having no male relatives, his patron takes back the cows that belonged to him and appropriates the small livestock, tools, etc. (inzungu) (3). The fields, banana plantations, and pastures left

3. From guzungura, " to inherit without being a relative."

under the same conditions (inkungu) (1) go to the political chief who

1. Cf. Personal Status, the Family and the Clan, p. 4.

assigns them to another man. But widows are authorized to live in their own rugo.

If the deceased is not tied by an ubugaragu contract, all his property goes to the political chief who disposes of it as he sees fit.

[74] SECTION IV. OBLIGATIONS AND CONTRACTS

566 The typical obligation results from the contract of the so-called ubugaragu by which a man who has paid homage (guhakwa) to a cattle owner obtains from him one or more cows taken from among his inyarulembo (1), (2). They are called inkazibiti if the

1. Cf. Property, Ownership of Cattle, p. 44.

2. The patron is not really tied by a contractual obligation. He merely accepts the client's services.

umugaragu (client) is a Muhutu, or ingabane if he is a Mututsi. The umugaragu has the right only to the usufruct of this cattle and its young, and only for the length of time it pleases his shebuja (patron) to leave it with him.

On the other hand, when a man is tied by the ubugaragu contract, the cows that were his personal property (imbata) become inkazibiti.

The principal advantages derived by the client from the ubugaragu contract are as follows: sale of the milk, butter, meat, and skins; help in case he should become disabled and incapable of providing for his needs; the honor of being named liegeman of such and such a person, instead of being given scornful names such as uriyamuntu, that man; or uriya mugabo, that simple man. That is why one says kugir'uguhatse n'ukugir'izina (to have a chief is to have a name).

Each client is subject to various obligations and payments to his patron for which he can be helped by his sons and even eventually by his abagaragu and their families.

[75]

A. Obligations of the Client.

1) Gufat'igihe (lit., to take the time), that is to say, to pay homage during a period of time whose duration is determined by the chief.

The client must accompany his patron on a journey, for example, when he goes to the Mwami's Court or to visit a great chief.

566 While they are traveling, the client acts as cook, makes sure that water and wood are collected, and keeps the injishywa (1). The

1. Cf. Property, Ownership of Cattle, p. 46.

length of time the client must follow his patron depends on the number of cows he holds or hopes to acquire, and also on the number of clients among whom the obligations can be distributed.

When the patron is on his own land, the umugaragu carries the provisions to his storehouse.

2) Kubak'inkike (lit., to build a part of the rugo).

The clients must each build or repair a part of the enclosure surrounding the patron's hut and storehouses by providing the necessary materials.

The obligation to build the hut is shared jointly by all the abagaragu.

3) Kurarira (night watch or evening spent in talk).

The clients must take turns watching over the patron while he is resting and guard his rugo. The sentinels must bring the wood needed to light the watch fire.

4) Gutumwa (to be sent).

Each client must carry messages from his master any distance and accompany his servants who are bearing presents to a relative or friend of the patron. The umugaragu may even be a messenger and bearer at the same time if the present is intended [76] for an important person or for one who is particularly dear to the shebuja's heart.

5) The umugaragu must take part in the sowing of the sorghum (ishaka) (1) for two days.

1. Sorghum is a sacred plant and the sowing calls for a propitiatory ceremony.

6) Kutanga imibyizi (to cultivate the fields).

The Bahutu clients come and work in the patron's fields for an indefinite period of time, depending both on the number of abagaragu and the number of cattle that have been given them by the shebuja. Nor is the task of each one exactly determined.

566 7) Kumutabaraho (lit., to accompany to war).

This is a general obligation, to follow the master to war, to cut his wood, etc.

8) The client, designated in this case with the name umwozi (washer of pots), must watch over the quality of the milk kept in pots, bring it to his master (kugemera), and have the pots washed by a servant called umuhondamonyi.

9) Except for those that are poor, the abagaragu have a custom of honoring their master with presents, pots of beer, for example. The patron as a rule merely tastes the inzoga and then distributes it to his abagaragu.

10) If the patron loses any of his cattle, the clients must offer him an inshumbushanyo cow (2).

2. Cf. Property, Ownership of Cattle, p. 45.

11) Similarly, if the shebuja is in mourning, he receives from umugaragu an indorano (3).

3. Cf. idem, p. 45.

[77]

B. Obligations of the Patron

1) If the client has stolen a cow from another proprietor, in order to avoid the punishment of his umugaragu, the client intervenes (kugura, to buy back) and indemnifies the injured party. If he did not act in this way, he would be held in no esteem.

2) If the client is very poor, the patron gives him a bull calf so that he can eat meat and clothe himself with the skin. He provides him with milk.

3) The patron must assist the client in his palavers (kulengera).

4) The patron must help the client who wants to get married pay the dowry. For this he gives him a cow. If the umugaragu is important, the shebuja authorizes him to choose the inkwano cow himself. (1). If he has received only a cow from the patron, the latter

1. Cf. Property, Ownership of Cattle, p. 44.

566 can authorize him to give it as a dowry. The ties binding him to his patron are thus tightened, for the wife acts as guarantee that the ubugaragu contract will be well executed.

If the umugaragu commits a serious offense, the shebuja can take back the inkwano from the father-in-law (iyo batararongolanya or baraikoranura, lit., to prevent the marriage) for as long as his client has not received the indongoranyo (2). When this has been

2 Cf. idem, p. 44.

paid, the shebuja's rights are exercised over it.

5) When a client dies, the patron must watch over the fate of his wife and children. If the umugaragu has no brother, the shebuja becomes the orphans' guardian (kumuremera). In the opposite case, a paternal or maternal uncle shares the guardianship with the patron.

If the patron has paid his client's dowry, he takes the dowries given for his client's daughters and keeps them [78] until he turns them over to the boys so that they in turn can get married.

6) In the past the patron had to avenge his client's murder (kumuhorera) himself. Accompanied by his abagaragu and one of the deceased's sons, he would go and kill the murderer by means of a subterfuge. Pointing to the orphan, he would say to the murderer, "There is the one who kills you"; then he would kill him or else the shebuja would go to the Mwami to demand justice.

7) The client may dispose of the milk of the cows given him (intagemura) and make butter and cheese from it when the patron's requirements of milk are assured. Similarly, with the permission of the shebuja, he may slaughter animals and eat or sell the meat.

8) From time to time, the patron must give aihoe to his Muhutu client.

The patronage contract never comes to an end unless the cows die or if the client proves himself to be unworthy of the confidence placed in him. In this last case the master takes back his cows (kunyaga) and their young.

In addition, if the shebuja is at the same time the hill or provincial chief or the Mwami, he can deprive the client of his fields and rugo and drive him away from the hill. The client can only take with him his stick (banuh'akabando, lit., he is given a stick), the

566 most unimportant and useless of things.

Along with the ubuguragu contract and other leases of live-
437 stock such as the ingwate and its variants, the indagizo (1) etc.,

1. Cf. Property, Ownership of Cattle, p. 46.

Ruanda common law has a number of other [79] contracts. We will list in the following which are those in most common use.

Purchase-sale (kugura)

These transactions take place in the markets (amaguriro,
443 plural iguriro), located usually at the crossroads of the thoroughfares.
437 The most frequented are those of Rukiga and Kinyaga. The people of Buganza and Buliza come there to exchange their cows for salt,
[435] provisions, beer, honey, baskets, etc. In the past, animals and things on sale were valued in hoes (1).

1. The salt seller wishing to obtain a bull calf would ask how much it was worth in hoes. He would be answered, "Fifty." He would then take a basket of salt valued at one hoe and would give 50 of these to the owner of the bull calf. A current expression was: "It is a three-hoe goat." Today a hoe is worth 8 francs.

Specialized merchants (abatunzi, lit., the rich) also go there and offer for sale produce and objects they have brought from far
[301] away, for example ubutega (2) made in Urega (country of the Warega).

2. These thin rings of rattan fiber worn around the legs by the Banyarwanda women from their ankles to their knees were formerly fairly valuable. Three thousand
[435] ubutega were worth a bull calf, and a complete set of the ornaments could be bought only with the payment of two sterile cows.

Sometimes they combine their resources in order to make large purchases (gufatanya urutundo, lit., to assemble business).

443 Women and children are admitted to the markets without
579 restriction. In the past, people came armed, for they risked being robbed or even killed on the way by highway bandits.

The Lease of Services (kununga).

[465] A man may agree to work for another for 50 days, for example, at the rate of [80] one or two days a week on the condition of receiving the meat of one cow in exchange.

437 Exchange (kuguza) (1)

1. Kuguza, lit., "to agree to give an advance."

A Mututsi asks a Muhutu for a granary of sorghum (ihundo, lit., an ear of sorghum) for example, in exchange for a bull calf or hoes (usually 30).

The Loan (gutiza)

426 The Banyarwanda distinguish the loan for use (commodatum) from the simple loan (or loan for consumption).

If the loan for use, in hoes for example, is granted without interest, the same is not true of the loan for consumption, which involves edible produce. Whoever has received a basket of sorghum or beans must usually return two. The basket of supplementary produce which must be given the lender is called kirenga.

The Guarantee (kuchyungura).

Primus owns a pruning knife which Secundus would like to borrow. Secundus does not know Primus, so he goes to Tertius, a friend of Primus. Tertius tells Primus to lend his pruning knife to Secundus and offers himself as surety if the latter does not return the tool. Tertius may eventually turn against Secundus.

This contract can be made for cows, granaries of sorghum, etc.

Security (ingwate)

Primus wishes to borrow a few baskets of beans from Secundus. But Secundus answers that he cannot give them to him without a guarantee. Primus then offers Secundus a goat, for example (2).

2. A goat is worth three hoes.

When he brings Primus the counterpart of his loan, he takes back the goat.

[81]

437 The Commission (kugerekesha) (1)

1. Kugerekesha, lit., "to add."

Primus goes to market to exchange a hoe for some beans. [Thereafter] Secundus asks him, as remuneration, to take thence one of his (Secondus') goats and exchange it for three hoes, for example.

426 The Deposit (kubitsa)

The deposit of goods not consisting of cattle involves no obligation on the part of the depositor to the depositary who agrees to keep the goods deposited with him.

These contracts are made before notables of the hill who act as witnesses. But most often they are made in front of a rugo being built or a watering trough, places where there are always many people, who in case of a dispute will give their testimony.

If one of the contractors does not meet his agreement (2)

2. In the case of absolute necessity, for example a famine or an invasion of grasshoppers, a provisional release from the obligation is allowed if the question is one of furnishing produce, sorghum or beans.

or is dishonest, the tribunal of the hill chief, on complaint of the injured party, would force him to discharge (3) his debt (4).

3. Kwishyuza, "to claim payment"; kwishyura, "to pay."

4. Umwenda, "material."

The creditor has the option of taking a pledge, a goat for example, to oblige the debtor to pay.

If the latter cannot pay, he is condemned to work to indemnify the plaintif, usually two days out of five (5); but he can be replaced

5. Cf. p. 29, note 1.

426 by his son, his daughter, or his daughter-in-law, and possibly an umugaragu. In the past, if a debtor fled in order to avoid his obligations, the creditor had the right to seize his cattle, [82] his banana plantations, and even his hut. However, in this case, the children could keep their father's property on the condition of agreeing to work for the creditor until the debt was fully paid.

Sometimes a patron pays for his client if the latter has only a storehouse of provisions and if he needs the help of his family to work for his shebuja. If the umugaragu dies, his son takes his place. The obligation thus passes to the descendants until it is fulfilled.

On the other hand, the creditor's brother or son can act in the place of their relatives (1).

1. Laws of the Family and of the Clan, p. 8.

574 Hospitality.

The duty of hospitality is sacred to the Banyarwanda. Even a Mututsi will never refuse a Muhutu either ichumbi (lodging) or izimano (wood, water, and food). A proverb says; "Uwubaka wese yubakira abu Mwami (2), and whoever did not grant food and lodging

2. "Whoever builds (a house) does it for the people of the Mwami," which means that his house must be open to all the king's subjects.

to a traveler would be given the name of umugome (bad); he would be Uwanga Umwami (an epemy of the Mwami).

Civil responsibility.

672 Civil responsibility does not exist. The parents themselves however, repair any damage done by their children.

SECTION V. GOVERNMENT AND ADMINISTRATION

1. Nationality

563 The Munyarwanda people include the Batutsi, the Bahutu, and the Batwa. The Mututsi aristocracy of Hamite origin dominates

563 the mass of the Bahutu who are Bantus. These devote themselves to agriculture and raise cattle for the benefit of the Batutsi. The [582] pygmoid Batwa are kept at a distance by the Batutsi and the Bahutu and marriage with them is forbidden. They are hunters, blacksmiths, and potters.

173 The legendary tradition of the country explains the origin of these different peoples. Nkuba (lightning), first king of the country, and his wife, Nyagasani, lived in the heavens with their two sons, Kimanuka and Mututsi, and their daughter, Nyampundu. One day, having come down from their heavenly abode the three children settled on Mubari Hill in the Urgweya savanna, near Kissaka, and Kimanuka took the name of Kigwa (lit., fallen from the sky). They lived there on the produce of their hunting and are versed in the art of forging spears, pruning knives, and hoes. Kigwa married his sister Nyampundu, and Mututsi went off elsewhere. But when he learned that his brother and sister had had some children, he came back to them and married one of his nieces. The descendants of Kigwa took the name of Abanyiginya; those of Mututsi were called Abega. They sold weapons and farming tools and thus became very rich.

They continued to live on Mubari Hill until the time when Gihanga (the creator), twelfth king [84] of the dynasty, began to overrun the whole country in order to dispose of the products of his family's forges. This Mwami "traveling salesman" was the first to exercise supreme authority effectively and was much loved by all his people, who considered him as a half-god after his death.

Gatutsi received many cows from his father Gihanga. His brother Gahutu, however, did not get any from the father because there was not enough cattle for him. Thus he was obliged to become Gatutsi's servant. Gatwa, third son of Gihanga, killed Gatutsi. The weight of this crime has fallen on the Batwa descendants of Gatwa. Gihanga had still other sons: Nyakarundi, ancestor of the Barundi; Kanyabongo, father of the Banyabongo [Banjabungu?] people, who are now strangers to the Banyarwanda; finally Gahima, the first of the Bahima, inhabitants of Ndorwa, whom the Batutsi consider as their own people.

563 Whereas the Batutsi of Ruanda today consider their brothers from Rutshuru (Kivu) as Bahutu, they look upon the Batutsi of Urundi as their equals. On the other hand, the Bahutu of Urundi, by means

Batutsi of northern Ruanda. Their less pure type results from marriages with Bahutu women.

(Official photo, Colonial Office.)

563 of the ubugaragu contract, can be integrated into the Ruanda society (1). But if a Mututsi of Urundi settles in Ruanda with his

1. There are also Banyarwanda Bahutu who go and settle in Urundi.

abagaragu, although he is the equal of the Batutsi of that country, he and his household are nevertheless considered as foreigners (2).

[166]

2. These migrations are caused by the desire to escape personal vengeance following the accusation of murder, a sentence of banishment pronounced by the king of Urundi, or difficulties encountered by a client in his relations with his patron.

727 567 In the past, at the time of the wars, the vanquished who were taken prisoner were killed, while the women and the boys and girls were carried off to slavery. A Mututsi could [85] even marry a woman prisoner if she were of noble origin; the children held their father's status. But as a rule he gave her in marriage to one of his clients; the children of such a marriage continued to belong to the master's household, but their descendants were free and thus became Banyarwanda.

567 A slave might even marry a Mututsi woman. It was thus that the Mwami Rwabugiri, who had captured a young man called Rusera Muhima, later gave him his own daughter in marriage and made him a present of the subdistrict of Rugarama in Bunyambiriri.

2. Royal Power

643 173 The Mwami (king) has supreme authority in Ruanda. We have seen that all the traditions ascribe a divine origin to his power. The annalists of the Royal Court (abatshurabgenge) attribute to the present Mwami Mutara Rudahigwa, thirty-nine ancestors who, with the exception of the first, Nkuba, who remained in heaven, have all ruled over Ruanda (1).

1. Many names have certainly been omitted from this list. Assuming that

643
173

it is correct, the domination of the Batutsi over Ruanda would go back nearly four centuries.

[565] 643 The Abanyiginya and the Abega are the most influential noble families of the country, and kings and queens have been chosen from among them since the earliest times.

[551] The kings of Ruanda have two names, that given them at birth (Musinga, Rudahigwa) and that given them on their accession (Yuhi, Mutara).

When the Mwami dies royal power passes to one of his sons, generally to one of the youngest.

The divine origin attributed to royalty and the legitimacy conferred on the king by a very long heredity led to the [86] acknowledgment of a third characteristic of royal power, that is to say, autocracy.

[423] The Mwami is the undisputed master of the whole country, of the land (fields and pastures), of the cattle, as well as of the people. He is the only real proprietor, all those on whom he bestows his generosity being merely his life tenants.

643 425 He does not necessarily own the land which he cultivates himself, and he does not need to, since his revenues are enriched by the tributes and payments owed to him by each of his subjects. When he is young he receives in appanage from the king, his father, one or several provinces, as well as cattle, and servants. On his accession he may keep all these provinces or give them to others (1).

1. Mutara Rudahigwa has kept his provinces of Nduga and Marangara but has shifted the responsibility of their administration to an umutware.

His favors may be bestowed to anybody, to a Muhutu and even to a Mutwa, whom he can raise immediately to the highest rank. Formerly, even in Musinga's time, those who had ceased to please the Mwami, or simply those whose property he coveted, could be dispossessed any day regardless of their high positions, all influence taken from them, and they themselves exiled from the country. Today, if the Mwami wishes to occupy a certain hill, he asks one

643 of his great chiefs to cede it to him. The latter yields with good
[425] grace and usually receives some cattle in exchange.

The Mwami is an absolute monarch by divine right who
643 661 692 knows no other rule but his will, even his caprice. (2) In the past,

2. Hence the proverb: Luyose higirwa n'Unwami, "all depends on the King."

before our occupation, he could with impunity torture, mutilate, or kill anyone who had displeased him. His criminal sentences conformed to the customs of the country, which acknowledged this [87] formidable right, and no one thought of rebelling against his decisions (1).

[177] 1. The Mwami's right of life and death was abolished in 1917 at the time of the occupation of the country by our troops.

In the same way he is high judge and makes the final settlement in disputes, even the slightest, among his subjects.

Finally, the king is the supreme legislator of the people. With the help of the abiru, he sees that the common law is kept, but he has the sole power of modifying the country's law if and whatever he wishes.

643 He announces his decisions (amategeko) at the door of his rugo,
[692] where people from all parts have congregated to pay homage or demand justice. The intumwa (messengers) are then charged to make known the Mwami's orders to the people of the different provinces.

643 In addition to his Mututsi name (Musinga, Rudahigwa, etc.),
551 the Mwami receives on his accession a king's name (Yuhi, Mutara, etc.). These names are repeated periodically; thus the present Mwami is Mutara III.

The king is sometimes given a surname such as Rwabugiri Sezisoni (Merciful, Clement) (2).

[192] 2. Foreign word originating in Buhima, east of Ruanda.

643 Often an interdiction is attached to a king's name: a Yuhi,
[551] for instance, may not cross great rivers like the Nyabarongo (3).

3. River flowing into the Akanyaru which forms the boundary between Ruanda and Urundi.

[775] After his death the king becomes a sort of divinity for the people. He has gone to Hades to join the demigods, his ancestors.
643 The king shares the supreme authority with his mother
644 (umugabekazi) (4). She is all-powerful, often more powerful than

4. The king's wife is called Umwamikazi or simply Muka-Rudahigwa, etc. The present King's wife is called Nyiramakomare.

her son. Whoever pays homage to the king [88] must also do so to his mother. She intervenes in law proceedings and the distribution of land, herds, etc. The king and his mother together are called Abami, The continual presence of the queen mother at her son's
[608] side is essential (1) and if the king loses his mother, he will be given

1. Kankazi, mother of Rudahigwa Mutara, lives on Shyogwa Hill in Marangara. This measure was taken by the Belgian government because, remembering the disastrous role played by Nyirayuhi with Musinga, they wished to prevent the mother of the present King from exercising too great a political influence.

an official mother. The king's mother has a special name, the
[551] same as that of her son, except when the king is called Mutara; that name even the court familiars cannot give her (2). The same honors

2. Yuhi Musinga's mother Kanjogera, bore the royal name of Nyirayuhi. Kankazi, mother of Mutara Rudahigwa, is called Nyiramavugo.

643 are paid the Mwamikazi as to her son, hand clappings repeated
644 three times (gukoma mumashyi). After the death of the Mwami (3),

> 3. Or rather, as the Banyarwanda say, "When he puts on his drum," for it is forbidden to say that the King is dead.

his mother no longer plays any official role.

3. The Sacred Drum

778 The origin of the Kalinga is said to go back to Ruganzu
173 Ndoli. While the latter, who was not yet king, was fighting against the Karagwe (Uganda), the Abakongoro of Kivu attacked Ruanda and killed the Mwami Ndahiro Chyamatara, father of Ndoli.

Returning from war, the latter stopped at Busigi (territory of Biumba), where a rich proprietor called Minyaruka presented a magnificent drum to the glorious victor.

778 The Kalinga is the very symbol of royalty (4). [89] Hung on
643

> 4. The Banyarwanda say, Kalinga ibuze nta Mwami (lit., the drum was burned, there is no King). This proverb must not be taken literally for, on the other hand, the people of Ruanda say, Hagum'Umwami ingoma irabazwa, (lit., find the King (important thing), the drum (unimportant thing is only wood). [89]

its stretched cords are the ibikondo, virile attributes of the principal enemies vanquished and killed by the kings of Ruanda. It is also
[787] regularly sprinkled with the blood of victims sacrificed on occasions for auguries. Truly royal honors are given to the Kalinga; it is not made to resound but the other drums sound in its honor (1). It is

> 1. Kulamutza, "to salute (the king)." The drums are beaten every morning when the king leaves his apartments to begin his day as a public person.

778 643 placed in the hut called rwimiringa (lit., house of copper objects (2),

2. Kalinga means "royal drum"; Karinga means "small copper object."

[727] built inside the king's boma, where the war trophies are kept. The Kalinga is guarded night and day, for it is the emblem of the grandeur of the kings of Ruanda.

4. The Court of the Mwami

644 At Nyanza, the royal residence (ibgami), flocks of people of every rank come to attend court or to inform the Mwami of the affairs of their region: Bahutu or even Batwa villagers hoping to obtain some benefit from the Mwami or his mother, dignitaries of various ranks and functions, and servants of both sexes (3).

[114]

3. These duties and functions have been minutely described by the Rev. Father Pages in his fine book, Un Royaume hamite au centre de l'Afrique [A Hamite Kingdom in the Center of Africa] (ed. I.R.C.B. [Institut Royal Colonial Belge], Brussels, 1933). This work constitutes a veritable and priceless monument for the knowledge of Ruanda and its people. We cannot do better than suggest that the reader refer to it for everything concerning the organization of the Royal Court.

5. The Council of Ministers

645 787 In serious circumstances, such as war or famine, the Mwami is obliged to convene the great chiefs (abatware b'intebe) in council (inima). The soothsayers (abapfuma) then consult the oracles and

645
787 according to their answers indicate the decision to be made.

[90] 6. The Intore

644
861 The Mwami's prestige requires him to have a group of intore who constitute a corps of pages. Their creation goes back to Mwami Ruganzu. They were then called the "intrepid ones" (1). The intore

1. Ibisumizi, from gusumira, "to carry off by force."

are the sons of the intebe and abachibiri chiefs as well as of the Mwami's abagaragu. A father who did not send his child to the king's Court to become an intore would imply that he did not love the Mwami and would regret it. Usually when they are igimbi (about ten years old) the young boys are brought to Nyanza where they remain until they are men. They learn to fight, jump, and dance. At the same time they get their political education, learning the legendary traditions and customs of the country as well as the rules of courtesy. The intore camp on a hill not far from the Mwami's residence and meet morning and evening for their exercises.

644
292 At festival time, the intore wear a special garment. Their loins are girt with a leopardskin (inkindi), and they wear round their heads a band (umugara) decorated with inkomo fur (black, white-collared monkey called Colobus) which is held by imiroto going down their cheeks. They wear a necklace (igitako) round their necks and
[535] others as shoulder belts (inzibanye). They dance holding a bow (umuheto) in one hand and a spear (ichumu) in the other; small iron bells are attached to their ankles.

7. The Inyambo

231 Ruanda can be called Igihugu chy'inka n'ingoma (the country of the cow and the royal drum). Horned cattle, the principal wealth of the Batutsi, is cared for with a love approaching veneration.

231
173 [91] Legendary tradition attributes to Nyiraruchyaba, daughter of Gihanga, the introduction of cattle into Ruanda. One day when she went to cut wood, she noticed whitish patches on the ground. Being very thirsty and not finding any water nearby, she took her drinking-straw and drank the white liquid. Finding this drink delicious, she wished to know whence it came. She went into the forest and came upon a horned animal that was losing through its udder a liquid identical to that she had just drunk. In the meantime as Gihanga had fallen seriously ill, she brought him some of the white liquid. The patient drank it and recovered quickly. He asked his daughter where the medicine had come from and she brought him the animal. The cow was called ingizi (from kugira neza, to heal well). Since that time the Banyarwanda have had a great veneration for horned cattle.

232 Along with ordinary cattle (inkuku) the Mwami owns herds of scrupulously selected cows which, without being precisely the object of a cult as in ancient Egypt, are treated with particular care and are in the foreground at all festivals. These are the Inyambo (1).

1. The word Inyambo designates an animal, a herd, or all the herds together.

The origin of the Inyambo goes back to the Mwami Yuhi Mazimpaka. This king chose fine long-legged cows with long horns and a shiny dark brown coat (ibihogo) and mated them with a young and vigorous bull. The selected herd was kept apart in the province of Rukōma near the Nyabarongo River. These cows multiplied and from them the best ones continually selected. Under the preceding Mwami, Yuhi Musinga, the Inyambo were divided into two herds, one called agakanda and the other indoha. Musinga [92] added a third and called them respectively Inyuba hilo (the ones to be respected) or herd of Gihanga; Inshya (the new ones) or herd of Kigeri Ndabarasa which contained a remarkable bull called Rushya; and finally Ingabe (the dominating ones) or herd of Kigeri Rwabugiri.

The three herds combined were called Insanga. At the full moon in June they were led in procession to the Mwami amidst dancing and joyful cries (gukura gichurasi, lit., to carry off the month of May) (1).

S 821 1. The month of May, during which according to tradition Mwami Gihanga died.

821 was considered a time of mourning. It was forbidden to get married at that time.

232 At all times a bull called Rusanga and five cows of each of the three Insanga herds were kept in a special enclosure inside Musinga's boma, and the king would often come and stroke them and speak to them affectionately.

The Inyambo now live in the province of Buganza, a country of fine pastures and gently undulating hills; being delicate animals they cannot stand the high altitude climate. The Mwami hands over his herds to the umutware w'intebe who in turn entrusts them to a hill chief or to the common Batutsi, although without position of authority, they are of nobler origin than some chiefs and are therefore particularly qualified to care for this choice cattle.

The Inyambo are large, long-legged animals with a less well developed dewlap than ordinary cattle, a deeper chest, long flanks, and an angular, thin, and dry rump. The enormously long horns often attain a length of 1.75 meters. They are in the shape of a lyre or crescent; the width between the tips may be 2 or more meters. [93] The coat is bright russet (igaju) or cheese-colored (igitare), but mostly dark brown (ibihogo).

The Inyambo go back into the kraal every evening and are always bedded down, which is rarely done for ordinary cattle, even by wealthy owners.

234 They are not milked like ordinary cows. Only sufficient milk for their Bahutu guardians is taken daily. If they have a calf, their milk is reserved for the young animal. The offspring of the Inyambo is automatically an inyambo. Even the offspring of ordinary cows may become inyambo.

232 If in a herd of inkuku there is a heifer whose characteristics are similar to those of the Inyambo, the Banyarwanda mate this heifer with an inyambo bull. The calf born of this first union is called imilizo. If the breeders judge that the inyambo qualities are to be found in this animal, it is also mated with an inyambo bull, and the offspring is considered worthy to enter the Inyambo herd.

The inyambo cows are never slaughtered or sold for any reason, such as malformation or sterility; they all die of illness or old age. The males fare differently. When they are full grown

232 the best are kept for reproduction, but the others are sold, killed, or placed in ordinary herds. The meat of slaughtered bulls and that of dead cows is eaten or sold by the guardians.

Castration does not exist; it is even forbidden by customary law.

527 231 The Inyambo are led to the Mwami at festival time and at public rejoicings. They are escorted by the Mututsi, with whom they are boarded, and by [94] their guardians. For the occasion, the finest animal (inyamibwa) wears on its forehead an ornament of beads (amaraba), at the base of each of its horns three strings of beads (amashyongoshyo), and on the tips, tufts of banana fiber (amakamba); a strap covered with black and red beads goes round its neck; finally tufts of palm fiber called ubuhivu are fastened to the end of its tail. Six cows wear an ornament of white beads (inigi) between their horns and necks. Two others have two inigi and a bead collar longer than the inigi called imiheja. Finally the rest of the Inyambo simply have a tuft of fibers on their tails.

When they arrive at Nyanza, the Inyambo file before the Mwami while their escorts utter joyful cries (urwamu), wave sticks (guchyar'inka, lit., to make the cattle go in), and praise the good qualities of the Inyambo. Then they line the Inyambo up (kumulika Inyambo, lit., to show off the Inyambo) and renew their praises.

The intore pages then group themselves and dance in front of the herd (kwinikiza). The festival ends with libations of banana beer offered by the Mwami to all who have participated in the presentation of the Inyambo. If the Mwami is satisfied with the treatment of the Inyambo, he gives some ingororano to the chief of the province in which the herd is living and also to the chief's people.

8. Death of the King

643 763 When the Mwami feels his end is approaching, he calls to his side his stewards (abanyagikari), notables (abatoni) of whom he is particularly fond, and some guardians of the customs (abiru). He tells them his last wishes and reminds them of the name of the successor he has chosen. [95]

766 When the king is dead, the abiru shave their heads, take off their bracelets, and put on a garment of sycamore bark. Then they choose eight Batutsi or Bahutu belonging to the families of the Abatsobe, the Abagunga, or the Abanyargona, who are in charge of the funeral (abanyamugogo, lit., man with the great log). The corpse is dressed as when the person was alive, rolled in a mat, and placed in an ingobyi (1) resting on a raised hurdle (urutara) set up in

1. Long, boat-shaped basket in which people of high quality are carried.

one of the huts of the royal boma (2).

2. In the past, on the death of the king, two noble Batutsi had their throats cut. This was called gusegurir Umwami (lit., to make the king's pillow). When the Umugabekazi died, two great Batutsi ladies were similarly killed.

For eight days the watchers keep a great fire burning under the hurdle in order to cure the corpse. To speed up the operation the corpse is turned over morning and evening, and to prevent the skin from splitting, the watchers anoint it with butter from time to time.

At dawn of the ninth day, the body is lifted by the watchers, accompanied by a few abiru, and hidden during the day in the rugo of a Munyarwanda. At nightfall, the small group sets out again. Traveling only at night, the funeral procession arrives at Rutare Hill, near Lake Mohasi, the end of the journey. The owner of each rugo, where the bearers have spent the day with the corpse, must drink the gihango (3), the absorption of which will inevitably kill him if he

278 3. This gihango is different from the one in question in the blood pact, p. 13. It is a muddy drink in which medicinal herbs are mashed and mixed with wood ash and ash from the powder of the horn of a bull that has killed another bull. The Banyarwanda

278

believe that this potion will kill whoever does not speak the truth or reveals a state secret (cf. also Procedure, pp. 104 and 105).

766 dared reveal what he had seen.

The summit of Rutarè Hill is crowned with trees, [96] the remains of an ancient forest. The cemetery of the kings and queens can be found there. The abanyamugogo build a hut there, dig a grave, and bury the king and his weapons in it. The hut is closed with beams and surrounded by a thorny enclosure to keep wild ani-
[767] mals out. Quite near-by, the watchers build themselves dwellings where they live for two years and are fed during this time by the people of the neighborhood. Then they return home after going through Nyanza where they are showered with gifts. But the Mwami may not see them for he would die during the year if he caught sight of those who have watched over and carried his father's body. For the same reason the abiru who have accompanied them to Rutare may never return to the court of Nyanza. The belief also exists that from
[825] the right shoulder of the dead Mwami there issues a worm (urunyo) which, if placed in a pitcher of milk, will grow and become a leopard that kills only those who are wicked and unjust.

When the Mwami dies all work stops for eight days. For two months the bulls are removed from the herds and the king's children may not have any marital relations. Although they are under no obligation to do so, the Banyarwanda behave in the same way.

The death of the Umugabekazi [king's mother] calls for the same ceremonies and the same interdictions, but they are somewhat simplified.

9. Succession to the Throne

643 The king of Ruanda always belongs to the family of the
[644] Abanyiginya. His wives (1) are mostly chosen from the clans of the

[644]

1. The king may have four legitimate wives whose children are the only ones who, in theory, can succeed him; he can have as many concubines as he wishes.

Abega and the Abakono.

643 Sometimes the reigning sovereign can openly designate [97] even one of his youngest sons as heir. This happens when the soothsayers recognize him as being a "magic" king, with the mission of overcoming, for example, an epidemic (Umwami w'imitsindo). Thus Rwabugiri conferred power on his eldest son Rutalindwa, who took the name of Mibambwe, only for the duration of Musinga's minority.

Usually the name of the king's successor is secretly indicated by the king to the abiru, who then proclaim the one chosen.

669 As the law of primogeniture does not exist, palace revolu-
643 tions frequently occur on the death of kings. There are disputes between royal wives who have male children, especially when the wives belong to powerful families, in order to raise themselves and their sons to supreme power and to be able to bestow on members of their family high positions, land, and herds. It was this kind of revolution that, soon after the death of Rwabugiri, overthrew Mibamwe and gave Ruanda to Musinga and his mother Kanjogera.

10. Accession of the King

643 Two days after the death of the Mwami, his successor is proclaimed king by the guardians of the customs. After two months of mourning, all the great and small chiefs and their abagaragu go to Nyanza. The Inyambo are also brought there. For two days the most unbridled joy is given free rein amidst drinking, dancing, and games. The new king shows himself to the people in formal garments, his forehead bound with a crown composed of strings of white beads (ikamba or igisingo) falling over his face, and he receives from his subjects, as a gift of accession, some indabukirano. Then the people go back to their homes and the new reign begins.

643 If the son of the deceased is too young to actually reign
644 [98], the mother and usually the maternal uncles of the young prince act as regents (1). Similarly the Umugabekazi participates in the

1. We should point out however that Ruganzu Bwimba, before setting out on an expedition against the people of

644
643

Gissaka, a war in which he was killed, had designated as regent of his son Kyilima Rugwe, an Umunyginya called Chyenge, and not one of his brothers-in-law.

meetings of the Council of Ministers until her son is about fifteen years old, an age at which he can exercise supreme authority. Formerly, the Mwami's maternal uncles, taking advantage of his youth and their own privileged position, would often have recourse to violence and trickery in order to increase their provinces and their herds.

11. Political Divisions

631 The characteristic traits of feudalism are found in Ruanda. The dispersion of authority and property and the Mwami's bestowing on his subjects benefits and commands that are always revocable, result in great uncertainty for everyone and permit the king to establish his domination firmly over the country.

635 Ruanda is divided into provinces (intara) placed under the
631 command of a single chief (umutware w'intebe) (2). There are

2. Intebe, stool-seat.

exceptions to this rule. In Bgishaza, for example, two different chiefs are placed under the orders of the umutware w'intebe, the umutware w'ubutaka who exerts his authority over the lands and the Bahutu, and the umutware w'umukenke who governs the pastures, the herds, and the Batutsi. The abatware are appointed by the Mwami. They do not necessarily belong to the first families of the country. An average Mututsi or even a Muhutu may become a chief, thanks to royal favor that rewards his intelligence and devotion. [99]

635 In the past, at the time of the wars, the Mwami's abapfumu
701 chose from among the abatware w'intebe the umugabe w'ingabo (chief of the army). When peace was concluded, the latter remained what he had been before.

631 There are abatware who personally own hills in other prov-
635 inces (1).

1. Since 1924, aiming to unify the commands of the provincial chiefs, the government has endeavored to persuade the abatware to exchange hills.

634 The abatchibiri, who own only a part of a province, are also directly subordinate to the Mwami, who has given them their lands.

622 The ibisonga are placed at the head of one or more hills.
562 They are the supervisors of the abatware and the abachibiri, on whom
624 they also spy for the Mwami. Women can be ibisonga. For example, they can be the Mwami's abaja (mistress-servants) who, as a reward for the bestowal of their favors, are given a hill. But the most frequent case is that of a widow of an igisonga [sic] without any male children who, while attending the king, obtains permission to continue to manage the hill held by her husband (2). Each hill chief has

2. An example would be Nyiraigweni, widow of Nyantabana, a great provincial chief, replaced today by Rwabutogo who commands the district of Buganza in the territory of Nyanza.

under him a factotum called umuhingisha who designates and marks the boundaries of the fields, for which the Bahutu have asked the chief, and who may even settle the palavers in the absence of the igisonga. The umunyabigega is hierarchically subordinate to the former igisonga. He is the steward of the granaries (ibigega) of the chief whose cultivated fields he supervises.

631 The abanyabikingi command only a portion, a spur of a hill.
622 Appointed directly by the Mwami, they act as supervisors, and even as spies of the ibisonga for the king. [100]

12. Succession of Command

635 Like the royal office, the position of provincial chief is hereditary. It is assigned by the chief to one of his sons whom he considers most worthy to succeed him. It may happen that he may at the same time become chief of the clan, but it is not always so (1), for the family and the clan are social entities that are distinct

1. Cf. the example quoted in Personal Status, The Head of the Family and of the Clan, p. 6.

from political units.

The new chief must come and announce his father's death to the Mwami, bringing him a yo kubika cow, (lit., which announces death). On the other hand, he receives some indabukirano from his people and his friends.

622 The chiefs other than the abatware are appointed by the latter and confirmed in their functions by the Mwami.

13. Taxes and Forced Labor

651 Along with the civil obligations derived from the ubugaragu
466 contract, there are others due to the chiefs as such.

A. Obligations Due to the Hill Chief.

The Bahutu who are not abagaragu of the igisonga must bring the latter once a year a large basket of sorghum (urutete) and a small basket of beans (ipfukire). Formerly, they were also required to cultivate the chief's fields (ubuletwa or uruharo) (2), to build and main-

2. In 1924 this custom was modified by the authorities in order to improve the lot of the Muhutu, who now give only two days of work out of seven.

tain each a part of the chief's rugo (kubak'inkike), and to act as messenger (gutumwa). Finally, the igisonga keeps a group of five

466 [101] men (intizo) for his personal needs and puts the remainder at
651 the disposal of the provincial chief, who uses them either for building or repairing ingo belonging to the Mwami or his family, or else for work on the roads, etc.

The forced labor of kubak'inkike and gutumwa falls also on the simple Batutsi who are not the chief's clients (1).

1. The Batutsi obviously unload these obligations on their servants or their clients.

The chief's Bahutu and Batutsi abagaragu do not owe the ubuletwa. They are called ibyanga mibyizi (lit., those who refuse work). But they must bring the urutete and the ipfukire. In addition, the forced labor of kubak'inkike and of gutumwa falls on them also(2)

2. Cf. Property, Ownership of Cattle, p. 49.

by virtue of the ubugaragu contract.

All the Bahutu must in turn watch each night in the igisonga's rugo (okulalira) and provide the necessary wood for heat and cooking.

B. Obligations Due to the Provincial Chiefs and the Abachibiri.

The Bahutu who are not abagaragu owe them the urutete, the ipfukire, and also the ubuletwa for every two days out of seven. When the performance of this last obligation is difficult or even impossible because of the distance, the Bahutu replace it by bringing the produce of their cultivations (sorghum, peas, beans, Eleusine, and cush-cush). This tax is called ibihunikwa (lit., that which is put in the granary).

The Bahutu clients are only subject to the uretete and the ipfukire.

651 The ordinary Batutsi have the obligations of kubak'inkike, gutumwa, and kubyukurutsa, that is to say, of giving cows called imbyukuruke (2)

2. Cf. Property, Ownership of Cattle, p. 49.

651 [102] Those who are abagaragu, unless they have a dispensation, must bring to the chief the uretete and the ipfukire.

The ibisonga [sic] are charged with the collection, in each umulyango, of the taxes in kind due respectively to the abatware and the abachibiri.

The inhabitants of Nduga and Marangara, provinces that are the appanage of the present-day Mwami, owe him and him alone, the tax because he is chief of the province.

C. Obligations Due the Mwami.

These obligations have the generic name of ikoro ry'Umwami.

The Bahutu have to bring the king the ikoro ry'ubutaka (lit., land tax), including the urutete and the ipfukire, on which the chiefs collect a tithe (umusogongero). Those who are his direct clients are subject to, in addition [to the above], either the ubuletwa or the ibihunikwa.

The Batutsi are subject to the kubak'inkike, the gutumwa, and the kubyukurutsa. Those who are the Mwami's abagaragu must in addition, unless they are exempt, provide the urutete and ipfukire. The taxes in kind intended for the Mwami are collected by the chiefs from the people under their administration.

The provincial chiefs have the obligation to live at Nyanza for some time in order to attend the court there, and the king is apt to keep them waiting sometimes for several months before dismissing those with whom he is displeased. They are also obliged to bring cattle to the Mwami, particularly some inkuke (1), one indwanyi (2), one ibiniha (3), and some intorwa (4).

1. Cf. Property, Ownership of Cattle, p. 42.

2. Cf. idem, p. 43.

3. Cf. idem, p. 43.

4. Cf. idem, p. 43.

651 The king also has the right to a certain percentage of the heads of game (gusogongera). In the past the Mwami also collected a certain number of cows [103] (iminyago) out of those acquired during wartime raids.

Some of the natives are subject only to the ingabo. This is the case of the artisans, hunters, and farmers who provide the king and the Court with bows, arrows, pruning knives, mats, skins, drums, honey, hydromel, etc.

The Batwa are subject to no actual fiscal obligation to the king and chiefs. Potters must only furnish pots and pitchers to the court and provide the Mwami, his wife, and the Umugabekazi with ingobyi. They are also the executors of the king's great undertakings. The hunters' payments consist of ivory, skins, and fragrant wood.

687 Punitive sanctions are provided in the case of nonexecution of these obligations. The hill and provincial chiefs as well as the king have the Bahutu cudgeled and take the cows away from the Batutsi. In the past, the Mwami would even sometimes have the Batwa executioners cut off the ears (kubiha) of the Bahutu who are delinquent in tax payment.

651. 486 A toll (ihoro) is paid by those who cross any water. To cross a larger river such as the Nyawarongo, the tax is paid to the provincial chief who refunds some of it to the boatmen.

Merchants must also pay a toll to the chief whose territory they cross. [104]

14. Secret Societies

575 563 668 The sect known as the Nyabingi (or Biheko) has its origin in the name of the Queen of Ndorwa who was killed by the warriors of Mwami Rwabugiri, resulting in a marked hostility to the Batutsi and the royal authority on the part of the Queen's descendants. Also, these people have become Bahutu by their marriages with commoners. These are sufficient reasons for the "Baheko" [sic] to be considered rescuers by the Bahutu, especially in the north of Ruanda where the resistance, if not the hostility, to the Batutsi and their administration is much stronger than in the rest of the country.

From Ndorwa where it originated, the sect spread out to Buberuka, Mulera, Bugoyi, and even to Buganza and Bwanachyambwe.

575 The propagandists are mostly women who claim they are possessed
563 by the spirit of Nyabingi. Every Nyabingi woman has at her dis-
668 posal a certain number of abagirwa who are her servants but who often exploit for her the naïve Bahutu by exacting from them presents supposedly intended to honor Nyabingi [by inducing them] to thank her for protecting them from the Batutsi and even from the Europeans.

The Nyabingi sect has therefore a very harmful influence, not only because it keeps the Muhutu in worthless beliefs and takes advantage of his credulity by exacting from him large presents (baskets of peas, beans, and sorghum, and also sheep, goats, bull calves, and heifers) but especially because it preaches respect for an authority independent from the Mwami and excites hatred of the Batutsi chiefs and also of the occupying power. [105]

15. Social Classes

563 The Bahutu, dominated by the Batutsi, with the addition of
565 a few groups of Batwa, constitute the population of the Banyarwanda.

But the Bahutu, like the Batutsi, are subdivided into several categories, each having a special name.

The poor Muhutu who has only a miserable patch of land, is
565 called umutindi. If his poverty is less great, his name is umugabo. An umukungu is a man who is well provided for, owning several fields and numerous heads of cattle.

Similarly, according to their progressive wealth, the Batutsi are umukene, umukire, umutunzi, and umutware. The abatware make up a restricted aristocracy called imfura.

554 As we have seen, the favor of the Mwami or of the great chiefs may have the effect of appreciably improving the social position of
558 even a ordinary Muhutu. On the other hand, an important chief may be reduced to the most miserable condition if he has displeased the king or if he has been cursed by his father.

[563] The Batwa are all on the same footing and are universally despised by the Bahutu as well as by the Batutsi.

727 In the past, enemy warriors were usually massacred. The
567 noble women, reduced to slavery, were considered as Batutsikazi;

[72] the Bahutu women became abaja (servants). The little girls had the
[56] same fate as the women. The boys were treated like the Bahutu (1).

1. Cf. also: Personal Status, the Family and the Clan, p. 4; Marriage, p. 14; Birth and Filiation, p. 25; Government and Administration, Nationality, pp. 70 and 71; Right of War, (see below).

[106]

[70] The warriors did not constitute a separate caste. All the
[54] able-bodied men, Batutsi as well as Bahutu, had to take arms when the country was invaded.

[79] Similarly, the soothsayers, sorcerers, rain makers, and the numerous court officials at Nyanza did not make up closed castes.

16. Right of War

[72] In the past, Ruanda has had many great wars with all the neighboring countries, particularly with Karagwe, Gissaka, Kivu, and Urundi.

When the frontier guards (abanyarugerero) noticed suspicious troop movements, they notified the Mwami who summoned his
[78] Council of Ministers and then consulted the auguries. If these were favorable, war was decided on. An intumwa was sent to the frontier of the two countries, and crying out from a distance, declared the opening of hostilities. The Banyarwanda warriors, both Batutsi and
[72] Bahutu, fought together in regional campaign corps. The supreme chief of the army chosen for the duration of the war from among the abatware had the title of umugabe w'ingabo. During the battle the troops were preceded by abahenyi, entirely naked Bahutu who shouted insults at the enemy.

The Mwami sent an emissary to summon the enemy to surrender. If the enemy capitulated, a messenger accompanied by one from Ruanda came to notify the Mwami of the surrender and then returned to his country.

[72] The male prisoners were usually massacred, and their women and children led to Ruanda. Booty, consisting mostly of cattle, was

727 divided among the Banyarwanda warriors, who had to remit part of it to the Mwami (iminyago).

The king then reassembled his council and announced the end of the war.

[107] SECTION VI. JUSTICE

CHAPTER I. PENAL LAW

685 1. Theft (1) of Provisions and Small Livestock

1. Theft is called ubujura or ubgibyi. The word umujura designates the thief in general. The umushimusi is the cattle thief and the igisambo is the robber of provisions, tools, etc.

a) Thief Caught in the Act (flagrante delicto) (muchyuho).

Whoever found a thief in his rugo could, in the recent past, kill him with impunity, but if the victim of the theft did not succeed in giving the thief the unexpected mortal blow, and the antagonists got to fighting, the thief had to be brought before the [694] hill chief. Today the hill chief has the presumed culprit apprehended by some of his men, who bind him and lock him up until he is brought before the tribunal. However, the relatives or shebuja of the thief can offer a present (inchamugozi, lit., which cuts the cord) to the chief so that he may be unbound. At the tribunal they offer to pay the robbed man the ingurano (from kugura, to buy back), an indemnity which is not necessarily of the same nature as the object of the theft; for instance, hoes can be handed over for a basket of sorghum that has been stolen. The robbed man claims in addition the inchachyuho (2) for the violation of his

2. Lit., "the one (the cow) that cuts, delivers (the thief) for the break (into the rugo)."

1:Vanhove--93A G-5 (ca. 1935) 1941 FO42 Rundi FO42

[opp. p. 107]

291

(Official photograph, Colonial Office)

685 property right; it usually consists of a hoe. [108] If the thief is poor, a rich man may indemnify the victim of the theft, but in exchange he requires [from the thief] payments in the form of work.

In the past, if no intervention was made in his favor, the thief became the slave of the robbed man (umugaramu, the one who is bought back) for a certain period of time. However, he was well treated by the master and could even, when liberated, become his client.

b) Thief Not Caught in the Act.

685 694 In this case the robbed man has a discreet investigation made by a person who will not arouse suspicion. As soon as the investigator has gathered some information, he notifies the victim of the theft. The latter, with the help of his relatives or friends, goes and takes back his property and even something more; or else he arrests the thief or notifies the chief who has the thief apprehended. The man who was robbed must furnish the chief with proof of the crime (igihanga, lit., the head). Even if the robbed man has been paid back, the thief must pay him the umunani, representing eight times the value of the theft. Until the payment of this indemnity is complete, the thief remains in chains and is even beaten, unless he gives the inchamugozi. In addition to the imunani [sic] he is required to pay the inchachyuho.

685 The highway robber (umwambuzi) is sentenced to corporal punishment and to return what he has taken.

If the Mututsi, by any remote chance, stole provisions or small livestock, he would be given the usual punishments, and an even worse penalty, banishment from Mututsi society, for this theft would degrade and return him to the rank of Bahutu.

The umugambanyi (informer, traitor) does not steal himself, but sends some abajura (thieves) to commit [109] the crime. The ichyitso is one who gives the thieves necessary information. The umugambanyi is deprived of his property and bound and beaten until he has paid the umunani [sic]; then he is driven from the hill, and his rugo destroyed or given to another man. The punishment of the ichyitso is the same except that he is not held to the payment of the umumani.

685 Whoever has received stolen goods (1) is punished like the

1. The receiver is not designated by a special word. To receive stolen goods is called guhishira, "to hide in favor of someone."

thief. Whoever has hidden a thief from the searchers but can prove he did not participate in the theft is merely bound and cudgeled without further punishment.

2. Theft of Heavy Cattle

Today, the robbed man who catches the robber in flagrante delicto is no longer allowed to kill him. Whether flagrante delicto or no, only the provincial tribunal is competent to deal with the affair. As concerns the punishments, there are several possibilities.

Whoever has taken possession of one or several heads of cattle must return what he has stolen. In addition he is required to present to the tribunal eight animals (umunani) among which the man who has been robbed can choose a y'ichyuho cow, because the thief has entered his boma without his permission. Finally, he must give the man he has robbed an inguramaboko cow (lit., which releases arms that are bound) in order to purchase his freedom.

If the thief has slaughtered or sold the cattle, he must bring the umunani so that the robbed man may chose as many animals as have been stolen. In addition, the thief is obliged to give a y'ichyuho and an inguramaboko cow. The man who has been robbed must give the tribunal proof of the theft (igihanga). If, for example, the thief has slaughtered an animal, [110] the victim of the theft must show the horns of the animal that has been killed.

If the thief does not own any other animals except those he has stolen, his family pays the ichyuho and the inguramaboko. If the family owns no cattle or refuses to give any, the thief's hill chief or shebuja pays for him, but then the thief must redeem himself by working for the chief who has intervened in his favor.

685 If no one agrees to pay for the thief, the latter is led before the Mwami who asks one of the notables who is present to redeem him, in consideration of which the thief discharges his debt by working for this chief.

The Mututsi who steals a head of cattle is sentenced to ordinary punishments. During Mwami Rwabugiri's time, the thief might even have been condemned to death.

The receiver of stolen cattle is punished like the thief; sometimes he may also be deprived of his entire herd.

The obligation provided by customary law to restore what is stolen and in addition to pay the y'ichyuho and the inguramaboko is intended not only to repair the damage done, but also to severely punish the delinguent in order to inspire a salutary fear in him.

In the past, a chief might frequently have raided entire herds. He could be sentenced by the Mwami to return what he had taken and in addition to give to the man he had robbed several heads of cattle. The thief was also sometimes dispossessed of all his property. Unfortunately if the thief was a relative or friend of the Mwami, the theft often remained unpunished.

Formerly, one who stole a cow belonging to the Mwami's inyambo herds was condemned to be impaled.

Similarly, a cattle thief caught for the third time lost not only all that he possessed but was often condemned to death.

[111] 3. Fires

An incendiary (utwika) after being well beaten must restore the value of what he has destroyed; rugo, objects, provisions, etc. Otherwise he is dispossessed of his own rugo and all its contents for the benefit of the victim of the fire. If the fire is unintentional its author is only condemned to pay damages.

4. Blows and Wounds

683 If the blows administered result in wounds, the assaulter is condemned only to a fine (ichyiru), the amount of which varies with the rank of the victim. Thus an ordinary Muhutu messenger or an umugaragu of the Mwami may receive a whole herd. Usually if a

683 Muhutu has been wounded he receives the indwaza (lit., who cares for) indemnity consisting of one or two goats. If the author of the blows is a Mututsi, he must lend a cow to the Muhutu so that he can have its milk for as long as there is any; the Muhutu gets the full ownership of a bull calf when he returns the cow.

5. Murder

682 Murder cases were under the exclusive jurisdiction of the Mwami at the time when he had the right of life and death over his subjects (1).

1. Cf. Government and Administration, Royal Power, p. 74, note 1.

682 696 628 If the murderer (gatozi) and his victim belonged to the same social class, the king ordered the exercise of private vengeance (guhora, to avenge; kwikorera, to avenge one's self), which resulted in endless conflicts between families and clans. The Mwami, however, could throw on the murderer, the full responsibility of his deed, and the relatives of the victim could not then resort to the "vendetta."

682 [112] If the murderer was a Muhutu and the victim a Mututsi, two deaths were exacted.

On the other hand, if a Muhutu had been killed by a Mututsi, recourse to direct vengeance was impossible, but the Mwami could turn over a member of the Mututsi's family to the victim's relatives and have him killed. However, if a fairly important Mututsi killed a Muhutu, neither he himself nor his property would be affected. This iniquitous ruling did not rouse the natives' indignations because it conformed with the law of the land and they therefore submitted to it.

The right of pardon did not exist. However, the king could stop the vengeance (gucha inzigo, lit., to cut the vengeance) and offer compensation (wergild) to the family of the dead man; this was when the latter was a Muhutu, as the Batutsi accepted only blood atonement. For the king to agree to recognize the benefit of the compensation to the victim's family, the dead man had

682 obviously to be an important person, such as an umugaragu of the Mwami. In carrying out the sentence, the murderer had to give the victim's parents many heads of cattle, thirty or sometimes even more.

If a person lost his life in a fire started by a malicious person, the guilty party (or one of his family) was punished by having his head cut off by a member of the victim's family.

689 The abalozi (sorcerers) accused of having caused the death of a man by their evil spells were also punished by the death penalty.

696 If the murderer took refuge in the rugo of a chief, he found there inviolable sanctuary. It would have been a lack of respect to authority to kill a man at the chief's home and the administrators of justice might have been put to death for doing so. In such a case the chief himself brought the murderer before the Mwami.

—

[113] 6. Special Cases

687 Exceptionally serious cases had to be submitted to the Mwami. The crime of lese majesty brought with it, in the recent past, the death penalty to the perpetrator. The Batwa executioners were charged with carrying out the sentence by strangling (guhotora), spearing (gutera inchumu), cudgeling (gukubita inkoni), or killing with an axe (gukubita intorezo). The criminal could also be thrown into a pit located in Bugessera (near Nyanza) after having been strangled (1), or else he was blinded with a hot iron (2).

1. Abanyiginya accused of having plotted against the Mwami were punished in this way.

2. A chief of the neighborhood of Issave called Kayijuka had his eyes burned out for having shown Nyirayuhi, mother of King Musinga, to a missionary. At this time the custom of the country did not allow noble women to be seen by foreigners.

689 Rain makers (abavubyi) proved guilty of imposture (3) were

> 3. In spite of this terrible punishment the rain makers continued to ply their dangerous but lucrative trade.

drowned in Lake Mugessera.

684 Unmarried girls found to be pregnant suffered the same fate.

7. Unintentional Homicide

682 It sometimes happens that a beater or a hunter hidden in thick shrubbery is confused with the game or a wild animal and is killed by an arrow. These accidents are regulated in the following way:

If an arrow, after wounding an animal, kills a man, the shooter's responsibility is not involved.

If an arrow intended for an animal misses its target and kills a man who has indicated his presence, [114] the clumsy shooter is considered a murderer and the right of revenge is granted the victim's family. However, if the murderer can prove that the victim gave no signal, he is relieved of responsibility. He can also plead not guilty before the tribunal of the provincial chief or of the king by pointing out, with the help of witnesses, that because of the cries and many signals set off at the same time, he was unable to distinguish his victim's warning whistle, or that the latter moved after having given the signal agreed upon.

If the plaintiff's statements are accepted, the tribunal declares that the victim has perished by reason of his own imprudence or of an accident for which the killer cannot be held responsible, and the latter is definitely exonerated.

8. Imputability and Responsibility

672 Except in a case where the guilty one and the victim are of different social ranks, the seriousness of the punishment corresponds ne varietur to a determined offense, and attenuating or aggravating

672 circumstances are not taken into account, except in the case of a theft of provisions, when the judge must make sure whether the motive for the crime was hunger or fraudulent intention.

Children who commit an offense are whipped. Insane crimi-
681 nals are shut up and shackled.

682 Striking back is considered legitimate in the case of an unjust attack. In the past, if the aggressor was killed, the individual who had legitimately defended himself asked for the Mwami's intervention to stop reprisals by the family of the author of the criminal attempt. The king then forbade the exercise of private vengeance.

[115] 9. Prescription

681 Prescription of the punishment as well as that of public action is unknown in Ruanda's common law.

CHAPTER II. PROCEDURE (1)

692 1. Today, with the exception of crimes such as the abduction of cattle and private disputes which are in the cognizance of native tribunals, penal cases in which natives are involved are judged by European courts. The Belgian government has maintained, almost entirely, the native judicial organization in civil affairs. (Cf. J. Vanhove, Les Juridictions indigènes au Ruanda [Native Jurisdiction in Ruanda], Revue Congo, July, 1939).

1. The Various Degrees of Jurisdiction

Usually the parties first attempt to settle their dispute amicably before appealing to the jurisdiction of the hill chief (2).

2. Uruja kujya ibgami rubanza mu bagabo, that is to say literally, "the palaver that

692 will go to the king begins between the men (meaning here the arbiters)."

The chief who is judge is always assisted by its abagaragu conversant with the common law of the country, who have the collective name of abachamanza (arbitrating judges). In very delicate matters the case may be postponed to a later date to permit particularly competent abagaragu to handle it. The abachamanza are not necessarily Batutsi; Bahutu may be appointed as assessors and are thus called upon to judge an affair in which a Mututsi is involved.

Cases are brought before the tribunal in two ways:

694 a) When the hill chief (igisonga) or the subchief (umuhingisha) hears that a crime has been committed, [116] he sends a few of his men to arrest the individual who is suspected by public rumor of having committed the offense. The latter, tightly bound, remains shut up in an enclosure open to the winds, located near the chief's house, until the tribunal decides on his fate. During this period of preliminary detention, some of the chief's abagaragu, whether judges or not, question the presumed guilty person and attempt to make him confess his crime (kwindja, lit., to tempt, to solicit).

b) In civil matters the plaintif (umulezi) goes to the chief before whom he squats down, his stick and his spear against his shoulder, claps his hands, and says to the chief: Nimugahorane Imâna! (May God help you!) (implying, to judge my palaver). The defendant (ulegwa) is asked to appear. If after three successive summonses he persists in not appearing, the chief has him called once more. If he still defaults, his adversary has won his case.

695 The tribunal sits on the threshold of the chief's dwelling, where the ibitabo (1) are, or else under the porch in front of the

1. Small, very low festoon-shaped mud walls.

insika (2).

2. A kind of wickerwork screens decorating the base of the pillars supporting the hut's roof.

695 The plaintif's relatives and a crowd of curious onlookers attend the debates.

The defendant, then the plaintif, speak in turn, each of them twice. They can have recourse to an unpaid lawyer, generally a son, a faithful servant, or their shebuja.

The assessors who have questions to ask interrogate the parties. The chief himself is silent. Then, at his command or that of the wisest of the assessors, one of them rises and takes up the palaver again in detail (gusor'imanza, to give the content of the palaver, or better, gusubira mu rubanza, to repeat [in place of] the palaver). At the end of this statement [117] during which there has been complete silence, he pronounces the following words: Kubganjye nyanaka aratsinze! (According to me so and so has won), then he sits down again. Although the tribunal's silence indicates their agreement, the chief asks the assessors to confirm their assent and then pronounces the sentence.

If the members of the tribunal are not unanimous, the chief asks one of the opposing assessors to give again a statement of the case, indicating the reasons for his attitude. The first speaker then answers, supported by those of his colleagues who agree with him. The assessors with a different opinion then answer back, and there follows a lively and often stormy debate in open court. The exchange of talk sometimes becomes such that the chief has to interrupt to call the meeting back to dignified order. At a given moment, having heard all the facts, the chief, who is judge, demands silence, takes over in his turn the affair ab ovo, and after having justified his point of view, says: Koko nyanaka aratsinze! (Truly that one wins!).

The most usual methods of proof are testimony and oath. Only the plaintif is authorized to demand testimony. The witness (1)

1. A woman or child can never act as a witness.

(umugabo), always a single one, can be called in civil and penal affairs. He is questioned after the two parties have spoken. The intervention of a witness is only relatively useful, he is always more or less closely related to the plaintif and the defendant generally objects to him.

695 The oath is administered by the chief to both litigants and the witness before they speak. After planting their spears in the ground, they swear, saying: Nkabeshya iti chumu ndakaritega Mutara! (2) (If I lie, may this spear pierce Mutara!)

2. Instead of pronouncing the name of the reigning king, one often simply says, Ndakariteg'Umwami!

[118] In the past, in the case of a serious theft, assaults and wounds, or suspect illness or death, the accused who persisted in his denial was often tortured or subjected to an ordeal.

A person presumed guilty of a big robbery was tightly bound, then cow's urine was poured into the cuts made by the cords; or else he was deprived of food and beaten till he was crippled, all this without prejudicing the punishment.

695 A man who had been the victim of a big robbery, or whose
787 relative had been attacked by, or died of, a suspicious disease, would go to complain to the chief, accompanied by a Muhutu sorcerer (umushuzi), who would then perform the gushora (divination). The sorcerer would take a pruning knife (ikibabo) and ask the accused to spit on the blade (gukamira, lit., to milk) and to pronounce the following words: "If I am guilty, you will become black. If I am not guilty, you will become white like an inyange (ibis)." The umushuzi would then plunge the pruning knife into the fire. When the iron turned red-hot he scattered magic powder (umubi) on the blade and awaited the result of the experiment.

Another test currently used in the same cases was that of the chick called umuchuri (from guchurikam, to upset) for the occasion. The accused drank a little water, rinsed out his mouth, and spat out the water into the beak of the chick. The sorcerer (mututsi) then spoke to the bird, saying: "If you find that this one is guilty, you will make the traveler walk and the sedentary one stop. If he is not guilty, you will make the traveler rest and the sedentary one walk (1)."

1. These sibylline words can be explained as follows: In the entrails of the chick (ibilanga) there are some intestines which in contracting or expanding give the impression of retreating or advancing.

695 787 opened up its body, and after examining its entrails would give the suitable interpretation.

696 [119] There is no special procedure in the execution of sentences. If the judgment concerns stolen cows, the plaintif or the abagaragu go and take them from the thief. In other cases the condemned one does it himself, and if, as unlikely, he refuses to do so, the chief would compel him by force.

692 In principle, justice is gratuitous and legal expenses do not exist, but the judges are not indifferent to douceur, which gives an advantage to the powerful and wealthy ones. On the other hand, as a rule, an umugaragu with a palaver brings beer or tobacco to his shebuja so that he will bring his case before the tribunal.

Appeals are dealt with by the provincial chief whose tribunal is organized on the same basis as that of the hill chief. This appeal is called gusuzugura (lit., to despise the chief's justice) or gusubira urubanza (to begin the palaver over again).

In the past a Muhutu did not appeal to the provincial chief but to the umugabe w'ingabo (1).

1. Cf. Government and Administration, Right of War, p. 92.

On the other hand, the provincial chief's tribunal has first cognizance of cases concerning cattle and territorial litigation between hill chiefs. It is also obliged to act in cases of expulsion or dispossession of a Mututsi or a Muhutu by a hill chief.

The Mwami's tribunal is the supreme jurisdiction. The king presides, surrounded by his confidential men who are versed in the customs (abahanga) or by persons of high rank who have the responsibility of being judges.

Normally, the Mwami alone is competent to deal in the first instance, and with no appeal, with criminal affairs, [120] but he may delegate his power to an umutware. If, for example, a provincial chief has denounced a sorcerer to the king, the latter may command the chief to kill the umulozi.

Crimes of high treason and violation of state secrets are also exclusively of his competence.

695 In the past, in criminal cases judged by the Mwami, recourse was had to the gihango test in order to force the accused to

695 confess (1). Sentences were carried out by the Batwa executioners.

1. Cf. Government and Administration, Death of the King, p. 82, note 3.

692 695 Any Munyarwanda, even the most humble, may appeal directly to the Mwami if he has been despoiled by a chief. But this resort to royal justice is illusory for the poorer claimants, who are often obliged to remain for an indefinite time at Nyanza before their case is called. In addition, while the judges of the Mwami's tribunal are required to refuse presents offered by the litigants and to judge equitably regardless of their caste, they sometimes are willing to accept an "honorarium" from one or the other of the parties.

692 Finally, the Mwami's tribunal intervenes, with no appeal possible, in litigations arising between individuals belonging to different jurisdictions.

2. Litigation between Natives of Different Jurisdictions

When litigation arises between natives belonging to different hills, the defendant's igisonga deals with the case. The plaintif appears assisted by his shebuja or one of the latter's umugaragu, who acts as a kind of lawyer and is called umuhagarikira. If the plaintif's claim is rejected, he appeals to his chief. The two chiefs then get together in a neutral place with their abagaragu and the [121] litigants. If an amicable arrangement is impossible, the parties have recourse to the jurisdiction of the provincial chief.

If the litigants belong to different provinces, the plaintiff whose claim has been rejected by his adversary's hill chief goes accompanied by his shebuja or a umuhagarikira to the provincial chief who tries to come to an agreement with his colleague. If he does not succeed in doing this, the parties and their patrons go to the Mwami. The king appoints some persons of high rank from among the provincial chiefs on official visits, his courtiers, and his abagaragu to examine the case. This time it is the hill chiefs who plead for their own people. If the decision rendered does not please

692 one of the parties, he appeals to his provincial chief who points the matter out to the king. The Mwami then calls certain of his abahanga (1) with whom he sits and listens to the respective provincial

1. Cf. p. 104.

chiefs of the parties who are acting for them. The king then pronounces the sentence, justifying his judgment.

692 628 It should be noted that the normal procedure we have described could not always be employed in the past. When two hill chiefs, for example, were hostile to each other, and if the victim of a robbery came to claim justice, it could be that the thief's chief might take the thief's part. The robbed man would notify his chief, and then it was war between the hills. If the robbed man's chief was weak and could not obtain justice for his man, he appealed to the provincial chief who would summon both chiefs, the thief, and the robbed one. Only the two chiefs plead, first the robbed man's chief then the thief's chief. If the latter proved that the victim of the theft had wished to take the law into his own hands without first appealing to him, and that he then had to defend himself against an attack which he believed unjust, the provincial chief then inflicted a fine (ichyiru) in cows on the robbed man's chief. If the domestic war had resulted in deaths or wounds, the palaver was obligatorily transferred to the Mwami. After paying his fine, the robbed man's chief could apprehend the thief and punish him, as we have stated above.

ESSAI

DE

DROIT COUTUMIER DU RUANDA

AVANT-PROPOS.

Au delà de la rive orientale du lac Kivu s'étend un pays de collines élevées, le Ruanda. Le long de leurs flancs s'accrochent, tapies dans les bananeraies, des huttes innombrables dont la fumée monte dans le ciel, et sur les crêtes, le vent vif fait ondoyer les graminées roses des pâturages où paissent des troupeaux de vaches aux longues cornes. La population, exceptionnellement dense, comprend trois millions environ de Bahutu, d'origine bantoue, dominés par quelques dizaines de milliers de Batutsi, pasteurs hamites descendus vraisemblablement des plateaux éthiopiens. Enfin, de-ci de-là, des pygmoïdes batwa, potiers et chasseurs, vivent à l'écart des autres indigènes, qui les méprisent.

Les Européens qui ont étudié les premiers l'organisation coutumière du pays ont découvert avec surprise qu'elle offrait de nombreux points communs avec notre féodalité. La tenure des terres et du bétail ainsi que la dépendance des personnes y sont l'objet d'une régle-

1: Vanhove FO42 Rundi

mentation minutieuse que le Souverain du Ruanda a le pouvoir absolu de modifier, mais qui en fait est restée invariable à travers les âges.

Notre occupation a eu évidemment pour effet de modifier la coutume en de nombreux points. Nous ne pouvions approuver, par exemple, des dépossessions brutales et des attentats à la vie et à la liberté commis au nom du droit du plus fort. L'évangélisation a introduit également au sein de la société indigène des notions de justice et de douceur bien étrangères aux conceptions originales des natifs. Il convient cependant de noter que la coutume, en dépit des efforts de nos fonctionnaires et de nos missionnaires pour la battre en brèche dans ce qu'elle a de condamnable, conserve une grande partie de son empire, grâce à l'influence des grands chefs batutsi, soucieux de maintenir intacte leur autorité, et aussi grâce à celle de tous les sorciers, devins, faiseurs de pluie, etc... qui, tablant sur la crédulité et l'esprit superstitieux des Banyarwanda, s'attachent au maintien de la loi traditionnelle, sauvegarde de leur prestige et de leurs revenus. De plus, les Bahutu, tout en se rendant compte de la protection que nous leur offrons en réprimant les manifestations de l'arbitraire, subissent les transformations que nous avons apportées à la coutume plutôt qu'ils ne leur donnent une adhésion réelle. Cette attitude passive est due au fatalisme invétéré qui leur fait courber l'échine devant le maître incontesté : le Mututsi, et aussi à l'ancienneté de la coutume, qui la rend respectable à l'égal d'une institution quasi divine.

Comme c'est le cas au Congo belge et en général dans

1: Vanhove FO42 Rundi

l'Afrique Noire, le droit coutumier ne renferme pas que des règles juridiques applicables aux personnes, aux biens et à la société. Il contient également des prescriptions d'ordre religieux et magique, des recettes diverses, etc... Tel quel, il forme un tout disparate, mais cependant solide, qui donne la solution aux problèmes posés par la vie individuelle et collective des Banyarwanda.

Le droit coutumier du Ruanda, s'appliquant à une population homogène, est le même partout, sauf dans le Nord, à la frontière du Kivu et de l'Uganda, là où l'autorité des Batutsi sur les Bahutu n'a pu s'affirmer comme dans le reste du pays. Cette indépendance a eu pour effet de substituer à l'administration des fonctionnaires hamites celle des chefs de clan et de famille bahutu.

Les meilleurs connaisseurs du Ruanda et de ses gens ont été les religieux de la Société des Pères Missionnaires d'Afrique. Les RR. PP. Lupias, Schumacher, Arnoux, Pages, Hurel ont publié, dans les revues « Anthropos » et « Congo », entre autres, et dans de nombreuses monographies, des études très fouillées sur différents points de la vie sociale, politique, religieuse et intellectuelle des Banyarwanda. Les administrateurs territoriaux Lenaerts et Sandrart ont également apporté leur contribution fructueuse à la connaissance du droit coutumier du Ruanda

Toutefois, nous ne pensons pas qu'un relevé plus ou moins complet des coutumes de droit privé et public du Ruanda ait jamais été dressé. C'est ce que, modestement, nous nous sommes efforcé de faire dans le présent travail en insérant les observations recueillies dans le cadre d'un questionnaire établi spécialement à l'effet de faciliter

1: Vanhove FO42 Rundi

des études sur le droit indigène (1). Nous n'avons pu entrer dans le détail de toutes les institutions, dont certaines, notamment celles qui sont relatives aux contrats de bétail, nécessiteraient à elles seules un volume.

Mais, en dépit du temps restreint que nous avons pu consacrer à ce relevé des coutumes, nous croyons avoir pu donner l'essentiel du complexe coutumier du Ruanda. La valeur de nos informations, émanant des principaux *abiru*, gardiens des coutumes de la Cour de Nyanza, et des séminaristes, fils de grands chefs de province, de même que les recoupements auxquels nous avons procédé, nous font espérer que nous livrons un essai d'où toute fantaisie est bannie.

Nous souhaitons qu'il permette à tous ceux, religieux et laïcs, qui œuvrent au « pays de la vache et du tambour », aussi bien qu'aux ethnologues désireux de posséder une base de recherches, d'avoir des lumières nettes sur une organisation aux rouages à la fois compliqués et précis qui nous replace « mutatis mutandis » à la fois dans l'atmosphère de la Cité antique et dans celle du monde médiéval.

SECTION I.

État des personnes.

CHAPITRE PREMIER.

LA FAMILLE ET LE CLAN.

1. Généralités.

La famille « sensu stricto » (*rugo*) [1] est cependant plus étendue que chez nous. Elle comprend le père, ses femmes et leurs enfants, mariés ou non, les frères du père, leurs femmes et leurs enfants. Jadis, les esclaves de guerre (*abanyagano*) [2] en faisaient également partie.

Les Bahutu, serfs des Batutsi, ont leur rugo propre.

La famille au Ruanda est du type patriarcal. La filiation se compte dans la ligne paternelle [3]; l'enfant ne prend pas nécessairement le nom de son père [4]; l'autorité paternelle est exercée par le père, et la femme vient habiter chez son mari [5].

---

(1) Le rugo est l'enceinte où se trouvent la hutte, les greniers et les étables. Par extension, ce mot désigne la famille au sens strict. Au pluriel : *ingo*.

(2) Cf. aussi Mariage, p. 19; Naissance et Filiation, p. 36; Gouvernement et Administration, Nationalité, p. 84; Classes sociales, p. 105; Droit de la guerre, p. 106.

(3) Les enfants sont cependant considérés en quelque sorte comme appartenant à la fois à la famille du père et à celle de la mère. Les Banyarwanda disent : *umuntu akomoka iwabo wase nanyina*, c'est-à-dire : l'homme procède des deux (familles), celle de son père et celle de sa mère.

(4) C'était même chose rare avant la pénétration européenne.

(5) Le Mututsi polygame n'occupe pas une habitation personnelle. Il rend visite successivement à chacune de ses femmes dans leur demeure propre.

Les adoptés font aussi partie de la famille. C'est ainsi qu'un homme sans enfant (*inchike*) peut adopter un fils de son frère (*umuhungu wachu*), à son défaut, un fils de sa sœur (*umwishywa*) ou encore le fils d'un ami. Un Mututsi ne peut adopter un enfant muhutu et vice versa.

Comme les femmes ne peuvent hériter, l'adoption constitue un moyen pour un frère de faire bénéficier sa sœur de certains avantages, car elle a pour effet d'instituer un neveu comme héritier (*kulaga* : litt. promettre ses biens).

L'adopté agit en tout comme s'il était le fils de son père adoptif : il fait la cour pour lui auprès du chef, règle ses affaires, le défend en justice, etc... Les filles lui donnent le nom de frère, et si elles divorcent, elles viennent lui demander asile.

Il se peut même que l'umwishywa devienne, en même temps que chef du rugo de son oncle maternel, chef du clan maternel (*umutware w'umulyango ya nyina*).

L'enfant adoptif peut conserver les *inkazibiti* (1) reçues de son vrai père, mais ne peut plus intervenir dans le partage de la succession de celui-ci. Il se peut aussi qu'il reçoive sa part (*indemano*) (2) avant de se rendre chez son père adoptif; dans ce cas, tout en étant client (*umugaragu*) (3) de celui-ci, il reste également, par les indemano, client de son vrai père.

Si l'adopté se montre désobéissant ou ingrat à l'égard de son père adoptif, celui-ci peut le maudire et l'obliger à s'en aller les mains vides.

*
* *

Le clan (*umulyango*) (4) ou *inzu* comprend tous ceux qui se réclament d'un ancêtre commun fondateur de la

(1) Cf. les Biens, Propriété du bétail, p. 49.
(2) Cf. idem, p. 49.
(3) Le patron s'appelle *shebuja*.
(4) Ne pas confondre avec : umulyango : porte.

1: Vanhove FO42 Rundi

race. Au cours du temps, le clan s'est divisé en plusieurs sous-clans (*imilyango*).

Le clan et le sous-clan portent un nom (*ubgoko*) qui rappelle leur fondateur. C'est ainsi que les membres de l'umulyango des Abanyiginya sont les descendants de Kimanuka, qui est l'*Umunyiginya* (le premier des Abanyiginya). Ndabarasa, fils du Mwami Rujugira Chyirima, qui devint Roi sous le nom de Kigeri, fut l'*Umurabarasa*, le premier de l'umulyango des Abarabarasa ou Ibigina. C'est ce dernier nom qu'ils portent actuellement.

Chaque umulyango possède un ou plusieurs totems (*ibiziro*) animaux. Par exemple, les totems des Abanyiginya sont la grue couronnée (*umusambi*) et le pique-bœuf (*inyange*); celui des Abega le crapaud (*igikeri*); celui des Abagessera la bergeronnette (*inyamanza*). Le membre d'un clan ne tuera jamais tel ou tel oiseau, par exemple, parce qu'il croit que l'esprit d'un ancêtre y est renfermé.

Les Bahutu appartiennent au même umulyango que les Batutsi et possèdent les mêmes totems qu'eux. Ils prennent toutefois un autre nom. Par exemple, ceux qui vivent chez les Abega et les Abanyiginya sont désignés respectivement sous le nom d'Abasavere et d'Abasindi.

2. Le chef de famille et de clan.

Le chef de la famille « sensu stricto » (*umutware w'urago rwa se* : litt. le chef du rugo de son père) est normalement le père. Après sa mort, un de ses fils, qui n'est pas nécessairement l'aîné, lui succède. Il se peut que la veuve du chef de famille dirige provisoirement le rugo si son mari est mort sans avoir désigné son successeur ou quand ses fils sont encore enfants [1].

[1] Tout en continuant à faire partie de son umulyango, la femme est, en quelque sorte, incorporée dans l'inzu du mari si elle a des enfants. Mais elle ne prend pas le nom de l'umulyango de celui-ci. La femme reste toujours étrangère au clan de son mari et conserve son totem propre.

L'umutware w'urugo rwa se n'a qu'une importance réduite et ce mot n'est que rarement employé. Plus important est l'*umutware w'urugo rwa bo* (litt. : d'eux), appelé aussi *umutware w'umulyango*, qui commande à la fois son rugo et l'umulyango.

L'umulyango est une entité sociale sans valeur politique. C'est ainsi que Rwabutogo, chef de l'umulyango des Abega, ne possède que la province du Buganza-Est. Pour les questions de famille et de bétail, il commande Rwagatakara de qui dépend Rwabusisi, qui est le chef du Buliza et du Buganza-Sud.

L'umutware w'umulyango exerce une juridiction paternelle sur tous les membres de son groupe. S'ils lui désobéissent gravement, il peut les chasser et s'emparer de leur bétail (indemano, inkazibiti), à l'exception des bêtes qu'ils ont reçues en cadeau du Roi (*ingabane*) (1). Toutefois, c'est au Mwami qu'il appartient de prononcer la sentence d'éviction. De plus, si le Roi voit qu'une injustice a été commise, il autorise celui qui en est la victime à aller s'installer ailleurs pour se soustraire à la juridiction du chef d'umulyango, sans cesser pour cela d'appartenir au clan. Si le Mwami demande l'*umulundo* (2) au chef d'umulyango, celui-ci peut réclamer à son tour des *inyiturano* (3) aux siens. D'autre part, le chef d'umulyango peut témoigner sa faveur à ceux de ses parents dont il est satisfait en leur donnant des ingabane.

3. Lois de la famille et du clan.

1° Il est interdit d'épouser une personne appartenant au même umulyango à n'importe quel degré. Seuls les Abanyiginya, clan qui donne les rois, peuvent se marier

(1) Cf. les Biens, Propriété du bétail, p. 49.
(2) C'est-à-dire littéralement : désire voir le bétail de son bétail. Il ne prend qu'une bête ou deux.
(3) Cf. les Biens, Propriété du bétail, p. 51.

dans leur inzu [1] et à fortiori dans les autres imilyango. Toutefois, l'union leur est défendue avec les Abatshyaba, Abungura, Abakomankali. Ils épousent ordinairement des Abega.

Les Abega (famille qui donne les reines), les Abagessera, Abakono, Abaha, Abasinga ne peuvent se marier ni dans leur umulyango ni dans les autres inzu. Il leur est permis d'épouser des Abungura et des Abakomankali, mais non des Abatshyaba.

2° La solidarité active et passive en matière de dettes n'existe que du côté paternel (*iwabo wa se*) et non dans l'umulyango de la mère (*iwabo wa nyina*).

Il en est de même en matière pénale, sauf s'il s'agit d'une dette de sang.

4. Tableau des noms indiquant les rapports de parenté et d'alliance.

Ceux qui font partie du même umulyango s'appellent *abagil'ichyobahuriycho*, *abagil' ichyobapfana* ou, et c'est le terme le plus employé et le plus précis, *abafil'isano*.

Mari : *umugabo*.
Femme : *umugore*.
Le mari de deux femmes : *umugabo z'ishyali*.
L'une des femmes parlant de l'autre : *umukeba wa njye*.
Le mari parlant de l'une ou l'autre : *umukeba we*.

Sœur de ma bru : *umwana wanjye.*

5. Le pacte du sang.

Le pacte du sang (*kunywana*) est pratiqué dans tout le Ruanda et surtout par les Bahutu. Les frères de sang (*abanywanyi*) peuvent compter l'un sur l'autre de la façon la plus complète. Ils doivent s'entr'aider dans les circonstances les plus difficiles de la vie et peuvent même disposer mutuellement de leurs biens [1] et de leurs femmes [2].

Les intéressés, assistés chacun d'un témoin qui sera garant de l'observation du pacte par l'autre partie, s'assoient sur une natte dans la hutte de l'un d'eux. Chacun des témoins coupe une feuille d'érythrine corail (*muko*) et en coupe le pétiole; il roule la feuille en forme de cornet et y verse un peu de farine de sorgho. Puis, avec un petit couteau, il fait une incision au-dessous du nombril de celui qu'il assiste. Il presse les lèvres de l'entaille et fait couler le sang, qu'il recueille dans le cornet et mêle à la farine à l'aide de la queue de la feuille. Ensuite, chaque impétrant boit le mélange appelé *gihango* (litt. : sang) qui lui est présenté par le témoin de l'autre. Les témoins profèrent alors des imprécations (*kutanga*) au nom de leurs clients respectifs pour sceller le pacte : « Si tu me trouves malade ou blessé sur le chemin et si tu ne m'aides pas, que le gihango te tue ! »

« Si tu me refuses le gîte et la nourriture, que le gihango te tue ! »

Les deux frères de sang s'étendent alors sur la natte côte à côte pendant quelques instants, pour montrer qu'ils seront indissolublement unis aux bons comme aux mauvais jours.

Puis celui qui est étranger prend une poignée d'herbes et la jette dans le foyer en disant : « Si tu viens chez moi

---

(1) Par convention spéciale.
(2) Avec le consentement des femmes.

F. Vanhove FO42 Rundi

et que je sois absent, tu peux boire ma bière et te chauffer avec mon bois, que le gihango ne te fasse aucun mal, car tu n'auras voulu ni voler ma bière, ni brûler ma hutte. Mais si ma femme te refuse la bière et le bois, je ne serai pas en cause, car ma femme n'est pas liée comme nous par le pacte du sang. »

Les abanywanyi offrent alors des cadeaux aux témoins : houes, colliers, etc., et se font des cadeaux consistant en houes, chèvres, vaches, suivant leur fortune, afin de « se dégager de la natte sur laquelle le pacte de sang a eu lieu » (*kwichara ku kirago*).

CHAPITRE II.

LE MARIAGE.

1. Sortes d'unions.

Le mot *ugushaka* (avoir femme) désigne le mariage en général.

Le mariage type, contre versement d'une dot (*inkwano*) au père de la jeune fille, se dit *kurongora*.

Il arrive qu'une *umugeni w'ubuntu* (litt. : fiancée donnée en cadeau) soit donnée en témoignage d'affection à un ami. Plus tard, le mari peut verser une dot, mais il n'y est pas obligé. Si la brouille survient entre les amis, il se peut qu'alors une dot soit réclamée. Un chef puissant peut également donner à son client mututsi une jeune fille en cadeau (*umugeni w'ingororano*).

Epouser une femme divorcée ou veuve se dit *gutshyura umusumbakazi* (litt. faire entrer (chez soi) une femme qui a été déjà mariée). Ces unions sont fréquentes surtout chez les Bahutu. Au moment d'entrer en ménage, le mari ne donne au « pater familias » de la femme qu'une cruche de pombe, mais si les époux ont des enfants, il devra verser une dot.

Deux mères batutu, la tête ceinte de l'« urugori », se congratulent.

Cliché du Ministère des Colonies.

[p. 18 a]

Dame mulutsi entourée de ses enfants et de son personnel féminin.

Cliché du Ministère des Colonies.

[p. 18 b]

Il arrive qu'un jeune homme enlève une jeune fille (*kwiba umugeni*) pour forcer le consentement des parents de celle-ci. Mais le père du jeune homme verse une dot ultérieurement.

Il est des *ibyomanzi* (femmes vagabondes) qui vont séjourner chez un homme plus ou moins longtemps au hasard de leur vie errante (*kubuyera* ou *kohoha*). Le sort de ces unions est évidemment précaire. Si, par impossible, la vie commune dure plusieurs années, la femme peut présenter son concubin à des parents. Si des enfants naissent, il se peut que l'homme soit alors obligé de verser une dot. L'union est alors régularisée.

Il arrive encore que deux hommes ayant chacun une sœur dont ils peuvent toucher la dot fassent l'échange des femmes : *abageni b'ubuntu bunyuranye* : (litt. : fiancées comme cadeau).

Dans tous ces mariages, le sort de la femme et des enfants est le même que dans le mariage type. Si le mari ne verse pas de dot, le père de la femme peut enlever les enfants et les garder en otage jusqu'à ce que leur père ait rempli ses obligations.

Jadis, les enfants prisonniers de guerre (*abanyagano*) se mariaient plus tard généralement entre eux. Le maître pouvait aussi donner une fille captive en mariage à l'un de ses clients. Il touchait la dot, mais, par contre, devait en verser une pour un de ses esclaves désireux de se marier avec une femme du pays.

L'esclave, sa femme et leurs enfants continuaient à faire partie du personnel du maître. Si un de ces enfants désirait contracter mariage à son tour, son père payait la dot pour son fils ou la touchait pour sa fille, et par le fait même, son fils ou sa fille était affranchi et devenait munyarwanda.

Le maître pouvait épouser une femme esclave et les enfants issus de cette union suivaient la condition de leur

père, même si celui-ci avait déjà d'autres enfants d'un mariage avec une femme munyarwanda.

2. Formes de mariage.

La polyandrie n'existe pas au Ruanda.

La polygamie (polyginie) est générale, sauf chez les indigènes chrétiens, et principalement parmi les Bahutu, qui ont deux ou trois femmes en moyenne et parfois même quatre ou cinq.

Les Batutsi en possèdent le plus souvent deux. Les grands chefs ont, outre leurs femmes, un certain nombre d'*insholeke* (*concubines*).

Les Batwa ont généralement quatre ou cinq femmes.

Une des femmes porte un nom spécial : c'est l'*inkundwakazi* (l'aimée, la favorite). Ce sont ses qualités qui la font appeler ainsi : sa propreté, son art à fabriquer du pombe, sa fidélité, sa surveillance vigilante des cultures, les bons traitements dont elle entoure les abagaragu, les soins constants qu'elle apporte au bétail, l'accueil aimable qu'elle réserve aux amis de son mari, le souci qu'elle met à faire exécuter les ordres du maître en l'absence de celui-ci [1].

Quant aux autres femmes, le mari dit simplement en parlant d'elles : *abagore banjye* (mes femmes). Toutefois, la favorite ne peut les commander. C'est au mari seul qu'il appartient de donner des ordres à ses épouses.

***

Les enfants de mères différentes (ou de pères différents) sont mis sur le même pied et se considèrent vraiment comme frères et sœurs.

---

[1] L'*inyungwakazi* est tout le contraire de l'inkwundakazi. C'est une épouse dépourvue de qualités ménagères, désobéissante, voire adultère. Si son mari ne la répudie pas, il la tient à l'écart et n'a plus de rapports avec elle.

Les enfants adultérins appartiennent au mari de l'épouse infidèle.

Les enfants, qu'ils soient légitimes ou non, ne sont pas traités différemment selon la condition de leur mère. Mais si les enfants d'une concubine se montrent insupportables, les gens ne manqueront pas de les appeler avec mépris : *abana bo mu milombero* (enfants des haies).

3. Empêchements au mariage.

1. Exogamie.

Les Batutsi (sauf les Abanyiginya) et les Bahutu ne peuvent prendre femme dans la famille et le clan de leur père à n'importe quel degré. Les cousins parallèles [1] ne peuvent donc s'épouser, mais le mariage est permis entre cousins croisés [2], car les enfants de la sœur appartiennent à la famille de leur père. Un oncle ne peut jamais épouser sa nièce.

L'endogamie (*kwisabira ku mugongo;* litt. : se trouver sur le dos) et l'exogamie existent à la fois chez les Abanyi ginya. Ils ne peuvent cependant épouser la fille de leur frère ou de leur sœur. De même, ils ne peuvent prendre femme chez les Abungura, Abasinga et Abatshyaba.

Quand un homme meurt, son père ou son frère peut épouser l'une des veuves. De même, celui de ses fils qui lui succède comme chef de famille peut épouser les femmes de son père, autres que sa propre mère, à condition qu'elles n'appartiennent pas à la famille de celle-ci.

Le mari de la sœur du défunt peut épouser sa belle-sœur (*muramukazi*), mais non la fille de celle-ci (*umukobwa wachu*). De même le frère de la femme du défunt peut prendre comme femme sa belle-sœur, mais non la fille de celle-ci (*umwishywa w'umukobwa*).

---

(1) Les cousins parallèles sont ceux dont les pères sont frères ou les mères sont sœurs.

(2) Les cousins croisés sont ceux dont le père de l'un est le frère de la mère de l'autre.

Le mariage est permis avec la veuve d'un frère de sang, mais non avec sa fille.

Les Batutsi peuvent épouser des femmes bahutu. Il arrive, par exemple, qu'un patron donne sa fille en mariage à un de ses clients qu'il affectionne particulièrement. Mais il est interdit à un umugaragu de demander à son shebuja l'autorisation d'épouser sa fille.

2. Impuberté.

Jadis, un jeune homme et une jeune fille ne pouvaient respectivement se marier avant l'âge de vingt-cinq et de dix-huit ans. Une fillette (*inshube*) et un garçonnet (*ingimbi*) étaient parfois fiancés, mais ils demeuraient chez leurs parents jusqu'au moment du mariage.

A présent, un jeune homme se marie généralement à dix-huit ans, une jeune fille à quatorze.

3. Défaut de consentement.

C'est le père qui choisit l'épouse de son fils. S'il est mort, un de ses frères le remplace dans cette mission. Le fils chef de famille cherche femme pour ses frères et reçoit les demandes en mariage pour ses sœurs. La jeune fille et le jeune homme doivent accomplir la volonté de leur « pater familias ». Même si leurs sentiments ne sont pas à l'unisson, ils ne peuvent refuser de s'unir. Il en est notamment ainsi quand les pères sont amis et qu'ils veulent éviter de se brouiller. Evidemment, les mariages conclus dans ces conditions sont fragiles et presque toujours de courte durée.

Cette règle n'est sanctionnée d'aucune peine. Mais celui qui l'enfreindrait s'exposerait au mépris public.

De nos jours, il est cependant de plus en plus fréquent que le jeune homme fasse son choix seul et que ce soit lui qui demande à son père de faire les démarches nécessaires auprès de la famille de celle qu'il a élue.

4. La dot.

La dot (*inkwano*) a pour but de racheter les enfants à naître du mariage. En effet, si elle n'est pas versée à l'ayant droit de la femme (son père ou son frère), celui-ci prendra les enfants en otage.

De même, la dot contribue à assurer la stabilité du mariage. En effet, les parents qui devraient rembourser la dot en cas de rupture de l'union ne manquent pas d'inciter les époux à se réconcilier.

Chez les Batutsi, la dot consiste en vaches. Jadis, chez les gens aisés, celles-ci étaient au nombre de huit, d'où le nom d'*umunani* (litt. : huit, s-e : têtes de bétail). Aujourd'hui, ces vaches qui ne sont plus que deux mais qui ont gardé le nom d'umunani sont encore amenées au père de la jeune fille au cours des fiançailles et gardées par lui en dépôt. L'une est destinée au *gukwa* (1), l'autre au *gutebutsa* (2). Le jour du mariage, le père de la jeune fille se réserve uniquement la vache qui lui a donné le plus de veaux, ou la plus belle génisse, et rend l'autre au père du jeune homme.

Dans le Buganza, le Buliza, le Nduga, le Bugessera, où le bétail est nombreux, les Bahutu donnent aussi une vache comme dot. Ailleurs, elle consiste en houes, quatre généralement, et en une trentaine de cruches de bière. Il se peut qu'une vache *imbata*(3) ou *ingabane* (4) soit de plus demandée par le beau-père muhutu.

Chez les Bakiga (région du Rukiga), la dot est payée en chèvres (*ibuguma*) ou en moutons (*iliza*). Un parent de la femme pourvu de grandes mains empoigne une patte de chaque animal, les tient réunies et essaie d'en

(1) Littéralement : faire les démarches pour conclure les fiançailles.
(2) Littéralement : hâter (s. e. le mariage).
(3) Cf. les Biens, Propriété du bétail, p. 48.
(4) Cf. idem, p. 49.

1: Vanhove FO42 Rundi

rassembler le plus possible. Il répète cette opération deux fois et de la sorte arrive à réunir une vingtaine de bêtes. On connaît aussi parfois au Rukiga la dot en vaches *indundu* (1) et *ingwate* (2).

Les Batwa ne donnent qu'une houe et un pot de bière le jour des fiançailles et quatre houes comme dot.

La coutume du réemploi de la dot, à savoir que le père d'un fils et d'une fille ne paie la dot pour le mariage de son fils qu'après avoir reçu la dot pour sa fille, n'existe pas au Ruanda.

Les Batutsi ne donnent aucun cadeau à leur belle-mère. Chez les Bahutu, le jour du mariage, avant que la jeune fille quitte la maison de son père, le jeune homme envoie à la mère de sa fiancée une cruche de bière appelée *irizeneko* (litt. : écartèlement) pour rappeler la souffrance qu'elle a endurée en enfantant sa fille.

Si la dot a été payée en vaches, le beau-père donne le jour du mariage une vache *indongoranyo* (3) à son gendre. Si elle a consisté en houes, le mari reçoit aussi une houe comme indongoranyo.

5. Fiançailles et union.

Si le jeune homme n'a pas fait son choix, le père attire l'attention de son fils sur telle ou telle jeune fille qu'il aimerait avoir pour bru, après s'être assuré au préalable de l'accord du père de celle-ci et avoir arrêté avec lui la date des fiançailles officielles (*gusaba umugeni* : lit. : demander la jeune fille en mariage).

Le jour fixé, il retourne chez les parents de la jeune fille accompagnée d'un ou deux clients (3) porteurs d'une houe neuve et d'un pot d'hydromel et menant une vache

(1) Cf. les Biens, Propriété du bétail, p. 49.
(2) Cf. idem, p. 52.
(3) Un de ses parents chez les Bahutu.

1: Vanhove FO42 Rundi

dite *y'ilembo* (litt. : pour l'entrée du rugo). On l'introduit dans le rugo. Le père du jeune homme, le père de la jeune fille ainsi que les frères et beaux-frères de celui-ci s'asseoient sur des nattes, boivent, fument et devisent de choses et d'autres. Pendant ce temps, la mère et la fille se tiennent cachées dans un réduit voisin et suivent avidement la conversation.

Après ce préambule, qui n'est qu'un dérivatif, l'entretien porte alors sur le mariage. Il donne souvent lieu à une discussion animée au cours de laquelle chacune des parties défend ses intérêts. L'accord enfin réalisé, le père s'entend dire : « Nous vous donnons notre fille, mais la vache n'est pas assez belle [1]; amenez-en d'autres ». Un umugaragu est alors chargé d'amener sept autres vaches pour compléter l'*umunani* [2] et de demander aux parents de la jeune fille leur agrément quant à la date du mariage.

Les rapports sexuels sont strictement interdits aux fiancés.

Le mariage a lieu généralement chez le père du jeune homme [3].

Si le père de la jeune fille, après avoir accepté la dot, ne tient pas sa promesse et refuse de donner sa fille ou la promet à un autre, il doit immédiatement restituer la dot. Mais par le fait même, il brise tout lien d'amitié avec les parents du jeune homme et, dans la suite, aucun homme de la famille de celui-ci n'épousera une jeune fille de l'autre famille. Il en est de même quand le prétendant rompt les fiançailles.

---

(1) Même si la bête est magnifique.

(2) Comme nous l'avons vu plus haut (Cf. Dot); le père de la jeune fille ne se réserve plus à présent qu'une vache sur les deux.

(3) Les cérémonies du mariage ont été minutieusement décrites par le R. P. SCHUMACHER (*Anthropos*, 1910, pp. 870-906) et le R. P. PAGES (*Congo*, 1922, t. I, pp. 645-663, et t. II, pp. 42-68). Nous nous contentons d'y renvoyer le lecteur. Cette matière relève d'ailleurs plus du folklore que du droit coutumier. Aussi la laissons-nous de propos délibéré en dehors de notre exposé.

6. Vie du ménage.

Le mariage au Ruanda est patrilocal, c'est-à-dire que la femme quitte ses parents pour aller habiter chez son mari. Si les noces ont eu lieu dans la famille de la femme, le jeune ménage y séjourne quelque temps (*gutahira*), puis va se fixer dans la famille du mari.

Chez les Batutsi, les parents de la femme envoient à leur fille, deux mois environ après le mariage, l'*intwikururano* (de *gutwikurura :* litt. : dévoiler, découvrir) consistant en bière, farine de sorgho et lait. Ces présents sont destinés à permettre à la jeune femme de sortir de la retraite qui lui est imposée au lendemain des noces et de se montrer en public. De son côté, le père du mari donne à sa bru une vache dite *y'itshyali* (litt. : du nid). Les époux quittent alors la demeure où ils s'étaient installés provisoirement et vont occuper le rugo qui a été bâti pour chacun d'eux. Un peu plus tard, ils vont passer une nuit chez les parents de la femme (*gucha mw'ilembo :* litt. : passer le seuil ou *gusubya amaguru :* litt. : retourner à pied) et les gratifient également de cadeaux à cette occasion.

Les femmes batutsi occupent chacune un rugo particulier avec leurs enfants, des servantes (*abaja*) et du bétail donné par le mari. Les concubines habitent, à une ou deux, dans des huttes séparées à l'intérieur du rugo d'une femme légitime.

Il arrive que les femmes bahutu occupent la même hutte, mais seulement pendant un temps assez court.

La femme n'est pas obligée de revenir de temps en temps chez ses parents. Toutefois, il se peut que les augures décident que l'accouchement se passera mieux dans sa famille à elle.

7. Droits et obligations des époux.

La coutume impose au mari un devoir général d'aide et d'assistance vis-à-vis de sa femme (*kukamira umugore* : litt. : traire pour sa femme). Il doit fournir des vêtements, des parures (1), la soigner quand elle est malade. De même une femme qui abandonnerait son mari malade ou dans le malheur serait l'objet d'opprobre.

La séparation des biens existe entre époux. La femme possède son rugo, son champ et en outre, chez les Batutsi, du bétail *inyarulembo* (2) et des abagaragu qu'elle tient de son mari.

Chez les Bahutu, l'homme assume la charge des lourds travaux : construction du rugo, défrichements et la femme, aidée de son mari et des enfants assez grands, cultive les champs. Les travaux du ménage sont également partagés : les corvées d'eau et de bois, la traite des vaches, la fabrication de la bière incombent au mari; la femme, elle, fait la cuisine, fabrique le beurre et veille à la propreté du rugo et du kraal.

Le mariage émancipe en quelque sorte la femme munyarwanda, mais la maternité seule lui confère des droits qui font d'elle une privilégiée si on la compare à ses sœurs de l'Afrique noire. Plus la femme a d'enfants, plus la considération dont elle est l'objet augmente (3). L'épouse mututsi est vraiment la *nyirarugo* (maîtresse de maison), la *nyirabuja* (patronne). Son mari la consulte

---

(1) Naguère encore, le mari dépensait beaucoup pour procurer à sa femme les *ububutega* (anneaux en herbes) que par centaines elle portait aux jambes. Cette parure, qui alourdissait la silhouette des femmes banyarwanda et entravait leur marche, était considérée comme le comble de l'élégance, car elle leur donnait l'allure des vaches, objet d'admiration générale au Ruanda.

(2) Cf. les Biens, Propriété du bétail, p. 51.

(3) Les familles comptant six, sept, huit et même dix enfants sont nombreuses au Ruanda; cette remarquable prolificité explique que la population du pays double en vingt-cinq ans environ.

dans les questions d'intérêt, lui demande son avis au sujet du mariage des enfants, etc. En outre, chez les Batutsi, elle dirige les servantes, surveille le travail des gens de la colline venant exécuter les corvées coutumières et celui des abagaragu. Elle ne peut toutefois destituer un client ou prendre une décision importante sans le consentement de son mari. Si elle le faisait et si son mari n'intervenait pas, il serait la risée du voisinage et on l'appellerait *inganzwa* (homme sans caractère, qui est dominé par sa femme).

Les Banyarwanda ont une expression pour qualifier une bonne épouse. Ils disent qu'elle « construit pour son mari » (*kubakira umugabo*).

Un Muhutu ne manque pas à la moindre occasion d'user de son droit de correction maritale. Au contraire, un Mutusi ne pourrait sans déchoir frapper sa femme, à moins de raison grave.

Le droit à la fidélité existe pour les deux époux. Mais la coutume est fort tolérante pour les infractions à la foi conjugale commises par l'homme, tout au moins quand il appartient à la même classe sociale que le mari trompé.

L'adultère du mari provoque évidemment un vif mécontentement chez la femme, mais presque toujours elle s'inclinera. Il arrive cependant qu'elle quitte son mari infidèle pour retourner chez ses parents. Ceux-ci s'efforceront de la persuader de rentrer chez son mari, car, si elle refusait, ils seraient obligés de restituer la dot.

Le mari qui apprend que sa femme a commis un adultère (*gusambana* : litt. : prendre un autre homme) lui enjoint de ne pas recommencer. La deuxième fois, il la frappe. Si elle continue, il la répudie (*gusendwa*) publiquement. Une femme répudiée est déconsidérée et trouve difficilement à se remarier. Parfois, la femme adultère est renvoyée la nuit, par égard pour sa famille, pour que sa faute ne soit pas connue de tous.

Jadis, si le mari surprenait sa femme en flagrant délit, il faisait arrêter et frapper l'amant. Puis, devant témoins, le mari répudiait sa femme. Si le complice était un noble comme lui, on le laissait partir avec la femme. Mais, en général, s'il était marié, il allait retrouver son épouse, qui lui faisait une scène de jalousie sans plus. Quand l'amant était un umugaragu mututsi, il était dépouillé de ses biens et exilé au loin. Si c'était un Muhutu, le mari pouvait demander au Mwami l'autorisation de l'empaler comme un voleur de bétail, ou bien il le rouait de coups et le faisait chasser de la colline. Le complice de la femme adultère du Mwami était toujours tué. Quant à la femme, dans aucun de ces cas, elle n'était gravement maltraitée.

Notre occupation a fait disparaître les châtiments cruels et, actuellement, le complice de la femme n'est plus l'objet d'aucun châtiment. L'adultère donne lieu uniquement à une réparation pécuniaire (*itshyiru*) de la part de l'amant; d'autre part, le divorce est prononcé au profit du mari et la dot lui est restituée, tout au moins s'il n'y a pas d'enfants issus du mariage.

Si la femme adultère est enceinte, elle soutiendra toujours que l'enfant qu'elle attend est né des œuvres de son mari. Celui-ci, dans le doute, prend l'enfant (*umusambanano* [1]) chez lui aussitôt qu'il est sevré. Il pourvoit d'autre part aux besoins de sa femme, mais ne consent pas à reprendre la vie commune.

Si le mari est certain que l'enfant est le fruit de l'adultère, il ne s'occupe plus de sa femme et les parents de celle-ci adoptent l'enfant. Il se peut enfin que le complice épouse la mère de son enfant. Un mari complaisant ou qui, sachant que sa femme lui est infidèle, la garde mal-

---

[1] Terme générique qui désigne l'enfant illégitime, aussi bien naturel simple qu'adultérin et incestueux.

gré tout, est l'objet des railleries de ses voisins et amis qui n'hésitent pas à l'appeler inganzwa.

Chez les Bahutu, la femme adultère est battue par son mari et renvoyée dans sa famille. S'il n'y a pas d'enfants nés de l'union, le mari réclamera la dot payée aux parents de sa femme.

L'adultère chez les Batwa n'a guère d'importance. Si une femme a été infidèle, son mari lui pardonne, et s'il y a grossesse, il considérera l'enfant comme le sien.

8. Rapports en dehors du mariage.

De tout temps, les rapports sexuels ont été strictement défendus aux jeunes filles batutsi et bahutu. La violation de cette interdiction attirerait en effet de grands malheurs sur les familles, dit la voix du peuple. Autrefois, les filles enceintes (*ikinyandaro*) [1] étaient même souvent tuées avec leur enfant, ou bien elles étaient conduites en dehors des frontières du Ruanda dans une île déserte du lac Kivu et elles y mouraient de faim, à moins que les Banyabungo ne vinssent à leurs secours. Parfois aussi, on les menait dans l'Urundi, où elles devaient rester jusqu'après l'accouchement. L'enfant était tué ou abandonné aux Barundi.

Aujourd'hui, ces sanctions cruelles n'existent plus, mais une fille-mère est toujours considérée comme une honte (*inshyano*) pour les parents. Toutefois, ceux-ci recueillent généralement l'enfant.

Toutefois les jeunes gens nobles ne se privent pas d'avoir des rapports sexuels avec les filles d'abagaragu placées chez leur père en qualité de servantes. Le jeune homme mututsi surpris avec une jeune fille de sa caste était, par contre, puni jadis de la même manière que le complice d'une femme mariée.

---

[1] D'après les croyances des Banyarwanda, une fille prise de force ne devient pas enceinte.

Les grands chefs qui possèdent des concubines (insholeke) les mettent à la disposition de leurs amis ou parents en visite.

Des frères de sang ou des amis échangent parfois leurs femmes pour une nuit (*guhan'ingo :* litt. : échanger les ingo).

Jusqu'en ces derniers temps, le beau-père et même les beaux-frères avaient le droit de passer une ou plusieurs nuits avec la femme de leurs fils ou frère. Le beau-père avait le droit de faire valoir ses exigences sans discussion, tandis que les beaux-frères ne pouvaient y prétendre qu'avec l'autorisation de leur frère. La femme qui refusait de partager sa couche avec son beau-père ou un de ses beaux-frères pouvait être chassée. Le mari avait même le droit d'obliger sa femme à accorder ses faveurs à un de ses amis à lui.

CHAPITRE III.

DISSOLUTION DU MARIAGE.

1. La mort.

Deux jours après le décès, tout le clan arrive pour assister la veuve et les orphelins dans leur deuil. La mère et ses enfants se rasent les cheveux, enlèvent leurs bracelets et s'abstiennent de laver leurs vêtements (*kwirabura :* litt. : devenir noir). Un des frères du défunt allume un feu qui brûle dans le rugo sans arrêt pendant deux jours (*igitshaniro*). Quand il est éteint, les enfants et leur oncle prennent de la cendre et vont en cachette la verser dans un marais.

Le deuil dure deux mois, pendant lesquels les fils mariés ne peuvent avoir de rapports avec leurs femmes.

Le premier jour du troisième mois, les membres de la famille reviennent. Le soir, ils s'assemblent tous, ingur-

1: Vanhove FO42 Rundi

gitent force rasades de bière et chantent joyeusement (*kwera* : litt. : devenir blanc). Celui des frères du défunt qui a procédé à l'igitshaniro, ou, à son défaut, un autre frère doit partager la couche de la veuve (*kweza*). Les fils mariés font, par ordre de naissance, le simulacre de l'acte sexuel avec leurs femmes.

Le lendemain, la veuve ainsi que les femmes des fils mariés mettent du lait dans les barattes et font le beurre [1]. Puis tous les membres de la famille s'enduisent de craie, mettant des vêtements blancs et se rendent à l'abreuvoir. Un frère du défunt descend dans le puits creusé non loin de là, y puise de l'eau avec un pot et la vide dans l'abreuvoir. Puis il passe le pot aux enfants mâles en commençant par l'aîné, et chacun d'eux imite son geste [2]. Le soir, les gardiens traient les vaches, puis, après que la mère, aidée de l'oncle paternel, a retiré le beurre de sa baratte à elle (*gutshyura igisabo* : litt. : faire rentrer les barattes), les fils mariés et leurs femmes font de même avec les leurs.

Les fils donnent alors une génisse à l'oncle et un taurillon à celle de leurs sœurs qui a enlevé la bouse (*gukuka*) dans le kraal.

La nuit se passe à boire et le lendemain l'oncle procède au choix du nouveau chef de famille, si le père ne l'avait désigné avant de mourir.

*
* *

Si la femme n'a pas eu d'enfants ou si le mariage a été de peu de durée, sa mort ne donne lieu à aucune cérémonie et le mari ne porte le deuil que huit jours seulement [3].

---

(1) Pendant le deuil, elles ne pouvaient plus toucher les barattes. C'était un étranger à la famille du défunt qui venait faire le beurre.

(2) Pendant le deuil, seuls les vachers remplissaient l'abreuvoir.

(3) Toutes ces curieuses cérémonies montrent la douleur profonde des parents du défunt. Elles ont aussi, et surtout, pour but d'éviter

1: Vanhove FO42 Rundi

2. La séparation et le divorce.

Il arrive que les caractères des époux ne s'harmonisent pas, que la femme se plaigne de la ladrerie de son mari ou que celui-ci trouve que son épouse est capricieuse ou désobéissante. Dans l'un de ces cas, les conjoints peuvent se séparer pour quelque temps (*kwahukana*). Mais cette séparation les fait souvent réfléchir; le mari fait amende honorable et vient rechercher sa femme chez ses parents en donnant des cadeaux à ceux-ci et à son épouse (bière, étoffe, ou chèvres); ou bien, se rendant compte qu'elle a eu tort de quitter le foyer conjugal, la femme y retourne d'elle-même.

Pendant le temps de la séparation, les enfants, sauf les nourrissons, restent chez le mari.

***

Si l'entente est définitivement impossible, le divorce (*kwahukana rwose* : litt. : se séparer définitivement) peut être demandé par l'un des époux.

Les causes du divorce au profit du mari (répudiation) sont : l'adultère répété, la malpropreté, la négligence dans les soins du ménage ou la surveillance des serviteurs, le mauvais œil [1] qui provoque une maladie du mari ou du bétail et surtout la désobéissance obstinée. La stérilité peut être une cause de divorce, mais si le mari est content de sa femme, il la gardera et se contentera d'en prendre une autre qui pourra lui donner des enfants.

La maladie, même prolongée, n'est pas une cause de divorce.

---

que des malheurs ne fondent sur la famille du disparu (*guhumana* : litt. : être souillé, changer de couleur, contracter une maladie grave).

Bien qu'elles soient étrangères au droit coutumier proprement dit, nous avons jugé bon d'en brosser un bref tableau, afin de montrer que la vie entière des Banyarwanda est enserrée dans un réseau étroit de prescriptions d'ordre magique.

[1] Cf. p. 32, note 3.

1: Vanhove FO42 Rundi

Si le mariage a été fécond, le mari ne peut reprendre la dot, mais conserve l'indongoranyo qu'il a reçue de son beau-père.

S'il n'y a pas d'enfant, le mari qui a reçu l'indongoranyo n'est pas autorisé à réclamer l'inkwano. Il le peut dans le cas contraire, mais les parents de la femme, pour éviter cette obligation, lui donnent une autre de leurs filles.

Si la dot a été intégralement payée, les enfants restent chez leur père, sauf ceux qui ne sont pas sevrés.

La femme peut demander le divorce si le mari ne paie pas la dot, s'il ne lui fournit pas d'étoffes ou de parures, s'il ne cesse de la maltraiter, si les enfants mourant l'un après l'autre lui font croire à une influence maléfique de son mari.

S'il y a des enfants, le mari peut conserver l'indongoranyo. Dans le cas contraire, il reprend la dot, à moins qu'il n'ait reçu l'indongoranyo.

Les enfants, après sevrage, retournent chez leur père, sauf si la dot n'a pas été entièrement versée.

CHAPITRE IV.

NAISSANCE ET FILIATION.

Une femme enceinte continue à se livrer à ses occupations jusqu'au moment de sa délivrance. Il arrive même qu'une femme muhutu accouche alors qu'elle travaille aux champs. Il ne faut pas voir là un effet de la rigueur de sa condition, mais l'influence de la tradition. Voyant ses parents, ses voisins agir de la sorte, elle ne conçoit pas qu'elle puisse rester inactive en attendant la venue de son enfant.

Quand l'événement est proche, on consulte les augures pour connaître l'endroit le plus favorable pour l'accou-

chement. Il se peut qu'il ait lieu chez les parents de la femme.

Pendant les huit jours qui suivent la naissance, l'accouchée se repose; son mari l'entoure de prévenances, veille à ce qu'elle ne manque de rien; viande, lait, bière, etc. (*guhemba umubyeyi :* litt. : récompenser la mère). De plus, les parents de la femme lui apportent eux aussi des présents. Vers le huitième jour, la mère recommence à sortir, à condition que le jour soit pair [1]. Pour cette circonstance, elle met son plus beau vêtement : une robe en peau de vache (*ikanda*) ou, si c'est une Mututsi, une dépouille de léopard, dont elle se couvre les épaules. Elle se met sur la tête une sorte de couronne (*urugori*) faite de paille de sorgho [2] qu'elle portera désormais avec fierté, car c'est l'emblème de sa dignité de mère. La jeune mère s'installe près de la porte du rugo avec son mari. Si l'enfant est un garçon, le père lui glisse entre les doigts un diminutif de lance, d'arc, de flèche et de bouclier pour qu'il soit brave. Les enfants du voisinage sont ensuite conviés à manger un plat composé de bouilie de sorgho et de haricots. Mais ils attendent pour manger que l'enfant ait fait ses besoins, d'où le nom de ce repas : *ubunyano* (de *kunya :* déféquer). Puis le père cite quelques noms qu'il aimerait donner à son enfant et les assistants en choisissent un. Si les parents ont déjà perdu des enfants, pour détourner les mauvais esprits, le nouveau-né est baptisé d'un nom malsonnant tel que : *Kangurube* (enfant-porcelet). Le même jour, le mari est obligé, sous peine de voir un malheur atteindre l'enfant, d'avoir des rapports avec son épouse.

Les jumeaux (*impanga*) portent des noms qui se ressemblent : Karengera et Karinganire, par exemple.

---

(1) La semaine du Ruanda compte quatre jours ouvrables et un jour de repos. Les jours impairs sont considérés comme néfastes.

(2) L'urugori est garni de perles chez les riches Batutsi.

1: Vanhove FO42 Rundi

*
* *

La règle « pater is est quem nuptiæ demonstrant » est d'application générale. Normalement donc, le mari est le père de l'enfant et la filiation s'établit dans la ligne paternelle. Les enfants nés après la mort du père sont considérés comme légitimes si la femme était enceinte au moment du décès.

Il n'existe pas de nom spécial pour désigner l'enfant légitime.

La règle rappelée ci-dessus souffre cependant des exceptions. Si un homme épouse une ikinyandaro, l'enfant à naître, qui n'est qu'un umusambanano pour le mari, appartiendra à son père naturel. Mais il arrive que le mari prétende que l'enfant est né de ses œuvres si la fille n'est enceinte que de peu de mois au moment du mariage.

Il se peut qu'une fille ignore le nom de l'homme qui l'a prise [1]. L'enfant naturel appartient alors à l'inzu du père de la fille. Aujourd'hui, nombreuses sont les ibyomanzi qui, assoiffées d'indépendance, ont quitté leurs parents et errent dans le pays. Leurs enfants sont appelés *abana b'umugore*, mais ils n'appartiennent pas à l'inzu maternel, car les ibyomanzi n'ont plus de famille.

L'enfant adultérin appartient au mari. Il lui appartient de par la dot versée. Si celle-ci n'a pas été donnée, il est censé faire partie de la famille du père de sa mère. L'enfant incestueux appartient au mari.

Quand un enfant est né d'une fille non mariée, le père de celle-ci l'a sous sa dépendance.

Jadis, au temps des guerres, il arrivait que le possesseur d'une femme esclave épousât celle-ci. Les enfants issus de cette union étaient tenus pour légitimes et sui-

---

[1] C'est le cas notamment pour les *abajakazi* (servantes-maîtresses) qui vivent à la Cour du Mwami ou chez les grands chefs et qui sont mises à la disposition des invités de leur maître.

vaient la condition de leur père, même si celui-ci avait déjà d'autres enfants d'un mariage avec une femme munyarwanda.

Les enfants nés du concubinage du maître avec une femme esclave étaient également considérés comme légitimes.

CHAPITRE V.

PUISSANCE PATERNELLE.

La « patria potestas » est exercée par le père. Jadis elle impliquait le droit de vie et de mort sur les enfants. Aujourd'hui le père ne dispose plus d'un tel pouvoir, mais son autorité reste toujours souveraine et s'étend même à ses fils mariés. Ceux-ci doivent notamment lui donner des vaches s'il en demande pour grossir ses troupeaux et remplacer des bêtes malades ou mortes.

Un mauvais fils peut être maudit pas son père et chassé de la famille et même de la colline (*igitshibwa* ou *ikivume :* le maudit). Il s'en va les mains vides et ses frères se partagent ses biens.

Comme contre-partie de ses pouvoirs, le père a l'obligation d'entretenir ses enfants et d'établir ses fils en payant la dot.

Les enfants doivent obéir à leur mère comme à leur père.

De même, ils doivent se montrer déférents à l'égard de leurs oncles et tantes paternels et, dans une moindre mesure, vis-à-vis de leurs oncles et tantes maternels. Les sœurs doivent obéissance à leurs frères et les cadets à leurs aînés.

La déchéance de la puissance paternelle n'existe pas comme telle. Mais si le père est indigne ou incapable, le grand-père ou un oncle paternel s'occupe des enfants.

1: Vanhove FO42 Rundi

CHAPITRE VI.

TUTELLE ET EMANCIPATION [1].

Quand le père est mort, c'est généralement un de ses frères qui veille sur la veuve et les orphelins. A défaut d'oncle paternel, c'est un oncle maternel qui assure la tutelle.

L'oncle paternel peut épouser sa belle-sœur. Il a vis-à-vis de ses neveux les mêmes droits et obligations que leur père. Si la veuve se remarie avec un étranger (*umwinjila*), celui-ci devient le tuteur des enfants, mais, en général, il n'a guère d'autorité. Et s'il ne remplit pas ses devoirs, il arrive qu'il soit chassé par l'oncle paternel et doive s'en aller les mains vides.

De même, si l'oncle tuteur méconnaît ses obligations, les enfants peuvent se plaindre au patron de leur père ou, s'ils n'ont pas de bétail, au chef de colline. Devenus grands, il arrive même qu'ils chassent le tuteur indigne.

*
* *

Seul le mariage émancipe les fils, à moins qu'auparavant ils ne s'affranchissent de façon violente de l'autorité du tuteur.

Toutefois, même lorsqu'ils sont émancipés par le mariage, les enfants mâles ne sont pas libérés de leurs obligations vis-à-vis de leurs parents [1].

---

[1] Cf. également : les Successions, Tutelle des enfants, p. 71.

CHAPITRE VII.

MAJORITE ET INTERDICTION.

Il n'y a pas au Ruanda de cérémonie d'initiation ayant pour effet de marquer l'entrée des garçons dans la vie sociale, pas plus qu'il n'existe de classes d'âge. Mais, quand un jeune homme est devenu *ingaragu*, son père le considère alors comme un homme; il lui parle du bétail, des cultures, lui permet de partager son repas, l'envoie à sa place chez le patron pour faire la cour, etc.

***

Les aliénés (*abasazi*), les muets (*ibirazi*) et les sourds (*ibipfamatwi*) circulent librement et, sauf les premiers, peuvent se marier.

Les biens du prodigue (*ikarara* : litt. : demi-fou, exalté) sont gérés par ses parents.

Quant au mauvais fils, désobéissant et insolent, il peut être maudit par son père (*igitshibwa* ou *ikivume*).

CHAPITRE VIII.

Tableau indiquant les noms désignant les différents âges de la vie [1].

Hommes.	Femmes.
1° *Uruhinja* : de la naissance jusqu'aux premiers pas.	1° Même nom.
2° *Igitambambuga* : jusqu'à quatre ou cinq ans.	2° Même nom : jusqu'à trois ans.
3° *Inchuke* : jusqu'à sept ans.	3° Même nom : jusqu'à six ans.

[1] L'âge donné en années est évidemment approximatif, puisque l'état-civil des indigènes n'est pas encore organisé dans les territoires sous mandat.

HOMMES.	FEMMES.
4° *Ingimbi* : jusqu'à dix ans.	4° Même nom : jusqu'à huit ans.
5° *Umwana ugimbutse* : jusqu'à quinze ans.	5° Même nom: jusqu'à douze ans.
6° *Ingaragu* : jusqu'à vingt ans.	6° *Umwangavu*: jusqu'à quatorze ans.
7° *Umusole* : jusqu'à vingt-cinq ans.	7° *Inkumi* : jusqu'à seize ans.
8° *Umusole uhamye* : jusqu'à trente ans.	8° *Inkumi inhamye* : jusqu'à dix-huit ans.
9° *Igikwerere* : jusqu'à quarante ans.	9° *Iliza* (litt. : avant son premier enfant): jusqu'à vingt ans.
10° *Impotole* : jusqu'à cinquante ans.	10° *Impetule* : jusqu'à vingt-cinq ans.
11° *Ijigija* : jusqu'à cinquante-cinq ans.	11° Même nom: jusqu'à trente ans.
12° *Umusaza*: jusqu'à soixante ans.	12° *Ijigija ihamye* : jusqu'à quarante ans.
13° *Umusaza rukukuri* : au delà de soixante ans.	13° *Umukechuru*: jusqu'à cinquante ans.
	14° *Umukechuru rukukuri* : jusqu'à soixante ans et au delà.

Type de bétail du Ruanda.

Environs de Kigali.
On aperçoit les cultures couvrant les éperons de colline et les vallées.

Cliché de l'auteur.

[p. 40a]

SECTION II.

Les biens.

1. Propriété en général.

Les Banyarwanda ont une notion de la propriété moins abstraite que la nôtre. Elle est comparable à celle de la possession.

D'autre part, la différenciation n'est pas faite entre les choses mobilières et immobilières. Mais les biens portent des noms différents selon leur nature ou leur usage : Les Banyarwanda distinguent les *amatungo* (animaux); les *ibintu*, nom générique qui s'applique au rugo, aux *imilima* (champs), *ubgatsi* (pâturages), *imyaka* (récoltes) et *urutoke* (bananeraies); les *ibiti* (arbres); les *intwaro* (armes et instruments tranchants); les *ibikolesho* (houes, pioches, paniers, barattes); les *imyambaro* (vêtements).

2. Propriété foncière.

Une véritable propriété foncière existe au Ruanda, alors que, au Congo belge, les indigènes considèrent que la nue propriété du sol appartient au mânes et s'en réservent uniquement l'usufruit.

Toutes les terres du pays appartiennent au Mwami, qui en abandonne la jouissance par voie de cascade aux différents chefs ou sous-chefs. Ceux-ci à leur tour cèdent un *isambu* (terrain vendu) ou concèdent un *umwatano* (terrain loué) aux Bahutu moyennant un prix ou une redevance consistant en un certain pourcentage sur les récoltes à venir (*ichyata umulima* : litt. : cadeau pour avoir un champ).

Le Muhutu détient son terrain de façon plus ou moins précaire. En effet, même s'il paie régulièrement les rede-

vances, il se peut que sa terre lui soit reprise un jour, par exemple s'il néglige de s'acquitter des prestations coutumières dues aux chefs et au Roi; dans ce cas, il peut être dépouillé en tout ou en partie de son terrain, mais la dernière récolte ne lui est pas enlevée [1].

Le chef de colline a également le droit d'enlever une parcelle de terrain (*ubugerure*) à des Bahutu pour en former un *ubuka* qu'il veut offrir à quelqu'un d'autre ou le garder comme propriété personnelle (*imilima y'inyarulembo*). Le morceau de parcelle qui reste au Muhutu s'appelle *isagu*.

Le Muhutu peut transmettre son droit d'exploitation à son fils par voie d'héritage. Un terrain qui passe d'une génération à l'autre s'appelle *indeka*.

Des terrains sont parfois détenus collectivement par une famille en la personne de son chef (*isambu* ou *ingobyi y'iwabo*). Les membres de la famille ne lui paient pas de location et, à l'exclusion des étrangers, ont le droit d'y couper du bois de chauffage ainsi que d'y mener paître le bétail.

Il existe aussi des bois communaux (*itshanya*). Le chef de colline s'en réserve une partie et permet l'exploitation du reste aux gens de la colline.

Les Batwa prétendent être les occupants légitimes des forêts. Pour cette raison, ils entrent souvent en conflit avec les Bahutu voisins des régions boisées.

Les minières et les carrières de terre plastique sont la propriété du chef. Mais celui-ci permet à ses gens de s'y

---

[1] Un régime de propriété sensiblement différent existe dans la partie ouest du Bunyambiriri, l'extrême nord du Ndiza et le Rukiga (provinces du Mulera et du Bugoyi), où les terrains défrichés et cultivés par les Bahutu sont l'objet d'un droit de propriété familiale. Ce droit est sacré et les Batutsi, dont le pouvoir dans ces régions est plutôt nominal, savent qu'ils ne pourraient le contester sans s'exposer à de graves mécomptes, voire à des représailles sanglantes.

approvisionner en échange d'une redevance (une houe ou des pots).

Les limites (*imbibi*) des champs sont constituées en général par de petits fossés (*impavu*) ou des tas de pierres (*ibishyiraga*).

Il n'y a pas de zones neutres entre les terres.

Un *inkungu* est un terrain délaissé par suite du départ volontaire ou de la mort sans héritier de son détenteur. Un homme qui est l'objet de la malédiction paternelle ou qui est chassé par le chef, par exemple à la suite de vols répétés de bétail, doit aussi abandonner sa parcelle. Le chef peut offrir un inkungu (ou un ubugerure) à un étranger à la colline qui demande à s'y établir. Si celui-ci est un Muhutu, il est obligé de se soumettre aux mêmes obligations que son prédécesseur. Si c'est un Mututsi, il n'est tenu de payer aucune redevance foncière et le chef lui donne même en plus un pâturage.

Les droits de passage et d'accès ne sont pas privatifs. Les gens de la colline peuvent circuler librement sur les terres des uns et des autres. Il en est de même pour le bétail, pour lequel des chemins spéciaux sont aménagés.

En cas de contestation en matière foncière, le litige est porté devant le chef de colline, qui se rend sur les lieux et, après avoir entendu les témoins, départage les plaideurs.

3. Coutumes de chasse.

Les coutumes de chasse sont très nombreuses. Aussi ne citerons-nous que quelques cas parmi les plus fréquents :

L'indigène chassant isolément qui a tué une antilope ordinaire (*impongo*) prend la viande et la dépouille.

La chasse en battue est organisée par le chef, qui détermine les terres à battre, après avoir pris l'avis des chas-

seurs réputés batutsi ou bahutu et suivant les indications des pisteurs. Le chef désigne aussi les traqueurs, choisis parmi les plus mauvais tireurs; pour stimuler leur zèle dans cette tâche ingrate, il leur promet des pots de bière, si la chasse est fructueuse.

Les indigènes sont tenus de prendre part à la chasse, mais ils se plient de bon gré à cette obligation qui est pour eux un divertissement apprécié et également une source de profits.

De même, celui qui au cours d'une battue a blessé le premier une bête est censé l'avoir tuée. Il a droit à la peau et à une cuisse. La viande est partagée entre tous les chasseurs batutsi ou bahutu. Le chasseur qui abat plusieurs antilopes peut conserver la peau d'une bête.

Celui qui trouve une bête tuée doit la rendre aux chasseurs. Théoriquement du moins, le gibier appartient au Roi et les dépouilles d'une certaine valeur [1] doivent lui être remises, notamment les peaux de loutre (*inzibyi* ou *igihura*), d'antilope de marais (*mpala*), de « bush bock » (*inzole*), de lion et de léopard ainsi que les pointes d'ivoire.

Si un fauve a été abattu, sa dépouille doit être remise au chef, qui en échange donne aux chasseurs une vache stérile comme *ingororano* [2].

Quand le chef de colline chasse avec ses gens, il conserve quelques peaux et donne les autres au chef de province. Celui-ci à son tour en garde quelques-unes et, s'il le juge avantageux pour lui, envoie les autres au Mwami. Si le chef de colline a tué un lion ou un léopard, la dépouille doit être remise au Mwami. S'il y a deux peaux, elles sont partagées entre le Roi et le chef de province. Le

---

(1) Les peaux d'antilope de marais sont très appréciées des Batutsi, à cause de leurs poils longs et soyeux; ils en font des couvertures de lit. Les peaux de « bush bock » et de léopard servent d'ornements de danse aux pages « intore ».

(2) Cf. les Biens, Propriété du bétail, p. 57.

1: Vanhove FO42 Rundi

chef de colline ne peut donc conserver une peau de léopard que si la chasse a été particulièrement fructueuse.

L'indigène qui a abattu trois éléphants a cependant droit pour lui seul aux défenses de la troisième bête tuée.

Enfin, il est interdit à un chasseur de prendre une partie quelconque du crocodile qu'il a tué. L'animal, les pattes alourdies de grosses pierres, doit être précipité au fond de la rivière. Les Banyarwanda croient en effet que le corps du saurien contient un violent poison et ils veulent empêcher qu'il en soit fait usage.

Lorsqu'une bête est signalée, les traqueurs qui se sont avancés dans les fourrés, où ils sont quasi invisibles, et les chasseurs qui les y ont suivis doivent signaler leur présence à leurs voisins par un sifflement discret. Les accidents de chasse sont réglementés par la coutume [1].

4. Propriété du gros bétail.

a) Généralités.

Le Mwami est propriétaire de tout le bétail du Ruanda ou tout au moins des femelles reproductrices. Les grands chefs (*abatware*) sont chargés par le Roi de veiller sur son bétail dans les différentes provinces. Aussi, la vente de génisses ne peut-elle avoir lieu sans leur autorisation.

Au contraire, le détenteur de vaches stériles ou de taureaux peut céder ces bêtes ou les abattre comme il l'entend.

Dans une province, l'indigène acquéreur d'une vache reproductrice ne possède qu'un droit d'usufruit et n'aurait aucune réclamation à faire valoir si le Mwami lui enlevait la bête qu'il a achetée et son croît. L'*umutware w'umukenke* [2] peut s'opposer à ce que des têtes de bétail sortent de la province. Tout indigène qui va s'établir dans une autre province doit abandonner son bétail,

---

(1) Cf. Droit pénal, p. 113.
(2) Cf. Gouvernement et Administration, divisions politiques, p. 98.

7

à moins d'avoir reçu l'autorisation du chef de l'emmener avec lui. Quand un indigène quitte sa province, en y laissant son bétail, pour aller s'installer dans une autre, son nouveau chef lui remet généralement un troupeau de la même importance que celui qu'il a perdu. S'il s'échappe de sa circonscription en emmenant subrepticement son bétail, son ancien chef réclame le troupeau. Jadis, si ce dernier se heurtait à un refus, il cherchait à s'emparer d'un troupeau d'une égale valeur appartenant au nouveau chef du transfuge et un conflit armé résultait immanquablement d'un tel différend. Aujourd'hui, le litige est soumis obligatoirement au Mwami. Il ordonne éventuellement que le nouveau chef restitue le bétail et, en cas de mauvaise volonté de sa part, il peut lui enlever en outre un ou plusieurs troupeaux.

Avant l'occupation européenne, un chef mécontent d'un de ses gens pouvait lui prendre son bétail en tout ou en partie sans l'autorisation préalable du Mwami. Le chef était sur ce point le « Mwami de son umugaragu ».

Les vachers (*abashumba*) au service de détenteurs de bétail sont autorisés à prélever une partie du lait des bêtes confiées à leur garde. Ils peuvent être révoqués en cas de négligence.

b) Classification du bétail d'après la couleur.

Amanya : gris-bleu.

Ibihogo : brun foncé.

Ibihogo bitose : brun plus foncé.

Igaju : brun clair.

Igaju ly'intukura : jaune-brun.

Igisa : café au lait.

Igitare : blanc.

Ikibamba : noir avec de grandes taches blanches.

c) Classification du bétail d'après l'âge.

1. Bétail mâle :

Umutavu : nouveau-né.

Ingimbuke : de quinze jours.

Umushishe : d'un mois.

Incharwatsi : qui mange de l'herbe pour la première fois.

Umukulira : qui va au pâturage pour la première fois.

Inchuke : sevré.

b) Classification du bétail d'après la couleur.

Ikibayi : gris-brun.

Ikijugu : gris clair.

Isine : noir avec de petites taches brunes.

Itshyasha : avec une tache blanche sur le front.

Ubugondo bw'izagiriza : blanc avec de petites taches brunes.

Umukara : noir.

Umusengo : brun avec de petites taches blanches.

Urwirungu rwumugoroba : blanc et noir.

Urwirungu rw'amarwa : beige rosé.

c) Classification du bétail d'après l'âge.

Ikimasa ly'umukangara : un peu plus grand que l'inchuke.

Karasiga inkivyondo: bon pour payer une amende.

Igitobyi : prêt à saillir.

Imfisi umutore : qui a sailli une fois.

Ubukombe : taureau adulte.

Umutaza : vieux taureau.

2. Bétail femelle :

(Jusqu'au sevrage, même nom que le bétail mâle.)

Ishashi ikata : génisse pleine.

Iliza : premier veau.

Impete : deuxième veau.

Impetule : troisième veau.

Ijigija : quatrième veau.

Ibuguma : vache qui vêle encore mais dont le produit trop faible meurt.

Inshura : vieille vache qui ne vêle plus.

Isave : vache stérile de naissance (maigre).

Urubeheri : vache stérile de naissance (grasse).

d) Classification du bétail d'après les cornes.

Igaritse : aux grandes cornes fort étendues.

Impotore : aux cornes dont les pointes sont légèrement tordues.

Ingarure : aux cornes tordues dont les pointes sont dirigées en avant.

Inkungu : sans cornes.

1: Vanhove FO42 Rundi

Intenderi : aux cornes dont les pointes sont dirigées vers le sol.
Inkungu y'indegeri : aux petites cornes mobiles.
Ikubis'ihembe : avec une corne verticale, l'autre horizontale.
Itegey'inyuma : aux cornes dont les pointes sont dirigées en arrière.
Itez'akamoso : aux cornes entrecroisées.
Urubindo : aux cornes dont les pointes sont dirigées vers les oreilles.
Itegey'ijuru : aux grandes cornes presque verticales.

e) Classification du bétail d'après le droit coutumier.

Imbata. — Tête de bétail reçue en dot, en cadeau ou achetée au marché et dont le possesseur est vraiment propriétaire. Mais si, en se mettant sous le patronage du chef de colline ou du chef de province [1], il reçoit de l'un de ceux-ci une ou plusieurs vaches appelées *inkazibiti* ou *ingabane*, selon qu'il est Muhutu ou Mututsi, toutes les vaches imbata peuvent, en cas de déchéance de sa qualité de client, lui être enlevées avec les autres par une décision arbitraire de son patron.

Si un Muhutu reçoit d'un Mututsi des têtes de bétail en vertu du contrat dit d'*ubugaragu* (bail à cheptel) [1] et si après quelques années, en vendant les taurillons, les peaux, les cornes, le lait, le beurre, il a gagné assez d'argent pour pouvoir acheter une tête de bétail, celle-ci n'est pas une imbata, mais une *impahano* [2].

Si un Muhutu umugaragu d'un Mututsi marie sa fille et reçoit une vache à lait comme dot, celle-ci n'est pas une imbata, mais bien une *inkwano* et le shebuja du gendre peut la reprendre. En effet, c'est la situation sociale du Muhutu qui lui a valu de toucher une dot en bétail. S'il n'avait pas été client d'un Mututsi, il n'aurait reçu comme dot que des houes ou des chèvres.

---

(1) Voir plus loin : Obligations et Contrats, p. 74.
(2) Cf. les Biens, Propriété du bétail, p. 51.

INTUNDANO [1]. — Vache achetée au marché, avec le salaire gagné aux mines, contre des chèvres ou des paniers de haricots. Elle est imbata.

INDUNDU. — Vache acquise immédiatement en pleine propriété sans condition pour l'acheteur de payer plus tard un supplément. Indundu s'oppose à *Ingwate* [2].

INKAZIBITI. — Vaches remises sans redevance par le patron à un client qui a fait sa cour (*guhakwa*). Prendre possession des vaches promises par le shebuja se dit : *kujya ku ilembo* (litt. : franchir le seuil du rugo). La première vache reçue dans ces conditions s'appelle *inka y'igiti* [3]; la deuxième *impetano*; les autres ne portent pas de nom spécial. Un père peut donner aussi des inkazibiti à ses femmes et à ses fils.

INGABANE. — Quand un Mututsi qui a fait sa cour auprès du Mwami reçoit de celui-ci une colline avec du bétail et des abagaragu, le dit bétail porte le nom de *ingabane* [4]. Un troupeau d'ingabane comporte au minimum trente têtes : vaches, veaux, génisses, taurillons.

Un simple Mututsi non pourvu d'un commandement politique peut recevoir des ingabane et des inkazibiti. Mais la faveur du Mwami lui vaut d'être considéré comme un personnage important. Il est l'umugaragu du Mwami.

Les Bahutu ne reçoivent d'ordinaire que des inkazibiti.

INDEMANO [5]. — *a*) Vaches de même couleur et de même âge remises par un père à son fils quand celui-ci est sur le point de se marier. L'ensemble des indemano porte le nom d'*iminani;*

---

(1) De *kutunda*, faire le commerce.
(2) Voir plus loin, p. 55.
(3) Littéralement : vache du tronc d'arbre.
(4) De *kugabana*, recevoir.
(5) De *kulema*, créer, former, rassembler.

b) Par un patron à un client qu'il affectionne et qui va se marier;

c) Par un mari à sa femme.

Les indemano sont aussi ingabane.

Les têtes de bétail restant au maître après ces différents partages forment l'*ingarigari* (les vaches réservées).

Ingarigari. — Vaches que le maître conserve pour sa satisfaction et ses besoins personnels sans en donner à ses femmes, ses fils, ses amis ou sans les donner à bail à des abagaragu.

Inkuke [1]. — *a*) Un fils qui a reçu de son père des indemano rend à son père une vache à lait (*inkuke*) prise parmi les indemano. Quand elle ne donne plus de lait, le père la renvoie chez son fils.

b) Un umugaragu mututsi a l'obligation d'envoyer chez le Mwami une inkuke prise parmi les ingabane qu'il a reçues. Quand la vache ne donne plus de lait, le client doit amener d'autres bêtes.

c) Un umugaragu peut recevoir des indemano de son patron. En général, ce sont de vieilles vaches ou des taurillons qu'il échange alors contre des génisses. Quand elles sont adultes, il donne une ou plusieurs de ces inkuke à son patron.

d) Un umugaragu du Mwami doit envoyer de temps en temps à celui-ci une vache laitière prise dans les ingabane qu'il a reçues.

Indwanyi. — Taureau adulte fourni annuellement au Mwami par chaque chef de province et qui est sacrifié aux mânes ou qui sert de bête de boucherie pour les besoins du Roi, de ses Batwa ou de ses hôtes étrangers : Bahima, Barundi, Baganda, etc.

---

[1] De *gukura*, enlever, ôter.

Ibiniha. — Vache stérile fournie dans les mêmes conditions et destinée au même usage.

Intorwa. — Taurillons ou jeunes béliers destinés à la consultation des augures ou au culte des ancêtres.

Yo Kubika. — Vache amenée au Mwami par le successeur d'un chef de province, qui vient lui annoncer la mort de son père.

Iy'ubuntu(1). — Vache donnée en cadeau. Elle appartient en pleine propriété à celui qui la reçoit; celui-ci n'est tenu à aucune obligation vis-à-vis du donateur. Les vaches ubuntu ne sont pas ingabane; elles sont imbata, quand elles prennent place parmi les imbata qui se trouvent déjà dans le rugo et gardent le nom d'*inka y'ubuntu*, sans en posséder les privilèges, dans tous les autres cas.

Inyiturano. — Vache donnée en retour par celui qui a reçu une ubuntu. Quand un homme qui a gratifié d'ubuntu certains de ses amis meurt, ses enfants peuvent réclamer une vache inyiturano à chacun de ceux-ci.

Impahano (2). — Vaches achetées dans les mêmes conditions que les intundano, reçues en cadeau ou en dot. Elles ont le même caractère que celles-ci, mais si leur possesseur se lie à un patron, elles deviennent « ipso facto » des vaches d'umugaragu.

Inyarulembo. — Vaches qui continuent à appartenir à un pasteur mututsi, mais qui peuvent se trouver chez une de ses femmes ou chez un umugaragu. Elles restent près de la demeure du maître, car elles sont destinées à fournir le lait nécessaire à l'alimentation de celui-ci et de sa famille. Les indemano remises par un propriétaire

(1) De *ubuntu*, générosité. On dit aussi *ineza*, bienveillance.

(2) De *guhaha*, aller chercher, se procurer.

de bétail sont des inyarulembo. Les vaches achetées par un umugaragu mututsi (intundano) sont aussi inyarulembo. Au contraire, celles acquises par un Muhutu qui s'est engagé dans un contrat de clientèle deviennent ingabane.

INKWANO. — Vache à lait donnée ou reçue en dot pour le mariage d'une fille ou d'une sœur. Elle devient imbata.

INDONGORANYO (1). — Tête de bétail donnée au jeune ménage par les parents de la femme et parfois aussi par les parents du mari. Chez les chefs, l'indongoranyo est remise aussitôt après le mariage en signe d'amitié. Chez les autres Batutsi, l'indongoranyo est donnée à la jeune femme par son père quand elle rend visite à ses parents après la naissance de son premier enfant.

IY'URUGORI (2). — Vache à lait ou génisse qu'une jeune mère reçoit de son père ou de son beau-père, à moins qu'elle n'ait été gratifiée déjà d'une indongoranyo. En cas de rupture du mariage, l'urugori n'est pas réclamé à la famille de la femme.

IY'ICHYARI. — La bru n'est pas autorisée à voir son beau-père pendant les premiers jours du mariage. En même temps qu'il lève l'interdiction, le beau-père peut donner une *ichyari* au jeune ménage. Chez les Bahutu, la vache est remplacée par un mouton ou une chèvre.

IY'IGISAGE. — Vache donnée par un père à son fils quand celui-ci atteint six ou sept ans. A ce moment, on modifie la coiffure qu'il avait jusqu'alors (*igisage*) pour lui faire des *amasunzu* (3). L'enfant muhutu reçoit au même âge deux ou trois bananiers.

---

(1) De *kurongoranya*, aider à entrer en ménage.

(2) Du nom du bandeau en paille de sorgho que les mères banyarwanda portent sur la tête.

(3) Coiffure en forme de crête de coq ou de croissant de lune.

INKAMWA. — Quand un père de famille meurt, un de ses fils ou de ses petits-fils est choisi pour mettre entre ses mains un pot de lait. La vache qui a donné ce lait s'appelle *inkamwa*. Elle est donnée à celui qui a placé le pot de lait entre les mains du défunt et n'est pas comprise dans le partage de la succession.

Cette vache ne peut être vendue ou tuée. Son croît n'est pas soumis à cette interdiction. Si elle meurt, elle est mangée par les Bahutu dans le rugo du propriétaire et les os y sont enterrés.

Chez les Bahutu, un mouton joue le rôle d'inkamwa.

IY'UMUGANGU. — A la mort du père de famille, l'aîné des fils égorge un taurillon, qui est mangé par la famille. La peau est portée par le fils aîné pendant deux mois pour que les vaches ne meurent pas, comme leur maître.

IY'UMULIRO et INSHUMBUSHANYO. — 1° Si la foudre a détruit le troupeau (ou même une bête) détenu par l'umugaragu, celui-ci peut obtenir de son shebuja l'*umuliro* (litt. : la vache du feu), à savoir une vache ou un taurillon.

Quand plusieurs vaches sont remises par le patron pour indemniser son client, la première s'appelle *umuliro*, les autres *inshumbushanyo*.

2° Si le patron dépouille son client de tout son troupeau pour le punir de l'inexécution de l'une de ses obligations, l'umugaragu sollicite la protection d'un autre shebuja, qui remet à son nouveau protégé une vache et un taurillon ou un taurillon seul.

IMPONOKE. — Quand le troupeau du patron, du chef de province ou du Roi est décimé par la peste bovine (*muryamo*), les abagaragu donnent des vaches pour combler les vides causés par l'épizootie.

INDORANO [1]. — A la mort de l'enfant, de la femme ou du frère du Roi, de même qu'en cas de deuil chez un grand chef, les chefs de province et, s'ils sont soumis directement au Mwami, les chefs de colline amènent chacun deux vaches chez le Mwami et une seulement dans l'autre éventualité. Une vache est remise également par les abagaragu. La vache donnée à un ami à l'occasion d'un grand deuil s'appelle aussi indorano.

IMPONGANO. — 1° Vache donnée pour apaiser la colère du Roi ou d'un chef de province.

2° Vache donnée à un familier du Mwami pour le remercier de son intervention auprès du Roi.

IZIMANO. — La première fois qu'un grand chef de province va en saluer un autre, l'hôte remet à son invité une vache à lait.

De même, si le Roi ou un chef de province se rendent chez un de leurs abagaragu, ils se voient offrir un veau.

INJISHYWA. — Vache qui accompagne un Mututsi noble se rendant chez un chef de province ou le Mwami pour affaires ou pour y faire sa cour. Elle est destinée à lui fournir le lait nécessaire à son alimentation.

INDAGIZO [2]. — Vache que le déposant (*uwaragije*) confie à quelqu'un qui possède un pâturage meilleur que le sien, mais le dépositaire (*uwaragiywe*) ne devient pas umugaragu. Celui-ci doit renvoyer la vache quand elle a mis bas, mais il a droit au lait pendant deux mois si la vache est jeune et pendant quinze jours si elle ne l'est plus. Si le veau meurt, le dépositaire a droit au lait un jour sur quatre.

---

(1) De *kurora*, voir.

(2) De *kulagiza*, donner en dépôt pour faire paître.

INTAHIRA [1]. — C'est la meilleure des vaches détenues par un umugaragu. Il la fait toujours marcher en tête du troupeau. Le détenteur peut prendre son lait (*intagemura* : litt. : conserver le lait pour soi), mais les veaux doivent retourner chez le propriétaire.

INGWATE. — Primus, qui possède un taurillon (*inguzwa*) ou une vache stérile (également inguzwa), demande à Secundus, qui a une génisse (*ingwate*), s'il ne veut pas consentir à un échange aux conditions suivantes .

a) Si la génisse a un veau femelle (*umukangara*), Primus gardera le produit et la mère pendant un temps à convenir, deux ans généralement. Secundus reprendra alors la vache et son veau et conservera en plus l'inguzwa.

b) Si la génisse a un veau mâle, Secundus le prend tout de suite et Primus garde la mère pendant deux ans. Le lait est partagé entre les co-contractants : Secundus a droit au lait pendant quatre jours, Primus pendant deux jours et le gardien pendant un jour par semaine.

c) Si la génisse meurt avant d'avoir donné un veau, Primus prend la dépouille et Secundus conserve l'inguzwa. Pour éviter que la génisse reste pendant deux ans chez Primus, Secundus donne à son co-contractant une vache pleine (*ingenzura*) et reprend l'ingwate et son croît (veau femelle ou mâle). Deux cas peuvent alors se présenter :

a) L'ingenzura accouche d'un veau femelle. Primus le réclame.

1° Secundus accepte et reprend l'ingenzura;

2° Secundus refuse. Primus conserve l'ingenzura, son veau et ne donne pas le lait, en attendant qu'une autre vache lui soit remise.

---

[1] De *gutahira*, venir devant, précéder, tenir la tête.

b) L'ingenzura met bas un veau mâle.

1° Secundus accepte de donner à Primus un umukangara et reprend la vache et son veau;

2° Secundus refuse. Primus garde l'ingenzura et son veau. Il ne rend ce dernier qu'après sevrage. Il attend que la vache donne un veau femelle.

Igichaniro (1). — Primus, désireux d'avoir un taurillon, donne en gage (*kugwatiriza*) toutes ses vaches à Secundus, tout en les gardant chez lui. Après deux ans, Primus remet un veau femelle à Secundus. S'il refusait, Secundus serait en droit de prendre une vache à lait (*gukubitira*).

Si le contrat porte sur des chèvres, le fait pour Secundus de se payer soi-même en cas de refus de Primus porte le nom de *gufatira*.

Indabukirano (2). — 1° A l'avènement du Roi, ses abagaragu et tous les chefs de province doivent lui donner chacun une ou deux vaches en hommage.

2° Quand un *umutware w'intebe*, un *ichibiri* ou un *igisonga* (3) sont nommés, les propriétaires de plusieurs têtes de bétail doivent lui offrir une vache. Les abagaragu ont la faculté, non l'obligation, de faire de même.

3° Quand le Roi ou un umutware destitue et dépouille un chef, les abagaragu du nouveau chef peuvent aussi lui donner chacun une indabukirano.

Les Bahutu, eux, offrent des chèvres, des moutons, des houes.

---

(1) L'*igichaniro* est, à proprement parler, le feu allumé dans le kraal pour protéger les vaches contre le froid.

(2) De *kurabukira*, offrir un don d'avènement au chef.

(3) Cf. Gouvernement et Administration, divisions politiques, pp. 98 et 99.

INTORE. — 1° Certains grands chefs possèdent, comme le Roi, un corps d'*Intore* (pages danseurs) [1] [2]. L'enfant d'un riche Mututsi qui se rend chez un chef de province pour y devenir page y amène une vache *y'intore*. Celle-ci est donnée à l'*umutware y'intore* (commandant des pages), qui devient ainsi en quelque sorte le shebuja du père de l'enfant. Ce dernier n'est cependant tenu par aucun lien comme un client ordinaire.

2° On appelle aussi intore les vaches données obligatoirement par les abagaragu à un Mututsi noble qui succède à son père comme chef de famille.

3° Impôt en vaches.

INGORORANO [3]. — Vache donnée pour récompenser un guerrier de son courage ou pour un service rendu. Celui qui a bien soigné les vaches du maître (*inyarulembo* ou *ingarigari*) ou qui a bien cultivé ses champs peut recevoir une vache. Pour récompenser l'umutware w'intore de son enseignement, le père d'un page lui donne aussi une ingororano.

UMUHETO. — Vache prise grâce à l'arc (*umuheto*). C'était le butin de guerre. Jadis on donnait aussi ce nom à l'impôt payé par les guerriers.

IMIGOGORO [4]. — Vache envoyée tous les jours chez les blancs pour leur fournir du lait. Dans le Kinyaga (Shangugu) et dans le Bugoyi, on l'appelle *umuheto*. Dans le Ndorwa, elle est appelée *kibere*.

---

(1) De *gutora*, prendre, ou *gutorana*, prélever, choisir.

(2) Cf. Gouvernement et Administration, les intore, p. 90.

(3) De *kugororera*, gratifier.

(4) De *mogogoro*, fatigue, ennui, imposition. Avant l'occupation belge, ces vaches étaient appelées *imbyukuruke* (litt. : parade).

IMBYUKURUKE. — Vache de choix destinée à être montrée à un haut personnage en visite et à lui fournir du lait pendant le temps de son séjour.

IBIHEMBO. — Cadeau en vaches offert à la femme du Roi, d'un grand chef ou d'un patron quand elle a un enfant.

Le don fait par les Bahutu qui consiste simplement en lait ou en bière se dit *y'ibihembo*.

INTIZO [1]. — 1° Un homme dépouillé par un chef reçoit d'un ami une vache en prêt (*intizo*) en attendant que justice soit rendue. Il se peut également que l'ami ne donne que du lait (*intizo*), parce que, en envoyant une vache, il montrerait ostensiblement son amitié et ainsi risquerait lui aussi d'encourir la colère du chef.

2° Un propriétaire de bétail doit donner au moins une vache à lait à un gardien (umushumba) qui n'a pas le temps de cultiver pour son compte.

3° Un Muhutu qui cultive les champs d'un Mututsi reçoit du lait (intizo), soir et matin, de celui-ci.

4° Une vache est remise à deux cultivateurs qui se partagent le lait et les prestations à fournir en contrepartie [2].

IMPONGANO. — Vache donnée en réparation d'une faute ou offerte à titre de cadeau à celui (*inshuti*) dont l'intervention peut aider à faire gagner le procès.

INGURANO. — Vache de rachat donnée par un patron ou par un chef de famille pour éviter que le coupable soit condamné.

---

(1) De *gutiza*, prêter.

(2) La traite d'une vache est égale au salaire d'un jour de culture.

INKUNGURANYO [1]. — Primus, possesseur d'une génisse, s'adresse à Secundus pour échanger la vache contre un veau femelle ou deux taureaux. Ils ne doivent rien donner en supplément pour avoir un droit absolu sur l'objet de l'échange, mais aucun d'eux ne conserve non plus la possibilité de reprendre la valeur échangée.

5. Petits animaux domestiques.

Le Mwami possède un droit de propriété plutôt théorique sur le petit bétail, qui est considéré par les grands éleveurs comme étant sans valeur.

En conséquence, les Bahutu ont la faculté de vendre ou de réserver pour leur consommation chèvres et moutons.

La volaille appartient également aux Bahutu, qui ont l'obligation de fournir, sans rémunération, les poussins nécessaires aux sacrifices divinatoires. Les poules et les œufs ne sont pas consommés par les indigènes et n'ont donc, sauf aux environs des postes européens, aucune valeur marchande.

Le petit bétail ainsi que la volaille sont la propriété exclusive des hommes.

Les Banyarwanda tiennent beaucoup à leurs chiens de chasse. Des Batutsi vont jusqu'à payer une ou deux vaches pour un chien réputé pour ses qualités de chasseur.

6. Autres biens mobiliers et immobiliers.

Chez les Batutsi, le mari et chacune de ses femmes habitent leur rugo propre, mais toutes ces demeures sont la propriété du mari. De même, chez les Bahutu, la hutte et ses annexes appartiennent au mari.

Les instruments de travail appartiennent au mari. La femme et les enfants ne peuvent les prêter sans son autorisation, sauf pour peu de temps.

---

[1] De *gukunguranya*, échanger deux vaches de valeur égale d'une manière définitive et irrévocable.

1: Vanhove FO42 Rundi

Les ustensiles de ménage fournis à l'épouse par le mari restent la propriété de celui-ci. Mais les *ibirongoranywa* [1], c'est-à-dire les objets, ustensiles, vêtements, donnés par le père à sa fille au moment du mariage et qui peuvent atteindre parfois la valeur de plusieurs vaches ou consister même en vaches, appartiennent à la femme. Elle peut en disposer comme bon lui semble, sauf s'il s'agit de vaches.

SECTION III.

Les successions.

1. Bases du droit successoral.

Les principes qui régissent le droit successoral sont :

1° Les femmes et les filles sont exclues de la succession, car elles ne peuvent ni tester ni hériter de valeurs;

2° La succession reste en principe dans la ligne masculine paternelle [2];

3° Le nouveau chef de famille est normalement, mais non nécessairement, l'aîné des fils, sans distinction de lits.

2. Désignation du nouveau chef de famille.

Le temps de deuil (*kwirabura* : litt. : devenir noir) et les cérémonies de la purification (*kwera* : litt. : devenir blanc) achevés, à savoir deux mois après le décès [3], il

---

(1) Cf. note 1, p. 52.

(2) Il se peut qu'un garçon hérite également dans la famille de sa mère, mais seulement si le défunt, parent de sa mère, a exprimé sa volonté avant de mourir et, bien entendu, s'il n'a pas d'héritiers naturels.

Il arrive aussi qu'un étranger recueille la succession du défunt si celui-ci n'a pas d'héritiers.

(3) Le délai est réduit à quelques jours quand le ménage n'a pas eu d'enfants.

est procédé à la désignation du nouveau chef de famille (*umutware w'urugo rwa se* : litt. : le chef du rugo de son père).

Si le père est mort sans avoir pu faire connaître ses volontés, ce soin incombe au chef d'umulyango, qui prend au préalable l'avis des anciens. Peu importe que les fils soient de lits différents (polygynie ou mariages successifs), qu'ils soient légitimes, nés d'une concubine ou adultérins. Seules sont prises en considération dans le choix les qualités qui sont requises d'un futur chef de famille.

Mais le plus souvent, sentant sa fin proche, le père appelle le chef d'umulyango et deux amis. Il leur dicte ses dernières volontés. Les épouses d'un polygame ne se privent généralement pas d'intriguer en faveur de leur fils et s'efforcent de circonvenir leur mari — ou même son frère — en usant à la fois de leurs charmes et de leur plus subtile dialectique. La situation est identique dans le cas de mariages successifs.

On comprend donc aisément que souvent les autres fils, surtout s'ils sont issus de mères différentes, se jugent lésés à tort ou à raison. Mais la faculté leur est donnée de demander justice au Mwami, au chef de la province ou au chef de colline, selon qu'ils sont fils d'umutware w'intebe, d'igisonga, simples Batutsi ou Bahutu. Ces autorités ratifieront le choix fait par le père ou l'oncle ou bien décideront quel autre garçon succédera à son père.

A défaut de descendance masculine, la dignité du chef de famille revient au frère le plus âgé du défunt. Dans ce cas, l'héritier sera à la fois chef de son rugo et de celui de son frère.

Il se peut même qu'il soit en temps chef de l'umulyango, c'est-à-dire du clan. C'est l'umutware w'umulyango (ou encore l'umutware rwa bo).

Si tous les frères sont disparus, leurs fils héritent par droit de primogéniture.

Si le défunt n'a ni fils, ni frères, ni neveux dans sa ligne, son père lui succédera ou, à son défaut, le frère de celui-ci ou l'un de ses descendants mâles par droit de primogéniture.

Les Bahutu et les Batwa ont leur propre umutware w'urugo. Mais ils dépendent du même chef d'umulyango que les Batutsi.

3. Composition de la succession.

En outre de la dignité du chef de famille, la succession comprend :

1° Le gros bétail;
2° Les clients (abagaragu);
3° Chez les Bahutu surtout, les chèvres et les moutons;
4° Les immeubles [1];
5° Les meubles [1].

Les donations (*kugabira :* faire une donation) faites par le père à l'un de ses fils, et qui sont appelées inkazibiti quand elles consistent en vaches, restent acquises au donataire, à moins d'indignité : irrespect marqué, désobéissances multiples, etc. (*kunyaga :* reprendre).

Les obligations actives aussi bien que passives passent à la succession. Faute de pouvoir rembourser, les descendants du défunt en ligne directe — et eux seuls — seront tenus de travailler un jour ou deux par semaine au profit des héritiers du créancier — que ce soient ses fils ou même ses frères — et ce jusqu'à extinction complète de la dette.

4. Dévolution des biens.

Les biens sont attribués aux héritiers, deux mois après le décès chez les Batutsi, un mois après chez les Bahutu. Toutefois, les instruments et objets peuvent être utilisés tout de suite.

---

[1] Cf. les Biens, Propriété en général, p. 41.

Le fils qui est maudit par son père (igitshibwa ou ikivume) doit restituer tout ce qu'il a reçu de celui-ci (inkazibiti, indemano); il est contraint de s'en aller au loin, seul, sans sa femme et ses enfants, en abandonnant tous ses biens.

Pour faire saisir plus clairement le mécanisme de la dévolution des biens, nous choisirons les quatre types de successions qui se présentent ordinairement et nous en ferons un schéma.

Schéma I. — Succession d'un riche Mututsi (chef de province ou umugaragu du Mwami).

Nyirimigabo, chef de province, meurt en laissant cinq fils issus de deux femmes. Ce sont :

Bihutu, fils de Mujijima, marié;
Nyagatoma, fils de Mujijima, marié;
Nturo, fils de Nyirampunga, non encore marié;
Rusagara, fils de Mujijima, encore enfant;
Mahira, fils de Mujijima, encore enfant.

A la mort du père, Nturo, le troisième fils, devient chef de l'urogo rwa se.

Voici comment les biens vont être répartis [1] :

Vaches. — Nturo, non encore marié, reçoit :

1° L'ingarigari de son père, deux mille têtes, par exemple;

2° Les indabukirano données par les abagaragu (simple faculté);

3° Les intore données par les mêmes (obligation);

4° Les indabukirano données par ses frères, Bihutu et

---

[1] Pour la définition des différents termes désignant les biens de la succession et consistant en bétail : cf. les Biens, Propriété du bétail, pp. 48-59.

Nyagatoma, par Mujijima au nom de Rusagara et Mahira encore enfants et par les amis de son père (faculté);

5° Une partie des inyarulembo de sa mère Nyirampunga;

6° De plus, ses abagaragu et ses amis peuvent lui amener chacun une vache indorano.

Bihutu, l'aîné, ne reçoit rien. Mais, marié du vivant de son père, il avait reçu de ce dernier, lors de son établissement, l'iminani, troupeau formé de vaches indemano.

Nyagatoma reçoit des indemano que Nturo tire de ses inyarulembo (vingt-cinq, par exemple). De la sorte, comme il est sur le point de prendre femme, il pourra s'établir. Son père lui donne en plus quelques inkazibiti (quatre ou cinq).

Rusagara reçoit des inkazibiti de Nturo. Jeune encore, il reste chez sa mère Nujijima. Celle-ci lui donnera plus tard des indemano prises dans les inyarulembo qu'elle a reçues de son mari.

Mahira, comme son frère Rusagara, continue à habiter chez sa mère. Nturo lui donne également des inkazibiti, et plus tard il lui remettra des indemano, car sa mère n'aura vraisemblablement plus assez d'inyarulembo pour lui donner.

Les inyarulembo de Mijijima restent chez elle; elle en réserve quelques-unes pour les donner à Rusagara comme indemano et elle garde les autres. Les inyarulembo de Nyirampunga sont prises par Nturo, qui en laisse un certain nombre à sa mère.

Quand l'une de ses sœurs mariées vient annoncer la naissance d'un enfant, Nturo lui donne une vache y'urugori ou y'ibihembo.

Clients. — Les abagaragu que Nyirimigabo s'étaient acquis en leur donnant des inkazibiti passent tous à Nturo.

On leur donne le même nom qu'à un troupeau de vaches indemano : iminani.

Les frères de Nturo, dès qu'ils sont pourvus de vaches, se cherchent eux aussi des abagaragu.

Les bouviers (abashumba) qui s'occupent des vaches des femmes du défunt suivent le sort des inyarulembo de celles-ci : ceux de Mujijima restent avec ses vaches, en attendant que certains d'entre eux accompagnent les vaches données comme indemano à Rusagara et à Mahira.

Champs, bananeraies. — Nturo, en sa qualité de chef de famille, peut choisir des champs où il veut, sur l'une des collines de son père.

Bihutu et Nyagatoma, qui, en même temps que leur umunane, avaient reçu un champ, n'ont plus le droit de rien demander.

Rusugara et Mahira recevront un champ de leur mère ou de Nturo.

Paturages. — Les règles régissant l'attribution des champs s'appliquent aux pâturages.

Rugo. — Chaque femme du défunt continue chacune à habiter son rugo propre, qui est entouré de bananiers, d'un terrain de culture et d'une pâture.

Armes, instruments, etc. — Ils appartiennent de droit au chef de famille.

Vêtements. — Il en est de même pour ces objets, mais le chef de famille a coutume de les distribuer aux serviteurs.

Schéma II. — Succession d'un Mutatsi mayon (chef de colline).

Il s'agit de Gakire, fils de Kanziga, qui, marié du vivant de son père Gafuku, a reçu trente indemano et trois inkaribiti.

Kagabo, fils de Ligoga, marié également, a reçu de son père vingt-cinq indemano et trois inkazibiti.

Kinyogote, fils de Ligoga, encore enfant, a reçu de son père deux inkazibiti.

Kanziga et Ligoga ont reçu chacune vingt inyarulembo de leur mari.

Gafuku, à sa mort, possède un ingarigari de quatre-vingts bêtes.

Vaches. — Gakire, nommé chef de famille, prend :

1° Les quatre-vingts ingarigari;

2° Les indabukirano offertes par ses frères et les clients ainsi que les intore données par les abagaragu;

3° Une partie des inyarulembo de sa mère Kanziga.

Kagabo ne peut rien recevoir.

Kinyogote reste chez sa mère. Quand il sera en âge de se marier, il recevra de Gakire vingt vaches dont dix prélevées par celui-ci dans ses inyarulembo, cinq autres qu'il prendra dans les inyarulembo de Kanziga, et cinq prises dans les indemano de Kagabo. En outre, Kinyogote recevra cinq inyarulembo de sa mère Ligoga. De la sorte, il aura vingt-cinq indemano.

Clients. — Les serviteurs de Kanziga restent dans son rugo à elle. Ceux de Kanziga appartiennent à Gakire, qui en laisse un certain nombre à sa mère. Les clients de Gafuku passent également au nouveau chef de famille.

Champs et paturages. — Gakire se choisit de nouveaux champs sur la colline.

Kagabo ne reçoit rien.

Kinyogote restera chez sa mère jusqu'à son mariage. A ce moment, Gakire et Kagabo lui donneront chacun un champ et un pâturage.

Rugo. — Les veuves restent chacune dans leur rugo jusqu'à leur mort, le retour dans leur famille ou leur remariage.

Armes, instruments, vêtements. — Leur attribution est la même que dans le tableau II.

Schéma III. — Succession d'un simple Mututsi.

Gakuba, simple homme quoique Mututsi, a eu quatre fils de son mariage avec Kampororo :

Karekezi, marié du vivant de son père, a reçu de celui-ci deux vaches inkazibiti. Gakuba est en effet trop pauvre pour donner à ses fils des vaches en nombre tel qu'elles méritent le nom d'iminani. En plus, Karekezi a reçu une vraie inka y'igiti.

Kambanda, marié lui aussi, a reçu également deux vaches dont une vraie inka y'igiti.

Gapyisi et Kayibanda sont encore tout enfants à la mort de leur père et n'ont rien reçu de lui.

Gakuba, en mourant, laisse vingt vaches inyarulembo.

Vaches. — Elles sont divisées comme suit :

Kambanda, nommé chef de famille, reçoit sept vaches plus une comme *itako ry'umutware* (1) (litt. : cuisse de chef).

Chacun des autres fils reçoit un nombre égal de vaches (quatre). Il peut se faire que des vaches restent en dehors du partage. S'il n'y en a qu'une, elle appartient de façon indivise à tous les fils. S'il y en a deux, chacune d'elles est la propriété de deux des fils.

Clients. — Ils ne sont guère que deux ou trois et ils passent au chef de famille.

---

(1) Afin de pourvoir aux besoins de ses frères et sœurs.

Champs et paturages. — Les deux aînés avaient reçu au moment de leur mariage un champ et un pâturage. Des terres possédées par le père à sa mort, Kambanda prendra les deux tiers et le tiers restant sera partagé plus tard entre les deux cadets.

Urugo. — Il continue à être occupé par la mère.

Armes, instruments. — Sont du lot de Kambanda.

Schéma IV. — Succession d'un Muhutu.

Kimonyo meurt en laissant cinq fils issus de trois femmes :

Tabaro, fils de Nyiramgunzu, marié du vivant de son père et ayant reçu un champ de lui;
Fuku, fils de Nyirambeba;
Shumbushu, fils de Nyiramgunzu;
Karifuni, fils de Nyirambeba;
Nzabandora, fils de Nyiramatama.

Champs, arbres. — Shumbushu, nommé chef de famille, reste chez sa mère. Il reçoit comme itako ry'umutware, en nue propriété, une grosse partie de la bananeraie de Nyiramgunzu, le reste étant divisé en parties égales entre lui et son frère Tabaro (en nue propriété également).

Fuku et Karifuni recevront chacun la moitié du champ et de la bananeraie de leur mère.

Nzabandora se verra attribuer le champ et la bananeraie de Nyiramatama.

Shumbushu a cependant le droit de prélever un itako sur les biens de ses frères.

Vaches, paturages. — Le Muhutu ne possède généralement pas de pâturages, car même lorsqu'il a une ou deux vaches, elles sont inkazibiti et rarement imbata. Ces bêtes

1: Vanhove FO42 Rundi

appartiennent indivisément aux fils du défunt, qui vont demander à un Mututsi aisé l'autorisation de continuer à mener paître les bêtes dans ses pâturages.

Petit bétail. — Le troupeau de chèvres et de moutons est divisé entre les fils. Le chef de famille prend en plus l'itako.

Rugo, récoltes. — Chacune des femmes reste dans son rugo et dispose des récoltes faites à l'entour.

Armes, instruments. — Sont pris par le chef de famille.

Succession d'un Mutwa.

L'héritage d'un Mutwa se résume à peu de chose : quelques chèvres et moutons, des instruments et des ustensiles. Il arrive cependant qu'il comporte un petit champ (*ingobyi y'urugo*), parfois même un terrain d'une certaine importance (*igikingi*), reçu le plus souvent en récompense de prouesses chorégraphiques.

5. Sort des veuves.

Le temps du kwirabura et du kwera expiré, la veuve (*umupfakazi*) a la faculté de se remarier.

Si elle accepte comme nouvel époux un membre de la famille de son mari : le chef de famille (à l'exclusion de son propre fils) [1], un de ses beaux-frères (frères de son mari) ou son beau-père, la femme reste dans son rugo, où son nouveau mari viendra lui rendre visite. Il n'est versé aucune dot (inkwano) pour une veuve qui se remarie et le mariage a lieu sans aucune des cérémonies habituelles.

Si la femme décline toute offre de mariage pour se consacrer à l'éducation de ses enfants, il lui sera permis

---

[1] Le fils chef de famille peut prendre pour femmes une ou plusieurs des veuves de son père si elles n'appartiennent pas à la famille de sa mère. Un oncle ne peut épouser sa nièce.

1: Vanhove FO42 Rundi

quand même de ne pas quitter son rugo. Elle garde les vaches inyarulembo, ses serviteurs, le champ et le pâturage qu'elle a reçus de son mari avec le droit d'en retirer des avantages. Ces biens ne constituent pas pour elle un douaire, mais sont conservés par elle à titre provisoire. Elle ne fait en somme que les gérer dans l'intérêt de ses fils mineurs qui restent avec elle. De la sorte, elle peut continuer à vivre comme du temps de son mari, sans craindre de tomber dans la misère. Au surplus, même lorsque ses fils prélèvent une partie de ces biens pour s'établir, ils ne cessent pas de témoigner une tendre sollicitude à leur mère et pourvoient à ses besoins.

Si la veuve désire rentrer dans sa famille, elle doit dans ce cas abandonner le rugo et ce qu'il contient, sauf ses objets personnels. Ses enfants devront être laissés à la famille de leur père dès qu'ils seront sevrés, — c'est-à-dire vers l'âge de quatre à cinq ans, — à moins que la dot n'ait pas été entièrement versée.

Il arrive qu'une veuve avec enfants se remarie avec un étranger à la famille du défunt. En principe, il ne lui est pas interdit de vivre dans son rugo avec le nouveau mari. Mais ces unions, mal vues d'ailleurs, sont généralement précaires. A la moindre difficulté, les parents du défunt interviennent souvent et le second mari est chassé sans pouvoir rien emporter, en étant même contraint d'abandonner les enfants qu'il a eus de la femme.

Quant à la veuve sans enfants, elle doit rentrer dans sa famille, à moins qu'elle n'accepte d'épouser un membre de la famille du défunt.

6. Situation du veuf.

Le plus souvent, la mort de la femme ne met pas fin aux relations du veuf avec sa belle-famille, surtout si des enfants sont nés du mariage.

1: Vanhove FO42 Rundi

Les beaux-parents ont la faculté de donner à leur gendre une, parfois même deux vaches indorano [1].

Si le veuf reste avec des enfants en bas âge, pour que les orphelins n'aient pas pour marâtre une étrangère, les beaux-parents proposent généralement à leur gendre de prendre une de leurs autres filles pour femme [2]. Loin de réclamer pour celle-ci une nouvelle dot, ils offrent au contraire une vache indongoranyo [3] qui normalement cependant est la contre-partie de la dot versée.

Un veuf sans enfants peut réclamer la restitution de la dot. Il ne le fait généralement pas, car il sait que ses beaux-parents, pour éviter de rendre la dot, lui chercheront une nouvelle épouse parmi leurs propres filles ou celles de leur parenté.

7. Tutelle des enfants [4].

La mère veuve, non remariée au loin, continue à vivre dans son rugo et y élève ses enfants jusqu'au mariage de ceux-ci, qui, en ce qui concerne les garçons tout au moins, les émancipe.

Le fils qui est nommé chef de famille remplace effectivement son père, pourvu qu'il soit en âge de le faire; il possède les mêmes droits et obligations que lui, notamment celle d'établir ses frères (en leur donnant des indemano) et de marier ses sœurs; si plus tard l'une de celles-ci vient à être répudiée, elle se réfugie chez sa mère ou chez son frère, qui lui cherche un nouveau mari.

Si tous les garçons sont mineurs, le grand-père paternel ou, à son défaut, celui des oncles paternels qui paraît

---

(1) Les Bahutu donnent comme indorano des cruches de bière.

(2) Le veuf ne peut se remarier avant un temps de deuil d'un mois. Pendant cette période, il ne se rase plus, ne lave plus ses vêtements et ne peut avoir de rapports avec une autre femme.

(3) Une houe chez les Bahutu.

(4) Cf. Etat des personnes, Tutelle et Emancipation, p. 38.

le mieux qualifié est choisi comme tuteur; il exerce en cette qualité les prérogatives de la puissance paternelle et gère pour ses pupilles les biens délaissés par le défunt.

Si les parents mâles du côté paternel sont disparus, c'est un des oncles maternels qui en sera tuteur. En effet, si chacun des époux continue à appartenir à son umulyango propre, les enfants, eux, sont membres des deux familles.

L'émancipation, qui se confond normalement avec le moment du mariage, arrive quand le jeune homme atteint dix-huit ans. Mais il peut se faire que les enfants, ayant des motifs de se plaindre de leur tuteur, aillent, selon leur rang social, demander justice au chef de colline, de province ou au Mwami. Devenus grands, il arrive même qu'ils s'émancipent (proprio motu » en chassant le tuteur indigne.

8. Successions irrégulières.

Bien que le droit successoral exclue les filles de l'héritage, celles-ci sont toujours gratifiées de cadeaux par le nouveau chef de famille, tout au moins quand il est leur frère.

En ce qui concerne les Bahutu, le cas suivant peut se présenter : un Muhutu, umugaragu d'un riche Mututsi, a une fille servante chez son maître, où elle est mariée à un autre serviteur; à la mort de son client, le maître, au lieu de reprendre les vaches, peut les remettre au mari de la fille, qui devient ainsi son umagaragu.

Quand une femme meurt, les quelques parures qu'elle possède (colliers, bracelets) ne vont pas à sa fille, mais à ses belles-filles (filles de son mari). La mère peut aussi, avec la permission du chef politique, les donner à son fils qui vivait avec elle. Celui-ci en fera cadeau plus tard à sa femme.

Un homme qui n'a pas de garçons (inchike) ou qui les a maudits peut adopter un fils de son frère (umuhungu

wachu) ou, à son défaut, celui de sa sœur (umwishywa). Il lui promet son héritage et son neveu devient en tout véritablement son fils [1].

Un homme qui a conclu le pacte du sang (kunywana) [2] hérite de son frère de sang (umunywanyi) si celui-ci meurt sans laisser de parents mâles. Il peut épouser la femme du défunt mais non sa fille, qui est considérée comme étant son enfant, et il exerce la puissance paternelle sur les orphelins.

Si le défunt, lié à un patron par un bail à cheptel, n'a pas de frère, la tutelle des enfants mineurs revient au shebuja (*kumuremera*). Dans le cas contraire, celui-ci la partage avec un oncle paternel ou maternel des orphelins. Si le patron a versé la dot de son client, il prendra les dots données pour les filles de son umugaragu et les gardera pour permettre aux garçons de se marier. Ainsi donc, dans ce cas, un Mututsi devient chef du rugo du Muhutu.

9. Successions en déshérence.

Les femmes n'héritant pas, si, par impossible, le défunt n'a pas de parents mâles, son patron reprend les vaches qui lui appartenaient et s'approprie le petit bétail, les instruments, etc. (*inzungu*) [3]. Les champs, les bananeraies, pâturages délaissés dans les mêmes conditions (*inkungu*) [1] vont au chef politique, qui les attribue à un autre homme. Mais les veuves sont autorisées à demeurer dans leur rugo.

Si le défunt n'est pas engagé dans les liens d'un contrat d'*ubugaragu*, tous ses biens vont au chef politique, qui en dispose comme il l'entend.

---

(1) Cf. Etat des personnes, la Famille et le Clan, p. 7.

(2) Cf. Etat des personnes, le Pacte du sang. p. 17.

(3) De *guzungura*, hériter sans être parent.

SECTION IV.

Les obligations et les contrats.

L'obligation type résulte du contrat dit d'*ubugaragu*, par lequel un homme qui a fait sa cour (*guhakwa*) auprès d'un propriétaire de bétail obtient de celui-ci une ou plusieurs vaches prises dans ses inyarulembo (1) (2). Elles sont appelées inkazibiti si l'*umugaragu* (client) est un Muhutu, ingabane si c'est un Mututsi. L'umugaragu n'a droit qu'à l'usufruit de ce bétail ainsi que du croît et seulement pour le temps qu'il plaira à son *shebuja* (patron) de les lui laisser.

D'autre part, quand un homme se lie par le contrat d'ubugaragu, les vaches qui étaient sa propriété personnelle (imbata) deviennent des inkazibiti.

Les principaux avantages que retire le client du contrat d'ubugaragu sont : la vente du lait, beurre, viande, peaux, l'assistance dans le cas où il deviendrait infirme et serait dans l'impossibilité de subvenir à ses besoins, l'honneur d'être nommé homme-lige d'un tel ou d'un tel, au lieu d'entendre ces appellations pleines de mépris : *uriyamuntu* = cet homme; *uriya mugabo* = ce bonhomme. C'est pourquoi l'on dit : *kugir'uguhatse n'ukugir'izina* (avoir un chef, c'est avoir un nom).

Chaque client est soumis vis-à-vis de son patron à diverses obligations et prestations dans l'accomplissement desquelles il peut se faire aider par ses fils et même éventuellement par ses abagaragu et leur famille.

---

(1) Cf. les Biens, Propriété du bétail, p. 51.

(2) Le patron n'est pas vraiment lié par un engagement contractuel; il se contente plutôt d'accepter les services du client.

A. — Obligations du client.

1° *Gufat'igihe* (litt. : prendre le temps), c'est-à-dire faire sa cour pendant un temps dont la durée est déterminée par le chef.

Le client doit accompagner son patron en voyage, par exemple quand il se rend à la cour du Mwami ou chez un grand chef. Pendant ces déplacements, il lui sert de cuisinier, assure les corvées d'eau et de bois, garde les injishywa (1). Le temps pendant lequel le client doit suivre ainsi son patron dépend du nombre de vaches qu'il détient ou désire encore acquérir et aussi du nombre de clients entre lesquels l'obligation peut se répartir.

Quand le maître est dans ses terres, l'umugaragu porte sa pipe, l'escorte quand il rentre la nuit, porte les vivres dans ses greniers.

2° *Kubak'inkike* (litt. : construire une partie du rugo).

Les clients doivent construire ou réparer chacun une partie de l'enceinte entourant la hutte et les greniers du patron, en fournissant le matériel à cette fin.

Quant à la hutte, l'obligation de la bâtir repose sur tous les abagaragu indivisément.

3° *Kurarira* (garde de nuit ou veillée de causerie).

Les clients doivent à tour de rôle veiller sur le repos du patron et garder son rugo. Les sentinelles doivent apporter le bois nécessaire pour allumer le feu de garde.

4° *Gutumwa* (être envoyé).

Chaque client doit porter les messages de son maître à n'importe quelle distance et accompagner les serviteurs chargés de porter des cadeaux à un parent ou à un ami du patron. L'umugaragu peut même être messager et porteur à la fois quand il s'agit d'un présent destiné à une

(1) Cf. les Biens, Propriété du bétail, p. 54.

personne importante ou qui est particulièrement chère au cœur du shebuja.

5° L'umugaragu doit participer aux semailles du sorgho (*ishaka*) [1] pendant deux jours.

6° *Kutanga imibyizi* (cultiver les champs).

Les clients bahutu viennent travailler dans les champs du patron pendant un temps plus ou moins long, qui n'est pax fixé, mais qui dépend à la fois du nombre d'abagaragu et de l'importance du bétail qui leur a été remis par le shebuja. La tâche de chacun n'est pas non plus déterminée exactement.

7° *Kumutabaraho* (litt. : accompagner à la guerre).

Il s'agit d'une obligation générale : suivre le maître au combat, couper son bois, etc.

8° Le client, désigné dans ce cas sous le nom de *umwozi* (laveur de pots), doit veiller à la qualité du lait conservé dans des pots, l'apporter à son patron (*kugemera*) et faire laver les pots par un serviteur appelé *umuhondamonyi*.

9° Les abagaragu, sauf ceux qui sont pauvres, ont coutume d'honorer leur maître de cadeaux : pots de bière, par exemple. Le patron se contente généralement de goûter l'*inzoga*, puis il la distribue à ses abagaragu.

10° En cas de perte de bétail par le patron, le client doit lui offrir une vache/inshumbushanyo [2].

11° De même, quand le shebuja est éprouvé par un deuil, il reçoit de son umugaragu une indorano [3].

---

(1) Le sorgho est une plante sacrée et les semis donnent lieu à une cérémonie propitiatoire.

(2) Cf. les Biems, Propriété du bétail, p. 53.

(3) Cf. idem, p. 54.

B. — Obligations du patron.

1° Si le client a volé une vache chez un autre propriétaire, le patron, pour éviter un châtiment à son umugaragu, intervient (*kugura :* racheter) et indemnise le lésé. S'il n'agissait pas de la sorte, il serait mal vu.

2° Si le client est fort pauvre, le patron lui donne un taurillon pour qu'il puisse manger de la viande et se vêtir avec la peau. Il lui fournit du lait.

3° Le patron doit assister son client dans ses palabres (*kulengera*).

4° Le patron doit aider le client, qui désire se marier, à payer la dot. Il lui donne une vache dans ce but. Si l'umugaragu est important, le shebuja l'autorise à choisir lui-même la vache inkwano (¹). S'il n'a reçu qu'une vache du patron, celui-ci peut l'autoriser à la donner comme dot; les liens qui l'unissent à son patron en sont par là resserrés, car la femme sert de garantie à la bonne exécution du contrat d'ubugaragu.

En cas de faute grave de l'umugaragu, le shebuja peut reprendre l'inkwano chez le beau-père (*iyo batararongolanya* ou *baraikoranura :* litt. : empêcher le mariage) aussi longtemps que son client n'a pas reçu l'indongoranyo (²). Quand celle-ci a été remise, les droits du shebuja s'exercent sur elle.

5° A la mort du client, le patron doit veiller sur le sort de sa femme et de ses enfants. Si l'umugaragu n'a pas de frère, le shebuja devient le tuteur des orphelins (*kumuremera*). Dans le cas contraire, un oncle (paternel ou maternel) partage la tutelle avec le patron.

Si le patron a payé la dot de son client, il prend les dots données pour les filles de celui-ci et les conserve en atten-

(¹) Cf. les Biens, Propriété du bétail, p. 52.

(²) Cf. idem, p. 52.

dant de les remettre aux garçons pour qu'ils puissent se marier à leur tour.

6° Le patron devait jadis venger lui-même le meurtre de son client (*kumuhorera*). Accompagné de ses abagaragu et de l'un des fils du défunt, il allait tuer le meurtrier en usant d'un subterfuge. Désignant l'orphelin, il disait au meurtrier : « Voilà celui qui te tue », puis il le tuait, ou bien le shebuja allait demander justice au Mwami.

7° Le client peut disposer du lait des vaches qui lui sont remises (*intagemura*) et en faire du beurre et du fromage quand les besoins du patron en lait sont assurés. De même, avec la permission du shebuja, il peut tuer des bêtes et consommer ou vendre la viande.

8° Le patron doit donner une houe de temps en temps à son client muhutu.

Il n'est jamais mis fin au contrat de clientèle, sauf si les vaches meurent ou si le client se montre indigne de la confiance placée en lui. Dans ce dernier cas, le maître lui reprend ses vaches (*kunyaga*) et leur croît.

De plus, si le shebuja est en même temps chef de colline, de province ou le Mwami, il peut dépouiller le client de ses champs, de son rugo et le chasser de la colline. Celui-ci ne peut emporter que son bâton (*banuh'akabando*) : litt. : on lui donne un bâton), chose la plus accessoire et la moins utile.

*
* *

A côté du contrat d'ubuguragu et d'autres baux à cheptel tels que l'ingwate et ses variantes, l'indagizo [1], etc., le droit coutumier du Ruanda connaît nombre d'autres

---

[1] Cf. les Biens. Propriété du bétail, pp. 54 et 55.

contrats. Nous énumérons ci-après ceux dont il est fait le plus fréquemment usage.

L'achat-vente (Kugura).

Ces transactions ont lieu sur les marchés (*amaguriro* — plur. *iguriro*), situés généralement aux carrefours des voies de communication. Les plus fréquentés sont ceux du Rukiga et du Kinyaga. Les gens du Buganza et du Buliza y viennent échanger leurs vaches contre du sel, des vivres, de la bière, du miel, des paniers, etc. Jadis les animaux et les choses mis en vente étaient évalués en houes [1].

Des commerçants spécialisés (*abatunzi :* litt. : les riches) s'y rendent également et offrent en vente les denrées et objets qu'ils ont été chercher au loin, par exemple les *ubutega* [2], fabriqués dans l'Urega (pays des Warega). Ils unissent parfois leurs ressources pour effectuer des achats importants (*gufatanya urutundo :* litt : rassembler le commerce).

Les femmes et les enfants sont admis aux marchés sans restriction. Jadis les gens y venaient en armes, car ils risquaient d'être dévalisés et même tués en route par des bandits de grand chemin.

Le louage de services (kubunga).

Un homme peut s'engager à travailler pour un autre, pendant cinquante jours par exemple, et à raison d'un

---

(1) Le vendeur de sel désireux d'acquérir un taurillon demandait combien celui-ci valait de houes. On lui répondait : cinquante. Il prenait alors un panier de sel dont la contenance valait une houe et en versait cinquante au propriétaire du taurillon. On disait aussi couramment : c'est une chèvre de trois houes. Aujourd'hui la valeur d'une houe est de huit francs.

(2) Ces minces anneaux de fibres de rotin portés autour des jambes, des chevilles aux genoux, par les femmes banyarwanda, avaient naguère encore une certaine valeur : trois mille ubutega valaient un taurillon, et une parure complète ne pouvait être achetée que contre paiement de deux vaches stériles.

jour ou deux par semaine, à la condition de recevoir en échange la viande d'une vache.

L'échange (kuguza) (1).

Un Mututsi demande à un Muhutu un grenier de sorgho (*ihundo :* litt. : épi de sorgho), par exemple, en échange d'un taurillon ou de houes (trente généralement).

Le prêt (gutiza).

Les Banyarwanda distinguent le prêt à usage (commodat) du prêt simple (ou de consommation).

Si le prêt à usage, en houes, par exemple, est accordé sans intérêt, il n'en est pas de même pour le prêt de consommation, qui a pour objet des denrées. Celui qui a reçu un panier de sorgho ou de haricots doit en rendre généralement deux. Le panier de denrées supplémentaire qui doit être donné au prêteur s'appelle *kirenga*.

La caution (kuchyungura).

Primus possède une serpette que Secundus voudrait emprunter. Secundus, qui ne connaît pas Primus, s'adresse à Tertius ami de Primus. Tertius dit à Primus de prêter sa serpette à Secundus en ajoutant qu'il se porte fort pour ce dernier s'il ne rend pas l'instrument. Tertius peut éventuellement se retourner contre Secundus.

Ce contrat peut être conclu pour des vaches, des greniers de sorgho, etc.

Le gage (ingwate).

Primus désire emprunter quelques paniers de haricots à Secundus. Mais Secundus répond qu'il ne peut les lui donner sans rien recevoir en garantie. Primus offre alors à Secundus une chèvre, par exemple (2). Quand il apporte à Primus la contre-partie de son emprunt, il reprend sa chèvre.

---

(1) *Kuguza :* litt. : consentir une avance.

(2) Une chèvre vaut trois houes.

Le mandat (kugerekesha) (1).

Primus se rend au marché pour échanger une houe contre des haricots. Secundus lui demande, moyennant rémunération, d'y emmener une de ses chèvres et de l'échanger contre trois houes, par exemple.

Le dépôt (Kubitsa).

Le dépôt de biens ne consistant pas en bétail ne donne lieu à aucune obligation du déposant à l'égard du dépositaire qui accepte de conserver les biens mis en dépôt chez lui.

*
* *

Ces contrats sont conclus devant des notables de la colline qui servent de témoins. Mais le plus souvent ils sont passés devant un rugo en construction ou un abreuvoir, endroits où les gens sont toujours nombreux. Ceux-ci, en cas de contestation, fourniront leur témoignage.

Si l'un des co-contractants ne s'exécute pas (2), ou est malhonnête, le tribunal du chef de colline, sur plainte du lésé, le force à s'acquitter (3) de sa dette (*ūmwēnda*) (4).

Le créancier a la faculté de saisir un gage, par exemple une chèvre, pour obliger le débiteur à payer.

Si celui-ci ne peut payer, il est condamné à travailler pour indemniser le plaignant, généralement deux jours sur cinq (5); mais il peut se faire remplacer par son fils, sa fille, sa bru et éventuellement par un umugaragu. Jadis, si le débiteur s'enfuyait pour se soustraire à ses obligations, le créancier avait le droit de s'emparer de son bétail.

---

(1) *Kugerekesha* : litt. : faire ajouter.

(2) Le cas de force majeure, par exemple une famine ou une invasion de sauterelles, s'il s'agit de la fourniture de denrées : sorgho ou haricots, délie provisoirement de l'obligation.

(3) *Kwishyuza*, réclamer paiement; *kwishyura*, payer.

(4) *Umwēnda*, étoffe

(5) Cf. p. 35, note 1.

de ses bananeraies et même de sa hutte. Toutefois, dans ce cas, les enfants pouvaient garder les biens de leur père, à la condition de s'engager à travailler pour le créancier jusqu'à l'extinction de la dette.

Il arrive qu'un patron paie pour son client, si celui-ci ne possède qu'un grenier de vivres et s'il a besoin de l'aide des siens pour travailler pour son shebuja. Si l'umugaragu meurt, son fils le remplace. L'obligation passe ainsi aux descendants jusqu'à ce qu'elle soit éteinte.

D'autre part, le frère ou le fils du créancier peuvent agir aux lieu et place de leurs parents [1].

*
* *

Hospitalité.

Le devoir d'hospitalité est sacré pour les Banyarwanda. Même un Mututsi ne refusera jamais l'*ichumbi* (logement) et l'*izimano* (bois, eau, nourriture) à un Muhutu. En effet, un proverbe dit : *Uwubaka wese yubakira abu Mwami* [2], et celui qui n'accorderait pas à un voyageur le vivre et le couvert porterait le nom d'*umugome* (mauvais); il serait *Uwanga Umwami* (l'ennemi du Mwami).

Responsabilité civile.

La responsabilité civile n'existe pas. Toutefois, les parents réparent eux-mêmes le dégât causé par leurs enfants.

SECTION V.

Gouvernement et Administration.

1. Nationalité.

Le peuple munyarwanda comprend les Batutsi, les Bahutu et les Batwa. L'aristocratie mututsi, d'origine hamite, domine la masse des Bahutu, qui sont des Bantous. Ceux-ci se livrent à l'agriculture et élèvent le bétail pour le compte des Batutsi. Les Batwa, des pygmoïdes, sont tenus à l'écart par les Batutsi et les Bahutu et tout mariage est interdit avec eux; ils sont chasseurs, forgerons ou potiers.

La tradition légendaire du pays donne l'explication de l'origine de ces différentes populations : Nkuba (la foudre), premier Roi du pays et sa femme Nyagasani habitaient au ciel avec leurs deux fils, Kimanuka et Mututsi et leur fille Nyampundu. Un jour, les trois enfants, descendus de leur demeure céleste, s'installèrent sur la colline Mubari dans la savane Urgweya, près du Kissaka, et Kimanuka prit le nom de Kigwa (litt. : tombé du ciel). Ils vécurent là du produit de leurs chasses et connaissaient l'art de forger lances, serpettes et houes. Kigwa épousa sa sœur Nyampundu et Mututsi s'en alla ailleurs. Mais quand il apprit que son frère et sa sœur avaient des enfants, il revint chez eux et épousa une de ses nièces. Les descendants de Kigwa prirent le nom d'Abanyiginya; ceux de Mututsi s'appelèrent Abega. Ils vendirent des armes et des instruments aratoires et devinrent ainsi très riches.

Ils continuèrent à habiter sur la colline Mubari jusqu'au moment où Gihanga (le créateur), douzième Roi de

la dynastie, commença à parcourir tout le pays pour écouler les produits des forges de sa famille. Ce Mwami « commis-voyageur », le premier qui exerça l'autorité suprême de façon réellement effective, fut fort aimé de tout son peuple, qui le considéra après sa mort comme un demi-dieu.

Gatutsi reçut de son père Gihanga de nombreuses vaches. Quant à son frère Gahutu, son père n'ayant plus de bétail à suffisance, il ne put s'en voir gratifier comme Gatutsi. Aussi fut-il obligé de devenir le serviteur de Gatutsi. Gatwa, troisième fils de Gihanga, tua Gatutsi. Le poids de ce crime est retombé sur les Batwa descendants de Gatwa. Gihanga avait encore d'autres fils : Nyakarundi, ancêtre des Barundi, Kanyabongo, père du peuple des Banyabongo, qui sont à présent des étrangers pour les Banyarwanda; enfin Gahima, le premier des Bahima, habitants du Ndorwa, que les Batutsi considèrent comme des leurs.

Si les Batutsi du Ruanda considèrent aujourd'hui leurs frères de Rutshuru (Kivu) comme des Bahutu, ils regardent au contraire comme des égaux les Batutsi de l'Urundi. D'autre part, les Bahutu de l'Urundi, par le moyen du contrat d'ubugaragu, peuvent être intégrés dans la société du Ruanda [1]. Mais si un Mututsi de l'Urundi vient s'établir au Ruanda avec ses abagaragu, tout en étant l'égal des Batutsi du pays, lui et ses gens sont considérés cependant comme des étrangers [2].

Jadis, au temps des guerres, les vaincus faits prisonniers étaient tués, tandis que les femmes, les garçons et les filles étaient emmenés en esclavage. Un Mututsi pouvait

---

(1) Il y a également des Bahutu banyarwanda qui se rendent dans l'Urundi pour s'y fixer.

(2) La raison de ces exodes réside dans le désir de fuir la vengeance privée, à la suite d'une accusation de meurtre, dans une condamnation de bannissement prononcée par le roi de l'Urundi, ou encore dans les difficultés rencontrées par un client dans ses rapports avec son patron.

Vanhove FO42 Rundi

même épouser une captive si elle était de noble origine; les enfants suivaient la condition de leur père. Mais généralement, il la donnait en mariage à 'un de ses clients: les enfants issus d'une telle union continuaient à appartenir à la maison du maître, mais leurs descendants étaient libres et devenaient par le fait même des Banyarwanda.

Il arrivait même qu'un esclave épousât une femme mututsi. C'est ainsi que le Mwami Rwabugiri, qui avait recueilli un jeune captif appelé Rusera Muhima, lui donna plus tard comme femme sa propre fille et lui fit cadeau de la sous-chefferie Rugarama au Bunyambiriri.

2. Le pouvoir royal.

Le Mwami (Roi) est l'autorité suprême du Ruanda. Nous avons vu que les traditions s'accordent à donner à son pouvoir une origine divine. Les annalistes de la Cour royale (*abatshurabgenge*) attribuent à l'actuel Mwami Mutara Rudahigwa trente-neuf ancêtres qui tous, sauf le premier Nkuba resté au ciel, auraient régné sur le Ruanda (¹).

Les Abanyiginya et les Abega sont les familles nobles les plus influentes du pays et c'est chez elles que, depuis les temps les plus reculés, sont choisis respectivement les rois et les reines.

Les Rois du Ruanda portent deux noms, celui qui leur est donné à leur naissance (Musinga, Rudahigwa) et celui qu'ils reçoivent à leur avènement (Yuhi, Mutara).

A la mort du Mwami, le pouvoir royal passe à l'un de ses fils, généralement l'un des plus jeunes.

L'origine divine attribuée à la royauté et la légitimité que confère au Roi une très longue hérédité entraînent la

(¹) Beaucoup de noms ont certainement été oubliés dans cette liste. En admettant qu'elle soit exacte, la domination des Batutsi sur le Ruanda remonterait à près de quatre siècles.

reconnaissance d'un troisième caractère du pouvoir royal, à savoir l'autocratie.

Le Mwami est le maître incontesté de tout le pays, aussi bien du sol — champs et pâturages — et du bétail que des habitants. Il est le seul vrai propriétaire; tous ceux qu'il gratifie de libéralités ne sont que ses usufruitiers.

Il ne possède pas nécessairement de domaine qu'il exploite en propre et il n'en a pas besoin, puisque ses revenus s'alimentent des tributs et prestations dont chacun de ses sujets est tenu vis-à-vis de lui. Quand il est jeune, il reçoit du Roi son père une ou plusieurs provinces en apanage, du bétail et des serviteurs. A son avènement, il peut ou conserver ces provinces ou les donner à d'autres [1]. Ses faveurs peuvent s'adresser à n'importe qui, à un Muhutu et même à un Mutwa qu'il peut élever sur-le-champ au rang des plus grands. Naguère encore, du temps de Musinga, ceux qui avaient cessé de plaire au Mwami ou simplement ceux dont il convoitait les biens pouvaient, du jour au lendemain et si haut placés fussent-ils, être dépossédés de tous leurs biens, déchus de toute influence et exilés du pays. Aujourd'hui, le Mwami désireux d'occuper telle ou telle colline demande à un de ses grands féodaux de la lui céder. Celui-ci s'incline de bonne grâce et reçoit généralement du bétail en échange.

Le Mwami est un monarque absolu de droit divin qui ne connaît d'autre règle que sa volonté, voire son caprice [2]. Jadis, avant notre occupation, il pouvait impunément torturer, mutiler ou mettre à mort quiconque lui avait déplu. Ses sentences criminelles étaient conformes aux coutumes du pays, qui lui reconnaissaient

---

(1) Mutara Rudahigwa a conservé les siennes : le Nduga et le Marangara, mais il s'est déchargé de leur administration sur un *umutware*.

(2) D'où le proverbe : *Iuyose higiriwa n'Umwami* = tout dépend du Roi.

1: Vanhove FO42 Rundi

ce droit redoutable, et personne ne s'imaginait pouvoir s'insurger contre ses décisions [1].

De même, il est grand juge et tranche en dernier ressort les différends, même les plus minces, qui surgissent entre ses sujets.

Enfin le Roi est le législateur suprême du peuple. Il exerce avec l'aide des *abiru* la mission de garder le droit coutumier, mais il a seul le pouvoir de modifier la loi du pays s'il le veut et comme il l'entend.

Il proclame ses décisions (*amategeko*) à la porte de son rugo, où se trouvent massés des gens venus de partout pour faire leur cour ou demander justice. Des *intumwa* (messagers) sont alors chargés de porter les ordonnances du Mwami à la connaissance de la population des différentes provinces.

Le Mwami, en outre de son nom de Mututsi (Musinga, Rudahigwa, etc.), reçoit à son avènement un nom de Roi (Yuhi, Mutara, etc.). Ces noms sont repris périodiquement; c'est ainsi que le Mwami actuel est Mutara III.

Il arrive aussi que le Roi soit désigné par un surnom, comme Rwabugiri Sezisoni (miséricordieux, clément) [2].

Souvent une interdiction s'attache à un nom de Roi : un Yuhi, par exemple, ne peut traverser les grandes rivières comme la Nyabarongo [3]. Après sa mort, le Roi devient pour les populations une sorte de divinité. Il va rejoindre dans les enfers les demi-dieux ses ancêtres.

Le Roi partage l'autorité suprême avec sa mère (*umugabekazi*) [4]. Elle est toute-puissante, souvent même plus puissante que son fils. Quiconque va faire sa cour au Roi

---

(1) Le droit de vie ou de mort du Mwami a été supprimé en 1917, au moment de l'occupation du pays par nos troupes.

(2) Mot étranger, originaire du Buhima, à l'Est du Ruanda.

(3) Rivière se jetant dans l'Akanyaru, qui forme la frontière entre le Ruanda et l'Urundi.

(4) La femme du Roi est appelée Umwamikazi ou simplement Muka-Rudahigwa, etc. L'épouse du Roi actuel se nomme Nyiramakomare.

doit la faire aussi à sa mère. Elle intervient dans les procès, la distribution des terres, des troupeaux, etc. Le Roi et sa mère portent ensemble le nom d'*Abami*. La présence continuelle de la reine-mère à côté de son fils est essentielle (1), et si le Roi perd sa mère, il lui sera donné une mère officielle. La mère du Roi porte un nom spécial qui est le même que celui de son fils, sauf quand celui-ci s'appelle Mutara, et que même les familiers de la cour ne peuvent lui donner (2). On rend à la Mwamikazi les mêmes honneurs qu'à son fils : battements des mains trois fois répétés (*gukoma mumashyi*). Après la mort du Mwami (3), sa mère ne joue plus aucun rôle officiel.

3. Le tambour sacré.

L'origine du *Kalinga* remonterait à Ruganzu Ndoli. Pendant que celui-ci, qui n'était pas encore roi, luttait contre le Karagwe (Uganda), les Abakongoro du Kivu attaquèrent le Ruanda et tuèrent le Mwami Ndahiro Chyamatara, père de Ndoli.

En revenant de la guerre, ce dernier s'arrêta à Busigi (territoire de Biumba), où un riche propriétaire, appelé Minyaruka, offrit un superbe tambour au glorieux vainqueur.

Le *Kalinga* est le symbole même de la royauté (4).

---

(1) Kankazi, mère de Rudahigwa Mutara, réside sur la colline Shyogwa dans le Marangara. Cette mesure a été prise par le gouvernement belge, qui, se souvenant du rôle néfaste joué par Nyirayuhi auprès de Musinga, a voulu empêcher la mère du Roi actuel d'exercer une trop grande influence politique.

(2) La mère de Yuhi Musinga, Kanjogera, portait le nom royal de Nyirayuhi. Celle de Mutara Rudahigwa, Kankazi, s'appelle Nyiramavugo.

(3) Ou plutôt, comme disent les Banyarwanda, « quand il remet son tambour », car il est interdit de dire que le Roi est mort.

(4) Les Banyarwanda disent : *Kalinga ibuze, nta Mwami* (litt. : le tambour fut brûlé, il n'y a pas de roi). Il convient de ne pas prendre ce proverbe au pied de la lettre. En effet, les gens du Ruanda disent, d'autre part : *Hagum'Umwami ingoma irabazwa* (litt. : trouvez le Roi [chose importante], le tambour [chose accessoire] n'est que du bois).

Il porte suspendus aux cordes qui le tendent les *ibikondo*, attributs virils des principaux ennemis vaincus et tués par les rois du Ruanda, et est, de plus, régulièrement aspergé du sang des victimes immolées pour la consultation des augures. On rend au *Kalinga* des honneurs vraiment royaux; on ne le fait pas résonner, mais les autres tambours retentissent en son honneur (1). Il est placé dans la hutte appelée *rwimiringa* (litt. : maison des objets de cuivre) (2), construite à l'intérieur du *boma* du Roi et où sont conservés les trophées de guerre. Le Kalinga est gardé jour et nuit, car il est l'emblème de la grandeur des rois du Ruanda.

4. La Cour du Mwami.

A Nyanza, résidence royale (*ibgami*), se pressent en foule des gens de toute importance faisant leur cour ou venant entretenir le Mwami des affaires de leur région : manants Bahutu ou même Batwa espérant obtenir un quelconque avantage du Mwami ou de sa mère, dignitaires de rang et de rôle divers, serviteurs des deux sexes (3).

5. Le Conseil des Ministres.

Dans les circonstances graves : guerre, famine, le Mwami a l'obligation de convoquer les grands chefs (*abatware b'intebe*) en conseil (*inima*). Les devins (*abapfumu*) consultent alors les oracles et d'après leur réponse indiquent la décision à prendre.

---

(1) *Kulamutsa*, saluer (le Roi). On les bat en effet chaque matin quand le Roi sort de ses appartements pour commencer sa journée d'homme public.

(2) Kalinga = tambour royal; Karinga = petit objet de cuivre.

(3) Ces charges et emplois ont été décrits minutieusement par le R. P. Pagès dans son beau livre : *Un Royaume hamite au centre de l'Afrique* (éd. I. R. C. B., Bruxelles, 1933). Cet ouvrage constitue un véritable monument d'un prix inappréciable pour la connaissance du Ruanda et de son peuple. Nous ne pouvons mieux faire que d'inviter le lecteur à s'y reporter pour tout ce qui concerne l'organisation de la Cour royale.

1: Vanhove FO42 Rundi

6. Les « Intore ».

Le prestige du Mwami veut qu'il possède une troupe d'*Intore* qui constituent en quelque sorte un corps de pages. Leur création remonte au Mwami Ruganzu. Ils s'appelaient alors les intrépides (¹). Les intore sont les fils des chefs d'intebe et d'abachibiri ainsi que des abagaragu du Mwami. Un père qui n'enverrait pas son enfant à la cour du Roi pour devenir intore ferait croire qu'il n'aime pas le Mwami et il lui en cuirait. C'est généralement quand ils sont ingimbi (vers l'âge de dix ans) que les jeunes garçons sont amenés à Nyanza, où ils restent jusqu'à l'âge d'homme. Ils apprennent à se battre, à sauter, à danser. En même temps, ils font leur éducation politique, apprenant les traditions légendaires et les coutumes du pays ainsi que les règles de courtoisie. Les intore campent sur une colline non loin de la résidence du Mwami et ils se réunissent le matin et le soir pour se livrer à leurs exercices.

A l'occasion des fêtes, les intore revêtent un costume spécial. Ils ont alors les reins ceints d'une peau de léopard (*inkindi*) et portent autour de la tête un bandeau (*umugara*) orné de poils d'*inkomo* (singe noir à collerette blanche dit Colobus), retenu par des *imirota* passant le long des joues. Ils ont un collier (*igitako*) au cou et d'autres en forme de baudrier (*inzibanye*). Ils dansent en tenant un arc (*umuheto*) d'une main, une lance (*ichumu*) de l'autre; des grelots de fer (*inzogera*) sont attachés à leurs chevilles.

7. Les « Inyambo ».

Le Ruanda peut être appelé *Igihugu chy'inka n'ingoma* (le pays de la vache et du tambour royal). Le bétail bovin, qui constitue la principale richesse des Batutsi, y est soigné avec un amour qui confine à la vénération.

(¹) *Ibisumizi*, de *gusumira*, enlever de force.

Les traditions légendaires attribuent à Nyiraruchyaba, fille de Gihanga, l'introduction du bétail au Ruanda. Un jour que celle-ci était allée couper du bois, elle remarqua des taches blanchâtres sur le sol. Ayant grand'soif et ne trouvant pas d'eau à proximité, elle prit son chalumeau et but le liquide blanc. Trouvant ce breuvage délicieux, elle voulut savoir d'où il provenait. Elle s'avança dans la forêt et rencontra une bête à cornes qui perdait par ses mamelles un liquide identique à celui qu'elle venait d'absorber. Gihanga étant tombé gravement malade sur ces entrefaites, elle lui apporta du liquide blanc. Le patient le but et guérit rapidement. Il demanda à sa fille la provenance du médicament et celle-ci lui amena la bête. La vache fut appelée *ingizi* (de *kugira neza :* bien guérir). C'est depuis ces temps que les Banyarwanda ont une telle vénération pour le bétail bovin.

A côté du bétail ordinaire (*inkuku*), le Mwami possède des troupeaux de vaches sélectionnées minutieusement qui, sans être précisément l'objet d'un culte comme en connut l'ancienne Egypte, sont entourées d'une sollicitude particulière et figurent au premier rang dans toutes les fêtes. Ce sont les *Inyambo* [1].

L'origine des *Inyambo* remonte au Mwami Yuhi Mazimpaka. Ce Roi choisit de belles vaches hautes sur pattes, aux longues cornes, à la robe d'un brun foncé luisant (ibihogo), et leur adjoignit un jeune et vigoureux taureau. Ce troupeau sélectionné fut mis à l'écart dans la province du Rukoma, près de la rivière Nyabarongo. Ces vaches se multiplièrent et l'on continua à choisir parmi elles les plus beaux sujets. Sous le Mwami précédent, Yuhi Musinga, les *Inyambo* étaient divisés en deux troupeaux seulement appelés l'un *agakanda*, l'autre *indoha*. Musinga

---

[1] Le mot « Inyambo » désigne une bête, un troupeau ou l'ensemble des troupeaux.

en ajouta un troisième et leur donna les noms respectifs d'*Inyuba hilo* (les respectables) ou troupeau de Gihanga, *Inshya* (les nouvelles) ou troupeau de Kigeri Ndabarasa, qui comptait un taureau remarquable nommé *Rushya*; enfin *Ingabe* (les dominatrices), ou troupeau de Kigeri Rwabugiri.

Les trois troupeaux réunis furent appelés *Insanga*. A la nouvelle lune de juin, ils étaient conduits processionnellement chez le Mwami, au milieu des danses et des cris d'allégresse (*gukura gichurasi* : litt. : enlever le mois de mai) [1].

En tout temps, un taureau appelé *Rusanga* et cinq vaches de chacun des trois troupeaux *Insanga* se trouvaient dans un enclos spécial à l'intérieur du boma de Musinga, et le Roi venait souvent les caresser et leur parler affectueusement.

Les Inyambo séjournent maintenant dans la province de Buganza, pays de beaux pâturages et de collines mollement ondulées, parce que ce sont des bêtes délicates qui ne supporteraient pas le climat des hautes altitudes. Le Mwami remet ses troupeaux à l'umutware w'intebe; celui-ci les confie à son tour à un chef de colline ou à de simples Batutsi qui, bien que dépourvus de commandement, sont d'origine plus noble que certains chefs, et ainsi sont particulièrement qualifiés pour veiller sur ce bétail de choix.

Les Inyambo sont des animaux de grande taille, hauts sur pattes, ayant le fanon moins développé que le bétail ordinaire, plus de coffre, le flanc long, la croupe anguleuse, maigre et sèche. Les cornes, démesurément longues, atteignent souvent près de un mètre soixante-quinze; elles sont disposées en forme de lyre ou de croissant; l'écartement entre les pointes peut être parfois de deux mètres et

---

[1] Le mois de mai, au cours duquel, suivant la tradition, le Mwami Gihanga était mort, était considéré comme un temps de deuil. Il était alors interdit de se marier.

même plus. La robe est rouge vif (igaju), de couleur froment (igitare), mais surtout brun foncé (ibihogo).

Les Inyambo rentrent au kraal tous les soirs et sont toujours littées, tandis qu'il en est rarement ainsi pour le bétail ordinaire, même chez les riches propriétaires.

Elles ne sont pas traites comme les vaches ordinaires. On ne leur prend chaque jour que la quantité de lait nécessaire à leurs gardiens bahutu. Quant à celles qui ont un veau, leur lait est réservé aux jeunes animaux. Le produit des Inyambo est par le fait même inyambo. Même la progéniture des vaches ordinaires peut le devenir.

Si dans un troupeau d'inkuku se trouve une génisse dont les caractéristiques sont semblables à celles des Inyambo, les Banyarwanda font saillir cette génisse par un taureau inyambo. Le veau né de ce premier croisement porte le nom d'*imilizo*. Si les éleveurs jugent que les qualités d'inyambo se retrouvent dans cette bête, ils la font également saillir par un taureau inyambo et ce produit est alors considéré comme étant digne d'entrer dans le troupeau des Inyambo.

Les femelles inyambo ne sont jamais abattues ou vendues pour quelque motif que ce soit : malformation ou stérilité, par exemple; elles meurent toutes de maladie ou de vieillesse. Pour les mâles, il n'en va pas de même; quand ils sont devenus adultes, les meilleurs sont conservés pour la reproduction; les autres sont vendus, tués ou placés dans des troupeaux ordinaires. La viande des taureaux abattus et des vaches mortes est consommée ou vendue par les gardiens.

La castration n'existe pas; elle est même interdite par la coutume.

Les Inyambo sont conduites chez le Mwami à l'occasion des fêtes et des réjouissances publiques. Elles sont escortées par le Mututsi, chez qui elles sont en pension, et

par leurs gardiens. Pour la circonstance, la plus belle bête (*inyamibwa*) porte sur le front un ornement de perles (*amaraba*), à la base de chacune de ses cornes trois fils de perles (*amashyongoshyo*) et aux pointes, des touffes de fibres de bananier (*amakamba*); une lanière couverte de perles rouges et noires lui entoure le cou; enfin au bout de la queue sont attachées des touffes de fibres de palmier portant le nom d'*ubuhivu*. Six vaches portent un ornement de perles blanches (*inigi*) entre les cornes et au cou. Deux autres ont deux inigi et en outre un collier de perles plus long que l'inigi appelé *imiheja*. Enfin, le reste des Inyambo a simplement une touffe de fibres à la queue.

Arrivés à Nyanza, les Inyambo défilent devant le Mwami pendant que les gens de leur escorte poussent des cris de joie (*urwamu*), agitent des bâtons (*guchyur' inka :* litt. : faire rentrer le bétail) et vantent les qualités des Inyambo. Puis ils font aligner celles-ci (*kumulika Inyambo :* litt. : montrer les Inyambo) et ils renouvellent leurs éloges.

Les pages intore se groupent alors et dansent devant le troupeau (*kwinikiza*). La fête se termine par des libations de bière de banane offerte par le Mwami à tous ceux qui ont participé à la présentation des Inyambo. Si le Mwami est satisfait de la façon dont sont traitées les Inyambo, il donne des ingororano au chef de la province où les troupeaux séjournent ainsi qu'aux gens de ce dernier.

8. Mort du Roi.

Quand le Mwami sent sa fin prochaine, il fait venir auprès de lui ses officiers de bouche (*abanyagikari*), des notables (*abatoni*) qu'il aime particulièrement et quelques gardiens des coutumes (*abiru*). Il leur fait connaître ses dernières volontés et leur rappelle le nom du successeur qu'il s'est choisi.

Le Roi mort, les abiru se rasent la tête, enlèvent leurs bracelets et mettent un vêtement en écorce de sycomore. Puis il choisissent huit Batutsi ou Bahutu appartenant aux familles des Abatsobe, Abagunga ou Abanyargona, qui sont chargés du soin des funérailles (*abanyamugogo* : litt. : hommes à la grande bûche). Le cadavre est habillé comme de son vivant, roulé dans une natte et placé dans un *ingobyi* (1) reposant sur une claie surélevée (*urutara*), installée dans une des huttes du boma royal (2).

Pendant huit jours, les veilleurs entretiennent un grand feu sous la claie pour faire boucaner le cadavre. Dans le but d'activer l'opération, le cadavre est retourné matin et soir, et pour empêcher la peau de crever, les veilleurs l'enduisent de beurre de temps à autre.

A l'aube du neuvième jour, le corps est levé par les veilleurs, accompagnés de quelques abiru, et est caché pendant la journée dans le rugo d'un Munyarwanda. La nuit venue, la petite troupe reprend sa marche. Voyageant seulement la nuit, le cortège funèbre arrive ainsi à la colline Rutare, près du lac Mohasi, terminus du voyage. Le propriétaire de chaque rugo où les porteurs ont passé la journée avec le cadavre doit boire le gihango (3), dont l'absorption le ferait mourir infailliblement s'il osait révéler ce qu'il a vu.

Le sommet de la colline Rutare est couronné d'arbres,

---

(1) Panier allongé en forme de nacelle dans lequel sont portées les personnes de qualité.

(2) Jadis, à la mort du Roi, deux nobles batutsi étaient égorgés; c'est ce qui s'appelait : *gusegurir Umwami* (litt. faire l'oreiller du Roi). Lors du décès de l'Umugabekazi, deux grandes dames batutsi étaient pareillement mises à mort.

(3) Ce gihango est différent de celui dont il a été question dans le Pacte du sang, p. 17. C'est un breuvage boueux dans lequel des herbes médicinales ont macéré et sont mélangées à de la cendre de bois et de la poudre de la corne d'un taureau qui en a tué un autre. Les Banyarwanda croient que cette potion tue celui qui ne dit pas la vérité ou trahit un secret d'Etat (cf. également la Procédure, p. 120).

1: Vanhove FO42 Rundi

vestiges d'une ancienne forêt. C'est là que se trouve le cimetière des Rois et des Reines. Les abanyamugogo y construisent une hutte, creusent une tombe et y enterrent le roi avec ses armes. La hutte est fermée à l'aide de madriers et entourée d'un enclos d'épineux pour empêcher les fauves de s'y introduire. Tout près de là, les veilleurs se bâtissent des habitations. Ils y séjournent pendant deux ans et sont nourris pendant ce temps par les gens des environs. Puis ils retournent chez eux après être passés par Nyanza, où ils sont comblés de cadeaux. Mais le Mwami ne peut les voir, car il mourrait dans l'année s'il apercevait ceux qui ont veillé et porté le corps de son père. Pour la même raison, les abiru qui ont accompagné ceux-ci à Rutare ne peuvent plus jamais venir à la cour de Nyanza. La croyance existe également que de l'épaule droite du Mwami défunt sort un ver (*urunyo*) qui, placé dans une cruche de lait, y grandit et devient un léopard qui ne tue que ceux qui sont méchants et injustes.

A la mort du Mwami, tout travail est suspendu pendant huit jours. Deux mois durant, les taureaux sont retirés des troupeaux, les enfants du Roi ne peuvent avoir de rapports conjugaux; sans que ce soit une obligation pour eux, les Banyarwanda agissent de même.

Le décès de l'Umugabekazi donne lieu aux mêmes cérémonies et interdictions, mais légèrement simplifiées.

9. Succession au trône.

Le Roi du Ruanda appartient toujours à la famille des Abanyiginya. Ses femmes [1] sont choisies surtout dans les clans des Abega et des Abakono.

Parfois, le Souverain régnant désigne ouvertement

---

[1] Le Roi peut avoir quatre femmes légitimes dont seuls les enfants sont, en théorie, admis à succéder à leur père, et autant de concubines qu'il désire.

1: Vanhove FO42 Rundi

comme son héritier même l'un de ses plus jeunes fils; il en est ainsi si celui-ci est reconnu par les devins comme devant être un Roi « magique », chargé de vaincre une épidémie, par exemple (*Umwami w'imitsindo*). C'est ainsi que Rwabugiri ne conféra le pouvoir à son fils aîné Rutalindwa, qui prit le nom de Mibambwe, que pour le temps de la minorité de Musinga.

Le plus souvent, le nom du successeur du Roi est indiqué secrètement par ce dernier aux abiru, qui proclament ensuite l'élu.

Comme le droit d'aînesse n'existe pas, les révolutions de palais sont fréquentes à la mort des rois. Il y a lutte entre les épouses royales qui ont des enfants mâles, surtout lorsqu'elles appartiennent à des familles puissantes, afin de se hisser ainsi que leur fils au pouvoir suprême et de faire octroyer aux membres de leur famille des dignités, des terres et des troupeaux. C'est une révolution de ce genre qui, peu après la mort de Rwabugiri, renversa Mibamwe et donna le Ruanda à Musinga et à sa mère Kanjogera.

10. Avènement du Roi.

Deux jours après la mort du Mwami, son successeur est proclamé Roi par les gardiens des coutumes. Après deux mois de deuil, la foule des chefs, grands et petits, et de leurs abagaragu se rend à Nyanza. Les Inyambo y sont amenées également. Pendant deux jours, la joie la plus débridée se donne libre cours au milieu des beuveries, des danses et des jeux. Le nouveau Roi se montre à son peuple, en habits d'apparat, le front ceint d'une couronne composée de fils de perles blanches (*ikamba* ou *igisingo*) retombant sur le visage, et il reçoit de ses sujets, en don d'avènement, des indabukirano. Puis les gens retournent chez eux et le nouveau règne commence.

Si le fils du défunt est trop jeune pour régner effecti-

vement, la mère et généralement les oncles maternels du petit prince exercent la régence [1]. De même l'Umugabekazi participe aux réunions du conseil des ministres jusqu'à ce que son fils ait atteint quinze ans environ, âge auquel il peut exercer le pouvoir suprême. Naguère encore, les oncles maternels du Mwami, profitant de sa jeunesse et de leur situation privilégiée, avaient souvent recours à la violence et à la ruse pour arrondir leurs provinces ou augmenter le nombre de leur troupeaux.

11. Divisions politiques.

Les traits caractéristiques de la féodalité se retrouvent au Ruanda. L'émiettement du pouvoir et des biens, l'octroi par le Mwami à ses sujets d'avantages et de commandements toujours révocables entraîne une grande incertitude dans la condition de chacun et permet au Roi d'asseoir sûrement sa domination sur le pays.

Le Ruanda est divisé en provinces (*intara*) placées sous le commandement d'un chef unique (*umutware w'intebe*) [2]. Cette règle souffre des exceptions. Dans le Bgishaza, par exemple, deux autres chefs se trouvent placés sous les ordres de l'umutware w'intebe : l'*umutware w'ubutaka*, qui exerce son autorité sur les terres et les Bahutu, et l'*umutware w'umukenke*, qui gouverne les pâturages, les troupeaux et les Batutsi. Les *abatware* sont nommés par le Mwami. Ils n'appartiennent pas nécessairement aux premières familles du pays. En effet, un simple Mututsi, voire un Muhutu, peut devenir chef grâce à la faveur royale qui récompense son intelligence et son dévouement.

---

(1) Signalons cependant que Ruganzu Bwimba, avant de partir en expédition contre les gens du Gissaka, guerre au cours de laquelle il fut tué, désigna comme régent de son fils Kyilima Rugwe, un Umunyginya, Chyenge, et non un de ses beaux-frères.

(2) *Intebe*, siège-tabouret.

Jadis, au temps des guerres, les abapfumu du Mwami choisissaient parmi les abatware w'intebe l'*umugabe w'ingabo* (chef de l'armée). La paix conclue, celui-ci redevenait ce qu'il était auparavant.

Il est des abatware qui possèdent en propre des collines dans d'autres provinces [1].

Les *abachibiri*, qui ne possèdent qu'une partie de province, dépendent, eux aussi, directement du Mwami, qui leur a donné leurs terres.

Les *ibisonga* sont placés à la tête d'une ou plusieurs collines. Ils sont les surveillants des abatware et des abachibiri et souvent aussi leurs délateurs auprès du Mwami. Des femmes peuvent être ibisonga. Ce sont, par exemple, des abaja du Mwami (servantes-maîtresses) qui, en récompense de l'octroi de leurs faveurs, reçoivent une colline. Mais le cas le plus fréquent est celui d'une veuve d'igisonga sans enfant mâle qui, faisant sa cour chez le Roi, obtient de continuer à gérer la colline détenue par son mari [2]. Chaque chef de colline a sous ses ordres un factotum appelé *umuhingisha*, qui désigne et délimite les champs demandés au chef par les Bahutu et peut même trancher les palabres en l'absence de l'igisonga. L'*umunyabigega* est hiérarchiquement subordonné au précédent. C'est le chef des greniers (*ibigega*) du chef dont il surveille les cultures.

Les *abanyabikingi* ne commandent qu'une partie, un éperon de colline. Nommés directement par le Mwami, ils jouent auprès des ibisonga le rôle de surveillant, voire d'espion pour le compte du Roi.

---

(1) Depuis 1924, dans le but d'unifier les commandements des chefs de province, le gouvernement s'est attaché à persuader les abatware de procéder à des échanges de collines.

(2) Citons, par exemple, Nyirarigweni, veuve de Nyantabana, grand chef de province, remplacé actuellement par Rwabutogo, qui commande la chefferie Buganza dans le territoire de Nyanza.

12. Succession du commandement.

Comme la dignité royale, la charge de chef de province est héréditaire. Elle est attribuée par le chef à celui de ses fils qu'il juge le plus digne de lui succéder. Il se peut que celui-ci devienne en même temps chef du clan, mais il n'en est pas toujours ainsi [1]. En effet, la famille et le clan sont des entités sociales distinctes des unités politiques.

Le nouveau chef doit venir annoncer la mort de son père au Mwami en lui amenant une vache *yo kubika* (litt. : qui annonce la mort). D'autre part, il reçoit de ses gens et de ses amis des indabukirano.

Les chefs autres que les abatware sont nommés par ces derniers et confirmés dans leurs fonctions par le Mwami.

13. Impôts et corvées.

A côté des obligations civiles découlant du contrat d'ubugaragu, il en est d'autres qui sont dues aux différents chefs comme tels.

A. — Obligations dues au chef de colline.

Les Bahutu qui ne sont pas abagaragu de l'igisonga doivent apporter à celui-ci, une fois par an, un grand panier de sorgho (*urutete*) et un petit panier de haricots (*ipfukire*). Naguère encore, ils étaient tenus également de cultiver les champs du chef (*ubuletwa* ou *uruharo*) [2], de construire et d'entretenir chacun une partie du rugo du chef (*kubak'inkike*) et de lui servir de messager (*gutumwa*). Enfin l'igisonga garde un groupe de cinq

---

[1] Cf. exemple cité dans : Etat des personnes, le Chef de famille et de clan, p. 10.

[2] En 1954, cette coutume a été modifiée par les autorités, pour améliorer le sort du Muhutu. Celui-ci ne fournit plus actuellement que deux jours de travail sur sept.

hommes (*intizo*) pour ses besoins personnels et met le reste à la disposition du chef de province, qui les utilise soit à la construction ou à la réparation des ingo du Mwami et des siens, soit pour des travaux de routes, etc.

La corvée de kubak'inkike et de gutumwa incombe également aux simples Batutsi qui ne sont pas clients du chef [1].

Les Bahutu et les Batutsi abagaragu du chef ne doivent pas l'ubuletwa. On les appelle *ibyanga mibyizi* (litt. : ceux qui refusent le travail). Mais ils doivent apporter l'urutete et l'ipfukire. De plus, la corvée de kubak'inkike et de gutumwa leur incombe également [1], mais en vertu du contrat d'ubugaragu.

A tour de rôle, tous les Bahutu doivent veiller chaque nuit dans le rugo de l'igisonga (*okulalira*) et fournir au chef le bois nécessaire au chauffage et à la cuisine.

B. — **Obligations dues aux chefs de province et abachibiri.**

Les Bahutu qui ne sont pas abagaragu leur doivent l'urutete, l'ipfukire et également l'ubuletwa, deux jours sur sept. Quand l'exécution de cette dernière prestation est difficile, voire impossible, vu la distance, les Bahutu la remplacent en apportant le produit de leurs cultures (sorgho, petits pois, haricots, éleusine, colocasses). Cet impôt porte le nom d'*ibihunikwa* (litt. : ce qui est mis au grenier).

Les clients Bahutu ne sont astreints qu'à l'uretete et à l'ipfukire.

Les Batutsi ordinaires ont l'obligation de kubak'inkike, gutumwa et *kubyukurutsa*, c'est-à-dire de donner des vaches dites *imbyukuruke* [2].

---

[1] Les Batutsi se déchargent évidemment de ces obligations sur leurs serviteurs ou leurs clients.

[2] Cf. les Biens, Propriété du bétail, p. 58.

Ceux qui sont abagaragu doivent, sauf dispense, apporter au chef l'uretete et l'ipfukire.

C'est aux ibisonga qu'est dévolu le soin de prélever dans chaque umulyango les impôts en nature dus respectivement aux abatware et abachibiri.

Les habitants du Nduga et du Marangara, provinces qui sont l'apanage du Mwami actuel, doivent l'impôt à celui-ci en sa qualité de chef de province et à lui seul.

C. — Obligations dues au Mwami.

Elles portent le nom générique d'*ikoro ry'Umwami*.

Les Bahutu ont à apporter au Roi l'*ikoro ry'ubutaka* (litt. : impôt de la terre), comprenant l'urutete et l'ipfukire, sur lesquels les chefs prélèvent une dîme (*umusogongero*). Ceux qui sont ses clients directs sont astreints en plus soit à l'ubuletwa soit à l'ibihunikwa.

Les Batutsi sont tenus de kubak'inkike, gutumwa et kubyukurutsa. Ceux qui sont abagaragu du Mwami doivent encore, à moins d'en être dispensés, fournir l'urutete et l'ipfukire. Les impôts en nature destinés au Mwami sont prélevés par les chefs chez leurs administrés.

Les chefs de province ont l'obligation de séjourner à Nyanza un temps plus ou moins long pour y faire leur cour, et le Roi ne manquera pas de faire attendre parfois plusieurs mois avant de congédier ceux dont il est mécontent. Ils sont encore tenus d'amener au Mwami du bétail, notamment des inkuke (1), un indwanyi (2), une ibiniha (3) et des intorwa (4).

Le Roi a également droit à un certain pourcentage sur le produit des chasses (*gusogongera*). Jadis, le Mwami prélevait également un certain nombre de vaches (*imi-*

(1) Cf. les Biens, Propriété du bétail, p. 50.
(2) Cf. idem, p. 50.
(3) Cf. idem, p. 51.
(4) Cf. idem, p. 51.

nyago) sur celles qui provenaient des razzias opérées au cours des guerres.

Certains indigènes ne sont tenus qu'à l'*ingabo*. C'est le cas des artisans, des chasseurs, des agriculteurs qui fournissent au Roi et à la Cour des arcs, des flèches, des serpes, des nattes, des peaux, des tambours, du miel, de l'hydromel, etc.

∴

Les Batwa ne sont astreints à aucune obligation fiscale proprement dite à l'égard des chefs et du Roi. Les potiers doivent uniquement fournir des pots et des cruches à la Cour et porter le Mwami, sa femme et l'Umugabekazi en ingobyi. Ils sont aussi les exécuteurs des hautes œuvres du Roi. Les prestations des chasseurs consistent en ivoire, peaux et bois odorant.

∴

Des sanctions pénales sont prévues en cas de non-exécution de ces obligations. Les chefs de colline et de province ainsi que le Roi font bâtonner les Bahutu et prennent des vaches aux Batutsi. Jadis, le Mwami ordonnait même parfois à ses bourreaux batwa de couper les oreilles (*kubiha*) aux contribuables bahutu défaillants.

∴

Un droit de péage (*ihoro*) est perçu par les passeurs d'eau. Pour le passage d'une rivière plus importante, telle que la Nyawarongo, la taxe est versée au chef de province, qui en ristourne une partie aux bateliers.

Les commerçants doivent également verser un ihoro aux chefs dont ils traversent le territoire.

14. Sociétés secrètes.

La secte dite Nyabingi (ou Bibeko) tire son origine du nom de la reine du Ndorwa, tuée par les guerriers du Mwami Rwabugiri, d'où l'hostilité marquée aux Batutsi et au pouvoir royal par les descendants de la Souveraine. De plus, ceux-ci sont devenus des Bahutu par leurs alliances avec des femmes du peuple. Ce sont là autant de raisons pour que les « Babeko » aient été considérés comme des sauveurs par les Bahutu, surtout dans le Nord du Ruanda, où la résistance sinon l'hostilité aux Batutsi et à leur administration s'affirme bien plus que dans le restant du pays.

Du Ndorwa, où elle a pris naissance, la secte s'est étendue au Buberuka, Mulera, Bugoyi et même au Buganza et au Bwanachyambwe. Les propagandistes sont surtout des femmes qui se disent possédées par l'esprit de Nyabingi. Toute femme Nyabingi dispose d'un certain nombre d'*abagirwa* qui sont ses serviteurs, mais qui se substituent souvent à elle pour exploiter les naïfs Bahutu en exigeant d'eux des présents soi-disant destinés à honorer Nyabingi et à la remercier de les protéger contre les Batutsi, voire contre les Européens.

La secte Nyabingi exerce donc une action néfaste, non seulement parce qu'elle entretient le Muhutu dans de vaines croyances et qu'elle abuse de sa crédulité en exigeant de lui des cadeaux importants (corbeilles de pois, de haricots, de sorgho, moutons, chèvres, taurillons, génisses), mais surtout parce qu'elle prêche le respect d'une autorité indépendante du Mwami, excite la haine contre les chefs Batutsi et aussi contre le pouvoir occupant.

1: Vanhove FO42 Rundi

15. Classes sociales.

Les Bahutu dominés par les Batutsi et auxquels s'ajoutent quelques groupes de Batwa forment le peuple des Banyarwanda.

Mais les Bahutu comme les Batutsi se subdivisent en plusieurs catégories qui portent chacune un nom spécial.

Un Muhutu pauvre, n'ayant qu'un misérable lopin de terre, s'appelle *umutindi*. Si son dénuement est moins grand, il porte le nom d'*umugabo*. Un *umukungu* est un homme bien nanti, possédant plusieurs champs et de nombreuses têtes de bétail.

De même, selon leur degré de richesse progressif, les Batutsi seront *umukene*, *umukire*, *umutunzi*, *umutware*. Les abatware forment une aristocratie restreinte appelée *imfura*.

Comme nous l'avons vu, la faveur du Mwami ou des grands chefs peut avoir pour effet d'améliorer sensiblement la situation sociale même d'un simple Muhutu. D'autre part, un chef important peut être réduit à la condition la plus misérable s'il a déplu au Roi ou s'il est maudit par son père.

Les Batwa, eux, sont tous mis sur le même pied et sont universellement méprisés par les Bahutu comme par les Batutsi.

Jadis, les guerriers ennemis étaient le plus souvent massacrés. Les femmes nobles réduites en servitude étaient considérées comme des Batutsikazi; les femmes bahutu devenaient des *abaja* (servantes). Les fillettes suivaient le sort des femmes. Quant aux garçons, ils étaient traités comme des Bahutu [1].

---

[1] Cf. aussi : Etat des personnes, la Famille et le Clan, p. 7; Mariage, p. 19; Naissance et Filiation, p. 36; Gouvernement et Administration, nationalité, p. 82; Droit de la guerre, p. 106.

Les guerriers ne constituaient pas une caste à part. Tous les hommes valides, Batutsi comme Bahutu, devaient prendre les armes quand le pays était menacé.

De même, les devins, sorciers, faiseurs de pluie, pas plus que les nombreux fonctionnaires de la Cour de Nyanza ne forment pas des castes fermées.

16. Droit de la guerre.

Le Ruanda a connu jadis de grandes guerres avec tous les pays voisins : Karagwe, Gissaka, Kivu et Urundi notamment.

Quand les gardes-frontières (*abanyarugerero*) remarquaient des mouvements de troupes suspects, ils avisaient le Mwami. Celui-ci réunissait le conseil des ministres et l'on procédait à la consultation des augures. Si ceux-ci étaient favorables, la guerre était décidée. Un intumwa était envoyé à la limite des deux pays et, en criant de loin, annonçait l'ouverture des hostilités. Les guerriers banyarwanda, batutsi et bahutu, combattaient ensemble dans des corps de milices régionales. Le chef suprême de l'armée choisi pour le temps de guerre parmi les abatware portait le titre d'*umugabe w'ingabo*. Au combat, les troupes étaient précédées d'*abahenyi*, Bahutu qui entièrement nus vociféraient des insultes à l'adresse de l'ennemi.

Le Mwami mandait un émissaire pour sommer l'ennemi de se rendre. Si celui-ci consentait, un envoyé accompagnait celui du Ruanda, venait notifier la reddition au Mwami, puis retournait dans son pays.

Les prisonniers mâles étaient généralement massacrés; leurs femmes et leurs enfants étaient emmenés au Ruanda. Le butin, consistant surtout en bétail, était partagé entre les guerriers banyarwanda, qui devaient en remettre une partie au Mwami (*iminyago*).

Le Roi réunissait alors à nouveau son conseil et proclamait la fin de la guerre.

Voleur de bétail empalé.

Cliché du Ministère des Colonies.

FO42 Rundi

Un des nombreux tribunaux indigènes institués depuis l'occupation belge.

Cliché du Ministère des Colonies.

Cp. 1069

1: Vanhove FO42 Rundi

SECTION VI.

La Justice.

CHAPITRE PREMIER

DROIT PENAL.

1. Vol [1] de vivres et de petit bétail.

a) Flagrant délit (*mushyuho*).

Celui qui surprenait le voleur dans son rugo pouvait naguère encore le tuer impunément, mais si la victime du vol ne parvenait pas à donner au voleur le coup mortel à l'improviste et si les antagonistes en venaient aux mains, le voleur devait être traduit devant le chef de colline. Aujourd'hui, celui-ci fait appréhender le coupable présumé par quelques-uns de ses hommes, qui le ligottent et l'enferment en attendant qu'il soit traduit devant son tribunal. Les parents ou le shebuja du voleur peuvent toutefois offrir un présent (*inchamugozi :* litt. : qui coupe la corde) au chef pour qu'il soit délié. Au tribunal, ils proposent au volé de lui verser l'*ingurano* (de *kugura*, racheter), indemnité qui n'est pas nécessairement de même nature que l'objet du vol; c'est ainsi, par exemple, que des houes peuvent être remises en cas de vol d'un panier de sorgho. Le volé réclame en plus l'*inchachyuho* [2] en vertu de la violation de son droit de propriété; elle consiste généralement en une houe.

---

[1] Le vol se dit : *ubujura* ou *ubyibyi*. Le mot *umujura* désigne le voleur en général. L'*umushimusi* est le voleur de bétail et l'*igisambo* celui qui dérobe des vivres, des instruments, etc.

[2] Littéralement : celle (la vache) qui coupe, délivre (le voleur) pour la brèche (faite dans le rugo).

Si le voleur est pauvre, il arrive qu'un homme riche indemnise la victime du vol, mais il exige en retour du voleur des prestations en travail.

Jadis, si aucune intervention n'avait lieu en sa faveur, le voleur devenait, même pour un temps plus ou moins long, l'esclave du volé (*umugaramu* = le racheté). Il était cependant bien traité par le maître et pouvait même, à sa libération, devenir son client.

b) **Vol non flagrant.**

Dans ce cas, le volé fait faire une enquête discrète par une personne qui ne peut donner l'éveil. Dès que celle-ci a recueilli des éléments d'information, elle prévient la victime du vol, qui aidée de parents ou d'amis, va reprendre son bien et même davantage, ou bien arrête le voleur ou encore avertit le chef, qui le fait appréhender. Le volé doit fournir au chef la preuve du délit (*igihanga* : litt. : la tête). Même si le volé s'est payé lui-même, le voleur doit lui verser l'*umunani* représentant huit fois la valeur du vol. Jusqu'au paiement complet de cette indemnité, le voleur reste enchaîné et est même frappé, à moins qu'il ne donne l'inchamugozi. En outre de l'imunani, il est condamné à payer l'inchachyuho.

*
* *

Le détrousseur de grands chemins (*umwambuzi*) est condamné à une peine corporelle et à rendre ce qu'il a pris.

Le Mututsi qui, par impossible, volerait des vivres ou du petit bétail serait condamné aux peines ordinaires et, châtiment terrible, il serait mis au ban de la société mututsi, car ce vol le dégraderait, le ravalerait au rang des Bahutu.

L'*umugambanyi* (indicateur, traître) ne vole pas lui-même, mais envoie des *abajura* (voleurs) pour commettre

le délit. Quant à l'*ichyitso*, c'est celui qui donne aux voleurs les renseignements qui leur sont indispensables. L'umugambanyi est dépouillé de ses biens, lié et frappé jusqu'à ce qu'il ait payé l'umumani, puis il est chassé de la colline et son rugo est détruit ou donné à un autre homme. Le châtiment de l'ichyitso est le même, excepté qu'il n'est pas tenu au paiement de l'umumani.

Celui qui a recélé une chose volée [1] est puni comme le voleur. Celui qui a dissimulé un voleur aux recherches mais qui prouve n'avoir pas participé au vol est lié et bâtonné sans plus.

2. Vol de gros bétail.

Le volé qui surprend le voleur « flagrante delicto » n'est plus autorisé aujourd'hui à le tuer. Qu'il s'agisse ou non d'un délit flagrant, le tribunal de province est seul compétent pour connaître de l'affaire. En ce qui concerne les peines, il importe de distinguer plusieurs éventualités.

Celui qui s'est emparé d'une ou plusieurs têtes de bétail doit restituer ce qu'il a volé. De plus il est contraint de présenter au tribunal huit bêtes (umunani) parmi lesquelles le volé peut choisir une vache *y'ichyuho*, parce que le voleur s'est introduit dans son boma sans son autorisation. Il doit enfin remettre à la victime du vol une vache *inguramaboko* (litt. : qui délivre les bras liés) pour acheter sa liberté.

Si le voleur a abattu ou vendu le bétail, il doit amener l'umunani pour permettre au volé d'y choisir autant de bêtes que celles qui lui ont été prises. De plus, il est obligé de donner une vache y'ichyuho et une inguramaboko. Le volé doit fournir au tribunal la preuve du délit (igihanga). Si par exemple le voleur a abattu une bête, il

---

[1] Le receleur n'est pas désigné par un mot spécial. Recéler se dit : *guhishira*, cacher en faveur de quelqu'un.

L. Vanhove FO62 Rundi

incombe à la victime du vol de montrer les cornes de la bête tuée.

Si le ravisseur ne possède pas d'autres bêtes que celles qu'il a volées, sa famille paie l'y'ichyuho et l'inguramaboko. Si elle ne possède pas de bétail ou refuse d'en donner, le chef de colline du voleur ou son shebuja paie pour lui, mais alors le voleur doit se racheter en travaillant pour celui qui est intervenu en sa faveur.

Si personne ne consent à payer pour le voleur, celui-ci est conduit devant le Mwami, qui demande à l'un des notables présents de le racheter, moyennant quoi le voleur s'acquitte de sa dette en travaillant pour ce chef.

Le Mututsi qui vole une tête de bétail est condamné aux peines ordinaires. Du temps du Mwami Rwabugiri, il arrivait même qu'il fût condamné à mort.

Le recéleur de bétail volé est puni comme le voleur; aussi peut-il être parfois dépouillé de tout son troupeau.

L'obligation prévue par la coutume non seulement de restituer mais de payer en plus l'y'ichyuho et l'inguramaboko n'a pas seulement pour but la réparation du dommage causé, mais vise de plus à punir sévèrement le délinquant pour lui inspirer une crainte salutaire.

Autrefois, il était fréquent qu'un chef razziât des troupeaux entiers. Il pouvait être condamné par le Mwami à rendre ce qu'il avait pris et à donner en supplément au volé un nombre plus ou moins grand de têtes de bétail. Le voleur était parfois aussi dépossédé de tous ses biens. Malheureusement, si l'auteur du vol était un parent ou un ami du Mwami, il arrivait souvent que le vol restât impuni.

Naguère encore, le voleur d'une vache appartenant aux troupeaux inyambo du Mwami était condamné à être empalé.

De même, un voleur de bétail pris pour la troisième fois perdait non seulement tous ce qu'il possédait, mais de plus était souvent condamné à mort.

3. Incendie.

L'incendiaire (*utwika*), après avoir été roué de coups, doit restituer la valeur de ce qu'il a détruit : Rugo, objets, vivres, etc. Sinon, il est dépossédé de son propre rugo et de tout ce qu'il contient au profit de la victime de l'incendie. Si l'incendie est involontaire, son auteur est condamné uniquement à des dommages-intérêts.

4. Coups et blessures.

Si les coups qui ont été portés ont entraîné des blessures, l'auteur des faits n'est condamné qu'à une amende (*ichyiru*) dont l'importance varie avec la qualité de la victime. C'est ainsi qu'un simple Muhutu messager ou umugaragu du Mwami peut recevoir tout un troupeau. En général un Muhutu ayant reçu des blessures se voit gratifié de l'*indwaza* (litt. : qui soigne), indemnité de soins consistant en une ou deux chèvres. Si l'auteur des coups est un Mututsi, il doit prêter une vache au Muhutu pour lui permettre de prendre le lait aussi longtemps que la bête peut en donner; le Muhutu reçoit un taurillon en pleine propriété quand il a rendu la vache.

5. Meurtre.

Les affaires de meurtre étaient de la compétence exclusive du Mwami au temps où il avait le droit de vie et de mort sur ses sujets [1].

Si le meurtrier (*gatozi*) et sa victime appartenaient à la même classe sociale, le Roi ordonnait l'exercice de la vengeance privée (*guhora* : venger — *kwikorera* : se venger), qui entraînait des conflits interminables entre familles et clans. Le Mwami pouvait toutefois faire retomber sur le meurtrier seul la responsabilité de son acte et les parents de la victime ne pouvaient alors recourir à la « vendetta ».

---

[1] Cf. Gouvernement et Administration, le Pouvoir royal, p. 87, note 1.

1: Vanhove FO42 Rundi

Si le meurtrier était un Muhutu et la victime un Mututsi, deux morts étaient exigées.

D'autre part, si un Muhutu avait été tué par un simple Mututsi, le recours à la vengeance directe était impossible, mais le Mwami pouvait abandonner aux parents de la victime un membre de la famille du Mututsi pour le tuer. Toutefois, si un Mututsi de quelque importance tuait un Muhutu, ni lui ni ses biens n'étaient inquiétés. Cette sentence inique n'indignait pas les indigènes, parce qu'elle état conforme au droit du pays et ils s'inclinaient devant elle.

Le droit de grâce n'existait pas. Le Roi avait toutefois la faculté d'arrêter la vengeance (*gucha inzigo :* litt. : couper la vengeance) et d'offrir la composition (wehrgeld) à la famille du mort, mais seulement si celui-ci était un Muhutu, car les Batutsi n'admettaient que la réparation par le sang. Pour que le Roi consentît à reconnaître à la famille de la victime le bénéfice de la composition, il fallait évidemment que le mort ait été un homme important, qu'il ait été, par exemple, umugaragu du Mwami. En exécution de la sentence, le meurtrier devait donner aux parents de la victime un nombre important de têtes de bétail, trente et même plus parfois.

Si une personne avait perdu la vie au cours d'un incendie allumé par une main malveillante, le coupable (ou quelqu'un des siens) était décapité par un membre de la famille de la victime.

Les *abalozi* (sorciers), accusés d'avoir causé la mort d'un homme par leurs maléfices, étaient aussi punis de la peine capitale. Si le meurtrier se réfugiait dans le rugo d'un chef, il trouvait là un asile inviolable. C'eût été en effet un manque de respect à l'égard de l'autorité que de tuer un homme chez le chef et les justiciers auraient pu être mis à mort par ce fait. Mais le chef amenait alors le meurtrier devant le Mwami.

1: Vanhove FO42 Rundi

6. Cas spéciaux.

Les affaires d'une exceptionnelle gravité étaient soumises obligatoirement au Mwami.

Le crime de lèse-majesté valait naguère encore la peine capitale à son auteur. Les bourreaux batwa étaient chargés d'exécuter la sentence par étranglement (*guhotora*), par la lance (*gutera inchumu*), par la bastonnade (*gukubita inkoni*), par la hache (*gukubita intorezo*). Le coupable pouvait être aussi précipité dans un gouffre situé dans le Bugessera (près de Nyanza), après avoir été étranglé [1], ou bien encore il était aveuglé à l'aide d'un fer rouge [2].

Les faiseurs de pluie (*abavubyi*) convaincus d'imposture [3] étaient noyés dans le lac Mugessera.

Les jeunes filles reconnues enceintes subissaient parfois le même sort.

7. Homicide involontaire.

A la chasse, il arrive qu'un traqueur ou un chasseur dissimulé dans un fourré épais soit confondu avec un gibier ou un fauve et soit tué par une flèche. Ces accidents sont réglés de la façon suivante :

Si une flèche, après avoir blessé une bête, tue un homme, la responsabilité du tireur n'est nullement engagée.

Si une flèche destinée à une bête manque son but et tue un homme qui avait pourtant signalé sa présence,

---

(1) Des Abanyiginya accusés d'avoir comploté contre le Mwami furent châtiés de la sorte.

(2) Un chef des environs d'Issave, appelé Kayijuka, eut les yeux brûlés pour avoir montré Nyirayuhi, mère du roi Musinga, à un missionnaire. A cette époque, la coutume du pays n'admettait pas, en effet, que les femmes nobles pussent être vues par des étrangers.

(3) En dépit de ce châtiment terrible, les faiseurs de pluie n'en continuaient pas moins à exercer leur métier dangereux, mais lucratif.

J. Vanhove FO42 Rundi

le tireur maladroit est considéré comme un meurtrier et le droit de vengeance est acquis à la famille de la victime. Toutefois, si le meurtrier peut faire la preuve que le signal n'a pas été fait par la victime, sa responsabilité est dégagée. De même, il peut plaider non coupable devant le tribunal du chef de province ou du Roi en faisant valoir, avec l'assistance de témoins, que par suite des cris, du grand nombre de signaux émis au même temps, il ne lui a pas été permis d'entendre le sifflement d'avertissement de la victime ou encore que celle-ci s'est déplacée après avoir lancé le signal convenu.

Si les déclarations du plaideur sont reconnues fondées, le tribunal déclare que la victime a péri par suite de son imprudence ou d'un accident dont le meurtrier ne peut être rendu responsable, et il met celui-ci définitivement hors de cause.

8. Imputabilité et responsabilité.

Sauf le cas où le coupable et la victime sont d'un rang social différent, la gravité de la peine infligée correspond « ne varietur » à une infraction déterminée et il n'est pas tenu compte de circonstances atténuantes ou aggravantes, sauf quand il s'agit de vol de denrées, auquel cas le juge doit s'assurer si le mobile de l'infraction est la faim ou une intention doleuse.

Les enfants qui commettent un délit sont fouettés. Quant aux délinquants privés de raison, ils sont enfermés et entravés.

La riposte est considérée comme légitime en cas d'attaque injuste. Jadis, si l'agresseur était tué, l'individu en état de légitime défense demandait au Mwami d'intervenir pour arrêter les représailles de la famille de l'auteur de l'attentat. Le Roi interdisait alors l'exercice de la vengeance privée.

9. Prescription.

La prescription de la peine, comme celle de l'action publique, est inconnue dans le droit coutumier du Ruanda.

CHAPITRE II.

LA PROCEDURE [1].

1. Les divers degrés de juridiction.

D'habitude, les parties essaient d'abord de régler leur différend à l'amiable avant de s'adresser à la juridiction du chef de colline [2]. Le chef-juge est toujours assisté d'abagaragu versés dans le droit coutumier du pays qui portent le nom collectif d'*abachamanza* (juges-arbitres). Il se peut que dans des matières très délicates, la cause soit remise à une date ultérieure pour permettre à des abagaragu particulièrement compétents de siéger. Les abachamanza ne sont pas nécessairement des Batutsi; il peut arriver que des Bahutu soient désignés comme assesseurs et ainsi soient appelés à connaître d'une affaire dans laquelle se trouve impliqué un Mututsi.

Le tribunal est saisi de deux façons :

a) Quand le chef de colline (igisonga) ou le sous-chef (umuhingisha) apprend qu'une infraction a été commise,

---

(1) Aujourd'hui, à l'exception d'infractions telles que les détournements de bétail dont les tribunaux indigènes s'attribuent la connaissance à l'égal des différends d'ordre privé, les affaires pénales où des indigènes sont en cause sont jugées par des juridictions européennes. Quant à l'organisation judiciaire indigène en matière civile, le gouvernement belge l'a maintenue presque intégralement (cf. J. VANHOVE, *Les juridictions indigènes au Ruanda*, Revue CONGO, juillet 1939).

(2) *Uruja kujya ibgami rubanza mu bagabo*, c'est-à-dire littéralement : la palabre qui va (aller) chez le Roi commence entre les hommes (ici = arbitres)

il envoie quelques-uns de ses hommes pour arrêter l'individu que la rumeur publique soupçonne d'être l'auteur du délit. Ce dernier, étroitement lié, reste enfermé dans un enclos ouvert à tous les vents, situé près de la maison du chef, jusqu'à ce que le tribunal statue sur son sort. Pendant le temps de cette détention préparatoire, des abagaragu du chef, juges ou non, interrogent le coupable présumé et essaient de le faire avouer (*kwindja* : litt. : tenter, solliciter).

b) En matière civile, le demandeur (*umulezi*) va trouver le chef. Il se met à cropetons devant lui, son bâton ou sa lance contre l'épaule, bat des mains et dit au chef : « *Nimugahorane Imâna!* » : Que Dieu t'assiste ! » (s-e. : pour juger ma palabre). Le défendeur (*ulegwa*) est invité à comparaître. Si après trois convocations successives il persiste à se dérober, le chef le fait appeler une nouvelle fois. S'il fait encore défaut, son adversaire a cause gagnée.

Le tribunal siège au seuil de la demeure du chef, là où sont les *ibitabo* (1), ou encore sous le porche, devant les *insika* (2).

Les parents des plaideurs et la foule des curieux assistent aux débats.

Le défendeur, puis le demandeur parlent de façon alternée chacun deux fois. Ils peuvent recourir aux bons offices d'un avocat bénévole, généralement leur fils, un serviteur fidèle ou leur shebuja.

Les assesseurs qui ont des questions à poser interrogent alors les parties. Le chef, lui, se tait. Puis, sur son ordre ou celui du plus savant des assesseurs, un de ceux-ci se lève et reprend la palabre par le menu (*gusor'imanza* : donner le contenu de la palabre ou, mieux, *gusubira mu rubanza* : répéter [à la place de ...] la palabre). A la fin de cet exposé,

(1) Murets très bas, de terre battue, en forme de festons.

(2) Sorte de paravents de vannerie décorant le bas des piliers qui soutiennent le toit de la hutte.

pendant lequel un silence religieux n'a cessé de régner, il prononce les paroles suivantes : *Kubganjye nyanaka aratsinze!* (D'après moi, un tel l'emporte !), puis il se rassied. Bien que le silence du tribunal marque son accord, le chef demande aux assesseurs de confirmer leur acquiescement, puis il prononce la sentence.

S'il n'y a pas unanimité au sein du tribunal, le chef prie un des assesseurs opposants de refaire lui aussi l'exposé de l'affaire en indiquant les motifs de son attitude. Le premier orateur réplique ensuite, appuyé par ceux de ses collègues qui partagent sa façon de voir. Les assesseurs qui sont d'un autre avis ripostent ensuite et il s'ensuit un débat animé, souvent orageux, en pleine audience. Les écarts de langage sont parfois tels que le chef doit sévir pour rappeler l'aréopage à plus de dignité. A un moment donné, sa religion étant faite, le chef-juge réclame le silence, reprend à son tour l'affaire « ab ovo » et, après avoir justifié son point de vue, dit : *Koko nyanaka aratsinze!* (Vraiment, celui-là l'emporte!).

Les modes de preuve les plus usités sont le témoignage et le serment. Seul le demandeur est autorisé à invoquer le témoignage. Le témoin [1] (*umugabo*), toujours unique, peut être appelé dans les affaires civiles ou pénales. Il est interrogé après que les deux parties ont parlé. L'intervention d'un témoin a une utilité fort relative, car étant donné qu'il est toujours apparenté de près ou de loin avec le demandeur, le défendeur le récuse généralement.

Quant au serment, il est déféré par le chef aux deux plaideurs et au témoin avant qu'ils ne prennent la parole. Après avoir fiché leur lance en terre, ceux-ci jurent en disant : *Nkobeshya ili chumu ndakaritega Mutara!* [2] (Si je mens, que cette lance transperce Mutara!)

---

[1] Une femme ou un enfant ne peuvent jamais servir de témoin.

[2] Au lieu de prononcer le nom du Roi régnant, on dit souvent simplement : *...Ndakaritegʼlʼmwami!*

1: Vanhove FO42 Rundi

Jadis, en cas de vol grave, de coups et blessures, de maladie ou de mort suspecte, les accusés persistant dans leurs dénégations étaient torturés ou soumis à une ordalie.

Le coupable présumé d'un vol important était lié étroitement, puis dans les coupures faites par les cordes, on versait de l'urine de vache; ou encore il était privé de nourriture, frappé jusqu'à en devenir infirme et ce sans préjudice du châtiment.

Un homme ayant été victime d'un vol considérable, celui dont un parent était atteint d'une maladie suspecte ou y avait succombé allait se plaindre au chef en se faisant accompagner d'un sorcier (*umushuzi*) muhutu, qui procédait alors au *gushora* (divination). Celui-ci prenait une serpette (*ikibabo*) et invitait le prévenu à cracher sur la lame (*gukamira* : litt. : traire) et à prononcer les paroles suivantes : « Si je suis coupable, tu deviendras noir. Si je ne suis pas coupable, tu deviendras blanc comme un *inyange* (ibis) ». L'umushuzi plongeait ensuite la serpette dans le feu; quand le fer devenait rouge, il semait de la poudre magique (*umubi*) sur la lame et attendait le résultat de l'expérience.

Une autre épreuve utilisée couramment dans les mêmes cas était celle du poussin appelé pour la circonstance *umuchuri* (de *guchurika* : renverser). L'accusé buvait un peu d'eau, se rinçait la bouche et crachait l'eau dans le bec du poussin. Le sorcier (mututsi) s'adressait alors à l'oiseau en disant : « Si tu trouves que celui-ci est coupable, tu feras marcher le voyageur et tu arrêteras le sédentaire. S'il n'est pas coupable, tu feras reposer le voyageur et marcher le sédentaire [1] ». Le sorcier tuait alors le poussin, ouvrait son corps, et après avoir procédé à l'examen des entrailles, en donnait l'interprétation convenable.

---

[1] Ces paroles sybillines s'expliquent comme suit : il y a dans les entrailles (*ibilangô*) du poussin des boyaux qui en se contractant ou en se détendant donnent l'impression de reculer ou d'avancer.

1: Vanhove FO42 Rundi

L'exécution des sentences ne comporte pas de procédure spéciale. Si le jugement porte sur des vaches volées, le plaignant ou des abagaragu vont les reprendre chez le voleur. Dans les autres cas, le condamné s'exécute lui-même. Si par impossible, il refusait, le chef l'y contraindrait par force.

En principe, la justice est gratuite et les frais judiciaires n'existent pas, mais les juges ne sont pas insensibles aux épices, avantageant ainsi les puissants et les riches. D'autre part, il est de règle qu'un umugaragu ayant une palabre apporte de la bière ou du tabac à son shebuja pour qu'il introduise l'affaire devant le tribunal.

⁂

L'appel est prévu devant le chef de province, dont le tribunal est organisé sur la même base que celui du chef de colline. Ce recours est dit : *gusuzugura* (litt. : mépriser la justice du chef) ou *gusubira urubanza* (recommencer la palabre).

Jadis, un Muhutu ne faisait pas appel devant le chef de province, mais bien devant l'umugabe w'ingabo (¹).

D'autre part, le tribunal du chef de province connaît en premier ressort des affaires de bétail et des litiges territoriaux entre chefs de colline. De même, il est obligatoirement compétent en cas d'expulsion et de dépossession d'un Mututsi ou d'un Muhutu par un chef de colline.

⁂

Le tribunal du Mwami est la juridiction suprême. Le Roi le préside, entouré d'hommes de confiance versés dans les coutumes (*abahanga*) ou de grands personnages assumés comme juges.

Le Mwami est normalement seul compétent pour connaître en premier et dernier ressort des affaires crimi-

(¹) Cf. Gouvernement et Administration, Droit de la guerre, p. 106.

I: Vanhove FO42 Rundi

nelles, mais il arrive qu'il délègue son pouvoir à un umutware. Si, par exemple, un chef de province a dénoncé un sorcier au Roi, il arrive que celui-ci ordonne à ce chef de tuer l'umulozi.

Les crimes de lèse-majesté et de violation des secrets d'Etat sont aussi de sa compétence exclusive.

Jadis, dans les affaires criminelles jugées par le Mwami, on recourait à l'épreuve du gihango pour forcer l'accusé à avouer [1]. Les sentences étaient exécutées par les bourreaux batwa.

Tout Mùnyarwanda, même le plus humble, peut se plaindre directement au Mwami s'il a été spolié par un chef. Mais ce recours à la justice royale est illusoire pour les plaideurs peu fortunés, qui sont souvent contraints de séjourner plus ou moins longtemps à Nyanza avant que leur affaire soit appelée. De plus, bien que les juges du tribunal du Mwami soient tenus de refuser les cadeaux offerts par les parties et de juger en équité sans se préoccuper de la caste des plaideurs, il leur arrive d'accepter d'être « honorés » par l'une ou l'autre des parties.

Le tribunal du Mwami intervient enfin en dernier ressort dans les litiges surgissant entre individus appartenant à des ressorts différents.

2. Litiges entre indigènes de ressorts différents.

Quand des litiges surgissent entre indigènes appartenant à des collines différentes, c'est l'igisonga du défendeur qui connaît de l'affaire. Mais le demandeur comparaît assisté de son shebuja ou d'un autre umugaragu de celui-ci qui joue en quelque sorte le rôle d'avocat et porte le nom d'*umuhagarikira*. Si le demandeur est débouté, il va se plaindre à son chef; les deux chefs se réunissent alors dans un endroit neutre, avec leurs abagaragu et les

---

(1) Cf. Gouvernement et Administration, Mort du Roi, p. 35, note 3.

1: Vanhove FO42 Rundi

plaideurs. Si un arrangement à l'amiable est impossible, les parties recourent à la juridiction du chef de province.

Si les plaideurs appartiennent à des provinces différentes, le demandeur débouté par le chef de colline de son adversaire, accompagné de son shebuja ou d'un umuhagarikira, va trouver le chef de sa province. Celui-ci essaie d'arriver à un accord avec son collègue. S'il n'y parvient pas, les parties et leurs patrons se rendent chez le Mwami. Parmi les chefs de province en visite officielle, ses courtisans et ses abagaragu, le Roi désigne quelques-uns de ces hauts personnages pour examiner l'affaire. Cette fois, ce sont les chefs de colline qui plaident eux-mêmes la cause de leurs gens. Si la décision rendue n'agrée pas à l'une des parties, elle se plaint à son chef de province, qui signale la chose au Roi. Le Mwami appelle alors certains de ses abahanga [1]. Il siège avec eux et entend les chefs de province respectifs des parties qui agissent au nom de celles-ci. Le Roi prononce alors la sentence en justifiant sa façon de juger.

Il convient de noter que la procédure normale que nous venons de décrire ne pouvait pas toujours être employée jadis. Quand les deux chefs de colline étaient, par exemple, hostiles l'un à l'autre, si la victime d'un vol, par exemple, venait réclamer justice, il se pouvait que le chef du voleur prît le parti de celui-ci. Le volé prévenait son chef et c'était alors la guerre entre collines. Si le chef du volé, trop faible, n'obtenait pas justice pour son administré, il en appelait au chef de province, qui convoquait les deux chefs, le voleur et le volé. Seuls les deux chefs plaidaient, d'abord le chef du volé, puis celui du voleur. Si celui-ci prouvait que la victime du vol avait voulu se faire justice sans s'être d'abord plainte à lui, qu'il avait eu ensuite à se défendre contre une attaque qu'il pouvait croire injuste,

---

[1] Cf. p. 119.

1: Vanhove FO42 Rundi

le chef de province infligeait une amende (*ichyirù*) en vaches au chef du volé. Si la guerre intestine avait causé des morts ou des blessures, la palabre devait être transmise obligatoirement au Mwami. Après avoir payé l'amende, le chef du volé pouvait appréhender le voleur et le punir comme nous l'avons exposé plus haut.

Chapter 1

Survey of Land People (1)

(Cf. the map [colored in the original] at the end of the book.)

114 1. Part of this chapter is taken from a lecture which I gave at the 19th German Geographers' Conference in Strasbourg in the spring of 1914.

1. The Land Urundi

131 In the extreme west of German East Africa lies one of the regions of Africa least known until now: Urundi. To the north it borders on Ruanda, to the east on Ussuwi and Uha, to the south also on Uha, to the west on Lake Tanganyika and the Ruzizi River. Since Urundi has an area of almost 29,000 square kilometers, i.e., approximately twice that of the Kingdom of [161] Saxony, and since it has over one and a half million inhabitants (according to van der Burgt, around two and a half million), it deserves attention for this reason alone. However, although 648 it has been German territory for over 25 years, we know little about it. Because of the recalcitrance of its population, the government had almost completely closed off the area to travel from the outside, and until 1911 political influence was limited to the establishment of a station with a resident and a company of colonial troops in Usumbura on Lake Tanganyika. It was not until 1912 that the seat of government was moved on a trial basis to Gitega in the interior of the region.

648 797 Oskar Baumann in 1812 was the first European who traveled through northern Urundi to the source of the Nile on the upper Ruvuvu. There followed then between 1896 and 1898 several military expeditions by colonial army officers, Ramsay, von Trotha, Langheld, von Langenn-Steinkeller, Fonck, and Dr. Kandt; and between 1896 and 1899 the Catholic Mission of

648 the "White Fathers" founded the stations of Usumbura (later
[797] moved to Marienheim), Mujaga, and Mugera in central Urundi. However, this advance of the Europeans was met with hostility by the Barundi [Rundi], so that from 1900 on German colonial troops under their leaders, Bethe, von Beringe, and von Grawert, had to contend with Kisabo, the king of Urundi, whereupon the Barundi finally recognized the sovereignty of the Germans. This recognition, however, is only nominal, for our power there is much too small to permit the establishment of a German administration in Urundi as yet.

114 Under such circumstances the exploration of Urundi could make no substantial progress. Ethnology alone has been advanced to a high degree by Father J. M. M. van der Burgt, who for many years was active in Urundi as a missionary and published the results of his excellent ethnological studies in Dictionnaire Français-Kirundi which appeared in 1903 through the Dutch Missionary Publishing House at Bois le Duc. The extremely extensive ethnological and ethnographical data, however, are so interspersed in this book with all kinds of historical and [2] linguistic digressions that it is difficult to extract and methodically collate the ethnological data of scientific value.

In view of this situation I decided to devote part of my 1911 expedition to the investigation of Urundi. Therefore, I worked there for a few months, sufficient time to obtain an over-all view which I have endeavored to supplement, as far as possible, by inquiries, correspondence, and other kinds of studies. Setting out from Ruanda in the northwest, I first crossed the northwestern mountain region, the "Mountains of the Moon" with my two companions, Lieutenant Tiller and Dr. Houy, then descended to the great central African depression into the valley of the Ruzizi, then crossed in dugouts the northern end of Lake Tanganyika to the residency, Usumbura, and thereupon traveled through the whole of central Urundi from west to east in a month and further through northern Uha and the Ussumbwa states, until finally, at Tabora, I reached the central railroad by which I traveled to Dar es Salaam.

133 When I now attempt to describe the inhabitants of Urundi, the Barundi (1), the following question must first be briefly

[104]
[194]

1. In the spelling of Barundi, Bahima, Batussi, Bahutu, Batwa, Baganda, Banjoro, Banjaruanda, Banjankole, etc., I am following the example of J. Czekanowski (Nos. 38 and 48). In this connection, it should be noted that the phonetic value of this b is often close to our w i.e., an English v and in correct phonetic terms might be more clearly transcribed by a v specially marked, but for the purpose of my study the common b corresponds more closely to the orthography of the tribes between the lakes. On the other hand, one must write Wanjamwesi, Wasukuma, Waschaschi, etc., since these tribes pronounce the w in all clarity.

answered: What does the country look like, the soil which supports and nourishes the people and upon which its economic, social, and political life takes place? Urundi is a mountainous country, the southern part of the interlacustrine region to which belong Ruanda in the north, the Kisiba states and Uha in the east, and in the south also Uha and part of Ujiji. On all sides Urundi has good natural boundaries: in the north the rivers Akanjaru and Kagera, in the east the long plateau sloping down toward Uha, in the south the upper course of the Malagarasi, in the west Lake Tanganyika and the Ruzizi River. To the north the region has a broad front toward Ruanda, while to the south it tapers off in wedge-shaped form to Lake Tanganyika.

In its geological structure Urundi is divided into two large regions whose landscapes differ. The larger eastern part is a section of the Paleozoic slate and quartzite plateau (Plate 26) probably belonging to the Cape formation. This plateau covers almost the entire interlacustrine region. The narrower, tapering

133 western part is the tail end of a range of Archeozoic folded mountains; it consists of crystalline slate with many granite intrusions and outcrops. The boundary between the two formations is a sharp threshold or drop in the terrain running north to south approximately at the longitude of the Mugera missionary station. Toward the east the slate-quartzite plateau also slopes down in an extended gradient at high altitude toward the gneiss and granite plateau of Unjamwesi which I consider an eroded escarpment. A huge tectonic fault scarp is found in the steep western slope of the highland toward the central African graben and toward Lake Tanganyika. Smaller fault depressions in several places extend over the country of Urundi; in fact, the entire interlacustrine region is rich in such tectonic faults. (Cf. the map on opposite page.)

[648] [4] Only a few times have determined enemies invaded Urundi across the high ridges and escarpments in the west and southeast, but this has happened more often from the flatter, more open fronts in the north and northeast. In the north are [101] the proud, warlike neighbors, the Ruanda, in the northeast the restless tribes of the Lake Victoria region: the Bassuwi, Basindja [Linza], Wassumbwa [Sumbwa], and others.

The slate-quartzite plateau of eastern Urundi has been leveled by erosion from meteorological forces over many thousands of years into a large peneplain with long, broad, low ridges (Plate 1a), while in the west the older mountain periphery still rises to a considerable altitude although it has also been worn down and rounded for the most part. The plateau region has an average altitude of 1,600-1,800 meters; the peripheral mountains rise to as high as 3,000 meters. More recent block movements renewed again the process of erosion which had been slowing down, so that in many regions the streams have carved recent, deep valleys into the plateau and the mountain ranges which then divided the region into a great number of large blocks and bastions. However, in still more recent times this process of erosion was again considerably slowed down by other developments. This is apparent from the fact that at present there are rapid streams only in the mountains of the west (Plate 1b), while in the plateau region of the east almost

Legend

Based on personal observations and collections (revised by K. Schlossmacher; cf. Hans Meyer, Ergebnisse einer Reise durch das Zwischenseengebiet Ostafrikas 1911 [Results of a Journey Through the Interlacustrine Region of East Africa in 1911], Berlin, 1913) and taking into account earlier publications by Stuhlmann, Baumann, Count von Goetzen, Kandt, Herrmann, Dantz, Stromer von Reichenbach, Gagel, Koert, and others.

Primary formation.

Granite rock.

Primary formation in combination with granites.

Loose and more recent surface layers (alluvia of rivers).

Probable extent of layers.

Hot springs (occurring on fissures).

Fissure lines (a) or fault scarps (b?); probably eroded escarpment.

Horizontal quartzes, slate, etc. Perhaps Cape formation.

Granites, covered by recent volcanic rock.

133 everywhere only sluggish waters run in the relatively recent valleys. To all appearances a general damming up of waters has taken place due to recent block movements which have caused an enormous growth of swamps in the valleys in Urundi, especially in the north and northeast, and in the entire interlacustrine region. Its main cause is insufficient drainage in the network of streams of the Kagera River on the one hand and in that of the Malagarasi on the other, since their level of erosion has apparently been raised by more recent block movements in both areas.

The two big rivers mentioned above divide Urundi into two hydrographic systems: the larger northern system drains into the Kagera, Lake Victoria, the Nile, and, therefore, into the Mediterranean; the smaller southern one into the Malagarasi, Lake Tanganyika, the Congo River, and, therefore, into the Atlantic Ocean.

132 Since Urundi is between 2 1/2 and 4 1/2 degrees south latitude, it has, like Ruanda, an equatorial climate with two rainy seasons and two dry seasons. The rains occur soon after the sun has reached its zenith in April and October. The amount of precipitation, approximately 1,250 millimeters in the north and less than 1,000 millimeters in the south, is not great for a tropical region, yet it is still plentiful and evenly distributed. The average annual temperature fluctuates about 20 degrees Centigrade. It is higher in the east, and in the mountains of the west the thermometer almost approaches zero in July. Day after day a vigorous east wind blows across the highlands. In the mornings there are often dense mists in the valleys.

The warm temperature, the amount of precipitation, and 137 the distribution of rain would lead one to expect extended forest growth in Urundi, but this is not the case. Urundi is quite predominantly grassland (Plate 1a), pasture land at high altitude, like Ruanda. This is because the natives cut down the forest [311] to make fields and pastures. Toward the east in the direction of Uha where the country is lower, the grassland gradually turns into a tree and tussock grass steppe (Plate 3b). The grass grows higher and wilder in Urundi than in Ruanda since the grassy plains

137 are not burned down so regularly, and Urundi is not as completely treeless as Ruanda because next to each kraal a few fig trees are maintained for the use of their bark. Also, [5] the larger rivers, such as the Ruvuvu or the Malagarasi, are bordered for some stretches with a rather dense forest on the banks (Plate 5). The great majority of the valleys, however, is swampy and filled with dense papyrus thickets which can be penetrated only in a few places (Plate 2a). While in our part of the world valleys are the natural arteries of traffic and the most suitable places for settlement, they can never serve this purpose in most of Urundi. The swamp covered valleys and [361] their often very steep slopes force the population and their roads and settlements to the upland plateaus and upper slopes. For this reason all farmsteads are on mountain ridges and the higher slopes of the valleys. In the valleys the only fields are of crops [241] that, like sweet potatoes, need considerable moisture. This character of the valleys will make it extremely difficult to open up the country by means of roads or even railroads. The papyrus swamps are, next to the grassy hills across which one can see for miles, the most characteristic feature in the landscape of Urundi, as well as of Uha and Ruanda, that is, of most of the interlacustrine region.

Richard Kandt, the poet among the travelers to East Africa, devotes the following impressionistic description to them.

"From the time we entered the region of Urundi and also during the last days in Uha, papyrus swamps formed the characteristic feature of the landscape. Often streams hardly more than two meters wide lie in a valley of papyrus several hundred meters wide. It fills not only the main valleys but extends also into all tributary valleys and even climbs up the ravines and gorges so that, seen from a height, the country looks like a gigantic network of green ribbons in whose meshes the mountains lie like islands. I have seen many a strange and beautiful landscape in Africa. I have experienced the indescribable melancholy hovering over burned, trembling-hot steppes when the rays of the sinking sun, in a bloody red, break through the glittering haze. In the territory of the Congo State I have tasted

137 to the full the splendors and terrors of the jungle. I have taken delight in the serene gracefulness of the central African lakes, and I have admired the grandiose miracle world of the volcanos. I know the harsh grandeur of the rivers which flow silently through the shadow of the forest galleries and the tragic mood inspired by the lava wilderness deserted by all good spirits. Yet I must say that scarcely any of these scenic moods has impressed itself on my mind more deeply than the picture of such a papyrus landscape. It is constantly changing, not only with the season but almost with every hour of day, depending on the angle of the rays of the sun; it is different in clear and in overcast weather, in the morning and in the evening. For hours I used to gaze down on it from the height of a mountain and never tired of observing the violet shadows of the wandering clouds moving across the green plains or the wind playing with them in such a way that only a mild disturbance would arise among them, as in a tightly crowded herd, but then it would swell up to a storm and plow long deep furrows between them which would repeatedly close up and open and close up again." (No. 22, page 246.)

Only on the highest mountain ridges of the west (Plate 4a) are there any virgin forests with tall trees in Urundi, but even here there are only relatively small remnants, as in Ruanda and in a few corners of Lake Victoria. Everywhere they have been pushed back and destroyed by the expanding population. Most probably the entire interlacustrine region was still covered by virgin forest only a few centuries ago, since the altitude as well as the temperature and rainfall in the interlacustrine region favor the growth of forests, but the rapid increase in population of the agricultural Bantu demanded more space, and the forest had to give way. The devastation of forests became even greater when the cattle-raising Batussi [Tussi] invaded the interlacustrine region and claimed larger and larger areas as pasture for their herds of cattle. Replacing the burnt forest, bamboo (Arundinaria alpina) has grown in many places in the upland valleys [6]; it

137 better resists the periodic grass fires and adds a peculiar feature to the scenery of the mountains (Plate 4b). The growth of grass and trees in the hot, dry plain of the Ruzizi lowland (Plate 3a) is, however, very much like a steppe.

As a result of the expansion of the population and the 136 destruction of the forest, free wildlife also has been considerably reduced. In the grassland there remain only very few antelope (Jimela, tuft antelope, gazelles), and of large birds only crowned cranes which because of their great numbers might be called the heraldic animal of Urundi and Ruanda, further bustards, herons, ibises, francolins, Nile geese, etc. In the forests on the riverbanks one still finds bushbucks (Tragelaphus), swamp antelopes, and duikers. In the water itself there are numerous hippopotamuses, crocodiles, and otters. In the remaining parts of forest on the highland periphery and in the tree steppe of the Ruzizi lowland, there still live quite a number of elephants, buffalo, baboons, etc. Everywhere leopards are quite frequent. Especially interesting is the mixture of East African and West African forms in this area which in terms of plant and animal geography is a border region. Just as num- [137] erous plants, flora of the West African forest, have penetrated into this region and in part even as far as Lake Victoria, so also have many small and large representatives of West African fauna; I shall mention only the gray parrot, the giant touraco, the hornbill, and, of the mammals, the red buffalo, the chimpanzee, and the gorilla. Because of this mixture of East and West African forms, the plant and animal collections of this bio-geographical border zone which extends through western Urundi and western Ruanda are very interesting.

2. The Population

563 Even more interesting than the mixture of flora and fauna is the population mixture, both in Urundi and in Ruanda. There are three anthropologically and culturally distinct elements which are quite sharply separated but exist side by side or one above the

563 other, and which in the course of centuries in this grouping have crystallized into a strong social and political community.

563 162 144 The great mass of the population consists of the agriculturalists, the Bahutu [Hutu], belonging to the Bantu race, more specifically to the so-called basic Bantu. In Urundi their number is approximately one and a half million. Above them, as the ruling caste, stands the Hamitic pastoral Batussi, who invaded Urundi from the north about 400 years ago and who, both here and in the entire interlacustrine region, subjugated the agricultural Bahutu. They are proud, tall figures, often over two meters in height, with sharp profiles and stately posture, so that at first they even impress the well-traveled European. According to official estimates, they number from 40,000 to 50,000 in the whole of Urundi. Besides these giants, the country also shelters the remnants of an original, short, pygmoid population, the Batwa [Twa], who lived here in the forests even before the Bantu and who, together with the forests, were partly destroyed, partly pushed back into remote corners by the other stronger elements. At present there are only a few thousand of them in Urundi and the same number in Ruanda. Their stature ranges mostly between 1.50 meters and 1.60 meters, but they are [463] strongly built and make a living as hunters, as blacksmiths and potters in the service of others, or as bodyguards of important people and of the king.

563 Undoubtedly the Batwa are the oldest stratum of population in the entire interlacustrine region. Dispersed in small tribal groups over the country, [7] they lack any kind of social cohesion; nor do they seem to have any traditions about their past. The [144] Urundi Batwa resemble the Batwa in the forests, but in Urundi they apparently have more Bantu blood in their veins. They are, therefore, somewhat taller and not as pure a type as the Batwa of Ruanda. Both in Urundi and Ruanda and in the northeastern Congo region, the Batwa are in the process of disappearing. Regarded as pariahs both by the Batussi and the Bahutu, they are everywhere treated badly but are at the same time thoroughly exploited. They always look profoundly melancholic and are

563 extremely suspicious; I have rarely seen a Mutwa ["mu-" is prefix for singular] laugh. They are an old, tired race of people, approaching extinction in the not too distant future. For this reason it is high time that the remnants of this people be methodically studied by an ethnological expert during an extended stay. This seems to me to be one of the most rewarding tasks to be accomplished in our East Africa which is so rich in ethnological problems.

The agricultural Bahutu, the main population of Urundi, [162] number approximately one and a half million and belong to the so-called basic Bantu of central East Africa, as also do the Wanjamwesi [Nyamwezi]. According to their traditions, they [173] came to Urundi from the east, that is, from the direction of the southern end of Lake Victoria and spread farther and farther west, clearing the forests. They speak almost the same Bantu [197] dialect as the inhabitants of Ruanda and those of Uha. Strangely enough, their conquerers, the Hamitic Batussi, and the tribe they subjugated, the Batwa, also speak only this Bantu dialect, while in the neighboring states to the east and north the entire population speaks Kinjoro ["Ki-" is a prefix indicating language], in certain parts also Kissumbwa. (Regarding the remnants of an older Kirundi dialect, see p. 148.) On the [144] other hand, in Urundi and Ruanda the Bantu have changed their ethnic and somatic character somewhat under the influence of [177] their Hamitic conquerors. These, the Batussi, have assumed within the few centuries of their conquest the language, dress (barkcloth), and many customs of the Bantu, but in exchange they have given them something of their blood, their type of dwelling (round huts), their big-horn cattle, and their political organization.

Nothing is known of the history of the Bahutu of Urundi and Ruanda in the period before the rule of the Batussi. Only in conjunction with their Batussi conquerors do the Bahutu step into the light of African history. From then on there exists a history of the Barundi, the political community consisting of Batussi nobility, Bahutu people, and Batwa pariahs (see p. 151 [not translated]).

Batussi

3. Physical Characteristics

114 I have not undertaken anthropological measurements of the Barundi since I was completely occupied by my geographical and ethnographical tasks. My medical companion, Dr. R. Houy (unfortunately murdered in the Cameroons in 1913), whose own field was anthropology but who was at the same time very interested in zoology, found such a rich field in collecting and observing the peculiar fauna of this country that he, too, abstained from the time-consuming anthropological measurements. Thus I had to limit myself to the occasional use of the tape measure and the color scale, and for the rest I can only report general somatic observations.

[8] The most impressive of the Barundi people are naturally
144 the ruling tall Batussi (Plates 11, 12, 14). Aside from their heads which in most cases are smoothly shaven, they physically very much resemble their fellow tribesmen in Ruanda. At first glance their Hamitic origin is apparent. On my earlier travels I had often been among the Somali and Galla, and when I was among the Batussi of Urundi and Ruanda it seemed that I had been transported again into the midst of the former, especially the Galla.
141 In one trait, however, the Batussi have an advantage over the Hamites of northern East Africa: they are, on the average, much taller. The most convenient yardstick I carry with me is provided by my own height, and against this I could easily make approximate measurements of the many hundreds of Batussi whom I met. I did not find any adult smaller than 1.77 meters (measured by a tape), few below 1.80 meters, the majority between 1.80 and 1.90 meters, many (about 10 per cent) between 1.90 and 1.95 meters, some few between 1.95 and 2 meters, and a very small number over 2 meters up to an upper limit of 2.08 meters (measured by tape). In spite of their extraordinary
142 height, their body parts are exactly proportioned in relation to each other; not merely are their legs and arms very long but also their torsos which are often so narrow and extended that one can hardly imagine how the internal organs are distributed inside. The impression of abnormal height is further increased by the

142 fact that almost all Batussi are haggard and lean. Only the older batwale (higher officials) and the affluent Baganwa (members of the royal family) have rounded body contours, but fat bellies are rarely seen even among older people. The waist is usually very thin; the chest and shoulders, however, are broad. All these characteristics are most probably the result of a long, more or less conscious natural selection, that is, breeding for great body height (cf. Luschan in Appendix II to No. 40, p. 252).

Most Batussi have sinewy limbs and a firm musculature, but no thick muscular flesh on the arms and legs. Calves are usually entirely lacking. Hands and feet are conspicuously graceful and finely jointed; by our standards they all have narrow ladies' hands with a glove size of 5 or 6 and long fingers, while their feet are narrow and small too, but with short toes. The wrist is so thin that even men can easily insert it into the [411] slit (2 1/2 to 3 1/2 centimeters wide) in the wooden discs with which they protect their left hand against the recoiling bowstring (see pp. 34 & 82). No adult European is able to do this. [301] Their copper or iron ornamental rings, worn on the right wrist, are all so narrow that they seem to be made for children. Aris- [554] tocrats let the nail on the little finger grow to a length of 1 1/2 to 2 1/2 centimeters as a mark of their nobility and their freedom from manual labor.

The neck is rather long and finely formed which gives the head an easy, proud bearing as contrasted with the Bantu Negro with his thick-set neck.

The head is very beautifully formed (Plate 17c, d). Since [302] the Batussi of Urundi mostly shave it smooth in contradistinction to those who live in Ruanda, one can always admire its high arch, its round, broad forehead, and its extraordinary length which makes the round occiput stretch out far beyond the base [141] of the neck. Skulls are extremely dolichocephalic.

With regard to facial form, I differentiate two types. The one, more noble, has a finely formed nose with a narrow tip and thin sides, a relatively small mouth, and narrow lips (Plate 17d);

142 the other type has a [9] straight or pug nose, Batussi Bahutu a broader nose tip, and a larger, thicker mouth u(Plate 17b). Both types are conspicuously the oval form of the face, the small but pronounced chin, and the complete absence of Negroid prognathism. Yet, 142 frequently, the noble impression of the face is reduced by the 143 fact that the upper front teeth jut out (buck teeth). For this 582 reason the mouth of these individuals mostly remains half open, and one can see the upper four incisors. These crooked teeth, it seems to me, are especially of frequent occurrence among the members of the most distinguished families, both here and in Ruanda; these people are also tallest. Perhaps these two features are special characteristics and result from the long inbreeding of these families, for they marry only among themselves and are severely restricted in their choice (p. 1004-106), while the common Batussi are allowed a wider choice in selecting a mate, and the lowest, poorest class enters into marriages, although not entirely legitimate ones, with the Bahutu as well.

If the hair of the head is left unshaven, it is seen to be 142 curly and woolly like that of the Batussi in Ruanda. One also sees at the temples and above the forehead that it does not grow even but in tufts; this is the most Negroid physical feature of the Batussi who, apart from this, do not look like Negroes at all.

The second large population group among the Barundi, 142 the Bahutu, who are ruled by the Batussi nobility, have the well- 144 known Bantu physical type, just like all the inhabitants of the interlacustrine area, that is, Ruanda, Mpororō, Ankole, Karagwe, Kisiba, etc. (Plate 6, 8, 9, 10). The differences between them and the Batussi are immediately visible in their short figures, [141] varying between 1.62 and 1.70 meters, and especially in their shorter legs, their thick-set muscular physique which admittedly often looks frail from undernourishment, and in their genuinely prognathous Negroid skull. Somatically they differ very little from the central Bantu of Unjamwesi and Usukuma, although in some respects they resemble the Forest Bantu of the eastern Congo region who formerly probably extended farther toward the east (see p. 152 [not translated]). Their eastern branches

142 in Urundi might be compared to the Bakiga [Chiga] in Ruanda.
144 The latter are a tough, strongly built, mountain people who have cleared the forests and differ from the remaining Bantu in the same manner as the Forest Bantu who live in the western mountains of Urundi differ from the other Bantu of Urundi (cf. also No. 47a, p. 272).

Very often, however, among the Bantu of the inter-lacustrine region are to be seen finer, narrower faces with noses and mouths less broad and with jaws less strongly pronounced than among the others. This is probably caused by the centuries-old admixture of Bahima [Hima] blood, for the Hamitic rulers of the Bantu do in fact often associate with Bantu women but never, or only very exceptionally, do Bantu men associate with Bahima women (p. 101). These individuals among the Bahutu with an admixture of Batussi blood are for the most part taller
[141] than the ordinary Muhutu. All Bahutu are rather dolichocephalic. The hair is curly and tufted, but not of the "peppercorn" type.

The difference between these two racial elements is also
142 apparent in their skin color. The large majority of the Bahutu has the color of dark café-au-lait with violet reflections, approximately Number 28 and 29 of Luschan's color scale. For many persons, however, the color of the skin resembles the reddish tinge of the South American highland Indians whom I know well from former travels [10], which may be ascribed to the admixture of Batussi blood in some of them, but among the others to the customary rubdown with red earth and butter. They then come close to Number 32 of the scale, but only as far as color value is concerned, not in the intensity of the shade. The Batussi, on the other hand, are in most cases light chocolate brown, between Number 26 and 28 of the scale or copper brown like many Indian tribes. Many show lighter gradations depending on the effects of the sun, but always with a predominantly reddish tone, never a yellow-brown or a black one. Batussi women (Plate 15, 17a) are supposed to be in all cases lighter than the men -- I have only seen very few -- because they stay within the homesteads most of the time whereas the Bahutu women, who while working in the fields expose themselves to

142 the sun as much as the men, are the same color as the men (Plate 14b, 16b). Small children are always considerably lighter in skin color.

142 144 The third population group, the Batwa (Plate 7), also have almost the same somatic character in Urundi as their fellow tribesmen in Ruanda. The latter are somewhat better known to us through the work of J. Czekanowski. In Ruanda, especially in the forest areas of Bugoje and the Virunga volcanoes, they have preserved much of their original Pygmy character, for they are still able to lead a withdrawn life of hunting in the forests. Even in Ruanda, however, the majority of them already live as agriculturalists and craftsmen (potters, blacksmiths) dispersed in small communities among the Bahutu and have already received from them a strong admixture of Bantu blood, partly from the Forest Bantu of the eastern Congo region and partly from the central Bantu of the interlacustrine region. This has also happened to the majority of the Batwa of Urundi since, after the expansion of the Bantu and the disappearance of the forests, they too have been forced to settle among the Bahutu and into agriculture (see p. 152 [not translated]). However, we still meet many among them in whom we can recognize, either at first glance or on closer inspection, the pygmoid characteristics familiar to us from the more northern, racially pure Pygmies of the primeval forest (Wambutti [Bambuti]) of the Ruwenzori and of the upper Ituri.

141 Primarily their stature and the form of their limbs are striking in the case of the Mutwa, but whereas the racially pure Batwa of the Ituri are only between 1.30 and 1.40 meters tall, only among the hunting Batwa of Bugoje and the Virunga volcanoes are there individuals between 1.40 and 1.55 meters tall. On the other hand, among those engaged in agriculture among the Bahutu, there are few less than 1.60 meters tall, and many are taller. Without exception the women are shorter than the men. Czekanowski lists an average size of 1.53 meters for the Batwa men of Muhawura and for the women of Muhawura, 1.40 meters; for the Batwa men of the agricultural tribes, however, 1.61 meters, and for the women, 1.54 meters.

[141] The latter measurements are in general applicable to the Batwa of Urundi also. All of them have relatively short trunk and
142 limbs. The legs, however, are short in relation to the upper part of the body, but all limbs are well-proportioned and very muscular. The hands and especially the feet are relatively broad and clumsy; the fingers and toes are very short in relation to the back of the hand and the foot. The heel juts out so far in the back that, seen from the side, the lower leg appears to be placed more toward the middle of the foot.

[141] Upon a short neck is set a head which in most cases is fairly round and decidedly brachycephalic, with a short face and broad cheek bones. However, dolichocephalic individuals are not exactly rare. The frontal bone and the arch of the brows usually extend noticeably beyond the face. [11] The nose almost always is indented at the root which causes the forehead to jut out even more; the nose is flat and broad and has a broad, turned-up tip so that one looks into the nostrils. The mouth is of medium size, but the lips are, in most cases, rather thin, and the upper lip often is scarcely arched. The chin is small and somewhat receding. The ears usually have a very small lobe or none at all. The hair is curly, matted, and, whenever closely cropped, stands up in small "peppercorn" tufts, as among the Bushmen of South Africa. Old people have in many cases a very morose or unhappy facial expression due to three or four peculiar wrinkled furrows that run across the forehead, and one or two thick skin folds stretch from each corner of the nose across to the corners of the mouth. They often look almost like swollen scars (see Plate 7).

The skin color of the Batwa is darker than that of the Bahutu, often with a violet tinge even when the skin has been washed clean. In the colored picture in the travelogue of Duke Adolf Friedrich of Mecklenburg, in which a Mutussi, a Muhutu, and a Mutwa are standing side by side, the color of the Muhutu is most faithfully rendered while the Mutussi is too red and the Mutwa too brown.

144 Czekanowski conbines the results of his measurements and his comparisons of the Batwa with the pure Pygmies of the

144 more northerly regions and with the Forest Bantu and Interlacustrine Bantu and comes to the following conclusions: the Batwa are not a homogeneous group, but consist of elements taken from the Pygmies, the Bantu of the primeval forest and, to a lesser degree, the Interlacustrine Bantu also; among the Batwa of the volcanic region the Pygmy type predominates; among those of central Ruanda, the Interlacustrine Bantu type. This latter fact, according to my observations, is also true of Urundi. A surprising fact about the Batwa and one which was demonstrated by Czekanowski is that they show traces of a dolichocephalic Bushman-like element. This trait in conjunction with slight stature has turned up frequently in the works of other observers of East Africa and attracted Czekanowski's attention, especially in the area of Kilimanjaro. Originally the Batwa were "dwarfs," but their body type gradually changed through the admixture of Bantu blood. The farther north we meet Batwa, toward the racially pure Pygmies of the Ituri, the stronger are their pygmoid characteristics; most strongly so among the Batwa of Idschwi Island of Lake Kivu where they are well sheltered from outside influences (No. 31a, 101-109).

[162] Since according to official data the Batwa are only one per cent and the Batussi only about three per cent of the total population of Urundi, the numerical predominance of the Bahutu-Bantu is so great that they entirely determine the overall impression one gets of the Barundi people. Moreover, the Bahutu and also the relatively few Batussi who rule them are somatically, mentally, and culturally so homogeneous throughout Urundi that deviations from the average type are met with only rarely in this great country, excepting those of mixed Bahima blood mentioned above. Of course the Barundi people owe this homogeneity above all to their strict centuries-old seclusion from the outside world. The border areas farthest west on Lake Tanganyika and the Ruzizi River might have worked considerable changes on the Barundi tribes living there, for they do have a much warmer lowland climate, and the great lake might have caused adaptive changes in the way of life of the inhabitants. Moreover, the neighboring Congo tribes are a quite different sort of people. However, even here, no such

144 changes occurred; the ethnic character of the Barundi changes only slightly, in spite of the fact also that political connections with the Mountain Barundi had become much less close.

[12] In 1901 Richard Kandt wrote as follows of the
63) Barundi of the Tanganyika lowlands.

"Politically the area between the eastern periphery of the Central African graben and the Ruzizi is divided into from ten to twelve rather small sultanates, most of which probably cover approximately 150 to 200 square kilometers. They are nominally not independent; their rulers, who all belong to the Semitic Watussi of the Galla territories south of Abyssinia, were originally vassals of the king of Urundi, or the 'Muesi' as he is called by title. But although the majority of the inhabitants gives the impression of being almost pure Warundi, the high crest of the peripheral mountains and the broad desolate primeval forest were too convenient a bulwark not to arouse the desire of independence in the population which is hardly affected by grandiose ideas of national unity, the more so since the mother country is also split up into a large number of mutually warring chiefdoms which are only loosely bound to the central power. The only existing remnant of cohesion seems to be the fact that the Muesi has some kind of religious importance which makes his chief think it advisable not to sever all connections with him.

If we consider how infinitely different the entire living
182 conditions of the Lake Warundi dwelling near Tanganyika are from those of the Mountain Warundi and how far back the various influences go which affect the Lake Warundi (namely, the presence of the Wasuaheli [Swahili], the Arabs, and the various western tribes following in their footsteps), we are surprised at how stubbornly they have nevertheless remained true in the matter of their external appearance, language, and customs to the peculiarities of their unusually isolated native country. The same is true of the Warundi living in the low valley of the Ruzizi, except that for them the temptation to abandon the customs of their forefathers was considerably smaller, and the farther north they lived, the smaller it became." (No. 22, pp. 339-340.)

164 Since then the Lake Barundi have not changed much as
regards their physical and mental constitution, but the individ-
165 ual tribes were struck by a terrible epidemic of sleeping sick-
ness and were reduced to scarcely a third of their original num-
bers, so that in 1911 I found most of the formerly flourishing
settlements deserted and laid waste. Fortunately the stinging
[136] fly, Glossina palpalis, which carries the infection, has not
penetrated into cool, windy, upper Urundi, and it probably
never will since it does not find favorable conditions there.

4. Mental Traits

000 At this point little will be said about the mental traits
of the Barundi since they can be adequately inferred from the
detailed descriptions of their life and of their material and in-
tellectual culture which will follow. Therefore, I shall give
only a few data about the disposition, temperament, and
character of these three large population groups which differ
so considerably from each other.

Of the Batwa, the more primitive, freer Forest Batwa
151 are also much freer mentally than those who have settled
among the Bahutu and Batussi. Like all hunting tribes, they
are characterized by their extraordinarily sharp senses, the
superiority of which is very often experienced and still feared
by the Bahutu as they advance against the forest in search of
563 arable land. As long as he can still hunt and live, freely
roaming the forest, the Mutwa is very proud of his independence
and looks with contempt upon the Muhutu wretched and bent
low tilling his field, and also on the Village Mutwa living
outside the forests who has to earn his living painfully either
by working in the fields or as a potter or blacksmith. Toward
609 a European the Mutwa is in most cases, if not hostile, at any
rate shy and ostensibly indolent, for even in peaceful inter-
course he is afraid of the sorcery and formidable powers of the
Whites.

563 [13] The Village Batwa are in all circumstances shy and
157 cringing as a result of their social position as pariahs, of which

563 they are reminded daily in living with the two other higher
157 classes of the population. Under this social pressure, their natural talent has been turned into cunning and craftiness. However, the Forest Batwa are quite proficient in these arts also.

Being shrewd and realizing their position fully, the Batwa
563 are friendly toward the Batussi, whereas they regard the Bahutu agriculturalists who destroy the forest with fire and axe as the robbers of their freedom, and this is the case both in Ruanda and in Urundi. Just as in Ruanda King Musinga himself keeps an
[644] entire settlement of Batwa at his court in Nyanza, preferring to entrust the protection of his person and the maintenance of order to these pariahs hostile to the Bahutu, so also in Urundi most of the Batwa are to be found near the residences of the chief where they find work and a livelihood in the service of the Batussi more easily than anywhere else except among the Bahutu. This is a symbiosis of the two numerically weaker population elements against the subjugated Bahutu, a people who number millions, within which both groups derive advantage.

The over-all character of the Barundi is provided by the large mass of the Bahutu, for although the Batussi are in fact the most striking members of the population because of their external appearance and their ruling position, they are too much in the minority, and in the majority of customs and external forms of culture they have assimilated with the Bahutu. Mentally, however, they are quite different from the Bahutu.

Like all Bantu, the Muhutu is by nature intelligent and
157 has a lively, sanguine temperament. This original trait is apparent in Urundi and in Ruanda wherever the hand of the Batussi rulers does not weigh upon them too heavily, i.e., more so in Urundi where the rule of the Batussi has never been as despotic as in Ruanda, and, in Urundi, most of all in the northwestern region, independent of the kingdom, where the chief, Kilima, is himself a Bantu or of mixed blood (see pp. 162, 168, 188 [these pages not translated]), and also in the far south and in the lowland areas of Lake Tanganyika and the Ruzizi River. The mental agility, loud speech and lively gestures of the Bahutu are nowhere as noticeable in Urundi as there in the

157 northwest. In spite of their impulsive behavior, the Bahutu are incapable of any strong exertion of will. They are conservative out of inertia and indifference, and for this reason they cling to the old, habitual concepts and customs. A marked tendency toward everything mystical and supernatural works in the same direction, in spite of the rough sensuality of their physical nature. Much good-naturedness is apparent in their social behavior to their equals and in their warm love for children.

In his contacts with others, whenever no higher class Mutussi is present, the Muhutu is cheerful, loud, and talkative, but in the presence of a Mutussi superior he is serious and reticent. When the Muhutu is able to relax, his imagination is active and is expressed in naïve boasting and bragging. He likes to cheat his fellow countrymen and foreigners and is liable to use physical force if he considers the other person weaker. [609] The European is sure to be told lies by him at first and to have him soon turn impertinent if he does not know how to command his respect. If the European manages this, as the Mutussi 563 157 always does, the boasting of the Muhutu soon turns into slavish docility and cowardice. This is also the case when he is confronted by serious danger, for example, in war, unless his fear of the Mutussi ruler [14] is even greater than his cowardice and forces him to commit acts which look like the result of great courage and self-imposed discipline. In reality the Bahutu of Urundi have become slaves in thought and desire, as a result of the four centuries of despotism by the Batussi, although theirs is not so slavish an attitude as that of the Banjaruanda [Ruanda] under their monarchic Hamitic rulers.

For the keen observer this enormous influence of the relatively small Batussi minority upon the large mass of the Bahutu is at first impossible to understand, for he soon realizes that the Batussi are by no means the ideal men they seemed to us to be from the first descriptions by Count von Götzen, Dr. Kandt, and others.

Richard Kandt says of the Batussi:

181 "If I analyze my feelings and state them honestly, I must say that I was impressed by them. Even now I have not lost this feeling although my mind rebels against it and although I have told myself hundreds of times that these people are, after all, barbarians far inferior to me intellectually. But it is of no avail! I have explained to myself the source of this feeling, so unusual to experience toward a colored person ... Apart from the gigantic stature, apart from the nobility of each movement and the dignity of their manner of speech, apart from the tasteful unobtrusive manner in which they dress, apart from their refined features and the calm penetrating, often even mocking and provocative eyes, apart from all this, there still is -- and here I hesitate and am unable to formulate the dim obscure feelings which hover in my imagination." (No. 22, p. 266.)

[564] This is a sentimental but a very understandable judgment. In actual fact the Batussi are a ruling caste, but not a ruling race in the ethical sense.

563 Gradually one discovers the secret of the tremendous
186 superiority of the relatively few Batussi over the one and a half
156 million Bahutu: they are greatly superior to them in intelligence, calmness, composure, cruelty, cunning, racial pride, solidarity, and political talent. What strikes one most about the individual Mutussi, apart from his imposing outward appearance which certainly must have made a great impression on the Muhutu from the beginning, is first his calm and what appears to be unconcerned reserve. In his contact with the restless, impulsive, thoughtless Muhutu, this has always been to his advantage.

[609] Further one is struck by the arrogance he displays even toward Europeans, by his abysmal mendacity and cowardice when faced with any disagreeable situation. The Mutussi regards himself and his kind as the crown of creation, as a paragon of cleverness and political skill. This is small wonder, for the inferiority of the relatively few tribes within his sphere of vision -- intentionally kept narrowly circumscribed -- and the fact that a Batussi minority rules the large Bahutu people were bound to increase his feeling

186 of importance beyond all measure. It is true that he fears the
609

186 European because the latter is in possession of many mysterious
609 powers and resources, for example, the breechloader and technical skills, but he nevertheless considers him basically stupid since he can deceive him, and he looks down upon him with more contempt the less he knows and understands him. As a traveler, one at first has to get used to being looked up and down with a contemptuous smile by most Batussi in conversations and negotiations far from the military posts, and from then on it is best to treat them with a certain amount of humorous derision, provided one is capable of it. The longer one has traveled in Negro areas and the better one has familiarized oneself with Negro character, the more one is impressed when first meeting the Batussi by their proud reserve. There is no restless curiosity [15], no noisy, half fearful, half good-natured greeting as with most Negroes, but, calm and composed, these tall fellows stand there, leaning on their spears, and let the European pass or approach as though the unusual phenomenon did not impress them in the least. It is not until one matches their self-assurance and meets them with some force to back one up that one notices from the restless play of their eyes and the veins in their necks that most of them have a nervous uneasiness, anxiety, and fear concealed behind their apparent indifference.

181 Never or only very seldom does the Mutussi say what he thinks; it has to be inferred. Indeed, lying is not only customary to strangers, but it is a deep-rooted vice practiced toward everyone. This is a moral defect which cannot be glossed over by considering it optimistically, as R. Kandt does, as a "kind of competition between two intellects which to them is not dishonorable," or as "the unconscious transference into real life of their graceful riddle games, unusual for a Negro people, with which even as children they are accustomed to enliven conviviality" (No. 22, p. 273). Such romanticism is misleading in ethnology and ethnopsychology; sober objectivity in the evaluation of our colonial peoples is necessary for practical reasons alone.

In addition to mendacity, laziness and cowardice are also unpleasant character traits of the Batussi. The Mutussi never

The Mutassi never
181 works unless he belongs to the lower class, but he takes a sports-
[461] man-like interest in his cattle. Work is the concern of the sub-
jugated Bahutu and hence disgraceful to a Mutussi, and only the really poor Batussi will stoop to it. To be rich and powerful and to enjoy life in idleness is for him the essence of wisdom, the ideal which he endeavors to achieve with the utmost cunning and lack of scruple. It is everyone for himself, a maxim which is also adhered to by the Batussi as a whole in their relations to the ruled people, the Bahutu and Batwa.

Naturally this life of pleasure, indulged in for hundreds of years, has done great harm to the character and manly virtues of the Batussi. That they were not without courage, warlike ability, and energy can be easily inferred from the fact that, although they are small in numbers now and doubtless even smaller at one time, they have conquered this large country. Witness also the early history of their royalty (see p. 162 [not translated]). For a long time now, however, they have had their internal and external battles fought for them by their bondsmen, their Bahutu vassals, while they keep themselves cautiously in the background and cunningly direct operations from a safe place. Of course, there are praiseworthy exceptions even here.

In spite of all this, it must be admitted that even in this respect the Barundi are on a higher level than the Banjaruanda. In Urundi the Batussi are not so pleasure-seeking, lazy, mendacious, violent, and cowardly as those in Ruanda, nor are the Bahutu so servile and hypocritical toward superiors and so insolent toward the weak as they are there, nor does the king along with the lords living at his court indulge to such a degree in idleness, revelry, intrigues, and the satisfaction of vicious and cruel instincts as does the one in Ruanda.

563 In Urundi, as well as in Ruanda, it is above all the will
[556] to power and the desire for pleasure which have caused the ruling Batussi to keep the greatest form of wealth, cattle, to themselves. By this means alone they have created for themselves, an economic power over [16] the mass of the Bahutu which also provides the surest foundation for their political predominance
[754] (see pp. 41-42). In addition they have cleverly succeeded in

563 acquiring a reputation among the superstitious Bahutu of being
[754] great sorcerers and have made themselves greatly feared for this reason. Also, the priesthood works hand in hand with them to enslave and exploit the people (see p. 134). The exploita-
563 tion of the mass of the people and the crass egoism of the small
642 Batussi minority are made possible by the whole ingenious political system of both the Barundi and the Banjaruanda, with its strict legal separation of races and castes, with the rigidly graded system of vassals and supervising officials, the hierarchy of priests, privileged families, princes, etc. All this will be described in detail in later chapters of this book. The astonishing political acumen of the Batussi merely promotes the selfishness with which they exploit the subject Bahutu. There is no trace of any higher conception of the state.

563 For this reason it is natural that the Bahutu regard the Batussi only as conquerors of a different tribe whose yoke weighs
181 heavily on them. Yet, although they hate the Batussi, they make no effort to free themselves from their bondage for, like almost all Negro peoples, their nature necessitates subordination under a firm guiding hand. Moreover, their fear of the Batussi is so great that they would not hazard an open rebellion against them. Indeed, though few in numbers, the Batussi are vastly
563 superior to the Bahutu in intelligence and in the fact that a
186 solidarity exists among them which is constantly being renewed under the impulse of common interests. The Bahutu, on the other hand, are split up into a number of mutually warring clans and tribal groups, lack any sort of genuine national consciousness, and are being played off against each other in an ingenious manner by the Batussi.

000 As long as the Batussi are the rulers in the country, an intellectual and cultural revival of the Barundi people is impossible, for it is only the present depressed condition of the Bahutu, maintained through hundreds of years of seclusion, that guarantees the domination of the Batussi. For the time being, however, we Germans must collaborate with the Batussi and interest them materially in our projects in Urundi since we are still too weak to meet an open attack on their part. The goal of our long term colonial policy, however, must be to crush the

000 rule of the Batussi, liberate the Bahutu from the yoke of the Batussi, and win them over to our civilizing aims which are, at the same time, in their very own interest.

181 In conclusion, I shall cite a very acute judgment of the Barundi in general by R. Kandt: "The Warundi, it is true, are as cowardly as the Wanjaruanda but -- being in any case more lively and intelligent -- they are also more boastful and impertinent. In those days I never rid myself of the impression that all these histrionics, these war games, etc., were the expression of real street Arab mentality. For this reason I also believe that it will be more difficult to bring about a satisfactory state of affairs in Urundi than in Ruanda. Nevertheless, we shall never have such difficulties with either of them as might necessitate the far-reaching and dangerous defensive operations which were conducted in Uhehe, for example. These peoples, emasculated by centuries of bondage, do not know - and this is good -- what latent power lies dormant in the bodies of innumerable millions, and, lacking any deeper national consciousness, they will be the convenient tools of an intelligent colonization based on a knowledge of the country and language. They will never conceive of banding together in a united defense against foreign invasion. To arouse them from this slumber and to goad them into a united defiance of the Europeans would require such brutal clumsiness on the part of the administrators that probably none of us or our grandchildren need be afraid of experiencing the horror of it." (No. 22, pp. 325-326.)

[17] Chapter 2

Settlement, Dwellings, Food

361 In Urundi and Ruanda the surface character of the country, the form and type of its plateaus, hills, mountains, and valleys, determine the form and location of the settlements.

133 By far the largest part of the country is a tableland which
361 powerful erosion has dissected into innumerable long and short ridges with flattened tops and chains of hills with frequently deep and rather steep valley escarpments. The majority of the valleys are filled by papyrus swamps which can only be crossed in a few places. Hence it is not the valleys, as in our part of the world, but the high places that provide the most suitable settlement sites. The marshes in the valley bottoms, the hot stagnant air in the lowlands, the myriads of mosquitoes and gnats, and the valley slopes which in many places are very steep cause the people with their roads and settlements to resort to the free, airy plateaus and hill tops, while in most valleys the only fields are of such crops as require much moisture. In most areas of Urundi and Ruanda the valleys serve not to unite people but to separate them. In both regions the division of the people and the state into small communities is, therefore, determined by natural causes (see p. 89). For this reason also, the future opening up of the country by means of roads or railroads is rendered unusually difficult. The valleys in many parts of the eastern drier quartzite regions are much less swampy and less steep. There also, the surfaces of the plateau ridges and of the hill ranges are everywhere so stony and sterile due to weathered quartzite fragments (see Plate 2b) that the people avoid the high land and prefer to settle on the sides of valleys where the springs break out below the crevassed quartzite on the upper line of stratification of the almost impermeable argillite and where the argillaceous residual soil is more fertile and easier to till than the quartzite lying above.

This natural diversity among the areas is in itself an ex-
161 planation of why the population is rather unevenly distributed over the country.

The government estimates the number of natives in Urundi at one and a half to two million ("Die deutschen Schutzgebiete 1912-13," Amtliche Jahresberichte ["The German Protectorates 1912-13," Official Annual Reports], pp. 8-9). This large margin is an indication that official censuses in the individual areas have so far not been possible. Both here and in Ruanda only the drawing up of tax registers will some day

161 furnish more accurate figures. According to my own and other recent estimates, the figure of two million is too high; one and a half million is probably closer to the truth. However, a few missionaries, among them Father van der Burgt, have estimated even more than two million. [18] There are rela-
162 tively fewer Batussi in Urundi than in Ruanda; they constitute
563 hardly five per cent and probably only two or three per cent of the total population, i.e., 40,000-50,000 in Urundi. For them, too, van der Burgt assumes a much higher percentage: 15-20 per cent as against only five per cent for the Batwa. Apart from the mass of native Bahutu, there were in 1912-13 still about 2,500 other Negroes (Wasuaheli, Wanjamwesi, Manjema, and others) in the country, and, in addition, one or two dozen Arabs, two or three dozen Indians, and approximately five dozen Whites, half of them Germans and about 20 Frenchmen and Frenchwomen (missionaries).

On the whole Urundi and Uha are not by any means as
161 densely populated as Ruanda which has 72 inhabitants per square kilometer. [Fig. 1 appears here in original text.] The official estimate for 1912-13 gives an average of 51 inhabitants per square kilometer for Urundi (or 68, if one puts the total population at two million). On the whole the density of population increases from east to west. In the west the valleys and the broad ridges of the peripheral mountains are most densely populated; hence they are almost entirely cleared of timber. There, there are an estimated 50 to 60 people per square kilometer or, in other words, a density of population approximately equal to that of Portugal. Any comparison with Germany with its 120 inhabitants per square kilometer would be inappropriate since the area of utilizable land is relatively much smaller in Urundi than in Germany due to the many swampy valleys and quartzite wastes. The most densely populated parts are the
161 areas of granite, crystalline schist, mica schist, amphibolites,
133 diabases, etc., which comprise the more elevated western portion of Urundi where the rainfall is higher and which form fertile residual soils. Of the less elevated, large slate and

2 and 3. Center huts for women and children.
4. Rear hut for the servants.

Fig. 1. Homestead of a Barundi Lord.
(Sketch by Hans Meyer.)

161 quartzite areas adjoining to the east, the latter are the more
[133] sterile and, for this reason, less populated and cultivated. [19]
One observes the same phenomenon in Ruanda. In the more
[311] humid areas where bananas are grown, the banana plantations
cover large areas and thus give the illusion of a relatively dense
population, whereas in fact only a few huts are to be found in
them.

The Batussi and Bahutu families are rather rich in chil-
592 dren, as in Ruanda. Individually the Batussi women are less
[842] fertile than the Bahutu women, but in general there are seldom
fewer than three children in each family and in many cases
(among the Bahutu) between six and eight and correspondingly
more if the husband has several wives. Usually each married
couple lives with its children in a single hut. However, if
[595] there are many children or several wives, each mother lives
in a separate hut with her youngest children. Grandparents and
unmarried adults also have huts to themselves. Thus, there
are often between two and four residential huts and several huts
for grain and cattle in one kraal, or several fenced-in residential
huts plus outhouses are combined in one large homestead (see
Fig. 1).

361 The settlement pattern is that of individual establish-
ments, the fenced-in kraal, hamlet, courtyard (lugo, urugo).
Each homestead stands alone, surrounded by its fig trees and
its banana plantation if it is in the banana region (Plates
18, 21b). In most cases, however, there are several kraals
belonging to the extended family circle, situated next to each
other within calling distance so that village-like clusters
(ikisagara) are formed (see Fig. 2 and Plate 19a). Outside ex-
tend the fields. Of course, this is especially true for the
settlements of the Bahutu, for among the Batussi only the
poorest and lowest classes cultivate the fields. The kraals or
clusters of kraals belonging to the more prosperous Batussi are
scattered over the grassy pastures used by their cattle and sur-
rounded by high hedges of euphorbia and fig trees without
banana groves or fields. The distances between kraal clusters

361 and villages differ considerably depending on the quality of the soil. In the densely populated western districts one passes a cluster of homesteads every quarter or half hour, but in the thinly populated eastern districts one sometimes travels over an hour without seeing or passing a courtyard or a village.

One never sees many people outside, neither on the roads, 363 near the grazing cattle, nor in the fields. Only close to the huts and within the kraals does one see people walking, standing, and squatting in groups. Old people 70 years old and older 145 are extremely rare. Very few seem to live beyond the age of 60, and this seems to be more often the case with the Batussi than with the Bahutu.

According to missionaries' reports, the population has 161 been increasing during the last ten years or so, since the petty wars between the batwale and the princes and the invasions of the Banjaruanda and the Baha [Ha] have become rarer and less bloody. Only in the Tanganyika region which has been hit by 164 sleeping sickness has the population decreased considerably. 731 In the rest of Urundi the number of inhabitants is occasionally reduced considerably by smallpox epidemics or by crop failures, which are especially fatal to children, but such famines are relatively rare. In 1892, 1896, 1904-5 and 1908, rinderpest, bad harvests, and smallpox caused great devastations. In 1910 the distress resulting from drought in eastern Urundi was so great that the mission at Mujaga had to buy up large amounts of manioc and beans in Uha for their natives. Some travelers 181 claim that the majority of the Bahutu are waiting to be liberated from their conquerors. I cannot confirm this from my observations. [20] [Fig. 2 appears here in original text.] [21] The enthusiastic reception that the Bahutu gave at the time to the first European arriving there, Oskar Baumann in Urundi and Count Götzen in Ruanda, did indeed spring from the traditional hope for a great new conqueror who would usher in a golden age, but like all East African Bantu the Bahutu of Urundi and Ruanda do not in the least thirst for freedom. As has been mentioned above, they are submissive and dependent on others; they are happiest under firm authority and as accustomed to the discipline of their

[Text continues on page 31]

Fig. 2. Barundi Village. (Sketch by Hans Meyer.)

181 Batussi masters as they formerly were to the scarcely more lenient rule of their Bantu chiefs. When one comes from Ruanda which is governed on a rigid monarchical basis, one is astonished at how much freer, happier, and noisier, but also with how much less discipline the Barundi live and behave under their Batussi batwale than in Ruanda.

361 221 233 Predominantly agriculturists and breeders of small cattle, the Bahutu are completely sedentary. The Batussi, who own all the big cattle, also have permanent dwellings, but during the dry months they engage in a kind of alpine farming with their herds of cattle in the fresher pastures of the mountains, as though in memory of their former life as nomads. This will be described in more detail later in our discussion of stock farming (see p.40).

342 The residential huts (insu) of the Barundi differ essentially neither in form nor in structure, technique or material, from those of the Banjaruanda. Externally they are usually somewhat flatter than the huts in Ruanda; they have the shape of an umbrella rather than a beehive. Yet both in Urundi and Ruanda the crinoline-like frame is bound together by means of wooden poles or, wherever there is bamboo, by means of bamboo poles, the empty spaces between them being filled with vertical and horizontal layers of sorghum stalks. The superimposed, flat, hemispherical roof is not supported by a single pole in the center, but by a number of them evenly distributed in the hut. The entire frame is covered down to the ground with straw of tall grass (sedge, not reeds), and in some regions with dry banana leaves. As a protection against rain, a stick with a wisp of straw which spreads out at the bottom is fastened at the point of the roof. The opening for the door with the somewhat protruding door roof resembles that of the Ruanda house, but its side walls are interwoven less carefully than those of the Ruanda house. The door opening is closed by a coarsely plaited screen, kept in place by a stick propped against it. Except for the single door, there is no opening in the entire structure (Plate 18). Thus, the smoke must escape through the door. The entire hut can be lifted by several men and shifted to a

342 nearby site when the family changes its place of residence.

If the huts are very much inferior in their outward appearance and in the care with which they are built to those of Ruanda, this is even more true of their interiors. Here, as in Ruanda, the interior supporting poles are used to fasten [285] several woven screens, higher than a man and made of papyrus, reed stalks, or bamboo laths. These divide the hut into two or more separate living, sleeping, and store rooms. Many of these woven screens have the shape of a bent shield, as in Ruanda. In Urundi, however, very few of them are plaited as delicately and figured as beautifully as the shield-shaped wall screens and mats which in Ruanda cover the walls all around [22] and separate the various rooms from each other, admirably decorating not only the huts of the Batussi but often also those of prosperous Bahutu. Usually only two rooms are separated from each other by mats in this way: the front room (umurjango), which serves as a living room, kitchen, and dining room during the day, and the rear room (akagiro) which 513 serves as a bedroom. In the latter, the parents' bed space 352 is also separated from the sleeping place of the children by mat screens. Here most of the Barundi sleep simply on a bundle of straw which they cover with a cowhide or goatskin. However, where a bedstead does exist, it consists of four short posts rammed into the ground and a wooden frame fastened on them which is filled with laths and covered with a mat. In Urundi, as well as in Ruanda, Mpororó, Ankole, etc., such bedsteads are owned only by the distinguished and the rich.

352 . Wooden stools to sit on, like the ones used elsewhere in East Africa, are nonexistent in Urundi and Ruanda, or they exist only as a foreign import from Unjamwesi, Usâmbiro, etc.

Even in the dwelling of the powerful chief Lusabiko in East Urundi there was "not a single stool or log to sit on. Only a few thick bundles of straw were lying in a corner; they could be drawn toward one if he did not wish to squat on the ground. If one desires to sleep, the bundle is unfastened, and [513] a soft bed is made. In the homes of rich persons a hairy ox hide is placed over it before sitting or lying down." (No. 14, 1901, p. 214.)

342 In constructing a house, not a single nail, wooden plug, or peg is used, but the entire structure of stakes and wickerwork is usually tied firmly together with fresh bast from the bark of a [289] fig tree or with spliced fibres of banana trunks or papyrus stalks. The height of the huts varies between two and four meters (in Ruanda as much as eight meters); the diameter is between three and six meters.

In Urundi I did not see residential huts of any other shape, but, according to Baumann, there are residential huts with a cylindrical bamboo substructure on the upper Kagera (No. 4, [343] p. 218). In Urundi I have seen these used only as storage huts in the mountains where bamboo grows.

As has already been mentioned above, each family has its own hut, and if there are several wives, each wife has her own hut. There are no special houses for bachelors, unmarried women, strangers, communal gatherings, or for specific societies. However, there are half-open roughly constructed work huts for 343 blacksmiths and smaller well-built huts for young cattle (uruhongore) and for the storage of field crops (ivikeka). The [251] storage huts are shaped like baskets, tapering toward the bottom, and are twice a person's height. They are covered with a flat, conical straw roof which is usually removable (see p. 56). All this stands on a low grate of wooden poles to protect the hut yet very close to it, there usually stand a few small spirit huts 346 (ikigabiro), not more than a meter high, made of straw and 778 reeds. In these the spirits are offered meat, milk, or produce [782] of the soil in pieces of broken pots or pumpkin shells (see pp. [776] 121, 135 , and Plate 18a). Another miniature hut (ikitabo) is dedicated to the chief god, Riangombe or Kiranga. One sees many more of these huts in Urundi, Uha, and Ussumbwa than in Ruanda.

364 The Barundi, and above all, the Bahutu, are far from exemplifying the great cleanliness which usually prevails in 356 the vicinity of the huts in Ruanda; [23] they throw garbage 342 next to the hut and defecate in the banana grove surrounding [514] the huts, but the coprophagous dogs and vultures, wherever they exist, make it their business to remove the worst.

364 they exist, make it their business to remove the worst. Accord-
356 ing to the descriptions of most travelers, cleanliness and care
342 in the construction of huts and farmsteads seem to be least in north and northeast Urundi. Personally, however, on my journey across central Urundi I found the most beautiful settlements in the west and the dirtiest and worst constructed in the east. Von Trotha, for instance, says of northeast Urundi: "The indifference of the people toward cleanliness and careful construction of houses is incredible. Only the chiefs have well-built dwellings, and in the environs of their houses dirt is not yet piled up like a fortress as is the case among their subjects" (No. 8, p. 62).

When the hut becomes old and dilapidated, it is repaired,
356 but even so it hardly ever lasts longer than five or six years. After that time it has to be completely rebuilt. After the owner's
429 death the widow or unmarried children continue to live in it, and after the family has been dissolved, the house is torn down.

Since each farmstead may include up to six or eight
592 residential huts, depending on the prosperity of the owner and
361 how many wives he has, and since a cluster of kraals or a village often contains four, six, or more kraals, a village may shelter up to 60, 80, and more people. Usually the settlements are smaller, although in banana-growing regions the wide expanse of banana plantations, among which the kraals of the Bahutu are hidden, may create the impression that the villages or clusters of homesteads are much larger.

Rich people and the Batussi lords, however, are not con-
556 tent with a single kraal including several huts. They build
592 several kraals adjoining each other so that it is possible to pass
342 directly from one to another. The front hut serves as a living and reception room for the master of the house and also as a shelter for the cattle at night; the center huts are for the women and children; and the rear hut is for the servants and is used as a kitchen and storage place, the cooking place, etc. (see Fig. 1). For the rest, the huts and homesteads of the lords, princes, or even of the king scarcely differ from those of the common Batussi and of the "better" Bahutu, either in their furnishings or in their cleanliness; they are merely larger than the latter.

351 417 The enclosure (ingo) around the majority of the kraals both in Urundi and Ruanda is not only intended as a means of protection against human or animal intruders, but it also serves to enclose the family, especially the small children, and to keep the cattle penned in at night (Plate 20a, 21b). If the inhabitants have no cattle, they usually have no fences around their huts. This is the case, for example, in some mountain regions of northwest Urundi and in a few districts of western central Urundi. Wherever fences do exist, they are higher than a man so that one cannot see over them. Depending on what material is available, they consist of dry trunks of banana trees, sorghum stalks, papyrus shafts, or the dry branches of the Acanthus arboreus, roughly but firmly tied together, or they are formed by closely planted living dracaena, fig trees, or euphorbias. I never saw stones piled up so as to make a wall, although there are enough blocks of stone there to serve this purpose. The entrance to the kraal, which is flanked by two strong poles, is blocked at night by trunks placed across it. [24]

The kraals of the Batussi are in most cases more carefully and firmly enclosed than those of the Bahutu. In some areas settled predominantly by Batussi, for example, in the extensive highland pasture areas on the eastern slope of the peripheral mountains of Tanganyika on the upper Muwarasi, "each house is a small fortress with three concentric defenses. Within the protective wall (probably made of piled earth, there is a plaited cane fence, behind this one of euphorbias, and finally one made of thorns" (No. 8, p. 73).

351 248 Even when the hedge does not consist of fig trees planted close to one another, there are almost always a number of fig trees around the kraal, this being more often the case here than in Ruanda. These trees provide not only shade for the kraal, [287] but also bark which is used in a variety of ways, in particular for making clothes (Plate 18a, 21a). As in Ruanda, such circular groups of fig trees enable one to note the sites of former kraals, particularly those of chiefs, many years after the huts have

351 disappeared. Yet, I did not find any trees at all at the resi-
[249] dence of the great chief Kilima (see pp. 162, 188 [these pages not translated]) in northwest Urundi. Four large round kraals are situated there on an open round mountain top at an altitude of 2,150 meters, affording a wonderful view of the neighboring deep valleys and long mountain chains. Each kraal is surrounded
[417] by a thick bamboo palisade, twice as high as a man, enclosing six to eight spacious round huts. There is no tree, green fence pole, or even a banana leaf anywhere near it. The entire complex stands on the commanding steep mountain top, like a fort built for defense.

361 In other parts of the border districts adjoining Ruanda, the houses are sometimes crowded together into whole villages surrounded by strong protective fences. Indeed, Captain Bethe even found "a large city of natives, a compact community living together" (Deutsches Kolonialblatt [German Colonial Journal, 1899, p. 9) in Iwusome on Lake Rugwero in northeastern Urundi. However, these are exceptions to the general practice of living in individual kraals and occur only in a few exposed border regions.

The fireplace (isiko) is usually in the main center room
354 of the hut. I intentionally do not use the word "hearth," for usually it consists of a few stones which may be pushed together on a round platform of pounded clay in such a way that a fire may be built in the center and a cooking pot placed on top. Sometimes also, the fire is placed on a thick round plate of fired clay in the same manner as in Ruanda; its periphery is raised in the form of a roll to prevent the fire from being scattered.
372 When the embers cease to glow, which is very seldom, fire is obtained from one's neighbor. On long travels, however, fire is made in the well-known manner of the Bantu, when wood is available, by twirling a hard piece of wood on a soft one; otherwise, a glowing piece of coal is tied up in a bundle of slightly wet grass and carried along. In this manner they carry embers with them on journeys lasting several days.

Yet since firewood is often very scarce in a country almost destitute of trees and bushes, cakes of cattle dung dried in the sun are used for fuel or, wherever there are no cattle or only a few, papyrus or reed rootstocks are collected in the swampy valleys.

000 swampy valleys. Acrid smoke fills the entire hut. Add to all
362 this several adults, some of whom in many cases may be smoking tobacco, half a dozen children, a few goats, dogs, and chickens, and if during bad weather or at night the only
[136] opening of the hut is closed and the rats, which are to be found in every hut, [25] begin their sport, it is easy to imagine how refreshing it is for any non-Murundi to stay in such a hut.

252 Cooking (kuteka) in and outside the hut is the business of
[462] the wife, assisted, if necessary, by the children. A man will cook only if he has to, for example, while traveling. The
415 only cooking utensil used is the earthen cooking pot (inkono), made by the Batwa potters (see p. 78) or by women who have mastered the art of pottery (Plate 48). Large earthenware pots (imiwindi) with a capacity of up to 20 liters serve as water containers and for preserving pombe beer. Wooden bowls or pumpkin shells are used as ladles. Milk is kept in carved wooden vessels (iwango), generally of unwieldy shape. As among the
[251] Banjaruanda, they are rinsed with cow urine each time before being filled so as to preserve the milk better. Butter, which is
[234] never eaten but used only for rubbing the body, is produced by
[302] shaking the curdled milk in large bottle gourds, and it is always in a half liquid state. The large earthenware vessels all have a round bottom and stand on the ground of the hut, propped up by stones, while various wooden and gourd vessels (ubwato, akako) stand between the latticework of the walls or are suspended in wide-meshed nets. The wooden milk vessels are placed on a bench-like frame near the fireplace along the wall. There are no spoons, only wooden ladles which are often nicely decorated
[531] with carved linear designs. The boiling mush is stirred with a broad wooden spatula ("matchstick") (No. 1 of Plate 46), and when the meal is ready, it is heaped on shallow wooden or
264 woven bowls. In the customary fashion of Negroes it is then formed into little lumps with one's fingers, dipped into one of the boiled herb sauces, and pushed into the mouth.

252 In front of every house there is a wooden mortar (isekuro),
243 shaped either like a cylinder or an hourglass. In this the women
[412] separate the grain from the husks and panicles, or in other words "thresh," by means of a wooden pestle which they pound rhythmically in turn.

252 The winnowing of the grain and disposal of the spelt [sic] is
243 usually done by men by means of large, very flat baskets or
[415] "riddles." Finally, the flour is spread out on these same flat baskets after the woman has made it by grinding the grain on a millstone (uruschjo), one of which also lies in front of each hut. All this is done very much in the same manner as in Ruanda and among the other peoples of the interlacustrine region (No. 19, pp. 371-372, 451-452).

264 Most Batussi have only one hot meal a day, and they eat it in the evening. The Bahutu, however, have two: the first meal around noon, the second in the evening between seven and eight o'clock. The Batwa do not seem to be bound to any particular mealtime. When the Batussi and Bahutu feel hungry in the meantime, especially in the morning, they eat cold food, like cooked sweet potatoes, manioc, roasted corn, peanuts, etc. Milk is drunk either fresh or sour; the Batussi are par-
272 ticularly fond of whisked sour milk. In order always to have
484 fresh milk when traveling, prosperous Batussi take several milch cows and the necessary personnel along on their trip. Meat is
[252] mostly roasted on the spit or dried by smoking or in the sun.
262 Yet meat is seldom enjoyed, for the Batussi of Urundi, like those of all the other Bahima states, eat only beef, and they do this only when the animals are sterile or too old to breed, or when an animal is killed to be sacrificed (cf. pp. 103, 136). The Bahutu get beef [26] only when the Batussi who own the cattle give them some. As for meat from the goats or sheep they have allotted to them, this they eat only when an animal is slaughered for its hide which is used for making clothes. More meat is allotted to the Batwa who serve as guards, policemen, musicians, etc., at the "courts" of their Batussi rulers.
231 One will find relatively few goats and sheep in Urundi, although enormous herds existed in former times. They have disappeared to a large extent as a result of the exploitative economy practiced by the traveling merchants since 1906. Chickens and eggs
262 are not eaten either and are used only for sacrificial purposes or for prophecy (see p. 47). Since hunting also seldom provides

Since hunting also seldom provides
262 anything for the kitchen - the Barundi are poor hunters and,
[224] except for the Batwa, do not eat venison or if they do, only on exceptional occasions -- and since wild plants are seldom used for food, the menu is rather limited. The main food items for the whole of Urundi are bananas, beans, peas, sweet potatoes, and sorghum; all these are dried, ground, and prepared as mush. All the other things produced by the fields at different altitudes and in areas of different climate (see the chapter on agriculture, p. 48) play only a subordinate role.

It is true that when speaking to a European or a Muhutu the Batussi claim that they live only on milk, meat, and beer, but in reality they eat legumes, bananas, millet mush, and other foods exactly like the Bahutu. After all, not enough cattle are killed in the area to satisfy all the Batussi every day.
252 Except for meat, which, as has been mentioned, is almost always roasted on the spit, most dishes by far are cooked or stewed; only very few are fried in grease or oil as, for example, in the Tanganyika region where palm oil is plentiful.

As far as special rules concerning food are concerned,
262
264 I have discovered a number of food taboos connected with totemism and religious ideas (see p. 103). It is surprising that one never sees adults eating. They always take their meals inside the huts, the man together with his wife but apart from the children, and if they are ever caught at their meals, they stop and go away since the food would "not agree" with them if eaten in the presence of strangers. Of course, this is
262 not the case when they are traveling. In that case the force
261 of external circumstances often frees them from such considerations; yet conscientious or rigidly trained people, as most of the Batussi are, observe the custom so strictly even while traveling that they will go hungry rather than depart from it. When climbing the Karisimbi, for example, I had two young Batussi guides who, in spite of the extreme physical exertion involved, refused all the food I offered them and did not eat anything for two days because they did not have their customary mush and milk, nor did they accept anything from the people in my caravan.

[27] Chapter 3

Ornaments, Clothing, Weapons

301 The Barundi have very few body ornaments. Men and women wear thin rings of copper or iron wire around the ankles and above the wrist, or catgut strings with thin wire wrapped around them, and also more rarely a thick iron ring around the wrist. The men in particular wear an ornament around their necks which is unknown in Ruanda: a triangular section as thick as a finger, cut from a white shell (ikiresi), hanging on a string; for the most part it is imported from Unjamwesi (No. 19, p. 406) where men also wear it. Similarly, a polished boar's or hippopotamus tooth is worn on a string around the neck (Plate 33). More frequent these days are simple chains of pearls made of small pale pink or white European pearls; more rare are strings with small spindle-shaped wooden pegs strung in a row, with inlaid brass or copper discs like mosaics, or with all kinds of pieces of roots, animals' claws, goats' horns, etc., used as amulets (see p. 132). Small conical or bell-shaped pendants of copper or iron are also often worn in great numbers around the neck (umuhare, (Figs. 3 and 4). The thick disc-shaped wooden ring (ikirinsi), which many Barundi wear around their wrist to protect it from the recoiling bowstring when shooting (see p. 34 and Plates 11, 12b, 13, 30a), is often also merely an ornament. Although it is 20 to 25 centimeters in diameter and despite the delicate structure of the Barundi hand on which it is worn, this disc-ring nevertheless does not look clumsy since it is elegantly formed and inlaid [28] with various linear brass or copper ornaments (Plates 42, 43). The incision on its side through which the disc is slipped on the wrist is so narrow -- two and a half to three and a half centimeters -- that it is hard to see how a man's wrist can be pushed through it. A smooth ball the size of a plum and carved from fruit pits is a sign of rank or is a valuable amulet among the highborn. It is worn on top of the smoothly shaven head on a narrow strip of leather that passes around the back of the head.

Fig. 4. Iron Bells as Neck Ornament. (Ethnological Museum, Berlin.)

301 Often a second strip of leather, without the ball, however,
554 goes around the head from the back to the center of the forehead. I have never seen this form of ornament worn by the Bahutu or the common Batussi but only by members of the royal kin group (Baganwa) and by the high batwale (see Plates 11, 13, 14).

302 The hair style of the Barundi is very simple. According to the reports of former travelers, there was much greater variety years ago; today the large majority shave the head completely. For this purpose, after the hair has been somewhat softened with warm water, they use a short shaving knife without a handle. Many of them leave a small, round tuft of hair on top of their heads, more rarely a remnant of hair in a different form. The children frequently appear in long "poodle locks"; they then look like Galla or Somali children (Plate 12b, 16a). The heads of women and girls are usually smooth shaven. If they wear hair, they comb it with wooden combs (Fig. 5). The men also shave their beards; axillary and pubic hair are removed among the Batussi, but not among the Bahutu who have very little anyway. The two bristly fringes of hair running diagonally across the head, which are a national trait of the Banjaruanda, are very seldom seen on a Murundi.

302 Common to the Batussi of both regions is the care of the
515 skin by means of various cosmetics. Rubbing with half-liquid butter is the most frequent. Most by far of the butter produced is used for this purpose, and often some raw laterite and the juice of fragrant herbs is added to this skin ointment. Those people who have no cows and, consequently, no butter, such as most of the Bahutu, cannot smear themselves with butter. If this ointment is put on fresh every day, it is quite appetizing and nice, but if, as frequently happens, the butter turns rancid and combines with the smell of sweat and the stench of smoky huts and stables, the fellows stink so much that one can smell them at a distance of ten paces even in the dark of the night. Yet I must say in defense of the Barundi that they like to take a bath whenever water is plentiful, i.e., when drawing

302 water at a spring, crossing brooks, and on similar occasions.
515 Sometimes children and, at times, even adults cover their hair, scalp, and other parts of the body, sometimes the entire body, with a light gray layer of paint made of clay, ashes, or the marly excrement of beasts of prey that is frequently found in the steppes. This is not a festive adornment, as is often the case when adults paint themselves (see p. 67 , 127), but is intended to free the skin of small parasites and to keep it smooth.

304 Tattooing (urusago) I have observed much more seldom in Urundi than in Ruanda and Uha, [29] and then only in the form of decorative scars, never colored tattooing on the surface of the skin. In Urundi, too, it is mainly the Batussi who are tattooed, and, as in Ruanda, the patterns extend over the upper part of the arms, the two halves of the chest from the shoulder down to the area of the navel, and both halves of the back from the shoulder to the waist. As in Ruanda, the patterns consist mainly of finger length half-moons which in great numbers are placed in a row and are generally connected in groups of two by a third crescent which interlocks with the open side of the sickle; the total effect is that of a chain-like pattern (see Fig. 7). Each line consists of many parallel cuts made by a knife (Fig. 6) and caused to swell by rubbing on ashes and euphorbia juice, so that they finally form a thick scar which stands as high as one centimeter above the surface of the skin. Practitioners skilled in medicine do the tattooing. Other patterns consist of zigzag lines, ribbon-shaped parallel rows of lines running across the shoulders like broad suspenders, or button-shaped scars, like thick inoculation scars, in rows on the upper arm and in the center of the chest. Other irregular clusters of scars are not decorative tattooing but incisions for local body pains or wound scars resulting from violent injuries.

304 In my opinion it is improbable that this tattooing was
171 originally practiced only by the Batussi and was imitated by the Bahutu and Batwa, as was stated by M. Weiss (No. 33, p. 93). This type of tattooing is quite unknown to the Hamitic peoples of Africa, but it is very common among the Bantu of the upper Nile and Congo regions and of the western and southern regions.

(Sketch by Hans Meyer.)

304 around Lake Victoria, among the Bassuwi, Basindja, Baha,
171 Wassumbwa, etc. -- while, according to H. Rehse, the Basiba [Haya] do not tattoo themselves -- so it is much more likely to assume diffusion from the Bantu and Nilotes to the Batussi and a further development of tattooing by the latter. The tattoos of the Somali, Galla, Massai [Masai], etc., look quite different. A report by H. H. Johnston gives some indication of the wider context. According to him, the crescent-shaped scar tattoo, of which he gives a photograph (No. 17, Vol. II, p. 569), is also found among the Bakonjo [Konjo], who are probably the oldest Bantu race [30] in Unjoro, Toro, and Ankole, while the large mass of the Banjoro [Nyoro] in Unjoro, who are an important mixed race consisting of Bantu, Nilotic, and Bahima elements, do not tattoo themselves.

304 In Urundi I did not observe any tattooing on women and children. It was impossible to find out anything definite about the meaning of the patterns. I would doubt that they are intended to represent horns of cattle, as has been claimed by a missionary.

"Decorative disfigurements" of the ears (ear blocks), nose (nose pegs), the lips (pelele), the teeth (notches or filing), or other parts of the body are found in Urundi neither among the Batussi nor among the Bahutu, and this is also true of Ruanda. The Batwa, however, sharpen the two upper incisors. Also, neither cutting of the genitalia among either sex, deformation of the head, nor other such things are practiced. It is not until one descends to the west, east, or south from the interlacustrine plateau that one once more finds tribes with disfigurements of the body.

[287] Urundi is still the country of clothing made from barkcloth
439 (impusu). Except for the peripheral areas in the southeast, south,
177 and west where foreign trade, to which the rest of the country has been barred until recently, supplies cotton material, a piece of "Amerikani" or a cotton blanket used for clothing is still a rarity in Urundi. It was not until recently that more cotton material was introduced into the country by the few licensed traveling merchants, the missions, and the passing caravans

439 of officials and military men. The natives eagerly snatch it up.
177 Yet at the time of King Kisabo the chiefs strictly banned the wearing of cotton material for they suspected quite rightly that, together with the foreign merchants and goods, other influences would soon be introduced which might undermine their sovereignty.

Apart from the bark material which predominates, goat
291 skins (ikikoba, urusato) are also worn as loincloths, with the fur side inward; they are the only clothing for children, poor people, and mostly for the Batwa also (Plate 7). In northeastern Urundi, in the Bugufi district, hide cloaks are worn more often than those made from bark (No. 8, p. 61). All over Urundi the
[854] women, in addition to the loincloth of hide or bark material, around the upper part of the body wear a quadrilateral piece of hide or bark material, tied in a knot at the shoulder; it is used to carry the youngest child on the back. The men wear a larger, toga-like garment, held up by a knot at the shoulders and falling down over the knees. The knots at the shoulders are often decorated with a few large tassels of dry banana bast which look like gigantic major's epaulets (Plate 11a, 14a).

Barkcloth (impusu) -- Stuhlmann calls it "bast felt" (No.
287 32a, p. 35) -- has an advantage over hide and cotton materials
386 in that it is very light, warm, and permeable, but its production requires work, and since it frays out after longer wear, it soon becomes full of holes and frayed and looks very shabby (Plates 9, 13a). Add to this the usually very dismal, dark gray color. By nature it is brown. In a very few cases it is dyed red with laterite or plant juices (for mourning), or it is decorated with
[531] black designs shaped like spindles, leaves, or circles against its natural reddish-brown background. Usually it is dyed a dark gray with wood ashes, argillite, or mud from the swamps, and then it is a deplorable sight. When a large number of people dressed in this manner happen to stand together in a crowd, the many black-clothed figures, [31] combined with the smooth-shaven skulls and flashing spears which are carried by everyone, form a very impressive total picture of great somberness. We again find this simple method of dyeing in Unjoro, the most northerly area to which the Bahima extend; Vandeleur writes

287 about this: "The Wanjoro (in the highland of southern Unjoro)
386 produce the same clothes of barkcloth as the Waganda [Ganda], dyeing them black by putting them for a day into the mud of a swamp." (No. 9, p. 377.)

291 There is no difference between the dress of the Batussi and the Bahutu, nor is there a special costume reserved for certain classes or professions. The Mutwa and the Muhutu, the Mutussi and the Muganwa, the great chief and the king: all dress in the same unattractive blackish-gray impusu of tree bark. Another feature common to them all is that they take off the long upper garment inside the huts and when working in the fields because it is a hindrance.

287 The material is made from the barks of several fig species
248 (Urostigma), mainly the Ficus chlamydodora Warb. or the Ficus Schimperi Hochst., in the same manner as in those areas of Ruanda where garments of barkcloth are still worn. Since more barkcloth is used in Urundi than in Ruanda where cotton cloth is already much in use, more fig trees are planted near the huts in Urundi than in Ruanda; often they look like a village orchard near the houses. For this reason alone the scenery of Urundi gives the impression of being more friendly and varied than Ruanda which is grassy for the most part. Almost every cluster of huts lies in the shade of a little fresh green fig grove. The fence surrounding the homesteads also consists partly of fig trees which form natural fence posts, giving firm support to the latticework of the fence. According to van der Burgt, the Ficus chlamydodora was introduced into Urundi only about 60 years ago and at present occurs only where it is cultivated. However, I believe I have seen it growing wild in the peripheral mountains of the northwest.

287 Once the tree has grown until the trunk is about the thickness of an arm, its bark is removed for the first time. For this purpose two horizontal incisions are made around the trunk from half a meter to one meter apart. Both incisions are connected by a vertical incision, and a long rectangular piece of bark is then loosened from the tree without difficulty. The exposed area of the trunk is then rubbed with butter, and banana leaves are tied around it. Then, from the cut edges, the bark completely

287 reforms again under the resin exuding from the wood, and the wound heals. In two years time the tree can be cut once more. The piece of bark which has been removed is first cleaned of the rough outer layer with a knife, then it is placed over a tree trunk lying on the ground and pounded on both sides with a short, grooved, wooden club (Plate 36, 37) until it becomes soft. The sap still in it is then wrung out, as out of a wash rag; the piece is then spread out and dried in the sun. Finally it is sewn with banana bast thread and an awl to other pieces and made into a garment of the size needed for a loincloth or a cloak (No. 19, p. 279). Barkcloth is produced exclusively by [462] men and is, almost without exception, for house and family use only, but in Ruanda there are also special "fundi" who make a business of producing and selling the cloth to other people. The women are concerned only with decorating their [301] garments with interlaced borders and lace, while the men [32] also fasten tassels and shoulder tufts as decorations on their garments (Plates 11a, 44, 45). Even King Kisabo liked to indulge in this occupation during his leisure hours, and the same is reported of the mighty chief Lusabiko in east Urundi: "We found the chief busy making fringes out of fine dry grass with which to decorate his bark garment. In this simple Negro, squatting on the ground plaiting fringes, nobody would have suspected the great Lusabiko at whose feet a quarter of the beautiful land of Urundi lies trembling" (No. 14, p. 214).

291 It may be assumed that the Batussi as a pastoral people must originally have worn garments made from cattle hides, as is still the case at present among several pastoral tribes in East Africa, for example, the Massai and Wandorobbo [Wanderobo]. Since they have settled down, however, they have adopted barkcloth, among many other things, from the subject Bahutu. [292] Carefully and tastefully prepared hide garments, leopard skin aprons (see pp. 124, 126), and all kinds of ornaments (Plates 11b, 12a, 31, 32) make their appearance only when festive attire is worn at war dances and other celebrations.

Neither men nor women have any headgear. If the sun is too hot, if it rains, or if the head must be protected for some other reason, a corner of the garment is pulled over the bare

291 head. Sometimes women wear a headband of corn leaves as a symbol of young motherhood; two narrow strips of banana bark over the forehead is the sign of a married woman. Both are also worn in Ruanda.

There is no special covering for genital parts or the feet. When men wear only the toga, the penis is often visible, but this does not offend their sense of modesty. The women have their breasts mostly covered by their upper garment, but they do not mind uncovering them when, for any reason whatsoever, they take off or change a garment. Before reaching puberty, children walk around entirely naked (Plate 16) or with a narrow apron of banana bast (Plate 38).

411 The Barundi are really a "people in arms," far more so than the Banjaruanda among whom the large mass of the Bahutu walk unarmed and even the Batussi rarely carry a spear, but rather only a long staff which, however, may be quickly made into a weapon by affixing a spear point. Similarly, the Barundi can be seen walking around with wooden shafts without points whenever they want to demonstrate their peaceful intentions or wish to protect the iron point against wear or rust, but they almost always carry the spear point wrapped up, and they never go far away from the homestead to tend the cattle, work in the fields, or go on a visit without having at least one or two people in the group armed with spears and bows. A Murundi with any self-respect will never let himself be seen without a spear, for without it he would feel "undressed." Even boys carry spears. As a rule, the two customary weapons, spear and bow, are carried together, the spear in one hand, the bow and two to four arrows in the other.

The spears (itschjumu) hardly differ from those in Ruanda, and, as in Ruanda, the shape of the points varies somewhat (Plates 39, 40). Generally the blade has a strong, sharpened central rib which makes it very elastic and resistant and gives the spear, so to speak, four edges. Next to the central rib two blood grooves are hollowed out; these are usually absent on a Bantu spear. Point and socket have a sleeve for inserting the shaft. The latter is a strong [33] stick, as thick as a thumb, two

411 to three meters long, absolutely straight generally, and as well-rounded and smoothly scraped as though polished. Considering the extreme rarity of trees and large bushes in Urundi, the quality of the spear shafts is surprising. No pole-timber for the spears is imported from the neighboring areas. Many spear shafts are family heirlooms which have been bequeathed down to the present day from a time when wood was more plentiful. Others are made from the wood of the cultivated fig tree which yields barkcloth; it grows good straight branches unless it is cut often. Poorer people and children generally have spears with inferior, somewhat bent or knotty shafts. Spear [326] points and sockets are made by special blacksmiths (see p. 77) [316] either from iron mined in Urundi itself or from iron hoes (see [439] p. 83) imported from the Congo (Uvira) or from Usindja. The rest of the work necessary to make a spear is done by each Murundi himself. [Fig. 8 appears here in original text.]

The spear is mainly a weapon used for stabbing or for defense. It is thrown only short distances when one is certain of hitting the target since one cannot risk losing this valuable possession. There are no slings for hurling spears.

The Murundi is inseparable from his spear, and the fact 516 that they are always able to lean on the long spear shaft determines the characteristic posture of both the Murundi and the Munjaruanda when they are standing still. He grips the upright shaft with his arm half-raised so that his hand is about the level of his face. Depending on whether the palm of the hand is turned in or out when clutching the spear, the shaft stands vertically either between chest and elbow or along the outside of the elbow, while its end rests on the ground. In both cases the body leans with all its weight against this prop which slants somewhat away from it; at the same time the leg bearing the main weight of the body is fully extended while the leg next to the spear which takes no weight is easily crossed over the other leg at knee-level so that it touches the ground only with the outer edge of the sole (Plate 9b). [34] Less frequently the foot of the leg taking no weight is planted firmly against the leg bearing the main weight, as is done frequently among the Negroes of the Upper Nile and also among the Massai. The composition of lines

(Ethnological Museum, Berlin, No. 5274.)

516 in this posture of the Barundi at rest is often surprisingly beautiful. A small group of men standing in this position really presents "a picture to be painted." [Fig. 9 appears on p. 34 of original text.]

The chief weapon for attack and fighting is the bow and
411 arrow. The bows (umuheto) have the simple shape of most of the East African bows and they are rather good weapons (Plate 41). The string is usually made of beef sinew. Compound bows, such as the Batwa of Bugoje have, do not exist among the Batwa of Urundi who have been much more influenced by the Negroes. The arrowheads (umwampi) have neither barbed hooks nor lobes and, by means of a thorn, are embedded in the wooden shaft whose upper part is wrapped and the bottom ends simply feathered. The feathering often is bound in a nicely patterned reed wrapping (Fig. 8). Neither the Batussi nor the Bahutu ever use poisoned arrows, but the Batwa do (No. 19, p. 246). It has already been mentioned that the left hand holding the bow is protected against the recoiling string by thick disc-shaped arm rings (ikirinsi) (see p. 27 and Plate 30a). Also, among the Barundi archery does not entail shooting from a held position with precise aiming, but rather suddenly and violently jerking off the arrow toward the target in an impulsive fashion, like hurling stones from a sling (which is not practiced in Urundi). Nevertheless, they do hit a man at a distance of 30 to 40 meters with a fair amount of precision (Plate 30). The majority of the arrows are made by the Batwa. Sometimes the arrows are kept in nicely carved wooden quivers (umutano) which are provided with overlapping lids on both ends (Plates 41, 42), but a quiver is seldom seen on the arm or back of a Murundi, mostly only inside the huts. [Fig. 9 appears here in the original text.]

The sword-like knives (imbugita) of the Barundi, up to
412 half a meter long, are not really weapons but instruments for
411 daily use which only occasionally are also used as weapons (Plate 43). The knife has two parallel edges, and its tip is only slightly pointed. In its entire width it is inserted into an hour-glass-shaped wooden handle, and it is worn in a wooden sheath

[Text continues on page 50]

[34]

Fig. 9. Knives with Decorated Wooden Sheaths. (Ethnological Museum, Berlin, Nos. 2466, 3881.)

412 (uruwati) made of two thin boards held together by several
411 wrappings. In the same manner as the quiver, the sheath is often
[531] decorated with carved crescents or zigzag patterns (Fig. 9).
The knives are often carried by a strap running from the right shoulder to the left hip, like a shoulder belt. The much smaller
412 knives, 10 to 15 centimeters [35] long, which are found more often and which are of the same shape and used for smaller carving jobs, are either worn on a string around the neck or over the left upper arm. Only in western Lower Urundi on Lake
[177] Tanganyika can we find knives with fine copper wire nicely wound around them; there they are due to Congo influence and are produced by Wawira [Bira] blacksmiths (No. 19, 133).
[326] In Upper Urundi proper, the Bahutu and especially the Batwa blacksmiths are the suppliers of knives.

Fighting clubs (uwuhiri) which were once generally used
411 all over the region have become rather rare in Urundi; as among the Massai and the Wadschagga [Chagga] these former weapons have been degraded into a show piece or toy of the men. They consist of a beautifully planed piece of hardwood, about one third of a meter in length, which at the end has been carved into three or four edges and at the handle end is slightly thickened.

Shields (ingabo) are much more rare. They have com-
411 pletely lost their importance as a weapon of defense and, as in
554 Ruanda, they have become merely the emblem of a chief or of a family (perhaps the escutcheon of a clan) (Plate 44). The king possesses several shields and each chief and his bodyguards have one each which are painted differently. The Batwa do not have any shields and are not allowed to carry any. The round shield, up to one half meter in diameter, is carved of wood it has a wooden grip and is painted with white and red segments of circles of various types. There are also shields which have reeds plaited around them (see pp. 80-81 and Plate 53) and others of identical shape made of cowhide which occur even more rarely. The same shape and ornamentation of the wooden shields and quivers recur both among the northern Bahima in Ruanda and among the southern ones in Ufipa (cf. illustration in No. 47, p. 76).

714 Finally, battle dress is part of the fighting equipment of the Murundi. When the bodyguards of the king -- who are, as we shall see later (p. 87), the actual combatants -- march out for battle, they wear a uniform consisting of an apron of white tanned antelope hide or sheepskin (inkindi), and they paint [302] their skulls, faces, and the upper part of their bodies with all kinds of white and red lines and ornaments which give them a terrifying, savage appearance (No. 19, p. 277). This hide apron uniform is also worn at war dances. It is much the same in Ruanda where, in addition to this uniform, other decorations, for example, a headdress and foot rattles, are also worn. The Bahima in Ufipa have the same kind of war costume as here and in Ruanda (cf. illustration in Lechaptois, No. 47, p. 61).

172 411 Old stone weapons, the remnants of former cultures which have disappeared (see p. 151 [not translated]), are not in use any more in Urundi even among the Batwa who are the oldest ethnic element; the same is true in Ruanda.

[36] Chapter 4

Hunting, Fishing, Stock Farming, Agriculture, Stimulants

1. Hunting and Fishing

224 Hunting (uwuhisi) plays only a small role in the existence of the Barundi, for in an area which is so densely populated and almost completely denuded of forests and where game has been systematically exterminated in the interests of cattle farming and pastures as in the regions settled by the Boers, there are only a few animals left which one might hunt. It appears that the most frequent ones are the bushbuck (Tragelaphus) which are found mainly in the narrow bush thickets of the deep valleys of the streams and also the tufted antelope, gazelle, and the Jimela antelope. As far as other big game fit for hunting are concerned, the elephant is occasionally found in the thinly populated areas, in the deserted forests of the western peripheral

224 mountains, and in the Ruzizi lowlands. The hippopotamus, however, is still rather frequent; it finds food and shelter in all the sizable rivers and swamps. There are leopards everywhere but most of all in northeast Urundi.

It is seldom that the Murundi hunts (kuhiga) alone with his weapon. At times chiefs arrange hunting drives with from 10 to 20 persons; these, however, are more a sport than hunting and have only the single practical purpose of obtaining antelope hides for the war dress mentioned above and horns for trumpets and amulets. The Batussi and Bahutu do not eat the [224] meat of the hunted animals since they consider it impure; they give it to the Batwa or to the dogs who play an essential part [231] in each drive. The dogs can hardly be called hunting dogs as we understand the term (see p. 48), for they do nothing but rouse and pursue the game. They are the common Murundi dogs with pointed ears. Old King Kisabo had a real pack of hounds for hunting. The dogs wear a leather collar with an iron bell or rattle whose clanging and rattling scares the game, and they are kept on the leash until the hunters have taken their stand in a wide semicircle around the area where the game is suspected to be. The dogs are then released into the thicket. They soon scare the game with the rattling of their bells and finally hold it at bay by concerted attack so the hunters may approach and kill the animal with arrows or spears (No. 19, p. 100).

That the Forest Batwa, who earn their livelihood mainly by hunting, are much better hunters hardly requires explanation; in most cases they hunt in pairs. Above all elephant hunting in the forests of the northwestern peripheral mountains is their exclusive specialty. For this purpose and also for killing other big game, such as the hippopotamus, they use deep pits (itschjobo) which are dug on the paths where game usually pass. Sharp-pointed poles are placed in an upright position [37] at the bottom of the pits whose steep walls are up to eight meters high; these poles are supposed to injure or kill the animal falling into the pit. The hole is carefully covered with branches and leaves. An animal which has fallen into the pit and is still alive is killed with spears. The natives build very solid traps to catch

224 leopards, the worst enemy of their small cattle. A heavy beam of wood weighted with stones is suspended within a narrow, low passage leading through a strong palisade fence; it is released when a string is touched and comes crashing down (Plate 24b). A goat is tied next to the narrow passage within the fence, and the leopard attempting to reach the bleating animal through the passageway is killed by the falling beam. All leopard skins [554] have to be surrendered to the king; he alone is entitled to dress himself and his relatives in aprons of leopard skin.

223 The Batwa are very adept at setting up snares (uschiwuka) with which they catch large birds and small mammals. They also are familiar with birdlime twigs which are used to capture small birds. They make a kind of sport of quietly sneaking up to birds sitting in the underbrush and then suddenly touching them with the twig so that the animal is caught in the glue. Their way of catching guinea fowl and francolins is also rather unusual. As soon as it is dark in the evening, the hunter carrying a glowing torch made of grass proceeds to the place on the steppe where he has tracked these scratchers. The birds approach the fire out of curiosity. As soon as the hunter notices a bird, he puts the torch down beside him, and carefully taking a circuitous route, he slinks up to the bird whose attention is directed to the torch and kills it with a blow of his stick. The meat of the slain [262] animals is, of course, eaten in all these cases. The Forest Batwa subsist mainly on what they hunt, and they are not fastidious.

226 Moreover, the Batwa of interior Urundi are the only ones who eat fish and engage in fishing (kuroba), while the Barundi [563] of the interior neither catch nor eat fish unless they have learned [262] to do so from missionaries or military officers. In contrast, the Barundi of Lake Tanganyika and the Ruzizi are good fishermen and are passionately fond of fish. The Batwa fish mainly with a rod (igera) and only rarely with nets (urusenga), but the Barundi of the Tanganyika region use a whole series of different techniques for catching fish. The most common one, which is often engaged in on a large scale and yields the largest catch, is that of fishing by net from a boat at night. This yields almost

226 exclusively the little sardine-like fish, about five centimeters long, which are called akahuso; they are found in the lake in large numbers and are attracted by the light of the torch at night. Fishing is conducted from the dugout by two men of whom one handles the net and the other rows and maintains the burning of the long reed torch (ikimuri) which forms one of the main elements of the fishing equipment. This torch is actually a long rope, 20 to 25 centimeters thick, which consists of dry reeds tied together with banana bast and is made 10 to 20 meters long depending on the requirements. The enormous bundle of reeds is placed on the bottom of the dugout so as to protrude somewhat over the front of the boat; it is then lighted at the front end, and the boat is rowed out into the lake. There the boat is anchored by means of a stone fastened to a bast rope. The small fish then swarm toward the glare of the light and are caught in the hundreds and thousands by the net which is repeatedly thrown out and pulled in, [38] and they are emptied into the boat. The still smaller fish, umuschischja, and small crustaceans and other minute creatures are caught by means of a scoop net resembling our hand nets (No. 19, p. 426 and Plate 45).

251 These two types of small fish, akahuso and umuschischja, are spread out in a wide, thin layer in the space in front of and between the huts just as they have been taken out of the boat whether still alive or dead. They dry quickly in the sun and air.

[182] A vessel filled with water is placed in the middle; it is dedicated to Imana and is supposed to keep the god kindly inclined toward fishing (No. 19, p. 427). Moreover, according to van der Burgt,

[791] the Lake Barundi have a special magician whose job it is to insure successful fishing by means of all kinds of magic rites. The

262 small dried fish, which have a pretty silvery and golden iridescence

438 and do not taste at all bad, are very popular among the natives. They are also traded to the interior insofar as fish are eaten there, which is particularly the case in northwest Urundi. I once met people from Lake Tanganyika with large baskets full of such fish at the foot of the Russiga mountains, a three days' journey from the lake.

226 Every traveler gets a vivid impression of night fishing on Lake Tanganyika, much more so, in fact, than of the other methods

226 of fishing. From an elevated point near the lake, for instance, from Boma in Usumbura, after dusk from all sides of the lake he sees dozens of lights quietly float out into the lake, arrange themselves out there in long rows, and then remain for hours in the same place, where the boats are anchored. On the other side, on the distant west shore (Uvira) which belongs to the Congo State, the same spectacle takes place. Hundreds of lights will often be twinkling above the quiet water, one dying out in one place, another being lighted and flashing up somewhere else, like a festive illumination; behind rises the large dark backdrop of the western peripheral mountains and above it the Milky Way with its millions of twinkling stars. A light, warm breeze is blowing across land and lake, and only seldom is the great silence of the African night penetrated by an animal's cry.

In the daytime the lake dwellers use a conical dragnet (itanda) for fishing. It is fastened to a wooden hoop and kept below water by stones tied to it. It is pulled behind the boat on two cords, and from time to time its contents which include both large and small fish are emptied into the boat. Kandt observed an unusual method of net fishing among the Barundi of northern Tanganyika, while I personally and others have not seen anything like it. This method is as follows: of the six men in the boat, four dive into the water at the same moment holding the net in their hands. They emerge again with their prey after 30 to 50 seconds and are pulled into the boat by their companions (No. 22, p. 333).

227 286 The various types of nets have a very firm and even texture although they are made by hand without a square ruler. The strings are woven of the fibers of the raffia palm.

226 Also in fishing with a line the Lake Barundi use various methods. A long line is usually used for catching big fish. Numerous strong fishhooks (umugera) are fastened to it at short intervals on short pieces of string; the whole thing is called umuhungo. To each hook one of the above-mentioned little fish, akahuso, is fastened as bait. The long line is thrown into the water from the shore or from the boat; it is held by both ends,

226 [39] and as soon as it is noticed that the fish bite, the line is pulled in by two men, and the fish are collected (No. 19, p. 426).

Fishing with rod (isanga) and line (impungo) is practiced mainly by boys but also by the Batwa. Not just one hook, as is the case with our fishing lines, but two to four hooks, one above the other, are fastened to the lower end of the line. They are kept afloat by a piece of wood. Often a fisherman will hold two or three such fishing rods in his hand. In spite of the crocodiles, the fishermen often stand in water up to the belly, and when a fish bites, they slowly turn the fishing rod around its axis so as to let the line wind up. If they gave a sudden pull, the hooks, which have no barb as ours do, would permit the fish to slide off.

A peculiar apparatus for catching medium-sized fish consists of a quadrilateral box-like frame (uvusago) made of palm leaves. Several holes are pierced in its sides, behind which grasshoppers or worms are fastened as bait. Thirty to forty such trap boxes are weighed down and lowered into the water around the boat. A wooden float fastened to each of these by a string indicates immediately when a fish trying to get at one of the pieces of bait is caught in one of the holes. This method is supposed to yield a rich catch.

Finally, weir-baskets (umugono) must be mentioned. They have the form of a long cone, which occurs elsewhere quite frequently, and inside there is a funnel-shaped smaller basket, on the order of a mousetrap. Although the fish can penetrate the narrow opening of the latter into the main part of the cone where the bait is kept, they cannot get out of it. The weir-baskets are fastened to the bottom of the lake near the shore by means of poles, and they are pulled out and emptied every few days.

No harpoons are used for catching fish, nor is poison used for stunning the fish. The Negroes here, like those in other parts of Africa, have not progressed to training swimming birds to catch fish. For instance, cormorants are frequent around Lake Tanganyika, and the natives have long been aware of their skill in catching fish.

222 In connection with the use of wild fauna for nourishment,
252 we also must mention the catching or collecting of locusts and
[262] termites. It is very popular among the Bahutu and Batwa. Locusts are caught in great numbers when large swarms move across the land. They are killed by squeezing in the thorax, and they are then fried in fat. Termites are caught by removing the top of smaller termite hills to ground level. The termites appearing from the opened holes and chambers are then collected in a pot and thrown alive into boiling fat. Especially in the steppes of eastern Urundi I often noticed along the path the uncovered, tube-shaped termite tunnels, as broad as a hand and going far into the ground, which had been emptied by the Bahutu. Usually the hill is then closed once more by the surviving termites, covered with new earth hills, and is soon populated again.

222 The use of wild bees (urujuki) for obtaining honey forms the transitional stage from the exploitation of the animal world by hunting to the keeping of domesticated animals. In this case, too, the original technique was to discover beehives in the wilderness and extract their honeycombs. Occasionally the
231 Batwa still follow this custom, whereas the Bahutu, like the other East African Negroes, have long since succeeded in making the wild bees serve human needs by suspending beehives in blossoming trees of the steppe and forest. [40] Apiculture is most widespread in the outer provinces of Ujogoma and Usige which still contain most of the forest and tree steppe. For the Barundi
[263] honey is of the greatest importance since they do not have any other sweetening. They use it, above all, for making honey
[273] beer (see p. 61) and add it to various dishes.

The beehives (umusingo) are shaped like short, thick tubes about one and a half meters in length and half a meter in diameter, and they are made either from a hollowed-out tree trunk or, in areas where there are only a few trees, from papyrus and sorghum stalks tied or twisted together (Plate 25b). The two openings of the tube are closed by discs made of wood or of plaited straw with a hole for the bees to fly out. There is also a little flight board in front of the hole. As soon as a new swarm

231 flies out with its queen, it is sprinkled with dust and water so it will not fly afield or will drop to the ground. The swarm of bees with its queen is then carefully swept into the tubes which are brought to it, the opening is closed, and the hive is suspended from a tree or a pole. The small entrance hole to the hive is then opened. All hives are suspended in a horizontal position. Of course, the whole procedure is usually not over before a few bee stings have been received, but the "bee-keepers" know quite well how to protect themselves by covering the whole body with barkcloth.

Gathering honey from the beehives later is a much simpler procedure. At night, when the bees are not flying, the back of the hive is opened, and a glowing wisp of straw which is smoking strongly is introduced, causing the bees to crowd together in the opposite corner. The honeycombs are cut out and then preserved in a pot (No. 19, p. 3). There are many different uses for the wax in the Barundi household. Since a demand for it has
439 developed in the markets, bee keeping has noticeably increased in the border regions accessible to trade. Undoubtedly it can and will find an even greater expansion once the country has been opened up to trade and there are more possibilities for marketing it. Even today wax and cattle hides are the most important trade products of Urundi.

2. Stock Farming

We often read that the economic life of the Barundi centers
231 around stock farming. This is not correct. The Barundi are,
563 first of all, agriculturists, like all Bantu Negroes, but stock farming is the chief occupation of the Hamitic ruling class, the Batussi, and it is only through their influence and in their service that many Bahutu are occupied in keeping and caring for livestock. By "livestock" we mean large domesticated animals, cattle (inka), for the Batussi hardly occupy themselves with smaller animals, goats and sheep. These latter animals had long been an element in the economy of the Bantu Negroes, that is, the Bahutu in this case, before the Batussi entered the country, and even today they are kept mainly by the Bahutu for their own consumption.

231 consumption. Their number, however, is relatively small.

In Ruanda the cattle all belong to the breed of the long-horned Bahima cattle which the Batussi brought with them on their treks southwest from their original homes in the northeast. The geographical distribution of these cattle is exactly identical with that of the Bahima (see p. 158 [not translated]). These are cattle of medium size with straight backs and with only a small hump of fat or none at all. To the thick-set head are attached two huge horns, up to more than one and a half meters long and extending in the form of a lyre in most cases. Their base is often enormously thick [41] (Plate 23). The largest horns may be found among sterile cows. Prof. Joh. Neumann-Hamburg has described those which I brought with me: "Der Schädel des Batussirindes" [The Head of the Batussi Cattle] in the Mitteilungen aus den Deutschen Schutzgebieten, 1913 [Reports from the German Protectorates, 1913], Supplementary Volume 6, p. 113 ff. Apart from this, a characteristic trait of Bahima cattle is a large dewlap.

Bahima cattle most resemble the so-called Sanga cattle of Abyssinia, particularly that strain found in the area from southern Abyssinia to the lands of the Galla. The long-horned cattle of the old Egyptians belong to the same type, so do those of the Fulbe [Fulani] in the Sudan, in Bornu, in the Cameroons etc., among the tribes of the middle Zambesi to the Cape Colony, among the Hottentots in Damara and Ovamboland, in southern Angola, in other words, as far as the Hamites have traveled on their migrations (No. 17, Vol. II, p. 620 ff.; Nachtigal, Sahara, and the Sudan, Vol. I, p. 682; Thorbecke, Im Hochland von Mittel-Kamerun [In the Mountains of the Central Cameroon], Part 1, 1914, p. 70, showing a good photograph of a long-horned bull). As to the question whether the Batussi brought these cattle with them or whether they found them in the area they now inhabit, Stuhlmann also chooses the first alternative (No. 28a, p. 695). Long-horned cattle are found over the entire area of Ruanda and Urundi. Toward the west the limit is the big Central African trench, toward the south and southeast the scarp of the interlacustrine plateau toward Ujiji and Uha. Here in the southeast I found

231 the last herds of the long-horned cattle in the Urundi border villages west of the Kisuma River; east of this, in lower northern Uha, the bush forest and tsetse fly begin.

In Urundi and Ruanda there are none of the smaller, short-horned zebu or humped cattle that are found in the rest of East Africa. Bahima cattle are so well adjusted to the climate and the mode of life of the highlands of the interlacustrine region that they thrive only in this region. As soon as the animals are taken to the lower areas, that is, to Unjamwesi, Lake Victoria, or to the coastal regions, they languish and soon die, even if they are not stung by the tsetse fly. In this respect they are quite like the Batussi themselves with whom they live in a kind of symbiosis

As a former nation of shepherds, the Batussi place a high value on their cattle which is quite foreign to the Bantu. It far exceeds the estimate of their capital value. Cattle are not regarded as producers of meat, as an "article of consumption," but as original capital from which only the dividends (milk, [231] butter, blood tapped from the living animal, hair) may be used, while the capital itself (individual heads of cattle) may only be exchanged for other valuable capital assets, for example, women. More than that, cattle have a high sentimental value for the [182] Mutussi. His entire thoughts and aspirations revolve around the cattle; they are for him the mainstay of his social order, yes, even the object of his devotion which in many cases even transcends into the religious sphere. Accordingly, they are objects of a cult which is full of symbols and mystical relationships. [776] The highest deity, Imana, is first of all protector of the cattle. In East Africa we find a similar attitude among the Hamito-Nilotic nation of herdsmen, the Massai. In whatever concerns cattle, a woman has no say at all. The entire breeding and [462] care of the cattle, even milking, is the job of the man. It is true that in this sphere too the Bahutu have to do all the heavy work, cleaning the animals, tending the cattle in the pasture, milking the cows, etc., but the Mutussi does the more delicate work: he chooses the animals for breeding; he is the veterinarian; he decides what animals are to be killed or sacrificed; and he does this job with all the affection of the sportsman for his animal.

231 The cattle of the entire country belong de jure to the
122 king (or to the highest chief), as in Ruanda. He leaves a large part of the cattle with the Batussi sub chiefs, who enjoy the usufruct, and [42] the latter, in turn, leave small herds and single animals with lower Batussi and individual Bahutu for care, further breeding, and use. A set small number of the young becomes the property of the caretaker which he holds as an irrevocable fee.

231 To a certain degree the almost mystical esteem in which
554 cattle are held is transferred to the temporary owners, caretakers, and breeders of the cattle. A person who is vested with cattle is thus raised to a higher status. A Muhutu who is vested with cattle for the usufruct and for breeding is ennobled, so to speak, by this act; he is no longer subject to compulsory labor, nor does he have to work the fields for his master. Thus, the possession of cattle has a social significance which is no less important than the economic one. Not only for religious reasons but also for social and political ones, old and sick cattle are allowed to live as long as they possibly can, both in Urundi and Ruanda, for they can still be used to vest someone with them who through this rise in status is more closely tied to the Batussi rulers and the king. It is also for this reason that the immense number of cattle owned by the king are a strong support of Batussi rule.

233 All cattle are fed in pasture (Plate 23); only older calves and sick animals are fed in the stable. During the night the cattle are kept within the inner fence of the homestead. As soon as they have been cleaned after sunrise in the morning and the cows have been milked, the herd is driven to pasture (kwahura inka). The location of grazing land is determined by the season and the growth of fodder. The herd remains there until evening. Every sixth or eighth head of cattle carries a bell (insogera) made from a bent piece of sheet iron (Plate 45) or from wood; in many areas, however, there are no cattle bells at all. Twice daily the herd is driven to the water-
233 ing place in the nearest river valley. If the valley has no
312 flowing water but only underground water to be obtained by digging holes, as is often the case during the dry months, long

233 troughs of clay are constructed near the water holds into which
[312] the drinking water is scooped. As in our Alps, the hill slopes bear the imprint of the hooves of the cattle in the form of innumerable little steps and paths since the grazing cattle will usually move along the slope in a horizontal direction which is more comfortable for grazing.

In the months after the rains the cattle can gorge themselves on green grass and they then look quite attractive, but during the dry months when all the grass is parched to a gray-brown color, the cattle become so lean that one can count all their ribs. In Urundi during the months of September and October I have seen, almost without exception, cattle which were very emaciated. Only the herds of the chiefs preserve their healthy appearance in the dry period since the best grazing land is reserved for them. The general impression is that both
[137] in Urundi and Ruanda, which are both almost exclusively grasslands, good nourishing pastures are not very extensive. It is possible to wander for days over chains of hills and plains in the sterile, thinly populated quartzite areas of the east where the growth of grass is so poor that it is not worthwhile for the natives to burn it. Since the hill ridges and the valleys in the
[311] populated areas of central and western Urundi are covered with homesteads and fields, insofar as the valleys are not filled with papyrus swamps, in general only the hill slopes for pastures. However, since every year the dry expanse of grass on them is burned off in order to obtain a new growth of green grass as soon as possible and to destroy the vermin noxious to cattle, the quality, the food value, of the grass [43] cannot improve. Also, if the herds multiply greatly, as in the northwestern areas of Urundi and in most of Ruanda, the pastures are soon over-
[246] stocked. The Batussi and Bahutu do not grow any fodder with a high food value which could compensate for the lack of good grazing land. As a result most cattle suffer from malnutrition, and if then a contagious disease is brought into the country or if it is caused in the area itself through infectious vermin, etc., the animals with low resistance succumb to it in great numbers. The available grazing land is then sufficient for the

233 surviving animals for a long time to come, until the herds once more have become too large, the animals once more cannot find enough to eat, and natural selection by epidemics starts once again. This situation will not improve until Europeans introduce rational methods of stock breeding.

The animals are conscientiously cared for every day. Every night fresh litter is provided in the pens for the herds returning from the pasture. The animals are scrubbed clean with straw whisks and searched for ticks and other parasites which may have attached themselves to the animals. The udders are washed each time after milking. While the cattle are standing in the kraals or drinking from the troughs, they are bothered by stinging flies; human beings, too, are attacked by these bloodthirsty tormentors. For this reason fires are kept burning in the kraals and near the watering places, the smoke driving away the flies. Such pillars of smoke can be seen rising from the farms everywhere in the morning and evening. From time to time the animals are given saliferous ashes to lick. Even in the pastures the herdsman is constantly occupied with his herd. He is able to give it all kinds of orders by shrill whistling. As a result of good treatment, the animals are in most cases very good-natured; they do not kick, and they keep still when something is being done to them. In the latter case one of the herdsmen usually uses his stick or reed to stroke the animal gently between the upper part of the hind legs. Despite their long horns, the animals also cause much less damage among themselves than one might expect. Even if they are crowded together when driven to or from the pasture, a constant muffled rattling and clanking of the colliding horns can be heard -- the characteristic sound of a moving Urundi herd -- but it is extremely seldom that the animals injure each
232 other. In case an animal is seriously injured or becomes sick and the owner himself is unable to help which, however, he is usually able to do -- a Mutussi or Muhutu who is skilled in medicine is called to act as a veterinarian. For his help he
232 is paid very well (Plate 25a). The Batussi, like all Africans,
731 are quite powerless against epidemics, especially rinderpest,

232 and as a result the devastations caused among the cattle by a
731 single epidemic are terrible. Thus, the rinderpest that ravaged the entire interlacustrine region, as well as Uganda and Unjoro, in 1888 killed two thirds of all the cattle, and since the Bahima live mainly on milk, blood, and meat, it is reported that almost two thirds of the Bahima also died of hunger (No. 17, Vol. II, p. 626).

Although the Barundi take good care of their cattle, they
232 cannot really be called good cattle breeders, as is sometimes done. The same is true for the Banjaruanda. The livestock suffers from an insufficient supply of new blood, that is, from the centuries-old inbreeding. It is true that the Barundi, as well as the Banjaruanda, always select the breeding steers from a different herd in order to prevent degeneration, but there is still only variation within the same long-horned strain of cattle [44] and the blood is not freshened up by other breeds. Since also most of the bulls are not castrated, although castration is known and a special term exists for it (kuschahura), there are often weak bulls in the herds which cause the breed to deteriorate. The improvement of the breeds is not helped either by the fact that, as a result of the growing demand for cattle hides by traders, more bulls are raised which in former times used to be slaughtered or sacrificed when they were still young. Degeneration is especially apparent from the fact that there are a great number of sterile cows, both in Urundi and Ruanda. They can be immediately recognized in a herd since they have the longest horns. It almost appears as if the excess of strength which has not been spent on reproduction is channeled into making the horns grow to a gigantic size. Both in Urundi and Ruanda only the herds of the kings and of the high batwale are in really good condition as a result of constant selection and exchange. There are white, brown, and dappled herds. However, these are deluxe herds and not representative of the general run.
232 The designation, "holy cattle," which is often heard applied
778 to the king's herds, is as incorrect as it is when applied to the herds of the Musinga [king] of Ruanda. It is also erroneous in that not even the animals destined for sacrifice are taken from these herds. On the other hand there are holy cattle kept

232 especially for sacrifice and for their function at the election
778 of the king, and there are others dedicated to one of the principal gods, Imana, Riangombe, Rikiranga (see p. [illegible], also p. 184 of original text [not translated]).

When a calf is born, it is rubbed with butter. As soon
233 as the horns appear, the owner tears off the covering epidermis with his teeth and rubs the little horns with butter so as to make them grow well. The calf is then given a name which is de-
[552] termined by its parentage, color, or some other characteristic, or in memory of some deceased member of the family, a chief, king, etc. The calves are put in the pen for six months before being sent to pasture, and after that the young cattle graze in a separate pasture. In the morning and in the evening, before the milking of the cows, the calves are permitted to suck. If a cow refuses to suckle her calf, both her udder and the calf are rubbed with salt water, whereupon the cow will lick the calf and will also allow it to lick and to suck her udder. In order to wean a calf, the cow's teats are smeared with cow dung (No. 19, p. 423).

234 Before a cow is milked (kukamma), the calf is permitted to suck for a few moments. Then the Murundi squats down near the udder, holding a vessel under it with his left hand and milking with his right hand. In this process a considerable amount of milk (amata) is spilled on the ground since the vessel has a narrow opening. An unruly cow or one that kicks has her legs tied together while being milked. If the calf dies or is slaughtered, the cow gives no more milk. In this case, to make her continue to produce milk, the skin of her calf stuffed with straw or simply a piece of the hide suspended on a stick is held in front of her nose (No. 22, p. 287; No. 48, p. 141; No. 27, p. 95). This is also true in Ruanda, Ankole, and the other Bahima regions. This artless yet useful deception usually tricks the cows, and they lick the hide and continue to give milk. The amount of milk produced by the long-horned cattle is quite small all over the interlacustrine region. It is seldom more than two to three liters daily, in
234 the morning and in the evening. The milk pails (itschjansi)
415 are always made of wood; in most cases they have a cylindrical shape and a rounded lid. Van der Burgt claims that [45] this

234 shape is to be regarded as the imitation of the phallus of a steer
[415] "as though this emblem is inseparably connected with their cult"; I myself offer no opinion on this subject. The milk pail is rinsed daily with fresh cow urine (amaganga), and from time to time it is "cleaned" with human urine (No. 19, p. 423). It is possible that this custom has ritual meaning aside from the practical experience that urine acts as a mild disinfectant. However this may be, the result of this custom, popular also among many other tribes, is that the taste and smell of the milk is nauseating to Europeans. If a European wants palatable milk, he must have it milked into his own pails.

[272] The Barundi, as well as the Banjaruanda and other Bahima peoples, drink the milk either fresh or curdled, but never boiled. A large portion is put away for making butter. For this purpose the milk is first of all left standing in a large wooden vessel for three to four days until it curdles. Then it is poured into a large bottle gourd (ikisabo) until the flakes of butter separate off. These are fished out with a spoon, pressed together, and then preserved in an earthen vessel covered with fresh banana leaves. The remaining buttermilk
[272] is a popular beverage. Making butter, typically enough, is
[462] not a man's job, like everything else connected with cattle;
302 it is women's work since butter is not regarded as an article of food produced by a cow but solely as a cosmetic. No Murundi
[262] eats butter; nobody uses it for baking, frying, or cooking; it is only used for rubbing the body (see above, p. 28). The same
[171] is also true for the Banjaruanda, Banjampororó, Banjankole [Nkole], and the other Hamites.

One of the most popular delicacies for the Barundi, espe-
272 cially for the Batussi, is cattle blood. They obtain it in the
[171] same manner as the Banjaruanda and the Massai. Each steer is bled approximately once every three months. A special arrow
[411] made for the purpose is used. It has a short, broad, round blade which cannot penetrate far into the body (Fig. 10). Several men hold the [Fig. 10 appears here in the original text] steer by his horns, and then the arrow is shot from a bow into the

(Ethnological Museum, Berlin, No. 6546.)

272 jugular vein from a short distance, whereupon the blood spurts out swiftly. The arrow falls off immediately, and the blood is then caught in an earthenware pot. After two to four liters have been collected, the wound closes by itself. Part of the 262 warm blood is immediately drunk; the remaining larger part is boiled on the fire until it becomes solid, as in our black pudding. Then salt, beans, peas, and other ingredients are added, and the tasty meal (ikiremve) is eaten greedily (No. 19, p. 424).

Obviously, beef (injama) is eaten much more rarely. Since cattle are not regarded as food but as capital, there is beef to eat only when an animal has fallen or if it is killed for a sacrifice (cf. p. 136). Only the chiefs can indulge in the luxury of killing an animal for food from time to time. In this case almost always old steers or sterile cows are chosen. Cows that give milk or [46] breeding animals are never killed. The same is true for all Bahima people from Ankole (No. 26, p. 146) to Ufipa. The Bahutu, especially those on Lake Tanganyika, sometimes eat mutton and goat meat, although rarely; the Batwa also eat antelopes, gazelles, francolins, guinea fowl, ducks, etc., but neither they nor the Batussi or Bahutu will eat chicken (No. 19, p. 396). Beef is either eaten 252 raw, still warm if possible, or it is pierced with a wooden spit and roasted over the fire. It is cooked only very rarely. 439 Europeans, who are accustomed to eating meat, are able to buy 431 only sterile cows or defective steers when traveling through Urundi and Ruanda. Sometimes they receive them as a gift from the host. Even then the rules of custom require that the host or the person who sold the animal receives in return a hind leg, the skin, and horns: the leg for food, the horns as a cult object for the hut, and the skin as a bed cover or for making clothes -- especially for women and Batwa -- or to be sold to the trader.

439 According to all experience it is impossible to export live cattle in great numbers because they soon perish after leaving the highlands as a result of the change of fodder, the tsetse fly, and other infections which unfortunately are prevalent in East Africa. At present quite a large number of dried cattle hides

439 from Urundi and Ruanda are sold in Usumbura and Bukoba for export since there is a heavy demand for them. The hides are almost without exception from animals that died, either useless steers or sterile cows, which for this reason are now killed in much greater numbers than before. Since for reasons mentioned above other cattle are seldom slaughtered, the export of hides will remain quite restricted in the future.

One of the "superstitious" customs connected with cattle
272 farming whose practical basis and meaning cannot be dis-
825 covered any more is that the Murundi may never heat or even boil milk. If he did so, the cow from whom the milk had been taken would get a sore udder or she would even stop giving milk altogether. It is also believed that the cow would develop sores on her udder if the Murundi ate peas or peanuts on the day he drank milk. This taboo evidently also has dietetic reasons. On the other hand, it is difficult to understand why someone
752 with a wound on his leg or on some other part of his body is not permitted to look on while a cow is calving; it is assumed that his wounds would then grow even larger (No. 19, p. 423).

It is certain that the Barundi have taken over the belief
231 imp[illegible]d by the Batussi that especially close connections exist
776 between cattle and the chief deity, Imana. All cattle are dedicated to Imana and are believed to be creatures "possessed" by Imana. Instead of Imana, Riangombe is also often mentioned. On the other hand it is reported that even the "devil," or Rikiranga, the most important of the evil spirits (see p. 121), is the owner of a cattle herd in the vicinity of Mujaga which includes two steers dedicated to him (Afrikabote [African Messenger], 1904, p. 123). Yet the precise extent of these religious beliefs regarding cattle is quite unknown. Finally,
576 we might mention that during the involved greetings of the
231 Barundi the phrase, "ischo-scho-amascho," that is, "cattle,
[782] cattle herd," is repeated. Van der Burgt considers this typical herdsman's greeting a kind of supplication to the main god, Imana, to grant the person greeted all kinds of good fortune which is epitomized precisely by cattle (No. 19, p. 530). In van der Burgt's opinion all salutations of the Barundi are of

576 a religious character (see p. 95 , types of greeting). This is
231 possible and quite probable, considering the solemnity with which the long greeting [47] ceremony is practiced by those participating in it. It must be remembered, however, that very solemn and extended salutations are also customary among other East African tribes and that they have absolutely no religious content. They have their source simply in the general urge of the Negroes toward involved forms of speech and dignified behavior. In a shorter form, the "cattle greeting"
[171] is also used by the Banjaruanda who have also taken it over from their Batussi. Even the Batwa, who never own cattle, have acquired it.

Second only to cattle, sheep (intama; Plate 24a) are con-
231 sidered the most valuable domestic animal. Nevertheless, sheep are less numerous in Urundi than goats since they are more difficult to raise and they are not as fecund as goats. The Barundi have two breeds of sheep: a medium-sized woolly type without a fatty tail and a bigger fatty-tailed sheep. Both of them are dappled or white, rarely black. Both are raised
[281] only for their hides which are used either for domestic consumption (cloak, blankets, etc.) or as trade objects in exchange for iron hoes, salt, and other necessities. A small number of sheep are used for sacrifices and oracles. Neither the Batussi
[262] nor the Bahutu eat the meat (the Bahutu only eat it on rare occasions), but the Batwa are quite fond of it.

Goats (impene) are much more numerous in Urundi. They are of a breed with long legs, rather short bodies, and short, dappled or yellowish-gray hair (Plate 24a). This breed is strong, resistant, easily satisfied, and very fecund; a litter of three or four kids is quite frequent. Goats and sheep often are sent to the pasture together, but wherever grass is sparse, only goats find sufficient fodder while the sheep and cattle have
[262] to be driven to better pastures. The Batussi are as reluctant to eat goat meat as mutton, and the Bahutu seldom eat it, but
[231] goat skins are an important item in the bartering trade of the Barundi, and for this reason the number of goats has been

231 terribly decimated since the admission of traders in 1906. Goats are not used for sacrifices.

235 Chickens (inkoko) are the only domestic fowl of the Barundi, but they are kept only in small numbers. It is possible to wander for days through the farms of central Urundi without seeing a single chicken. There are far more in Usige, in the Tanganyika area, where they are used exclusively for trade. [439] They are sold to the Moslem Negroes of the coastal area there who like chicken and who have been very numerous since the time of the Arabs and are now numerous due to European colonization. Not only the Batussi and Bahutu but also the [262] Batwa detest chicken meat; it is an age-old food taboo which is probably of totemic origin. The breed is the one generally found in East Africa, long-legged and mostly black. The chickens are not fed at all. They have to find their own food, and for this reason they are always thin. In most of interior [782] Urundi and in Ruanda they are only used for sacrificial occasions and as oracles. They are sacrificed to the manes of deceased family members or to the spirits, Imana, Rikiranga, and Riangombe, in the same manner as sheep and cattle (see p. 135). Certain cocks are also dedicated to Imana (No. 19, p. 453). [787] To consult the oracle, the chickens are killed, and the future or the uncertainties of the present are augured from the color and position of their viscera. This is done by the sorcerers or medicine men who will, of course, read the oracle as it suits them best. The Barundi regard the eating of chicken by 262 Europeans and the Moslem Negroes of the coast as abominable. They also abhor the eating of eggs, probably for totemic reasons and not because they regard [48] eggs as excrement of the chicken, as has often been claimed, sometimes even by themselves. They know quite well that the egg contains the embryo of the chicken and therefore that a person eating eggs is really eating chicken, thereby violating the food taboo.

235 753 Van der Burgt mentions another "superstitious" custom: when a hen is found eating its own eggs or killing its chicks, the egg shells are thrown on a crossroads to prevent the hen

235 from doing this again. Barundi passing this way take pains not
753 to crush the shells since the improvident person doing so would get sick (No. 19, p. 453).

231 Finally, among the domesticated animals we shall mention the dog (imbwa). His only purpose in life is to eat all the refuse. Adults and children play with him and also maltreat him. It has already been mentioned above (p.36) that on rare occasions he is also used for hunting drives. Both mentally and physically they are most miserable curs and it is difficult to understand why, after being domesticated for so long, they have not made better progress. Perhaps their domestication does not date back as far as is generally assumed, but in that case what might be their indigenous wild ancestor? Van der Burgt says that they "tiennent du loup" (resemble the wolf) (No. 19, p. 104). This can only be an error of observation for these dogs have much more in common with a jackal than with a wolf. Perhaps the jackal is the ancestor. Yet the original stock has separated into two different breeds, unless we assume that one breed was indigenous while the other was introduced later, probably by the Bahima. One breed is yellow-brown, and its ears are pointed upright. The other one is black, white, or spotted and has drooping ears. Mixed types, however, are quite frequent. Both types have only a little hair on their tails. When they run, the stiff, jolting motions of their legs are conspicuous. I have found the same two types or varieties distributed also in Kisiba and Ruanda. In Ruanda dogs are bred in greater numbers than in Urundi, probably because they are used for hunting more than here. Since dogs are not fed, they have to take care of themselves, and of necessity they have become omnivorous. They are always hungry and very skinny. Whenever they find something to eat, they fill themselves until they are ready to burst. What Europeans find most revolting about them and the
364 Barundi consider a useful trait is that they eat human excrement. In a country where there are no pigs and only a few scavenger birds, which take care of the sanitation problem in the rest of East Africa, the dogs are of hygienic importance. Apart from this they have absolutely no social virtues. They are snappish, cowardly, thievish, very poor watchdogs, and miserable

231 comrades. However, their fecundity is considerable; a bitch will seldom have a litter of less than eight to ten. It is generally claimed that the dogs of the natives in East Africa do not bark but only howl. This is not quite correct. As a matter of fact they do not give a short, clear bark as our house dogs do, but, on the other hand, they do not merely howl. The sounds they utter are usually a combination of both barking and howling. After an extended howling sound, two or three short barks follow, blending into one another, then another howl follows, and so forth.

There are no domestic animals in Urundi and Ruanda other than those described above.

3. Agriculture

In spite of the importance of cattle farming in Urundi
241 and Ruanda, agriculture (kurima) is nevertheless the basis of economic life. Almost without exception, farming is practiced only by the [49] original settlers, the Bahutu, and by part of those Batwa who have undergone a metamorphosis. The Batussi, however, seldom help till the soil; they prefer to have the Bahutu do their work. Only the lowest and poorest class of the Batussi work in the fields. Agricultural work in this area is not merely reserved to women. Men, women, and
[462] children participate equally. Only among the Batwa, the oldest element of the population, is agricultural work exclusively done by women (No. 19, p. 19). Yet the Batwa claim that they learned from the Bahutu how to cultivate the soil.

The only agricultural implement is the iron hoe (ischuka,
412 241 igembe) which has the shape of a clover leaf or of a "heart with a stem" well-known all over East Africa (see Plate 46). As a result of its wide distribution over the entire interlacustrine
[434] region, the field hoe has become the chief object of internal trade, a yardstick of value, a coin. Since the Barundi and
[439] Batwa blacksmiths cannot satisfy the demand, many hoes are imported from Uha, Usámbiro, Uvinza, etc. The blade of the hoe is about 30 centimeters long. An iron spine bent at an

412 acute angle joins it to a wooden handle whose club-shaped end
241 has a hole for this purpose, made with red-hot iron. In most cases the handle is so short (about three quarters of a meter) that the person using it in the fields always has to stoop quite low. Usually only the right hand is used for gripping the hoe while loosened stones, weeds, and the produce of the field are collected with the left hand. Hoes with handles as long as one and a quarter meter are also used, however. In northern Ruanda and on Lake Kivu such long-handled hoes predominate. Both hands are used to grip them, and they do not require one to work in such a stooped position as do those with shorter handles.

For digging holes to sow beans, peas, corn, and other produce, a piece of broken-off reed or wood is used at times. This piece, however, does not thereby become a permanent implement, that is, a "digging stick"; holes in the soft soil are mostly dug with the fingers. On the other hand, the short hatchet (ischenjo), shaped like a segment of a circle, is a permanent piece of equipment used for clearing the ground of underbrush. The same is true of the bent hewing knife (umuhoro;
[171] see Plate 46), characteristic of the interlacustrine region, which appears in the hand of the old Egyptian harvest god. It is also used here as a harvest knife, besides having many other uses.

241 Thus, the farming techniques of the Barundi are merely hoe-culture, and the produce of their fields only hoe-products [as contrasted to plow-culture and its products]. Bananas and beans are the main agricultural produce. Bananas thrive everywhere, but they grow well only up to an altitude of approximately 2,000 meters. Beans grow in somewhat higher altitudes. Finally, peas are entirely absent in the lowland, but they are quite frequent in the higher regions of central Urundi. They are the sole agricultural product found in the areas of greatest elevation. Corn is widely grown in the Tanganyika region and in the valley of the Ruzizi, but it is found in the interior areas to a much smaller extent than is generally assumed. In the dry eastern part of Urundi where bananas become scarce, corn, interspersed with beans, is often cultivated on artifically irrigated valley floors. Peanuts are also abundant in the Ruzizi and Tanganyika areas, but in the highlands of the interior they are only sparsely

241 distributed. Wherever water is plentiful, one will find sweet potatoes; therefore there are few in the highland of the interior and only in the valley bottoms. Yams are grown very rarely. Manioc, however, which requires a certain amount of dryness and warmth is widely distributed in the lowlands and in the dry quartzite areas of the east. In the mountains of the west it is found only in the lower, warmer regions. Sorghum is found all over Urundi, although nowhere in large amounts; its main growing areas are the drier quartzite regions of eastern Urundi. Eleusine [a kind of millet] is found only in small quantities, and mostly at high altitudes. A little rice is grown [50] but only on the shores of Lake Tanganyika. It is cultivated by non-Barundi who imported it from the east; the Barundi themselves are not familiar with the cultivation of rice. Tobacco is cultivated everywhere in Urundi but merely as a form of primitive horticulture near the huts. The same is true for the castor-oil plant. Finally, the oil palm grows only on the shores of Lake Tanganyika and on the slopes of the peripheral mountains on the western side toward the lake.

Let us now take a closer look at the most important cultivated plants and at the methods of growing them.

Several varieties of banana (ikitoke) are cultivated both
245 in Urundi and in Ruanda. Fifteen types can be distinguished in Urundi. Their flavor and the uses to which they are put differ widely. It is an open question whether there are wild varieties (musa ensete) in the mountains. In any case, out in the wild bush country I have often seen bananas which may have reverted to the wild state. According to the Barundi, their fruit is unpalatable, and they are called ikiribu. Van der Burgt has found them in northern Urundi near the mission at Mariensee. Wherever in East Africa bananas are cultivated as the main means of subsistence, a characteristic fact about their cultivation makes those tribes who plant them unusually sedentary. This fact is that the banana plant reproduces by means of runners or multiplies from shoots which cannot be taken far away, and once a banana grove has been planted around a farmstead it survives a long time. On the other hand, the fact that banana

245 cultivation requires hardly any work at all engenders laziness among those tribes who live almost entirely on bananas, as, for instance, the peoples living in the areas around Lake Victoria. Cultural progress through work is forced upon the population in this area only by their chiefs (Kahigi, Mugaráwua, and others) who are members of Hamitic Bahinda families. However, in Urundi and Ruanda the climate and topography of the area force the people to grow not only bananas but a whole series of other agricultural produce which the soil yields only after hard work with the hoe. There the limited banana cultivation cannot induce the same indolence among the people. However, when comparing the neglected banana plantations with the fields of other produce, it becomes evident that the former will thrive without much care. After the bunches of bananas have been gathered, the trunk withers yet it is left to stand there for quite a long time. The large dried leaves droop down, and weeds are removed only if they become too dense. Often no effort is made to plant young shoots, and the new striplings simply are left to grow from the rootstock. Subsequently, all of them are cut except one or two which are left for further growth. Sometimes all of them are left. For this reason the banana trees in a plantation do not grow singly, as is always the case on the coast, for instance, where reproduction and the increase in number of the plants are always effected by planting young striplings. Here, bananas grow from trunks which, in bundles of four, six, or ten, have shot from the same rootstock. Frequently, cultivated plants that are not too tall and can stand the shade are grown between the bananas such as sweet potatoes, pumpkins, beans, corn, and sorghum.

Bananas thrive best on soil which is quite moist while the plant is still growing but dry while the fruit appears and ripens. In areas where rain is plentiful, as in mountainous western Urundi, banana groves are not restricted to certain places, while in eastern Urundi with its drier climate they either nestle in the valleys so as to get sufficient water or they are [312] found in more exposed places where water has to be piped artificially through long ducts.

245 artificially through long ducts (see p. 55). Mountainous areas at altitudes of more than 2,400 meters are too cold for bananas [51]; their growth already becomes noticeably sparse beginning at an altitude of 2,000 meters. Only a few bananas grow in the sterile quartzite areas of eastern Urundi.

Most of the fruit of the banana is cut down when it is [252] still green and unripe. The bananas are then peeled and boiled in water to make a kind of porridge, or they are [262] dried in the sun and ground into flour. Ripe fruit is eaten only in small amounts and as a delicacy since it is hard to [273] digest uncooked. For brewing beer, bananas are artificially ripened by fire in holes dug in the ground (see p. 60).

After the bundles of fruit have been cut off, the trunk withers. If necessary, it is cut down and split into small pieces which are spread at the foot of other trunks as [231] vegetable fertilizer. Chopped banana trunks are also used as fodder for young cattle. In dry areas the watery juice is squeezed from the trunks and drunk. The fibers of half-dried trunks are used for making string, rope, and plaited work, and the large dry leaves are used for roofing the huts, for wrapping various objects, etc.

244 Beans (ikiharage), next to bananas the most important means of subsistence of the Barundi, are grown in large fields all over the country. They abound in the higher or drier areas where bananas thrive with difficulty or not at all. Beans still grow quite well at altitudes between 2,000 and 2,500 meters. About 90 varieties are known: bushy, creeping, and climbing types; those which thrive in cold or in warm climates; and those bearing seeds of different size and color. They all belong to the species Phaseolus vulgaris which has probably been brought to the interlacustrine region from the west, together with the sweet potato and corn (No. 28a, p. 222). The creepers grow as tall as a man, and each plant is propped up by a sorghum stalk or a stick to which they can cling in the same manner as our [European] climbing beans. They are planted by sticking two or three beans into small holes made with a hoe.

The same technique is used for peas (uwusassja) of which

244 there are about half a dozen varieties of the type Pisum sativum. One with a bluish fruit is supposed to have been imported by the Batussi from their original home in the lands of the Galla (No. 19, p. 283). Stuhlmann, however, assumes that the pea, which in East Africa is grown only in the highlands of the lake region, was introduced by the Portuguese from the south and spread north across the highlands (No. 28a, p. 225). In the upper mountainous areas of Urundi peas are the only cultivated plant. As on the high volcanoes of Ruanda, on the [262] peripheral mountains of Lake Kivu, and in the Ruzizi graben, many thousand natives in the high peripheral mountains of northwest and western Urundi, up to an altitude of almost 3,000 meters, live almost exclusively on peas. Wherever the [311] magnificent, old, virgin forest in these regions up to the watersheds is destroyed by ax and fire, it makes room almost without exception for pea fields. In the rich humus of the forest soil, the peas thrive exceptionally well, of course. As the destruction of the forests proceeds, so does the expansion of pea fields. What a miserable substitute for the wonderful and economically much more valuable forest which in the existing climate could never be restored to its former size, even if this were attempted.

Beans and peas are left to ripen fully on the "stalk." Only when the plants have withered so completely that the fruit is about to fall off by itself are they torn out and piled up in the kraals. Then they are spread out on the roofs of the huts and finally threshed with switches. The straw [52] that is not used for litter is distributed on the fields in numerous single piles, like our haycocks, and then burned so that the ashes will fertilize the soil.

Peanuts (itschjoba) and corn (ikigori) are sown in the same 243 manner as beans, by sticking them into holes. The peanuts are 244 first taken out their shells, and the corn kernels are left in water for a day to make them swell. There seem to be three types of peanuts which are differentiated as itschjoba, itschjema, and itschjansa. None of them is used for making oil. They are only [252] eaten as a dessert and delicacy, either raw or roasted in ashes (No. 19, p. 41).

243 There are at least half a dozen different varieties of corn (ikigori). In regions where the soil can easily be irrigated, corn is often sown three times a year, and relatively large stocks of it are always kept in the granaries. The ears are cut from the stalk. As long as they are still juicy and sweet, they are either [252] eaten raw or roasted in ashes, but for the most part the ripened kernels are ground into flour and made into a kind of polenta [372] [Italian dish]. The straw is used for fuel.

244 Yams (igname), arrowroot (amateke), and sweet potatoes (ikisumbu) are planted by sticking the tubers into the ground, and a little topsoil is heaped over them. Sweet potatoes, of which there are about half a dozen varieties (No. 19, p. 424), and arrowroot need much water for the first period of growth. For this reason they are mostly grown in the valley bottoms where they can be artificially irrigated (Plate 22b). When ripe, they are dug up with a hoe in the same manner as our potatoes; the tubers or rootstocks are removed and cooked or roasted in ashes.

245 Manioc (umumbati), however, is cultivated by shoots which are broken off from the juicy manioc shrubs and then planted in rows with a little topsoil heaped over them. After that the plant grows without any further care. It is the most undemanding of all the cultivated plants of East Africa, and for this reason it is found all over Urundi, especially in the eastern quartzite regions. At least six varieties are distinguished, 252 none of which is so poisonous as to require cooking or fermentation in order to become palatable, as do some other varieties in East Africa. It is eaten raw, cooked, dried, ground up as flour, in the form of dumplings, etc. The leaves are boiled as a vegetable.

243 Sorghum (isakka) plays a much less important role in Urundi than in Ruanda where it ranks first among cultivated plants, even before bananas. Uha, too, produces more sorghum than anything else and supplies the Barundi with it in times of scarcity. Nevertheless, sorghum occurs in Urundi in some twenty named varieties of the white and red types (No. 19, p. 544). When sorghum is sown, the soil is simply turned over with a hoe; in most cases no furrows are drawn. The grains

243 are then scattered from the swinging hand onto the level ground, after which some soil is sprinkled on the seed by hand. Eleusine (uwuro) is sown in the same manner. The ripe ears of these two types of millet are each individually cut from the stalks with a knife. This is also the method used for corn and rice. Then the ears are spread on the firm ground in front of the huts and threshed with switches. Some of the sorghum [252] is ground into flour, but most of it is used for brewing beer. [273] Eleusine is mainly ground into flour from which the daily ugali mush (umudsima) is made.

The Barundi grow tobacco (itabi) in small quantities near 249 almost every homestead, as has been mentioned above. The delicate plant is cared for so poorly, however, that it yields a mediocre product. Uvira tobacco, which is traded in considerable amounts in the Tanganyika area, is of much better quality. [53] The Barundi put the tobacco seeds into small holes dug into the soil with a hoe. The young seedlings are not transplanted, but the Barundi clear and irrigate the surrounding soil from time to time. As soon as the plant begins to blossom (red, not white), the leaves are picked off and strung up on bast strings to dry in the sun. Then, for fermentation and storage, they are wrapped in dry banana leaves. In spite of its terrible appearance, 276 the tobacco does not have a bad aroma, but it is so strong that even the Barundi seldom smoke it. In most cases it is smoked only by old men and women. The others are all inveterate snuff-takers (see p.59), whereas in Ruanda tobacco is only rarely taken as snuff but is smoked in considerable amounts.

[824] Tobacco is regarded by the Barundi in the same way as all narcotics are regarded by primitive peoples: as possessing [758] mysterious powers. From this originates the custom of stuffing a pinch of snuff up the nose of a person who has fainted. Also, the young bridegroom blows tobacco smoke at his wife, and so forth (No. 19, p. 557).

244 Several kinds of pumpkins (imboga) are likewise grown merely as garden produce or interspersed among bananas or sorghum, in particular a variety which is round and as big as a head, and another smaller variety that looks almost like a

244 cucumber. They are eaten as a vegetable. Gourds with
[415] variously-shaped fruits are cultivated mainly for use as vessels.

The oil palm (ingasi), which occurs in Urundi only in
314 the interlacustrine area, is not really a plant cultivated by the
[177] Barundi but a wild tree which has been introduced from West Africa. The Barundi use its fruit. The oil palm forest of Mtara is approximately 12 kilometers north of Usumbura. It covers about 800 hectares with 400,000 to 500,000 oil palms (Elaeis guineensis). Closer to Usumbura there is a forest of 200,000 to 220,000 palms, and farther south of Usumbura, stretching to the vicinity of Ujiji, there are other stocks of trees with 300,000 to 400,000 palms. The systematic cultivation of oil
[177] palms was first introduced to the Tanganyika area by the Europeans, but at the present time the forests are exploited neither by Europeans nor by the natives because they are the chief breeding site of the fly that transmits sleeping sickness. For this reason the forests are avoided as much as possible. The
[248] only tree incorporated into their hoe-culture, which is inimical to the cultivation of trees, is the fig from whose bark cloth can be made (see above, pp. 24, 31). This tree is really planted and cared for. The oil palm, however, is only seldom planted by the natives. After dropping from the trees, the nuts thrive easily in the moist soil where oil palm forests usually grow. The majority of the young trees are either pulled up or cut down, and only a few are left standing to replace old dead trees. After cutting down the ripe fruits of the oil palm, they are first scalded in boiling water and then pounded in a mortar until the whole outer layer of flesh containing the oil is detached. The pounded pap is squeezed out by hand into a wooden tub filled with water so that the oil will float on the surface. From there it is scooped into an earthen pot. It is marketed in smaller pots. Most of it
[439] is sold in Ujiji and in the Congo district (Uvira). The Barundi use
[252] the little oil that is left as an ingredient in some of their dishes or
[278] for frying fish, partly also as a skin lotion and as a medicine for the wounds caused by sand fleas (No. 19, p. 291 and 411).
000 Originally the Barundi were not familiar with the use of palm oil

Originally the Barundi were not familiar with the use of palm oil
388 for making soap; [54] only the people of the Tanganyika area
177 have learned from the Arabs and Wasuaheli how to mix oil with potash to make soap (kifefe) which is traded in fist-sized balls.

Apart from the cultivated plants mentioned above, the
222 Barundi and their women and children collect a number of wild
262 plants or parts of these plants to be used as food or condiments. There are, for instance, the stinging nettle, whose leaves are boiled as "spinach," and sorrel, also cooked as a vegetable. The fruit of the eggplant (Solanum esculentum) -- reverted to the wild state? -- is eaten raw or roasted. They also collect edible mushrooms which are eaten either raw or cooked, red pepper
[268] (intore) whose pods are used for seasoning, and various berries eaten as delicacies by women and children, especially blackberries which are abundant everywhere.

The location and arrangement of the fields (umurima)
241 in Urundi does not differ much from Ruanda. One thing that soon strikes the observer is that in Urundi, with the exception of the western mountain areas, terraced fields are much more rare than in Ruanda where they cover entire mountain slopes and constitute the characteristics appearance of the cultivated areas. In Urundi the fields extend predominantly over level ground, either on the broad ridges and plateaus or at the bottom of the valleys. They are always close to the huts and, of course, to water. No furrows are drawn on most fields; their surface is merely loosened with a hoe. In the case of freshly cleared land, the pulled grass and shrubs are piled up in the field, left to dry, and burned. Then the ashes, as fertilizer, are worked into the ground with the hoe. A similar method is used at the edge of papyrus swamps. After the water level has receded, the papyrus thicket is cut down over the whole extent of the extremely fertile alluvial land whose surface has dried. The hacked-off papyrus fronds are burned as soon as they have dried out (Plate 22a). Then the roots are dug up, narrow drainage ditches are dug, and the plant ash is spread over the field as fertilizer. Finally sweet potatoes, arrowroot, and beans are planted in the little holes which have been dug. They come up quickly. If land is cleared on a hill slope, the fields are laid out in long narrow strips which follow the contour horizontally. These are made as level as

241 possible by removing soil from farther up the hill and heaping it farther down. Thus, if there are several strips of land situated one above the other on a hillside, they are arranged in terraces. Each field is separated from the one below by a narrow grass-covered ridge in the same manner as in Ruanda. Stones piled up to form such a ridge are seen only rarely. A few broad furrows are drawn through these terrace fields so as to prevent the soil from being washed away by heavy rains. However, on the valley floors and on the artificially irrigated plains the fields are arranged in the form of elevated plots between which water may flow freely.

Since the hoes used in the fields do not penetrate very far into the soil, the clearing of the land, sowing, and planting do not extend very far below the surface. Hence, the uppermost topsoil is continuously used and is soon exhausted and "impoverished." In order to retard this process or to prevent it entirely, the Barundi use fertilizer, as has already been mentioned. This is not found very frequently in East African agriculture. As fertilizer, they use either animal manure (ikiragiriro) from cattle, goats, sheep, and chickens, or the ashes of burnt plants (amase) from the hearth and from the roots of grass or papyrus which they have dug up, or green fertilizer (chopped pieces of the banana trunk, sorghum stalks), or kitchen refuse, sweepings, etc. [55] These fertilizers are distributed evenly over the fields and sometimes raked into the soil somewhat, usually shortly before the rainy season.

As soon as the first rains come, men, women, and children begin to cultivate the fields. The various plants are sown throughout the rainy season, that is, from September or October until March or April: first, beans, peas, and corn; sorghum and eleusine next; then the tuberous plants. Fresh beans and young corn are available in November, but the main harvest (bananas, sorghum, eleusine) takes place in June. The dry period extends from June until September or October. It is a period of rest for most fields. However, in river and stream valleys, in the lowlands where water is available, and even on many hill slopes, the fields are tilled and planted and crops are harvested during the

241 entire year. Even during the driest months bananas, beans, corn, sweet potatoes, and pumpkins grow there.

241 312 This is made possible only by artificial irrigation (uwutotsi) which the Barundi have brought to a stage of development and apply in a manner similar to the Banjaruanda. In the valley plains and on the river bottoms, water is channeled from the main stream through a whole network of larger and smaller canals and ditches and distributed over the area. Here the innumerable plots of arable ground rise above the ditches like high beds (Plate 22b). In order to irrigate the fields on the hillsides as well, the upper course of the stream is dammed up with earth and latticework so as to form a pool. From there the water is led along the mountain slopes through a ditch, which is often several kilometers long, until the desired destination is reached. Small channels lead off from this main artery at various intervals and irrigate numerous fields on the hillsides. Once a field has received enough water, the ditch leading to it is dammed up. The last fields receive only a little water because the supply has been exhausted along the route. It is amazing with what understanding of the velocity and pressure of the water the ditches have been leveled, dammed up, and conducted along the valley slopes with all their indentations and salients. If the slope is interrupted by a gully that also interrupts the course of the irrigation ditch, a long tree trunk, often brought from a long distance, is placed horizontally across the gully. Its upper side is hollowed out to form a groove through which the water may flow. There are tree viaducts of this type 30 to 40 meters long (No. 19, p. 50). The construction of such an irrigation network is the joint enterprise of the men. Each is entitled to his share of water. The equitable distribution of the water is regulated and supervised by the mutwale of the district.

I have seen a similar carefully and painstakingly constructed irrigation network -- which would do credit to any European horticulturist -- only among the Wadschagga of Kilimanjaro. It must be said, however, that the artificial irrigation in some areas of Usambara, Uluguru, Ussagara, and several other mountain regions is not much inferior to that mentioned above.

241 In spite of all this, the Barundi do not grow more crops
433 than they need for their subsistence during the year. The soil
[134] is, for the most part, fertile red earth and, in the valley plains, dark gray alluvial soil or humus, except in the sterile and stony quartzite regions of the east. With or without artificial irrigation, this soil could produce much more if a larger area were cultivated. This is prevented mainly by the absence of trade. [56] Since there are neither markets nor organized trade in the large area of central Urundi -- only the Tanganyika region possesses both -- the Murundi could do nothing with what he produced beyond his own needs. Moreover, the Murundi does not anticipate bad harvests. Like nearly all Negroes, he never
731 worries about the future. Since not even the hardy manioc (which, even in the driest years when everything else withers, still furnishes a good yield) is grown in large quantities, extensive areas are plagued by famine in poor harvest years. This is especially true of the arid quartzite regions of eastern Urundi.
[797] Then the missionary stations (Mugera, Mujaga, and others) and the government try to help by importing grain (sorghum) from Uha and Usámbiro, but they still cannot prevent many people, particularly children, from starving to death.

Another important reason that prevents further expansion
241 of agriculture can be found in the way land is owned, in the
423 overruling power of the Batussi who claim, above all, grazing land for their herds of cattle. We shall discuss this problem later (p. 57).

Various efforts are made to protect the growing crops
241 against pests. Weeds are cleared away; caterpillars, beetles,
136 and snails are picked off; birds are frightened away by scarecrows which, for example, are made of gallows-shaped sorghum stalks tied one upon the other with dry, rattling fruit suspended from them. Large animals, however, like the wild boars and baboons in the mountains of western Urundi, are either kept out by fences or chased away by watchmen who walk around in the daytime and at night take up their positions in small huts perched on high posts. From there the guards from time to time set up a loud shouting or rattle with sticks. In the valleys of western

241 Urundi and Ruanda where water is abundant, crowned cranes,
136 spore geese, and Nile geese are the worst enemies of the crops since they eat the young budding sprouts of beans, sweet potatoes, pumpkins, millet, etc. The Bahutu try to frighten them away by rattles and shouting. Ibises, herons, and golden plovers also abound in the swamp valleys, but they do not attack the green crops and prefer to fish for frogs, worms, and snails in the drainage ditches. In the dry quartzite regions of eastern Urundi there are only a few such swamp valleys, and consequently there are only a few of the noxious birds mentioned above.

251 Harvested produce is partly kept in baskets and sacks in the huts, but most of it is put in the basket-shaped storage huts mentioned above (p. 22) which are located near the living huts. Particularly beans, sorghum, and corn are stored in these basket-like huts. However, during the dry period ears of corn are suspended in large bundles from the fig trees surrounding the homestead. The tuberous fruit, namely, sweet potatoes, yams, manioc, and arrowroot, are usually not piled up but are left in the ground until they are needed. This is another reason why the quantity grown is never large, since it would spoil otherwise.

423 I mentioned before that further expansion of agriculture in Urundi is blocked by the peculiar conditions of ownership. The situation here is quite similar to that in Ruanda. None of the agricultural Bahutu owns the land that he cultivates. All the land is the property of the king who vests his high batwale with it, who in turn vest the lower Batussi batwale (see p. 134). The mutwale distributes the individual lots of land to the Bahutu he rules, who hold it in fee. [57] The Bahutu must ask his per-
423 mission whenever they intend to work a plot of land, build a hut,
65/ or clear new ground for fields. They pay him a tribute of natural products which is done only once. In addition, they pay him an
[427] annual "tithe" as a ground rent. If the annual rent is not paid at harvest time, the mutwale may punish this tardiness by evicting the person from the land. The mutwale may also demand extraordinary tributes from the Bahutu without compensating them, for example, presents for the head chief, provisions for the caravan of a European passing through, etc. The gifts or payments made

423 in return by the Europeans are simply pocketed by the mutwale:
651 Misera contribuens plebs [contributing to the misery of the people?] !

311 The main interest of the Mutussi feudal lord, however, is
578 not the agricultural activity of the Bahutu but his cattle herds and their welfare. He is, therefore, chiefly interested in having abundant grazing land for his cattle. For this reason he is in most cases not at all enthusiastic if the Muhutu attempts to narrow down the already limited grazing area by clearing new fields for cultivation. This conflict of interests, which is of course decided by the Batussi in favor of grazing land and against agriculture, will continue even when this big country is some day opened to trade and commerce, and the Muhutu can sell his agricultural produce abroad. The conflict of
000 interests will become even more pronounced than it is at present, since the Bahutu will then attempt to increase their agricultural production and to sell more. These difficulties will only be alleviated by a thorough change in the conditions relating to pasture land and a partial shift to growing concentrated fodder and stall-feeding. These are problems which will be hard to solve in practice, but now that the central railroad has reached Lake Tanganyika and there are plans to increase the productivity of the contiguous large and populous areas, our leading statesmen in charge of colonial affairs will have to spend much thought on these questions. In the end it will be necessary to attack the fundamental evil pressing heavily upon these areas and retarding their development: the rule of the Batussi. For this purpose, however, more force is necessary than is available to us at present. If the colonial troops are not increased, the central railroad will nevertheless make it possible to concentrate military power more quickly than heretofore. Finally, the Bahutu will be with us against the Batussi when they realize that we are stronger than the latter.

241 At the end of this review of Barundi agriculture I shall
782 mention briefly a few religious customs connected with it (No. 19, pp. 20-21). The local head chief of each of the large feudal districts or provinces gives the order for the

241 beginning of the cultivation of the fields as soon as the rainy
782 season has started. This is done after he and his sorcerers (abafumu) have practiced a number of ceremonies and have
[776] offered sacrifices to the principal god, Imana, the fertility god. The order of the head chief is passed on by the subchief to the lower batwale who again pass it on to the Bahutu. The Bahutu also offer small gifts to the god. When they begin to till the field, a sorcerer (umufumu) dances in front of them on the first day, shouting and gesticulating, to banish the evil spirits and to bless the seed.

241 According to Father Gassldinger the consecration of the
782 fields takes a somewhat different form in central Urundi
796 (Mujaga). At the beginning of the rainy season, after the high grass has been cut down and dug into the topsoil with hoes, work is started with a ceremony that is supposed to bring the blessing of Kiranga. [58] The men, painted yellow and red, line up with their hoes on the field which is to be tilled. Kiranga with two escorts (ivisjego) sits on the side of the field. A girl who is painted and richly adorned stands in front of the men in the center of the field. She now begins to jump, dance, and sing while cutting the high grass with her sickle. Still singing, she asks Kiranga for a successful sowing and curses the sorcerers and witches who might want to harm the field. The men promise her ample gifts of beer for the summer. The men walk slowly behind her turning the soil over with their hoes which they strike rhythmically into the ground. Depending on the type of seed, Kiranga is invoked by a particular name: Njamurimi when sorghum is sown, Njabaschi for peanuts, Rumambo for corn, etc. (No. 45, p. 316).

782 The heir presumptive to the throne of the king is believed
241 to hold in his clenched fist at birth a grain of seed of each of the
[449] crops of Urundi. If the corn or sorghum in a field has been dashed to the ground by hail or a cloudburst, the Muhutu who cultivated the plot runs around the field with a cattle bell, and by its noisy clanging he reminds the god to whom he has made sacrifices of his duty to protect the field from evil spirits. If this clanging of the bell is done properly, the crops lying on the ground will raise themselves to an upright position.

4. Stimulants

276 The Murundi knows only two narcotics: tobacco and alcohol (beer). The method of cultivating tobacco (itabi) has already been discussed on page 53 . It has also been mentioned that the Barundi, except for old men and women (including the Batwa), do not smoke much tobacco while all of them are inveterate snuff-takers. Their neighbors, the Banjaruanda, as well as the Baganda and Banjoro, are habitual smokers but do not take snuff. This is true of both men and women. This striking difference between them and the Barundi is probably based on the quality of Urundi tobacco which, as a result of insufficient care, is very strong. Wherever tobacco pipes are seen among the Barundi [Fig. 11 appears here in the original text] -- which is mainly in the north and especially in the northwest -- their shapes are the same as those of the Banjaruanda, and the Batwa make them out of black clay in the same manner as in Ruanda (Plate 49 and Fig. 11). The pipe stem is a piece of reed. On Lake Tanganyika [59] water pipes are also used. [177] They are made of a calabash with a clay pipe bowl inserted at the side and have been taken over from the Wawira of the Congo.

Taking snuff (kusomera), on the other hand, is so popular among all Barundi, men, women and half-grown children as to constitute almost a national pastime or "national vice" (Plate 28). If only it were not such an unappetizing habit! Theirs is not the relaxed, almost graceful snuffing, so full of feeling, that one may observe among the Wadschagga of the Kilimanjaro region. Among the latter tribe a little finely ground tobacco powder is poured onto the back of the hand from a small box embroidered with pearls and then gently inhaled with the nose as though they were smelling a flower. The Murundi takes his snuff in the following manner. First of all, he uses three little instruments: a small goat's horn which is the tobacco container (ihembe) and is carried over the shoulder on a string; a wooden bowl for moistening the tobacco (Fig. 12), and a little nose clamp (umunengo) made from a small cleft piece of wood which

276

Fig. 11. Double Tobacco Pipes of Black Clay, probably for Votive Offerings.
(Ethnological Museum, Berlin, No. 6595, 6596.)

276 has approximately the shape of a [Fig. 12 appears here in the original text] clothespin and is suspended from the neck on a string (Fig. 13). In order to take the snuff, the [Fig. 13 appears here in the original text] Murundi first pours some tobacco from the horn into the wooden bowl. He adds a little water and stirs the mixture until the water has turned into a brownish-green tobacco juice. Then he pours this sauce into the hollow of his hand and draws it in through his nostrils with an ecstatic grunt. All this is usually done in a sitting or squatting position (see Plate 28b). Since the juice would, of course, run out of his nose immediately, the already described nose clamp is pushed over the nostrils or the nose is blocked by gripping it between the index finger and the thumb. The pinch of snuff is considered good if it is sharp enough to bring tears to the snuff-taker's eyes. He will leave the stinging brew in his nose for three to five minutes or longer. Finally, when he has had enough of this pleasure, he bends forward, takes the clamp or his fingers from his nose and lets the slimy sauce drip to the ground. Any remainder is blown out of the nose with the fingers, and the fingers are wiped off on the bare legs. The entire procedure, which may be observed several dozen times each day, is so disgusting that it easily might cause one to be disenchanted with a sojourn among the Barundi if one did not remind himself that this is a subject for ethnological study which, as such, is beyond good and evil.

276 576 If one of the snuff-takers is suddenly overcome with the desire to sneeze, he quickly blows out all the juice, aiding the passage of it with his fingers; otherwise dire consequences would ensue. After he has sneezed, the bystanders wish him "kira" (bless you), whereupon he answers, "tukirane" (may things go well with us). Offering a pinch of snuff and accepting one which has been offered [60] are evidence of good breeding. Only the Batwa are never offered a pinch by the other Barundi, nor do they offer snuff to them (No. 19, p. 465).

273 Male and female Barundi of all tribal, status, and age groups are even more passionately addicted to alcohol in the form of beer (insoga). "If in general the Barundi are a sober

273 people, it is not out of virtue but simply because they do not have enough to eat and drink to satisfy their appetites. They could eat an ox at one sitting, and if they were given as much beer as they wanted, they would keep drinking from morning till night" (No. 19, p. 317). Drunkenness is not regarded as a shortcoming or a vice but as evidence of the prosperity or generosity of the host. After the millet and banana harvest, from July to September, is the time for brewing beer (kwenga insoga, kutoba), the period of gluttony and general drunkeness all over Urundi, and this continues until the provisions are exhausted. Often the last drop disppears down the gullet after not more than four weeks, and the thirsty souls have to remain
273 abstinent until the next harvest period. During the period of
574 carousal, singing and shouting can be heard issuing from most homesteads deep into the night, for there are no quiet and solitary drinkers. Drinking beer is always a social affair. One person after another invites friends and relatives to communal drinking bouts, and in this manner they make the rounds among all the families of friends, guzzling until nothing is left. In
[431] addition to this, pots filled with beer are given as presents or any suitable occasion, and then they are shared by receiver and donor together. Of course, beer is part of any kind of festive occasion which usually also includes dancing (see pp. 65, 125).
273 Since the banana beer, which is the most popular, is quite
579 potent and since, in addition, the Barundi are by nature easily
152 excited, the more advanced stages of such communal drinking bouts usually take a rather wild form. Quite regularly violent arguments ensue, and often fights result in which even lances are used, sometimes ending in manslaughter. In the latter case, the consequences for the families concerned are quite disastrous (see pp. 97, 105).

273 Significantly enough, beer-brewing among the Barundi
[462] is a task with which the women are charged. They are experts in this respect, but they also are hard drinkers. There are four different types of beer in Urundi. The most potent, popular, and widespread type is banana beer (insoga j'ivitoke). To

273 prepare it, green, unripe bananas are first ripened artificially in a kind of incubator. This is simply a pit which has been dug in firm ground. The bottom of it is covered with green banana leaves, the bundles of bananas are piled on top, and these are again covered with green banana leaves. Over all, dry banana leaves are heaped up and set on fire. As soon as they have started to burn, the whole thing is covered with twigs and earth. After four to five days the bananas are fully ripe. They are then taken out of the pit, peeled, and placed in a wooden trough. There they are mashed with the aid of clean bunches of grass which are held in the hand. Then water is poured on, and all the solid parts are fished out. The remaining juice is scooped into a large earthen pot with a pumpkin shell. A little sorghum flour is added to aid fermentation. After the liquid has been left to ferment for four to five days, the beer is poured into small jugs and is ready for drinking.

[61] Brewing millet beer (insoga j'impeke) is less complicated. However, this type of beer is less tasty and also less popular. Naturally it is predominantly produced in areas where more sorghum than bananas are grown, as, for instance, in eastern Urundi and in Uha. The brewing process is as follows. Red or white sorghum is left in cold water to swell and to germinate. After a few days the millet is poured into a basket, and after being left there to germinate a little more, it is dried in the sun and ground into flour. This flour is then poured into boiling water, and the mash is constantly stirred with a small piece of wood while cold water is gradually added. When the big pot is finally entirely filled with cold water, a little sour banana beer is added, and the mash is allowed to settle on the bottom of the vessel. The finished beer above it is then poured off into small pots. The beer always retains a somewhat floury color and teems with floating millet grains and seeds.

Without doubt, the European palate prefers the third kind of beer which might be called banana cider (umutobe). It is simply water mixed with the juice squeezed from ripe bananas which has fermented slightly. This beverage sparkles like champagne, has a bitter-sweet taste, is very refreshing, and is

273 easily digested. Barundi men scorn it because of its harmlessness, and it is left for the sick, the women, and the children, among whom it is very popular (No. 19, p. 74).

The fourth type of beer is honey beer (umutobe w'insuki). It resembles lemonade but is nevertheless somewhat alcoholic, so even men like to drink it. It consists of one fifth honey and four fifths water. This is boiled for a short time, and then it is poured into a different vessel and left standing near the fire for a few days without being allowed to boil. Finally it is placed under the open sun for an entire day so as to cause slight fermentation. This is also a tasty and wholesome beverage.

Honey beer and banana cider cannot be preserved for a long time; the latter will keep only for four to five days. For this reason both must be consumed quickly. The first two types mentioned, banana and sorghum beer, do not improve by aging either. They turn sour, the sooner the warmer the place is where they are kept. In mountain areas with a cold climate they will keep for five to six weeks, but in the much more extensive plateau lands they turn sour much sooner. For this reason alone the high time of general drinking is squeezed into the period of a few weeks which are enjoyed all the more strenuously. [Fig. 14 appears here in the original text.]

[62] The Barundi seldom drink beer directly from the pots or from open pumpkin bowls, as is the case among most other East African Negroes. Usually the beer is poured from the [264] pots into calabashes and then sucked out of these by means of straws or reeds (umukenke) in the same manner as we drink iced coffee. The Banjaruanda and Basiba use the same method. Also [484] on trips and marches they carry calabashes of beer with them, [415] together with the necessary tubes which are kept in plaited or carved cases (Fig. 14).

The real beer brewers in Urundi are the Bahutu women, as has already been mentioned, but as far as drinking is concerned, the Bahutu and the Batussi are of equal rank. Most of them are tremendous tipplers who consume 12 to 15 liters of beer a day. The Batwa, too, are hard drinkers if they have beer.

415
531

Fig. 14. Containers for Suction Tubes for Drinking Beer.
(Ethnological Museum, Berlin, No. 4875, 6391, 6652.)

273 They usually obtain it[1] from the Bahutu by trading earthenware
[438] which they have made, although their women are quite adept at brewing beer. They also buy the bananas for it from the Bahutu since they themselves do not own any banana groves.
[563] The Batussi and the Bahutu often drink together but never in company with the Batwa. The latter may not even drink by themselves if a Muhutu or even a Mutussi is in the vicinity.

439 It hardly needs to be mentioned that in a country which is still not opened up to trade and commerce no imported alcohol or European spirits can be found.

276 Also, the smoking of hashish is unknown among the Barundi, although it is very popular among the neighboring Wanjamwesi and although hemp (urumogi) grows in certain districts of Urundi, even far into the interior (No. 19, p. 260). They are acquainted neither with the chewing of betel, which unfortunately has been introduced to large areas of East Africa by the Arabs and Indians, nor with any other stimulants except those mentioned above.

[63] Chapter 5

Games, Dances, Music

517 Like almost all other East African tribes, the children and adults of the Barundi are always ready for games (uwukini), dancing, and amusements. This is true above all of the Batussi who otherwise have nothing or little to do, but also it is true of the large majority of the Bahutu. Even the members of the depressed pariah class of the Batwa are ardent dancers.

857 Among the Batussi and the Bahutu many children partici-
524 pate in the games and dances of the adults. Here, as among most Negro tribes, children eight or nine years old are almost as mature as adults. Negro children, after they pass babyhood, never play with the same naïve absorption and gracefulness as our [European] children. There is a whole series of games especially for children and others especially for adults. "Playing

1 [i.e, the Batwa obtain beer. — Analyst]

857 soldiers" ranks first among the children's games. [Fig. 15 appears
524 here in the original text.] As everywhere else the boys form two opposing armies, and then they try to outsmart each other by engaging in all kinds of maneuvers and attacking each other with bows and spears without, however, doing any harm to each other. These battle game is of a more serious nature: two groups arm themselves with corncobs or stones and keep bombarding each other until one party has suffered enough casualties and takes to flight. Single combat is taken even more seriously: two boys who have insulted and challenged each other beat away at one another with sticks until one of them runs away.

K. Weule discussed several toys used by Barundi children which are now on display in the Berlin Ethnological Museum (Ethnologisches Notizblatt [Ethnological Notes], Vol. II, No. 1, pp. 48-52). For toys, boys make small swords, bows, arrows, and spears of wood or reed. In the Tanganyika area where guns are known, they also make little rifles out of sorghum stalks or bamboo cane from which a wooden arrow is catapulted by a palm stalk acting as a spring (Fig. 15). The boys also make popguns out of cylindrical pieces of tree bark which is removed from the twig in one piece, in the same manner as European boys cut a whistle. Both openings are closed by a plug of wet bast, and then one plug is pushed [64] into the cylinder with a stick so that the other plug is forced out by the compressed air, giving a loud report.

A popular game in which adults also participate is hoop-throwing (ulubangwe). Two groups of players face each other and, by turns, throw a hoop which the opposite party is supposed to catch in the air. This is to be done neither with the hand nor a stick but by means of a piece of cord whose forward end is forked. Each end of this fork has an empty corncob fastened to it. The hoop must be caught in this end of the cord which is tossed toward it. The party who most often succeeds at this is pronounced the winner.

Small kites are made out of pieces of the very light pith of rushes which are held together by a small rod. The tail of the kite is made of a piece of barkcloth. These contraptions fly as

(Ethnological Museum, Berlin, No. 6515.)

857 badly as the little kites made out of newspapers which European
524 children like to build (Weule, loc. cit., p. 51).

Boys and girls like to play at hiding nuts in the sand. This is quite similar to a game played by European children. Squatting on the ground, they make a little heap of sand, put a small nut inside, and divide the heap into five or six segments. The player who has scratched open the greatest number of segments before hitting on the nut is the winner.

The children make tops (irebe) out of a small pumpkin or the shell of a dry fruit which is pierced with a little stick. A bast string is wound around the stick and then quickly pulled by means of a cleft piece of wood held in the other hand. By piercing holes into the top, it is made to produce a buzzing sound (No. 19, p. 320 and Weule, loc. cit., p. 51).

The boys have stick-throwing contests. Each of them takes two sticks, and in turn they hurl their sticks, like spears, from the same place toward the same direction. Anyone whose stick is thrown farther than another stick is entitled to take the other stick and add it to his own collection. The player who ends up with the greatest number of sticks is the winner.

Balls for games are made of all kinds of elastic material. The children throw them to each other or hit them with a stick.

The game of hide-and-seek is also popular, of course. The child who has been discovered in his hiding place must in turn seek the others. As among the Banjaruanda, jumping over a high string or stick is also practiced.

Girls are given less time for playing than boys. From an early age they have to help with the house work, take care of their little brothers and sisters, fetch water, litter, etc., thus getting used to the idea, common to all these peoples, that the woman is a veritable work animal. Even they have some free time, however, which they use mostly for playing with dolls. They make the dolls (umwana) themselves out of a small pumpkin which has been laced tightly in the middle. Eyes, nose, and mouth are indicated by a few holes scratched on one side of the sphere, arms and hands by means of a few strokes on the other side. Or they use the conical reddish blossom of the banana plant. Sometimes a piece of bast material

857 524 is used to make a dress for the doll which is then carried on the back as mothers carry their children.

[65] When they are not drinking or gossiping, the adult 526 men spent their leisure time shooting arrows at a stick placed at a distance of up to 100 meters or more or by lance-throwing contests at any distant object. In the Tanganyika region a quiet 524 sitting game in which only two persons can participate is very popular. It is a game played on a board (ikisoro) resembling [177] our checker board. It is known to the Wasuaheli as mbao and probably has been imported from there to the Tanganyika area by way of Unjamwesi. From Tanganyika it also penetrated to a few chiefs of central Urundi. The board is rounded off at the edges and has four rows of little bowl-shaped hollows of which there are 32 altogether. Small stones or fruit pits are placed in them. By a complicated system of moves and counter-moves by which one opponent may take stones from the other, one player finally wins all the stones of his opponent. A precise description would lead us too far here, and in any case the game is known from the East African coastal areas.

Weule described (loc. cit., p. 52) the game of patience, ikifundo, that is played in Usige on the north shore of Lake [177] Tanganyika. It was probably an import from the Arabs or the Wasuaheli. I have not seen it myself.

There are also other widespread games, as, for instance, the string games, which I have not seen played by children or adults.

535 Dances (ivino, uruvino) are included here since they are to a certain extent mere "games." It is true that only a minority of dances are executed for their own sake as amusement; most of them are connected with some family, social, war, or religious celebration and are danced only on these special occasions. They all resemble each other in form, however, and may be described together here, except the religious ones which we shall discuss in the chapter on "Religion" (see p. 127).

Like the Banjaruanda, the Barundi are enthusiastic dancers and dance whenever they have the opportunity. "To amuse oneself, to play, to sing and to dance are synonymous words. They dance well, elegantly (especially the women), even with

585 consummate skill. Boys and girls practice dancing from the earliest age. This they do under the eyes of their parents who encourage and instruct them. For a Murundi of good birth, it would be a disgrace not to be a good dancer" (No. 19, p. 141).

The dances are for the most part mass or group dances, seldom solo dances. They are predominantly stepping dances, seldom hopping or turning dances. Most of them are accompanied by singing, some also by instrumental music. Men execute the great majority of the dances; only one special dance is reserved for the women who never dance with the men. The Batussi participate in all the dances of the Bahutu. Only where many Batussi are gathered, as, for instance, at the royal court, do they dance by themselves. The war dances of the Batussi youths, who are educated at the royal court ("cadet corps") are especially graceful and energetic. No Mutwa is permitted to dance with the Batussi and Bahutu, nor do the latter participate in the Batwa dances, but the Batwa dance often and well among themselves.

All over Urundi and Ruanda the men do the same "national dance." Remarkably enough it is free of any eroticism while the characteristic national dances of the neighboring peoples, especially the Wanjamwesi or even more so the Wawira near Lake Tanganyika, are often more than obscene. [66] This main dance of the men is really a war dance (Plates 31, 32). It is also executed on other occasions of all kinds, either for the mere pleasure of doing it, or to honor a chief or a European, or to celebrate certain anniversaries or occasions which occur only once in a lifetime. The men who participate in the dance arrange themselves with their spears in their right hands in two, three, or four rows. At the curt command of a leader, they execute a series of "figures" in a well-rehearsed sequence. This is mainly leg and foot dancing with the rest of the body hardly involved; only a few figures require any kind of violent movement of the upper part of the body. The main achievement is that the whole group, often numbering several hundred men, stamps the ground rhythmically and in unison, changing from one foot to another all together, as though they were one man. The

535 tempo becomes faster and faster and the stamping progressively heavier without becoming disorderly until suddenly, in one jolt, the figure ends with one movement. For more noise, little iron bells, shaped like cowrie shells, or dried fruit shells, half-filled with pebbles, are tied around the ankles or are fastened to the belt and make a rattling noise at each movement. An interesting description of such a dance can be found in Kreuz und Schwert [Cross and Sword], 1900, p. 67:

"What a thrilling spectacle! Imagine several hundred black devils, their spears raised and making the most incredible movements with their bodies, all in the same rhythm. The ground trembles under the feverish stamping of their feet, and the weapons make a weird clanging noise. Everything is hidden in a fantastic semidarkness by big clouds of dust. At one moment the wild horde rushes toward you like a legion of the possessed, at another the whole column of men moves quickly backwards while conscientiously keeping in line as though the whole pack of men were only one single body moving over the ground with the speed of wind. In short, it seems like a dream, the onlooker is caught up by the frenzy. These joyous celebrations last through the entire day until many who have come a long distance set out for home."

R. Kandt (No. 22, p. 254) gives us another vivid description:

"I was especially pleased when in the afternoon, as though at a given signal, the hills around me became alive, and the Warundi came running down the slopes in single file looking like serpents with many tails. They gathered by the hundreds in the center of the camp, and, body pressed to body, they executed a silent dance under the aegis of their choir leader. Their feet were beating the ground in an ever changing rhythm, now in dactyls, now in anapaests, now in spondees. The beat became more violent until finally the black mass of men, with a forest of spears towering over them, was envoloped in an almost impenetrable

535 thick cloud of dust. Through this veil of dust I could see the white in their eyes, the shining rows of their teeth, and their heads thrown back with laughter or ecstasy. It was a strange spectacle which I watched for over an hour without tiring of it. I admired the incredible discipline of this mass of men which reacted to the slightest signal of the choir leader, following promptly the quickly changing rhythms so that it seemed as though the ground trembled under the step of a single giant. [868] Even the small naked boys of six to eight years imitated their fathers and brothers with such adroitness that only rarely did one of them miss a beat in this pedal ceremony. In that case the culprit, blushing with shame, was forced into the background by the angry jeer or rough hand of an adult onlooker."

Another dance, which is seldom done, is executed not in rows but in a wavy line. Holding their spears in their hands, all the men run in single file, keeping the same step by imitating the rhythm of their leader who runs at the head of the line. This produces a sound like that of a galloping horse (No. 19, p. 142).

Solo dances by men are even more rare. The motions of the solo dancer are much livelier than those observed in group dances. Usually the onlookers beat the rhythm by clapping their hands, or a musical accompaniment is made [67] with [534] rattle sticks, a zither (inanga), or a drum. Such a dance is described as follows in Kreuz und Schwert, 1901, p. 212:

"The dancer executes all kinds of jumps: now he approaches the instrument which is setting the rhythm; now he moves away from it in great leaps, now he rushes forward as though he intended to jump over the instrument player; he crawls away on hands and legs, falls backwards onto the ground, suddenly jumps up again; and he continues these antics until he loses his breath. Then someone else takes his place and once more amuses the audience with his wild gyrations. Even though the dancer may be engaged in the wildest leaps, he will stop as suddenly as the instrument player stops his music, for he will not dance without the accompaniment of an instrument."

535 The women always form a circle for their dances. One woman, usually a young girl (sometimes even two), dances in the center. With her arms not quite stretched out and her hands bent upward, she moves to and fro within the circle making all kinds of symbolic movements which are extraordinarily graceful. Von Trotha was very much reminded of the bayaderes (No. 8, p. 72). These dances do not have even a trace of eroticism. Apparently they are an imitation of the characteristics of animals. Van der Burgt interprets the position of the arms as an imitation of the horns of cattle and ascribes an originally religious meaning to the dances (No. 19, p. 142). I feel, however, that in many cases these are supposed to be imitations of the outspread wings of the crowned crane, the characteristic animal of the swampy Ruanda-Urundi landscape, as is also the case with quite similar dances in Ruanda. The position of the rest of the body and the manner of running forward and backward are also, it seems to me, in accord with this. In Ruanda this dance is called "crane dance." Boys and sometimes even men like to take part in it.

While the girl dancing solo (or the two of them) shows her skill in this manner, the women standing around in a circle stamp the ground rhythmically with their feet. They may also sing. A choir leader shouts very short stanzas, sometimes only a single word; which is then repeated by the choir until the choir leader calls out a new stanza.

535 292 There are no special costumes for the dances. Father van der Burgt mentions and gives a picture of a "couronne," a cap made of raffia fibers; from it a long train of fibers hangs down the back. Van der Burgt describes these caps as the decoration of the dancing girls (No. 19, p. 407, and Fig. 138), but these "crowns" are very rare. The Barundi are also not familiar with masked dances or other kinds of disguise connected with dances. There are only certain symbolic cult-costumes which are worn by sorcerers or priests leading certain religious dances [302] (see pp. 124, 126, 131 and Plates 25, 54). On the other hand, the faces of the dancers are often painted with white or red earth (cf. pp. 127, 128).

535 The only thing to say about the dances of the Batwa is that in general they resemble the dances of the Bahutu. The Batwa are very enthusiastic dancers, and in their solo dances they perform the strangest gyrations and leaps. Among them also the onlookers accompany the dance by shaking pumpkin rattles and singing short stanzas. This is done in a noisier and wilder fashion than among the Bahutu and the Batussi.

534 I have already mentioned a zither-like instrument, the inanga, with which the Barundi often accompany their solo dances. It consists of a flat, longish bowl of bark or wood. Six to eight cords of sheep gut or sinew are strung across the bowl. We call it a bowl zither (No. 6 of Plate 47). Usually the wood is decorated with a few simple linear decorations, and several holes are pierced in the bottom which are supposed to [68] add richness to the tone. It is noteworthy that the wooden bowl of the instrument is carved by the Batwa while the Bahutu string the cords. Van der Burgt infers from this that the inanga zither was originally the cultural property of the Batwa and was taken over by the Bahutu later (No. 19, p. 387). It seems more probable, judging from its geographical distribution, that it is the cultural property of the Bahima (see p. 158 [not translated]; it occurs both in the north of the Bahima region among the Banjankole and in the south among the Wafipa [Fipa].

The zither is played in a sitting position. The instrument is placed upon the knees, and the strings are plucked with both hands after the player has tuned them correctly by letting them in or out. The tuning is determined entirely by what kind of singing is intended and by the pitch of the singer's voice. I have not noticed that the strings were tuned to any particular sequence of notes in the scale.

533 As in Europe, there are many persons among the Barundi who play an instrument, but only a few can do it really well. There are professional musicians only at the courts of the chiefs. There the musicians, who are predominantly Batwa, play the drums, flutes, and zithers. The same is true in Ruanda.

533 The playing of the zither is almost always accompanied by singing which is done in a rather low voice, mostly in a minor key which is the characteristic key of the Negroes. Neither the voices nor the manner of performing are good. Either the song in short stanzas deals with some local incident, a current event, a person, a personal experience, etc., or it is one of the old traditional Barundi songs whose lyrics are [188] spoken in the Old Kirundi dialect (see p. 148). Apparently they are nothing but a series of unconnected nouns, adjectives, wishes, orders, etc., the meaning of which is not quite clear any more either to the singer or to the listeners (No. 19, p. 97).

534 The ox horn (ikihuha) is the real war or alarm horn. Its narrow end is provided with a hole, and this is the form generally in use in East Africa. Such signal horns are also widely used by the caravans.

The clarinet-like flute (ikihuschama), which is used only as a musical instrument, is much rarer. It is a wooden tube, a third of a meter long, with a funnel-shaped opening. Its lower end has three holes so that various notes can be blown (Nos. 3 and 4 of Plate 47).

On the other hand, a short fife (umwironge) is much more common. Like our fifes, it has a hole near one end which one blows into and two or three holes at the other end which may be stopped alternately. Flutes and fifes are seldom played singly but usually in an orchestra together with drums of which I shall speak later (p. 70).

Reed pipes are more children's toys than real instruments. Their two ends are plugged, and they have a hole in the middle. They are usually carved by boys. Rattle boards (urukajamba) belong in the same category. They are used particularly for accompanying the dances of the girls. These rattle boards are made of pieces of reed arranged in two separate layers which are kept apart by means of a piece of reed placed obliquely so that there is an empty space between the layers. Dry kernels of corn are placed inside. They produce a sharp rattling sound against the reed walls when the box-shaped rattle board is shaken. Rattle sticks are also often used. They consist of sticks

534 to which small pumpkin rattles are fastened (Nos. 1 and 5 of Plate 47). At religious [69] ceremonies single pumpkin rattles are swung (Plate 25a).

Finally drum (ingoma, inkiranji) is both the rarest and the most highly valued instrument. It is not only used for accompanying dances but also as the main orchestral instrument of the chiefs. Often it has great religious significance. The drum [202] is not used at all for the purpose of signaling or transmitting news. In Urundi there is no "drum language" as there is in other African countries.

Drums are made out of a section of a tree trunk which has been cut off straight at one end rounded off at the other end. The inside of the trunk is hollowed out with carving knives, leaving the fairly thin outer walls. It is then placed on a conical wooden pedestal so that the whole thing has approximately the shape of a "wine glass." The grain mortars are similarly shaped. The open upper end is covered with a piece of cattle hide, shaved thin and stretched tightly across, which was soaked in warm water beforehand. The hide is stretched tight by little wooden pegs fastened around the edge of the drum (No. 2 of Plate 47). Two wooden sticks are used as drum sticks.

If the drum is to be used for accompanying a dance -- 533 which is almost always a solo dance, not a group dance -- two, 535 three, or four men beat on it, each alternating quickly with the other in beating the drum with his two sticks in a certain rhythm. Each drummer uses a beat different from that of the next; each always uses only his particular beat. Thus, if there are four drummers, they produce a drum stanza consisting of four different tempos which are repeated until the "drum leader" starts a new stanza by introducing a new beat. The louder it booms, the better. After a short time one of the drummers suddenly jumps up while the others continue drumming; he makes all kinds of leaps, stamps on the ground, creeps forward, runs back and shakes his drumsticks about as though he were possessed. Just as suddenly, he jumps back to his drum and continues drumming with his partners. Then another drummer follows suit or one of the listeners surrounding the scene, and so

533 on for hours. The drum concert and drum dance are hardly
535 ever accompanied by singing (No. 19, p. 388).

In Urundi and Ruanda drums are such a rarity that an
534 experienced observer wrote as recently as 1901: "In Urundi drums are unknown" (Kreuz und Schwert [Cross and Sword], 1900, p. 212). During my own two months' journey through central Urundi, I never heard a single drumbeat. This can be explained easily by the fact that there remain only a few small areas in this country where trees still exist that are large enough to make drums (and boats). It is probably because of
534 their high value that the possession of drums has become a
554 privilege of chiefs and of the king. Neither the "people" of
778 the Barundi (Bahutu or Batussi) nor the Batwa are permitted to own drums. A special role is reserved for the king's drum. This drum, in addition to the spear, the finger ring or bracelet (wrist disc), and the holy wooden milk vessels, is part of the royal insignia which the ruler bequeaths to his successor (No. 19, p. 524). This "holy" drum is a kind of Palladium of the realm and, as such, it is given the name akarjenda. It is very big and made from the wood of a special tree. This drum is regarded as the seat of the protective spirit of the realm, and solemn vows are made by this "drum spirit" akarjenda (No. 19, p. 388). Special guards are charged with taking care of [70] this royal drum (see p. 187 [not translated]). It is always kept at the residence of the king and, together with the holy spears and the holy milk vessels, it also accompanies him on his trips (report by Captain von Langenn). The hides used for the holy drums [sic] are taken exclusively from the cattle of the so-called "holy herd" (see p. 44).

533 Neither van der Burgt nor any other observer reports having heard of the combination of several drums and other instruments to form an orchestra, but natives assured me that such an orchestra existed at the royal court and that it consisted of Batwa. I consider this very likely since there is such an orchestra, a combination of several differently tuned drums and flutes, at the residence of Musinga, king of Ruanda. The members of the orchestra are Batwa. It sounds very melodious

533 and is quite impressive when, beginning with one muffled drum, the other drums gradually join in through a long rhythmic sequence, the sound of the orchestra rises to its full force, and then the flutes join at a shrill pitch. The sound of the orchestra then gradually diminishes, one drum after the other falls silent, until finally the muffled beat of the first drum softly fades away. At night, however, the tired European may be driven almost to despair by this drum orchestra. Everyone who has been a guest of Musinga will remember this night music.

We have already discussed the musical aspect of the songs with which instrumental music and dances are accompanied (p. 68). At this point I would like to add something about the content of these songs as taken down by van der Burgt. He states that the lyrics of these songs, sung mostly in unconnected Old Kirundi words (see pp. 124, 148), are not even understood in their original meaning by most of the Barundi themselves. A question about their meaning is usually answered by: "It means nothing, it is only a song." Only those who have been initiated in the esoteric meaning by the learned men, sorcerers and priests, have some understanding of the true meaning of these songs (No. 19, p. 97).

For example, these are the lyrics of a song accompanied by a zither:

[539] "Ntiwarima uy' umwaka, ntiwarima.
ninanga usiwire. umugaso utasimbe.
yagese ku' nama. isenge iritschjika."

(Translation: The field is not cultivated this year, i. e., war has been declared. Chief Ninanga stays here. The water ditch does not flow, i. e., the ditch forming the border is dry. It passes close to the homestead. The amulet is broken, i. e., a bad omen for the war.)

In contrast to these old traditional songs, the songs improvised during the dance generally have some connection with current events and are sung in the modern colloquial language. Even these are not coherent songs either but merely short interrupted sentences and thoughts.

533 This does not apply to religious songs which are sung at certain cult ceremonies. We shall discuss them in the chapter on "Religion" (p. 127).

533 461 Often, but not always, singing of the simplest form accompanies work done by several persons with the object of concentrating the individual's energies by means of the rhythm or to make for greater perseverance. For instance, this may be done while moving heavy objects, when hoeing the field in a group, rowing a boat, cutting trees, etc. Usually the song consists of only two or three words which are first sung by one person in the group and are then imitated by the others until the choir leader gives them a new word, a new "idea."

[71] Chapter 6

Means of Communication, Trade, Handicrafts

1. Means of Communication

487 In a country with as little internal and external trade as Urundi the means of communication are naturally very primitive. The roads connecting villages or districts with each other are simple, narrow, trampled footpaths which circumvent all obstacles by turning to the right or left. Wherever this is impossible, as, for instance, in the extremely rocky quartzite regions of central and east Urundi, obstacles are never moved out of the way but are simply left there, and the traveler has to climb over them. These paths in the quartzite regions are, therefore, extremely difficult to traverse for the non-native burden carrier in a caravan or even for a European. The difficulties are further increased by the fact that all the paths of Urundi and Ruanda tend to reach the hill ridges and highland plains which predominate in this area by the shortest possible route, in order to proceed along there with greater ease. Since many valleys are deeply cut and have steep sides, the paths which go

487 up and down the slopes in a straight line are a real nightmare for any non-Murundi.

Another circumstance which makes journeying more
491 arduous is that in spite of the innumerable streams and rivers there are hardly any bridges (ikiraro) in the whole of Urundi and Ruanda. The chief reason for this defect is the lack of suitable timber in these treeless areas. Even where there is still a sufficient number of trees, a bridge is built only in very rare cases since the entire width of the valley bottoms is usually covered with reed or papyrus swamps through the middle of which weaves a narrow, open watercourse. The swamps are too wide for building bridges.

Usually there is no other way but to wade through the swampy valley bottoms and streams up to one's knees or hips in the black, stinking morass. Only rarely are papyrus fronds or reeds cut down in bunches and piled next to each other and on top of each other to form a kind of floating bridge which prevents the travelers from sinking too deeply into the swamp. When reaching wide, open rivers, such as the Ruvuvu, Akanjaru, Luvironsa, and others, the traveler seeks out well-known fords and wades across, often up to his shoulders in water, and he uses a stick or a spear for support against the force of the
[482] stream. Everything that has to be kept dry must be carried in a bundle on the head. At the same time there is much shouting to frighten away the crocodiles. If the river is too deep,
501 dugouts are used for the crossing, and the shore dwellers make
505 a living at this. [72] If only a few persons and light burdens have to be ferried across, primitive rafts (ikitebo) are used. They are made of several layers of dried papyrus sticks which are tied together (Plate 26b). The rafts may be used a few times until they have soaked up too much water. On the Malagarasi River, large tubs made of tree bark are used. They are big enough for one man or one burden and are pulled and pushed across the river by two or three men who have to swim (No. 19, p. 448).

491 If it happens that a big tree is standing near a deep stream which cannot be forded, it is transformed into a bridge

491 by cutting it down, causing it to fall across both edges of the brook. If necessary, a rope of lianas is spanned across next to the bridge to help the traveler maintain his balance when walking over it. I have seen several such tree bridges in Uha where there are more trees than in Urundi. There are no suspension bridges.

In the whole interlacustrine region I have not seen any real bridges built by the natives themselves. Yet van der Burgt describes such a bridge: a few fork-shaped poles are rammed next to each other in the stream bed, and a few long pieces of timber are placed in the forks approximately parallel to each other, thus spanning the entire stream. A great number of crossbeams, approximately two meters long, are fastened to these, and finally bundles of reed or papyrus stalks are tied on top of them so that one may comfortably walk across.

Wherever missionary stations or colonial troops have built roads, there are solid wooden bridges on the European model, and wherever the route traverses swamps, there are earthen dams and corduroy roads. However, the lack of trees in this country will always be an obstacle to the construction of bridges.

The natives always make the cattle swim through the water or wade through the swamps even when bridges exist. Any crocodiles which may be in the vicinity are frightened away by shouting.

482 Since neither the Barundi nor the Banjaruanda have animals to ride or burden-carrying animals, all burdens and also people who are unable or unwilling to walk have to be carried by men. Burdens are packed in small or large bundles, generally wrapped in dry banana leaves, or in large baskets made of plaited bast. They are carried freely on the head or sometimes, for a change, on the shoulder but never in a sling or net on the back as, for example, in Kisiba or in Usambiro.

493 However, sick people or important persons who do not wish to walk travel on a stretcher (isjugi) which is carried by two men on their shoulders. The king also uses such a stretcher for

493 relatively long distances. These are not the comfortable, beautifully plaited carrying baskets which are in use in Ruanda for Musinga and the Batussi rulers, but in most cases they are merely two strong poles connected by crossbars which are covered with a layer of straw or a sheep skin. The traveler either lies on it or sits on it with his legs crossed under him. Old King Kisabo, who was almost blind, often traveled in this manner for several days (Plate 13a). Nevertheless, even in Urundi large, plaited wickerwork stretchers occur.

501 I have already briefly mentioned the boats (ubwato) in the chapter on fishing (p.37). They are almost without exception dugouts. Only rarely and only in the easternmost region can one observe small bark canoes [73] which apparently are used solely for crossing the intermittent streams that appear during the rainy season in summer. During the dry season one can see them cracked open lying beside the dry stream beds. They are only used during one rainy season, and new ones have to be built each summer. They consist merely of three pieces of tree bark patched together with tree bast. One piece forms the bottom, the other two the sides. They hold no more than two persons.

Dugouts, however, are strong and durable, although technically they are extremely defective. We shall discuss the manner of their construction later, in the section on "Handicrafts" (p. 82); at this point we shall only describe how they are used and manipulated. On the rivers of central Urundi dugouts are rare, and due to the lack of large trees, they are small and poorly constructed (Plate 5b). Often they are quite crooked, so it is difficult to keep them balanced. In forest regions, as in north Urundi, on Lake Tanganyika, and on the Ruzizi River, they are of better quality, larger, and more numerous. On Lake Tanganyika, canoes 15 meters long and 1,50 meters wide are no rarity. The best are from the west [313] shore, from Uwembe, where the tall forest furnishes a supply [439] of good timber. They are sold to the Barundi for goats or pearls and are valued at about six to ten rupees.

501 Most boats are somewhat tapered and pointed in front and in back which makes them easy to land on the flat shore. None of the boats is equipped with a rudder; they are steered by one of the oarsmen. No oars are used in shallow water, for instance, near the shores of Lake Tanganyika; instead, long bamboo poles are used to punt the boats (Plate 26a). Short "oars" (ingaffi), approximately one and a half meters long, are used in water which is deep or when there is a strong current. The heart-shaped blades of the oars are slightly bent so that they in effect scoop the water. The oars are not suspended in slings or 502 inserted in holes but manipulated freely. The oarsmen or punters usually stand upright in the boat facing forward. If there is only one man in the boat, he will take his position at the stern; if there are two, they stand in the rear third of the boat; if there are three men, two take their places in back and one in front; if there are four, two stand in front and two in back. Only long tiring trips do they sit on the crossbars. Anyone who is not rowing crouches on the bottom of the canoe.

[501] A heavy stone tied to a bast rope is used for an anchor. There are no masts, sails, or outriggers. None of the boats is decorated with carvings or paintings. If water has entered, it is scooped out with pumpkin shells or with little wooden shovels. If, however, a boat has sprung a crack or a leak, it is repaired in the following manner: holes are pierced near the edges of the crack with a red-hot point of iron; by means of these holes, a wooden board is tied to the hull with bast ropes as though "sewing" a patch. Then the crack is calked on both sides with tree bast or reed. Bitumen, which occurs frequently on Lake Tanganyika, is also used for that purpose.

The Batwa do not have any boats but they know how to make them for their Barundi masters (No. 19, p. 66).

The poor construction of the dugouts prohibits extended trips on Lake Tanganyika. It is very seldom that a large boat with several oarsmen will cross the lake from Usumbura to Uvira. Most boats hug the shoreline, not moving more than 100 to 200 meters away from it, and even when going from Usumbura to Uvira, they move along the north shore of the lake. Frequently the government in Usumbura sends dugouts to Ujiji and

502 vice versa. These dugouts also hug the shoreline so that it is possible to punt for the entire distance, which is faster than rowing. [74] It takes them five days to cover the distance between these two points which, measured in a straight line, are approximately 180 kilometers apart. At the present time [136] they only travel at night since the Glossina palpalis, the dreaded transmitter of sleeping sickness, swarms in many places on the lake during the daytime.

484 The provisions for such trips lasting several days are generally taken along from the point of departure. They usually consist of sweet potatoes which are simply piled on the bottom of the boat and boiled whenever the boats land at a resting place.

481 The lake dwellers learn how to swim (kuoga) when they are still children, but because of the crocodiles they do not go into the water very far. People seldom swim in the interior where the rivers have many crocodiles. The swimming stroke is the same among all East African Negroes: with one arm far outstretched, the swimmer throws himself from one side to the other, striking out with only one arm at each stroke.

2. Trade, Money, Weights and Measures

439 In the whole of Urundi, the only trade worth mentioning is in the Tanganyika district. For political reasons, the government has closed off the entire area of central Urundi to foreign trade and traffic. Only a limited number of traveling merchants are permitted. Thus, trade in this area is limited 438 chiefly to the exchange of local products among the natives. With the exception of salt, this trade is not carried on over long distances but only between neighboring communities.

443 In the Tanganyika district of Urundi markets (akaguriro) are held daily in many places due to the influence of the adjacent Congo State. In central Urundi, however, this useful institution is unknown except in the vicinity of missionary stations and at the new residency, Gitega. During the past years, however, in

443 spite of the sleeping sickness, there has been a marked increase in the number of Barundi from the interior visiting some of these markets on Lake Tanganyika and more trading trips by Tanganyika people to central Urundi to buy cattle hides and wax, which they then bring to Usumbura.

Among themselves the Barundi of the distant interior trade
438 field produce for other produce or for goats, sheep, hides, bark-
317 cloth, pots, iron hoes, etc. The latter items are produced mainly by the Batwa (p. 77). The only trade object transported over a long distance is salt which is not found anywhere in Urundi itself. Formerly it was for the most part imported from adjoining Uha, but at present it is sold in much better quality by the Gottorp saltworks on the lower Malagarasi River which is under European management. It finds its way to the interior by way of Usumbura (Plate 27a).

Formerly palm oil was the main trade commodity in the
439 Tanganyika region (p. 53), but since all traffic and trade in the Tanganyika region has been paralyzed by the terrible sleeping sickness epidemic, the oil trade, too, has decreased considerably. The smaller portion of the oil goes to central Urundi, the larger portion is absorbed by Ujiji and the west shore of the lake which is part of the Congo state. Bananas, pombe beer, butter, fish, goats, and sheep are exported both to central Urundi and to Ujiji and the eastern Congo. The Congo region sends mainly caoutchouc, a little ivory, and cattle in exchange. By far the greatest portion of trade with the Congo area is carried out by smuggling. [75] While import and export is free in the German controlled area, Congo authorities have imposed large tariffs on imports and exports. The natives, however, are very adept at circumventing them. Most of the smuggled products are brought in on paths through the swamp thickets of the Ruzizi which are very difficult to control.

Only wax and cattle hides are exported from central Urundi.
439 In exchange, beads and thick wire (iron, copper, brass) are the
435 main imports, in addition to relatively little cotton material but much salt. In 1911 it was calculated that about 18,000 to 20,000 cattle hides, priced at eight rupees or the equivalent

439 per farsalah [Arab., equal to approximately 35 British pounds],
435 were annually exported to Usumbura from central Urundi. The wax export amounted to 500 to 700 farsalah a year at 18 to 20 rupees per farsalah. The hides are mostly those of animals who had to be killed because of injury or sickness since only a few animals are killed to be eaten or sacrificed (p. 45). Live cattle are not exported at all because the Batussi owners of the cattle are very reluctant to part with them. Furthermore, there will not be a very good market for live cattle as long as they cannot be transported by rail and steamer to European buyers. Another serious obstacle to cattle export is the fact that the whole of Urundi, with the exception of the northern part of it (adjoining Ruanda) and the vicinity of Ujiji, is surrounded by a broad belt inhabited by the noxious tsetse fly. Perhaps it will someday be possible to break through this by means of railroads and special protective arrangements.

These two local products, wax and cattle hides, form the bulk of trade. They are exported for the most part from Usumbura via Kigali to Bukoba or from east Urundi via Ussuwi to Bukoba. Only a small portion is directed via Ujiji since the journey across the country to the coast is too long and expensive.
[491] Even the Tanganyika railroad will hardly change this situation for the time being considering the high freight rates it charges.
482 In 1911 a burden carrier, who carries 60 to 70 pounds and more,
465 received four to five rupees for the distance from Usumbura to Kigali, eight to nine rupees for the distance from Usumbura to Bukoba, and seven to eight rupees for the return trip from Bukoba to Usumbura on which he does not have to carry so unwieldy a burden as dry cattle hides. Because of sleeping sickness, the
487 trade route from Usumbura through the Ruzizi valley to Lake Kivu is closed.

Trading activity at the markets has, of course, also been
443 affected by sleeping sickness. As recently as 1900 there were still over a dozen well-frequented markets in a radius of three hours distance from Usumbura. The market in Usumbura itself had approximately 5,000 visitors daily. At present, however, only two markets in this area are still of some importance, Usumbura itself (Plate 27b) and Kajagga on the northern tip of

443 the lake. A recent addition to this in the interior is the market near the new government station at Gitega which is growing in importance. Apart from these, there are a whole number of small markets serving purely local needs. The market at Usumbura which is held from six o'clock in the morning until 10 or 11 o'clock -- like all other markets -- is still frequented by over 1,000 persons a day. It is conducted in a very orderly fashion under German governmental supervision. There is even a large roof [347] of corrugated iron to protect the market from the sun and rain. The vendors, most of them women, squat in long rows under the roof and out in the open; each has his merchandise arranged in front of him in baskets or spread out on mats or banana leaves. The list of local products recorded by van der Burgt 15 years ago is still valid today: oil, salt, beer, cotton material, fish, mats, pots, jugs, bundles of tobacco, snuff, balls of soap, millet, [76] corn, flour, bananas, peanuts, sugar cane, sweet potatoes, yams, manioc, pumpkins, beef, goats, sheep, chickens, nets, spear shafts, bamboo poles, canes of reeds, firewood, rope, string, hoes, etc. In addition to this, today one may see all sorts of cheap European industrial products, such as brightly colored cotton blankets, various printed cotton materials, petroleum, cigarettes, glass beads, iron, copper and brass wire, hardware, and china.

Von Trotha also describes the markets as "the most 443 characteristic feature of the region. Here every conceivable 562 object is traded with much shouting or paid for with strings of beads and goods. There were thousands of haggling and shouting people at the market of Mpinkasa on the northeast shore of Lake Tanganyika, but everything is settled in an orderly fashion and without fighting. One may buy a woman for ten strings of red beads, and once tired of her, she may be returned to the market and once more exchanged for beads." (No. 8, p. 77). Of course, the trade in women has stopped now, and even at the time of Trotha's journey in 1896 it must have been a very rare transaction.

443 571 [203] The market is the place where people meet, inspect merchandise and observe other people, gossip, hear and pass on news items, drink pombe, discuss business and non-business matters, and where they do many things which are useful and many others which are superfluous. Many Barundi visit the market even if they do not intend to buy or sell anything, merely to amuse themselves. If things become too lively in [625] the beer section or if a fight starts, the market police aided by the peaceful elements among the population quickly succeed in restoring order.

436 The German East African heller is the current coin at the main markets of Usumbura, Kajagga, and Gitega. Silver rupees, half rupees, and quarter rupees are seldom seen. Apart from the heller, all sorts of other money substitutes are in circulation at other markets of the northern lakeshore belonging to Urundi. The heller has not yet penetrated into the large area of central Urundi, and it is known only at the few missionary and government posts and along the main roads linking them. Even there it is accepted reluctantly. Beads are still the most important medium of exchange in this area, notwithstanding the efforts of the government to introduce hellers and rupees everywhere in order to facilitate not only trade but also the future collection of taxes. These efforts will only meet with success after Urundi has actually been placed under government administration and after a hut or head tax has been introduced which has to be paid in currency. The same is true of Ruanda. There, however, the use of currency has already spread considerably as a result of the export trade and the residency at Kigali with its traders' settlement which has been established in the interior for years.

The small coin most in use in Urundi is the pink bead simsim or samsam; a string (kete, Kette? [Kette, "string" in German]) of beads, approximately 30 centimeters long, is the monetary unit. It is equivalent to three hellers. Ten strings equal 1 ifundo; 10 ifundo equal 1 ingoje; 10 ingoje equal 1 [301] akanono (No. 19, p. 111). The samsam bead is also used as the principal neck ornament of men and women.

436 An elongated, violet bead, with white stripes, inganga, is more valuable: one inganga bead equals one kete of samsam beads. Still more valuable are the thick white amaguru beads; a double necklace of these is valued at 10 kete of samsam beads. In addition to these, there are, especially in the lake region, medium-sized blue beads and reddish and white ones with a lacquer-like sheen, also large spindle-shaped white beads with red circles, and others. All these types, however, do not have a fixed monetary value, [77] like those mentioned above; their exchange value fluctuates. Yellow, green, and black beads are not accepted anywhere.

435 Naturally, the available stock of beads and the law of supply and demand also determine the value of the "monetary" beads. In general, these were the rates of exchange which formerly applied in the interior: 5 bananas = 1 heller, 1 bunch of about 20 bananas = 1 kete, more than 2 double handfuls of flour = 1 kete, 1 handful of salt = 1 kete, 1 pot of beer = 3 kete, 1 iron hoe = 6 kete, 1 pot of honey = 1 ifundo, 1 goat = 3 ifundo, 1 sheep = 4 ifundo, 1 bull = 5 to 10 ingoje, 1 cow = 20 ingoje. At present, one goat costs as much as 3 to 4 rupees in the interior, and all other prices have risen proportionately.

439 435 Cotton material which was formerly strictly banned by the chiefs is now accepted eagerly in the interior. The most popular brand is the ordinary white "amerikani" of which 1 gora of 30 ells [an ell is between 55 and 80 centimeters] is valued at approximately 12 rupees in the interior. The "lesso" or "kanga," printed materials with brown patterns which are popular in Ruanda, are gradually being introduced all over Urundi.

804 The double handful (kumaschi) or, on the markets, a pumpkin shell of equal capacity is the generally accepted dry measure for flour, grain, beans, etc. Larger items, like manioc roots, sweet potatoes, bananas etc., are sold by the 804 piece. There are no domestic weights. The farsalah (35 pounds 177 Brit.) used all over East Africa since Arab times has only been

804 introduced here through contact with foreigners in the export
177 trade. It is used, for instance, for cattle hides, ivory, and wax.
The use of cowrie shells as money is known neither in
[436] Urundi nor in Ruanda.

3. Handicrafts

463 In his excellent book, Handwerk und Industrie in Ostafrika
433 [Handicraft and Industry in East Africa], (L. Friederichsen & Co., Hamburg, 1910) F. Stuhlmann writes: "It must be emphasized that in Africa handicrafts are almost everywhere only a matter of secondary importance; the basis of the economy is agriculture" (p. 3). This also applies to Urundi where handicrafts are, for the most part, "homework," that is, raw products are worked for one's personal use at home, and only the surplus is traded for the products of others. Home industry, that is, the production in quantity at home for the use of others and for export, exists only for pottery and iron-working. On the other hand, there is
[437] also the practice of paid labor whereby the craftsman is paid for manufacturing items at the house of the person who ordered them, using raw material furnished by this person, for example, in the production of barkcloth, the construction of a hut, and wood carving. Of course there are skillful and unskillful people in every trade and in every family, and the products of the former are naturally preferred to those of the latter. Only in pottery
463 and ironwork is the craft passed on from father to son. It is
462 mainly the Batwa who practice these two crafts and pass them on
563 from generation to generation, but there are also Bahutu families in which pottery and ironwork are hereditary (No. 19, p. 369). Ironwork, wood carving, and the production of barkcloth are exclusively reserved to men, plaiting and basketry to women. Among the Bahutu, pottery, too, is only made [78] by women; among the Batwa it is mainly done by women but to some extent also by men (No. 19, p. 451).

323 Pottery (inkono, pot) is of course practiced predominantly where the suitable type of clay occurs. This is the case in many

323 of the slate districts of Urundi and Ruanda where good pottery clay (uwumba) has formed from decomposed or alluvial slate. In most cases its color ranges from dark gray to black. Thus it happens that entire potters' villages are built at such sites, a process which has been, and still is, greatly facilitated by the caste separation the parish-like Batwa.

The clay is dug by the men, kneaded with water, and beaten with a club until it has been freed of rough particles and becomes pliable. A small, round clod of clay which has been somewhat flattened with the hand is placed on a piece of a broken pot which serves as a foundation. A sausage-like ring of clay is superimposed around the edge so as to make a kind of bowl (Plate 7b). Adding superimposed long rings of clay is then repeated. The joints are filled in and smoothed out with a moist hand. All the time the whole thing is constantly turned around on the broken piece (urudsjo) under it (a primitive potter's wheel). While it is turning, the object is polished with the hand and water is sprinkled on it until the pot attains the desired size and shape. The rim is then evened off with a tree leaf. The real finishing, inside and out, is undertaken only after the vessel has dried somewhat in the air. For this purpose a piece of calabash, a small piece of wood, a piece of bark, or a little flat stone is used. Finally, simple linear 323 decorations (wavy lines or zigzag rows of short lines) are 381 scratched below the neck of the vessel with a pointed piece of wood or iron. No figures are scratched on the surface, nor are the pots dyed or even glazed. Van der Burgt believes that the wavy and zigzag lines of the decorations are supposed to be mysterious symbols for the "lightning of Imana," the highest god, which might be regarded as "a kind of hieroglyphic writing" (No. 19, p. 452). I do not believe that the potters are so profound, and I regard the patterns as a purely mechanical expression of the desire for ornamentation. The Barundi and Batwa themselves also assured me that these patterns had no deeper meaning. Clay pots of the European Stone Age show the same simple decoration which is determined purely by primitive techniques.

323 Once the pot is finished, it is first dried in the sun and then baked. For this purpose a large number of pots already baked are placed on the ground with their openings downward to serve as a support upon which a number of corn or sorghum stalks are placed in a crisscross fashion. The new pots are put close together on top of this. Since firewood is seldom avail-
[372] able, dry grass is piled on them and set on fire. One keeps adding dry grass until the pots are thoroughly baked. At last the finished pots are picked out of the ashes and cooled by sprinkling water on them. The pieces of ash adhering to them are not removed, however, for they are proof that the pot has
[563] not been used yet; no Murundi would ever buy a used pot from a Mutwa.

323 The Barundi and especially the Batwa make earthenware
415 vessels of different shapes and for different uses (Plate 48): small elongated pitchers with narrow necks for fetching and storing water and beer; large round or thick-bellied pots with a bigger opening for cooking; basins and bowls for drinking; bulging pots with conical lids for [79] storing butter; broad funnels for pour-
[276] ing liquids; and, in rare instances, also vessels with two open-
[782] ings and tobacco pipes with two bowls for votive purposes, like those found in Rifanda (No. 19, p. 452, and Fig. 11; No. 48, p. 318). Large three-legged pots are made only for religious rituals (p. 127).

323 Tobacco pipes (inkono j'itabi, injungu) deserve special
276 mention, although they play only a minor role among the Barundi people who are chiefly addicted to snuff. These pipes are made only by men and are much cleaner and more delicate than the other pottery products of the Barundi. Their basic shape is the same as in Ruanda, but individually they vary in form between pointed, funnel-shaped, and almost round bowls, depending on the whim of the producer or the customer (Plate 49).

415 None of the earthenware vessels of the Barundi has a flat
323 bottom or a handle; at best there is a raised edge for gripping.
439 Thus they always have to be supported by stones or placed into a hollow in the ground or into a ring formed of straw. It is true that in the Tanganyika district one may often see vessels with handles, beaks, or feet, but these are without exception products

323 of the Wawira who live on the west shore of Lake Tanganyika
415 in the Congo State, and they have this shape only if specially
439 ordered. The simple Barundi vessels are very cheap: in
[435] Usumbura a large cooking pot is sold for one heller; in the interior two pots cost one kete of pearls.

The Barundi are hardly less adept at basketry (kudsjischa)
285 than the Banjaruanda, but as far as patterns and decoration are concerned, they are far inferior to the latter. Basketry may be divided into three types: the binding technique, the weaving technique, and the coiling technique (No. 32a, p. 42). The binding technique is the simplest of the three. Reed stalks, papyrus strips, tufts of grass, or rushes are arranged side by side and then are bound together with a few transverse bast strings. Mats, open baskets, and sieves are manufactured in this manner, but this work is so loosely woven as to be useful only for a limited number of purposes. In any case, there are very few
[352] mats in the interior of Urundi; even the chiefs usually sit on the bare ground or on a hide. In some areas, however, such
[513] mats, woven with long stalks of grass, are used; people wrap them around their naked bodies when going to sleep (No. 19, p. 390). In the Tanganyika district there are many more mats. It seems that they were introduced from the Congo and from the north (Ruanda). It is remarkable that in Urundi only men
[462] weave mats, which is the case even for the Batwa, whereas in Ruanda only women make the delicately woven ground mats, bed screens, bed mats, wall screens, etc., which often have beautiful patterns.

285 The weaving technique is much more widespread. It is
415 used in manufacturing baskets, plates, bags, sacks, and other things (Plate 51). Usually two layers of thin strips of bast are interlaced with each other at right angle, like a mesh. Depending on the material, this texture is firm and elastic or soft and flexible, but in all cases it is closely woven. The instruments used for this technique are a thin wooden stick which loosens the mesh to facilitate the passage of the material and an iron needle without an eye but with a little projection for winding the bast string so as to pull it through. In this way they produce large and small, round and square, tall and flat, open and

285 lidded baskets, long narrow containers for tubes to suck beer,
415 very large baskets with lids which are used as traveling trunks, meal winnowers, plates, grain sacks, sometimes even quivers for arrows, and other things. Very occasionally [80] simple
[531] linear patterns are produced by interlacing strips of bast dyed black. In Urundi this weaving technique is exclusively prac-
[462] ticed by women; only the large flat meal winnowers are manufactured by men (No. 19, p. 577), presumably because they
[237] are calked with cow dung, a product of cattle which women can
[184] have nothing to do with as a matter of principle.

The coiling technique is used for making basketry with long,
285 thin, straw or bast rolls, with thread wrapped round them (similar to the beehives of our peasants). These rolls are laid in spiral fashion on top of each other and are tightly fitted by the bast string tied around them; for this reason this is also referred to as the spiral-technique (Plate 50). It is used for producing baskets and bowls with walls which are thicker and more resistant to shock and pressure than those manufactured by the weaving technique. The spiral technique is also employed in making
[415] waterproof cups, the long pointed lids of the gourd bottles used
[482] for beer, and the often very pretty wreath-shaped rings used for keeping vessels in an upright position and for carrying burdens
[462] on the head. This technique is also only practiced by women.
285 Stuhlmann assumes that it is of Hamitic origin (No. 32a, p. 44).
171 This would account for its general geographic distribution and for the high stage of development to which it has been brought in the Batussi states. F. von Luschan also points out that this technique is characteristic of Hamitic tribes or tribes under Hamitic influence, ranging from the Somali to the Ovambo [Ambo] (No. 40, p. 252).

286 Finally we wish to mention the carrying nets which are
352 made of intertwined bast strings simply tied together crosswise. They are hung inside the huts to hold calabashes and other objects (Plate 51). The Barundi could not do without these nets, for even inside the huts plaited work cannot be left standing on the floor since it would be eaten by the termites.

286 The Lake Barundi of the Tanganyika district plait fishing
177 nets with either a wide or narrow mesh in a similar fashion, but

this seems to be an art which they learned from the Congolese Wawira and Wabembe [Bembe] (No. 19, p. 577).

The Barundi are not familiar with the technique of weaving material for garments. They wear garments made of barkcloth and hides, and only in recent times have they started to use European cotton fabrics.

Wood carving (uwuwasi) obviously ranks second to pottery, weaving, and metalworking in a country with as few trees as Urundi. Most carving is done in the western mountain regions where there are still remnants of primeval forest with tall trees. From there these objects are exported to the almost treeless areas of the interior. The Batwa in particular are good wood carvers. As among the Bahutu and Batussi, only men engage in wood carving. Everyone makes his own ordinary wooden household objects, such as poles, sticks, pestles for pounding grain, hoe handles, knife handles, and similar objects, since they do not require any particular technical skill. Other woodworking that requires technical knowledge and experience, such as spear shafts, bows, arrows, quivers, wrist discs, milk pails, bellows, shields, and grain mortars, is done by specialists who exchange or sell their products (Plate 52). Moreover, a characteristic feature of the wood carving of the Barundi and Banjaruanda and one which Stuhlmann calls attention to for all African wood carving (No. 32a, p. 28) is that objects are always made from a single piece of wood. Products made of several pieces of wood are extremely rare; both in Urundi and in Ruanda the only ones are knife and dagger sheaths consisting of two flat boards tied together. A combination of wood carving and plaiting techniques is found in one type of shield (ingabo) whose oblong wooden plate is covered [81] with plaited work consisting of strips of fig bark and rattan, leaving only the boss in the center of the shield uncovered (Plate 53). This type of shield is extremely rare in Urundi. In Ruanda there are more of these shields covered with plaited work -- ascribed by Stuhlmann to the kulungwa of the Bahima (No. 32a, p. 30) -- but, nevertheless, they occur only sporadically. They are numerous only near the Uganda border.

322 412 The Barundi do not have a special tool for wood carving, only the two small chopping knives, the sickle-shaped, long-handled cutting knife (Plate 46, No. 4) with which we are already familiar from the discussion of agriculture (p. 49), and the short and long knives which are used for all kinds of daily jobs (Fig. 16). To round and smooth spear shafts, a small piece of wood is stuck on a small double-edged knife, at an angle. Then the knife is moved back and forth along the shaft until the wood has been scraped and given the desired shape. The wooden arm discs, after having been cut from a block of wood, are shaved with a knife and polished with fig leaves (which are probably flinty) until they have the elegant, mathematically correct shape and smooth surface which we admire in them. [Fig. 16 appears here in the original text.]

The simple parallel linear decorations which are occasionally seen on wooden utensils and calabashes are seldom carved [531] but generally burnt in by a kind of poker-work. For this purpose small notches are made in an old knife or spear point so that several tooth-like points are formed. This iron is made red-hot and then passed over the wood; its points burn a number of absolutely parallel lines into the surface (No. 19, p. 367). Apart from this, saws for cutting wood are as unknown as drills and nails. Because of this, holes are also made in wood by means of red-hot iron. As everywhere else in East Africa where saws are not available, boards or beams are carved from thick logs by chopping and cutting chips and splinters from both sides of the block until a board of the desired thickness remains. For this reason the traveler in these regions can hardly present the chiefs with a more welcome gift than a sturdy handsaw, a hand-drill, hammers, iron nails, and other tools.

322 532 Nowhere in Urundi or Ruanda did I see either human or animal figures scratched or cut into the surface of wood or carved from wood. Only among the Barundi on Lake Tanganyika [177] does one find carved wooden figures, an art which was introduced from the Congo region. Finally, the decorations found 322 531 on many -- not all -- of the wooden [82] hand discs deserve to be mentioned. They are inlaid with iron, copper or brass spirals,

531 angular or round pieces of foil and pins (Plates 34 and 35).
322 Occasionally their entire surface is almost completely covered with such thin metal inlays. They are attached to the surface by scratching the outlines of the metal pieces into the wood, then hollowing out the area within these outlines, filling it with wax, and, finally, pressing in the spirals and metal foils. There are only a few artists who master this technique. In Ruanda such metal inlays are seen on only a few hand discs and on the horns worn around the neck as part of the dancing costume. There the inlays consist of strips of zinc and lead.

The biggest carved object of the Barundi and the one most
396 difficult to make is the boat, the dugout (ubwato). As we have seen above (p. 73), dugouts are rare in this almost treeless country, and their use is confined to a few of the larger rivers and to Lake Tanganyika and the Ruzizi River. Dugouts are ordered and paid for by chiefs who are in need of a boat for ferrying purposes in their district or by families engaged in fishing who can afford the expense. The Batwa are the best boat builders; the technique is a specialty of theirs (No. 19, p. 367). The two instruments used in the construction are a
[412] chopping knife whose blade is set at an angle and whose handle is gripped with both hands and an ax with a short handle. The tree -- the thicker and straighter the better -- is felled by thousands of blows. The bark is then removed with axes, and the log is first hewn roughly to the desired length and thickness of the boat. Then it is given its external shape: the bulging sides, the round bottom without a keel, and the somewhat pointed bow and stern. Finally the inner trough is hollowed out. This, too, is done solely with axes and knives. In other regions of East Africa this is accomplished by starting small fires on the upper side of the tree trunk. These fires gradually eat their way into the trunk, and the charred parts are scraped out until only the hull remains. According to their own testimony, the Barundi do not know this technique. After the job is more or less done, the boat, before being launched, is filled with water in order to test whether it is waterproof. After all the cracks have been calked, the dugout is pushed and pulled into the water with the participation of a festive and noisy crowd.

396 Often the boat has to be transported a long distance to
496 its launching site. This may take several days. An umufumu (sorcerer) walks in front, scattering "salutary" powder on the road so as to make sure that the boat will reach the water undamaged. As soon as the boat is launched, the people participating in the celebration sing and dance on both sides of the river. Then a pot of banana beer is covered with river clay and
[702] placed inside the boat; the immediate participants drink from the pot and spit into the river to appease the evil spirits. The clay on the pot is rubbed by the participants on their foreheads and on those of the members of their family as protection against accidents. Then the boat is rowed across the river to the other shore, and the people there go through the same ceremonies. The consecration of the boat is concluded by a dance
[273] of the abafumu (medicine men) and ends in a general drinking bout. (No. 19, p. 66)

If after the launching of the boat it is discovered that it
396 lacks buoyancy or equilibrium, corrections are made by further carving with knife or ax or by putting stones inside for ballast. It has already been mentioned (p.73) that the dugouts have neither seats nor rudder. The way they are propelled has also been described.

[83] I have also already discussed the very simple technique (p.31) of making barkcloth (fig. bast felt).

281 The technique for hides and leatherwork is also very simple. The Barundi on rare occasions use a piece of hide as their only garment. Otherwise they mainly use hides as blankets. The Batwa, however, prefer garments of hide to those made of barkcloth; consequently they are the most expert workers in leather (abaharra). However, both the Batwa and the Bahutu use the same technique. If it is merely a matter of firm, hard leather for lids, quivers, binding material for fastening arrowheads, etc., the hide is simply scraped clean and dried in the sun. If, however, soft, flexible leather (urusato) is needed for garments and blankets, it must be tanned. Since in Urundi the method of tanning and tawing is little known, as was originally the case in all other parts of Africa (No. 32a, p. 47), the hide

281 is treated by the method used for making chamois leather. First of all, the hide is stretched tight on the ground with pegs all around the edges. With a knife the hair and the particles of meat and fat still attached to it are scraped off carefully. When the hide is almost dry, the pegs are removed, it is rubbed with fat or butter and then beaten thoroughly, piece by piece, with both hands until it has become smooth and pliable (No. 19, p. 425). Finally the hide is rubbed with a little white residual soil (kaolin) so as to give it a nice appearance. Hides to be used as blankets are treated in the same manner, but the hair is not removed.

326 177 In the field of ironwork the performance of the Barundi is good, even excellent. This is really surprising since reportedly the forging technique was brought to Urundi from the northeast, probably from Kissaka, at the time of King Ruganza of Ruands, i.e., approximately 200 years ago. The art was introduced, it is said, by a legendary person, Kigwe. [412] [411] Van der Burgt writes me that "before that period wooden hoes were used for cultivating the soil, and arrows and spears were made entirely of wood." An old Mutwa told van der Burgt that in his youth he had seen such wooden utensils himself. According to my observations such wooden hoes and weapons do not exist any more. Van der Burgt is mistaken in assuming that 135 the backwardness of the Urundi iron industry can be explained 316 by the fact that there are no iron ore deposits in Urundi (No. 19, 325 p. 250). I found excellent iron (itschjuma) in the form of limonite and specular iron ore in many places. On the other hand, I can confirm that the Barundi do not know how to mine and smelt these local iron ores. In Ruanda I saw smelting furnaces in full operation, but there are none in Urundi. The 326 Barundi blacksmiths only work iron imported from other areas. [439] Some of it is imported in the form of hoes from Usindja (southern part of Lake Victoria) with the help of the Baha and Bassuwi, and some of it is European iron wire which is brought into the country by way of Lake Tanganyika. The Bahutu and Batwa blacksmiths convert this imported iron into the forms of hoes, knives, chopping knives, spear points, arrowheads, arm

326 rings, etc., which are customary in the country. The Bahutu and the Batwa use the same technique, but apparently the Batwa are the more adroit blacksmiths. In Urundi blacksmiths do not form a special guild, but in some families the craft is passed on from one generation to the other. Blacksmiths live [554] with the other Barundi, and because of their craft they are highly respected. They are professional craftsmen who sell [84] their merchandise, but as in Ruanda, they often also engage in agriculture on the side. [Fig. 17 appears here in the original text.]

325 [348] The work shop (uruganda) is a small round hut, open on all sides. In its center a hollow in the ground contains the [372] charcoal fire. Since blacksmiths need charcoal for their craft and since there are few trees in this country, they mostly have their huts not far from the remains of forests or the bushes along [438] the rivers. Charcoal from the peripheral mountains wrapped in long bundles of banana leaves is sold in the interior. Next to the fireplace there are bellows, either vessel or bowl bellows (umuvuba), shaped like a large, double wooden spoon, over each of whose ends a goatskin is stretched loosely (No. 2 of Plate 45). A wooden stick is tied to the center of each skin; it serves as a piston whose upward and downward movements press the air from the vessel into the end of the pipe. The blower stands or squats behind the bellows holding a piston in each hand which he alternately moves up and down quickly. The same type of bellows is used in Ruanda where it is also used for blowing the smelting furnaces. In Urundi (according to Stuhlmann's small map in No. 32a, p. 62), still another type is said to exist, the tube or bag bellows; yet I have not been able to find out anything about it. The more common vessel bellows just described is carved from a single block of wood and opens into a short, funnel-shaped clay pipe which is placed directly among the hot coals and keeps them glowing. From time to time water is sprinkled on the glowing pile of coal.

[85] On the other side of the fireplace there is a hard stone which serves as an anvil (Fig. 17). The piece of iron which is to be forged is pushed into the glowing coals with a wet, clamp-like piece of wood or with a pointed iron pin, and it is pulled

325 out with the same instrument. Once on the anvil, the iron is forged with the hammer (injondo), a heavy piece of iron with several edges. It has no wooden handle but is elongated on one end to form a kind of handle so that it may be gripped firmly. The iron is hammered and intermittently made red-hot until it has been purified of all dross. Then it is forged with the
325 hammer into the shape of the desired object. For this purpose
412 any of the following auxiliary tools are used: a thick, rounded pin over whose curved head the glowing piece of iron is hammered into concave shapes, e.g., bells, sleeves for spear points, etc.; a short pointed piece of iron with which simple patterns of dots are engraved in arm rings, chopping knives, and other objects; an old knife to cut pieces of glowing iron in two by using it like a wedge and hitting it with the hammer; a file consisting of a serrated piece of iron with a wooden handle with which any unevenness is rasped off the forged objects after they have cooled down; and finally a few hard, smooth stones for polishing.

I have not been able to ascertain whether the Barundi are
[439] familiar with wiredrawing. They use imported European types of iron, copper, or brass wire to wind around their bracelets and knife sheaths.

325 Copper (umurinda) and brass are hardly used at all in
439 Urundi, with the exception of the Tanganyika district where copper and brass have been imported from the Congo (for instance, Katanga) for years and are used for many purposes. In
[316] the large interior areas of Urundi no copper ore is mined. The small amount of copper imported from Tanganyika in the form of wire is hammered out cold and used for making simple brace-
[301] lets, small bells used as dangling ornaments, small pieces of foil used as inlays for the large wooden arm discs, and other things. Both in Urundi and Ruanda the casting of iron in molds is unknown.

[86] Chapter 7

Political Organization, Law, Social Organization, Clans, Totemism

1. War, Monarchy, Feudal System

721 Insofar as there is a historical tradition, the history of the Barundi shows that under the rule of strong and energetic kings this people performed extraordinary warlike deeds which for a long period protected the country from the oppression of black or Arab conquerors (Ruanda, Mirambo, Wangoni [Ngoni]; Rumalisa). It is only in recent decades with the decline of the dynasty and the lack of a great compelling personality that the warlike spirit and comprehensive organization has become weakened, so much so that the German occupation met no special obstacles. The present-day Barundi, i.e., the Batussi, Bahutu, and Batwa, are not inclined to conduct war against an external enemy, in spite of their violent, quarrelsome temperament and their innumerable internal feuds. They are peaceful if they are left in peace.

In the past, too, during the period of their political strength, the Barundi did not conduct big wars for the purpose of expansion and conquest as did the Wangoni and the Wahehe [Hehe]. The usual practice was rather internal guerrilla warfare by one Murundi chief against another and the eternal clan and family feuds within their own country. Matters became serious only when foreign aggressors invaded the country. In such a case there were first several minor attempts to repel the aggressor, and then the entire people finally rose up behind their king and expelled the invader. This happened, for example, to the Arab leader, Rumalisa, and his slave-hunting bands (p. 165 [not translated]).

[648] Our government seldom considers it necessary to intervene to any great extent in the internal feuds and petty wars which still occur frequently. These quarrels are seldom of a very 726 bloody nature. If a chief finds cause to quarrel and complain [754] against his neighbor, he first seeks to make him give in peacefully by means of "sorcerers." If this method fails, he sends

726 his men against him without any declaration of war. The war party consists almost exclusively of Bahutu and Batwa. The Batussi provide a few leaders but in general keep carefully in the background. The party threatened by aggression is soon informed of the approaching danger by his friends, and he either evades it or through his men tries to damage his enemy's property and possessions. Each seeks to take as many cattle as possible from the enemy, to injure or kill as many men as possible, to plunder and burn the homesteads in night attacks, and to capture the women. Rarely is there an open battle between the two hostile parties, and seldom more than a dozen persons are killed [87] in such a war (No. 19, p. 276). The principal form of conflict, as it was among the heroes of Homer, is to [754] hurl insults at each other or to use sorcery aimed at hurting or killing the enemy from a distance. The medicine man pro- [789] tects his own people through magical charms (stones, pieces of herbs, or bones, all of which are worn suspended on the body) from being wounded or bewitched.

726 701 Of course the efforts and expenditures are greater in the case of feuds between great chiefs or wars conducted by the king against invading enemies. Until a few years ago the Germans, too, were regarded as such enemies. In such a case all the men and youths who are sufficiently strong must take up arms, [722] while the women, children, and cattle are taken to safe hiding places. The bodyguard (abagendanji), which every great chief has even in peace time, is always first on the spot. These are specially picked men whom the chief keeps on a beef diet and [714] who are dressed in a kind of uniform, a white leather apron. Their leader, always a Mutussi, is provided with a special distinctive shield. Frequently the bodyguard consists entirely of Batwa. When the war drum is beaten, all the other warriors [411] assemble quickly. Each is armed with two spears, one bow, and four or five arrows. In order to frighten the enemy, the [714] warriors paint their faces, their skulls, and many other parts of the body with white and red lines, dots, and spirals, using pulverized clay. They thus manage to present a really fearful 726 sight. Then the medicine men also enters the picture,

726 performing all kinds of sorcery in order to hurt the enemy. The chief accompanies his troops to the battle field only in really big wars when it is a matter of survival for the whole state.
[782] Sacrifices to the protective spirits are made on the border stream --
[411] the borders are mostly formed by streams -- poisonous powders are spread on the paths used by the enemy, the future is read
787 from the entrails of sheep and chickens, and arrangements are
726 made accordingly. If possible, the sorcerer even arranges for one of the holy cattle (ingabe) to be sent against the enemy. If it penetrates the enemy's ranks this is regarded as a good omen to which even the enemy will submit; however, if it turns back in front of the enemy, it is regarded as a bad omen, and negotiations for peace are begun (No. 19, p. 277).

If in spite of all this an open battle takes place, one side will soon take to flight after a few men have been killed or
727 wounded by spears or arrows. The victors then pounce on the homesteads and burn them, after looting everything of value, especially the cattle. Upon their return, the women receive them with jubilant trilled cries. This marks the beginning of a feast with dancing, drinking, and eating meat, which often lasts several weeks, as long as the chief provides beer and cattle. If the enemy chief has been captured, he is usually killed.
721 Peace is hardly ever concluded. Usually a feud between chiefs is passed on to son and grandchild, according to the unwritten laws of vendetta. Thus, there is continual strife in the country unless a stronger hand enforces the peace. Our colonial forces
[648] have had to do this several times and with success whenever there was a dangerous disturbance of the peace in our colony. Yet, according to a very wise governmental ordinance, the German Resident is not permitted to intervene in unimportant internal conflicts. The same applies to Ruanda where bloody quarrels occur often enough. For this reason these fights will continue for a long time, [88] until with the progressive effective occupation of the country by our troops they die down completely.

642 Until the German occupation, Urundi was a unified kingdom for many centuries. Of course this is true only with respect to its historical development and name, for in reality quite a .

642 number of the leading men of the country had become more or less independent of the king. As we shall see in the historical survey (p. 166 [not translated]), the government recognized the independence of a few of these chiefs after the death of old King Kisabo. Even there, however, the people still regard the distant king -- who it is true has become almost a phantom for them -- as the supreme authority of the realm in many respects, especially in religious matters.

643 Theoretically, the king is the absolute ruler of all of Urundi. Whoever does not submit to him is a renegade and a revolutionary. In the last analysis this claim to royal supremacy is founded on the fact that the king is descended from the old ruling family, the Baganwa, and is regarded and revered as an almost divine being. In this capacity he is the head of the national religion and the religious head of the nation, regardless of the personal characteristics of the king who is ruling at any one time. If, in addition to the religious respect which he enjoys, the king is prudent and strong-willed, as the bearer of the "crown" he will have no difficulty in enforcing his claim to be the sole ruler in the whole of Urundi. This is proved by the history of Urundi.

In both Urundi and Ruanda, also in Ufipa (No. 47, p. 29), the official title of the king is umwami, i.e., he who rose to authority. The Urundi king is also referred to as the njen' ingoma, the possessor of the (holy) drum, or as umvijéji, father, master.

644 The person closest to the king is the umufumu w'umwami, [793] the "house chaplain," high priest. Generally he is a highly intelligent man who in all cases is attached to the semidivine king and who also is the first to advise him in mundane matters. [791] A "court kiranga," a chief magician or sorcerer, assists the high priest. Among the officials of the court, there are masters of the kitchen, butchers, firewood keepers, stable masters, water suppliers, cow milkers, night watchmen, the bodyguard, and others. As far as political personalities are concerned, there are in the entourage of the king representatives of the great head men, the governors of the provinces, just as at the court of Musinga of Ruanda. Here, as well as in Ruanda, it is often the governors themselves who temporarily or permanently are drawn

644 to the royal court because, due to some suspicion or other, the king wants to have them near him and under his supervision.

In Urundi these provincial governors are almost without 635 exception members of the royal family (abaganwa) or of one of 565 the kin groups of the high Bahima nobility related to the king by marriage (see pp. 91, 101 also p. 182 of original text [not translated]). However, in the subdistricts of the provinces 634 ordinary Batussi are appointed as government officials (abatware or batwale). Sometimes, especially in the southeast, there are also Bahutu serving as batwale. This office is hereditary within the appointed families, but the king may annul the succession by inheritance of a son after the death of a mutwale. Also, he may appoint a new mutwale any time he pleases (No. 19, p. 267).

631 The same organization of officialdom also exists in 614 Ruanda. Similarly, in Ankole the entire country is divided [635] among nine governors or high batwale responsible to the king. There they carry the title Bakungu and are all members of the royal clan, [89] Abahinda. Each Mukungu has several district [634] chiefs under him. However, these are all representatives of Bahima clans and each of them is elected by his clan which means that he is the eldest of the clan. These men have petty jurisdiction over their clan members, while disputes between different clans are decided by the Mukungu. The office of [635] Mukungu is hereditary. (No. 27, p. 98.)

In Urundi, however, the monarchy is not, or not yet, as 643 well founded as in Ruanda (King Musinga). The cause for this 614 may be found, above all, in the much stronger spirit of independence of the Barundi and in the still very strong clan organization of the Batussi and the Bahutu. However, the kings of Urundi and their powerful kin group, the Baganwa clan, have managed in the last two decades to have almost all the clan elders in the country, who formerly had a free hand, replaced by officials and vassals of the king who back up his absolute power.

643
423
631

As in Ruanda and the other Bahima states, from Unjoro in the north to Ufipa in the south (No. 47, p. 74), all the land, people, and cattle in Urundi belong to the king on the basis of his inherited right as conqueror. He distributes the land among the members of his family and his clan, the Baganwa, as a hereditary fief. He may reclaim it, however, if at any time he is dissatisfied with the holder. These grand vassals or grand batwale again subdivide their territory in many small fiefs among their followers, and these continue the process so that the entire country is covered by a gigantic network of vassals of the king (see p. 171 [not translated]). They are predominantly Batussi, and the lowest among them have approximately the position of a village mayor. The smallest territorial unit of this large administrative organization is the [361] mountain, the plateau ridge (umutumba, umurambi). In the highlands which are cut up by swampy valleys, the mountains bear the settlements, not the valleys. For this reason the boundaries of the provinces and their subdivisions are formed almost everywhere by the stream and river valleys, the most obvious and most effective natural lines of separation between the regions and their inhabitants. However, the large fiefs seldom consist of one continuous stretch of land within a region; almost always they are formed by numerous smaller pieces of territory distributed over various provinces. Thus, the important vassals are prevented from becoming too powerful for the king.

Of course, all vassals are expected to pay a certain amount of tribute to the king. From these the latter meets the expenses of his large household, pays his officials, and conducts his wars. Depending on the duties involved, there are three kinds of feudal tenure. 1) Land fiefs: their holders have to pay regularly a certain share of the produce of their fields to the king. 2) Cattle fiefs: the tenants monthly furnish a certain number of cattle, milk, and butter. 3) War fiefs: the holders must keep ready for action a certain number of warriors who must be placed at the king's disposal upon his command. Sometimes these three types of feudal tenure are combined in one region and in the

643 person of one vassal. This simplifies the administration con-
631 siderably. Often, however, the vassal is vested with the tenure
423 of the mountain and the Bahutu who live there as his bondsmen, but he does not receive at the same time all the privileges; another Mutussi may receive the war fief on the same mountain, i.e., he may have the duty of assembling the local men in case of war, or a third Mutussi on this mountain may be in charge of dividing up the grazing land, etc. [90] The object and result of this organization is to make each of the holders of these privileges jealously watch over the others and to insure that the king keeps the reins of power firmly in his hands.

634 The mutwale who has been vested with a fief is, however,
614 the ruler of the Bahutu and Batwa in his feudal domain. He determines the work load of his people and has jurisdiction over ordinary affairs. However, the position of the people under him is not at all like slavery. They enjoy a considerable amount of freedom and are entitled to certain privileges. In addition
[628] they always have as support their kin group, their clan, which can be depended upon to take [redacted]t, bloody revenge for any real acts of violence on the part of the batwale or any other person. It is a kind of Vehmic organization which is respected even by the most powerful Batussi batwale. Also, each Muhutu is entitled to leave his feudal lord if the latter maltreats him and to look for a new master. However, since the reputation
[554] and wealth of each Mutussi depends chiefly on how many people he has, it is in his own interests to see to it that his people do not leave him as a result of maltreatment.

662 The king always surrounds the high vassals and batwale with spies in order not to allow them to become too independent. Beyond that, however, jealousy and envy are powerful motives for each mutwale to exercise a check on his neighbor. Naturally intrigue and incrimination are widespread. If a case of dis-
687 loyalty or high treason is reported to the king and is discovered to be well-founded, royal justice acts quickly with spear and poison. Nevertheless, several grand batwale have managed to
631 attain a large degree of independence in the course of time. This is particularly true of those living in the exposed border

631 districts in the area adjoining Ruanda and Ussuwi. They still pay a set amount of tribute in natural produce to the king, but otherwise they may do, or not do, whatever they please unless they disturb the peace or necessitate the military intervention of our Resident.

As a rule the king or the princely governor will not make alternations in the conditions of feudal tenure if the vassal regularly sends his tribute, keeps his subjects in timorous dependence, promptly contributes the necessary groups of men in case of war, and remains subservient and loyal to the king.

[624] Finally, in the different villages and hamlets there are communal officials (bisonga) who are responsible to the batwale; they collect the taxes, arrange for corvée labor, and are in charge of petty jurisdiction, etc.

645 When discussing important matters, the king, also the
634 provincial governors, and the batwale, are assisted by a state council or a communal council, respectively. These councils are appointed by the king or by the governor, as the case may be, and are chosen from among the most respected and most prosperous men of the country or of the region. Represented among them particularly are the clan elders (abagabo). The council is convened on important occasions, and the king or the mutwale presides, but in his decisions the king or the mutwale is not bound by the advice of the council (No. 19, p. 267). The
634 batwale are responsible to the king for everything that happens
641 in their administrative district. They also have almost absolute power over the Bahutu and Batwa population which they administer. This includes the power of execution. It is true that subjects suppressed by an unjust mutwale may appeal to the provincial governor or to the king, but they obtain satisfaction only very seldom, for "the tsar is far away and the sky is high." [91]
643 The absolute ruler, the semidivine king is, of course, always
641 right and has every privilege; he owns all the land and all the cattle, and he vests with it whomever he chooses, whenever he chooses, and in amounts that he alone decides, and he may take any subject's life or property as he pleases.

643 These are the conditions, de jure and de facto, whenever
631 the king is a man of strong will, and there has been a whole

643 series of such kings in Urundi. If the king is a weakling, if he
631 lacks the cunning and the capacity for violence and cruelty to inspire fear, which are the necessary characteristics of African rulers -- as, for example, the present weak King Mutaga -- his absolutism is mere show. Then the real rulers are the heads of the royal family, the Baganwa or Abaganwa, who make the royal puppet dance to their tune. These, then, are times when the various provincial governors make themselves independent, when other parts of the country fall under the rule of foreign neighboring sultans (for example, Ujogoma temporarily under Ussuwi), and when anarchy more or less prevails in the entire realm. Concerning the development of these conditions and the present state of affairs, see the chapter, "History," p. 151 ff. [not translated].

643 The present impotence of the monarchy, the weakening
648 of central power, and the disruption of the formerly powerful unified realm have been sanctioned by the German colonial government to its own advantage. At the same time the colonial government is attempting to replace gradually the supreme power of the king with the rule of the German Resident. It cannot eliminate the monarchy as such unless it is prepared to take up the fight against all the Batussi. For this our strength is still not sufficient. However, in the future much will depend on what kind of a man from the old ruling dynasty succeeds the present weak puppet king, Mutaga, and what the attitude of our government to him will be.

643 The succession to the throne is determined by primogeniture
662 in Urundi, unless the king or the head chief decides otherwise. By law he is succeeded by the oldest son of his head wife. Usually, however, the king designates as his successor the one of his many sons who appears most suitable to him, and he bequeathes to him the insignia of royalty, i.e., the holy drum, his spear, and his arm ring. If this decision is made during the lifetime of the king, it is dangerous for the favored son. He will consider it advisable to escape from the jealousy of his brothers and relatives by taking refuge in some distant place until his time comes. If he is still a child, he is hidden by his mother far out of reach

643 of his relatives. However, the young prince who, according
662 to the belief of the Barundi, is destined to be king of Urundi also lives far from the court. The Barundi believe that this
[787] predestined royal child who has been born of one or another of the wives of the king can be recognized at birth by the fact that he holds in his hands seeds of all the species of produce grown in Urundi. They also believe that because of these revealing signs, the mother with her child flees to the neighboring country until the ruling king has died. A royal prince is regarded as suitable to succeed the king only if he is not yet married when ascending the throne and if his mother is still alive (p. 184 [not translated]). In any case there is a struggle between the various parties when the pretender to the throne returns from abroad after the king's death to lay claim to the succession. This ends with the victory [92] of one party and its pretender. The new ruler is proclaimed king after a ritual act of election (p. 184 [not translated]) by the council of the Baganwa and abafumu [plural of umufumu, sorcerer], and he usually has all his brothers and close relatives killed or sent into safe exile (No. 19, p. 524).

634 Less blood and violence is involved in the succession of the greater and lesser batwale. In this case, too, the father during his lifetime designates one of his sons as his successor by inheritance (or one of his daughter if he has no sons); usually it is the eldest. The king, however, may change the decision in favor of someone else. After the death of the chief, the new mutwale is ceremonially installed in his office by the council. He is given the insignia of the deceased and also the cattle, the wives, and the kraal of his predecessor; in short, he receives all his family property (No. 19, p. 550). He now proceeds to rule his new fiefdom like a sovereign prince, but he has to pay punctually to the king the tribute imposed on him, and he must also fulfill his other feudal duties which are not burdensome. Otherwise, he risks deposition, war, exile, and death.

2. Administration of Justice and Social Conditions

428 In the families of those Barundi (Batussi, Bahutu, and Batwa) who do not hold an office, the eldest son (or daughter) of the first wife is the secular and religious principal heir of the father. He inherits (kuraga) the largest share of the available family property, while the mother and the other children each receive equal shares of the remaining property. If the mother [429] is already dead and the children still small, the eldest son as the principal heir is expected to provide for them. If a 428 Murundi dies without children and leaves a widow, his brothers 768 divide his property among them, and the widow returns to her 587 family. However, a widow with children becomes the wife of the brother nearest to the deceased (levirate), and she and her children remain in the same house as before. The family stays together until the children are married and set up their own families (No. 19, p. 285). According to von Langenn, only sons receive the inheritance; they then support the mother and sisters. If there are no sons, either the widow or the daughters, as the case may be, are the heirs.

The eldest son also inherits the religious and professional 428 attributes and skills of his father. If the father was a priest 463 (kiranga), sorcerer, medicine man (umufumu), or blacksmith 868 (umususi), etc., the eldest son becomes -- or remains -- in the same position or profession by inheriting from his father the insignia and tools, in addition to the expert training. Thus, certain professions remain the prerogative of certain families. If the mother is an expert of some sort, she will pass on her skills to her eldest daughter.

428 If someone dies without leaving a family or relatives, the mutwale of the district in question inherits the property (No. 19, p. 568). Since no written laws of any sort exist, all law is 671 customary law, tradition, and usage. Every adult Murundi is 563 familiar with these customs, and if anybody infringes them, it is regarded as a punishable violation of the law. Even the king considers himself bound by them in his relations to the Batussi and only under exceptional circumstances [93] does he disregard

563 the law. The law of the land is, of course, a "master's law"
671 which favors the Batussi in all respects. In contrast, the Bahutu as bondsmen enjoy few privileges, and the Batwa are almost entirely without rights. The Batussi batwale often commit grave violations of the law, especially in their dealings with the Bahutu and Batwa without, however, being held responsible for such infractions. It is only the fear of vendetta that puts a restraint on their arbitrariness.

As is the case among all primitive people, the ethical
577 concepts of the Barundi regarding what is right and wrong are elusive. Questions aimed in this direction either remain unanswered or the reply is simply: "We do not know" or "the headman says so" or "our parents, superiors, the king wish it that way," and similar answers (No. 19, p. 381). One never hears that "conscience" prescribes certain actions or that the ghosts, the manes, or the gods wish it that way. Whatever is said on this subject has probably been suggested by the questioners, especially the missionaries. In contrast, concrete concepts of
671 law are much clearer. They are chiefly based on conditions of ownership and on social conditions, and they define something as right or wrong depending on whether it benefits or impairs these conditions which have become traditional.

As has been mentioned above (p. 91) the king is, in
423 principle, the sole owner of the entire land and fields and of all the cattle in the country. As described above (p. 86), the batwale and the lesser district chiefs -- almost always Batussi -- hold larger or smaller portions of this royal property in feudal tenure, and they, in turn, parcel out smaller portions for the use of those Batussi who are not officials or for the use of the Bahutu. Whatever these latter produce from the fields and from the cattle belongs to them by law as their own property after they have paid their tribute to the feudal lords. The huts and the courtyard which the Murundi has set up on the plot of land left to him are also his property. However, he can be driven from his house and field, for example, if he fails to pay his tribute or if he has committed murder of theft and also if the feudal lord wishes to put someone else in his place, either a

423 person who will pay more tribute or who pleases him for other reasons (No. 19, p. 469). As a rule, however, families live on a piece of land for generations and till the soil for their own benefit and in part for that of their feudal lord. Before the Batussi era, this land was probably for the most part the property of the Bahutu clans (see p. 104). The homesteads inhabited by the Batussi are usually set somewhat apart from those of the Bahutu, outside the confines of fields in the grazing land.

The inhabitants own their huts and, in addition, every-
421 thing they keep inside the huts or carry on their person. Thus, men, women, and children may own property, and the following may be items of property: huts, planted trees, produce still standing in the field or harvested, cattle that have been raised, furniture, tools, clothing, weapons, ornaments, trade objects, etc.

685 Property violations, i.e., damage and theft (uwivi), are
674 frequent, but if someone leaves his hut unguarded, a woven screen in front of the door opening is usually sufficient to keep away uninvited guests. Although the kraals are surrounded by
[417] strong fences and the paths between the fields are often lined with high euphorbia hedges (Plate 20), these have not been put up or grown as a protection against thieves but to pen and restrain the cattle. If a person steals something from [94] a homestead or produce from the fields, he is taken before the mutwale and is sentenced to severe corporal punishment unless he can pay a generous amount in damages of which the mutwale will appropriate one half (No. 4, p. 224).

692 The mutwale or in smaller districts the village chief is
627 the judge who pronounces justice in all cases. Usually the Batwa take care of their legal disputes among themselves without appealing to their Murundi mutwale, but the Batussi and the Bahutu take every matter that cannot be settled by the family council before their mutwale. Usually the plaintiff brings several witnesses with him whenever possible, but at the same time he brings a present for the judge which is not without influence upon the verdict of the latter (No. 19, p. 472). In most cases
696 the convicted person receives his corporal punishment from the family members of the plaintiff or from the bodyguard of the chief if he has one. Concerning the types of punishment, see p. 97.

563 554 The second important legal sphere is constituted by social conditions, but first, something about the social stratification. I shall reserve a separate chapter for the relationships within the clan and family (p. 98 , 106). As has already been mentioned, social stratification is determined by the three racial elements of which the Barundi people is composed: Hamitic Batussi, Bantu Bahutu, and the original indigenous population, the Batwa. By the law of conquest, the Batussi form the nobility; the Bahutu are those who are not free, or rather those whose rights are only conditional; and the Batwa are the helots who have no rights. If we disregard the Batwa pariahs, there is no separation of castes closed off from one another, although the priests (kiranga), the sorcerers and medicine men (abafumu), and partly also the religious brotherhoods (ababandwa) enjoy a privileged position on the basis of their magical powers which other persons lack. The professional craftsmen, especially the blacksmiths, also maintain a particularly respected position if they are Batussi or Bahutu, but this does not apply to Batwa. And, as is true everywhere, the [556] rich in Urundi enjoy more respect and influence than the poor.

In spite of the considerable difference in social and legal status and in spite of the arrogance of the Batussi, the latter associate with the Bahutu on a friendly basis in most cases, a relationship similar to that between a master and his useful, docile servant. Even if a Mutussi is a mutwale of the lowest rank or a petty feudal lord, the Muhutu will never forget that in his relations with the former he is dealing with a master. If he should ever forget this, he most certainly would be reminded of his inferior status in a manner which would not be pleasant for him, but the "better situated" Muhutu regards the ordinary non-propertied Mutussi as his equal. At times, although [582] only rarely, there are even marriages between Batussi and Bahutu, yet these are not considered as completely valid (see p. 101 , 169). It is also reported that, as in Ruanda, a Muhutu [557] may be promoted to the privileged class of the Batussi by an act of royal favor.

563 The Batwa, however, stand entirely apart from and below the others. They are not slaves who are forced to render services, but they are regarded as excluded from the society of the others, as outcasts whom the Batussi and the Bahutu despise and detest. They are considered animals, not human beings (No. 19, p. 541). The Batussi and Bahutu do indeed buy all kinds of handicraft products, especially pots, from them and also employ them as medicine men, musicians, and watchmen, but they never enter into closer relationships with them. (In Ruanda it is more likely that exceptions will be made, especially at the royal court.) A Mutussi or a Muhutu will never enter the hut of a Mutwa, he will never eat or drink with him, nor will he use a pot or a garment which has already been used by a Mutwa. [95] Only one thing is permitted: the [576] Mutwa may greet the Murundi and return his greeting although in a different manner than a Murundi would have done.

576 Depending on the social status of the person who tenders a greeting and the person greeted, there are considerable dif-
554 ferences between the forms of greeting used among the Barundi. In all cases the greeting is tendered and returned with a certain amount of ceremonial politeness so much so that some observers maintain that greetings are a kind of religious act. Even the words of the stereotyped greeting often suggest a religious connection (see p. 46). It is perhaps for this reason, but even more likely because of the great innate or learned politeness of the Murundi, that each of them would consider it a serious insult if he were not greeted or if his greeting were not returned. Corresponding to the social stratification of the people, we may differentiate three large groups of greetings.

576 1. Greeting the king. The person greeting the king kneels down,
643 bends toward him, claps his hands in his direction, and calls
554 out: "uganse umwami" (command me, King) or "ugire umwami" (may you enjoy good health, King). The members of the royal family, the Baganwa, who for the most part rule the provinces as head chiefs, are greeted in a similar fashion.

554 2. Greeting the batwale who are not of royal blood and the lesser
576 chiefs of communities. The person tendering the greeting bows

554 toward the mutwale and calls out "amahoro umutwale" (Peace,
576 Mutwale) or "mwakeje umutwale" (did you wake up in good health, Mutwale?), whereupon the person addressed simply answers "amahoro" or "mwakeje." Or the person tendering the greeting calls out "turakuje ubwatsi" (we offer you grass) or "sjinde awansi" (conquer your enemies). At the same time the greeter plucks a handful of leaves, straw, or grass and places them at the feet of the king or the mutwale. This is a symbol of submission for the grass or straw is the symbol of the soil and of all that grows on it (No. 14, p. 48; No. 22, p. 254; No. 4, p. 79). The "grass homage" is a widespread custom among the
[71] Hamitic nations of herdsmen and it also plays a ceremonial role among the Galla (A. Werner, "The Galla of East Africa," Journal of the African Society, Vol. 13, p. 275).

576 3. Greetings exchanged between ordinary Barundi. There is an extraordinary number of different types of greeting depending on the time of day, the occasion and the person involved, etc. In this type of greeting, "mwakeje" or "amahoro" is also used as the beginning phrase in most cases, but after that there follows a whole flood of phrases exchanged between the two persons. When taking leave, it is quite customary to call "ibaba" or "akababa" to the other person. These words are also used by the Wanjamwesi (No. 19, p. 529).

The Barundi do not embrace or kiss each other as a form of greeting, but there is a peculiar kind of accolade which is the customary form of greeting among relatives and friends. It is executed in a very ceremonial fashion and is accompanied by many turns of speech (No. 23, 1904, p. 36). If someone meets one of his relatives or a close acquaintance, he first gazes at him for some time without saying anything and then approaches, stretching his folded hands toward the person. The other takes these folded hands between his own and then gently strokes the arms of the person who greeted him. At the same time, the chests and heads of the two approach one another as though they intended to embrace. While these gestures are being made, numerous phrases of greeting are exchanged. The words

576 "ischo, scho, amascho"(cattle, cattle herd) are used frequently and signify that each wishes the other the greatest possible prosperity and happiness, namely, cattle. This is a very characteristic herdsmen's greeting which undoubtedly has been introduced by the Batussi (see p. 46).

431 [96] Giving and receiving presents (isimano, ingawano)
576 play a very important role in social intercourse. This also takes various forms depending on the social status of the donor and recipient and the event which occasioned the present. In Urundi it is an extremely frequent custom to give presents out of friendship, respect, politeness, or as a sign of submission. However, only rarely is the donor unmotivated by selfishness. In most cases he aims at receiving a present in return to which, according to custom, he is in fact entitled. If a present is given to the mutwale, the aim is to secure his favor in official decisions. To discontinue exchanging presents is regarded as a sign of hostility, the rejection of a present is considered a serious insult. The gift to be presented, whether it consists of field produce, pots of honey, goats, jugs of beer, or something else, is placed at the feet of the recipient. At the same time the donor never fails to taste a little of the food presented in order to show that it is neither poisoned nor bewitched. Then the donor makes a solemn speech assuring the other person of his affection and respect and asking him to return these friendly feelings; finally he openly requests a nice return present. This is what custom demands. The recipient of the gift replies in the same solemn manner and in the end promises a return present or has it brought immediately. At the sight of the present the other person frequently breaks into shouts of joy or begins a wild dance. Custom also requires that a little portion of the present be returned at once to the donor. This, of course, considerably
[563] facilitates the giving of presents (No. 19, p. 87). The Batwa among themselves also practice these customs connected with the giving of present, but to their Barundi chiefs they may only present pots, iron tools, weapons, tobacco pipes, or firewood, and, under no circumstances, beer, honey, or other foodstuffs since a Murundi would never eat food given to him by a pariah.

357 The domestic bondsmen, the servants, are an important
567 element in the social structure and the economic life. Neither in Urundi nor in Ruanda does slavery exist -- or rather, it no longer exists. In fact, the Batussi do not need slaves for the Bahutu are all bondsmen of the Batussi rulers and provide all the services that are required of slaves in other parts of East Africa. On the other hand, until the turn of the century, there existed quite a brisk slave trade out of Urundi to other areas. This was carried on under the influence of the Arabs and the coastal dwellers, with the Wawira, Bassuwi, Wassumbwa, and Wanjamwesi acting as middlemen. Not only did the Barundi sell their countrymen as slaves, in particular the women and girls, but also orphans were sold by their relatives, and even children by their own parents (No. 19, p. 212). The purchase price was paid in salt, pearls, and iron hoes. Pretty Batussi girls fetched the highest prices and were destined for the harems of the Arabs, prosperous coast Negroes, or the Wanjamwesi. As recently as 1900 there were public slave auctions in Uha (Heru) and in Usámbiro. Mainly slaves from Ruanda (Kissaka) and Urundi were sold there. A witness wrote at that time: "All the roads are full of slave trains, almost all of them women and girls. Eight out of ten female slaves perish, for these children of the mountains only rarely survive in a different climate" (No. 14, 1900, p. 178). At present, as the German occupation progresses, these atrocities have been stopped, and only rarely and under the cloak of secrecy is a girl or a child from Urundi sold into slavery in the neighboring areas.

[97] In Urundi itself, however, in the households of many
357 influential families, especially of the Batussi, there are, in-
597 stead of the domestic slaves, bond servants or maids (abaschumwi).
592 Although they are personally free, they have to work for the master and receive only room and board in exchange. They get their jobs by a kind of adoption; someone who has no relatives or who, for some reason or other, wants to leave his family will offer his permanent services to a prosperous Murundi or to a mutwale. The latter takes him into his home and treats him

357 like a member of the family (No. 19, p. 13). The adopted
597 person does the work around the house, tends the cattle, and
592 tills the fields, but he cannot acquire any property. If he wishes to give up his job and offer his services to another master, he may do so at any time, but the former master has so many indirect means at his disposal to force the servant to stay that most of those who have themselves adopted spend the rest of their lives with the same master.

592 Thus, the circle of dependents or retainers of any prosper-
554 ous and influential Murundi consists of these domestic servants,
573 of impoverished relatives and parasitic friends, fortune-hunting flatterers, and economic and political dependents of all sorts. Every day they pay homage to him in his kraal and accompany him wherever he goes. The greater the master's reputation, the larger is his entourage. It is rare that one sees a Mutussi of high status walking with an entourage of less than a dozen persons and often with as many as 20 to 30. In Urundi the entourage is called mafuatano; in Ruanda where the same institution exists it is referred to as bagaragu.

681 Debt slavery does not exist in Urundi. The Barundi, how-
[567] ever, have a great variety of very drastic punishments (ikihano) for violations of the law causing damage to life, limb, and property. In most cases the guilty party or his relatives or clan may atone for the misdemeanor or crime by a smaller or larger payment in the form of produce, cattle, salt, pearls, iron, etc. The amount is determined by the mutwale who acts as the judge (p. 94). If it is a case of a serious crime, manslaughter, murder,
628 or a serious injury, the kin group or clan vendetta (see p. 105)
672 becomes operative; this is done with the cooperation of the au-
681 thorities. The injured party or, if he has been killed, his kin group attempts to seize the wrongdoer by any means at their disposal. If the latter takes refuge in a neighboring province beyond the avenging arm of the injured kin group, an attempt will be made to catch one or several of his wives, children, brothers or sisters, close relatives, or members of his clan in his place. The captive is bound and locked up until his family obtains his freedom by paying a large amount of ransom money. This is forthcoming

628 in most cases. However, if the ransom is not paid, the mem-
672 bers of the injured group, with the consent of the mutwale, pro-
681 ceed to execute the victim. They take the captive to a remote place and first cut off his hands, then his feet, and eventually also the ears, nose, and tongue. Then the unfortunate victim is nailed to the ground by piercing four poles through his arms and thighs; there he finally receives the death blow through his chest (No. 19, p. 472). Another method of execution is to drive a sharp pole through his anus into his body up to his throat. The body is then exhibited in a public place. The vendetta takes similar forms among the other Bahima, down to the far south in Ufipa (No. 47, pp. 108-111). Stealing cattle and witchcraft are punished in the same cruel manner in Urundi.

762 [98] Persons intending to commit suicide, who are not by any means rare either in Urundi or Ruanda, usually kill themselves by hanging or drowning.

695 It appears that the oath (indahiro), the invocation of the deity, the manes, or the king for the purpose of affirming a statement, is not permitted as a legal device among the Barundi who, incidentally, "use oaths, curses, sorcery, lies, or trickery" copiously. On the other hand, a judge frequently inflicts the ordeal on the accused, especially if it is a case where he has charged with witchcraft and sorcery (No. 19, p. 405). Most often this takes the form of the spear test. It consists of stabbing the accused person's arm with a hot spear point. If the blood gushes out, he is judged guilty; if not, he is considered innocent. The water test is applied by making the accused place his hand into a pot of boiling water. If his hand is scalded, he is considered guilty, otherwise, not. Also, under certain conditions, the poison test is used, a custom found all over Africa. Of course, there exist all kinds of methods designed to make the ordeal come out correctly, like greasing or powdering one's skin, using counter-poisons, etc.

3. Clans, Exogamy, Totemism

614 In addition to the social stratification resulting from the different ethnic strata of the population with the Bahima conquerors, Batussi, as the upper class, there is in the entire interlacustrine region a subordinate social structure determined by kin groups or clans consisting of blood relatives. Depending on their nature, there are clans of Batussi, of Bahutu, and of Batwa. As a group of families related by blood, the clan is the basis of the entire social organization of both Ruanda and of Urundi, and also of Karagwe, Kisiba, Ankole, etc., while the political state is organized on the feudal system. Unfortunately, we 614 know very little about the clans of the Barundi since my pre- 114 decessors have given little attention to this institution and since the natives are reluctant to give information about these conditions, more from fear of the evil results of mentioning names [551] than from their religious concepts (see p. 111, 112). These things are much clearer in Ruanda where Czekanowski, assisted by the missionaries and Christianized natives, was able to obtain much interesting information about the clan structure (No. 48, Chap. 11). What I am able to convey below I owe -- except for my own findings in the field -- to information received from Capt. von Langenn-Steinkeller and Father van der Burgt.

"In his Dictionnaire Français-Kirundi, van der Burgt refers to a few privileged Batussi families from whom the kings customarily choose their wives (see pp. 99, 101, also p. 182 of original text [not translated]), but he fails to mention anything about an organization of the entire population into clans which is of decisive legal, social, and political importance. In reply to my direct inquiry, Father van der Burgt sent me the following information: "Formerly I held the belief for a long time that no clan organization at all existed in Urundi. Both in Unjamwesi and in Kisiba (No. 31, p. 5) one always hears people speak of their luganda (families, cognatio) and their kisse (pl., visse), i.e., clan; for example, whenever one asks a woman for her name, she first gives the name of her clan, e.g., "I am a Magana" or a "Njamurega" or a "Kundwa," etc. In central

614/114 Urundi, however, I only once heard a woman say that she was a Magana. Thus, I would say that clan organization is not as pronounced in Urundi as it is in Unjamwesi, Ussuwi, Kisiba, etc. In Kirundi I am not familiar with a word like the Usâmbiro "kisse" [99] but the Warundi often speak of their "umurjango" which also means kin group, clan. However, in Ruanda clan organization seems to be well developed. In northern Urundi (Mariensee Mission) where there are many Wanjakissaka immigrants, they often speak of their clans, but this does not apply to the Warundi who live there.

"Whether there are few or many such clans in Urundi I do not know. I discovered the names listed below, but I cannot guarantee that they are genuine Urundi clan names. I rather think that they originate from the periphery of the country: Wajango, Wamagana, Wassindi, Waschambo, Wasinga, Wajambo (Wanjambo), Wasigawa (Wasigaba), and others. Incidentally, although the population is divided into clans, the members live all over the area without rule or restraint, i.e., not localized."

Van der Burgt further lists (see p. 183 [not translated]) the Wakundo, Warwanda (Wawanda, Babanda?), Wenengwe, Wanjakarama, Wasigaba, and Waterwa (Watoirwa?) as the families closest to the royal family. On the other hand, Capt. v. Langenn informs me that the Batussi families of the highest rank are the Banjakarama, Benengwe, Banjakissaka, Baschunguka, and Boschoka, after which there follows a second series of families, also very distinguished, the Bawanda, Bahondogo, Bassawu, Bawejuru, Baschama, Bega, Bawankundu, Babile, Basindakire, and others. A few of these family names, like the Bega, the Bawanda, the Bakundo, and the Baschama, were repeatedly mentioned to me in Urundi, and in addition the Baschambo, Basito, Bagessera, Bakango, Balenge, Baransi, Balesi, Bakono, Basseke, Bassabu, Bajosi, and Barire.

If we compare these names with the family names listed by Czekanowski in his clan tables from Unjoro, Toro, Ankole, Mpororô, Kjamtwara, Kisiba, and Ruanda (No. 48, pp. 41, 88, 233-251) and with those mentioned by Kandt, van der Burgt, van Thiel,

614 Stuhlmann, P. Schumacher, Meldon, Roscoe, Rehse, and
114 others, we rediscover over half of the Barundi names also in these lands, especially in Ruanda. This indicates the direction of the closest relationship to the Barundi families. According to legend, the Basinga, Bagessera, and Basigaba are the oldest kin groups there (see p. 153 [not translated]). Probably these clans of Urundi and the northern Bahima states which have the same name are mere offshoots of one original clan which split up as the result of a large increase in numbers or from being harrassed by war and spread over the area by migration. Throughout Urundi, Ruanda, and the northern areas of the interlacustrine region, the Bawanda, Bega, Bakango, Baschambo, Bagaia, Basindi, Basinga, Basito, Bajango, Basigaba, Bajubu, and others are most widely dispersed, while the Bahondogo, Bassabu, Baschunguka, Babile, Basindakire, Barire, and Basseke seem to be restricted to Urundi, although future investigators may discover them in other areas. Perhaps their blood relatives and namesakes may be found father south and west, rather than in the north.

614 The majority of the clans listed above are those of the Batussi, but the Bamagana, Bajango, Basseke, Basjubu, Barire, and others are Bahutu. In addition to this, there are numerous Batwa clans whose names, however, I was unable to ascertain. Some clan names refer both to Batussi and to Bahutu clans. In fact, a few, as, for example, the Bagessera and Basinga, even refer to Batussi, Bahutu, and Batwa clans. It appears that the type of clan structure, the internal organization and the hierarchy of the clans, their social role, and their mutual legal relationships among the Batussi differ essentially in only a few characteristics from those of the Bahutu and the Batwa, namely, in those institutions and rules whose aim is to keep the Batussi blood pure and to maintain the exclusive position of their race and thus its authority. [100] Remnants of earlier endogamy still exist among them (see p. 101), while otherwise the clans are strictly exogamous. Probably the Batussi adopted the clan organization of the older ethnic elements in Urundi, just as they adopted many

614 other customs and institutions from them. However, the Batussi have contributed to a considerable extent in further reducing the importance of the old clan system. For the stronger the monarchy became and the more power and privileges the batwale who had been appointed by the king and the independent Batussi chiefs demanded and enjoyed, the less they could tolerate the continued existence of the authority of the former clan heads or clan elders and the more they suppressed and reduced the clan privileges still existing and replaced them by the administrative organization of the growing Batussi feudal state. In Ruanda, which is under strict monarchical rule, the activity of the clans in law and social affairs has been to a greater extent suppressed and restricted. Even in Urundi where the monarchy is not as strong and the state is more differentiated, the clans have had to hand over to the king and to the chiefs most of their former privileges, and they have lost their solidarity. In spite of all this, the clans continue to exist as a natural organization of the people alongside the artificial one of the state. Not only have they preserved in their organization and customs quite a number of traditions from earlier times, but they also carry on many activities stemming from their organization which have general social significance and effects. This is true particularly of functions relating to family law.

The chief characteristics of clan organization have remained the same as in earlier times: the patriarchal nature of the organization; the exogamy of the clans among each other; the totemistic peculiarity of each clan and, connected with this, the injunctions and taboos (abasiru) affecting the members, especially food taboos. These clearly separate the clans from each other. Further, there is the communalism of the clan members and the protection of the members of the kin group by their clan, by vendetta if necessary. Even under Batussi rule, this acts as a restraining influence against acts of violence by Batussi officials.

Let us briefly review the chief points as they were sketched by Czekanowski for Ruanda. Each clan recruits its members by

614 patriarchate, by patrilineal succession; each child belongs to the clan (umurjango) of its father from the day of its birth. Strangers may join the clan only in exceptional cases, but they do not enjoy full privileges. The greater the number of male members of the kin group, the stronger the clan is in its internal and external functions, the better will it protect and benefit the individual. This accounts for the fervent wish of each father of a family to have as many sons as possible and to bring them into his clan.

Marriages between the members of the same clan are forbidden. A clan member may choose his wife only from another clan. Strict exogamy is thus the rule. C. Meinhof traces the origin of this custom, which is particularly pronounced among the African Hamitic herdsmen, back to the fact that originally the wife belonged not just to a single man but rather to the whole kin group, to all clan associates of the man in common. In other words, the whole of the man's clan married the woman, and for this reason she had to be from another clan (No. 41, p. 84). Clear remnants of this kind of group marriage still persist among many of these Hamitic tribes and also among the Massai; it is customary for a husband to put his wife at the disposal of any clan member during the time of the latter's visit. [101] Also, the married wives are so easily accessible to the men of their clan that prostitution is almost nonexistent among these tribes. The concept of adultery is meaningful only with regard to illicit intercourse outside the clan. To a limited degree this is also true of the exogamous marriages of the Barundi (see p. 107). A member of a Batussi clan never enters into a completely valid marriage with a member of a Bahutu or a Batwa clan, and there never occur wholly valid mixed marriages between members of Bahutu and Batwa clans. The racial distinctions among the three large population groups are stronger than the rules regarding exogamy. It is true that Batussi may frequently be found in Bahutu clans and Bahutu in Batussi clans, but these are either offspring from concubinage with Bahutu women or from other liaisons with inferiors through special circumstances, and they are not regarded as fully valid clan members.

563 614

614 It appears, however, that the exogamy of the clans is not entirely unrestricted. It seems that members of a Batussi clan cannot enter into marriage with the members of all other Batussi clans, nor can the members of a Bahutu clan marry the members of any other Bahutu clan. It seems rather that the member of a clan is restricted in his choice of a wife or husband to a certain number of other clans, most probably to those having the same totem (umusiru). As among other peoples practicing totemistic exogamy, marriages may originally have taken place between old totemic cult groups founded upon animistic concepts (No. 43, p. 162). It appears that in this case also marriages are restricted to clans which have the same totem or belong to totem groups which entertain friendly relations with each other. Among other East African tribes, for example, among the Wagogo [Gogo], Wahehe, Bafipa, Banjoro, and Baganda, marriage is at least not excluded if the partners have the same totem (No. 49, p. 164). In any case it is not the identity of the totem but only the membership in the same kin group, i.e., consanguinity, which is the determining element in exogamy. Evidently exogamous and totemic groups have different origins even where they coincide (No. 49, p. 166).

614 In the rest of East Africa exogamous, totemic clans exist
171 among the Sulu [Zulu] (No. 30, Vol. II, p. 380), the Wangoni (395), Wagogo (402), Wahehe (404), Waheia [Haya] (406), Wayao [Yao], Makua, Makonde (406), Massai (408), Watakomba (420), Nandi, Suk, Turkana, Karamojo, Kamasia [Kamasya] (426), Wakawirondo [Kavirondo] (448), Basoga (457), Baganda (472), Banjoro (513), Batoro [Toro] (531), Banjankole (535), Galla (540), Basiba (No. 31, pp. 5-6), Bafipa (No. 47, pp. 131-135), Wakamba [Kamba], Wataweta [Taveta], Wakikuyu [Kikuyu], Wabena [Bena], Wanjamwesi, Wasukuma, [Sukuma], Wasango [Sango], Wawemba, and others (No. 49, pp. 122-124). If among these tribes the clans are not exogamous -- as among the Wahehe and the Massai -- the subclans into which the clans are divided practice exogamy. Often there are four clans and

614 almost everywhere the totem is called musiro or umusiru (pl., 171 abasiru).

In Urundi only the royal kin group, the Baganwa clan, is 614 not strictly bound by the rules of exogamy. Its members may 643 marry members of other clans of the high Batussi nobility (exogamy), or they may marry other Baganwa (endogamy). The king of Urundi himself always practices exogamy and marries into one of the four (or six?) highest clans (pp. 99, also p. 182 of original text [not translated]). Under exceptional circumstances the king in both Urundi and Ruanda may, or must, as the case may be marry even his own sister or daughter (see p. 182 [not translated]).

Among the Bahima of Ankole, Unjoro, Ufipa, among 614 the Baganda and the Galla or Oromo, the kings and princes 643 of royal blood may practice endogamy within the royal kin 171 group and may even marry their own sisters while all the other clans are exogamous (No. 30, Vol. II, pp. 523, 538, 541; No. 27, p. 105; No. 47, pp. 49, 132; Emin Bey, Petermanns Mitteilungen [Petermann's Communications], 1879, p. 120).

[102] As an extreme form of endogamy, marriage with a sister is practiced in East Africa only in cases of emergency when the ruling dynasty is unable to preserve the purity of its blood by any other connection. It probably is or was practiced by the ruling families of other peoples past and present only if the dynasty, as, for example, the Bahima, came either as peaceful immigrants or as conquering invaders and originally formed an alien element which excluded any miscegenation with the subjugated group (No. 43, p. 150).

From the fact that there are always several clans with the 614 same totem it may be concluded that these clans originally belonged to the same tribe which later split into two or more kin groups and clans as a result of growth while nevertheless keeping

614 the common totem. After separating, the clans took different names. Among the Bahima and Bahutu of East Africa, unlike the North American Indians, the totem name was not used as the name of the clan itself, but rather, as among the Australian aborigines, the names of the clan and the totem are different. However, the totem cult and its membership have been preserved even though in diluted form (cf. No. 43, pp. 142-143). In a few individual cases the names of the kin groups are identical with that of their totem, as among the Basoga, Basiba, and Banjoro, while the kin groups of the Baganda are named, without exception, after their totem (No. 49, p. 155).

Both in Urundi and in Ruanda the totem (umusiru) is still the cult object of the clan or the clan group, even if only in a passive or negative sense, in that everything connected with the totem must be strictly avoided by its clan. There is no active cult devoted to the totem either among the Barundi or among any other Bahima people (cf. also No. 47, pp. 133, 134 and No. 49, pp. 145, 147). Sacrificial offerings are occasionally made to them but that is all. Among most Rundi clans the totem is an animal or part of an animal. Much more rarely it is an object, as, for example, the small pillow with which burdens are carried on the head or the basket in which sweet potatoes are stored, even more rarely plants or parts of plants, flowers, and stones. The definite predominance of animal
614 totemism is probably related, as among all peoples organized
775 by totems, to the idea that the totem animal was originally
171 considered the "ancestral animal." Among the Barundi and Banjaruanda, however, this does not appear to indicate that the particular species of animals is regarded as the founder of the race or the tribal ancestor or ancestress of the particular clan, but rather that the soul of each clan member after his death enters an animal of this particular type. Evidently the belief in a relationship between the human kin group and the totem animal species does not include the concept of common descent from the same ancestral animal. Whenever a member of the kin group dies, this relationship is renewed by his soul entering an

614 775 171 animal of his totem species. In Central Africa many tribes of the northern Congo basin and of the western Sudan (No. 49, pp. 140-142) have the same belief.

614 Van der Burgt believes that the royal family of the Barundi has no totem (letter). According to other reports, however, their totem animal is probably the large python (see p. 118) which is also the "soul animal" of the kings; this also applies to the Basiba (No. 31, pp. 107, 130) and to the Baganda (No. 30, Vol. II, p. 500). According to the belief of the Banjankole, the souls of the kings enter into lions, those of the princes into snakes (No. 26, p. 151; No. 27, p. 102); among the Banjaruanda the souls of the kings enter into leopards."

[103] Thus, the belief in a relationship between clan members and the totem animal is one of the roots of totemism; the other is the same kind of animism that gives rise to awe and fear of the spirit of a dead person living in an animal or some other object and, in connection with this, brings about the cult of ancestors (cf. No. 49, p. 169). For this reason the totem animals are identical with the "soul animals" which are generally assumed to be the residence of human souls (see p. 118). In this case, too, these are characteristically animals, those which excel in great speed and agility and, thus, are suggestive of the vital breath, as, for example, the snake, lizard, certain fish and birds, the otter, weasel, duikerbok, long-tailed monkey, or those animals which have a sinister appearance or other terrifying characteristics, as, for example, the chameleon, the insect walking stick, leopard, buffalo, and hippopotamus. However, certain kinds of domestic animals, for example, black, white striped, or otherwise mottled cows or certain varieties of sheep may be chosen as totem animals by many clans. The veneration of cattle, which are neither used for work nor ordinarily butchered, would indicate that they were formerly the cult animal of the Bahima herdsmen, which to some extent is still true today. Some clans designate only liver, heart, and intestines of certain animals as totems. This custom is also found among many other Bahima and Bantu tribes. This is

614 probably done for a variety of reasons: partly because the original clan split up into several totem groups; partly because these organs of the animal body are most often regarded as containing the soul; partly for the practical reason of not wishing to forego the enjoyment of eating the meat of the entire animal. For a clan of herdsmen, it would have been impossible to select only cattle as their totem like, for instance, the hyena or the chameleon since the clan would have had to go hungry because of the taboo imposed by its totem.

614 784 262 For the clan member his clan totem, his umusiru, is an object of awe. It either inspires veneration as a member of an earlier generation of his kin group or it causes revulsion for other reasons. It is taboo to him, either because he regards it as sacrosanct due to its superior characteristics or because he regards it as impure due to its disagreeable characteristics. In their effect on the attitude of the clan member, these two emotions are the same. The umusiru is carefully avoided. Any injury or, what is worse, killing of a totem animal, any contact with or occupation connected with the totem or a part of the totem is considered an offense of which it is difficult to purge oneself. Eating its meat or drinking its blood or milk is prohibited. Out of this strict food taboo, there developed the now predominant attitude that meat, blood, milk, and other parts of an animal are impure and injurious to the health of the clan member. The impurity can only be eliminated by [783] means of elaborate ceremonies, and the umufumu (medicine man) determines the amount of the penance which depends on the seriousness of the case. Moreover, violations of the totem taboo, particularly of the food taboo, are automatically and magically punished by illness or even death for the offender (cf. No. 49, pp. 152, 153).

Since the members of other clans eat the meat of the totem animal of one clan, they are regarded as impure by this clan. Thus, the food taboos erect barriers between clans with different totems. For example, [104] if members of the clan of the Bawanda (Babanda), whose totem is the duikerbok, find

614 themselves together with members of the Baschama clan (totem
784 Klipdas or of the Bagessera clan (totem water wagtail), they
262 avoid physical contact with them and are not allowed to take their meals with them. The same is true in Ruanda. Moreover, the general prohibition against the Batussi eating with the Bahutu and the Batwa and against the Bahutu eating with the Batwa has totemistic bases aside from the racially determined caste spirit, if only because some Bahutu and Batwa occasionally eat goat meat and mutton which the Batussi abhor. Both in Urundi and Ruanda these totemistic food taboos do not affect the children (No. 48, p. 240), but women are bound by them.

614 B. Ankermann does not commit himself on the question
174 of the age and origin of totemism in Africa, but he suggests
563 that the Hamites might be regarded as the carriers of totemism. In many tribes a nontotemistic lower class is ruled by a totemistic -- and Hamitic -- upper class. In Urundi and Ruanda both the lower class, the Bantu (Bahutu), and the ruling Hamitic upper class, the Batussi, are totemistic. Even the pygmoid indigenous inhabitants, the Batwa, are organized into totemistic, exogamous clans. For this reason and for others having to do with the fact that totemic culture is everywhere manifestly very ancient, I should prefer (as regards the Barundi and Banjaruanda) to subscribe to the view which Ankermann considers more probable, namely that the original Negroes from whom the Sudan Negroes and the Bantu originate, were totemistic (No. 49, pp. 176-178), and that where totemistic Negroes are ruled over by totemistic Hamites, as in Urundi and Ruanda, the Hamites have blended their own totemism which they brought with them with that of the conquered, just as they must have blended their own clan organization with that of the conquered Bantu (see p. 100).

614 In the internal organization and life of the clan the
621 strong feeling of solidarity among its members is evidenced above all by the considerable degree of communalism.

614 Wherever monarchy with its state organization has not yet
621 dissolved the clans and dispersed their members all over the various feudal districts of the Batussi state (see p. 89), wherever the clans have preserved the main elements of their ancient solidarity and autonomy, as is the case particularly in the more or less independent border provinces of Urundi (and Ruanda), the clans form small or large communities under an elected clan elder (umugabo). This is especially true of
614 the Bahutu clans that existed in the area before the period of
423 Batussi rule. The office of the umugabo is hereditary in
621 many cases. The central communalistic element in the organization of these clans is the communal ownership of the land occupied by the clan. The land belongs to the clan community probably because it was originally appropriated and cultivated by the clan. The individual clan members is merely entitled to the use of the land he cultivates or of the pasture where his cattle grazes. Only the hut built on this ground is the real property of the individual, in addition to the inventory of implements, tools, weapons, and the cattle he has raised from the herd with which he has been vested by his feudal lord (see p. 93).

614 E. Johanssen, a missionary who in 1907 founded the first
182 Protestant missionary stations of Dsinga and Kirinda in Ruanda
[114] and who is an eminent student of the Banjaruanda, makes the following comment on the social importance of the Ruanda clans: "These kin group organizations hand down the old customs and traditions from one generation to the next. In this way they preserve the national characteristics against intermixture and decay. The easier it is to loosen the ties of the family group in its narrowly defined sense as a result of polygamy and by the dissolution of marriage, the greater is the [105] importance of the stable, indissoluble, religiously determined kin group. The destruction of this group would cause the entire nation to disintegrate and to split up into isolated groups which would be exposed to any outside influence. There can be no doubt that the kin group, as the

614 vehicle of tradition and religious customs (totem, food taboos,
182 sacrificial community), has been of great importance in sustaining the nation's life." (No. 39, p. 73.) This characterization also applies to the clans of the Barundi.

However, the Batussi monarchy is a most powerful enemy
614 of the clan organization. The growing power of the Batussi kings
642 has laid claim, as has been shown above, to all the land and
182 cattle as the personal property of the king who parcels it out in larger or smaller portions as fiefs to his Batussi followers (see p. 89). The king's vassal, in turn, divides his fief into smaller portions with which he vests his people. The former clan elder is usually appointed mutwale of the king and collects the taxes and other tribute of which he retains a share. Under the conquering kings the clan has thus been disrupted socially and economically and has been rather quickly absorbed into the political feudal community of the state, although it may still retain its clan name, its old customs, some of its institutions, and its totem for a long time to come.

There is one element of the old clan organization which
642 the clan members have retained even under the political re-
614 organization of the Batussi monarchy since it offers them a
628 strong protection against arbitrary acts of their rulers: it is
182 the vendetta (kuhora). Originally, allied clans used it as the most effective way to protect themselves when they were threatened by other clans. Even at the present time the vendetta is the strongest bulwark for the protection of the individual in spite of the fact that public and private security has considerably increased under the strong rule of the royal batwale. Despite criminal jurisdiction administered by the batwale, the vendetta is still used by the clan members as the most effective form of self-help and as a protective instrument of intimidation on the part of those who are politically weak. A person who kills or injures a member of a clan is killed or wounded by the members of the wronged clan (see p. 97). If the wrongdoer cannot be apprehended, the vendetta will strike another member of the criminal's clan. Indeed, more than that, some clans

642 may not be satisfied by equal retribution but avenge the loss
614 of one of their members by killing two or more members of the
628 opposite clan. In former times this created a permanent state
182 of war within the nation, no large-scale political community could develop, and the resistance of the Barundi against external aggression was extremely weakened. The same was true of Ruanda (No. 48, p. 238). It was only the strong monarchy of the Batussi which, in its own interest, put an end to this permanent civil guerrilla warfare. However, now the clans use the vendetta for the protection of their members under the cover of secrecy. The former open guerrilla warfare has turned into insidious murder against which even the most powerful Batussi mutwale is not secure if he is guilty of bloody acts of violence against some clan. The effect of this avenging popular justice and the manner in which it is regarded by the people are reminiscent of our Vehmgericht of medieval times, although they are both quite different in other respects.

[106] Chapter 8

Marriage, Birth, Death

1. Contracting Marriage, Wife, Children

582 In most cases the Barundi are married (kurongora) at quite an early age: the men as soon as they can pay the bride price; the girls often at the age of twelve or even younger if they are [589] nubile. It is very rare that a man voluntarily remains a bachelor. If someone marries late, the only reason is that he is unable to raise the bride price, i.e., the purchase price of a wife. Marriages are exogamous; there are no cases of marriage within
583 the same clan (see p. 100). Bride stealing is unknown as a
685 marriage custom. If, under exceptional circumstances, it does occur it is treated as a case of common theft (No. 19, p. 358).
595 Concubinage is practiced particularly in the case when the son of a mutwale or a chief has to wait for a girl of equal rank to

595 reach a marriageable age, and the girl has been chosen as his marriage partner by his parents; he will then take a concubine from a lower class for the waiting period. However, in most cases, the parents give their sons free choice.

584 When a young man takes a liking to a girl, he first proposes marriage to her without asking anyone else. If she accepts, the young man asks his parents to pay the "bride price." When the parents have given their consent, the suitor sends a matchmaker to the parents of the girl or, if her parents have died, to her closest relatives. If the father or, if he is dead, the mother refuses or explains that the girl has already been promised to someone else, the matter is considered closed, and the two lovers have to give each other up. If, contrary to 836 the orders of the parents, they engage in extramarital intercourse, the girl will, in most cases, receive corporal punishment. If she should become pregnant, she is placed completely outside the social pale, for by her behavior she has cheated her parents of the purchase price, and she has also deprived other girls of the opportunity of being asked for in marriage in her place.

583 However, when a girl's father or mother, as the case may be, accepts the suitor's proposal, the matchmaker has to negotiate the purchase price (inkwano) for the bride. This fluctuates depending on the individual, the position of and the property owned by the bridegroom and the bride. Among the large class of the unpropertied, a few strings of small pearls and a few pots of pombe beer are considered sufficient. Among more prosperous groups the bride costs, besides beer and pearls, one or more goats and sometimes even one or two head of cattle (No. 4, p. 221). Among the families of the rich and powerful, that is, the Baganwa, a bride may seldom be had for [107] less than 10 to 15 head of cattle. A bride can also be purchased by paying a part of the agreed price. In this case the young husband becomes security for the rest of the money but does not need to pay it if the marriage is annulled.

585 The objects constituting the agreed purchase price are sent to the bride's parents by the bridegroom through the matchmaker.

585 As soon as they have been delivered, the bride follows the matchmaker to the newly-built hut of the bridegroom. There the wedding is duly celebrated; the family members give presents to each other, eat and drink, and dance. Through her marriage the wife becomes part of the husband's family (patriarchate). On her wedding day the bride is expected to feign great sorrow; she covers her head with a veil, and the bridegroom must try to assuage her grief by giving her presents. For seven days the young couple remain unseen in their hut, but even on the following days the wife covers her head with a veil whenever she goes out of the house (No. 4, p. 222; No. 19, p. 359).

Great value is placed on the bride's virginity. If the sleeping mat of the young wife shows traces of blood after the wedding night, the young husband gratefully sends this proof to his wife's parents and adds a hoe as a present.

There are quite a number of obstacles to marriage.
582 Above all lineal and collateral blood relatives, members of the same clan or of the same totem group, are not allowed to marry each other; exogamy is the supreme rule (see p. 160).

Even among the Batwa of Urundi marriage between close
582 relatives is not permitted. Marriage between a Muhutu and a
563 Mutussi woman is not permitted, or it is possible only by royal permission in exceptional cases. The racial pride of the Batussi repudiate such a union. Even where toleration is the
836 rule, sexual intercourse between unmarried members of the same race is probably rare since Barundi mothers keep a watchful eye on their adolescent daughters. It may safely be said that the Barundi do not permit pre-marital freedom on principle.

The husband expects marital fidelity, unless he purposely
837 surrenders his wife to a clan member. In contrast, the husband
684 is not so strict about his own fidelity. It is true that adultery committed in secret is not punished by law as a case of theft, although in fact it is regarded as such by the Barundi. However, the deceived husband is entitled to kill the guilty parties in flagrante delicto (No. 19, p. 14). In most cases he contents

684 himself with driving the adulteress from the house. In Urundi
837 one generally does not find the laxity of marital customs which exists in several other Bahima states, for example, in Ankole and among the Massai, where the husband customarily lends his wife to any member of his kin group who happens to visit him. Even in Urundi, however, married Batussi women take much greater liberties with other Batussi men, particularly with members of the kin group, than do unmarried women. However, this does not apply to Bantu men (see p. 101).

For this and many other reasons, divorce and dissolution
586 of marriage (uwuhakanji) are frequent occurrences. It is not unusual to find persons who have been married five or six times. Since on the average the purchase price of a bride is quite low and can also be paid back without much difficulty, men and women often use the slightest provocation to separate from each other. If a husband mistreats his wife, she leaves him and returns to her parents or to her relatives who then do not have to refund the purchase price to the guilty husband. [108] If, however, the husband drives his wife away because she is lazy, malicious, or even committed adultery, the parents of the wife have to refund the purchase price of the bride to the husband.
[587] Persons who were divorced may remarry whenever they desire. In case of divorce, small children are left with the mother; of the older children the boys follow the father, and the girls go with the mother (No. 19, p. 174).

After the husband's death his widow (umufakasi) becomes
587 the property of the brother or of the closest relative of the deceased (see p. 92), for when she married she was admitted into her husband's family.

In East Africa this so-called levirate is also customary
587 among the Sulu, the Wagogo, Massai, Turkana, Kamasia,
171 Galla, Baganda, Banjankole, Banjaruanda, and others (No. 30, Vol. II, pp. 384, 403, 412, 419, 428, 538, 541).

768 If the deceased has neither brothers nor other close rela-
736 tives, the widow returns to her own family and takes her minor

768 children with her. The grown children stay with the husband's
736 family and provide for their widowed mother. However, childless widows earn their subsistence by working for neighbors or by begging.

The position of women is higher and the esteem in which
562 they are held is greater than among most other East African
593 Negroes. As far as domestic and family matters are concerned, the wife's position is approximately equal to that of the husband. Both of them share the daily chores, except tending the
[462] cattle which is solely the husband's affair, and work in the fields and in the garden where most of the work is allotted to the wife, although the husband will lend his assistance with all these tasks. The preparation of meals is also solely the wife's job. In addition to this, the wife takes care of the children and the hut. The social equality of the two sexes is also demonstrated by the custom -- which cannot be found among any other East African people -- that husband and wife
[264] eat together (see p. 26). Emin Pascha expressly reports of the northern Bahima that the wives eat together with thier husbands, a practice which is not followed by the Bantu who live there (Petermanns Mitteilungen [Petermann's Communications], 1879, p. 222). The advice of the wife and particularly the mother is sought in all important affairs in Urundi. Their opinion is often decisive. Female chiefs are more of an ex-
562 ception here than among the eastern tribes, the Wassumbwa and the Wanjamwesi, but they do occur as a result of succession by inheritance, and they are not so conspicuous publicly as among the Wanjamwesi. The greatest amount of influence is wielded
[644] by the king's mother. She has the role of co-ruler during her entire lifetime (see p. 185 [not translated]), a position of respect which has also been preserved in the other Bahima states as far as Ufipa, the southernmost of them (No. 47, p. 90).

Of all the Barundi wives, those of the Batussi are the proudest. In contrast, the Batwa wives are over-burdened with work, are held in low esteem, and have no voice in the family council.

595 The large majority of the Barundi is monogamous. They are not prosperous enough to be able to purchase more than one wife or to support more than one household. Anyone who can

595 afford it lives in polygamy in order to have workers to manage his property and to maintain his social position, in order to be able to associate with one wife when the other one is unapproachable during confinement, and for other reasons which are mainly of a practical and economic [109] nature rather than erotic. Thus, many Batussi have two wives, the bigger chiefs three or more, and the king has an entire harem. The Batwa, however, are almost all monogamous because of their poverty (No. 19, p. 447).

There is a widespread custom among the Bahima of Ankole and Kisiba whereby several brothers who are too poor to afford a wife individually pool their resources and buy one wife between them; the children belong to the oldest brother (No. 27, p. 105). This custom of polyandry is apparently very rare in Urundi. [837] However, brothers of a family are often excessively intimate with their brothers' wives.

In Urundi each wife has her hut and her household in a separate kraal. Among prosperous Batussi two wives seldom live within the confines of one enclosure. Usually their houses are a long way from each other, whenever possible on different mountains. The husband is alternately the guest of one or the other. In polygamous families the wife by the first marriage is [428] the head wife, and in matters of inheritance her children take precedence over other wives' children. In addition to regular marriages, concubinage with women of a lower social class exists. [428] The concubine (umukeba, umugensi), although recognized socially, may be dismissed at any time and she and her children [563] have no right of inheritance. Since Bahima wives are not very [842] fecund, many Batussi men take Bahutu women, who are much more fecund, as concubines in order to increase the number of children in the household. This often happens in other Bahima states, and the consequence is that many Bantu in this area have a strong admixture of Bahima blood (No. 17, p. 631). Marriage [583] on a temporary or trial basis is unknown among the Barundi; 548 marriages are, after all, contracted and dissolved so easily that such provisional unions are unnecessary.

000 such provisional unions are unnecessary. Moreover, professional
548 prostitution is for this reason virtually unknown in Urundi (see
also p. 218). I do not know whether the Barundi have "women's
575 clubs" with an organization of their own; in any case, there are
no special women's houses.

2. Birth, Childhood, Puberty, Death

163 As far as the Bahutu are concerned, the Barundi are a
people with a high birthrate. This is less true of the Batussi,
probably as a result of the long period of inbreeding. The more
842 children there are in a family, the greater is the work force
available to the parents and the better are the prospects of
obtaining a good purchase price for the girls who are to be
[832] married. Husband and wife occasionally take aphrodisiacs of
herb juices in order to increase fecundity (No. 19, p. 359).
As soon as the wife has conceived, the medicine man (umufumu)
843 is called. He gives her amulets to protect the embryo from
751 evil spirits. The amulets are worn over the abdomen which is
particularly in need of protection. For the same purpose the
husband occasionally blows tobacco smoke at his wife.

Whenever the results of conception are to be avoided,
847 either for the convenience of the women or in order to remove
the results of illicit intercourse, artificial abortion (kukorora) is
induced by intensive massage and by taking certain infusions
made of herbs. The use of these methods is a kind of secret
science among the women, and the men do not appear to have
any knowledge of it. The application of these methods is con-
[613] sidered a criminal offense and is punished [116] by the head
man or the chief (No. 19, p. 62). On the other hand, in
Ussumbwa and Unjamwesi abortion by means of herbal decoctions
is extremely widespread. "It is the goal of Barundi couples to
854 have as many children as possible. One frequently sees fathers
tending, carrying, and feeding their children in Urundi but
000 never in Ussumbwa or in Unjamwesi. Barrenness (ingumba) is

Barrenness (ingumba) is
842 regarded as a misfortune and is grounds for divorce. It is not
586 unusual for a Barundi mother to give birth to a child just one year after a previous birth. In Ussumbwa the period will be at least two years since an infant first has to be weaned before intercourse is permitted again; this is not the case in Urundi.
165 Child mortality also is very high in Urundi. Of the children 13 to 15 years old fewer than two thirds survive. One may often hear women saying that they lost ten children, but a sufficient number is left because of the high fertility (van der Burgt, Koloniale Rundschau [Colonial Review], 1913, pp. 721-722).

When delivery (uwurjasi) is near, the woman in labor is
844 assisted by a few women neighbors who are called in and, in difficult cases only, by a "wise woman" or the medicine man who operates with all kinds of magic but who also uses really effective methods and techniques, ranging from herbal medicine
845 and light massage to Caesarean operations (see pp. 140, 142 ; No. 19, pp. 9, 363). I do not know how this latter operation is performed; presumably it is only performed on dead women in order to save the child or to remove it, as is expressly reported by Emin Pascha of the Bahima of Unjoro (Petermanns Mitteilungen [Petermann's Communications], 1879, p. 393).
[171] The Caesarean operation is also known in Ruanda, Ussuwi, Kisiba, and Uganda (No. 48, p. 228). During her labor the
844 woman lies on her sleeping mat, or she squats on the ground with her back propped against one of the poles which support the hut or with some other person supporting her from behind. At this time the men leave the hut. As soon as the child is born, it is washed with cold water and rubbed with butter. The placenta is buried in the hut under the mother's bed; the umbilical cord is severed with a chip of wood and kept as an amulet by the mother. The newborn infant's body is then squeezed and pulled by the mother so as to give the head and limbs the proper shape (No. 19, p. 9). Deformation of the skull, however, is not practiced.

846 After giving birth, the mother is washed with warm water, and her body is rubbed with herbal juices. She remains in the hut for four or five days, depending on whether she has given

846 birth to a girl or a boy. When she leaves the house, her head is newly shaved, and she wears a broad headband made from a corn leaf, probably as a symbol of fertility and as an amulet.

The mother suckles her baby as long as she has milk and 853 as long as the physical condition of the infant seems to require it, which frequently is as much as three to four years. After giving birth to the child, she remains separated from her husband until her menstrual cycle begins again. However, if menstruation fails to occur, the separation is soon ended.

The birth of twins (amahassa) is greeted with mixed feel- 845 ings. Van der Burgt is of the opinion that it gives rise to joy because the Barundi attribute a religious meaning to the birth of twins which they regard as "ope incubi" [the result of intercourse with a spirit] (No. 19, p. 325). On the other hand, Gasslinger states that the birth of twins is considered a bad omen since twins are the favorites of Kiranga, and for this reason they will soon be taken away by him (die) unless the parents pay ransom by making large sacrificial offerings (No. 45, 1914, p. 314). I refrain from giving an opinion as to which 845 conception is the correct one. However, it is a fact that the 782 birth of twins is followed by extraordinary rites, sacrifices, and celebrations. The underlying reason [111] for this is probably that it is known from experience that twins are usually physically weak, and also they cannot get a sufficient amount of nourishment from the mother. As a result, both (or one of them) usually die unless Kiranga is propitiated by the offering of sacrifices. Upon receiving the news of the birth of twins, crowds of neighbors and friends gather. They sing and provide presents and large amounts of food which, however, are only intended for the spirits and disappear at night. A priest (kiranga) is called in. Aided by his assistants and numerous participants, he first performs the ceremony of the "holy spear" (see p. 134). By vener- [776] ating this symbol, its patron, the great spirit Kiranga, master over all material things, is shown gratitude, and his special blessings are called down upon the twins and their parents (No. 19, 845 pp. 516, 324, 216). Then the young men, with their faces 535 painted red and yellow, perform ritual dances in the courtyard

845 of the hut to the accompaniment of rattles. These dances last
535 from four to six hours and induce real frenzy in the dancers. They form a circle, jump and contort their bodies bathed in perspiration, and sing rhythmical songs of short stanzas. A circle dance of the girls follows. They are painted and are adorned with leaves. In the meantime large amounts of beer are consumed. The celebration continues in this manner for two or three nights and even longer. In the end the priest once
845 more performs the great ceremony of the holy spear, and two
782 little lambs are dedicated to the god as substitutes for the twins. The lambs may not be slaughtered and are allowed to run around freely and eat whatever and wherever they desire. However, the dances and the drinking bouts often continue for two or three weeks longer (No. 19, p. 325; No. 45, 1914, p. 315).

847 Infanticide (kumuniga umwana) is rare among the Barundi, but it does occur, mainly because the mother wishes to avoid the tedious work of bringing up and feeding the baby. Nominally this is regarded as a punishable crime, but the offender is rarely punished since it is difficult to prove intent to kill (by suffoca-
[826] tion). An infant is legally killed by the medicine man if it is born with teeth or if its upper incisors grow first (No. 4, p. 221).
[171] This is also reported by Lechaptois from the southernmost Bahima state, Ufipa (No. 47, p. 138). The Batwa, too, kill such infants.

553 As soon as the child's hair begins to grow or as soon as it is able to walk, it is given a name (isina) by the father. The mother and friends add still other names, so each Murundi has at least two or three names. No special celebration is connected with the naming of the child. There are a great variety of
551 names. They either indicate particular characteristics of the child or refer to certain events in its young life, or they result from some whim of the name-giver, for example: kitwe, thick-head; mbiriko, wood chip; ntarija, it does not cry; kimina, it walks upright; kiriwate, cattle hide; manwa, big mouth; mawamba, orphan; yamirwa, beer; inambu, hunger; tunguru, name of a bird. There are other, ugly Barundi names which

551 Father Gassldinger erroneously connects with the fear of death: nsujimbwa, dog kennel; sembwa, father of a dog; inangurube, pig's mother; kabwebwe, jackal; kabaragassa, flea; somojindi, human excrement. Others are: ruteratschuma, he hurls the iron; ndarusanse, I have hit it; ntamavukiro, homeless; rurihasi, he is near; ruronona, he is the destroyer; rutakaje, he has been lost [112] (No. 46, 1913, p. 13). In addition to his proper name, each child also bears the name of its clan and is given one or more nicknames which it retains even as an adult. The true names of children or adults are only reluctantly revealed to strangers because it is assumed that the latter, by knowing the name, may obtain magical power over its bearer which they might abuse to cause him harm (see p. 133).

853 The feeding and rearing of the child are entirely the affair of the mother. She breast feeds it up to the age of three and four years, and it is very amusing to see a strapping little boy run away from his play and up to his mother where he takes a few refreshing draughts from her breast and then once more rejoins his playmates. The children are kept clean and given 854 [515] a bath every day. There are no baskets or cradles where the children may be deposited. As long as the infant is unable to walk properly, it is carried on its mother's back all the time [482] in a carrying sling (impetso) made of goat or sheep skin with openings for the child's head and legs. Even while working in the fields or while dancing, the mother usually keeps the child on her back; its head and legs are then jolted about by the sudden movements as though it were a puppet. Yet this seldom makes the child cry. From time to time the child is taken out of the sling by lifting it gently from the side and allowed to defecate. If it has done so inside the rucksack, the latter and the mother and child are simply washed. Older children are placed astride the left hip of their mother who supports them from behind with her left arm.

854 At night the children lie on animal skins on the ground. They are covered with the upper garment of the mother which 513 is made of soft cloth from the bark of the fig tree. Very small children are sometimes caressed with kisses by their mother. Otherwise the Barundi are not familiar with kissing (No. 19,

854 p. 63). In order to put the child to sleep and also to soothe it
513 in the daytime, the mother may lightly pat its back and occasionally sing a monotonous "cradle song." Van der Burgt has recorded one in which the evil mother-in-law is mentioned to frighten the child: "Be quiet; otherwise I shall take you to the mother-in-law. She will give you only water. When the cows come home and are milked, you will go hungry. Mother-in-law will not protect you from the sun nor against hunger" (No. 19, p. 71).

Spiritually and morally the children grow up wild. There
861 is no effort to cure children of bad habits nor to teach them good ones. As long as the children's bad manners do not inconvenience the parents, they even take pleasure in inciting them to fits of temper, to fight, and to steal. Only in exceptional cases is there any practical training in special jobs and handicrafts. Whatever the children learn is acquired by observation, listening, and by helping with work. From an early age they must help their parents in all their work, and being by nature intelligent and vivacious, they soon become surprisingly independent.

145 Boys reach puberty (kukura) when they are between 12 to
864 15 years old, girls even earlier. Long before that, however,
839 they are enlightened about sexual matters and have learned many loathsome things of a sexual nature from those who are older. This does not mean that they have sexual intercourse at a very early age, but onanism and masturbation are widespread vices.

[113] About these practices van der Burgt reports (No. 19,
839 p. 361): "Puellae praesertim horibili huic vitio valde deditae sunt, sub praetextu quidem, ut magis aptae fiant matrimonio et viris placeant. In actu ipso nefando quoddam juramentum vel potius imprecationem pronuntiant: witsche inka ninokura ndasy'inka. Insuper variis mediis utuntur ad majorem voluptatem sibi procurandam. Media generatim sunt plantae, vel radices plantarum arborumve, quibus labia perfricantur." [Tr., "The girls especially are given to indulge in this horrible vice at an early age under the pretext that this makes them more fit for

839 marriage and is pleasing to men. During this execrable act, they pronounce certain oaths or, rather imprecations: witsche inka ninokura ndasy'inka. In addition, they use various means to obtain greater pleasure for themselves. In general they use plants or roots of plants and trees with which they rub the labia." Van der Burgt adds in a letter to me: "His perfricationibus labia extenduntur, ut flavescentes prostent et volumen vel longitudinem extraordinariam adspirantur. Haec consuetudo generalis tanquam nationalis considerari potest non solum in Urundi et Ruanda, sed etiam generatim inter tribus Africae interioris, paucis exceptis v. Wasukuma. Ergo primo loco non voluptas procuranda intenditur, sed puellae volunt 'pulchras se facere,' quia permulti adolescentes nunquam puellam in matrimonium ducerent, quae talia labia non habet. Post matrimonium se abstinent ab illa manipulatione." [Tr., "By means of this friction they extend the labia so that they become yellow and protrude, and they try to give them an extraordinary size and length. This custom may be considered
[171] a general or national one not only in Urundi and Ruanda but also among the majority of tribes of central Africa with few exceptions, as, for instance, the Wasukuma. Consequently, it is not primarily intended as a means of obtaining pleasure, but the
[826] girls simply wish to 'make themselves pretty,' since very many young men would not marry a girl who did not have such labia. After marriage the girls abstain from this manipulation."

I could not learn anything about the puberty rites; how-
881 ever, they most certainly are celebrated. Van der Burgt does not report anything on this subject either (No. 19, p. 394). In
304 any case, boys are not circumcised nor are girls infibulated. Only the Batwa, who in contrast to the Batussi and the Bahutu practice deformation of the teeth, sharpen the two upper incisors with a knife as an act to announce puberty (No. 19, pp. 105, 155).

I also was unable to ascertain whether the youths who had
561 reached puberty joined a social club or formed a special "age

561 group" as is found among several East African tribes. Is such a social institution does exist among the Barundi, it plays no role in public life. Nor are there special bachelors' huts or kraals for such an age group, while among other Hamitic peoples of East Africa -- or peoples under Hamitic influence -- for example, the Massai, the Wapokomo [Pokome], and the Galla, these age groups constitute the principal structure of the entire social life.

Among the Massai there are three age groups: the boys living with their parents, the unmarried youths (of the warrior caste) who live together in their own kraals, and the peaceful married men. Similarly among the Wapokomo and the Galla there are: first, the boys; second, the various age groups of those who have been circumcised at the same time, or Luva; and third, the class of the older men, or Gada. (A. Werner, "The Galla of East Africa," Journal of the African Society, Vol. 13, 1914, p. 262 ff.) In Ruanda the youthful band of warriors which usually appears at the court of Musinga for festive occasions and performs war dances might suggest that such an "age group" of unmarried youths exists among the Batussi, but perhaps they are only a kind of cadet or page corps of the king (see p. 65).

888 775 Old persons who have lost their physical and mental agility are seldom seen since they remain within the homesteads. Their next of kin take care of them until their death (ukufa), perhaps less for reasons of piety than for fear that if they treated them badly they might take revenge after their death as spirits. 763 When a person is dying his family usually gathers around him. Immediately after death, the women in the house and the neighborhood raise a loud and plaintive wailing while the men close the eyes of the deceased, bend his arms and legs, and tie him up (in a crouched position) so as to prevent him or his spirit from returning. Preparations are immediately made for the burial.

764 Burial in a crouched position is also the custom in Ankole, 771 Mpororó, Ufipa, and in other Bahima states, also among the

764 Massai and the Galla. (A. Werner, "The Galla of East Africa,"
171 Journal of the African Society, Vol. 13, 1914, p. 283; and No. 47, p. 159.)

764 [114] With the exception of executed criminals whose
[766] corpses are thrown into the bush for the hyenas to feed on, all Barundi are buried (kuhamba). Baumann reports that "the next of kin cut open the belly of those who have died in order to search for the evil charm responsible for the death" (No. 4, p. 222). I have not been able to confirm this either by my own investigations in the country itself, by van der Burgt, or others. The corpse is not washed but is put into the grave in its ordinary garments and with its amulets; at best it is wrapped in an old mat. No other funeral gifts are added. The burial takes place a few hours after death has occurred.

The grave (isjobo) is dug within the courtyard next to the fence or, if the dead person was the father of the family, in the center of the courtyard opposite the entrance to the main hut (No. 19, p. 203). However, according to O. Baumann, the grave is dug inside the hut itself (?) which is then abandoned. (No. 4, p. 223). While the corpse is being carried to the grave, the women once more set up a loud lament; they act as though they intended to prevent the burial, and they shout words of farewell to the deceased. If the dead person was the father of a family, the widow squats beside him before his burial, applies butter to his head, and speaks well of him so as to make his spirit look with favor on the members of the family. Then the corpse is placed in the grave which is padded with leaves; it is placed on its right side in a crouched position. Then the grave is filled with earth and a little sepulchral mound is formed on top upon which are placed various objects that the dead person used, for example, earthen vessels, old baskets, the plaited screen that covered the entrance to his hut, and other things. After a short time these objects are removed, the sepulchral mound is leveled, and nothing is left to indicate the site of the grave.

765 Funeral rites are performed only when a king is buried, but after each death certain mourning customs are observed which are more or less elaborate depending on the social position of the deceased. If the deceased is a common Murundi and also father of a family, his widow (or widows) and children observe a mourning period of seven days by not leaving the homestead. Presumably they are afraid of the spirit of the deceased when going outside the house so shortly after his death. Inside the hut they introduce numerous inovations and rearrangements as though they wanted to lead astray and divert the spirit of the deceased should he decide to return. The entrance to the residential hut is changed to another side, new stones are found for the fireplace, the place of the bed is moved, all the tools are rearranged, and so forth. After the seventh day every [783] member of the family takes a thorough bath in a stream, probably as a symbolic cleansing from the defilement caused by the deceased. Then the whole family have their heads shaved as a symbol of purification and mourning, and during the following two months they always wear clothes of mourning when leaving [292] the house, i.e., barkcloth which is neither dyed black, the normal color, nor painted with patterns (No. 19, p. 163) but [822] has its natural reddish-brown color; thus red is the color of mourning here. The name of the deceased is not mentioned any [551] more so as not to cause his malevolent spirit to appear, and all other persons or objects bearing the same name are given new ones.

Naturally a deceased mutwale is given more respect than 766 a common Murundi. For the former the kiranga performs the 211 ceremonies of the "holy spear" (see p. 134), and a tree is 768 planted on his grave [115] as a memorial (imana) which is inviolable. The family of the deceased leaves the homestead and settles in another place; the huts of the deceased disintegrate and disappear, and the fig trees that form the fence gradually grow into magnificent trees. Nobody may cut them down for [689] wood on pain of death (No. 19, p. 205). The sites where chiefs once lived, both in Urundi and Ruanda, can be picked out anywhere in the landscape by these groups of trees arranged in a circle where they once enclosed the courtyards (Plate 29a).

[765] The mourning period for a mutwale lasts two to three weeks.
However, the highest honors are paid to the dead king
766 (see p. 185 [not translated]). The corpse is first wrapped in
775 hides and barkcloth. It is not buried but dried over a smoking fire until it has become completely mummified. The first worm ("soul worm") that leaves the corpse is put into a milk pot and fed until one night it leaves the pot and turns into a giant snake (isato) in which the spirit (umusimu) of the dead
766 king will reside from then on. The corpse is not embalmed. The corpse of the king is not arranged in a crouched position as are those of the common Barundi; the arms and legs remain extended (No. 19, p. 204). In Ankole, however, the king's body is also put in a crouched position, wrapped in cowhide and buried (No. 27, p. 101). In Urundi the dead king is then put on a wooden trestle in the center of the homestead and left to lie in state until the feet of the trestle are eaten by termites. Under certain conditions this may take months. It is reported that King Kisabo lay in state in this way for an entire year. A local missionary told me that the deceased was
[588] even "married" to a young wife whose duty it was to take care of him and to provide him with food and pombe beer every day. During the entire period in which he lies in state the king's subjects gather from all corners of his realm; they pray to his spirit to win his favor, eat and drink in a festive funeral banquet beside his bier, and praise the deceased. Of course, the great ceremony of the "holy spear" is also performed. The
[765] official period of mourning for the king is one month. Finally, the mummy, accompanied by the medicine men and priests and followed by a wailing crowd of people, is carried away by the closest male relatives of the king. It is taken a distance of several days' journey to Ganso Mountain in the northwestern border mountains adjoining Ruanda, south of the source of the Ruvuvu River. The corpse is finally buried in a forest which may be entered only by the members of the royal family (Baganwa) and the priests. According to van der Burgt, however, it is not buried but simply laid to rest in a hut (see p. 186 [not translated]). The other Barundi kings have also been laid to rest there (No. 4, p. 223). On the other hand, van der Burgt writes

766 that the burial ground is a place called Wunjange close to Imanga Mountain (see p. 185 [not translated]).

Emin Pascha reports of the Bahima (Wahuma) of Unjoro
171 that in this region the corpse of the ruler is also smoked on a catafalque and preserved in his hut for many years until his successor finally buries him (Petermanns Mitteilungen, 1879, p. 392).

In Urundi the homestead of the dead king is abandoned
768 as are those of deceased batwale; it gradually disintegrates and only the trees that formerly formed the fence reveal to the traveler the former importance of the site. A guard inside a
775 hut placed next to it [116] sees that nobody enters the place an
769 and that the spirit of the deceased king, which, as has already been mentioned, is usually pictured as a big snake living on the site (totemism, p. 102), regularly receives sacrificial offerings of food and drink (No. 19, p. 205).

Van der Burgt reports that in honor of the dead king "heca-
766 tombs of human victims" are sacrificed (No. 19, p. 204), and
661 that some batwale and influential Barundi are executed" in order to appease the manes of the king." This presumably refers mainly to those unfortunate people who immediately after the king's death fall as victims of the policy of his successor or of the pretender to the throne, as well as the alleged sorcerers and witches who caused the king's death -- for natural death is
[761] something the Barundi do not know -- and who are now hunted down by the medicine men and executed (see p. 132, 140). In former times a few young girls and important men of the country were killed at the king's funeral in order to "accompany the deceased to the beyond" (see p. 186 [not translated]).

[117] Chapter 9

Religion, Myths, Cults, Missions

1. Gods

771 The religion of the Barundi is probably best described as animism and totemism, with a generous admixture of elements of fetishism (talisman), manism (worship of the ancestral spirits), and hero cult. The last has already become a cult of gods in many respects. This mixture of elements of the "totemistic era" with those of the "era of heroes and gods" (No. 43, pp. 116, 278) is undoubtedly the result of the mixture of the indigenous Batwa and Bantu with the Hamitic conquerors who added their totemistic clan organization and the cult of their heroes -- who have become tribal gods -- to the clan system, animism, and fetishism of the Batwa and Bantu. All these different social and religious elements have permeated each other, partly by merely existing side by side, partly by merging together and changing, so that it is often difficult to separate out neatly the individual elements and to recognize their origin.

Animism and the belief in demons constitute the main body of the religious concepts of the Barundi. These beliefs are shared by Batwa, Bahutu, and also the Batussi, although the latter to a much smaller extent. Apparently in Urundi as well as in all the rest of the interlacustrine region the Bahima brought with them more refined religious ideas from their original homes in the north. These ideas partly repressed the crude belief in demons and sorcery held by the Bantu Negroes and gave a more important role to ancestor worship. It is true, however, that the large majority of the Bahutu still cling to the old primitive belief in demons and sorcery which conforms so well to their spiritual bent. The Barundi believe that everything is endowed
774 with a soul. As among most primitive peoples who are still
787 at the stage of animism, their ideas of an immaterial soul are based on the observed fact that in a sleeping body there exists

774 something which is alive, which does not rest but thinks, sees,
787 and moves about. In a dream this incorporeal part of us sees the world not merely as a person who is awake does, but it also meets the dead who thus continue to exist incorporeally after death. If this immaterial element, the life-generating soul, permanently leaves the body, the human being dies.

774 The distinction between the body or shadow soul and the breath soul which W. Wundt and C. Meinhof considered characteristic of totemistic conceptions (No. 43, p. 203; No. 41, pp. 32-34) apparently fits [118] the notions of the Barundi, for the Murundi clearly distinguishes between the spirit of a dead person, the umusimu, and the soul active within a living person, the umutima, which is destroyed at the moment of death along with the pulsating heart, the indihagusi (No. 46, p. 15). It further seems certain to me that the Barundi conceive of all things, organic or inorganic, as being endowed with souls; this does not only apply to persons and animals but also to plants, stones, stars, fire, fountains, rivers, etc. These are not simply regarded as the occasional residences of former human and animal souls but as having souls of their own. Thus, the thorny bush which scratches the hunter and makes him bleed does so not only because it is the abode of what formerly was a malicious human soul but because it has a malicious "bush soul" of its own. The fountain refreshes the thirsty traveler not because, or not only because in it resides the spirit of what was formerly a generous person but because it has its own generous "fountain soul."

775 Umusimu is not only the term for the spirit of the deceased but also for the object or the animal which the spirit of the deceased has chosen as its residence; there may be various ones. Frequently these are small oblong pebbles (inguru) from the fields of the deceased. These pebbles are collected by the next of kin and put into a wooden trough which is placed inside the sacrificial hut where a beer sacrifice is made to them (No. 46, p. 16). Often the soul of a dead person also resides in an object close to his former dwelling, in a tree, fence, or rock, often also in an animal which by its nimble

775 agility conjures up the idea of the breath-like fleetingness of the soul, especially in snakes, lizards, and birds and also in unpleasant animals like toads, crocodiles, hyenas, and others. Apparently the members of certain clans all turn into specific animals, the totem animal (umusiru) of the clan (see p. 102). In general the first worm leaving the decaying corpse of a person is regarded as the vehicle of his soul until it has choosen another definite residence. As mentioned on p. 115, the first worm leaving the corpse of a king is therefore fed with milk until it turns into a large python who is worshipped as a god. The souls of great batwale turn into other snakes, lions, and leopards, who then reside in the holy groves (imana) near the graves. From there the snakes often visit the huts of the family and the mother of the family regards them as soul animals of the deceased family members and feeds them milk. The same [171] is true of the Galla, the Massai, and the Kaffir [Xosa] of South Africa (No. 41, p. 36; No. 19, p. 354). The idea of divine punishment, purification, and expiatory transmigration of souls which missionaries in particular read into this transfer of human souls into animals was certainly foreign to the Barundi originally. The fundamental notion of such a "transmigration of souls" is rather the totemic affinity of a human kin group with a particular animal species (see p. 102). The Barundi are, however, in the least disturbed by the internal contradiction contained in these notions, namely, the fact that the animal, tree, rock, stream, etc., which is occupied by the soul of the deceased person, would then have to have two souls. The logic of Negroes is different from that of Europeans.

The question of the immortality of the soul, which, of course, is strongly emphasized in the teachings of the Christian missionaries, leaves the non-Christianized Murundi as cold as all other East African Negroes. His imagination and ethical needs are [119] satisfied by assuming that the soul survives death. He is not further concerned about how long this survival lasts. Perhaps he thinks, as most other African natives do, that souls do not live on for eternity but that they gradually become weaker and smaller and finally disappear entirely (No. 41, p. 41) or that after the soul has entered an animal its life will be extinguished with that of the animal.

775 The spirits of the dead are, without exception, more or less evil and hostile to the living even if they were relatively good-natured when they were still alive. The dead person was forced to leave behind everything that he loved and cherished in his life, and for this reason he is filled with envy for those who survive and possess all these things. These jealous spirits, hostile to men and causing sickness, ruined crops, cattle epidemics, and other misfortunes, are the dreaded abasimu or imisimu (sing., umusimu); to repel, confine, appease them, or to win their favor forms the largest part of the thoughts and acts which occupy a Barundi's mind in his daily life. We find these primitive evil spirits among all the Bahima under the same name, abasimu or imisimu, even in the southern area of settlement, in Ufipa (No. 047, pp. 167-168). The envy and
775 hostility of the abasimu are soothed and assuaged by placing
782 valuable objects belonging to the deceased on his grave. Also, as often as possible morsels of food and parts of the objects formerly belonging to the deceased and now in use are offered as a sacrifice (see p.136). The incorporeal spirit eats or uses only the incorporeal part of these sacrifices, i.e., the "essence" of the proffered beer, meat, millet gruel, jugs, knives, arrows, hoes, etc. The sacrificial offerings are nothing but a premium to obtain greater security against the hostility of the abasimu. By no means can they be regarded as pious offerings to the revered and beloved ancestors. The Murundi only offers sacrifices to the manes because he is afraid of them. Yet a more effective method than making sacrifices is joining a
775 religious secret society, the religious fraternity of the ababandwa
794 of which we shall speak in greater detail below (p. 124). These ababandwa assume a privileged position in the realm of the spirits after their death. If their behavior within the society has been found correct, they come to Riangombe where, as imandwa, they form a kind of bodyguard of the god. They are, so to speak, the saints of the Barundi heaven.

776 Above the innumerable nameless abasimu and above the imandwa there is a stratum of higher spirits who are given names.

776 The relation between these two groups is similar to that of the ruling caste of the Batussi to the Bahutu (No. 19, p. 213). They are all personified beings whom we may call simply gods. A whole series of them bears the same names as former historical personalities among the Barundi or neighboring peoples. Everything that is said about them proves that these gods were originally heroes, chiefs, and kings of the people. As a result of their apparently superhuman characteristics and acts, they were worshipped as heroes and have gradually been elevated to the rank of gods. The hero has not been formed after the image of god, but the god after the image of the hero (No. 43, p. 280). Nor are these gods personifications of great natural phenomena, as, for example, the sun, moon, clouds, or thunder. The Murundi regards these phenomena simply as the residence and the expressions of the abasimu who inhabit them but not the personification of individual gods (No. 43, p. 358 ff.).

776 177 The name-bearing hero-gods of the Barundi who have been [120] vested with the characteristics of superhuman personality and immortality are -- judging by the attributes and histories ascribed to them -- partly popular gods of the indigenous Bantu and Batwa and partly an import of the Hamitic conquerors, partly also a mixture of both these elements. Van der Burgt does not believe that the deified heroes were originally Hamitic princes but emphasizes (reported by letter) that "most of the names of the gods belong to Bantu religion and are Bantu words." He maintains that in addition to the language the Batussi also acquired the gods of the Bahutu, but that the Batwa have some gods of their own, for example, Indagarra. However, among the 30 names of Barundi gods listed by van der Burgt (No. 19, p. 214), the following appear to me to be of Hamitic origin, or at least not genuine Bantu gods: Riangombe, Umugassa, Wamara, Kagoro, Ruwambo, Ruhanga, Rugba. Of these, Riangombe (Ljangombe, Djangombi) is also worshipped as a god in the Bahima states of Ruanda, Kisiba, Mpororó, Ankole, and others. He is thought to have been a Ruanda-Mutussi, the pupil of the first Ruhinda, and it is said that he distinguished himself by his great magic power (see also p. 188 [not translated]). Umugassa

776 or Mugascha is worshipped as a god of streams and of rain in
177 Uganda ("Mukessa," see Anthropos III, p. 214), in Ankole, Kisiba, Karagwe (Lake Mugascha), Kissaka, and Ussuwi. According to the tradition of the Basiba, he was a former king of the Sese Islands in the northern part of Lake Victoria (No. 31, p. 128; No. 27, p. 110; No. 34, pp. 518-519). Wamara is worshipped in Ankole and in Kisiba as the spirit of the dead souls. According to Banjankole tradition, he was a king of the Batschwesi in Baera (Uganda) who were a Hamitic people different from the Bahima, and he conquered Ankole. According to Rehse, he was "formerly a great ruler to whom the nations from Nyanza to the Congo State owed allegiance" (No. 31, pp. 126-127; No. 34, p. 520). Kagoro is regarded in Kisiba as a grandchild of Wamara (No. 31, p. 133). Rugaba or Lugaba, who is worshipped as the creator of man and cattle in Kisiba and in Ankole (No. 27, p. 108), was, according to van der Burgt, "the oldest king of the Wahinda" (No. 19, p. 219). Rehse writes of the gods of the Basiba that "the description of this world of spirits would at the same time represent the oldest history of Kisiba as well as that of all the central African countries." This also applies to the hero-gods of the Barundi. It would be a rewarding task to study these religious sources, especially for missionaries!

The Basiba worship a supreme god named Rugaba as the
776 creator of the world and the highest giver of grace, but they never offer sacrifices to him (No. 31, p. 125). In the same manner the Barundi and Banjaruanda (No. 28, pp. 1-13) worship Imana. He is never offered sacrifices or prayers, as an unapproachable supreme being. People prefer to turn to gods who are closer to human beings, who have once been human beings themselves, like Riangombe, Kiranga, Wamara, and others. Although he is conceived of as the personified creator and ruler of the world, Imana is the only one in the abode of the gods of the Barundi whose name is sometimes used as a
776 general term for the world of the spirits. Imana is simply "the
778 divine," "the godhead." Imana is also the term for all that is sacred to the Murundi: the sacred trees, the sacred steer, the

776 king, the amulets, the oracle animals, the sacred spear, etc.
[778] (No. 19, p. 214). The same applies to Ruanda (No. 44, pp. 284; No. 39, pp. 102, 109). Imana is given a number of different names or is identified with other gods, depending on his different characteristics and functions. This is also true in
[551] Ruanda. Children are often given names which contain the word Imana: [121] Kaimana, little Imana; Mbonimana, gift of Imana; Ndorimana, appearance of Imana; Keschimana, ornament of Imana (No. 23, 1913, p. 308). Both men and
[842] women, if they wish to have offspring, wear an impusu y'Imana, a garment of Imana, made of reddish barkcloth with black circles painted on it. Imana is the supreme god of all manes, of all ancestral spirits, and thereby has the character of an old national god.

Although Imana as the sole creator of the world ranks high above the other gods, one nevertheless cannot describe this as a monotheistic concept of the Barundi, as is done by some missionaries (No. 44, p. 283). Nor is it correct to attempt to see a kind of "Trinity" in the fact that, besides Imana, the Barundi have two supreme gods, Rikiranga and Riangombe, whom they often identify or confuse with Imana (No. 19, p. 214). This is to put Christian interpretations on the matter, and these are foreign to the thinking of the Barundi.

It appears that Kiranga or Rikiranga ranks closest to Imana. If Imana is described as the supreme head of the high ancestral spirits, Kiranga is the ruler of all the lesser demons and of all things material. For this reason von der Burgt describes him as a kind of "logos payen" (No. 19, p. 216). He is the god to whom people appeal first for assistance in all worldly matters. It is Kiranga to whom the priestly cult of the crowds is devoted, to him the ceremony of the "sacred spear" is dedicated (see p. 134), and the high priest calls himself Kiranga for he is "possessed" by him, he is his medium (p. 123). To all appearances he is a deity of the old Bantu population and has remained
776 quite free of Batussi influence. The missionaries refer to
778 Kiranga as the "devil" (No. 23, 1904, p. 123). It is said that
793 near Mujaga in central Urundi Kiranga possesses two large herds

776 of cattle led by two sacred steers. He is thought to have a sacred
778 mountain administered by a priestess who wields great influence
793 and is even immune to the power of the king, although the latter keeps her under constant guard so as to insure that she fulfills her cult duties. If she neglects her duties, she and her closest relatives are executed upon the order of the king. Her office, it is said, begins and ends with the reign of the king, for after the king's death she has to take poison.

776 Father Gassldinger describes Kiranga as the "great
782 destroyer," the Lucifer of the Barundi. People appeal to him first in all their afflictions, misery, and fear, and it is to him that most sacrificial huts (akararo) are dedicated. Inside these huts there is, as a rule, a big three-legged earthen pot with three spouts into which the sacrifice is deposited. Besides beer, grain stalks constitute the main sacrificial offerings made in these huts. Horns of cattle are also burned in them as sacrifices (No. 45, 1913, p. 359 ff.).

776 It is characteristic of the confused conception which the Barundi have of the different personalities of their gods and spirits that they often mix up the terms and attribute the names of several gods to a single one of them. For example, one may hear them say: "Riangombe is powerful, he is Kiranga; Kagoro is also Kiranga, he is Sengoga." Kiranga is also called Rugaba, Ruhanga, Inganje, Njabaski, Indagarra, or Rukisa, or these names are used as epithets of Imana, and the word Imana itself is used as a plural concept (No. 45, 1913, p. 363). Among the names listed there are several which we already know, as shown above (p.120), from other Bahima states as the names of specific gods and spirits. In Urundi their images seem to have faded [122] so much that they are confused with one another, and the concepts people had of them seem to have been reduced to mere attributes or epithets of Imana who in any case has already become a collective term for "sacred" or "divine" rather than a personified god.

Riangombe is third among the gods. He is the supreme head of all good spirits (imandwa) whom Imana entrusted with the task of guiding human beings and protecting them against evil

776 spirits (abasimu) (No. 44, p. 286). In Ruanda the religious society Kubandwa is dedicated to him (see p. 124), and after death he is the judge of the just and the unjust. For this reason he plays a more important role than any other god in the ethical and emotional life of the Barundi, and the same is true in Ruanda. This is also demonstrated by the fact that Riangombe (or Imana) is the protector of what to the Murundi and the Munjaruanda are their most treasured possessions: their cattle (see p. 46).

776 According to Ruanda tradition, Riangombe during his human existence was a Muhima of the privileged kin group, the 773 Bega, the highest nobility next to the royal family of the 772 Banjeginja. His father, Babinga, was the religious head of Ruanda, and Riangombe became his successor as the chief of the ababandwa, the religious fraternity. At the same time the political king of Ruanda was Lugansu who at first made war on him but then recognized and honored him (No. 44, p. 281). Imana was very favorably disposed toward the high priest Riangombe during his lifetime. When the latter died, Imana led him to the high volcano Muhawura where Riangombe now grazed his herd and planted his tobacco (the large-leafed Senecio). The plantations, however, were destroyed by the evil spirit Niragongo who resides on the mountain of the same name [Nyiragonga]. Then Riangombe, backed by Imana, sallied out against Niragongo, destroyed his dwelling, and set fire to the mountain (the volcano Nyiragongo). Now Riangombe alternately lives undisturbed on Muhawura and Karisimbi [Mountain] where he grazes his large, sacred, milch cattle herds and where he is served by the imandwa, the spirits of the deceased members of the religious society of the ababandwa. These alone enter his "Paradise," while the souls of unblessed, profane persons (abansigo) are relegated as demons (abasimu) to Namlagira and Nyiragongo where in the "Hell" of the volcanos they lead a shadowy existence as slaves. This is the Ruanda tradition as reported by Father Arnoux (No. 44). The essential elements of this tradition have also been preserved among the Barundi. Indeed, one still finds here even the account that after his death Riangombe was buried on the

776 mountain "Vurunga wa niangombe" in Ruanda (No. 19, p. 216),
773 although the Virunga volcanos of northern Ruanda are completely
772 unknown to the Barundi. The concept of Paradise and Hell (Karisimbe and Nyiragongo) is probably of local origin in Ruanda; in Urundi nothing of this sort is known (van der Burgt, written communication).

776 Both in Urundi and Kisiba, Riangombe is mainly regarded as the protector of cattle. In Kisiba he is only worshipped by the Bahima, and his priest is always a Muhima. However, he does not enjoy special status in Ankole (No. 34, p. 520). Further, since in Ruanda and Urundi he (next to Kiranga) is the focus of worship for the religious fraternities (ababandwa) and since in Urundi he is even revered by the Batwa as their chief deity (No. 19, p. 216), one may conclude that this herdsman's god, who evidently came into the country with the Bahima, has gradually been adopted by the Negroes and has become established in the old Negro mythology of the Bahutu and Batwa.

[123] Father Loupias, however, is of a different opinion. He assumes that Riangombe was originally a deity of the Bahutu or perhaps of the Batwa, and he states that in Ruanda neither the king nor the "great" Batussi are members of the order of the imandwa which is dedicated to Riangombe (No. 28, p. 6). The latter statement, however, is true also for Urundi, but it might be interpreted as aristocratic reserve on the part of the Batussi nobles against close contact with the Bahutu or with the Batwa.

Among the other Barundi deities which have not been mentioned above, the following are most probably the old indigenous gods of the agricultural Bahutu and the Batwa: Indagarra is the god of procreative power, a "Priapus," who is worshipped especially by the Batwa; Njamurimi is regarded as the protector of the fields; Njankuru is the national god of the Basige in northwest Urundi; Ingansje appears to be a god of time, "Chronos"; Wandamutoni is the wife of Imana; Ikisjego is the son of Imana; Tusara is the god of the spirits of domestic service, "kobold"; Kwiguka is the god of lewdness; and there are many others (No. 19, pp. 216-220).

2. Cults

793 Each of these gods is worshipped by specific cults; each
787 has his specific priest whom he "enters" from time to time,
makes him "possessed," and lets him prophesy and perform
794 feats of magic. There are male and female priests. Allegedly
756 the female ones remain unmarried. Divine power and inspiration and the predisposition for being possessed are in most cases passed on from father to son or daughter in the same manner as the power to heal and to raise spirits which is held by the medicine men (abafumu).

793 In Urundi these priests are called iviranga (sing. kiranga); in Ruanda, imandwa; in Kisiba, wabandwa. Among the persons who dedicate themselves to the cult of gods and spirits, the kiranga most of all has the character and functions of the priest in our sense. He has the same name as the god Kiranga (derived from the word root kira, to put in order), and he is regarded both as the representative and as the ambulatory abode of the god himself. Men or women become kiranga either because their fathers or mothers were kiranga and transmitted this talent after their death or as a result of having been struck but not killed by lightning, the sign of the power of the god (No. 19, p. 253), or they are seized by the spirit and enter a state of
[828] manic possession at the Kubandwa celebration or the "sacred spear" ceremony (cf. p. 134). As soon as such happenings and conditions make their appearance, the person in question is declared a kiranga and has to officiate at the ceremonies of the holy spear which are performed on so many occasions (No. 19, pp. 462-463) and to mediate between humanity, suffering or filled with metaphysical urges, and the spirits and gods.

As has been mentioned before, in Ruanda the ecstatic
791 mediators of the world of the spirits are called imandwa. They are male or female, divinely chosen mediums of one of the principal spirits, i.e., either Riangombe, Binego, Mugassa, or others. Depending on this association with a particular god, they have to adorn themselves in a fashion different from the others. They have to express themselves by growling, hissing,

791 or howling. A special spirit language is also used. Usually
[198] they fall into a religious ecstasy after consuming copious quantities of beer, and the spirit himself [124] will begin to speak through them and utter prophesies and oracles. They are
[672] not responsible for anything they do while they are in this spiritualistic-mediumistic state, even if they commit the worst violations of law and good manners (No. 39, p. 100). Those who are possessed make liberal use of this immunity, and one may very well consider this one of the chief motives for the whole institution of the imandwa cult.

In Unjoro the medicine men are also called abandwa. They "practice magic by killing animals or using certain herbs" (No. 9, p. 377).

Through the writings of A. Vix and B. Struck (Nos. 34 and 36) and Rehse (No. 31, pp. 107, 132), we have more precise knowledge from Kisiba of these persons who are called wabandwa and each of whom is possessed by a specific god. There, too, they differ depending on the nature of their god or demon, but all of them display their power "in hysterical fits caused by auto-suggestion." One of them may be an expert at making rain, another at curing the plague, a third may be proficient in agricultural matters, a fourth in the curing of cattle, etc. When the spirit seizes them, these divinely blessed persons put on a leopard skin, which the chief furnishes them, and a fur cap. Then they hang amulets from their necks and dance, holding long sticks and gourd rattles (Plate 54). However, they are not organized in a society.

794 In contrast, the ababandwa in Ruanda form a religious
575 cooperative or fraternity, and there are suggestions of this in Urundi too. The people in question are not the divinely possessed priests (kiranga) nor the magicians and medicine men (abafumu) to whom we referred above, but pious men who dedicate their lives to the god out of concern for their earthly well-being and for the future salvation of their souls. They are all organized in a fraternity, a cult community, bound by solemn ceremonies, and they offer their sacrifices jointly.

Van der Burgt does not differentiate between the ababandwa, the wachwesi, the iviranga, the ivisjego, etc.

794 575 (No. 19, pp. 220, 292, 463, 516), so it is impossible to obtain a clear picture of the nature of the Kubandwa cult of the Barundi from his writings. However, his accounts corespond essentially to the descriptions of the Imandwa secret society of Ruanda which have been given to us by Father Arnoux and the missionary Johanssen (No. 44 and No. 39, pp. 96-101). Thus, we can obtain many insights concerning Urundi from their writings. Quite correctly van der Burgt refers to similar cults of the "Watschwesi" (Batschwesi) fraternities in Ussuwi, Ussumbwa, Usindja, and Unjamwesi. In their nocturnal orgies have been preserved the last traces of religious cults and cult societies which still function openly as national institutions in Urundi, Uha, and Ruanda. The old relationship is also still recognizable in the hymns which are sung at such celebrations of the Watschwesi in Unjamwesi, Usindja, and in eastern Urundi. It is noteworthy that their lyrics are in the Old Kirundi language (No. 19, pp. 220, 463).

794 575 198 Father van Thiel, too, reports that in eastern Ussuwi at the ceremony of the Kubandwa, the admission to the society of the ababandwa, a ritual language called luchwesi is used. Father van Thiel lists a few dozen words (No. 24, p. 57), for example: bulege, bow; milasa, arrow; migasi, meat; muto, fire; masugunu, milk; muyara, head; manono, teeth; agawesa, eyes. It will have to be investigated whether this luchwesi is identical with Old Kirundi (cf. pp. 149, 332). Czekanowski gives a few specimens of the secret language of the babandwa in Ruanda (No. 48, pp. 316-317).

794 575 171 The following is known about the ababandwa in Ruanda. According to legend, the historical high priest Riangombe, before dying, expressed the desire [125] to be worshipped by the Batussi as well as by the Bahutu and the Batwa, without differentiation by caste. For this reason they all, without differentiation, dedicate themselves to him in the Kubandwa ceremony. It appears that this tradition merely means that the fraternity was extended to include the Batussi, for according to tradition

794 the fraternity of the ababandwa existed long before the histori-
575 cal Riangombe. It is most probably an extremely old element
171 of Negro religion in East Africa which has been preserved in its pure form in Urundi, Uha, Ruanda, Karagwe, the eastern Congo (Bunjabungu) (No. 44, p. 291), and in a degenerate form in Unjamwesi and Ussumbwa. Many parallels to it can be found in the secret societies of the Bantu and Sudan Negroes of Loango, the Cameroons, Togo, the Gold Coast, etc. Ac-
794 cording to van der Burgt, the Kubandwa cult in Urundi is part
575 of the Bantu religion of the Bahutu and has been taken over
114 by the Batussi. However, the king may not participate in the cult while the Batwa are very dedicated to it, partieularly to that of Kiranga. In his dictionary van der Burgt defines the ababandwa as a "société religieuse et secrèt" (No. 19, pp. 220, 463), but according to a more recent written communication he regards the Kubandwa not as a real "secret society" but as a gathering for a mysterious cult act to which not everyone is admitted, for example, children. Captain von Langenn, however, regards it as a religious secret society in which old sorcerers play the leading role; admission to it follows special ceremonies. Missionary Johanssen, too, describes the analogous institution in Ruanda as a "society of the initiated or of mediums" who are in contact with the world of the spirits and join Riangombe after their death, in contrast to the laymen, the insigo, who are excluded from this community (No. 39, p. 96). Father van Thiel likewise refers to the initiated persons of the Kubandwa cult in east Ussuwi as a "soeiété secrète" whose leader is the sorcerer (No. 24, p. 49).

[793] In Ruanda a high priest (kiranga) is the head of the
794 ababandwa. He is appointed by the king, but he may also be
644 dismissed by him. In Ruanda the king appoints the mpara as his
575 assistants. They are a group of ababandwa who enjoy the privilege of offering their sacrifices to Riangombe in the kraal of the king. It is noteworthy that they are all Bahutu. This is probably a concession to the old Bantu origin of the Kubandwa cult. These mpara, in addition to the Batwa who live at the k king's court (see p. 13), are the bodyguards and the "guardians of the royal sleep," and much confidence is placed in them (No. 44, p. 292).

794 575 The main reasons for joining the Kubandwa are usually the following: the invitation of a magician; the wish to be cured of a sickness or to be rescued from a difficult situation caused by evil spirits; the intention of obtaining a privileged position of various material advantages of joining the cult society; the fulfillment of a promise or vow made to one's ancestors; the carrying on of a family tradition, etc. Thus, we have motives in all of which the positive principle of utility strongly predominates.

The consequence of joining the Kubwanda [sic] is that the umubandwa ceases to be a member of common humanity; he now belongs to an exalted adoptive family which protects and promotes its members. We might regard it as a kind of Free Masons' Lodge. Through solemn vows the newly admitted members pledge themselves not to betray or violate the secrets of the Kubwanda. If a member should nevertheless do so, the [789] ababandwa curse him, wishing all sufferings on him, and Riangombe carries out the malediction (No. 44, p. 294).

[126] The ceremonies of the Kubandwa, the admission 796 of new members to the society, are accompanied by a great 794 number of formalities; they are identical, however, for Batussi, 575 Bahutu, and Batwa. To the best of my knowledge they correspond in their main outlines to the procedure that is customary in Ruanda which is as follows. First the aspirant (nsigo) informs a sorcerer (umufumu) of his desire to be admitted to the society. Then the abafumu require weeks and months to obtain the spirits' [787] assent by performing all kinds of sorcery: they listen to their "inner voices," they observe floating pieces of butter and wood, they read the entrails of chickens, sheep, water-wagtails, etc. (No. 44, p. 530). During this entire period the candidate is expected to bring the umufumu a series of presents: sheep, goats, beans, iron hoes, even cattle (required of the Batussi). At the same time bananas, meat, pombe beer, and other delicacies must be offered as sacrifices to the spirits in the little sacrificial huts. At last the spirits agree to the admission of the candidate. Then the abafumu choose from their circle a sponsor whose duty it is to introduce the candidate to the ababandwa. The real

794 admission to the order by the society's members is then enacted
575 in the kraal of the candidate. It is accompanied by innumerable
796 formulas, ministrations, invocations of Riangombe, Painting of face and body, eating, drinking, dressing up, handling the sacred spear, alternate chants, and the rattling of bells and gourds. Each of these acts has a symbolic meaning and reference (No. 44, pp. 539-558).

At the end of the ceremony the candidate's sponsor puts
[292] on the insignia of Riangombe (leopard skin, headdress with a cow's tail, etc.) and thereby turns into Riangombe himself who now in his own person performs the ceremony of the admission of the neophyte by a kind of examination and instruction. However, the novice is initiated to no profound secrets or "esoteric wisdom," as in the mysteries of antiquity, but only to ritual formalities, and though the novice is required to make a solemn vow that he will keep the secrets of the Kubandwa, this refers merely to these superficial ceremonies, for, like the other ababandwa, he knows of nothing else. In conclusion, the newly admitted member once more offers presents to Riangombe and to the ababandwa assisting him. Then Riangombe confers
[551] a new name on the novice by which he will be exclusively known in the future; in Ruanda, for example, the name may be "the little one who smashes the stone," or "the one who swallows cream," or "the one who steals from his mother," or "the one who rids the dogs of fleas" (No. 44, p. 870). After this the neophyte is a regular member of the society. Then the ababandwa, decorated with the insignia of their spirits, march through the countryside collecting food which is finally squandered in an eating and drinking bout (No. 44, p. 110). The newly admitted umubandwa then has to give public demonstration of his newly acquired power. A Munjaruanda who finds himself in some difficult situation asks him to help him appeal to Riangombe or some other god or protective spirit (for example, Kiranga, Masira, Binego, Kagoro, Mugassa). This is done by ceremoniously imploring the god to grant the request and by slaughtering in honor of the god a sterile cow, an old steer, or a ram, which is consumed by the ababandwa of the entire region (No. 44, p. 123 ff.). [127] On this occasion, as at all cattle sacrifices,

794 the horns of the slaughtered cattle are hung up near the huts or
575 piled up or half buried so that only the tips protrude. Any visitor
796 to Musinga's reception hut in Nyanza notices such half-buried horns near the entrance.

This act of assistance by means of prayer, which must be successful except when it is opposed by "superior powers," marks the conclusion of the long ceremony of the Kubandwa.

Through Father Gassldinger we know a little about the gatherings of the ababandwa in Urundi and of their rituals, chants, and dances (No. 45, pp. 309-314). In Urundi these ceremonies are in most cases for the god Kiranga who plays a far more important role in Urundi than does Riangombe who is predominately worshipped in Ruanda. In Urundi Kiranga is often identified with Riangombe (see p. 121). Thus, in the rites described by Father Gassldinger not Riangombe but Kiranga is the master and protector of the secret society of the ababandwa.

If a prosperous Murundi family has had sickness and other kinds of misfortune during the course of a year, it will celebrate a Kubandwa festival after the grain harvest as soon as the storage bins are full and the brewing of beer has begun. The festival is for Kiranga, and all the ababandwa of the region are invited to attend. First of all, an umubandwa friend at whose kraal the most recent ceremony took place is asked to officiate as hierophant, i.e., as the representative of Kiranga. This
[785] umubandwa prepares himself for the office by isolation and fasting. As soon as he begins to growl and howl in his hut at night, it is a sign that he is possessed by Kiranga, and the celebration can start. One after another the invited ababandwa, men and women, assemble in the courtyard of the host. Kiranga's spirit hut is decorated with young fig branches, freshly cut grass is neatly spread around the hut, and in front of it is placed a block of wood or a low footstool. One of the huge, three-footed beer jugs which are used at the feast of Kiranga is placed next to the footstool. A large, plaited receptacle containing herbs and leaves with which to work magic is placed in the center of the
[302] courtyard. In the meantime the ababandwa paint broad and
[301] narrow stripes of white-yellow clay across their faces; the women also decorate themselves by tying leaves and bands to their hair and arms.

796 and arms. Everyone is armed with long-stemmed rattle gourds
794 or iron bells. There is complete silence.
575 Then, with slow steps, Kiranga himself emerges from
[534] the hut. His face is painted with clay so as to be hardly recognizable; his eyes are closed. With both fists he clasps a long lance, the sacred spear. He is accompanied by four assistants (ivisjego); one of them is the master of the house, the host of celebration. Kiranga solemnly takes his seat on the footstool while the ivisjego squat at his side. At this moment a procession of ababandwa begins to walk toward him. From the plaited receptacle mentioned above they take tufts of grass, then kneel down and place them in front of Kiranga while calling to him: "Kiranga umwami wi Barundi!" (Kiranga, you are the king of the Barundi). After returning to their places, they begin shaking their rattle gourds in a certain rhythm, strictly observing the beat and at the same time stamping the ground in the same rhythm. A leader of the choir then begins to sing the old Kubandwa hymn:

[539] [128] Hai yeye wohima ye!
Abadandwa n'ivisjego!
Hiye yee, he he, eee hiye,
Ruheye ye, Riangombe ye, etc.

Its refrain "Hai yeye wohima ye" is chanted by everybody (which is quite similar to what has been reported by van der Burgt, No. 19, p. 292).

The hymns, the invocations of Kiranga, the maledictions,
796 and all other utterances which are part of the ceremony are not
794 spoken here in the colloquial Kirundi but "in a mangled gibberish
575 which only Kiranga and his subjects can understand." The word
198 insoga (beer) becomes inganda; amata (milk) is changed to anufuro (foam); amukobwa (girl) to amaschenge; kubita (to beat) to kubomagura (to throw mortar at); etc. This special Kirundi terminology is also used by the religious secret societies of the neighboring peoples and appears to consist mainly of elements of Old Kirundi which otherwise has been almost forgotten. (Cf. p. 148).

796 As soon as the men have finished their frenetic singing and
794 dancing, individual participants in the celebration step before
575

796
794 Kiranga, take a bow, clap their hands (the standard greeting
575 for the king, also in Ruanda and Kisiba), and then present all
[576] kinds of requests to him. One desires that his cattle be cured;
another wants a husband; a third wants a wife; etc. Kiranga
promises that their wishes will be granted if they give him
generous presents of beer and cattle.

Now the dance begins under the direction of a female
796 leader. "The arms are stretched out to the sides, and the
794 flattened palms are gently and gracefully moved at the wrist
575 joints. Smiling, the rows of dancing girls move toward each
535 other with their heads swaying. Their gesticulations become
gradually more lively. The entire body is inclined forward,
sideways, and backward in incredible contortions which are ac-
companied by staggering steps. The dance excites the par-
ticipants and the onlookers. In a breathy voice the girl lead-
ing the dance improvises a chant of praise to Kiranga; the
others take up the refrain just as softly. The men's small drums
and rattles accompany the dance softly and covertly. In the
meantime the musicians lustily partake freely of the beer.
Finally, when the girls are tired, they return to their places
amidst wild applause. Kiranga, however, also is tired, and he
names a successor, a woman, who is greeted with lively ap-
plause" (No. 45, 1913).

The women are usually particularly skillful in this role.
796 The one who has been chosen as successor places on her head,
794 which has been painted red, a kind of crown made of shells.
575 Her face twitches in nervous excitement. It is a gruesome
786 sight. After she has twirled in a circle for a few times with
her arms outstretched, she seats herself on Kiranga's footstool
and suddenly screams in a hoarse voice filled with hatred:
"All those who have not come shall die of hunger." This is
greeted with shouts of approbation by the hundreds of partici-
pants who are intoxicated with beer and excitement. Again
the woman screams: "All White men and their friends shall
die by the spear." The whole circle repeats these maledictions
jubilantly. Further: "All enemies are to perish with swollen

796 bellies" (i.e., like sick cattle). And so it continues with in-
794 numerable wild curses. When the storm has subsided, individ-
575 ual supplicants once more stumble forward in front of the
786 enthroned woman, pay profuse respects to the "king," and request his help in opposing witches and sorcerers who have harmed them. The woman promises this, and with the voice of a fury she calls for a pledge of faith to Kiranga. [129] The ivisjego jump up, and under their leadership and accompanied by the noise of all the instruments and with a thousand curses and screams, a dance is performed, such that in the end everyone is bathed in sweat.

A wild drinking bout by the men and women follows, while they repeatedly scream to Kiranga sitting on the footstool: "Remain on the ruler's throne forever, King of Urundi; Kiranga is king." After that the frantic dancing in rows and the noise continue until the woman representing Kiranga becomes thirsty and surrenders her place to a male successor who is then the host. Naturally, he also is enthroned with tremendous jubilation. In this fashion the drinking and dancing, the invocations of Kiranga, and the curses against enemies continue through the entire night until early morning. Then suddenly the whole group breaks up, and in single file, rattling their bells, they run to the nearest stream where they all wash themselves. With this, the celebration comes to an end, and everyone goes home. From this moment on, none of the participants of the celebration may show any sign of recognizing his companions. The whole Kubandwa must be kept secret. However, the host who last "played" Kiranga belongs from now on among those most privileged and divinely blessed.

796 Since much beer is drunk at these cult festivals and at all
794 other celebrations and it is only available after harvest time,
575 from July to the end of October, all festivals occur exclusively
273 in these months. Every night, especially when there is moonlight, one can hear the noise of drinkers and dancers from the banana groves. Usually they are mere drinking bouts which resound into the night and have no further importance, but often they are cult gatherings of the abandandwa in which only members of the fraternity may participate.

796 members of the fraternity may participate. The fraternity
794 of the ababandwa admits for religious purposes men, women,
575 Batussi, Bahutu, and Batwa whenever they seem suitable (that is, if they are able to pay the high cost of admission and have influence). This fraternity is also of great social importance in
794 these lands where deep cleavages divide the society as a re-
575 sult of the three-fold racial division into Batussi, Bahutu, and
569 Batwa, the contrasts between the conquering caste and the subjugated group, and the rigid clan organization. In contrast to these distinctions, the order of the ababandwa, who are united in the Riangombe and Kiranga cult, acts as a social equalizer by protecting and promoting its members regardless of the race, caste, or clan they belong to.

There is another group of persons who maintain close
756 relations with the world of the spirits and are endowed with
791 supernatural powers by them: the sorcerers, medicine men, magicians, who might all be described by the collective term abafumu (sing., umufumu). This is a Bantu word which is also used in Unjamwesi. It describes someone who uses magical remedies and amulets (No. 19, p. 461). The abafumu are medical practitioners who attempt to ward off misfortune and disease by using supernatural powers and remedies since, after all, every ailment or accident is due to the supernatural influence of evil spirits (see "Medicine," p. 140).

Without doubt the umufumu is the most powerful person
756 in his community. Very often he is more powerful than the king's official, the mutwale. "He is, at the same time, physician and apothecary, conjurer, counselor and priest, a beloved friend of the family, and a universal helper in need. It is his privilege to discover the designs which Imana and Kiranga [130] and his companions have concerning the destiny of poor, ordinary mortals. The eyes of the umufumu are sharper and better penetrate the veil of the supernatural, to him the invisible god reveals his wishes, he is his favorite and mediator .... The modern European regards all phenomena as natural and uses natural techniques to control them; the Murundi, on the other hand, regards everything except water and grass as a manifestation of the supernatural which must be treated

756 accordingly" (No. 45, 1913, p. 46). As a rule the craft of the umufumu is passed on from father to son, but it is also possible for extraordinary events or experiences suddenly to lead a Murundi, who until then has not felt any inclination to be an umufumu, to practice sorcery (kuragusa), for example, if he is unexpectedly saved from death. Then people say: "You have been chosen by Kiranga, and you must help us and mediate between him and us. Go and find the necessary objects, we shall come." If someone has thus been elevated to the status of the abafumu without any of his doing, if for many years he practices his craft and is sought after by numerous suffering people, success quite understandably often causes a kind of auto-suggestion and self-deception. Gradually the umufumu begins to believe more and more in his own power. He does after all believe in the magic of Kiranga, and besides, quite often he uses real and effective medicines in his cures. However, pious belief often goes hand in hand with a liberal dose of deliberate deception.

751 Father Gassldinger gives an excellent description of the
789 versatility of the abafumu in inventing and manufacturing their amulets and also of their function as magicians which affects every situation in the life of a Murundi: "The little stranger has hardly arrived on this earth when his brother, uncle, or nephew runs to the umufumu and asks him to come to the hut and to bring along his isato, the magic wand. The umufumu does not have to be asked twice. He puts a large number of peculiarly shaped pieces of wood and bones into a bag and immediately appears at the side of the newborn infant. The family may be rich, and in this case a great show must be made to earn the generous reward which is expected. First, he spends quite a while practicing all kinds of tricks. When he has finished with this, he solemnly takes the real iviheko from his bag: finger-length pieces of wood covered with butter and red earth and with a hole in the middle; then a few seeds of a sacred tree adroitly wrapped in twisted straws; a little antelope horn filled with ocherous earth into which are stuck small pieces

751 of wood and cat's hair; two leppard claws; a piece of snake skin
789 covered with soot; a little box made of dried pumpkin rind containing a piece of umbilical cord and hair of a newborn infant mixed with bean flour and ashes of the bones of wild boars, etc. He hangs these 20 to 30 small amulets around the infant's neck, and another such string with at least a dozen of these amulets is tied around the child's loins: one amulet against intestinal worms, another as protection against lightning, another against diarrhea, the next against snake bite, another one against skin diseases, and the last one to help the child become fat and strong. The umufumu breathes on the child, flails his arms convulsively, rattles his bells violently, and blesses and sanctifies the individual iviheko, for the Barundi do not believe in a power in these sticks, hair, and horns in themselves but only in the blessing and anointing which they have received from the umufumu. The potency of this blessing depends on the power of the umufumu and on the rarity of the substratum, the vehicle of this sanctification. There is no other Negro tribe which believes as firmly in the iviheko or which wears them in such great numbers as the Barundi.

789 "After the child has grown somewhat older, he begins to make crude bows and wooden arrows for himself and to practice shooting at birds. At that stage his parents seek even stronger iviheko for him, especially the horn of a gazelle filled with powder and containing a few iron points. This is supposed to impart strength for hunting, to make for good marksmanship, and to deflect the missiles of the enemy. When the boy has reached the age when he wants to find himself a wife, there is another series of iviheko to help him. After the marriage, he safeguards his wife's faithfulness and the speedy arrival of healthy [131] offspring by using still other amulets. In disease and misfortune and especially when he feels death approaching, the Murundi seeks rest and comfort in sleep caused by using particularly strong iviheko. On a journey the Murundi wears his own amulets; he sticks others in the four corners of his field; some hang over his bed. There are more amulets hidden near the entrance to the hut, and particularly strong and powerful ones are buried in the earth next to the fireplace. Sick cows are supposed to be cured

789 by iviheko. They also neutralize the evil influence of personal enemies. When at war, the night before the battle, the Murundi sleeps on his beloved iviheko, and he is laid to rest in the grave together with his iviheko.

"Once the body of a Murundi has been made invulnerable, it is still necessary to secure his property. Another amulet is fastened to the spear, or a special stick bought from the umufumu is carried in the same hand as the spear, or a magic sign may be scratched into the iron of the spear. An additional amulet is fastened to the top of the bowstring. Inside the hut a pile of amulets is buried in the ground near the entrance, one amulet is fastened above the entrance, but the most powerful and effective ones are placed near the three hearth stones. There are other amulets used in the fields, against hail and storm, against locusts and other calamities. Very frequently one may find them also on roads, especially on those leading to the banana groves or directly to the hut. If one is careless, he may easily stumble over slabs of wood colored ochre-red, protruding about five centimeters from the ground, and that, after all, is their purpose: a person with evil intent is expected to stumble and fall on the road, thus revealing himself to be an umurosi (malicious witches or wizards)." (No. 45.)

791 293 424 756 The magic power of the umufumu is handed down in families, not only by blood relationship but also by transfer of the insignia characteristic of the umufumu, which consist chiefly in a leopard skin, a headdress made of a cow's tail (Plate 54) and goat hair, a gourd rattle, a stick with charms, a certain way of painting the body and the face with light-colored clay and fat, etc. (No. 19, p. 461).

791 756 The abafumu of the Batwa enjoy a special reputation. They are feared by the Barundi because of their strong magic powers, but they are also consulted for cures. The supreme head of all medicine men, however, resides in Uha (No. 19, p. 462). He lives in the northern district of Ujungu and was formerly called Kawango, the name of one of the spirits of the interlacustrine region. He was probably the medium of this god.

791 This chief sorcerer was a kind of Delphic Oracle for the entire
756 interlacustrine region. He enjoyed such a high reputation that the kings of Urundi and Ruanda often sent missions to him to obtain the benefit of his counsel. The same is also frequently reported of the rulers of Usindja (No. 35, pp. 498, 506). As far as the sorcerers of Urundi, Kisiba, Ussumbwa, and other adjoining areas are concerned, we know that at times they travel to Uha in order to learn higher magic from the famous abafumu who live there. On the other hand, there are Baha medicine men who are employed as "court sorcerers" by various rulers of the interlacustrine region. The influential court sorcerer of the Urundi king, Mutaga, is also a Muhutu from Uha. His name is Kiburua (Ndandi), and he is well provided for by the king (report by von Langenn). It appears that all these Baha sorcerers are Bahutu, Bantu. This again is connected with the fact that the Bantu is by nature inclined toward mysticism and that the Bantu population is much older than the Bahima immigrants. There is no sorcerers' school in Urundi or Ruanda, where one might learn the secret teachings and practices from a "Council of Wise Men," but, as has been mentioned above, power and wisdom is passed on from one generation to the other within the family. Whoever has inherited these attributes and wishes to augment them must try to imitate the techniques of other magicians.

[132] As is evident from the examples reported by Father
756 Gassldinger which have been listed above, the functions of the umufumu are extremely varied. They encompass all conceivable physical ailments of man and animal, and the umufumu applies innumerable natural and supernatural techniques for assuaging and curing them. In the opinion of the Barundi, however, the natural remedies are not successful merely because of their natural characteristics -- for what does he know about physical and chemical effects, about the physiology of the body, or about causality, etc. -- but their effects stem from supernatural
[753] powers imparted to them by the umufumu. They believe that sickness, when not a case of direct poisoning, is usually caused by the supernatural influence of evil spirits (abarosi). It is, of
756 course, true that the Murundi, for his domestic use, applies
757 a great number of simple remedies which have been passed down

756 to him for generations, but this is done before the "case" be-
757 comes serious and requires the attention of an umufumu. These remedies are in a class by themselves (p. 140), and at this point we are only discussing sorcery, magic remedies and their application.

Regardless of the kind of remedy which is to be applied,
755 the Murundi first tests its effectiveness by external application. Even those remedies which can only be of help if taken internally are first strapped or spread on the ailing part of the body since they are expected to have a magical power similar to an amulet. Even European medicines meant to be taken internally, such as pills, powders, or tablets, are first wrapped in a leaf by the Murundi and tied to the sick organ. Only if he does not feel any improvement after that, will he finally make up his mind to swallow or drink them.

There are countless numbers of true amulets (iviheko)
751 which are made of various substances and in various shapes.
789 They are always worn suspended on the body in a small compact form (Plate 55). We have already listed quite a number of these above (p. 130). Usually they are suspended from the neck on strings, but frequently they are also tied to the head, to the belly, or to the genitalia, etc. At times each one hangs on a separate piece of string, at other times dozens of different kinds are strung up on a single piece of string, similar to a necklace. The material used for making the amulet is not as important as the sorcery through which the umufumu imparts supernatural powers to the object, but in most cases the amulet consists of a piece of wood three to six centimeters long, if for no other reason than that it is easiest to produce and to carry. One may also see claws or hooves of leopards, cats, goats, and sheep, the bones of birds, pieces of snake skin or the fur of wild animals, dried fruit, mussels, pebbles with unusual shapes, but, most frequently, powder from various types of soil, ashes of burnt bones or of the horns of animals, and flour made of various kinds of grain (No. 19, p. 29). Usually these powdery charms are poured into a small cattle, goat, or antelope horn whose opening is then closed with wax. Hollowed out fruit

751 rinds are also used for this purpose; often they are then artfully
789 decorated with pieces of wire or strings of beads which are twisted around them. Depending on the magic power which the umufumu has imparted to the amulet, there are protective amulets supposed to help against certain accidents and maladies, against the malice of evil spirits, and against witchcraft used by persons endowed with magic powers. There are also lucky amulets for bringing about good harvests, healthy cattle, safe journeys, strong and healthy babies, etc. Rich persons who
[556] can afford the luxury of many expensive amulets wear them around their necks in such numbers that their entire chests are covered with them, reminding one of the cascades of medals on the chests of European diplomats. Of course, the most
[554] amulets are worn by the great chiefs and Batussi batwale who are usually feared and respected as medicine men themselves.

The following description gives an example. "Leaning on an enormously long staff and armed with a powerful spear, the old chief Rumonge walks among his people like a simple citizen. There is nothing to set him apart from the others except the innumerable amulets which decorate his neck, chest, back, his hips, arms, and legs. He is known as an extraordinarily powerful sorcerer which greatly increases the fear and respect with which he is regarded by his subjects. And his words are made more telling by the use which he or his aides make of his heavy club" (Kreuz und Schwert [Cross and Sword], 1900, p. 70).

The Batwa produce most of the amulets used by the
[791] Barundi, but the other abafumu are also very productive in manufacturing amulets, and, of course, this is one of their most lucrative sources of income.

The abafumu have another important task: to discover
754 and to put out of action persons skilled in witchcraft who in various
791 ways bring harm and misfortune on their fellow citizens. These witches and necromancers, called abarosi (sing., umurosi), are

754 the first to be considered responsible if a person becomes sick
791 or dies, if a storm devastates the fields, if the cattle meet with an accident or are attacked by epidemics, when women remain barren, if infants are aborted, if thefts are committed, etc. The abarosi frequently employ poison, which is popular both in Urundi and in Ruanda (No. 48, p. 319), but in most cases they use their magic powers. The abarosi obtain magic power over people or over their cattle and other possessions by appropriating a little piece of a person's body, some hair, the paring of a fingernail, sputum, semen or urine, or some cattle dung, straw from the hut, or soil from the fields. All of these things give the abarosi power over a part of the person's "soul." This explains the great reluctance with which a Murundi, like all East African Negroes, allows a stranger to take pictures of himself, submits to physical measurement, or gives his own name or that of his family. If the medicines and protective amulets prove to be ineffective against the black magic of the abarosi, the umufumu will close in on the malefactor, the umurosi. By inspiration and by questioning his magic rattles and other apparatus, the umufumu's suspicion is directed to certain persons, who in most cases are old women! They are accused,
[695] arrested by the mutwale, and if there is no other proof, the umufumu subjects them to a kind of ordeal in which fire, poison, or boiling water is used. In most cases the verdict is unfavorable to the accused (No. 19, p. 405). In petty cases the person found
[688] guilty receives physical punishment or has to pay a fine; in serious ones they are simply beaten to death and thrown in the bush (see above, p. 97).

The umufumu's power of divination may also be directed
791 to other things if the party concerned so desires and is prepared
789 to pay the price. Through special ceremonies the umufumu brings rain to the fields, or if there is too much rain, he may stop it (No. 19, p. 443). For rain-making, which is so important for agriculture, there are special experts, the abavurati. However, their number is decreasing since every failure is severely punished by the batwale (No. 45, 1913), p. 50).

791 The umufumu also tries to predict the future and to re-
787 veal unknown facts and events, i.e., to prophecy. This is done with a great display of simple-minded hocus-pocus. Many small objects are poured on the ground from various calabashes. From their accidental arrangement a situation is explained and its future development prophesied. The Barundi believe that the predictions of the abafumu are in most cases correct. This may not be too difficult if the magician is an intelligent man.

[134] The umufumu, the medicine man, must under no
791 circumstance be confused with the monster who practices
754 witchcraft, the umurosi. The difference between the two may be characterized in the following manner. According to Barundi belief the abafumu are the benevolent, helpful medicine men who can free a person from the malediction of the evil sorcerer, the umurosi. The abafumu are the official, protectors against sorcery, but the abarosi are the evil sorcerers who occasionally put a spell on people. In Ruanda and in the southernmost Bahima state, Ufipa, the same names are used for the good sorcerers (mufumu) and for the evil ones (murosi or mulosi) (No. 47, pp. 179, 183-186; No. 48, p. 319). In reality the umufumu, who is usually an adroit and intelligent person, builds his position on gullibility and fraud. The perse-
[578] cuted umurosi is usually an innocent person who has either incurred the suspicion of his fellow citizens because of his eccentricity, or more frequently his good fortune and prosperity have excited other people's envy. However, the greatest and most
791 famous abafumu are almost without exception astute criminals
661 who will not shrink from any atrocity. The main reason for
628 their evil influence and great power is the fact that they are always in league with the chiefs, and through their activity as medical practitioners and counselors they are thoroughly informed about all family matters. The entire nation suffers under the terrorism of the great medicine men who are allied with the chiefs. Nobody dares avenge these atrocities on the evildoers themselves, for if one of them were killed or executed

791 as the result of a denunciation before the German Resident, the
661 entire kin group of the chief or the umufumu would be bound by
628 law of the vendetta, and they would take terrible vengeance on the family of the "traitor" (No. 45, 1913, pp. 83-84).

Neither the umufumu nor the umubandwa is invited to
793 officiate at the real cult acts of the Barundi people, at "divine
796 services." These are a matter for the priest, the kiranga. Although among the Barundi one's entire life is simply a series of performances to fulfill religious requirements which affect all matters of existence, they nevertheless assign particularly great importance to two rituals. For this reason the kiranga has to officiate at them. One is the ceremony of the "sacred spear," the other is the act of erecting the small huts for ancestors and spirits, ivigabiro, akararo, ivitabo (No. 19, pp. 498-499).

The ceremony of the sacred spear is enacted at all the
796 important events in the life of the Murundi, whenever protection against evil spirits is especially desirable. The father of the family is host at the ceremony and pays the officiating kiranga; relatives, friends, and neighbors act as assistants. The ritual takes place, for example, at the birth of a child, particularly at the birth of twins, if there is a serious sickness in the family, at weddings, joyous celebrations, funerals, etc. (No. 19, p. 516). Thus, it is a ceremony which may be sponsored by any Murundi who is in a position to afford the expense. This is not the cult gathering of the ababandwa, described on p. 124 above, which also takes place under the direction of the kiranga and is of a similar nature, but it is only performed by the secret society of the ababandwa.

778 Even the ordinary spear of the Murundi is considered sacred
796 in a certain sense since it is the symbol of paternal power and the authority of the ancestors. Consequently the "sacred spear"
[411] guarded by the priest is the object of great devotion. In the
[776] point of this spear lives the spirit Kiranga, [135] or Indagarra, or Riangombe, depending on whether the spear has been dedicated to one or the other of the spirits. In most cases it is Kiranga. The shape of the spear is like that of any other, but
796 one half of its blade is unpolished and black. If someone

796 expresses the wish that the "ceremony of the sacred spear" be celebrated for his benefit, he invites his friends and the priest (kiranga) of the district along with the latter's spear. The kiranga arrives with two or three male or female assistants (ivisjego), and all the participants in the celebration take their seats in the hut. The priest sits in the middle holding the sacred spear in his hand and wearing a cap made of leopard skin with its tail falling down his back. Each of the assistants holds in his hand a bifurcated branch to whose ends are tied little calabashes, some of which are filled with grains or pebbles. These rattles are shaken in a certain rhythm, and to their accompaniment the entire gathering sings -- in a minor key and andante -- a traditional hymn in the old Kirundi language (see p. 148) which is for the most part unintelligible. The hymn calls on the congregation to praise and glorify the spirits, Kiranga, Rugondo, Riangombe, and others (No. 19, pp. 517 and 292). While they are singing, each person gathers a little straw from the ground and places it as a sacrifice in front of the sacred spear, clapping his hands as a sign of homage, and then directs to the spirit Kiranga, residing in the spear point, a number of requests expressing the wishes of the host. After that the whole party leaves the house with a chant and proceeds to the little spirit hut (ikitabo) close by. Its floor is then covered with fresh straw or grass. After they have returned to the house, the whole gathering is sprinkled with water by the priest (symbol of purification?). At the end all join in drinking the contents of a large jar of "sacrificial beer." This concludes the ceremony, the priest receives his fee (beads, grain, barkcloth, etc.), and everyone goes home. In Ruanda and Uha the ceremony of the sacred spear is celebrated in a similar fashion (No. 19, p. 518).

796 There is another ritual at which the priest is regularly asked
778 to officiate: the ceremony of erecting and consecrating the little
346 spirit and sacrifice huts (Plate 18a). There are two different types of these huts: some are dedicated to the gods, Imana, Kiranga, and Riangombe, and are open to the public (ikitabo, akararo); the others are dedicated to the family ancestors and are private (ikigabiro).

778 The public cult sites used for common worship of the gods
[821] are erected wherever lightning has struck the ground, either where it injured or killed a person or a head of cattle or where it has just struck the ground. Lightning is regarded as sent by the god Imana himself (No. 19, p. 253). At such a place a circular piece of ground, two to three meters in diameter, is leveled and covered with straw. Manioc and fig branches are planted around it. Then, celebrating the ceremony of the sacred spear, the kiranga plants in the middle of it a shoot from a banana or a fig tree which is regarded as the temporary residence of the god, Imana-Rikiranga-Riangombe. uEvery passerby
[782] puts a little tuft of dry grass in front of the young tree in homage to the god (see grass greeting, p. 95). Sick people are brought to this site so that they may ask the god to grant them recovery (No. 19, p. 564). This kind of homage is also supposed to be helpful when asking for rain for the fields and herds. Usually
[346] some small grass huts are also erected at or near the sacrificial site; in these huts food and drink are sacrificed to the god. Often, however, such huts are absent.

[136] The second type of cult and sacrifice huts at whose
778 consecration the kiranga must participate is the private sacri-
346 fice huts (ivigabiro), dedicated to the spirits of the dead
782 (imisimu or abasimu). Often, however, a sacrifice is also offered to the god Kiranga in one of these little private huts; it is then called akararo ka rugabo, i.e., the great master's humble quarters for the night (No. 46, p. 18). These little huts are erected inside the kraal next to the residential huts. In most cases their shape resembles that of the residential huts, but they are only one half to one meter high (Plate 18a). They are always constructed in a careless fashion. In fact, often a few branches or some bundles of straw or reed, inserted in the ground and tied together at the top in the shape of an arch, are considered sufficient. A little straw is spread underneath, and on it a few implements are placed as a sacrificial offering, for example, a piece of imanga wood which is used for amulets, a piece of bottle gourd, shaped like a bowl, which is used as a container for food, an old pot as a receptacle for beer, an old tobacco pipe, etc. In some areas of Urundi, for example, in

778 Usige, these little huts are constructed so as to have two en-
346 trances, the pot inside has two spouts, the ritual tobacco pipe
[782] has two bowls; all this is probably because they are supposed to serve both the spirit of the ancestor and his wife (see Fig. 11). Van der Burgt interprets this custom as being related to the supposed bisexuality of the manes (No. 19, p. 564), yet I could not find any proof of this.

[769] The Murundi is rarely satisfied with only one ikigabiro; usually there are three or four of them dedicated to the spirits of the three or four deceased family members who were closest to him. At one time I actually counted no less than eight such sacrificial huts in one kraal.

The huts are consecrated by the kiranga performing the
778 ceremony of the sacred spear. While the ceremony is in
782 progress, the family members eat several kinds of food next
796 to the little "votive chapel." This is done in honor of the an-
769 cestor to whom the hut is dedicated. They deposit a small amount of each dish and a little beer in the ikigabiro. Later this offering will be repeated each time that the ceremony of the sacred spear is celebrated for some reason or other by the family concerned. Not only millet gruel and pombe beer are offered; among prosperous families the sacrifice also includes the meat of chickens, goats, rams, and even beef.

According to the belief of the Barundi, the ancestral
769 spirit either chooses to make the hut erected in his honor his
782 permanent residence or at least he uses it as his temporary
778 quarters in which case he will then appear as a ghost in the
775 neighborhood. The Murundi believe that the food offerings are eaten by the spirit when in reality they have been eaten by dogs, rats, or birds. If the food remains untouched, the Murundi finds comfort in the thought that the incorporeal spirit has enjoyed only the incorporeal parts of the food, beer, and tobacco.

778 According to van der Burgt, there exists, in addition to
769 the two cult sites mentioned above, a third type which, however,
825 appears to be extremely rare. These are closed huts, two to
775 three meters high, found in the neighborhood of the sacred groves close to the old royal kraals. The one seen by van der

778 Burgt was dedicated to the manes of King Ntare (No. 19,
769 p. 565) and allegedly was the residence of a large python which
825 was the receptacle of the spirit of the dead king. The snake
775 was protected and fed by its special guards. In Ruanda and Kisiba I personally heard of such official sacred monuments. They also were inhabited by a large snake which was regarded as the vehicle of the king's soul and which was regularly fed with milk by the priest. (Cf. also No. 31, pp. 107, 130.) [137] As a rule, however, no such consecrated huts are found in the sacred groves.

The sacred grove (imana, iteka, intatemwa) as such is
778 regarded as an object of deepest devotion by the Murundi (No. 19, p. 77). There are no woods in most of Urundi, and hardly any trees exist in Ruanda. Consequently, the small groups of tall fig trees towering above the ridges of hills here and there are a very characteristic feature of the scenery (Plate 29a). Everywhere they indicate the site where at one time stood the residence, the kraal (lugo, urugo), of a king or chief and where the former master himself is probably buried. After the death of the owner, his homestead is abandoned, the huts fall to pieces, and only the fig trees that formed the fence of the kraal continue to grow unhindered; from that time on, nobody may
[784] touch them or even cut them down. Like the onetime place of residence, these trees are regarded as sinister and sacred (imana, taboo). It is not simply pious feeling for the deceased which protects these trees of his former dwelling, for such gentle feelings are unknown to the Murundi. It is rather fear of the wrath of the spirits of the dead from whose graves the trees may have grown. This sentiment prevents the people from using the
[825] trees for much needed fuel. All kinds of animals live in the thicket,
[775] among them the snake which the spirit of the deceased has chosen as his new residence. Sometimes the priest of the district offers a sacrifice to the spirit by depositing food and milk for the snake.

The Barundi do not have any reproductions of their spirits,
532 demons and gods in the form of sculptured or carved figures or
776 as drawings. This should not be regarded as proof of their lack

532 of artistic creativity which is also typical of all their other
776 cultural possessions. The same is also true of most other East Africans. The Barundi represent their imaginary spirits only in their dances (see p. 127). They decorate them with certain symbolic emblems and pay homage to them, motivated
[781] by a mixture of fear and calculation.

Finally, religious concepts and emotions are also re-
784 flected in many "superstitious" customs with which the life of
262 the Barundi abounds. Most of these customs are designed to repel evil spirits. Those which deal with diet, care of the body, etc., frequently seem to the European observer to be hygienic precautions. There are many rules and taboos (umusiro) pertaining to food. As has been mentioned above, all Barundi may eat beef, although it is quite a rare treat for them (p. 46). Only the Batwa eat goat meat; a Muhutu will eat it only in rare cases. Nobody, however, is permitted to eat chicken meat, venison, or the flesh of numerous other animals which for various reasons are considered impure. Also, there are the food taboos on the totem animals of the different clans (p. 103). Few people eat mutton, and only the tribes living on Lake Tanganyika eat fish. Blacksmiths must abstain from eating pork (No. 23, 1914, pp. 111 ff.). Incidentally, no woman
[843] may watch a blacksmith at work. A pregnant Murundi wife is not permitted to eat meat, beans, sweet potatoes, beer, or salt; she may only eat boiled manioc, hot maize gruel, ripe bananas, and peanuts. However, a pregnant Mutwa woman may eat and drink as usual. Nobody may warm or boil milk
[825] since otherwise the cows would become sick. Likewise, a person who has eaten peanuts or peas may [138] not drink milk on the same day since the cows would become sick. Nobody may eat vegetables and milk at the same time since this would harm the cows which gave the milk. The Banjaruanda, Banjankole, Banjampororó, and Banjoro have the same superstitions (No. 30, Vol. II, pp. 514, 534; No. 19, p. 6). In
[765] Urundi, after the father of a family has died, his widow and children do not eat salt until the period of mourning has passed, and they do not cut their hair.

784 There are special rules dealing with the consumption of water. The washing and drinking water in a house must never be completely used up. Every evening a little water is left in [782] a jug so that the manes can refresh themselves at night. This is called amasi y'Imana. The family will use this remaining water the next morning for washing themselves (No. 19, p. 6). [788] A person may not cross a river without first painting a line on his forehead with the mud from the shore.

Numerous rules affect family life. A father never enters [606] the hut of his daughter-in-law. Also, until his married [593] daughters have given birth to a child, the father may not see them unveiled (No. 19, p. 6). A woman who has just given [846] birth to a child cannot leave the house for three days, since otherwise the baby, but not the mother, would get sick. If [845] twins are born, a religious ceremony has to be performed (see p. 110), since otherwise the children would die. A son-in-law 606 must avoid his mother-in-law; a daughter-in-law must avoid her father-in-law. If the young people nevertheless meet them, they must run or at least turn away from their parents-in-law. This is considered a sign of great respect. Its non-observance would be a serious insult and would lead to breaking the engagement [sic]. Basically, however, the reason for this is probably the fear of the taboo against contact with close relatives which is connected with conceptions of exogamy. A violation of this taboo is believed to bring harm and impurity upon the violator. This taboo is strictly observed by many peoples [171] of East Africa, for example, by the Wangoni, Wagogo, Massai, Wakamba, Basoga, Baganda, and others. (No. 30, Vol. II, pp. 400, 403, 412, 420, 461, 508). In Urundi the young couple is bound by the rule to avoid their parents-in-law until they have children, but after that the young people must show the greatest attention and subservience to the wishes of their parents-in-law. It often happens that the demands made by the latter are so exacting that the young couple has hardly enough time left for taking care of their own housework and the fields (No. 23, 1914, p. 122).

482 784 The pad used for carrying burdens on the head (ingata) has to be treated with particular care. No one may sit on it for

482 this would result in this person's or his father's death. A child
784 who my mistake sits on the pad will stop growing unless it spits on the pillow so as to ward off evil (No. 19, p. 553). Most probably the underlying reasons for this fear are totemistic conceptions.

3. Missions

797 The extreme pride of caste and race of the Batussi is the main reason the work of Christian missions has had little success
563 in Urundi. Teachings about the brotherhood of all Christians require the Mutussi to regard himself as the equal of his "slave," the Bahutu, or even to associate in a brotherly manner with the [139] despised pariahs, the Batwa. The Mutussi bluntly rejects these ideas outright, not for religious but for social reasons, and it is obvious that every Mutussi will prohibit the Bahutu over whom he rules to join a religious community whose teachings aim at leveling the deep social chasm on which the political rule of the Batussi over the large mass of the Bahutu is based.
797 Among the Bahutu the missionaries are opposed by strong and persistent enemies: the priests (kiranga), medicine men (abafumu), and the members of secret religious societies (for example, the ababandwa), who control the spiritual and emotional life of their countrymen and whose connections and organizations form a network over the entire land. Although
797 Christian missionaries have been active for more than 30 years
735 in the country, their work is still limited mainly to the poor
737 and destitute who have no contact with their own people. Van
888 der Burgt writes: "Most of those who come to the missions are starving persons during the frequent hunger epidemics and decrepit old men and women who have been cast out by their families. It would be easy to fill an old people's home with hundreds of inmates within a few weeks, for many of them are drowned by their families in the nearest river. Cattle are much dearer to the heart of the Murundi than are his aged relatives" No. 23, 1905, p. 178). As to the rest the rest there are only very few Barundi who have become Christians from inner conviction.

797 For all these national, social, and political reasons, the Batussi would also reject Islam if at some time in the future it should attempt to gain a foothold in this country which so far has been hardly accessible to foreign penetration. The memory of the battles they fought against Arab slave hunters only intensifies the Murundi's rejection of it.

The missionaries, however, continue their work untiringly in spite of little expectation of spreading the gospel among the Barundi as long as the Batussi remain the rulers. Such idealism and firmness of belief is indeed admirable. For many years only the Catholic "White Fathers" were active in this area. In 1896 they founded the first mission in Mujaga (east Urundi; Plate 29b), and later they opened other missions in Mugera (central Urundi), Marienberg (west Urundi), Mariensee (north-eastern Urundi). The Protestant Neudettelsbach Mission began its activity in Iruwura (northwest Urundi) only in 1910. The founding of a second mission in northwest Urundi followed in 1912.

Due to the predominantly negative attitude of the Barundi, 797 very little cultural work has been accomplished of the kind 177 which prepares for and accompanies actual missionary work: teaching basic school subjects, guidance in handicrafts, the spread of innovations in agriculture and stockbreeding. The medical activity of the missionaries seems still to be more efficacious than anything else in winning the confidence of the people.

In the Batussi states of Ruanda and Uha which have been inaccessible to the outside world for such a long time, the position is the same. On the other hand, the adjoining areas of Ussumbwa, Usindja, and Ihangiro, where the people are less divided by differences of caste and race and where there is no strict Batussi rule, have been open to foreign influences for a much longer period and there the work of the missionaries has been far more successful. Only time can tell whether the prospects for Christianization will also improve in Urundi. Most probably this will come about once the power of the Batussi rulers has been destroyed.

[140] Chapter 10

Medicine, Chronometry, Arithmetic, Language

1. Medicine

753 We have already discussed above (p. 132) the basic re-
755 ligious elements in the concepts of the Barundi about all kinds
of sickness and their remedies. *To the Barundi, all illnesses*
757 are the result of sorcery by a demon, and they can be cured or alleviated only by counter-magic. This counter-magic may be performed by the sorcerer or medicine man (umufumu) by means of the magic powers vested in him. He may seek to affect the demon of sickness either by certain manipulations or incantations or by means of talismans and amulets which he has endowed with his powers, or he may choose with prudent circumspection and mature experience certain natural substances which have specific inherent magical powers, herbs, juices, types of earth, or the body parts of animals, and use them as specific remedies for each particular case.

I should like to describe this last type of application as
757 being essentially medical treatment of the patient, for the decisive element is, after all, that these remedies have not been vested with their magic power and effectiveness by the umufumu, but rather they had these qualities originally. Without a thorough investigation, we are unable to answer the question whether we should say that the natives regard these properties as the expression of a soul inherent in the object or as the characteristic emanations of the object itself (in the sense of "emanism" as defined by Karutz, Zeitschrift für Ethnologie [Ethnological Journal], 1913, p. 545 ff.). For our present purposes this question is only of secondary importance. Such remedies, endowed with healing power a priori, can be effectively applied not only by the sorcerer but by any other intelligent man or woman familiar with their specific magical properties and able to select them properly. In addition to these remedies which are applied internally and externally,

757 there are others which rely on mechanical means for an effect, as, for instance, massage, enema, hot and cold baths, and, further, a small number of surgical operations from the simple [752] opening of a boil to (allegedly) the Caesarean operation (see above, p. 110). Difficult cases are treated by an experienced, skillful umufumu, but for simple cases every father of a family uses a number of household remedies. The art of using them is passed on from father to son. If necessary, a sick neighbor is given the benefit of them also.

[141] Generally, the first remedy tried is hot or cold water. It is used for intensive rubdowns, for long baths in treating skin diseases, aching joints, insomnia, and fever. A Murundi [515] enjoys taking a bath whenever a sufficient supply of water is available, but as soon as possible after the bath he will rub butter on his skin. There are several natural thermal baths in Urundi [312] which are used not only by the people living in the vicinity. For example, a gushing thermal spring whose water temperature is 47° Centigrade is located near Kisagara, a village not far from the Mugera missionary station, and there is another one north of Tschiwitoke in the Ruzizi Valley. A kind of steam bath is given to persons with fever by alternately holding their heads and limbs over a pot of boiling, steaming water (No. 19, p. 183). Enemas of warm water to which some herbal juice has been added are very common. They are given by first introducing the end of a long hollow stalk of reed or a strong leaf folled into the form of a tube into the anus; then the person applying the treatment blows a mouthful of water through the other end of this pipe into the bowels (No. 19, p. 331). Adults frequently give an enema to themselves: they fill one of the long-necked bottle gourds with water, insert the narrow end of the long bottleneck into the anus, and then lift the calabash in such a manner as to permit the water to enter the bowels by its own weight. Enemas are used for stomach-aches of any kind, constipation, diarrhea, fever, etc.

[278] There are innumerable medicines made of inorganic, vegetable, and animal substances. Among these, poisons play a relatively minor role, for the Barundi do not even know how to make arrows poisonous. The Batwa often use very effective

757 poison on their arrows. Nevertheless, besides magical conceptions, the fear of poison is probably the main reason why most medicines are first applied externally to the skin or worn in a poultice. Only after this method fails to produce results do they decide to take the medicine internally (cf. also p. 132).

One of the popular external remedies is the burning of the skin (cauterization) on the ailing part of the body. For this purpose a mixture of grease and wood ashes is first rubbed on the skin, then a red-hot piece of iron is applied to it. Afterward a little butter is rubbed on to alleviate the pain (No. 19, p. 91). In other cases a sharp knife is used instead of a hot piece of iron. It is used either as an especially strong irritant or for drawing blood. The method is similar to that of tattooing (p. 79). The Murundi does not actually practice blood-letting nor does he open the veins of human patients, although he frequently uses an arrowhead for bleeding cattle so as to enjoy their blood (p. 45). Boils on the surface of the skin are opened
752 with a needle or a knife. If a person is suffering from aching limbs, a series of small incisions are made in the skin with the local type of razor. Certain healing ointments or powders are then applied to the wound. The technique of cupping is also known. [Fig. 18 appears here in the original text.] It is applied by placing a piece of cattle horn (Fig. 18), [142] with the point pierced, on the place where an incision has been made in the skin. Through the hole in the horn the wound is then sucked until a sufficient amount of blood has been extracted (No. 19, p. 527).

However, the Barundi are very much afraid of deeper incisions, even if they are made by a European. A Murundi physician never performs amputations of limbs. Broken arms or legs are adroitly and carefully put in splints by placing them between two flat boards of wood which are then held firmly together with strips of barkcloth so that movement is impossible. Considering the prevailing disinclination for surgical operations, it appears very doubtful to me whether the Barundi actually perform as difficult an operation as the Caesarean on living women as van der Burgt mentions in a short note (No. 19, p. 363).

413

Fig. 18. Cupping Instrument of Cattle Horn.
(Ethnological Museum, Berlin, No. 6543.)

752 It seems more likely that, as in Ruanda, Ussuwi, and Kisiba (No. 31, p. 117; No. 48, p. 228; Petermanns Mitteilungen [Petermann's Communications] 1879, p. 393), they only perform a Caesarean operation on women who have just died in order to save the infant or at least to remove it from the womb so that it may be buried separately (see pp. 110, 140). Trepanation is unknown among the Barundi.

164 Many of the diseases from which the Barundi suffer are of an endemic character, for example, malaria, relapsing fever, leprosy, and sand fleas. Only a few appear as an epidemic, for example, smallpox and sleeping sickness, but their effect is all the more terrible since the Barundi do not know or apply any antidotes. Van der Burgt lists a whole series of diseases which occur in this region (No. 19, pp. 350-351), but he often uses different names for one and the same disease in its different stages. The following ones, in particular, should be mentioned: syphilis, fever, boils, inflammation of the eye, sores on legs and arms, epilepsy, cramps, leprosy, tapeworms and other intestinal worms, phthisis (ikihaha), dysentery, coughing, abscess on the vulva, diphtheria (?), inflammation of the testicles, gonorrhea, rheumatism, head porrigo, threadworms (filaria), omphalocele, elephantiasis, smallpox, insanity, loss of teeth, lithiasis, paralysis, catarrh of the frontal cavity, whooping cough, dropsy, blood in the urine, deafness, inflammation of the chest, leucorrhea and blennorrhea.

164 Of all diseases, smallpox (akaranda, akasibe) is the most
.731 feared. It comes in epidemics and depopulates entire districts, as, for instance, in the beginning of the 1890's when in Urundi, Ruanda, Karagwe, and other areas of the interlacustrine region many thousands of people were carried away. According to native reports a serious smallpox epidemic afflicted the country around the turn of the century. Less epidemic in nature but also
164 very much feared are the different types of inflammation of the throat (ikiwa) which should be described as angina and some of them perhaps as diphtheria. Often they quickly result in the infected person's death. Running pustules and boils (ikihoro,

164 ikinutsi, amosi, ikivimba) are also very widespread but less dangerous. They can presumably be identified with frambesia and are contracted especially by children. The afflicted persons suffer less from pain than from being immobilized. Since they do not keep the sores clean, the healing process is very slow. These skin sores should not be confused with those caused by syphilis (ikikatschji) which is fortunately still very rare in Urundi and in Ruanda. Sores caused by the sand flea (infunsa) are also rather rare in Urundi, except in the area around Lake Tanganyika which has been very much affected by trade. This affliction is far more common in Ruanda. Still more seldom have I seen persons suffering from leprosy (umuwembe) in Urundi, only two cases near Lake Tanganyika and a few cases near the Mugera missionary station where a small isolation hut has been built for lepers. During my entire trip through Urundi I observed elephantiasis only two or three times, and it is equally rare in Ruanda. [143] According to van der Burgt, phthisis can be found in a few districts, but I doubt whether the disease which he calls ikihaha is identical with our European tuberculosis. The bubonic plague, which is endemic in the area around Lake Victoria, in Uganda, Kavirondo, the Mwanza district, and Kisiba, does not seem to occur in Urundi at all, but it is reported that it occurs quite frequently in Ruanda and is known as masseke sickness.

Many Barundi suffer from intestinal worms, and children in particular often die of them. Acute diarrhea is also frequent, and the dangerous dysentery sometimes develops into an epidemic, for example, in 1908. According to the reports given by the missionaries, gonorrhea and fluor albus have been imported here from the East, but they are not very widespread. Eye diseases are rare, except that small children are afflicted by them, and their eyes are often covered by large numbers of the infectious flies.

164 As in Ruanda, malaria (injonko, indurwe) occurs everywhere in the warm, swampy lowlands which abound in these
136 countries. I have caught the anopheles mosquito in the swampy mountain valleys of southern Ruanda and northwestern Urundi at

164 altitudes as high as 1,600 to 1,700 meters, once even at
[136] 2,140 meters east of Usumbura. There I saw natives suffering from malaria, and I treated them with quinine. Some of the members of my caravan were also infected. However, it appears that blackwater fever occurs not at all or only very rarely. The highland Barundi are particularly afraid of being infected with malaria in the lowlands of the Akanjaru and the Ruvuvu in the north, in the swampy lakes in the northeast, and in the low, warm coastal area of Lake Tanganyika with the adjoining valley of the Ruzizi River, but the relatively few Barundi who live there permanently appear to be immune for the most part.

The highland Barundi are extremely sensitive to changes
164 in climate when traveling or when changing their residence.
147 In former times when the neighboring areas, for example, Ussumbwa, were still importing female slaves from Urundi, they calculated that eight out of ten slaves would perish because they could not live in the climate (No. 14, 1900-1901, p. 178). The missionaries in Mariahilf in Uschirombo report that in their missionary orphanage they always have quite a number of children from Urundi and Ruanda who are unable to get used to the climate of Uschirombo (which is not particularly bad) and who are almost always sick. The women who go there from Urundi and Ruanda have the same difficulty. Quite a few of them die or lose so much weight that they look like skeletons. Many of them recover after about a year, but they remain weak (No. 14, 1900-1901, p. 288). I would like to add that, ac-
[146] cording to my own observations, it is not merely the change of climate which is responsible for these cases of sickness but also the change in food, for example, lack of milk and poor water. In any case, it has been confirmed by experience that in the whole of East Africa the inhabitants of the cool mountainous areas and the highlands, such as Ruanda, Urundi, Uhehe, Usambara, etc., cannot live for any length of time in the lower, warmer regions, as, for example, in Unjamwesi, Ugogo, Useguha, and the coastal areas. This should be a serious warning to us not to import great numbers of people for work in the plantations of the lowlands, or, as the slogan goes, to open the gates of

164 these large "human reservoirs" of the highlands in order to
147 supply the plantations suffering from a chronic lack of labor. An attempt to do so would lead to results which would differ little from mass murder.

[144] The spread of sleeping sickness from the eastern
164 Congo to the western, lower regions of Urundi has had terrible
136 results. The carrier of the sleeping sickness, the stinging fly
731 Glossina palpalis, has infected the Ruzizi valley up to the vicinity of Lake Kivu, which is still safe, and the entire basin of Lake Tanganyika almost to the border formed by the surrounding mountains, and it also has spread to the stream and river valleys facing the lake as far as the eastern highland, for example, the valley of the Malagarasi. According to official reports on the development of our protectorate in 1912-13, the situation on Lake Tanganyika is such that, as a result of the considerable expansion of the infected area, the inaccessibility of the population, and also the difficulty of controlling the traffic with the infected areas of the Congo colony, the fight against sleeping sickness will continue for a long time to come. According to official sources, 3,303 new cases were observed in 1913, as compared with 3,560 cases in 1912. In the area of Lake Tanganyika there are probably a total of 200,000 persons suffering from sleeping sickness.

164 In 1911 I traveled through the infected areas of the lower
731 Ruzizi valley and in northeastern Tanganyika. I was horrified by the devastation that the disease had caused among the population which formerly had been so dense and had been so cheerful. Entire villages have ceased to exist, and the population of extensive areas have moved away or have been relocated by the government. The sick who have been collected in well-guarded camps by the government are slowly dying, and none of the remedies applied (Atoxyl, Salvarsan, and others) seem to have any beneficial effect. All economic activity has ceased, traffic and commerce have stopped, and the European firms which were active there have either gone bankrupt or moved away except for a few. After the railroad has been built to Lake Tanganyika, it will be possible to combat the spreading of the sleeping sickness

164 in the Tanganyika region with much better means and prospects
731 for success, but it will take decades before the damage is repaired to any extent.

164 Fortunately the disease has not yet spread to the large
area of Urundi proper east of Lake Tanganyika, and it probably
136 will not spread there in the future since the highlands of Urundi, Ruanda, and Uha are too cool for the Glossina palpalis to thrive and also because the conditions necessary for the existence of the fly, flowing water and shady bushes near the water, exist only in certain places of the highlands which are predominantly covered with grass. On the other hand, it seems to me that the great danger still approaching is that after the completion of the Tanganyika railroad the disease may also spread to the central areas of East Africa. Disease-carrying specimens of the Glossina palpalis, which at present is unable to fly across the dry steppes east of Lake Tanganyika, might be disseminated passively by being carried in railroad trains, as has happened in other countries with so many other epidemic or endemic diseases that were spread by means of railroads and ships. Then, if these infected flies find favorable conditions of existence at the eastern end of the railroad line, new nidi for sleeping sickness will be created. The situation may become even more dangerous if Glossina morsitans, the tsetse fly which is very common in the eastern regions, contracts the infection from Glossina palpalis and carries it farther. It has already been definitely proved in the southern part of our colony that Glossina morsitans may become a carrier of true sleeping sickness. If now, by [145] means of the railroad, the immensely large area where Glossina morsitans is common were infected from the direction of Lake Tanganyika, the consequences for the population of German East Africa would be incalculable. It is advisable to face up in time to this danger which is threatening us from western Urundi and the region of Lake Tanganyika. Otherwise reality might prove too much of a shock for us someday.

2. Chronometry, Counting, Arithmetic

821 The astronomical observations and knowledge of the Barundi are very meager. To them the sun (isuba) is only the wandering fire of Imana, the principal god. They believe that when the sun goes down in the west it falls into the hands of the Wabemba. The Wabemba, however, are cannibals and eat the sun, except for a small piece which escapes them and returns to the east where it once more grows to its full size and rises again in the morning (No. 19, p. 53).

In the minds of the Barundi the moon (ukwesi) is of greater importance, for it is by the regularly recurring phases of the moon that they measure the time. The moon is a male (or hermaphroditic?) being; the evening star is his favorite wife; the other stars are his children and servants; the stars of the "Great Bear" are his concubines; and those of Orion are his oldest sons (No. 19, p. 54). As among all Negroes, the appearance of the first crescent after new moon is greeted with jubilation, but the Barundi have no special cult devoted to the return of the moon. The word ukwesi, moon, has the same root as the Swahili word mwesi; the moon is the shining, strong, and powerful one. This is probably also the origin of the name Mwesi for one of the Barundi kings (see p. 162 [not translated]). The name Unjamwesi really refers to the land of Mwesi, i.e., Urundi, but when the Arabs invaded the lake region (in 1840), they applied this name to the whole area south of Lake Victoria and east of Lake Tanganyika. They named it after the most powerful of the local rulers, the king of Urundi. Thus, the name has been retained for the region of Unjamwesi which, in addition to Tabora, was occupied by the Arabs; yet the real land of Mwesi (Urundi) remained closed to them.

805 Everything in Urundi is determined by the course and the changes of the moon. The year is a lunar year, but the year is not consciously divided into twelve months, nor is there any definite measure of time for a year (umwaka). A year has passed when the two main seasons, the dry season and the rainy season, have passed. Within this framework, time is reckoned by the various agricultural activities undertaken at certain phases of the

805 moon during the rainy season or the dry season, for example: beginning of the rainy season (end of October), sowing corn; end of the rainy season (end of May), planting manioc; birth of a boy, full moon after the corn was sowed; death of a relative, new moon after planting manioc, and so forth. Nobody is able to count back in time for more than eight or ten years, and to do this one counts by saying: we have harvested sorghum so many times (No. 19, p. 377). Nobody knows exactly how old he is as soon as he is more than eight to ten years old. If one describes an event as 20, 30, or 40 years in the past, he means by this merely that it happened a long time ago.

To be specific, certain seasons which are marked by regularly recurring agricultural events are given definite names which one might call the names of months as determined by the agricultural cycle. Van der Burgt lists a whole series [146] of these (No. 19, p. 377), for example: uratsi, time when the grass sprouts (end of September and beginning of October); umwirima, beginning of the rainy season, beginning of planting and sowing (end of October, November); umwirawura, sprouting of the seed (December); umukuwesi, the corn is beginning to form cobs, beans are blossoming (end of December); ikigarama, beans are ripe (beginning of January); ikidida, beans are picked (end of January); akataschi, sorghum is planted (beginning of February); uruschana, corn is ripe (end of February, beginning of March); umunjonjo, sorghum is growing cobs (end of March); urusamo, sorghum is almost ripe (beginning of April); akawosa, harvesting sorghum (end of April); uruheschi, end of the rainy season, planting manioc, harvesting corn (end of May); itsi, dry season, time for drinking beer and catching fish (June to October); umukakora, burning the grass (June, July, August); akasjabirano, preparing the fields (October).

805 201 Of course the Barundi do not divide the day into twelve hours but into periods determined by the position of the sun and by phenomena which regularly occurs during daylight. Like almost all Negroes, when referring to a certain time of day in a story, they indicate the particular position of the sun in the sky

805 201 with their outstretched hand. They also do this when they wish to indicate the length of a trip or the distance between two places. Specific expressions are used for the following times of day: first crowing of the cock, first signs of daybreak, dawn, time of the awakening of the birds, rising of the sun, time between noon and evening, beginning of dusk, sundown, nightfall, bedtime, midnight, very late, very early. The concept for "week" is unknown.

802 201 When counting and reckoning (kuharura) the Murundi uses the fingers of one or both hands; he does not use his toes or his feet. Like all Bantu Negroes, the Barundi count by placing together or bending a certain number or group of fingers. They thus employ the decimal system. In the Bantu language the numbers from one to ten are: one, umwe; two, iwili; three, itatu; four, inne; five, itano; six, itandatu; seven, indwi; eight, umunane; nine, tschjenda; ten, tschjumi. Frequently, however, one may hear them count by using combinations of numbers with five, i.e., 6 = 5 + 1, 7 = 5 + 2, 8 = 5 + 3, 9 = 5 + 4. The number of fingers on one hand is thus the arithmetical unit which, as a closed fist, is always used for calculations. Individual numbers are indicated with the fingers in the following manner: one, outstretched index finger of the right hand with the other fingers bent inward; two, outstretched index finger and middle finger with the other fingers bent; three, outstretched index finger, middle finger, and ring finger with the other fingers bent; four, all fingers of a hand, except the thumb, outstretched; five fist formed with the right hand; six, fist formed with the right hand touched by the outstretched little finger of the left hand; seven, fist formed with the right hand touched with the little finger and ring finger of the left hand; eight, fist formed with the right hand touched with the little finger, ring finger, and middle finger of the left hand; nine, fist formed by the right hand and touched with the little finger, ring finger, middle finger, and index finger of the left hand; ten, two fists placed together. In order to indicate eleven, the fists are beaten together once and then the index finger of the

802 right hand is stretched out to indicate one, etc., up to nine-
201 teen. To indicate twenty, thirty, forty, the fists are beaten together two, three, or four times while counting: two tens (amatschjumi awili), three tens (amatschjumi atatu), etc. There are no specific numbers above ten (No. 19, pp. 114-115).

If in practical life the Murundi has to calculate with
802 objects, for example, when buying a certain number of sweet potatoes or manioc or beads, he divides the objects in groups of five, then piles two such groups of five together, and then adds the two, three, or four tens, etc. [147] A Murundi will hardly ever count above 100; he will always try to visualize the amounts by dividing them into separate groups, for example, when counting cattle or the warriors or subjects of a mutwale.

The Murundi does not have a number for describing the concept of "much" or "very much," as, for instance, the figure 40 among the Turkic peoples or 600 among the Romans; he expresses "much, many" with the Bantu word inschi (Swahili, ingi).

3. Language

197 All Barundi speak the same Bantu idiom, Kirundi. This is true of the original Batwa inhabitants as well as of the Bahutu who settled in the area later, and also of the most recent Hamitic conquerors, the Batussi. Kirundi belongs to the agglutinative languages; its structure is the same as that of all Bantu languages. Its distribution covers the entire interlacustrine region. It is spoken in Urundi and, with dialectal variations, in Ruanda, Uha (Ujungu, Uschingu, Heru, Uruguru) and in Ujiji. The idioms spoken in Usindja, Ussuwi, and Karagwe, i.e., Kisindja, Kimueri, and Kinjambo, are very similar to Kirundi, and the languages spoken in Uganda and Unjoro are closely related to it (No. 19, p. 329). Many Kirundi words, mainly for governmental and administrative institutions and religious customs, can also be found in the Kinjamwesi dialects, such as Kissumbwa, Kirwana, Kisukuma, and Kitakama. The religious
198 secret societies (Waswesi, Batschwesi) of these peoples make

198 use of a special Kirundi terminology (No. 18, p. 1; cf. also above, p. 124).

The characteristic features of Kirundi are as follows:
193 1. absence of gender; 2. absence of declension, but nouns are grouped into classes and have special prefixes for singular and plural; 3. the parts of a sentence are governed by the nouns by means of certain prefixes or characteristic syllables (No. 18, p. 2).

All nouns can be divided into ten classes. Certain nouns are doubled in order to intensify the meaning or to give an expression a connotation of familiarity. Like all Bantu languages, Kirundi has very few adjectives; it uses instead participial forms of verbs, nouns, generic concepts, etc.

The most difficult aspect of Kirundi is the structure and system of the verb. It is true the verb as such is simple and its construction and use are logical, but the number and variety of forms is so great that it is extremely difficult to find equivalents for a Kirundi verb form in a European language. There are, for example, base forms, auxiliary forms, conjunctive forms, passive, conditional, causative, oppositional, restrictive, and other forms, altogether more than fifty (No. 18, pp. 32-33). On the other hand, the number of conjunctions is very small; most of them are expressed by auxiliary verbs. Since the Murundi will drop even these if they are not absolutely essential for conveying the meaning, sentences are short, and their manner of speech sounds choppy. If a Murundi were to understand an elegant German or even Latin sentence, he would translate it into at least ten sentences of Kirundi.

In addition to the shortness of the sentences, rapidity of
194 speech is also characteristic of the Barundi. The Banjaruanda, on the other hand, speak much more slowly with a somewhat [148] singing intonation. Accent, i.e., stressing a particular syllable or pronouncing it on a certain pitch, is very important for the meaning of a word. This also applies to whole sentences. A European who does not pay express attention to these factors will therefore often misunderstand a Murundi or be misunderstood by him, even if otherwise he speaks and understands Kirundi quite well. As a general rule, the syllable next to the last one in a word is stressed longer [sic] then the others, i.e., as in

194 German. In order to avoid harshness in the sound and pronunciation of words, the Murundi never permits an uninterrupted succession of two consonants or two vowels in the same syllable; he separates the consonants by a vowel and the vowels by a consonant or by the elision of one of the vowels.

However, in addition to the Kirundi which is generally
191 spoken in Urundi, there is also a vulgar and sacral Old Kirundi.
192 Its use is limited, and wherever it is spoken only fragments of it are mixed with modern Kirundi. The Barundi have two, three, or more terms for most objects and concepts; some belong to the elegant conversational language, others to the vulgar manner of speech of Old Kirundi which is used by the common people, old women, and also by the Batwa whenever they are among themselves (No. 19, p. 330), and it is found in the religious hymns, festive chants, and ceremonial speeches (see pp. 70 ,
198 124, 128). In Ruanda there is also a secret ritual language called "lubandwa" (No. 48, p. 315), and there is a similar language called "luchwesi" in Ussuwi (No. 24, p. 57).

In Old Kirundi the roots of nouns and verbs and their in-
197 flection are quite different from modern Kirundi. They are also
191 unlike those of any other Bantu language. Presumably Old Kirundi is the original language of the Batwa who have been living in these highlands longer than anyone else. The immigrants who arrived later learned this language from the Batwa and at present use it either separately in addition to their own idiom or intermingled with it. Of course, the Batwa speak modern Bantu Kirundi in addition to their original language (No. 18, pp. 106-107).

Here are a few examples to illustrate the three linguistic
192 elements which co-exist in Urundi:

197

Word	Kitwa	Old Kirundi	New Kirundi
sun	irijotwa	irijotwa	isuba
moon	ukurabwa	ukurabwa	ukwesi
leopard	uwuhama	uwuhama	ingwe
sorghum	ururerema	ururerema	isakka
to hunt	kutamagisa	kutamagisa	kuhiga
to forge	kunaga	kunagura	kususa

197 According to Czekanowski, these Kitwa words are also known in Ruanda; supposedly they belong to a "local dialect" there. It appears that the language of the Batwa living in the volcanic regions of northern Ruanda is still another one; even such an eminent expert on Ruanda as Father Barthélemy was not familiar with it (No. 48, p. 131), and the idiom of the Ituri Batwa seems to belong to still another linguistic group. Samples of it taken down by Stuhlmann have no similarity with the Kitwa spoken in Urundi (No. 19, p. 330).

It is quite noteworthy that the Hamitic Batussi who invaded Urundi from the north and northeast approximately four centuries ago (see p. 7) understand Old [149] Kirundi, but as far as we know they have preserved no trace of their own original Hamitic language. To all appearances they stayed in the northern Bantu countries for quite some time before coming to Urundi. As a result they lost all trace of their Hamitic language and exchanged it for Bantu Kirundi, in addition to giving up many of their original Hamitic customs and accepting many Bantu customs and concepts. This phenomenon is especially noteworthy since the Batussi up to the present day have strictly and unwaveringly maintained the somatic and social purity of their race against the Bantu peoples over whom they rule. According to Captain von Langenn, only the members of the royal family, the Baganwa, have preserved some fragments of the Hamitic language, but van der Burgt has no knowledge of this (written communication). Also the missionary Roehl describes as incorrect the claim which often appears in the literature on the subject that the Ruanda Batussi have a separate language (No. 47a, p. 274). On the other hand, Captain Weiss reports that the Bahima of Ruanda and Mpororó have their own special language which he and his men could not understand, but he does not give any specimens (No. 33, p. 70). Future investigators should pay particular attention to such Hamitic language fragments, for they might yield valuable indications as to the former language and thus the origin of the Batussi.

Comparisons will have to be made with the Niloto-Hamitic languages of the Massai, Teso, Bari, Latuka, and especially with

197 the language of the Nandi in the Uganda protectorate. The language of the Nandi, of all the languages of East Africa, seems to resemble most closely the pure Hamitic language type since the Nandi probably are the remnants of a former Galla invasion. (A. W. Crabtree, "The Languages of the Uganda Protectorate," Journal of the African Society, January, 1914, pp. 158 ff.)

194 An exact study of the peculiar manner in which the Batussi speak the Bantu idiom, Kirundi, will also yield many intimations and indications in this respect, for it is obvious even to an observant layman that the Batussi differ from the Bahutu in speaking Kirundi They have a different accent, pronounce certain sounds differently, and combine the syllables differently. In general, it seemed to me that in both Ruanda and in Urundi the Batussi speak Kirundi with a much softer intonation and also that they have a tendency to swallow the vowels of the final syllables. Instead of the 's' or 'ss' pronounced by the Bahutu, they use a very soft 'sch' or 'dsch': instead of Munjahasi they say Munjahasch'; instead of Lanongo, Lanong'; instead of Lubassa, lubasch'. It is also often difficult to say whether the final vowel pronounced is an 'a,' or 'e.' It is also difficult to hear the difference in the pronunciation of 'r,' 'l,' and 'd.'

113 It would serve no purpose to list examples of modern Kirundi at this point since one may consult the comprehensive Dictionnaire Français-Kirundi by Father J.M. van der Burgt and the small Dictionnaire Français-Kirundi et Kirundi-Français by Father F. Ménard which is specifically intended for missionary use (No. 29). Van der Burgt reproduces a few examples of stories, fables, songs, and hymns with an interlinear translation in his Dictionnaire, pp. 96, 292-293, 332-334, 339-342; I myself cannot add anything to them. In conclusion, however, I should 539 like to add a few proverbs which are noteworthy for their sharpness of observation and brevity of expression (No. 19, p. 470).

[150] 1) Ivintu vy'ukwibwa 'viraguma.
Things of no interest (are) hard [to comprehend].

2: Meyer--234 K-5 (1911) 1916 FO42 Rundi FO42

539 2) Kukenura n' ukuvina.
To work is to dance (play).

3) Ischano irasje ujumunsi, irindi risosa hanjuma
Misfortune comes today, something else will come later.

4) Invura irahedsje, isuba risosa.
Rain finished, sun will come.

5) Infisi iravuga, iraschaka kutwara umuntu.
Hyena howls, will carry away man.

6) Aravjutse, ari mubi.
(When) he has risen he is irritable.

Vorwort

Das vorliegende Buch enthält die Zusammenfassung eigener und fremder Beobachtungen und Studien über das in den westlichen Hochlanden Deutsch-Ostafrikas ansässige Volk der Barundi, das in sehr eigentümlicher Art aus Bantu, pygmoiden Batwa und reinrassigen Hamiten zusammengesetzt ist. Ich habe Urundi im Sommer 1911 bereist und meine Beobachtungen im wesentlichen durch das reiche Material ergänzt, das der lange Jahre in Urundi missionierende Pater J. M. M. van der Burgt (Missionsgesellschaft der „Weißen Väter") in seinem Dictionnaire Français-Kirundi zusammengetragen hat. Für die freundliche Erlaubnis der Benutzung dieses Materials zum Zweck meiner methodischen Darstellung bin ich dem Herrn Verfasser zu wärmstem Dank verpflichtet; ebenso für die wertvollen genealogischen Tabellen der Barundifürsten mit den erklärenden Begleitworten, die ich am Ende dieses Buches veröffentliche, ferner für mehrere interessante Photographien der Barundi und für die Mühewaltung, der sich Herr Pater van der Burgt durch Mitlesen der Korrekturbogen unterzogen hat. Was die Literatur sonst noch über die Barundi bot — leider ist es sehr wenig — habe ich mit verarbeitet; dazu eine Reihe mündlicher und brieflicher Erkundigungen, die ich von Landeskennern, namentlich von Offizieren unserer Schutztruppe, eingezogen habe. Vor allem habe ich für solche schätzenswerte Auskünfte den Herren Hauptmann von Langenn-Steinkeller und Hauptmann W. von Grawert zu danken. Ersterer hat in freundlichstem Entgegenkommen auch eine Übersichtskarte der Häuptlingssitze Urundis und eine Anzahl ausgezeichneter photographischer Aufnahmen aus Urundi beigetragen. Desgleichen bin ich für die Überlassung mehrerer guter Photographien Herrn Hauptmann Kraut verbunden.

Meiner Darstellung liegt das bekannte ethnologische Schema F. von Luschans zugrunde, das ich auch auf dieser Reise wieder vorzüglich bewährt gefunden habe. Wenn ich in einzelnen Punkten davon abgewichen bin, so geschah es hauptsächlich mit Rücksicht auf die besondere Eigenart der Barundi. Sehr nützlich war es mir ferner, daß ich während der letzten Ausfeilung meines Manuskriptes Einblick in die Aushängebogen des vortrefflichen neuen Buches „Ruanda" von J. Czekanowski (Bd. VI

der „Wissenschaftlichen Ergebnisse der deutschen Zentralafrika-Expedition 1907—1908 S. H. des Herzogs Adolf Friedrich zu Mecklenburg", Leipzig bei Klinkhardt & Biermann) nehmen konnte, wodurch ich auf zahlreiche ethnologische Parallelerscheinungen bei dem sehr ähnlich gearteten Nachbarvolk, den Banjarwanda, aufmerksam gemacht wurde, die mir manches im Leben der Barundi verständlicher machten. Auch hierfür sage ich sowohl dem Autor wie dem Verleger meinen besten Dank. Ich muß das Entgegenkommen um so höher schätzen, als das Czekanowskische Buch wegen des Krieges, an dem sowohl der Verfasser als auch der Verleger kämpfend teilnehmen, noch nicht erscheinen konnte. Da aber das Werk bis auf die Bildertafeln fertig gedruckt ist und gleich nach dem Krieg erscheinen wird, konnte ich in meinem Text die mehrfachen Verweisungen auf dieses Buch stehen lassen, ohne die Gefahr zu laufen, ihm etwas vorauszunehmen.

Ferner danke ich der Leitung des Kgl. Museums für Völkerkunde in Berlin für die Erlaubnis, aus den Schätzen dieses Museums eine größere Anzahl ethnographischer Gegenstände der Barundi abbilden zu dürfen, die entweder photographiert oder von der vielgewandten Künstlerhand Wilhelms von den Steinen für mein Buch gezeichnet wurden. Die übrigen abgebildeten Objekte gehören meiner eigenen Sammlung an und befinden sich im Museum für Völkerkunde zu Leipzig. Desgleichen sind die Typen-, Gruppen- und Landschaftsbilder dieses Buches von mir aufgenommen, soweit ihre anderweitige Provenienz nicht besonders angegeben ist. Dem Assistenten am Forschungsinstitut für Völkerkunde in Leipzig, Herrn Dr. H. Plischke, bin ich für seine sorgsame Mitarbeit am Register des Buches aufrichtig dankbar.

Schließlich ist es mir eine angenehme Pflicht, dem Leiter des neuen Kgl. Sächs. Forschungsinstituts für Völkerkunde in Leipzig, Herrn Prof. Dr. K. Weule, hiermit auch öffentlich meinen Dank dafür abzustatten, daß er mir Gelegenheit gibt, die Reihe der Abhandlungen dieses Institutes, die sich auf alle Zweige der wissenschaftlichen Völkerkunde erstrecken sollen, mit meiner in ethnologischer Methodik angelegten Arbeit über ein wenig bekanntes Volk unserer ostafrikanischen Kolonie zu eröffnen.

Eine allgemeine illustrierte Schilderung meiner Reise von 1911 wird unter dem Titel „Im Lande der Nilquellen" voraussichtlich im übernächsten Jahr in einem anderen Verlag erscheinen. Für geographisch Interessierte sei bemerkt, daß über verschiedene Resultate meiner Expedition bereits folgende Schriften veröffentlicht sind:

1. Hans Meyer, Reiseberichte aus Ruanda und Urundi an das Reichskolonialamt. (Mitteil. aus d. Deutsch. Schutzgeb., Berlin 1911, Bd. 24, Heft 4 u. 5.)

2. Hans Meyer, Auf neuen Wegen durch Ruanda und Urundi. (Zeitschrift d. Gesellsch. f. Erdkunde zu Berlin, 1912, Nr. 2.)

3. Hans Meyer, Ergebnisse einer Reise durch das Zwischenseengebiet Ostafrikas 1911. Mit Beiträgen mehrerer Fachmänner, 8 Bildertafeln und 4 farbigen Karten. (Mitteil. aus d. Deutsch. Schutzgeb., Berlin 1913, Ergänzungsheft 6.)

4. Hans Meyer, Der Kagerafluß in Ostafrika und die Ruandabahn. (Koloniale Monatsblätter, Berlin 1914, S. 6—21.)

Die dem vorliegenden Buch am Ende beigegebene vierteilige Karte des mittleren Zwischenseengebietes, dessen Hauptteile die Hochländer Urundi und Ruanda bilden, ist nach dem bis Anfang 1916 veröffentlichten neuesten Material bearbeitet.

2: Meyer FO42 Rundi

Dazu ist kurz zu bemerken:
1. die oro- und hydrographische Karte enthält im wesentlichen nur Höhenschichten von 500 m, wodurch bloß die großen Formen hervorgehoben werden. Die Höhenzahlen sind nach dem deutschen Kolonialatlas, den Aufnahmen der verschiedenen Grenzexpeditionen, den Karten des Oberleutnant Weiß und nach meinen eigenen Messungen eingetragen. Im Flußnetz sind nur die Hauptadern eingezeichnet. — 2. Die Karte der Niederschläge beruht auf den Arbeiten von H. Maurer, ergänzt durch die fortlaufenden Publikationen von G. Heidke in den Mitt. a. d. Deut. Schutzgeb. und durch die Karte in der Dissertation von W. Pietsch über das Abflußgebiet des Nils, 1910. Die Regenmessungen auf dem hohen Randgebirge des Zentralafrikanischen Grabens sind unsicher. Wahrscheinlich muß die 1500-mm-Kurve auf lange Strecken des Gebirges östlich vom Russisi und vom Nord-Tanganika ausgedehnt werden. — 3. Der Vegetations-Karte liegt die Englersche Karte in meinem Buch „Das Deutsche Kolonialreich", Band Ostafrika, zugrunde, ergänzt durch meine Aufnahmen von 1911 in den Mitt. a. d. Deutsch. Schutzgeb. 1913, Ergänzungsheft 6. — 4. Die Völker-Karte beruht auf K. Weules Karte im Band Ostafrika des Werkes „Das Deutsche Kolonialreich" und auf J. Czekanowskis Karte zur Ethnographie des Nil-Kongozwischengebiets in Peterm. Mitt. 1912, Januarheft. — Für die Redaktion der Karten bin ich Herrn Kartographen P. Krauß in Leipzig zu Dank verpflichtet.

Mein Buch stellt die Dinge in Urundi dar, wie sie kurz vor dem Ausbruch des Weltkrieges lagen. Seitdem wütet die Kriegsfurie zwei volle Jahre lang in unserer Ostafrikanischen Kolonie, dank der Raubgier Englands und seiner belgischen, portugiesischen und südafrikanischen Spießgesellen, und der Zeitpunkt wird nicht mehr fern sein, wo unsern braven, von aller Außenverbindung abgeschnittenen Verteidigern die Kräfte erlahmen werden. Die schönen, reichen Hochländer Urundi und Ruanda sind von den plündernden Horden der kongolesischen Belgier durchzogen und besetzt worden. Was für Greuel und Jammer dies bedeutet, weiß nur, wer die belgische Kolonisationspraxis vom Kongostaat her kennt. Geschwächt und verarmt wird Ostafrika aus dem Krieg hervorgehen, und die großen, von deutschem Fleiß und deutscher Umsicht geschaffenen Werte werden vernichtet oder gestohlen sein; der wahnwitzige Konkurrenzneid unseres britischen kolonialen Nebenbuhlers wird hier wie in Kamerun gründlich dafür gesorgt haben, bis es zum Frieden kommt. Und trotzdem lassen wir uns den Glauben an unsere koloniale Auferstehung nicht erschüttern!

Mit freudiger Zuversicht und mit zähem Machtwillen erwarten wir vom Endsieg auf den europäischen Schlachtfeldern und Meeren auch die Wiedergeburt eines deutschen Kolonialreiches, eines größeren, schöneren und stärkeren, als das vorige gewesen, eines Kolonialreiches, dessen mittelafrikanisches Kernstück von Ostafrika durch den ganzen Kontinent bis zur Kamerunküste und weiter reichen soll, und dessen geschlossene Einheit uns endlich die natürlichen, wirtschaftlichen, kulturellen, politischen und militärischen Vorteile bieten soll, die wir in der Zersplitterung unserer früheren Kolonialgebiete so lange haben entbehren müssen. Es wird eine Lust sein, in dem neuen deutschen Kolonialreiche zu leben, zu arbeiten, zu organisieren, zu schaffen, zu forschen. In unseren alten Schutzgebieten wird aus den Trümmern feindlicher Zerstörung durch den Zauber deutscher Kraft und Kenntnis der Phönix junger schöner Wirtschafts- und

Kulturblüte erstehen, am schönsten und stärksten vielleicht in den ostafrikanischen Hochländern Ruanda und Urundi, wo ein der Menschenarbeit förderliches Klima, günstige Boden- und Bewässerungsverhältnisse und eine dichte, arbeitsame Bevölkerung natürliche Grundlagen für die Kolonisation bieten, die wohl vorübergehend geschwächt sein können, aber über alle Kriegsnöte hinweg Bestand haben werden. Der nächsten Generation, die jetzt um Deutschlands Existenz und Zukunft kämpft, ist es vorbehalten, all das fortzusetzen, was wir Älteren in langer wirtschaftlicher, politischer und wissenschaftlicher Kolonialarbeit begonnen und ein gutes Stück vorwärts gebracht haben. Auf sie, deren Willen und Kraft der Weltkrieg gestählt, deren Einsicht und Weitsicht er geklärt und geschärft hat, setzen wir Älteren unsere kolonialen Zukunftshoffnungen. Könnte ihnen mein Buch ein Wegweiser zur rechten Erkenntnis und demnach zur richtigen Behandlung eines der meistversprechenden Eingebornenvölker unserer bisherigen Kolonien werden, so wäre sein praktischer Zweck, der dem wissenschaftlichen nicht nachstehen will, erfüllt. Sei dem Buch ein freundliches Geschick in Deutschlands schwerster Zeit beschieden!

Leipzig, im Herbst 1916.

Geologische Skizze des mittleren Zwischenseegebietes 3
Die Sitze der Groß-Bataude und Hauptsiedlungen in Urundi 171
Farbige Karte des mittleren Zwischenseegebietes . . . . . Am Ende

Erklärung: Die im Text in Klammern stehenden Nummern, z. B. (Nr. 38, S. 15), beziehen sich auf die fortlaufend numerierten Bilder im Illustrationsverzeichnis, Anhang I dieses Buches.

Erstes Kapitel

Übersicht über Land und Volk[1]

(Vgl. hierzu die farbige Karte am Ende des Buches.)

1. Das Land Urundi

Im äußersten Westen Deutsch-Ostafrikas liegt eines der bisher am wenigsten bekannten Länder Afrikas: Urundi. Im Norden grenzt es an Ruanda, im Osten an Usuwi und Uha, im Süden ebenfalls an Uha, im Westen an den Tanganikasee und den Russisifluß. Da Urundi nahezu 29000 qkm groß ist, also etwa doppelt so groß wie das Königreich Sachsen und über 1½ Million (nach van der Burgt sogar zirka 2½ Mill.) Einwohner hat, so ist es schon deshalb der Beachtung wert; aber obwohl es nun schon über 25 Jahre deutsches Gebiet ist, wissen wir doch nur wenig von ihm. Wegen der Schwierigkeit seiner Bevölkerung hatte das Gouvernement das Land für den Außenverkehr fast ganz gesperrt, und die politische Beeinflussung beschränkte sich bis zum Jahre 1911 darauf, daß in Usumbura am Tanganikasee eine Station mit einem Residenten und einer Schutztruppenkompagnie errichtet war. Erst 1912 ist die Residentur versuchsweise ins Landesinnere nach Gitega verlegt worden.

Oskar Baumann war der erste Europäer, der 1892 durch Nord-Urundi nach der Nilquelle am oberen Ruwuwu wanderte, worauf 1896—98 mehrere militärische Streifzüge der Schutztruppenoffiziere Ramsay, v. Trotha, Langheld, v. Langenn-Steinkeller, Fonck und des Dr. Kandt folgten; und 1896—99 errichtete die katholische Mission der „Weißen Väter" die Stationen Usumbura (später nach Marienheim verlegt), Mujaga und Mugera in Mittel-Urundi. Diesem Vorgehen der Europäer begegneten aber die Barundi feindlich, so daß die deutsche Schutztruppe unter ihren Führern Bethe, v. Beringe, v. Grawert sich von 1900 ab mit dem Urundikönig Kisabo herumschlagen mußte, worauf endlich die Barundi die Oberhoheit der Deutschen anerkannten. Diese Anerkennung ist aber nur nominell, denn unsre Macht ist dort viel zu klein, als daß schon eine deutsche Verwaltung in Urundi eingerichtet werden könnte.

Unter solchen Umständen hat auch die Erforschung Urundis keine wesentlichen Fortschritte machen können. Bloß die Völkerkunde ist in hohem Maß gefördert worden durch den Pater J. M. M. van der Burgt, der viele Jahre in Urundi als Missionar tätig war und seine ausgezeichneten völkerkundlichen Studien in einem Dictionnaire Français-Kirundi niedergelegt hat, das 1903 im holländischen Missionsverlag zu Beis le Duc erschienen ist. Aber die überaus zahlreichen ethnologischen und ethnographischen Angaben sind in diesem Buch so eng mit allerlei historischen und

[1] Ein Teil dieses Kapitels ist einem Vortrag entnommen, den ich im Frühjahr 1914 auf dem 19. Deutschen Geographentag in Straßburg gehalten habe.

linguistischen Exkursen verbunden, daß es schwer ist, das wissenschaftlich brauchbare völkerkundliche Tatsachenmaterial herauszulesen und methodisch zusammenzustellen.

In Anbetracht dieser Lage der Dinge entschloß ich mich, einen Teil meiner Expedition 1911 der Untersuchung Urundis zu widmen; und so habe ich denn einige Monate dort gearbeitet, Zeit genug, um einen Überblick zu gewinnen, den ich durch Erkundigungen, Korrespondenzen und anderweitige Studien möglichst zu ergänzen bemüht war. Von Ruanda aus Nordwest kommend, habe ich mit meinen beiden Begleitern, Herrn Oberleutnant Tiller und Herrn Dr. Houy, zuerst das nordwestliche Gebirgsland, die „Mondberge", überschritten, bin dann zur großen Zentralafrikanischen Grabensenke in das Russisital abgestiegen, habe mit Einbäumen den Nordzipfel des Tanganikasees bis zur Residentur Usumbura überquert und bin darauf durch ganz Zentral-Urundi von West nach Ost in einem Monat und weiter durch Nord-Uha und die Ussumbwastaaten gezogen, bis ich schließlich bei Tabora die Zentralbahn erreichte, auf der ich nach Daressalam fuhr.

Wenn ich nun die Bevölkerung Urundis, die Barundi[1], zu schildern versuche, so ist voraus die Frage kurz zu beantworten: Wie sieht das Land aus, der Boden, der das Volk trägt und nährt, und auf dem sich sein wirtschaftliches, soziales und politisches Leben abspielt? Urundi ist ein Hochland, der Südteil des Zwischenseengebietes, zu welchem im Norden Ruanda, im Osten die Kisibastaaten und Uha, im Süden ebenfalls Uha und ein Stück von Udjidji gehören. Nach allen Seiten hat Urundi gute natürliche Grenzen: im Norden die Flüsse Akanjaru und Kagera, im Osten die lange, nach Uha abfallende Plateaustufe, im Süden den Oberlauf des Mlagarassi, im Westen den Tanganikasee und Russissifluß. Das Land hat nach Norden eine breite Front gegen Ruanda, während es nach Südwesten keilförmig zum Tanganikasee ausläuft.

Seinem geologischen Bau nach ist Urundi in zwei große, landschaftlich verschiedene Gebiete gegliedert, von denen der größere, östliche Teil ein Stück des paläozoischen, wahrscheinlich der Kapformation angehörenden Tonschiefer- und Quarzitplateaus (Tafel 2b) ist, das fast durch das ganze Zwischenseengebiet geht, während der schmälere, langgestreckte Westteil der Rumpf eines archäischen Faltengebirges ist, das aus kristallinen Schiefern mit vielen Granitintrusionen und -durchbrüchen besteht. Die Grenze zwischen den beiden Formationen ist eine starke Geländeschwelle oder -stufe, die in Nordsüd-Richtung ungefähr im Meridian der Missionsstation Mugera verläuft. Nach Osten fällt das Tonschiefer-Quarzitplateau zur großen Gneis- und Granittafel von Unjamwesi ebenfalls in einer hohen langgestreckten Stufe ab, die ich für eine Denudationsstufe halte. Aber eine gewaltige tektonische Bruchstufe ist der steile Westabfall des Hochlandes zum Zentralafrikanischen Graben und zum Tanganikasee. Und kleinere Bruchsenken durchziehen an mehreren Stellen das Land Urundi, wie ja das ganze Zwischenseengebiet reich an solchen tektonischen Brüchen ist. (Vgl. die nebenstehende Karte.)

---

[1] In der Schreibung Barundi, Bahima, Batussi, Bahutu, Batwa, Baganda, Banjoro, Banjaruanda, Banjankole usw. folge ich dem Beispiel J. Czekanowskis (Nr. 38 u. 48). Hierzu ist zu bemerken, daß der Lautwert dieses B oft unserm W nahesteht und phonetisch-korrekt durch ein besonders gekennzeichnetes B verdeutlicht werden könnte; aber dem Zweck meiner Arbeit entspricht das allgemeine B für die Schreibung der Zwischenseenstämme besser. Dagegen muß Banjamwesi, Wasukuma, Waschaschi usw. geschrieben werden, weil von diesen Stämmen das W in aller Deutlichkeit ausgesprochen wird.

Geologische Skizze des mittlern Zwischenseengebietes.

Auf Grund eigner Beobachtungen und Sammlungen (bearbeitet von K. Schloßmacher; vgl. Hans Meyer, Ergebnisse einer Reise durch das Zwischenseengebiet Ostafrikas 1911, Berlin 1913) und mit Berücksichtigung der älteren Veröffentlichungen von Stuhlmann, Baumann, Graf v. Goetzen, Kandt, Herrmann, Danz, Stromer v. Reichenbach, Gagel, Koert und andern.

Über die hohen Schwellen und Stufen im Westen und Südosten sind nur einige Male ernstliche Feinde nach Urundi eingedrungen, aber um so mehr auf den ebeneren, offneren Fronten im Norden und Nordosten. Im Norden liegt der stolze streitbare Nachbar Ruanda, im Nordosten die unruhigen Völkerschaften der Victoriaseeregion: die Bassuwi, Basindja, Wassumbwa u. a.

Das Tonschiefer-Quarzitplateau Ost-Urundis ist in vieltausendjähriger Abtragung durch die meteorischen Kräfte zu einer großen Rumpffläche mit langen, breiten Bodenwellen ausgeglichen worden (Taf. 1a), während im Westen das ältere Randgebirge noch hoch aufragt, aber ebenfalls größtenteils runde Formen erhalten hat. Das Plateauland hat eine durchschnittliche Höhe von 1600—1800 m, das Randgebirge steigt bis zu 3000 m empor. Jüngere Schollenbewegungen haben den zur Ruhe gehenden Erosionsprozeß neu belebt, so daß in vielen Gegenden die Gewässer von neuem in die Plateaumassen und in die Gebirgsgewölbe junge, tiefe Täler eingeschnitten haben, die nun das Land in eine Unmenge von großen Blöcken und Bastionen zerteilten. In noch jüngerer Zeit jedoch ist dieser Erosionsprozeß durch andere Vorgänge wieder sehr verlangsamt worden. Dies zeigt sich darin, daß es jetzt nur im Gebirge des Westens muntere, schnelle Bäche gibt (Taf. 1b), während im Plateauland des Ostens fast überall nur träge Gewässer in den relativ jungen Tälern fließen. Allem Anschein nach hat durch junge Schollenbewegungen eine allgemeine Stauung der Gewässerstatt gefunden, die eine kolossale Versumpfung der Täler in Urundi, besonders im Norden und Nordosten, wie im ganzen Zwischenseengebiet verursacht hat. Ihre Hauptursache ist der mangelhafte Abfluß der Gewässer im Flußnetz des Kagera einerseits und in dem des Mlagarassi andererseits, weil ihre Erosionsbasis hier wie dort offenbar durch jüngere Schollenbewegungen wieder gehoben worden ist.

Die genannten beiden großen Flüsse teilen Urundi in zwei hydrographische Systeme: der größere Norden entwässert sich zum Kagera, Victoriasee, Nil, also zum Mittelmeer; der kleinere Süden zum Mlagarassi, Tanganikasee, Kongo, also zum Atlantischen Ozean.

Da Urundi zwischen $2^1/_2$ und $4^1/_2$° südl. Br. liegt, hat es, wie Ruanda, Äquatorialklima mit zwei Regenzeiten und zwei Trockenzeiten. Die Regen treten bald nach dem Zenitstand der Sonne im April und im Oktober ein. Die Regenmenge ist mit zirka 1250 mm im Norden und unter 1000 mm im Süden nicht groß für ein tropisches Land, aber doch reichlich und gleichmäßig verteilt. Die mittlere Jahrestemperatur schwankt um 20°, ist im Osten höher, und das Thermometer sinkt in den Gebirgen des Westens bis nahe an Null im Juli herab. Tagein, tagaus bläst ein strammer Ostwind über die Hochflächen. Morgens liegen sehr oft dichte Nebel in den Tälern.

Die Wärme, die Niederschlagsmenge und die Regenverteilung lassen ausgedehnten Waldwuchs in Urundi erwarten; aber dies ist ein Irrtum. Urundi ist ganz überwiegend Grasland (Taf. 1a), Hochweideland wie Ruanda, dem die Eingeborenen zerstören den Wald für ihre Äcker und Viehweiden. Nach Osten, nach Uha, wo das Land niedriger wird, geht das Grasland allmählich in Baum- und Buschgrassteppe über (Taf. 3b). Der Graswuchs Urundis ist höher und wilder als in Ruanda, weil die Grasflächen nicht so regelmäßig abgebrannt werden, und Urundi ist nicht so absolut baumlos wie Ruanda, weil bei jedem Kral einige Fikusbäume zur Nutzung ihrer Rinde gehegt werden. Auch sind die größern Flüsse,

wie der Ruwuvu oder der Mlagarassi, streckenweise mit ziemlich dichtem Uferwald gesäumt (Taf. 5). Aber die große Mehrzahl der Täler ist sumpfig und von mächtigen Papyrusdickichten erfüllt, die man nur an wenigen Stellen durchdringen kann (Taf. 2a). Während bei uns die Täler die gegebenen Verkehrswege und die geeignetsten Siedelstätten für die Menschen sind, können sie das in den meisten Gegenden Urundis und Ruandas nie sein. Die Talsümpfe und die oft sehr steilen Talhänge drängen die Bevölkerung mit ihren Wegen und Siedelungen auf die Plateauhöhen und obern Hügelflanken hinauf. Alle Gehöfte liegen deshalb oben auf den Bergrücken und den höhern Talstufen; in den Tälern nur Äcker von solchen Feldfrüchten, die, wie Bataten, viel Feuchtigkeit brauchen. Diese Beschaffenheit der Täler wird die künftige Erschließung des Landes durch Straßen oder gar Eisenbahnen außerordentlich erschweren. Die Papyrussümpfe sind neben den meilenweit übersehbaren Grashügeln der charakteristischste Zug in der Landschaft Urundis wie auch Uhas und Ruandas, also des größten Teils des Zwischenseegebietes.

Richard Kandt, der Poet unter den Ostafrika-Reisenden, widmet ihnen daher die folgende stimmungsvolle Schilderung:

„Seitdem wir das Gebiet von Urundi betreten hatten, auch schon die letzten Tage in Uha, bildeten Papyrussümpfe das charakteristische Merkmal der Landschaft. Oft liegen Bäche, die kaum zwei Meter breit sind, in einem Tal von Papyrus, das mehrere hundert Meter breit ist. Aber nicht nur die Haupttäler werden von ihm ausgefüllt, sondern er dringt auch in alle Nebentäler und steigt selbst die Furchen und Schluchten hinauf, so daß, von einer Höhe gesehen, das Land einem riesigen Netz grüner Bänder gleicht, in dessen Maschen die Berge wie Inseln liegen. Ich habe manches seltsame und schöne Landschaftsbild in Afrika gesehen; ich habe die unsägliche Melancholie kennengelernt, die auf verbrannten, bebend heißen Steppen liegt, wenn die Strahlen der untergehenden Sonne blutrot den flimmernden Dunst durchbrechen; ich habe auf tongostaatlichem Boden die Herrlichkeit und die Schrecken des Urwaldes bis zur Neige gekostet; ich habe mich an der heiteren Anmut zentralafrikanischer Seen erfreut und die grandiose Wunderwelt der Vulkane angestaunt; ich kenne die herbe Größe der Flüsse, die schweigend den Schatten der Galeriewälder durchströmen, und die Tragik der von allen guten Geistern verlassenen Lavawildnis, und doch muß ich sagen, daß kaum eine dieser Landschaftsstimmungen sich meinem Geiste tiefer eingeprägt hätte als das Bild einer solchen Papyruslandschaft. Sie ist immer wechselnd, nicht nur mit der Jahreszeit, sondern fast mit jeder Stunde des Tages und dem Einfallswinkel der Sonnenstrahlen; sie ist anders bei klarem und bei trübem Wetter, des Morgens anders als des Abends. Stundenlang konnte ich von der Höhe eines Berges auf sie hinabblicken und ward nicht satt zu schauen, wie die violetten Schatten der wandernden Wolken über die grünen Gefilde zogen oder wie der Wind mit ihnen spielte, so daß erst eine leise Unruhe in ihnen wie in einer dichtgedrängten Herde entstand, bis er zum Sturm anschwoll und lange tiefe Furchen zwischen sie pflügte, die sich immer wieder schlossen und wieder öffneten und wieder schlossen." (Nr. 22, S. 246.)

Hochstämmiger Urwald wächst in Urundi nur noch auf den höchsten Gebirgsrücken des Westens (Taf. 4a), aber auch dort nur in verhältnismäßig kleinen Resten, wie in Ruanda und in einigen Winkeln des Victoriasees. Überall wird er von der sich ausbreitenden Bevölkerung zurückgedrängt, vernichtet. Sehr wahrscheinlich war vor wenigen Jahrhunderten noch das ganze Zwischenseegebiet von Urwald bedeckt, da sowohl die Höhenlage als auch die Temperatur und die Niederschläge im Zwischenseegebiet dem Waldwuchs günstig sind. Aber die starke Bevölkerungszunahme der ackerbauenden Bantu brauchte Raum, der Wald mußte weichen; und noch größer wurde die Waldverwüstung, als die viehzüchtenden Batussi ins Zwischenseegebiet eindrangen und immer größere Flächen Grasweide für ihre Viehherden in Anspruch nahmen. An Stelle des abgebrannten Waldes ist in den Hochtälern des Gebirges vielfach Bambus (Arundinaria alpina) emporgewachsen, der den perio-

2: Meyer FO42 Rundi

dischen Grasbeständen besser widersteht und nun einen eigenartigen Zug ins Landschaftsbild der Berge bringt (Taf. 4b). Ganz steppenhaft hingegen ist der Gras- und Baumwuchs in der heißen, trocknen Ebene der Russissiniederung (Taf. 3a).

Durch die Ausbreitung der Menschen und die Vernichtung des Waldes ist auch das freie Tierleben außerordentlich eingeschränkt worden. Im Grasland gibt es nur noch sehr wenige Antilopen (Simela, Schopfantilopen, Gazellen) und von großen Vögeln nur noch Kronenkraniche, die man wegen ihrer Häufigkeit das Wappentier Urundis und Ruandas nennen könnte, ferner Trappen, Reiher, Ibisse, Frankoline, Nilgänse usw. In den Uferwäldern der Flüsse kommen noch Buschböcke (Tragelaphus), Moorantilopen und Ducker vor, im Wasser selbst zahlreiche Nilpferde, Krokodile und Fischottern. In den Waldresten des Randgebirges und in der Baumsteppe der Russissiniederung leben noch ziemlich viele Elefanten, Büffel, Paviane usw. Leoparden sind überall nicht selten. Besonders interessant ist die Mischung ostafrikanischer und westafrikanischer Formen in diesem pflanzen- und tiergeographischen Grenzgebiet. Wie zahlreiche Pflanzen der westafrikanischen Waldflora bis hierher und teilweise sogar bis zum Victoriasee vorgedrungen sind, so auch viele kleine und große Repräsentanten der westafrikanischen Fauna; ich nenne nur den Graupapagei, den Riesenturako, den Hornraben, und von Säugern den Rotbüffel, den Schimpansen und den Gorilla. Wegen dieser Mischung der ost- und westafrikanischen Formen sind die Pflanzen- und Tiersammlungen aus dieser durch West-Urundi und West-Ruanda verlaufenden biogeographischen Grenzzone sehr interessant.

2. Die Bevölkerung

Noch viel interessanter als die Mischung der Flora und Fauna ist in Urundi wie in Ruanda die Mischung der Bevölkerung. Es sind drei anthropologisch und kulturell ganz verschiedene Elemente, die aber ziemlich streng gesondert neben- resp. übereinanderstehen und in dieser Gruppierung sich im Lauf der Jahrhunderte zu einem starken sozialen und politischen Gemeinwesen befestigt haben.

Die große Masse der Bevölkerung sind die der Bantuasse, und zwar den sog. Grundbantu, angehörenden Ackerbauer, die Bahutu, die in Urundi zirka $1^1/_2$ Millionen Köpfe zählen. Über ihnen steht als Herrenkaste das hamitische Hirtenvolk der Batussi, die vor etwa 400 Jahren von Norden in Urundi eingewandert sind und hier wie im ganzen Zwischenseegebiet die ackerbauenden Bahutu unterworfen haben. Es sind stolze, hochgewachsene Gestalten von oft mehr als 2 m Höhe, mit scharfen Profilen und vornehmer Haltung, so daß sie selbst dem vielgereisten Europäer zunächst imponieren. Ihre Zahl beläuft sich nach amtlicher Schätzung auf 40—50 000 in ganz Urundi. Und neben diesen Riesen birgt das Land noch die Reste einer kleinwüchsigen, pygmoiden Urbevölkerung, die Batwa, die schon vor den Bantu hier in den Wäldern gelebt und mit den Wäldern durch die anderen, stärkeren Elemente teils ausgerottet, teils in entlegene Winkel verdrängt worden sind. Es sind ihrer jetzt nur noch einige Tausend in Urundi und ebenso viele in Ruanda. Ihre Körpergröße schwankt meist zwischen 1,50 m und 1,60 m, aber sie sind kräftig gebaut und erwerben ihren Unterhalt teils als Jäger, teils als Schmiede und Töpfer im Dienst der andern, teils als Leibwachen der Großen und des Königs.

Zweifellos sind die Batwa die älteste Bevölkerungsschicht im ganzen Zwischenseegebiet. In kleinen Stammessplittern über das Land zerstreut, entbehren sie

jedes sozialen Zusammenhanges; auch scheinen sie keinerlei Tradition über ihre Vergangenheit zu haben. Die Urundi-Batwa sind ähnlich den Batwa in den Wäldern Ruandas, aber in Urundi haben sie augenscheinlich mehr Blut von der Bantubevölkerung in ihren Adern, sie sind daher etwas größer und nicht so rein im Typus wie die Batwa-Ruandas. In Urundi wie in Ruanda und im nordöstlichen Kongogebiet sind die Batwa im Verschwinden. Von den Batussi wie von den Bahutu als Parias betrachtet, werden sie überall schlecht behandelt, aber weidlich ausgenutzt. Sie sehen immer tief melancholisch aus und sind äußerst mißtrauisch; ich habe selten einen Mutwa lachen sehen. Es ist eine alte, müde Menschenrasse, die dem baldigen Untergang entgegengeht. Deshalb ist es die höchste Zeit, daß die Reste dieses Volkes endlich methodisch von einem ethnologischen Fachmann in längerem Aufenthalt untersucht werden. Mir scheint das eine der dankbarsten Aufgaben in unserm an ethnologischen Problemen so reichen Ostafrika zu sein.

Die etwa $1^1/_2$ Millionen Köpfe starke Hauptbevölkerung Urundis, die ackerbauenden Bahutu, gehören zu den sog. Grundbantu des zentralen Ostafrika, wie auch die Wanjamwesi. Ihrer Tradition nach sind sie einst von Osten, also vom südlichen Victoriasee her, nach Urundi gekommen und haben, das Waldland rodend, sich immer weiter nach Westen verbreitet. Sie sprechen fast denselben Bantudialekt wie die Bewohner von Ruanda und von Uha. Ja, merkwürdigerweise sprechen auch ihre Eroberer, die hamitischen Batussi, und ihre Unterjochten, die Batwa, nur diesen Bantudialekt, während in den östlichen und nördlichen Nachbarstaaten die ganze Bevölkerung Kinjoro, stellenweise auch Kissumbwa, spricht. (Über Reste eines ältern Kirundidialektes siehe S. 148.) Dagegen haben in Urundi und Ruanda die Bantu ihren ethnischen und somatischen Charakter unter dem Einfluß ihrer hamitischen Eroberer einigermaßen verändert. Diese, die Batussi, haben zwar in den wenigen Jahrhunderten ihrer Besitzergreifung die Sprache, die Kleidung (Rindenzeug) und viele Sitten von den Bantu angenommen, aber sie haben ihnen dagegen etwas von ihrem Blut, ihre Wohnart (Rundhütte), ihre großhörnige Rinderrasse und ihre politische Gliederung gegeben.

Von der Geschichte der Bahutu Urundis und Ruandas ist nichts bekannt aus den Zeiten vor der Batussiherrschaft. Erst mit und unter den Batussieroberern treten auch die Bahutu ins Licht der afrikanischen Geschichte. Von da ab gibt es eine Geschichte der Barundi, der staatlich zusammengefaßten Gemeinschaft von Batussiadel, Bahutuvolk und Batwaparias (s. S. 151).

3. Körperbeschaffenheit

Anthropologische Messungen habe ich an den Barundi nicht vorgenommen, da ich durch meine geographischen und ethnographischen Aufgaben völlig in Anspruch genommen war. Mein medizinischer Begleiter, Dr. R. Houy (leider 1913 in Kamerun ermordet), dessen Aufgabe die Anthropologie eigentlich war, fand aber, da er zugleich höchst interessierter Zoologe war, in der merkwürdigen Fauna des Landes ein so reiches Feld für seine Sammel- und Beobachtungstätigkeit, daß auch er von den zeitraubenden anthropologischen Messungen absehen mußte. So mußte ich mich auf nur gelegentliches Hantieren mit Bandmaß und Farbentafel beschränken und kann im übrigen bloß allgemeine somatische Beobachtungen wiedergeben.

2: Meyer FO42 Rundi

Die eindrucksvollsten Erscheinungen in der Barundibevölkerung sind natürlich die hochgewachsenen herrschenden Batussi (Taf. 11, 12, 14). Abgesehen von ihrem meist glattrasierten Schädel gleichen sie körperlich durchaus ihren Stammesgenossen in Ruanda. Auf den ersten Blick sieht man ihnen ihren hamitischen Ursprung an. Ich habe auf meinen früheren Reisen oft mit Somali und Galla zu tun gehabt und glaubte mich bei den Batussi Urundis wie Ruandas wieder mitten unter jene, namentlich die Galla, versetzt. Aber eine Eigenschaft haben die Batussi vor den Hamiten Nordostafrikas voraus: sie sind im Durchschnitt viel größer als jene. Den bequemsten Maßstab trage ich in meiner eigenen Körperlänge mit mir, und an diesem konnte ich leicht die vielen Hunderte von Batussi annähernd messen, mit denen ich zusammenkam. Keinen Erwachsenen fand ich kleiner als 1,77 m (mit Band gemessen), wenige unter 1,80 m, die Mehrzahl zwischen 1,80 und 1,90 m, viele (zirka 10%) zwischen 1,90 und 1,95 m, wenige zwischen 1,95 und 2 m und vereinzelte über 2 m bis zu einem mit Band gemessenen Extrem von 2,08 m. Trotz der außerordentlichen Länge ist das Größenverhältnis der Körperteile zueinander ebenmäßig; nicht bloß die Beine und Arme sind sehr lang, sondern auch der Rumpf, der oft so schmal und langgestreckt ist, daß man sich kaum vorstellen kann, wie die inneren Organe darin gelagert sind. Und der Eindruck der abnormen Länge wird noch dadurch verstärkt, daß fast alle Batussi hager und mager sind. Nur die älteren Batwale (Oberbeamten) und die wohllebigen Baganwa (Angehörige der Königssippe) haben runde Fleischformen, aber Fettbäuche sieht man auch bei den ältern selten. Die Taille ist gewöhnlich sehr dünn, die Brust und Schultern aber breit. Alle diese Eigenschaften sind höchst wahrscheinlich die Folge einer langen, mehr oder minder bewußten Zuchtwahl, d. h. Züchtung auf große Körperlänge (vgl. Luschan in Anhang II zu Nr. 40, S. 252).

Die meisten Batussi haben sehnige Glieder und feste Muskulatur, aber kein dickes Muskelfleisch an den Armen und Beinen. Die Waden fehlen gewöhnlich ganz. Auffallend zierlich und feingegliedert sind die Hände und Füße; nach unsern Begriffen sind es lauter schmale Damenhände mit der Handschuhnummer 5 oder 6 und mit langen Fingern, während die Füße zwar auch schmal und klein sind, aber kurze Zehen haben. Das Handgelenk ist so dünn, daß auch die Männer es leicht in den $2^1/_2$—$3^1/_2$ cm weiten Spalt der Holzscheiben einschieben können, mit denen sie sich die linke Hand gegen die zurückschnellende Bogensehne schützen (s. S. 34, 82). Kein erwachsener Europäer vermag dies. Ihre am rechten Handgelenk getragenen kupfernen oder eisernen Schmuckringe sind alle so eng, daß sie für Kinder bestimmt zu sein scheinen. Die Vornehmen lassen als Zeichen ihres Adels und ihrer Freiheit von Handarbeit den Nagel am kleinen Finger $1^1/_2$—$2^1/_2$ cm lang wachsen.

Der Hals ist ziemlich lang und fein geschwungen, wodurch der Kopf eine leichte, stolze Haltung erhält, im Gegensatz zum Bantumeger mit seinem gedrungenen Hals.

Sehr schön ist der Schädel geformt (Taf. 17c, d). Da die Batussi Urundis ihn im Gegensatz zu denen Ruandas meist glatt rasieren, kann man seine hohe Wölbung, seine runde breite Stirn und seine außerordentliche Länge, die das runde Hinterhaupt weit über den Halsansatz hinausragen läßt, stets bewundern. Die Schädel sind extrem dolichocephal.

In der Gesichtsform möchte ich zwei Typen unterscheiden. Der eine, edlere, hat eine feingeschwungene Nase mit schmaler Nasenspitze und dünnen Nasenflügeln, relativ kleinem Mund und schmalen Lippen (Taf. 17d); der andre Typus hat eine

gerade oder stumpfe Nasenform, eine breitere Nasenspitze und einen größeren, dickeren Mund (Taf. 17b). Aber beide Typen zeichnen sich durch die ovale Form des Gesichts, durch das kleine, aber ausgeprägte Kinn und durch das gänzliche Fehlen der Negerprognathie aus. Häufig ist jedoch der edle Eindruck des Gesichtes durch starkes Vorstehen der obern Vorderzähne (Prodentie) beeinträchtigt. Deshalb steht der Mund dieser Individuen meist halb offen und läßt die obern vier Schneidezähne sehen. Diese Schiefzähnigkeit schien mir gerade bei den Mitgliedern der vornehmsten Geschlechter hier wie in Ruanda oft vorzukommen, denen auch die längsten Körpergestalten eigen sind. Vielleicht sind diese beiden Eigenschaften besondere Merkmale und Folgen der langen Inzucht dieser Geschlechter, die nur in enger Wahl untereinander heiraten (S. 100, 106), wogegen den gewöhnlichen Batussi ein größerer Spielraum in der Ehewahl gewährt ist und die niederste, ärmste Klasse auch Ehen, wenn auch keine vollgültigen, mit Bahutu eingeht.

Wenn das Haupthaar stehengelassen wird, sieht man, daß es kraus und wollig wie das der Ruanda-Batussi ist. Auch sieht man an den Schläfen und über der Stirn, daß es nicht gleichmäßig dicht, sondern in einzelnen Büscheln wächst; es ist die am meisten negerhafte Körperrigenschaft der im übrigen so gar nicht nach Negern aussehenden Batussi.

Die zweite große Bevölkerungsschicht der Barundi, die von der Adelskaste der Batussi beherrschte Volksmasse der Bahutu, hat denselben bekannten Körpertypus der Bantu wie in allen Ländern des Zwischenseengebietes, also wie in Ruanda, Mororo, Ankole, Karagwe, Kisiba usw. (Taf. 6, 8, 9, 10). Durch ihre untersetzte Gestalt, die zwischen 1,62 und 1,70 m schwankt, namentlich durch ihre kürzeren Beine, ihren gedrungenen muskulösen Körperbau, der freilich oft infolge von Unterernährung schwächlich erscheint, und den echten prognathen Negerschädel, fallen sie sofort gegen die Batussi auf. Von den Zentralbantu Unjamwesis und Usukumas unterscheiden sie sich somatisch nur wenig, obwohl sie in mancher Beziehung auch den Waldbantu des östlichen Kongogebietes ähneln, die vermutlich früher weiter nach Osten verbreitet waren (s. S. 152). Ihre östlichen Ausläufer in Urundi dürften den Baliga in Ruanda gleichzusetzen sein, die als rauhes, den Urwald rodendes, kräftig gewachsenes Bergvolk sich von den übrigen Bantu Ruandas ebenso unterscheiden wie in Urundi die das Westgebirge bewohnenden Waldbantu von den andern Bantu Urundis (vgl. auch 47a, S. 272).

Sehr oft sieht man aber unter den Bantu des Zwischenseengebietes feinere, schmälere Gesichter mit weniger breiten Nasen und Mäulern und mit weniger starker Entwickelung des Unterkiefers als unter den andern. Die Ursache wird die jahrhundertelange Beimischung von Bahimablut sein, denn die hamitischen Herren der Bantu mischen sich zwar oft mit Bantuweibern, aber nie oder nur in seltenen Ausnahmefällen Bantumänner mit Bahimaweibern (S. 101). Diese mit Batussiblut gemischten Individuen der Bahutu sind auch meist höher gewachsen als der gewöhnliche Muhutu. Alle Bahutu sind ziemlich langschädelig. Das Haar ist kraus, kurz und büschelig, aber nicht „pfefferkörnig".

Der Unterschied dieser beiden Rassenelemente macht sich auch in der Hautfarbe bemerkbar. Die große Mehrzahl der Bahutu hat die Farbe dunklen Milchkaffees mit violetten Reflexen: etwa Nr. 28 und 29 der Luschanschen Farbenskala. Bei vielen aber ähnelt die Hautfarbe dem rötlichen Ton der mir von früheren Reisen her gut

bekannten südamerikanischen Hochlandsindianer, was bei den einen der Ingredienz von Batussiblut, bei den andern aber der gewohnheitsmäßigen Einsalbung mit roterdiger Butter zuzuschreiben ist; sie kommen dann der Nr. 32 der Skala nahe, aber nur im Farbenwert, nicht in der Intensität des Tones. Die Batussi dagegen sind meistens leicht schokoladenbraun, zwischen Nr. 26 und 28 der Skala, oder kupferbraun wie manche Indianerstämme. Viele zeigen hellere Abstufungen je nach der Sonnenwirkung, aber immer herrscht ein rötlicher Ton vor, nie ein gelbbrauner oder ein schwarzer. Die Batussiweiber (Taf. 15, 17a) sollen durchweg heller als die Männer sein — ich habe nur sehr wenige zu sehen bekommen —, weil sie sich meistens in den Gehöften aufhalten, während die Bahutuweiber, die sich bei der Feldarbeit dem Sonnenlicht ebenso aussetzen wie die Männer, auch ebenso gefärbt sind wie diese (Taf. 14b, 16b). Kleine Kinder sind immer beträchtlich heller.

Auch die dritte Bevölkerungsgruppe, die Batwa (Taf. 7), haben in Urundi fast denselben somatischen Charakter wie ihre Stammesverwandten in Ruanda, von wo wir sie durch die Arbeiten J. Czekanowskis etwas genauer kennen. In Ruanda haben sie namentlich in den waldigen Gebieten von Bugoje und der Virungavulkane noch viel von ihrem ursprünglichen Pygmäencharakter bewahrt, da sie noch ein zurückgezogenes Jägerleben in den Wäldern führen können. Aber auch in Ruanda lebt schon die Mehrzahl von ihnen als Ackerbauer und Handwerker (Töpfer, Schmiede) in kleinen Gemeinden verstreut zwischen den Bahutu und hat von diesen schon eine starke Beimischung von Bantublut, teils von den Waldbantu des östlichen Kongogebietes, teils von den Zentralbantu des Zwischenseengebietes, erhalten. So ist es auch der Mehrzahl der Batwa Urundis ergangen, da auch sie mit der Ausbreitung der Bantu und dem Dahinschwinden der Wälder zur Siedelung zwischen den Bahutu und zum Ackerbau gedrängt worden sind (s. S. 152). Aber immer noch begegnen wir unter ihnen vielen Individuen, die uns entweder schon auf den ersten Blick oder doch bei näherem Zusehen die pygmoiden Merkmale erkennen lassen, wie wir sie von den nördlicheren, reinrassigen Urwaldpygmäen (Wambutti) des Ruwensori und des obern Ituri kennen.

Zunächst ist es die Körpergröße und die Gliederform, die am Mutwa auffällt. Während da aber die reinrassigen Batwa des Ituri nur 1,30—1,40 m lang sind, trifft man in Ruanda nur noch unter den Jägerbatwa Bugojes und der Virungavulkane Individuen von 1,40—1,55 m Größe; dagegen unter den ackerbauenden, zwischen den Bahutu lebenden, nur selten einen von weniger als 1,60 m, oft aber von mehr. Durchweg sind die Weiber kleiner als die Männer. Czekanowski gibt für die Batwamänner vom Muhawura das Durchschnittsmaß von 1,53 m, für die Weiber vom Muhawura 1,40 m an, für die Batwamänner der ackerbauenden Stämme dagegen 1,61 m und für die Weiber 1,54 m. Diese letztern Maße gelten im allgemeinen auch für die Batwa Urundis. Bei allen sind Rumpf und Glieder relativ kurz, die Beine wieder verhältnismäßig kurz zum Oberkörper, aber alle Glieder mahen wohlproportioniert und von kräftiger Muskulatur. Die Hände und namentlich die Füße sind relativ breit und plump, die Finger und Zehen im Verhältnis zum Hand- und Fußrücken sehr kurz. Die Ferse springt weit nach hinten vor, so daß, von der Seite gesehen, der Unterschenkel mehr nach der Mitte des Fußes hin aufgesetzt zu sein scheint.

Auf dem kurzen Hals sitzt meist ein rundlicher, ausgesprochen brachycephaler Kopf mit kurzem Gesicht und breiten Jochbeinen, doch sind auch langschädelige Individuen nicht gerade selten. Stirnbein und Brauenbogen überragen gewöhnlich das

Gesicht stark. Die Nase ist fast immer an der Wurzel eingezogen, wodurch die Stirn noch mehr vorspringt; die Nase ist flach und breit und hat eine breite, meist stark aufgestülpte Spitze, so daß man in die Nasenlöcher hineinsieht. Der Mund ist mittelgroß, die Lippen aber meist ziemlich dünn und die Oberlippe oft kaum geschwungen. Das Kinn ist klein und tritt etwas zurück. Die Ohren haben gewöhnlich ein sehr kleines Ohrläppchen oder gar keins. Das Haar ist kraus, filzig und steht, wenn es kurz geschnitten ist, in kleinen „pfefferkörnigen" Büscheln, wie bei den Buschmännern Südafrikas. Alte Leute haben häufig einen sehr griesgrämlichen oder unglücklichen Gesichtsausdruck, indem über die Stirn drei oder vier eigentümliche runzelige Querfalten laufen und von den Nasenwinkeln je eine oder zwei dicke Hautfalten nach den Mundwinkeln ziehen, die oft fast wie Narbenwülste aussehen (s. Taf. 7).

In ihrer Hautfarbe sind die Batwa dunkler als die Bahutu, nicht selten mit einem Stich ins Violette, auch wenn die Haut reingewaschen ist. Auf dem farbigen Bild im Reisewerk des Herzogs Adolf Friedrich zu Mecklenburg, wo ein Mutussi, ein Muhutu und ein Mutwa nebeneinanderstehen, ist die Farbe des Muhutu am besten getroffen, während der Mutussi zu rot und der Mutwa zu braun ist.

Czekanowski faßt die Ergebnisse seiner Messungen und seiner Vergleichungen der Batwa mit den reinen Pygmäen der nördlicheren Gebiete und mit den Wald- und Zwischenseenbantu in folgende Schlüsse zusammen: Die Batwa sind keine einheitliche Gruppe, sondern aus Elementen der Pygmäen, der Urwald- und in geringerem Maße auch der Zwischenseenbantu zusammengesetzt; unter den Batwa des Vulkangebietes überwiegt der Pygmäentypus, unter denen Mittelruandas der Typus der Zwischenseenbantu. Das letztere ist nach meinen Beobachtungen auch in Urundi der Fall. Auffallend ist bei den Batwa die von Czekanowski nachgewiesene Spur eines dolichocephalen buschmannartigen Elementes, das in der Verbindung mit geringer Körpergröße auch sonst in ostafrikanischen Beobachtungsreihen oft erscheint und Czekanowski namentlich am Kilimandjaro stark aufgefallen ist. Die Batwa sind ursprünglich „Zwerge" gewesen, haben aber allmählich ihren Typus durch Aufnahme von Bantublut verändert. Je weiter wir nach Norden, zu den reinrassigen Pygmäen des Ituri hin, Batwa antreffen, desto stärker sind ihre pygmäischen Eigenschaften; am stärksten bei den Batwa der Insel Idschwi des Kiwusees, wo sie gegen äußere Einflüsse sehr geschützt sind (Nr. 31a, S. 101—109).

Da nach amtlicher Angabe in der Gesamtbevölkerung Urundis die Batwa kaum 1% und die Batussi nur etwa 3% ausmachen, ist die Überzahl der Bahutu-Bantu so groß, daß sie den Totaleindruck vom Volk der Barundi schlechthin bestimmen. Und die Bahutu sind, wie anderseits auch die sie beherrschenden relativ wenigen Batussi, somatisch, geistig und kulturell so einheitlich durch ganz Urundi, daß man in dem großen Reich nur selten Abweichungen von dem Durchschnittstypus findet; außer den oben erwähnten Mischlingen aus Bahimablut. Natürlich verdankt das Barundivolk diese Einheitlichkeit vor allem dem jahrhundertelangen festen Abschluß nach außen. Selbst in den westlichsten Grenzgebieten am Tanganikasee und am Russisifluß, die doch durch ihr viel wärmeres Niederungsklima, durch die Lebensanpassungen an den großen See, durch die Nachbarschaft der ganz anders gearteten Kongovölker u. a. m. stark abwandelnd auf die hier wohnenden Barundistämme hätten einwirken können, hat sich der ethnische Charakter der Barundibevölkerung nur wenig geändert, obgleich sich der politische Zusammenhang mit den Hochland-Barundi sehr gelockert hatte.

Richard Kandt schrieb 1901 über die Barundi der Tanganikaniederung:

„In politischer Beziehung zerfällt das Gebiet zwischen dem Ostrande des Zentralafrikanischen Grabens und dem Ruffiffi in zehn bis zwölf kleinere Sultanate, von denen die meisten zirka 150 bis 200 Geviertkilometer bedecken mögen. Nominell sind sie unselbständig, und ihre Herrscher, die alle dem semitischen, aus den Gallaländern südlich von Abessinien stammenden Geschlecht der Watussi angehören, sind ursprünglich Vasallen des Königs von Urundi, des ‚Mueſi', wie sein Titel lautet, gewesen. Aber, wenn auch die große Masse der Bewohner den Eindruck ziemlich unvermischter Warundi macht, so ist der hohe Kamm der Randgebirge und die breite Urwaldwildnis ein zu bequemes Bollwerk gewesen, um nicht bei der von großen Ideen nationaler Zusammengehörigkeit unberührten Bevölkerung Selbständigkeitsgelüste wachzurufen, um so eher, als auch das Mutterland in eine Unzahl sich gegenseitig befehdender und mit der Zentrale nur noch locker verknüpfter Häuptlingsschaften zersplittert ist. Der noch bestehende Rest von Zusammenhängen scheint allein dadurch sich zu erhalten, daß dem Mueſi irgendeine Art religiöser Bedeutung innewohnt, die es seinen Häuptlingen ratsam erscheinen läßt, die Brücken zu ihm nicht bis zum Pfeilergrund abzubrechen.

Wenn man bedenkt, wie unendlich verschieden die gesamten Lebensverhältnisse der am Tanganika sitzenden See-Warundi von denen der Berg-Warundi sind, und wie weit die mannigfachen Einflüsse zurückgreifen, die durch die Anwesenheit der Wasuaheli und Araber und des deren Fußspuren folgenden Gemenges westlicher Stämme sich an den See-Warundi betätigten, so staunt man, wie hartnäckig sie trotz allem im Äußern, Sprache und Sitten der Eigenart ihres in seltener Abgeschlossenheit lebenden Stammlandes treugeblieben sind. Dasselbe gilt für die im Ruffiffigraben sitzenden Warundi, nur daß für sie die Verlockung, von der Väter Bräuchen abzufallen, wesentlich kleiner und, je nördlicher sie wohnten, um so geringer gewesen ist." (Nr. 22, S. 339—340.)

Seitdem hat sich in der physischen und geistigen Konstitution der See-Warundi nicht viel verändert, aber die Stämme selbst sind durch die furchtbare Seuche der Schlafkrankheit heimgesucht und auf kaum ein Drittel ihrer vorigen Menge reduziert worden, so daß ich 1911 die meisten früher blühenden Siedelungen verlassen und verödet fand. In das große kühle windige Hoch-Urundi ist aber glücklicherweise die infizierende Stechfliege Glossina palpalis nicht vorgedrungen und wird es wohl auch nicht, da sie dort keine günstigen Daseinsbedingungen findet.

4. Geistige Eigenschaften

Über die geistigen Eigenschaften der Warundi ist an dieser Stelle wenig zu sagen, da sie aus den folgenden ausführlichen Schilderungen ihres Lebens, ihrer materiellen und ideellen Kultur genugsam hervorgehen. Darum hier nur einige Angaben über Anlage, Temperament und Charakter der drei großen, voneinander sehr verschiedenen Bevölkerungsgruppen.

Von den Batwa sind die ursprünglicheren, freieren Wald-Batwa auch geistig viel freier als die unter den Bahutu und Batussi angesiedelten. Wie alle Jägerstämme zeichnen sie sich durch außerordentliche Schärfe der Sinne aus, deren Überlegenheit die Bahutu bei ihrem, Ackerboden heischenden Vordringen gegen den Wald sehr oft spüren und immer fürchten. Solange er noch frei herumschweifend im Walde jagen und leben kann, ist der Mutwa sehr stolz auf seine Unabhängigkeit und schaut mit Verachtung auf den mühselig und krummgebeugt sein Feld bestellenden Muhutu und auf den außerhalb der Wälder lebenden Dorf-Mutwa hin, der sich seinen Unterhalt teils ebenfalls durch Feldbau, teils durch Töpferei oder Schmiederei sauer erarbeiten muß. Dem Europäer gegenüber ist der Mutwa, wenn nicht feindlich, so doch meist scheu und scheinbar indolent, denn er fürchtet auch im friedlichen Verkehr die Zauberei und starken Kräfte des Weißen.

Immer und überall aber zeigen die Dorf-Batwa ein scheues und gedrücktes Wesen infolge ihrer sozialen Pariastellung, die ihnen durch ihr Zusammenleben mit den beiden andern, höheren Volksschichten täglich zum Bewußtsein gebracht wird. Unter diesem sozialen Druck ist ihre natürliche Begabung in Verschlagenheit und Hinterlist abgewandelt, worin aber auch die Wald-Batwa Erkleckliches leisten.

Aus Klugheit und richtiger Erkenntnis ihrer Lage halten es die Batwa mit den Batussi, wogegen sie in den mit Feuer und Beil den Wald zerstörenden Bahutuackerbauern die Vernichter ihrer Freiheit sehen; so in Ruanda, so auch in Urundi. Und wie in Ruanda sogar der König Musinga eine ganze Niederlassung von Batwa an seinem Hof in Njansa hat, weil er die den Bahutu feindlichen Parias lieber mit der Bewachung seiner Person und mit Aufrechterhaltung der Ordnung betraut als jene oder gar als Batussi, so findet man auch in Urundi die meisten Batwa in der Nähe der Häuptlingssitze, wo sie im Dienst der Batussi leichter Beschäftigung und Lebensunterhalt finden als abseits nur unter den Bahutu. Es ist eine Symbiose der beiden numerisch schwächeren Volkselemente gegenüber dem Millionenvolk der unterworfenen Bahutu, bei der jeder der beiden Symbionten seinen Vorteil findet.

Die große Masse der Bahutu gibt dem Volk der Barundi seinen allgemeinen Charakter, da die Batussi zwar durch ihre äußere Erscheinung und ihre herrschende Stellung am meisten in der Bevölkerung auffallen, aber zu sehr in der Minderzahl sind und sich in den meisten Sitten und äußern Kulturformen den Bahutu angeglichen haben. Geistig freilich sind sie von den Bahutu recht verschieden.

Der Muhutu ist, wie alle Bantu, von Natur intelligent und lebhaften, sanguinischen Temperaments. Diese ursprüngliche Anlage zeigt sich in Urundi und in Ruanda überall, wo nicht die Hand der Batussiherren zu schwer auf ihnen lastet, also in Urundi, wo die Herrschaft der Batussi nie so despotisch war wie in Ruanda, mehr als dort; und in Urundi am meisten in den vom Königtum unabhängigen Gebiet im Nordwesten, wo der Häuptling Kilima selbst ein Bantu oder ein Halbblut ist (s. S. 162, 168, 188), ferner ganz im Süden und im Niederland des Tanganika und des Russissi. Die leichte Beweglichkeit des Geistes, das laute Reden und lebhafte Gestikulieren der Bahutu fällt einem nirgends in Urundi wieder so auf wie dort im Nordwesten. Trotz der impulsiven Art ihres Handelns sind die Bahutu doch nicht fähig zu starker Anspannung des Willens. Sie sind konservativ aus Beharrungstrieb und Gleichmütigkeit und halten deshalb an altgewohnten Vorstellungen und Sitten fest. Zu diesem Ende wirkt ein ausgeprägter Zug zu allem Mystischen, Übersinnlichen mit, trotz der derben Sinnlichkeit ihrer physischen Natur. Eine große Gutmütigkeit spricht aus ihrem sozialen Verhalten zu ihresgleichen und aus ihrer warmen Kinderliebe.

Im Umgang mit andern ist der Muhutu, wenn kein höherer Mutussi dabei ist, heiter, laut und mitteilsam; aber in Gegenwart eines Mutussiherrn ernst und zurückhaltend. Wenn sich der Muhutu gehen lassen kann, ist seine Phantasie geschäftig und äußert sich gern in naivem Prahlen und Aufschneiden. Seine Landsleute und Fremde betrügt er gern und schreitet leicht zu Gewalttätigkeiten, wenn er den andern für schwächer hält. Der Europäer kann zunächst sicher sein, von ihm angelogen zu werden und ihn bald anmaßend zu finden, wenn er ihm nicht Respekt einzuflößen versteht. Tut dies der Europäer — wie es der Mutussi immer tut —, so schlägt die Großsprecherei des Muhutu schnell in sklavische Fügsamkeit und in Feigheit um, wie auch angesichts jeder ernsten Gefahr, z. B. im Krieg, wenn da nicht die Furcht vor dem Mutussiherrn

noch stärker als die Feigheit ist und ihn zu Taten zwingt, die wie das Ergebnis hohen Mutes und selbstgewollter Disziplin aussehen. In Wirklichkeit sind die Bahutu Urundis durch die vier Jahrhunderte lange Gewaltherrschaft der Batussi zu Knechten im Denken und Wollen geworden, wenn auch nicht so sklavischen Sinnes wie die Banjaruanda unter ihren monarchischen hamitischen Despoten.

Dieser enorme Einfluß der verhältnismäßig kleinen Batussiminorität auf die große Masse der Bahutu ist dem scharf zusehenden Beobachter zunächst unverständlich, denn er erkennt bald, daß die Batussi durchaus nicht die Idealmenschen sind, als die sie uns in den ersten Schilderungen des Grafen v. Götzen, des Dr. Kandt und anderer erschienen.

Richard Kandt sagt von den Batussi: „Ich muß, wenn ich meine Empfindungen analysieren und ehrlich definieren will, geradezu sagen, daß sie mir imponierten. Ich bin dieses Gefühl auch bis jetzt noch nicht losgeworden, trotzdem mein Verstand sich dagegen sträubt, und trotzdem ich mir hundertmal vorgesagt habe, daß diese Menschen doch intellektuell tief unter mir stehende Barbaren seien. Und trotzdem! Ich habe mir natürlich Rechenschaft abgelegt über die Ursachen, in denen dies einem Farbigen gegenüber so fremde Gefühl wurzelt... Es ist außer dem riesigen Wuchs, außer der Hoheit jeder Bewegung und der Würde ihrer Sprechweise, außer der geschmackvollen, unaufdringlichen Art ihrer Kleidung, außer den vornehmen Zügen und den ruhigen durchdringenden, oft sogar spöttischen und dann irritierenden Augen, außer all diesem ist noch — hier stocke ich und vermag dem keine Gestalt zu geben, was mir dunkel und schattenhaft vorschwebt." (Nr. 22, S. 266.)

Das ist ein empfindsames, aber sehr begreifliches Urteil. In Wirklichkeit sind die Batussi zwar eine Herrenkaste, aber nicht eine Herrenrasse im ethischen Sinn.

Allmählich merkt man, worin das Geheimnis der gewaltigen Superiorität der relativ wenigen Batussi über die $1^1/_2$ Millionen Bahutu liegt: sie sind ihnen weit überlegen in Intelligenz, Ruhe, Gelassenheit, Grausamkeit, Verschlagenheit, Rassenstolz, solidarischem Zusammenhalt, politischem Talent. Was uns am einzelnen Mutussi am meisten auffällt, ist zunächst außer seiner imposanten äußern Erscheinung, die gewiß auch auf den Muhutu von Anbeginn großen Eindruck gemacht hat, seine gleichgültig erscheinende Ruhe und Reserviertheit, die ihm gegenüber dem unruhigen, impulsiven, unbedachten Muhutu stets zum Vorteil gereicht. Ferner fällt uns sein auch dem Europäer gegenüber zur Schau getragner Hochmut auf, seine abgründige Verlogenheit und seine Feigheit, wenn ihm die Situation fatal wird. Der Mutussi hält sich und sein Geschlecht für die Krone der Schöpfung, für den Ausbund aller Klugheit und politischen Gewandtheit. Kein Wunder, denn die Inferiorität der verhältnismäßig wenigen Stämme, die seit Jahrhunderten in seinen durch Abschließung nach außen absichtlich eng gezogenen Gesichtskreis getreten sind, und die Herrschaft der Batussiminorität über das große Bahutuvolk mußten sein Selbstgefühl über die Maßen steigern. Den Europäer fürchtet er zwar, weil dieser im Besitz vieler rätselhafter Kräfte und Mittel, z. B. Hinterlader und technischer Künste, ist, aber er hält ihn im Grund doch für dumm, weil er ihn so leicht belügen kann, und schaut um so hochmütiger auf ihn herab, je weniger er wirklich von ihm kennt und versteht. Als Reisender muß man sich erst daran gewöhnen, abseits der Militärstationen von den meisten Batussi bei den Gesprächen und Verhandlungen mit geringschätzigem Lächeln von oben herunter gemustert zu werden, und begegnet ihnen von dann ab am besten selbst mit leichtem Spott und Humor — wenn man welchen hat. Je länger man in Negerländern gereist ist und je besser man den Negercharakter kennengelernt hat, desto mehr imponiert einem bei den ersten Begegnungen mit den Batussi ihre stolze Zurückhaltung. Da gibt es keine

unruhige Neugierde, kein lautes, halb furchtsames, halb gutmütiges Begrüßen, wie bei den meisten Negern, sondern still und gelassen stehen die langen Kerle auf ihre Speere gestützt da und lassen den Europäer vorbeigehen oder herankommen, als mache ihnen die ungewohnte Erscheinung gar keinen Eindruck. Erst wenn man ihnen ebenso selbstsicher entgegentritt und einige Macht hinter sich hat, bemerkt man bei den meisten am unruhigen Spiel der Augen und am heftigen Pulsieren der Halsadern, daß sich hinter der scheinbaren Gleichgültigkeit eine nervöse innere Unruhe, Beklemmung, Angst verbirgt.

Der Mutussi sagt nie oder nur sehr selten, was er denkt; man muß es erraten. Und zwar ist das Lügen nicht nur gegen Fremde Brauch, sondern tiefgewurzelte Unsitte gegen jedermann; es ist ein moralischer Defekt, der sich nicht damit beschönigen läßt, daß man es, wie R. Kandt, optimistisch als eine „für sie nicht unedle Art des Wettstreites zweier Intelligenzen" auffaßt oder als „die unbewußte Übertragung ihrer anmutigen, bei einem Negervolk überraschenden Rätselspiele, mit denen sie als Kinder schon die Geselligkeit zu beleben pflegen, in das wirksame Leben" (Nr. 22, S. 273). Mit solcher Romantik gerät man in der Ethnologie und Völkerpsychologie in die Irre, während doch gerade in der Beurteilung unserer Kolonialvölker schon aus praktischen Gründen nüchterne Sachlichkeit vonnöten ist.

Neben der Verlogenheit sind Faulheit und Feigheit unerfreuliche Charakterzüge der Batussi. Der Mutussi arbeitet nie, wenn er nicht der armen, niedern Klasse angehört, sondern er beschäftigt sich nur sportweise mit seinen Rindern. Arbeiten ist Sache der unterworfenen Bahutu, daher für den Mutussi geradezu eine Schande, der sich nur die wirklich Armen unter den Batussi aussetzen können. Reich und mächtig sein und in Nichtstun das Leben genießen, ist ihm der Inbegriff aller Lebensweisheit, das Ideal, das er mit größter Raffiniertheit und Gewissenlosigkeit zu verwirklichen sucht, und zwar jeder einzelne für sich und ebenso die Gesamtheit der Batussi gegenüber dem beherrschten Volk der Bahutu und Batwa.

Dieses jahrhundertelang gepflegte Genußleben hat natürlich dem Charakter und den männlichen Tugenden der Batussi schweren Schaden getan, denn daß sie nicht ohne Mut, Kriegstüchtigkeit und Energie waren, ist ohne weiteres daraus zu schließen, daß sie trotz ihrer geringen Anzahl, die einst sicherlich noch viel kleiner war, sich das große Land unterworfen haben; auch bezeugt es ihre frühere Königsgeschichte (siehe S. 162). Seit lange aber lassen sie ihre innern und äußern Kämpfe nur durch ihre Hörigen, ihr Bahutu-Lehnsgefolge ausfechten, während sie sich selbst vorsichtig im Hintergrund halten und aus sicherem Rückhalt die Aktion mit Schlauheit und Tücke leiten. Rühmliche Ausnahmen gibt es natürlich auch hier.

Trotz alledem muß anerkannt werden, daß auch in dieser Beziehung die Barundi höher stehen als die Banjaruanda. Weder die Batussi sind in Urundi so genußsüchtig, faul, verlogen, gewalttätig und feige wie in Ruanda, noch die Bahutu so unterwürfig und heuchlerisch gegen Große und so unverschämt gegen Schwache wie dort, noch ist der König mit seinen am Hof lebenden Großen so sehr dem Müßiggang, der Schlemmerei, den Intrigen und der Befriedigung boshafter und grausamer Triebe hingegeben wie in Ruanda.

In Urundi wie in Ruanda ist es vor allem der Wille zur Macht und zum Genuß, der die herrschenden Batussi veranlaßt hat, den größten Reichtum, das Vieh, sich allein vorzubehalten. Schon dadurch haben sie sich eine wirtschaftliche Gewalt über

die Bahutumenge geschaffen, die auch ihrer politischen Vormacht die festesten Stützen gibt (s. S. 41, 42). Dazu haben sie es verstanden, sich durch ihre Schlauheit bei den abergläubischen Bahutu in den Ruf, große Zauberer zu sein, zu setzen und darum sehr gefürchtet zu werden; und die Priesterschaft hält mit ihnen zusammen, um gemeinsam mit ihnen das Volk zu knechten und auszubeuten (s. S. 134). Der Ausbeutung der Menge, dem krassen Egoismus der kleinen Batussiminorität dient die ganze klug ersonnene Staatseinrichtung der Barundi wie der Banjaruanda mit der scharfen rechtlichen Scheidung der Rassen und Kasten, mit dem genau gegliederten System von Lehnsleuten und Kontrollbeamten, mit der Hierarchie von Priestern, bevorrechteten Geschlechtern, Fürsten usw. Alles dies werden wir in spätern Kapiteln dieses Buches besonders darzustellen haben. Der erstaunliche politische Sinn der Batussi steht ausschließlich im Dienst ihres die beherrschten Bahutu ausbeutenden Egoismus. Von einer höheren Staatsauffassung keine Spur.

Es ist darum natürlich, daß die Bahutu in den Batussi nur die stammesfremden Eroberer sehen, deren Joch sie auf sich lasten fühlen. Aber obwohl sie die Batussi hassen, streben sie nicht nach Befreiung aus dem Knechtsverhältnis, denn sie haben, wie fast alle Negervölker, von Natur das Bedürfnis der Unterordnung unter eine fests führende Hand; auch ist ihre Furcht vor den Batussi viel zu groß, als daß sie sich offen gegen sie aufzulehnen wagten. Und tatsächlich sind die Batussi trotz ihrer relativ geringen Zahl doch durch ihre Intelligenz und durch ihr aus gemeinsamen Interessen immer neu erstehendes solidarisches Zusammenhalten den Bahutu weit überlegen, die in zahlreiche einander befehdende Geschlechter und Stammesgruppen zerfallen sind, jedes tieferen Nationalgefühls entbehren und von den Batussi geschickt gegeneinander ausgespielt werden.

Solange die Batussi Herren im Lande sind, ist ein geistiger und kultureller Aufschwung des Barundivolkes unmöglich, denn nur der jetzige, in jahrhundertelanger Abgeschlossenheit beibehaltene Tiefstand der Bahutu sichert den Batussi ihre Herrschaft. Einstweilen freilich müssen wir Deutschen es mit den Batussi halten und sie an unsern Vornahmen in Urundi materiell interessieren, da wir noch zu schwach zu ihrer offnen Befehdung sind. Aber das Ziel einer weiter ausschauenden Kolonialpolitik muß die Brechung der Batussiherrschaft, die Befreiung der Bahutu vom Batussijoch und ihre Gewinnung für unsere zivilisatorischen Ziele sein, die zugleich ihre eigensten Interessen sind.

Zum Schluß führe ich noch ein treffendes Urteil R. Kandts über die Barundi im allgemeinen an: „Die Warundi sind zwar ebenso feige wie die Banjaruanda, aber — wie sie überhaupt lebhafter und intelligenter erscheinen — so auch großsprecherischer und anmaßender. Ich wurde in jenen Tagen nie den Eindruck los, daß all dies Gebaren, dieses Kriegsspielen usw. der Ausfluß echter Gassenjungenempfindungen sei. Darum glaube ich auch, daß es schwerer sein wird, in Urundi einen befriedigenden Zustand zu schaffen als in Ruanda. Immerhin werden wir bei beiden niemals Schwierigkeiten begegnen, die so weittragende und gefährliche Abwehrunternehmungen nötig machen könnten, wie z. B. in Uhehe. Diese Völker, in jahrhundertelanger Knechtschaft entmannt, wissen nicht — und es ist gut so — welch latente Kraft in den Leibern ungezählter Millionen schlummert, und, jedes tieferen Nationalbewußtseins bar, werden sie gefügige Werkzeuge einer vernünftigen, auf Landes- und Sprachkenntnis bauenden Kolonisation werden und nie den kraftvollen Wunsch finden, sich zu einer einheitlichen Abwehr gegen fremde Invasion zu verbinden. Sie aus diesem Schlafe aufzustören und zu gemeinsamem Drutze gegen die Europäer aufzustacheln, dazu gehörte schon eine so brutale Ungeschicklichkeit der Regierenden, daß sie von uns und unsern Enkeln wohl niemand schaudernd zu erleben fürchten muß." (Nr. 22, S. 325—326.)

Zweites Kapitel

Siedelung, Wohnung, Nahrung

In Urundi und Ruanda ist die Oberflächengestalt des Landes, die Form und Art seiner Plateaus, Hügel, Berge und Täler, von bestimmender Bedeutung für die Form und Lage der Siedelungen. Da der weitaus größte Teil des Landes Plateauland ist, das die starke Erosion in zahllose lange und kurze, oben abgeflachte Rücken und Hügelwellen mit meistens tiefen, ziemlich steilwandigen Tälern zerschnitten hat, und da die Mehrzahl der Täler von Papyrussümpfen erfüllt ist, die man nur an wenigen Stellen überschreiten kann, sind nicht, wie bei uns, die Täler die geeignetsten Siedelplätze für die Menschen, sondern die Höhen. Die Versumpfung der Talsohlen, die heiße stagnierende Luft in den Niederungen, die Unzahl von Moskitos und Stechmücken und die oft große Steilheit der Talhänge drängen die Menschen mit ihren Wegen und ihren Siedelungen auf die freien luftigen Plateau- und Hügelrücken hinauf, während in den meisten Tälern nur Äcker von solchen Feldfrüchten liegen, die viel Feuchtigkeit brauchen. Die Funktion der Täler ist in den meisten Gegenden Urundis und Ruandas nicht eine die Menschen verbindende, sondern eine sie trennende. Deshalb ist hier wie dort die Gliederung des Volkes und des Staates in kleine Gemeinwesen von Natur gegeben (s. S. 89), deswegen aber auch die künftige Erschließung des Landes durch Straßen oder Bahnen ungemein erschwert. Viel weniger sumpfig und weniger steil sind die Täler in vielen Teilen der östlichen, trockneren Quarzitgebiete. Auch sind dort weit und breit die Oberflächen der Plateaurücken und Hügelzüge so steinig und steril durch die ausgewitterten Quarzitbrocken (s. Taf. 2b), daß die Menschen die Höhen meiden und sich mit Vorliebe an den Talflanken da ansiedeln, wo unterhalb der zerklüfteten Quarzite auf der oberen Schichtgrenze der schwer durchlässigen Tonschiefer die Quellen austreten und die tonigen Verwitterungsböden fruchtbarer und leichter zu bearbeiten sind als die darüberliegenden Quarzite.

Schon aus dieser natürlichen Verschiedenheit der Gegenden erklärt es sich, daß die Bevölkerung recht ungleich über das Land verteilt ist.

Die Zahl der Eingebornen in Urundi wird vom Gouvernement auf $1^1/_2$ bis 2 Millionen geschätzt („Die deutschen Schutzgebiete 1912/13", Amtliche Jahresberichte, S. 8—9). Dieser große Spielraum beweist, daß Zählungen in den Einzelgebieten bisher unausführbar waren. Hier wie in Ruanda wird erst die Aufstellung von Steuerrollen einmal genauere Zahlen bringen. Nach meinen und anderen neueren Beobachtungen ist die Zahl von 2 Millionen überschätzt; $1^1/_2$ Millionen dürfte richtiger sein. Einige Missionare freilich, auch Pater v. d. Burgt, nehmen sogar mehr als 2 Mil-

[p. 17]

lionen an. Batusi gibt es verhältnismäßig weniger in Urundi als in Ruanda; sie werden kaum 5%, wahrscheinlich nur 2—3% der Gesamtbevölkerung, also 40—50 000 Köpfe in Urundi ausmachen. Auch für diese nimmt v. d. Burgt einen viel größeren Prozentsatz an: 15—20% gegenüber nur 5% Batwa. Neben der großen Masse der eingeborenen Bahutu saßen 1912/13 etwa noch 2500 andere Neger (Wasuaheli, Wanjamwesi, Manjema u. a.) im Lande, dazu 1—2 Dutzend Araber, 2—3 Dutzend Inder und etwa 5 Dutzend Weiße, zur Hälfte Deutsche und zirka 20 Franzosen und Französinnen (Missionare).

Urundi und Uha sind im Durchschnitt lange nicht so dicht bevölkert wie Ruanda, das 72 Bewohner pro Quadratkilometer hat. Die amtliche Schätzung von 1912/13

1 Vorderhof, für den Herrn und die Rinder.
2 und 3 Mittelhöfe, für Frauen und Kinder.
4 Hinterhof, für das Gesinde.

Wohnhütten. Geisterhüttchen.
Vorrats- und Kleinviehhütten.

Fig. 1. Gehöft eines Barundi-Großen.
(Skizze von Hans Meyer.)

nimmt für Urundi durchschnittlich 51 Einwohner pro Quadratkilometer an (oder 68 bei der möglichen Annahme einer Gesamtbevölkerung von 2 Millionen). Die Bevölkerungsdichtigkeit wächst im ganzen von Osten nach Westen. Am dichtesten bewohnt sind im Westen die Täler und breiten Rücken des Randgebirges, die deshalb auch fast ganz abgeholzt sind. Dort mögen 50—60 Menschen pro Quadratkilometer zu rechnen sein, also eine Volksdichte wie etwa in Portugal. Ein Vergleich mit Deutschland, das 120 Einwohner pro Quadratkilometer hat, würde hinken, weil die nutzbare Bodenfläche in Urundi wegen der vielen Sumpftäler und der quarzitischen Ödländer verhältnismäßig viel kleiner ist als in Deutschland. Am bevölkertsten sind die Gebiete des Granites, der kristallinischen Schiefer, der Glimmerschiefer, Amphibolite, Diabase usw., die das höhere, regenreichere West-Urundi ausmachen und einen fruchtbaren Verwitterungsboden bilden. Von den östlich sich anschließenden, tiefer liegenden großen Tonschiefer- und Quarzitgebieten sind die letzteren die sterilsten und

deshalb am wenigsten bevölkert und bebaut. Dieselbe Erscheinung beobachten wir auch in Ruanda. Wo in den feuchteren Gegenden Bananen gebaut werden, nehmen die Bananenpflanzungen große Flächen ein und täuschen dadurch eine relativ dichte Bevölkerung vor, während sich doch nur wenige Hütten darin verstecken.

Die Familien der Batussi und Bahutu sind ziemlich kinderreich, wie in Ruanda. Im einzelnen sind die Batussiweiber weniger fruchtbar als die Bahutuweiber, aber im allgemeinen kommen selten weniger als 3 Kinder auf eine Familie, oft (bei den Bahutu) 6—8 und entsprechend mehr, wenn der Mann mehrere Frauen hat. Gewöhnlich wohnt jedes Ehepaar mit seinen Kindern in einer Hütte. Sind aber viele Kinder oder mehrere Frauen da, so bewohnt jede Mutter mit den jüngsten Kindern eine besondere Hütte. Auch die Großeltern und die unverheirateten Erwachsenen beziehen Hütten für sich. So stehen oft 2—4 Wohnhütten und mehrere Hütten für Getreide und Vieh in einem Kral, oder es sind mehrere umzäunte Wohnhütten nebst Zubehör zu einem großen Gehöft verbunden (s. Textbild 1).

Die Wohnanlage ist die der Einzelsiedelung, der umzäunte Kral, Weiler, Hof (lugo, urugo). Jedes Gehöft steht gesondert für sich, umgeben von seinen Fikusbäumen und seiner Bananenpflanzung, wenn es eine Bananengegend ist (Taf. 18, 21 b). Aber meist liegen mehrere Krale, die dem weiteren Familienkreis angehören, in Nähe beieinander, so daß doch dorfartige Gruppen (ikisagara) zustande kommen (s. Textbild 2 und Taf. 19a). Außerhalb breiten sich die Felder aus. Das gilt natürlich vor allem für die Siedelungen der Bahutu, denn von den Batussi bebauen nur die ärmsten, niedersten Klassen Felder; die Krale oder Kralgruppen der vermögenderen Batussi liegen überall im grasigen Weideland ihrer Rinder zerstreut, umhegt von hohen Euphorbien- oder Fikushecken, ohne die Umgebung von Bananenhainen oder Feldern. Von Gruppe zu Gruppe, von Dorf zu Dorf sind die Entfernungen sehr verschieden groß nach der Bodenbeschaffenheit. In den dichtbesiedelten westlichen Landstrichen kommt man alle viertel oder halbe Stunden an einer Gehöftgruppe vorbei, in den dünn bewohnten östlichen hingegen kann man über eine Stunde wandern, ohne einen Hof oder ein Dorf zu sehen oder zu passieren.

Niemals sieht man viele Menschen in der Landschaft, weder auf den Wegen, noch beim weidenden Vieh, noch auf den Feldern. Nur bei den Hütten und innerhalb der Krale gehen, stehen und hocken sie in Gruppen beisammen. Alte Leute von 70 und mehr Jahren sind äußerst selten. Über 60 Jahre scheinen nur wenige hinauszukommen, und zwar öfters die Batussi als die Bahutu.

Nach Angabe der Missionare ist die Bevölkerung seit etwa einem Jahrzehnt in Zunahme begriffen, da die Kleinkriege der Batwale und Fürsten gegeneinander und die Einfälle der Banjaruanda einerseits und der Baha anderseits seltener geworden sind und unblutiger verlaufen. Nur in dem von der Schlaftrankheit befallenen Tanganikagebiet ist die Bevölkerungszahl enorm zurückgegangen. Im übrigen Urundi wird die Volkszahl gelegentlich durch Pockenepidemien oder durch Mißernten stark reduziert, die namentlich die Kinder hinwegraffen, aber solche Hungersnöte sind doch relativ selten. 1892, 1896, 1904/5 und 1908 haben Rinderpest, Mißwachs, Pocken große Verwüstungen angerichtet. Im Jahr 1910 war die Not im östlichen Urundi infolge des Ausbleibens der Regen so groß, daß die Mission Muyaga große Mengen von Maniok und Bohnen in Uha für ihre Landeskinder auflaufen mußte. Daß die große Masse der Bahutu sich wirklich nach Befreiung von ihren Eroberern sehnt, wie

Fig. 2. Dorf der Barundi. (Skizze von Hans Meyer.)

manche Reisende angeben, kann ich aus meinen Beobachtungen nicht bestätigen. Der jubelnde Empfang, den seinerzeit die Bahutu dem ersten eindringenden Europäer, Oskar Baumann, in Urundi, wie dem Grafen Göhen in Ruanda, bereiteten, entsprang zwar der traditionell gehegten Hoffnung auf einen neuen großen Eroberer, mit dem ein glückliches Zeitalter anbrechen werde; aber wie alle ostafrikanischen Bantu, sind auch die Bahutu Urundis und Ruandas nichts weniger als freiheitsdurstig, sondern, wie oben erwähnt, submisse, unselbständige Naturen, die sich am wohlsten unter einer festen Autorität fühlen und sich an die Zucht ihrer Batussiherren bereits ebenso gewöhnt haben wie ehedem an die sicherlich keineswegs mildere Herrschaft ihrer Bantuhäuptlinge. Wenn man aus dem stramm monarchisch regierten Ruanda kommt, fällt es einem sogar auf, wieviel freier und fröhlich-lauter, aber auch wieviel weniger disziplinniert sich die Barundi unter sich und unter ihren Batussi-Batwalen bewegen und verhalten als in Ruanda.

Ganz vorwiegend Ackerbauer und Züchter von Kleinvieh, sind die Bahutu völlig seßhaft. Auch die Batussi, denen alles Großvieh gehört, haben feste Wohnsitze, betreiben aber in den Trockenmonaten mit ihren Rinderherden eine Art Almwirtschaft in den frischere Weide bietenden Bergen, gleichsam in Erinnerung an ihr einstiges Nomadentum. Auf diese Dinge werden wir später bei Besprechung der Viehzucht näher einzugehen haben (s. S. 40).

Die Wohnhütten (insu) der Barundi sind weder in der Form, noch in der Einrichtung, noch in Technik und Material wesentlich verschieden von jenen der Banjaruanda. Äußerlich sind sie gewöhnlich etwas flacher als die Ruandahütten, haben mehr Regenschirm- als Bienenkorbform, aber hier wie dort ist das krinolinenartige Gerüst aus Holzstangen oder, wo es Bambus gibt, aus Bambusstangen zusammengebunden, zwischen denen aufrechte und wagerechte Lagen von dicken Sorghumstengeln die Zwischenräume füllen. Das aufgesetzte flach-halbkugelige Dach wird nicht von einem Mittelpfahl getragen, sondern durch eine Anzahl gleichmäßig in der Hütte verteilter Pfähle gestützt. Das ganze Gerüst wird mit langhalmigem, aus den Niederungen geholtem Grasstroh (Cyperaceen, nicht Schilf) und in manchen Gegenden mit trockenen Bananenblättern gedeckt, bis auf den Erdboden herab. Auf die Dachspitze setzt man zum Schutz gegen eindringenden Regen einen Stock mit einem nach unten auseinandergespreizten Strohwisch. Die Türöffnung mit dem etwas vorgewölbten Türdach gleicht der des Ruandahauses, ist aber an den Seitenwänden weniger sorgfältig geflochten als jenes. Verschlossen wird sie durch einen grob geflochtenen Vorsatzschirm, den ein gegengestemmter Knüppel festhält. Außer der einzigen Tür ist keine Öffnung im ganzen Bau (Taf. 18). Auch der Rauch muß also durch die Türe abziehen. Die ganze Hütte kann von mehreren Männern emporgehoben und bei einem Ortswechsel der Familie an eine benachbarte Stelle versetzt werden.

Stehen die Hütten schon im Äußern und in der Sorgfalt des Baues sehr hinter den Ruandahütten zurück, so noch mehr im Innern. Auch hier werden wie in Ruanda die Stützpfähle im Innern benutzt, um einige übermannshohe Flechtwände aus Papyrus- oder Rohrstengeln oder Bambuslatten daran zu befestigen, durch welche die Hütte in zwei oder mehrere gesonderte Wohn-, Schlaf- und Vorratsräume geteilt wird. Oft haben diese Flechtmatten die gebogene Schildform wie in Ruanda, aber sehr selten sind sie in Urundi so fein geflochten und so hübsch gemustert wie die schildförmigen Wandschirme und Matten, die in Ruanda die Wände ringsum bekleiden

und die verschiedenen Kammern voneinander trennen und nicht nur die Hütten der Batussi, sondern auch die der wohlhabenden Bahutu häufig bewundernswert schmücken. Gewöhnlich sind es nur zwei Räume, die durch solche Matten voneinander geschieden werden: der Vorderraum (umurjango), in dem während des Tages gewohnt, gekocht, gegessen wird, und der Hinterraum (akagiro), wo geschlafen wird. Im letzteren ist die Lagerstatt der Eltern wieder durch Mattenschilde von der Schlafstätte der Kinder getrennt. Die meisten Barundi schlafen hier einfach auf einer Schütte Stroh, über die ein Rinds- oder Ziegenfell gelegt ist. Wo aber eine Bettstelle vorhanden ist, besteht sie aus 4 in den Boden eingerammten niedrigen Pfählen und einem darauf befestigten Holzrahmen, der mit Latten ausgefüllt und mit einer Matte bedeckt ist. Solche Bettstellen haben in Urundi wie in Ruanda, Mpororó, Ankole u. a. nur die Vornehmen und Reichen.

Holzschemel zum Sitzen, wie sie sonst in Ostafrika gebräuchlich sind, gibt es in Urundi und Ruanda nicht oder nur als fremden Import aus Unjamwesi, Usambiro usw.

Selbst in der Behausung des mächtigen Häuptlings Lusabiko in Ost-Urundi fand sich „kein einziger Schemel oder Sitzklotz. Nur ein paar dicke Strohbündel lagen in einer Ecke, die man sich herbeirücken konnte, wenn man nicht auf dem Boden kauern wollte. Wünscht man zu schlafen, so macht man das Bündel los und bereitet sich ein weiches Bett. Bei reichen Leuten wird erst eine haarige Ochsenhaut darübergelegt, wenn man sich setzen oder legen will". (Nr. 14, 1901, S. 214.)

Im ganzen Hausbau wird kein einziger Nagel, Holzdübel oder Pflock verwandt, sondern alles Gestänge und Geflecht ist festgebunden, gewöhnlich mit dem frischen Bast der Fikusrinde oder mit zerschlissenen Fasern der Bananenstämme oder der Papyrusstengel. Die Hüttenhöhe schwankt zwischen 2 und 4 m (in Ruanda bis zu 8 m), der Durchmesser zwischen 3 und 6 m.

Wohnhütten von anderer Form habe ich in Urundi nicht gesehen; aber nach Baumann gibt es am oberen Kagera Wohnhütten mit zylindrischem Bambusunterbau (Nr. 4, S. 218). Solche kenne ich von Urundi nur als Vorratshütten, wo im Gebirge Bambus wächst.

Wie schon oben erwähnt, hat jede Familie, also wenn mehrere Frauen da sind, jede Frau, ihre eigene Hütte. Besondere Häuser für Junggesellen, für unverheiratete Mädchen, für Fremde, für Versammlungen oder bestimmte Gemeinschaften gibt es nicht; dagegen halboffene, roh hergerichtete Arbeitshütten für Schmiede und gut gebaute kleinere Hütten für Jungvieh (uruhongore) und für die Vorräte an Feldfrüchten (ivikeka). Die Vorratshütten haben die Form von breiten doppelmannshohen, sich unten verjüngenden Körben, die mit einem flachkegeligen, meist abnehmbaren Strohdach gedeckt sind (S. 56). Das Ganze steht auf einem niedrigen Rost aus Holzstangen, damit Feuchtigkeit und Ungeziefer möglichst abgehalten werden. Seitlich in nächster Nähe der Hütte pflegen einige kleine, bis 1 m hohe Geisterhüttchen (ikigabiro) aus Stroh und Rohr zu stehen, in denen den Geistern Fleisch oder Milch oder Bodenfrüchte in Topfscherben oder Kürbisschalen dargebracht werden (s. S. 121, 135 und Taf. 18a). Ein anderes Miniaturhüttchen (ikitabo) ist dem Hauptgott Niangombe oder Kiranga gewidmet. Solcher Hüttchen sieht man in Urundi, Uha und Ussumbwa viel mehr als in Ruanda.

Von der großen Reinlichkeit, die in der Umgebung der Ruandahütten zu herrschen pflegt, sind die Barundi, vor allem die Bahutu, weit entfernt; sie werfen die Abfälle

dicht neben das Haus und defäzieren in dem die Hütten umgebenden Bananenhain, aber die koprophagen Hunde und Aasgeier, wo solche vorkommen, sorgen doch für Entfernung des Schlimmsten. Am schlechtesten scheint es mit der Sauberkeit und Bauforgfalt der Hütten und Höfe nach den Schilderungen der meisten Reisenden in Nord- und Nordost-Urundi bestellt zu sein, während ich auf meiner Reise quer durch Mittel-Urundi die schönsten Siedelungen im Westen, die unsaubersten und am schlechtesten gebauten im Osten gefunden habe. Von Nordost-Urundi sagt z. B. von Trotha: „Unglaublich ist die Gleichgültigkeit der Leute gegen Reinlichkeit und sorgfältige Bauart der Häuser. Nur die Chefs haben gut gebaute Wohnungen, und im Umkreis ihrer Behausung ist der Schmutz noch nicht zur Festung geworden wie bei ihren Untertanen" (Nr. 8, S. 62).

Wird die Hütte alt und schadhaft, so wird sie ausgebessert, aber länger als 5—6 Jahre hält sie auch dann selten; danach muß sie ganz neu gebaut werden. Nach dem Tod des Besitzers bleiben die Witwe oder die unverheirateten Kinder darin wohnen, und nach Auflösung der Familie wird das Haus abgerissen.

Da jeder Hof bis 6 oder 8 Wohnhütten umschließen kann, je nach der Wohlhabenheit und der Weiberzahl des Besitzers, und da oft in einer Kralgruppe oder einem Dorf 4, 6 und mehr Krale enthalten sind, kann ein Dorf bis zu 60, 80 und mehr Menschen bergen. Aber gewöhnlich sind die Siedelungen kleiner, wenn auch, wo Bananen gedeihen, die weite Ausdehnung der Bananenpflanzungen, in denen die Krale der Bahutu versteckt liegen, die Dörfer oder Hofgruppen viel größer erscheinen lassen.

Die Wohlhabenden und die Batussigroßen begnügen sich aber nicht mit einem, mehrere Hütten umfassenden Kral, sondern setzen mehrere Krale in Zusammenhang nebeneinander, so daß man aus dem einen direkt in den nächsten übertreten kann. Der Vorderhof dient dann dem Hausherrn zur Wohnung und zum Gästeempfang, auch zur Bergung der Rinder in der Nacht; die Mittelhöfe zur Behausung der Frauen und Kinder und der Hinterhof für das Gesinde, als Kochstätte, Speicher usw. (s. Textbild 1). Im übrigen unterscheiden sich die Hütten und Höfe der Großen, der Fürsten oder selbst des Königs weder durch ihre Ausstattung noch durch ihre Sauberkeit von denen der gewöhnlichen Batussi und der „besseren" Bahutu; nur ihre Größe ist meist beträchtlicher als bei jenen.

Die Umzäunung (ingo), von der in Urundi die Mehrzahl der Krale umhegt wird, hat, wie in Ruanda, nicht nur den Zweck eines Schutzmittels gegen Eindringlinge menschlicher oder tierischer Gestalt, sondern auch den eines Zusammenschlusses der Familie, insbesondere der kleinen Kinder, und vor allem der Einpferchung des Viehs während der Nacht (Taf. 20a, 21b). Wenn die Hüttenbewohner kein Vieh haben, fehlen gewöhnlich auch die Zäune um die Hütten; so z. B. in manchen Berggegenden Nordwest-Urundis und in einigen Landschaften des westlichen Zentral-Urundi. Wo Zäune vorhanden sind, sind sie übermannshoch, so daß man nicht darüber wegsehen kann, und je nach dem vorwaltenden Material aus trockenen Bananenstämmen oder Sorghumstengeln oder Papyrusschäften oder dürren Ästen des Acanthus arboreus roh, aber fest zusammengebunden oder aus dicht gepflanzten lebenden Drazänen- oder Ficusbäumchen oder Baumeuphorbien zusammengesetzt. Nie sah ich Steine zu Mauern aufgeschichtet, obwohl geeignete Steinblöcke genug da sind. Die von zwei festen Pfählen flankierte Kralöffnung wird nachts durch quergelegte Stämme verrammelt.

Die Kraale der Batussi sind meistens viel sorgfältiger und fester umfriedet als die der Bahutu. In manchen Gegenden, wo vorwiegend Batussi sitzen, wie z. B. in den ausgedehnten Hochweidegebieten auf der Ostseite des Tanganika-Randgebirges am oberen Muwarasi, ist „jedes Haus eine kleine Festung mit dreifacher Umwallung. Innerhalb des (wohl aus Erde aufgeworfenen) Schutzwalles ist ein Zaun aus Rohrgeflecht, dann einer aus Euphorbien und schließlich einer aus Dornen angebracht" (Nr. 8, S. 73).

Ist nicht die Hecke selbst aus eng gepflanzten Fikusbäumen hergestellt, so stehen doch fast immer eine Anzahl Fikusse um den Kral herum — viel häufiger als in Ruanda — und geben ihm nicht bloß Schatten, sondern auch seinen Bewohnern die für allerlei Zwecke, namentlich für die Rindenstoffkleidung dienliche Rinde (Taf. 18a, 21a). An solchen kreisförmigen Fikusgruppen sind, wie in Ruanda, namentlich die Stätten alter Häuptlingskraale viele Jahre kenntlich, nachdem längst die Hütten daraus verschwunden sind. Gar keinen Baum jedoch fand ich am Wohnsitz des Großhäuptlings Kisima (s. S. 162, 188) in Nordwest-Urundi. Dort liegen auf freier runder Bergkuppe, 2150 m hoch, mit prachtvoller Aussicht auf die benachbarten tiefen Täler und langen Gebirgsketten, vier große runde Kraale, jeder von einem dichten doppelmannshohen Bambuspalisadenzaun umgeben, der 6—8 geräumige Rundhütten umschließt. Nirgends ist ein Baum oder ein grüner Zaunstecken oder ein Bananenblatt in der Nähe; das Ganze steht wie eine zur Verteidigung eingerichtete Zwingburg auf beherrschender steiler Bergeshöhe.

In anderen Gegenden der Grenzgebiete gegen Ruanda sind die Höfe mitunter zu ganzen, mit starken Schutzzäunen umhegten Dörfern zusammengedrängt; ja Hauptmann Bethe traf in Iwusome am Rugwerosee in Nordost-Urundi sogar eine „große Eingebornenstadt, eine geschlossen wohnende Gemeinde" (Deutsch. Kol.-Blatt 1899, S. 9), doch sind dies auf einige gefährliche Grenzstriche beschränkte Ausnahmen von der sonst allgemeinen Wohnweise der Einzelkraale.

In der Hütte liegt gewöhnlich im mittleren Hauptraum die Feuerstelle (isiko). Ich sage absichtlich nicht „Herd", denn es sind meist nur ein paar Steine, die auf einer runden Unterlage von gestampftem Lehm nach Bedarf zusammengerückt werden, um Feuer dazwischen- und den Kochtopf daraufzusetzen. Bisweilen liegt das Feuer auch auf einer dicken runden Platte aus gebranntem Ton wie in Ruanda, die an der Peripherie mit einem Wulst versehen ist, damit das Feuer nicht zerstreut wird. Wenn einmal die glühenden Kohlen verloschen sein sollten, was äußerst selten vorkommt, holt man sich Feuer vom Nachbar. Auf langen Wanderungen aber wird Feuer nach bekannter Bantuart durch Quirlen eines harten auf einem weichen Holzstück erzeugt, wenn es Holz gibt, oder ein glimmendes Kohlenstück in halbtrockenes Gras eingebunden und mitgetragen. So können sie glimmende Kohlen ganze Tagereisen weit mit sich führen.

Da aber Brennholz in dem baum- und straucharmen Land oft ein rarer Artikel ist, benutzt man an der Sonne getrocknete Fladen von Rindermist als Brennmaterial oder, wo es keine oder wenig Rinder gibt, die aus den Sumpfdickichten geholten Wurzelstöcke des Papyrus oder des Schilfrohrs. Der stinkende Rauch erfüllt die ganze Hütte. Kommen dazu mehrere Erwachsene, von denen oft einige Tabak rauchen, ein halbes Dutzend Kinder, ein paar Ziegen, Hunde und Hühner, und wird bei schlechtem Wetter oder nachts die einzige Öffnung zugestellt und beginnen dann auch die in

2. Meyer FO42 Rundi

keiner Hütte fehlenden Ratten ihr Spiel, so kann man sich vorstellen, wie erquickend der Aufenthalt darin für jeden Nicht-Murundi ist.

Das Kochen (kuteka) in und außer der Hütte besorgt die Frau, nötigenfalls mit den Kindern; der Mann aber nur, wenn er muß, z. B. auf Reisen. Als Kochgeschirr wird ausschließlich der tönerne Kochtopf (inkono) gebraucht, wie er von den Batwatöpfern (s. S. 78) oder von den der Töpferei kundigen Weibern hergestellt wird (Taf. 48). Große Tontöpfe (imiwindi), die bis zu 20 Liter fassen, dienen als Wasserbehälter und zur Aufbewahrung des Pombebieres. Geschöpft wird mit Holz- oder Kürbisschalen. Milch wird in geschnitzten Holzgefäßen (iwango) von meist plumper Form aufbewahrt, die, wie bei den Banjaruanda, vor dem jedesmaligen Füllen mit Kuhurin ausgespült werden, um die Milch besser zu konservieren. Butter aber, die niemals zum Essen, sondern nur zum Einreiben des Körpers benutzt wird, wird durch Schütteln der Dickmilch in großen Flaschenkürbissen hergestellt und ist immer halbflüssig. Die großen Tongefäße, die alle einen runden Boden haben, stehen auf dem Erdboden der Hütte, von Steinen seitlich gestützt, während verschiedene Holz- und Kürbisgefäße (ubwato, akako) zwischen dem Flechtwerk der Hüttenwände stehen oder in großmaschigen Netzen aufgehängt sind. Die hölzernen Milchgefäße aber sind auf einem bankartigen Gestell in der Nähe der Feuerstelle an der Wand aufgestellt. Eßlöffel gibt es nicht, aber hölzerne Schöpflöffel, die oft hübsch mit geschnitzten Linienornamenten verziert sind. Der kochende Brei wird mit einem breiten hölzernen Spachtel („Streichholz") umgerührt (Taf. 46, Fig. 1) und die fertige Speise auf flache Holz- oder Flechtschalen gehäuft, von wo sie in üblicher Negerweise mit den Fingern in Klößchen geformt, in eine der gekochten Kräutersaucen getunkt und in den Mund geschoben wird.

Vor keinem Haus fehlt der entweder zylindrische oder sanduhrförmige Holzmörser (isekuro), in dem die Weiber in taktmäßigem abwechselnden Stampfen mittels hölzerner Stampfer das Getreide von den Hülsen oder Rispen befreien, also „dreschen". Das Ausschwingen zur Beseitigung des Speltes besorgt dann gewöhnlich der Mann mittels großer, ganz flacher Körbe oder „Schwingen"; und auf ebensolche flache Körbe wird schließlich das Mehl ausgebreitet, das die Frau durch Zerreiben des Getreides auf einem Mahlstein (uruschjo), der gleichfalls vor jeder Hütte liegt, hergestellt hat. Alles dies ist ganz ähnlich wie in Ruanda und bei anderen Völkern des Zwischenseengebietes (Nr. 19, S. 371/2, 451/2).

Die meisten Batussi essen nur einmal warm am Tag, und zwar abends; die Bahutu aber zweimal, und zwar die erste Mahlzeit um die Mittagsstunde, die zweite am Abend zwischen 7 und 8 Uhr. Die Batwa scheinen sich an keine bestimmte Essenszeit zu binden. Kalte Speisen, wie gekochte Bataten, Maniok, gerösteter Mais, Erdnüsse u. dgl., werden von Batussi und Bahutu auch in den Zwischenzeiten genossen, wenn man Hunger hat, namentlich am frühen Morgen. Milch wird in frischem oder saurem Zustand getrunken, von den Batussi mit Vorliebe als gequirlte Sauermilch. Um auch auf Reisen stets frische Milch zu haben, lassen vermögende Batussi mehrere Milchkühe nebst dem nötigen Personal mitlaufen. Fleisch wird meist am Stock geröstet, also „Spießbraten", oder im Rauch und an der Sonne gedörrt. Aber Fleisch ist ein seltener Genuß, denn die Batussi Urundis essen, wie die aller anderen Bahimastaaten, nur Rindfleisch und dieses nur, wenn die Tiere steril oder zu alt zur Zucht sind, oder wenn ein Tier zum Opfern geschlachtet wird (vgl. S. 103, 136). Die Bahutu bekommen

nur beim Rindfleisch, wenn ihnen die Batussi als Besitzer der Rinder etwas abgeben, und das Fleisch der ihnen zugewiesenen Ziegen oder Schafe bestenfalls dann, wenn ein Tier des Felles wegen, das zur Kleidung dient, geschlachtet wird. Mehr Fleisch fällt an die Batwa ab, die an den „Höfen" ihrer Batussiherren als Wächter, Polizisten, Maßlanten usw. gehalten werden. Man sieht verhältnismäßig wenig Ziegen und Schafe in Urundi, während früher die Herden kolossal waren; infolge der von den Wanderhändlern seit 1906 angeregten Rindwirtschaft sind sie großenteils verschwunden. Auch Hühner und Eier werden nicht gegessen, sondern nur zu Opferzwecken oder zum Weissagen verwandt (s. S. 47). Und da auch die Jagd nur selten etwas in die Küche liefert — die Barundi sind schlechte Jäger und essen, außer den Batwa, kein Wildfleisch oder ganz ausnahmsweise — und die wild wachsenden Pflanzen nur wenig zur Nahrung herangezogen werden, so ist der Küchenzettel recht klein. Hauptnahrungsmittel sind durch ganz Urundi Bananen, Bohnen, Erbsen, Bataten, Sorghum, die sämtlich getrocknet, zerrieben und in Mehlbrei verwandelt werden; alles andere, was die Felder in den verschiedenen Höhen- und Wärmelagen noch außerdem hervorbringen (s. Kapitel Ackerbau, S. 48), spielt nur eine untergeordnete Rolle.

Zwar behaupten die Batussi sowohl dem Europäer wie dem Muhutu gegenüber, nur von Milch, Fleisch und Bier zu leben, aber in Wirklichkeit essen sie ebenso Hülsenfrüchte, Bananen, Hirsebrei und anderes wie die Bahutu. So viel Rinder werden ja auch gar nicht im Lande geschlachtet, daß alle Batussi täglich davon satt werden könnten. Abgesehen vom Fleisch, das, wie erwähnt, fast immer am Stock gebraten wird, werden weitaus die meisten Gerichte gekocht oder gedämpft, nur sehr wenige mit Fett oder Öl gebacken, wie z. B. in der palmärmeichen Tanganikagegend.

Von besonderen Speisevorschriften der Barundi habe ich eine Reihe der mit dem Totemismus und mit religiösen Vorstellungen zusammenhängenden Speiseverbote in Erfahrung gebracht (s. S. 103). Im übrigen fällt auf, daß man nie Erwachsene beim Essen sieht. Sie nehmen die Mahlzeiten stets in den Hütten ein, der Mann zusammen mit seinem Weib, aber gesondert von den Kindern, und überrascht man einmal jemand beim Essen, so hört er auf und geht weg, da es ihm in Gegenwart Fremder „nicht bekommen" würde. Auf Reisen ist es natürlich etwas anders. Da entbindet der Zwang der äußeren Umstände oft von solchen Rücksichten; aber gewissenhafte oder streng gewöhnte Menschen, wie die meisten Batussi, halten sich auch auf Reisen so streng an die Sitte, daß sie lieber hungern als von jener abweichen. So hatte ich z. B. bei der Besteigung des Kerisimbi zwei junge Batussi als Führer, die trotz der großen übermenschlichen Anstrengung alles, was ich ihnen zum Essen anbot, zurückwiesen und zwei Tage lang keinen Bissen zu sich nahmen, weil sie nicht ihren vorgeschriebenen Brei und Milch hatten; auch von meinen Karawanenleuten nahmen sie nichts an.

Drittes Kapitel

Schmuck, Kleidung, Waffen

Der Körperschmuck der Barundi ist sehr dürftig. Um die Knöchel und über dem Handgelenk tragen Männer und Weiber dünne Drahtringe aus Kupfer oder Eisen, oder Darmsaiten, die mit feinem Draht umwickelt sind, seltener auch einmal einen dicken Eisenring um das Handgelenk; um den Hals aber namentlich die Männer ein in Ruanda unbekanntes Schmuckstück: einen dreieckigen fingerdicken Ausschnitt aus einer weißen Muschel (ikiresi), das an einer Schnur hängt und meist aus Unjamwesi eingeführt wird (Nr. 19, S. 406), wo man es ebenfalls an den Männern sieht. Desgleichen trägt man einen geschliffenen Wildschwein- oder Flußpferdzahn an einer Schnur am Hals (Taf. 33). Häufiger sind heutzutage einfache Perlkettchen aus kleinen blaßrosafarbigen oder weißen europäischen Perlen, seltener Schnüre mit aufgereihten kleinen spindelförmigen Holzstücken, in die mosaikartig Messing oder Kupferplättchen eingelegt sind, oder mit allerlei Wurzelstücken, Tierkrallen, Ziegenhörnchen usw. als Amuletten (s. S. 132). Auch kleine kupferne oder eiserne kugel- oder glockenförmige Anhängsel werden oft in großer Zahl um den Hals getragen (umuhare, Textbilder 3 u. 4). Ein bloßes Schmuckstück ist oft auch der dicke scheibenförmige Holzring (ikirinsi), den viele Barundi um das Handgelenk tragen, um dieses gegen das Zurückschnellen der Bogensehne beim Schießen zu schützen (s. S. 34 und Taf. 11, 12b, 13, 30a). Trotz seiner Größe von 20 bis 25 cm Durchmesser und trotz der feinen Gliederung der ihn tragenden Barundihand wirkt dieser Scheibenring doch nicht plump, weil er sehr elegant geformt und oft

Fig. 3. Kupferne kugelförmige Anhängsel, Halsschmuck und Amulett, mit „Medizin" gefüllt.
(Museum für Völkerkunde, Berlin.)

Fig. 4. Eiserne Glöckchen als Halsschmuck.
(Museum für Völkerkunde, Berlin.)

[p. 27]

mit verschiedenen linearen Messing- oder Kupferornamenten ausgelegt ist (Taf. 42, 43). Der seitliche Einschnitt, durch den die Scheibe auf das Handgelenk geschoben wird, ist mit $2^1/_2$—$3^1/_2$ cm so schmal, daß man nicht begreift, wie sich ein Männerhandgelenk hindurchzwängen kann. Ein Rangabzeichen der Vornehmen oder ein nur ihnen eignes wertvolles Amulett ist eine pflaumengroße, aus Fruchtkern geschnitzte glatte Kugel, die an einem um den Hinterkopf laufenden schmalen Fellstreifen mitten auf dem kahl rasierten Scheitel getragen wird. Oft wird gleichzeitig ein zweiter solcher Fellstreifen, aber ohne Kugel, vom Hinterkopf über die Mitte der Stirn gelegt. Ich habe diese Schmuckform nie an Bahutu und gewöhnlichen Batussi gesehen, sondern nur an Mitgliedern der Königssippe (Baganwa) und an Großbatwalen (s. Taf. 11, 13, 14).

Die Haartracht der Barundi ist sehr einfach. Vor Jahren war sie, nach den Berichten früherer Reisender, viel mannigfaltiger; heute rasiert sich die große Mehrzahl das Kopfhaar glatt ab. Dazu dient ein kurzes Schabmesser ohne Stiel, nachdem das Haar bloß mit warmem Wasser etwas geschmeidiger gemacht ist. Viele lassen auch einen kleinen runden Haarbüschel auf dem Scheitel stehen, seltener einen Haarrest in anderer Form. Die Kinder laufen häufig in langen „Pudellocken" herum und sehen dann aus wie Galla- oder Somalkinder (Taf. 12b, 16a). Die Weiber und Mädchen sind gewöhnlich glatt rasiert. Wenn sie Haare tragen, strähnen sie es mit hölzernen Kämmen (Textbild 5). Die Männer rasieren auch den Bart; Achsel- und Schamhaare werden von den Batussi entfernt, wogegen sie bei den Bahutu stehenbleiben, aber sehr spärlich sind. Sehr selten sieht man an einem Murundi die beiden schief über den Kopf laufenden aufgesträubten Haarraupen, die für die Banjarwanda Nationaltracht sind.

Fig. 5. Hölzerner Kamm zum Haarsträhnen. (Museum für Völkerkunde, Berlin.)

In beiden Ländern ist aber den Batussi gemeinsam die Pflege der Haut mit verschiedenen kosmetischen Mitteln. Am gebräuchlichsten ist das Einreiben mit halbflüssiger Butter. Der weitaus größte Teil der Butterproduktion wird hierzu verwandt, und oft wird dieser Hautsalbe etwas rote Lateriterde und der Saft von wohlriechenden Pflanzen zugesetzt. Wer keine Rinder und somit keine Butter hat, wie die große Menge der Bahutu, kann sich auch nicht einbuttern. Wenn die Salbung täglich frisch ist, ist die Sache ganz appetitlich und hübsch, aber wenn, wie sehr häufig, die Butter ranzig wird und sich dazu der Schweißgeruch und der Muff von rauchigen Hütten und Viehställen mischt, stinken die Kerle so intensiv, daß man sie in dunkler Nacht auf 10 Schritt wittern kann. Ich muß aber zur Ehre der Barundi sagen, daß sie sich gern baden, wenn sie reichlich Wasser haben, also beim Wasserschöpfen an den Quellen, beim Passieren von Bächen und ähnlichen Gelegenheiten. Kinder und zuweilen auch Erwachsene schmieren sich mitunter das Haar, den Schädel oder andere Körperteile, manchmal auch den ganzen Körper, mit einer hellgrauen Farbschicht ein, die aus Ton oder Asche oder den in den Steppen häufigen mergeligen Exrementen von Raubtieren hergestellt wird. Es ist kein Festschmuck, wie oft die Bemalung bei Erwachsenen (s. S. 67, 127), sondern es soll die Haut von kleinen Schmarotzern befreien und glatt machen.

Tätowierung (urusago) habe ich in Urundi viel seltener beobachtet als in Ruanda

und in Uha. Und zwar nur in Form von Ziernarben, nie von flacher Farbentätowierung. Auch in Urundi sind vorwiegend Batussi tätowiert, und wie in Ruanda sind es die Außenseiten der Oberarme, die beiden Brusthälften von der Schulter bis in die Nabelgegend und beide Rückenhälften von der Schulter bis in die Gürtelzone, über die sich die Tätowierungsmuster ziehen. Diese sind wie in Ruanda in der Hauptsache fingerlange Halbmonde, die in größerer Zahl aneinandergereiht und meist zu 2 und 2 durch einen dritten, in die offene Sichelseite eingreifenden Halbmond miteinander verbunden sind, so daß im ganzen ein kettenartiges Muster entsteht (Textbild 7). Jeder Strich besteht aus vielen kleinen parallelen Schnittchen, die mit einem Messer (Textbild 6) eingeritzt und durch Einreiben von Asche und Euphorbiensaft zum Aufschwellen gebracht werden, so daß sie schließlich eine verdickte, bis 1 cm über die Hautfläche vortretende Narbe bilden. Das Tätowieren besorgen heilkundige Ärzte. Andere Muster bestehen aus Zickzacklinien, aus bandförmigen parallelen Linienreihen, die wie breite Hosenträger über die Schultern laufen, oder aus knopfartigen Narben, die wie dicke Impfnarben auf dem Oberarm und in der Brustfurche aneinandergereiht sind. Andere, unregelmäßige Narbengruppen sind nicht schmuckhafte Tätowierung, sondern Einschnitte gegen lokale Körperschmerzen oder Wundmale aus gewaltsamen Verletzungen.

Fig. 6. Messer zum Tätowieren und Aderlassen.
(Museum für Völkerkunde, Berlin. N. 8413 a.)

Daß diese Tätowierung ursprünglich nur den Batussi eigen gewesen und von den Bahutu und Batwa erst den Batussi nachgeahmt worden sei, wie M. Weiß (Nr. 33, S. 93) angibt, ist mir nicht wahrscheinlich. Das Tätowieren dieser Art ist vielmehr den hamitischen Völkern Afrikas fremd, aber bei den Bantu der oberen Nil- und Kongoländer sowie der westlichen und südlichen Victoriaseegebiete, den Bassuwi, Basindja, Baha, Wassumbwa usw. — die Basiba tätowieren sich nicht, nach H. Nehse — sehr verbreitet, so daß viel eher an eine Übertragung von den Bantu und Niloten auf die Batussi und an ihre weitere Ausbildung durch die Batussi gedacht werden kann. Die Tätowierungen der Somal, Galla, Massai usw. sehen ganz anders aus. Einen Hinweis auf die Zusammenhänge gibt die Mitteilung H. H. Johnstons, daß die nämliche halbmondförmige Narbentätowierung, von der er auch eine Photographie abbildet (Nr. 17, Bd. II, S. 569), sich auch bei den Bakonjo, der wohl

Fig. 7. Narbentätowierung eines Murundi.
(Skizze von Hans Meyer.)

ältesten Banturasse in Unjoro, Toro, Ankole findet, während die große Masse der Banjoro, des Hauptmischvolkes von Bantu, Nilnegern und Bahima in Unjoro, sich nicht tätowiert.

An Frauen und Kindern habe ich in Urundi keine Tätowierung beobachtet. Über die Bedeutung der Muster war nichts Bestimmtes zu erfahren. Daß sie Rindshörner vorstellen sollen, wie ein Missionar meint, möchte ich bezweifeln.

„Schmückende Verunstaltungen" der Ohren (Ohrlöcher), der Nase (Nasenpflöcke), Lippen (Pelele), Zähne (Kerben oder Feilen) oder anderer Körperteile gibt es in Urundi weder bei den Batussi noch bei den Bahutu, also wie in Ruanda, aber die Batwa spitzen die beiden oberen Schneidezähne zu. Auch ist weder Beschneidung bei beiden Geschlechtern noch Deformation des Schädels u. dgl. üblich. Erst wenn man vom Zwischenseenplateau nach West, Ost, Nord oder Süd hinabsteigt, trifft man wieder auf Völker mit Körperverunstaltungen.

Urundi ist immer noch das Land der Rindenstofffkleider (impusu). Abgesehen von den peripherischen Landschaften im Südosten, Süden und Westen, wo der Fremdhandel, für den das übrige Land bis vor kurzem gesperrt war, Baumwollstoffe heranbringen kann, ist ein Stück „Amerikani" oder eine baumwollene Decke als Kleidung in Urundi immer noch eine Seltenheit. Erst in jüngster Zeit kommt durch die relativ wenigen zugelassenen Wanderhändler, durch die Missionen und die durchziehenden Beamten- und Militärkarawanen mehr Baumwollzeug ins Land und wird von den Eingebornen begierig aufgenommen. Zu Zeiten des Königs Kisabo aber verboten die Häuptlinge das Tragen von Baumwollstoffen aufs strengste, denn sie vermuteten sehr richtig, daß mit dem Hereinkommen fremder Händler und Handelswaren auch bald andere Einflüsse eindringen würden, die ihrer Selbstherrlichkeit Abbruch tun könnten.

Neben den vorherrschenden Rindenstoffen werden auch Ziegenfelle (ikikoba, urusato) als Lendenschurze getragen, die Fellseite nach innen, und zwar als alleiniges Kleidungsstück von den Kindern, den Armen und meist auch den Batwa (Taf. 7). Auch in Nordost-Urundi, in der Landschaft Bugusi, werden viel mehr Umhänge aus Fell als aus Rindenstoff getragen (Nr. 8, S. 61). Die Weiber tragen in ganz Urundi außer dem Lendenschurz aus Fell oder Rindenstoff noch ein an einer Ecke zusammengeknotetes vierseitiges Fell- oder Rindenstoffstück um den Oberkörper, in dem hinten das jüngste Kind zu sitzen pflegt, und die Männer einen größern, togaartigen Überwurf, der über den Schultern geknotet wird und bis über die Knie herabfällt. Oft wird die Verknotung auf den Schultern durch ein paar große Quasten aus trockenem Bananenbast geschmückt, die wie ein paar riesige Majorsepauletten aussehen (Taf. 11a, 14a).

Das Rindenzeug (impusu) — Stuhlmann nennt es „Bastfilz" (Nr. 32a, S. 35) — hat vor den Fell- und Baumwollstoffen den Vorzug, daß es sehr leicht, warm, weich und durchlässig ist; aber die Herstellung erfordert Arbeit, und da es sich bei längerem Tragen auffasert, wird es bald löcherig und ausgefranst und sieht dann sehr schäbig aus (Taf. 9, 13a). Dazu kommt die meist sehr unfreundliche dunkelgraue Färbung. Von Natur ist es braun. Selten wird es mit Laterit oder Pflanzensäften rot gefärbt (Trauergewand) oder auf dem natürlichen rotbraunen Grund mit schwarzen spindel- oder blattförmigen oder kreisrunden Ornamenten verziert. Gewöhnlich wird es mit Holzasche oder Tonschiefer oder Sumpfschlamm dunkelgrau gefärbt und sieht dann sehr trist aus. Wenn eine größere so gekleidete Menschenmenge beisammensteht, vereinen sich

die vielen schwarzbehangenen Gestalten mit den blank rasierten Schädeln und den von jedermann getragenen blitzenden Speeren zu einem überaus eindrucksvollen Gesamtbild von tiefem Ernst. Dieselbe einfache Färbemethode finden wir auch im nördlichsten Verbreitungsgebiet der Bahima, in Unjoro, wieder, von wo Vandeleur schreibt: „Die Wanjoro (im Hochland von Süd-Unjoro) machen die nämlichen Rindenkleider wie die Waganda und färben sie schwarz, indem sie sie einen Tag lang in den Schlamm eines Sumpfes stecken." (Nr. 9, S. 377.)

Einen Unterschied der Kleidung zwischen Batussi und Bahutu gibt es nicht, ebensowenig eine besondere Tracht für einen besonderen Stand oder Beruf. Der Mutwa und der Muhutu, der Mutussi und der Muganwa, der Großhäuptling und der König: sie alle kleiden sich in denselben unansehnlichen schwarzgrauen Impusu aus Baumrinde. Gemeinsam ist allen auch, daß sie in dem Innern der Hütten und bei der Feldarbeit das lange Obergewand als hinderlich ablegen.

Der Stoff wird aus den Rinden mehrerer Ficus-(Urostigma-)Arten, hauptsächlich des Ficus chlamydodora Warb. oder Ficus Schimperi Hochst., in derselben Weise wie in den noch Rindenzeuge tragenden Gegenden Ruandas hergestellt. Da aber in Urundi viel mehr Rindenstoff gebraucht wird als in dem schon stark mit Baumwollstoffen versehenen Ruanda, werden hier auch weit mehr Fikusbäume bei den Hütten angepflanzt als dort, oft wie ein dörflicher Obstgarten neben den Gehöften. Schon aus diesem Grunde macht die Urundilandschaft einen freundlicheren, abwechslungsreicheren Eindruck als das meist nur grasige Ruanda. Fast jede Hüttengruppe liegt im Schatten eines kleinen frischgrünen Fikushaines. Auch der Rundzaun der Gehöfte besteht zum Teil aus Fikusbäumen, die als natürliche Pfähle dem Flechtwerk des Zaunes festen Halt geben. Nach v. d. Burgt soll der Ficus chlamydodora erst vor zirka 60 Jahren in Urundi eingeführt worden sein und jetzt nur kultiviert dort vorkommen. Ich glaube ihn aber auf den Randbergen im Nordwesten wild bemerkt zu haben.

Wenn der Baum etwa armdick geworden ist, wird er zum ersten Male entrindet. Zu diesem Zweck wird der Stamm im Abstand von $^1/_2$ bis 1 m mit zwei Horizontalschnitten umringelt, beide Schnitte durch einen vertikalen Längsschnitt verbunden und die so angeschnittene Rinde als ein langes Rechteck ohne Mühe abgelöst. Das nackte Stammstück wird mit Butter beschmiert und mit Bananenblättern umbunden, worauf unter dem am Holz ausschwitzenden Harz die Rindensubstanz von den Schnittflächen her sich wieder völlig ergänzt, und die Wunde zuwächst. Zwei Jahre später kann der Baum wieder von neuem beschnitten werden. Das abgeschnittene Rindenstück wird erst mit dem Messer von der rauhen äußern Borke befreit, dann über einen am Boden liegenden Baumstamm gelegt und mit einer kurzen, vielfach gekerbten Holzkeule (Taf. 36, 37) so lange auf beiden Seiten geklopft, bis es weich geworden ist. Darauf wird der noch darin sitzende Saft ausgerungen wie aus einem Waschlappen, das Stück ausgebreitet an der Sonne getrocknet und schließlich mit anderen Stücken durch Bananenbastfaden und Pfriemen zu einem so großen Gewand zusammengenäht, wie man es für einen Hüftschurz oder einen Mantel braucht (Nr. 19, S. 279). Das Rindenzeug wird ausschließlich von Männern und fast nur für den eigenen Haus- und Familienbedarf hergestellt, doch gibt es in Ruanda auch besondere „Fundi", die das Zeug gewerbsmäßig für andere machen und verkaufen. Die Frauen besorgen nur das Ausschmücken ihrer Gewänder mit eingeflochtenen Kanten oder Litzen, während die Männer an

ihren Gewändern auch den Schmuck der Troddeln und Schulterquasten anbringen (Taf. 11a, 44, 45). Sogar der König Kisabo betrieb diese Beschäftigung gern in seinen Mußestunden; und das gleiche wird vom mächtigen Häuptling Lusabiko in Ost-Urundi berichtet: „Wir fanden den Häuptling damit beschäftigt, Fransen aus feinem trockenen Gras herzustellen, um sein Rindengewand damit zu schmücken. Niemand würde in dem schlichten Neger, der da am Boden hockend Fransen flocht, den großen Lusabiko vermutet haben, dem ein Viertel des schönen Urundilandes zitternd zu Füßen liegt" (Nr. 14, S. 214).

Es ist anzunehmen, daß die Batussi als Hirtenvolk ursprünglich Gewandstücke aus Rindshaut getragen haben, wie heute noch mehrere Hirtenstämme Ostafrikas, z. B. die Massai und Wandorobbo. Aber seitdem sie seßhaft geworden sind, haben sie von den unterjochten Bahutu neben manchen anderen Dingen auch deren Rindenstoffe angenommen. Nur im Festgewand, bei Kriegstänzen und anderen Feierlichkeiten, kommt die sorgfältig und geschmackvoll präparierte Fellkleidung nebst Leopardenfellschurz zum Vorschein (s. S. 124, 126); dazu allerlei Schmuck (Taf. 11b, 12a, 31, 32).

Eine Kopfbedeckung haben weder Männer noch Weiber. Brennt die Sonne zu heiß oder regnet es, oder will man den Kopf aus einem anderen Grunde schützen, so zieht man einen Zipfel des Gewandes über den kahlen Schädel. Ein Stirnband aus Maisblättern tragen mitunter die Weiber als Zeichen junger Mutterschaft; zwei schmale Stirnstreifen aus Bananenrinde als Frauenzeichen. Wides auch in Ruanda.

Eine besondere Bekleidung der Schamteile oder Füße gibt es nicht. Bei den Männern wird der Penis oft sichtbar, wenn sie nur die Toga tragen, aber ihr Schamgefühl wird dadurch nicht verletzt. Die Weiber haben meist auch die Brüste durch das Oberkleid verhüllt, entblößen sie aber ungeniert, wenn sie aus irgendeinem Grunde das Gewand ablegen oder wechseln. Kinder vor der Pubertät gehen gewöhnlich ganz nackt (Taf. 16) oder mit einem schmalen Schurz aus Bananenbast (Taf. 38).

Die Barundi sind wirklich ein „Volk in Waffen", weit mehr als die Banjaruanda, bei denen die große Menge der Bahutu unbewaffnet einhergeht und auch die Batussi viel öfters als den Speer nur den langen Stab tragen, der freilich durch Aufstecken einer Speerspitze schnell zur Waffe gemacht werden kann. Desgleichen sieht man häufig Barundi mit dem spitzenlosen Holzschaft umherwandern, wenn sie ihre friedliche Gesinnung dartun oder wenn sie die Eisenspitze gegen Abnutzung oder Verrosten schützen wollen, aber fast immer führen sie die eingewickelte Speerspitze bei sich, und nie entfernen sie sich weit vom Gehöft zum Viehhüten, zur Feldarbeit, zu Besuchen, ohne daß von mehreren Leuten nicht wenigstens einer oder zwei mit Speer und Bogen bewaffnet sind. Ein Murundi, der etwas auf sich hält, läßt sich nie ohne Speer sehen; er würde sich ohne ihn für „nicht angezogen" halten. Auch die Knaben tragen schon Speere. In der Regel werden die beiden gebräuchlichen Waffen, Speer und Bogen, zusammen getragen, der Speer in einer, der Bogen und 2—4 Pfeile in der anderen Hand.

Die Speere (itschjumu) unterscheiden sich wenig von den Ruandaspeeren und variieren auch etwas in den Formen der Spitzen, wie dort (Taf. 39, 40). Meist hat das Blatt eine starke, zugeschärfte Mittelrippe, die es sehr elastisch und widerstandsfähig macht und dem Speer sozusagen vier Schneiden gibt. Neben der Mittelrippe sind zwei Blutrinnen eingetieft, die dem Bantuspeer gewöhnlich fehlen. Spitze und Schuh haben eine Düse zum Einstecken des Schaftes. Dieser ist ein 2 bis

3 m langer, stark daumendicker Stock, meist ganz gerade, gut gerundet und glatt abgerieben, wie poliert. In Anbetracht der äußersten Armut Urundis an Bäumen und großen Sträuchern ist die Güte der Lanzenschäfte erstaunlich. Einfuhr von Stangenholz für die Speere gibt es nicht aus den Nachbarländern. Viele Speerschäfte sind Familienstücke, die sich aus holzreicherer Zeit her auf die Gegenwart vererbt haben, und andere werden aus dem Holz des angepflanzten Rindenstoff-Fikus gemacht, der schöne gerade Äste treibt, wenn man ihn nicht viel beschneidet. Ärmere Leute und Kinder haben meist Speere mit minderwertigen, etwas gebogenen oder knorrigen Schäften. Die Spitzen und Schuhe der Speere werden von besonderen Schmieden (s. S. 77) entweder aus dem in Urundi selbst gewonnenen Eisen oder aus den vom Kongo (Uwira) oder aus Usindja eingeführten Eisenhacken (s. S. 83) verfertigt. Die übrige Arbeit an der Herstellung seines Speeres tut jeder Murundi selbst.

Fig. 8. Flechtmuster an der Pfeilfederung.
(Museum für Völkerkunde, Berlin, No. 5274.)

Der Speer ist hauptsächlich Stoßwaffe und Verteidigungswaffe. Geworfen wird er nur, wenn man aus nächster Nähe seines Zieles sicher ist, da der Verlust dieses kostbaren Besitzes nicht riskiert werden darf. Wurfschlingen zum Schleudern der Speere gibt es nicht.

Die Unzertrennlichkeit des Murundi von seiner Lanze, die Möglichkeit, sich jederzeit auf den langen Speerstock zu stützen, bestimmt die Körperhaltung des Murundi, wie des Munjaruanda, in Ruhestellung sehr charakteristisch. Er umfaßt den aufrechten Stock mit halb emporgerecktem Arm, so daß die Hand ungefähr in Gesichtshöhe liegt. Je nachdem beim Anfassen die Handfläche nach innen oder nach außen gekehrt ist, läuft der Stock entweder zwischen Brust und Ellenbogen zum Boden oder an der Außenseite des Ellenbogens entlang. In beiden Fällen lehnt sich der Körper voll gegen die etwas schief nach außen stehende Stütze, wobei das „Standbein" gestreckt wird, das der Stütze benachbarte „Spielbein" aber über das Standbein in Kniehöhe leicht übergeschlagen wird, so daß es nur mit dem äußeren Sohlenrand den Fußboden

berührt (Taf. 9b). Viel seltener sieht man, daß der Fuß des Spielbeines gegen das Standbein gestemmt wird, wie es die Oberniloger und auch die Massai häufig tun. Die Linienführung dieser Körperhaltung der Barundi in Ruhestellung ist oft von überraschender Schönheit. Eine größere Zahl so dastehender Männer ist wirklich „ein Bild zum Malen".

Die eigentliche Angriffs- und Kampfwaffe ist der Bogen mit den Pfeilen. Die Bogen (umuheto) haben die schlichte Form der meisten ostafrikanischen Bogen und sind ziemlich gute Waffen (Taf. 41). Die Sehne ist gewöhnlich aus Rindersehne gemacht. Zusammengesetzte Bogen wie bei den Bugoje-Batwa gibt es bei den viel mehr verneigerten Batwa Urundis nicht. Die Pfeilspitzen (umwampi) sind weder mit Widerhaken versehen noch gelappt und stecken vermittels eines Dorns im Holzschaft, der oben umwickelt ist; am Fuß sind sie einfach gefiedert. Die Fiederung aber ist oft in hübsch gemusterte Rohrumwicklung eingebunden (Textbild 8). Niemals werden von den Batussi und Bahutu die Pfeile vergiftet, wohl aber von den Batwa (Nr. 19, S. 246). Daß die den Bogen haltende linke Hand durch dicke hölzerne scheibenförmige Armringe (ikirinsi) gegen den Rückschlag der Sehne geschützt wird, wurde schon oben erwähnt (s. S. 27 und Taf. 30a). Das Bogenschießen ist auch bei den Barundi nicht ein Schießen aus langem Stand und mit genauem Zielen, sondern vielmehr ein rasches, heftiges Abschnellen des Pfeiles gegen das Ziel aus dem Gefühl heraus, wie beim Wurf mit der Steinschleuder (die es in Urundi nicht gibt). Sie treffen aber den Mann auf 30—40 Meter ziemlich genau (Taf. 30). Die Mehrzahl der Pfeile ist Fabrikat der Batwa. Die Pfeile werden zuweilen in hübsch geschnitzten hölzernen Köchern (umutamo) aufbewahrt, die an beiden Enden mit übergreifenden Deckeln versehen sind (Taf. 41, 42), aber sehr selten sieht man einen Köcher am Arm oder Rücken eines Murundi, meist nur in den Hütten.

Fig. 9.
Messer mit ornamentierten Holzschaften.
(Museum für Völkerkunde, Berlin, Nr. [illegible].)

Die bis $^1/_2$ m langen schwertartigen Messer (imbugita) der Barundi sind keine eigentlichen Waffen, sondern Werkzeuge des täglichen Gebrauches, die nur gelegentlich als Waffe mit benutzt werden (Taf. 43). Das Messer hat zwei parallele Schneiden und ist vorn nur wenig gespitzt. Es ist mit seiner ganzen Breite in einen sondahefförmigen Holzgriff eingelassen und steckt in einer hölzernen Scheide (uruwati), die aus zwei dünnen, durch mehrere Umwicklungen miteinander verbundenen Brettchen gefertigt ist. Die Scheide wird oft wie der Köcher durch eingeschnittene Halbmonde und Zickzackmuster verziert (Textbild 9). Die Messer werden wie ein Wehrgehänge an einem von der rechten Schulter zur linken Hüfte laufenden Riemen getragen. Die häufigeren viel kleineren, 10—15 cm langen

2: Meyer FO42 Rundi

Messer dagegen, die ebenso geformt sind und zu kleineren Schneidearbeiten dienen, trägt man an einer Schnur entweder um den Hals oder am linken Oberarm. Hübsch mit feinem Kupferdraht umwickelte Messer gibt es nur im westlichen Nieder-Urundi am Tanganikasee, wo sie kongolesischer Einfluß sind und von den Wawiraschmieden hergestellt werden (Nr. 19, S. 133). Im eigentlichen Hoch-Urundi sind die Bahutu- und namentlich die Batwaschmiede die Messerlieferanten.

Recht selten sind in Urundi die einst allgemein verbreiteten Schlagkeulen (uwuhiri) geworden; sie sind von der vormaligen Waffe zum Paradestück oder zum Spielzeug der Männer herabgesunken, wie bei den Massai und den Wadschagga. Sie bestehen aus einem zirka $^1/_2$ m langen, schön geglätteten Stück Hartholz, das am Kopf drei- oder vierkantig zugeschnitten ist und am Handende etwas verdickt ausläuft.

Noch viel seltener sind die Schilde (ingabo). Sie haben die Bedeutung als Schutzwaffe gänzlich verloren und sind wie in Ruanda ein bloßes Häuptlings- oder Familienemblem (vielleicht Clanabzeichen) geworden (Taf. 44). Der König besitzt mehrere, jeder Häuptling und seine Leibgarde je einen, die verschiedene Bemalung haben. Die Batwa haben keine Schilde und dürfen keine führen. Der bis $^1/_2$ m breite runde Schild ist aus Holz geschnitzt, hat einen hölzernen Griff und ist mit weißen und roten Kreissegmenten verschiedener Art bemalt. Auch gibt es solche, die mit Rohr umflochten sind (s. S. 80—81 und Taf. 53), und gleichgestaltete aus Rindshaut, die noch seltener sind. Dieselbe Form und Ornamentierung der hölzernen Schilde und Köcher kehrt sowohl bei den nördlichen Bahima in Ruanda als auch bei den südlichsten in Ufipa wieder (vgl. Abbildung bei Nr. 47, S. 76).

Zur kriegerischen Ausrüstung des Murundi gehört schließlich noch der Kriegsschmuck. Wenn die Leibgarden des Königs oder des Häuptlings, die, wie wir später sehen werden (S. 87), die eigentlichen Kriegführenden sind, ins Feld ziehen, werden sie mit einem Schurz aus weißgegerbtem Antilopen- oder Schaffell (inkindi) uniformiert und bemalen sich den Schädel, das Gesicht und den Oberkörper mit allerlei weißen und roten Linien und Ornamenten, die ihnen ein erschreckendes wildes Aussehen geben (Nr. 19, S. 277). Auch bei den Kriegstänzen wird jener uniforme Fellschurz getragen, also ganz ähnlich wie in Ruanda, wo zur Uniform noch andere Schmuckstücke, wie Kopfputz und Fußrasseln, hinzukommen. Dieselbe Art des Kriegsschmuckes wie hier und in Ruanda haben auch die Bahima in Ufipa (vgl. Bild bei Lechaptois, Nr. 47, S. 61).

Von alten Steinwaffen als Resten einstiger, untergegangener Kulturen (s. S. 151) ist in Urundi auch bei den Batwa, dem ältesten Volkselement, nichts oder nichts mehr in Gebrauch; ebensowenig wie in Ruanda.

Viertes Kapitel

Jagd, Fischfang, Viehzucht, Ackerbau, Genußmittel

1. Jagd und Fischerei

Die Jagd (uwuhisi) spielt im Dasein der Barundi eine nur geringe Rolle, denn in einem so stark bevölkerten und fast ganz abgeholzten Land, wo man, wie in den Burenländern, der Viehhaltung und Viehweidung wegen das Wild systematisch ausgerottet hat, gibt es nur noch wenige jagdbare Tiere. Am häufigsten dürfte noch der hauptsächlich in den schmalen Buschdickichten der tiefen Bachtäler lebende Buschbock (Tragelaphus), ferner die Schopfantilope, Gazelle und Zimela-Antilope sein. Von anderen großen jagdbaren Tieren kommt gelegentlich der Elefant in den dünn bewohnten Gegenden, in den menschenleeren Wäldern des westlichen Randgebirges und in der Russissiniederung vor, häufig ist aber noch das Flußpferd, das in allen größeren Strömen und Sümpfen Nahrung und Schutz findet. Leoparden gibt es überall, am meisten in Nordost-Urundi.

Selten jagt (kuhiga) der Murundi mit der Waffe für sich allein. Zuweilen jedoch werden von den Häuptlingen Treibjagden von 10—20 Personen veranstaltet, die freilich viel mehr Sport als Weidwerk sind und nur den einen praktischen Zweck haben, Antilopenfelle für die obenerwähnte Kriegstracht und Gehörne für Trompeten und für Amulette zu verschaffen. Das Fleisch der gejagten Tiere wird als unrein von den Batussi und den Bahutu nicht gegessen, sondern den Batwa oder den Hunden gegeben, die bei jeder Treibjagd wesentlich mitwirken. Jagdhunde in unserem Sinn können diese Hunde (s. S. 48) kaum genannt werden, denn sie tun weiter nichts als das Wild aufstöbern und verfolgen; es ist der gewöhnliche Murundihund mit aufrechtstehenden Ohren. Eine wirkliche große Meute von Hetzhunden für die Jagd hatte der alte König Kisabo. Die Hunde tragen ein Lederhalsband mit einer eisernen Schelle oder Rassel, deren Klirren und Klappern das Wild aufscheucht, und werden so lange an der Leine geführt, bis die Jäger das Gelände, wo Wild vermutet wird, in einem weiten Halbkreise umstellt haben. Nun werden die Hunde ins Dickicht losgelassen, und bald scheuchen sie mit ihrem Schellengerassel das Wild auf und stellen es schließlich durch gemeinsamen Angriff, so daß die Jäger hinzulaufen und das Tier mit Pfeilschüssen oder Speerstichen töten können (Nr. 19, S. 100).

Viel bessere Jäger sind erklärlicherweise die vorwiegend von der Jagd lebenden Wald-Batwa, die meist zu zweien zu jagen pflegen. Vor allem ist die Elefantenjagd in den Wäldern des nordwestlichen Randgebirges lediglich ihr Werk. Hierzu wie zur Erlegung anderen großen Wildes, z. B. der Flußpferde, benutzen sie tiefe Fallgruben (itschjobo), die sie auf den Wechseln der Tiere anlegen. Auf dem Grund der steil-

[p. 36]

wandigen, bis 8 m tiefen Gruben pflanzt man aufrecht stehende spitze Pfähle ein, die das einbrechende Tier verwunden oder töten sollen, und bedeckt das Loch sorgfältig mit Ästen und Laub. Ein hineingestürztes Stück Wild, das noch lebt, wird mit Speerstichen getötet. Höchst solide Fallen bauen die Eingeborenen zum Fang der Leoparden, des schlimmsten Feindes ihres Kleinviehes, indem sie innerhalb eines engen, niedrigen, durch einen starken Palisadenzaun führenden Ganges einen schweren steinbeladenen Balken aufhängen, der durch Berührung einer Schnur ausgelöst wird und herabstürzt (Taf. 24b). Innerhalb des Zaunes wird neben dem engen Gang eine Ziege angebunden, und der Leopard, der zu dem schreienden Tier durch den Gang einzudringen sucht, wird durch den niedersausenden Balken erschlagen. Alle Leopardenfelle müssen an den König abgeliefert werden, der allein das Recht hat, sich und seine Sippe mit Schurzen von Leopardenfell zu kleiden.

Sehr geschickt sind die Batwa im Aufstellen von Schlingen (uschiwuka), in denen sie große Vögel und kleine Säugetiere fangen. Auch die Leimrute zum Fang kleiner Vögel ist ihnen nicht unbekannt; sie üben eine Art Sport damit aus, indem sie im Dickicht sich leise an sitzende Vögel anschleichen und die Tierchen plötzlich mit der Rute berühren, so daß sie daran kleben bleiben. Eigentümlich ist auch ihre Art, Francoline und Perlhühner zu fangen. Sobald es abends dunkel geworden ist, zieht der Jäger mit einer glimmenden Grasfackel in die Steppe, wo er solche Scharrvögel gespürt hat. Neugierig nähern sich die Tiere dem Feuer. Sowie aber der Mann eins bemerkt, legt er die Fackel neben sich, schleicht vorsichtig ausbiegend auf den Vogel, dessen Aufmerksamkeit auf die Fackel gerichtet ist, zu und erschlägt ihn mit einem Stockhieb. In allen diesen Fällen wird natürlich das Fleisch der gejagten Tiere verzehrt, denn die Wald-Batwa leben hauptsächlich von der Jagd und sind keine Kostverächter.

Die Batwa des inneren Urundi sind es auch allein, die Fische essen und Fischfang treiben (kuroba), während die Barundi des Inneren weder fischen noch Fische essen, wenn sie es nicht von den Missionaren und Offizieren gelernt haben. Dagegen sind die Barundi des Tanganikasees und des Russisi gute Fischer und passionierte Fischesser. Die Batwa fischen hauptsächlich mit der Angel (igera) und nur wenig mit Netzen (urusenga), die Barundi des Tanganikagebietes aber wenden eine ganze Reihe verschiedener Fangmethoden an: Die gebräuchlichste, oft im großen betriebene und quantitativ ertragreichste ist die nächtliche Netzfischerei vom Boot aus. Sie hat es fast nur mit den kleinen sardinenartigen, 5 cm langen, akahuso genannten Fischchen zu tun, die in großen Schwärmen den See bevölkern und nachts durch Fackelschein angezogen werden. Der Fang wird vom Einbaum aus von zwei Mann betrieben, von denen der eine das Netz handhabt, der andere rudert und den Brand der langen Rohrfackel (ikimuri) unterhält, die ein Hauptstück der Ausrüstung bildet. Diese Fackel ist eigentlich ein langes, 20—25 cm dickes Tau, das aus trockenem, mit Bananenbast zusammengebundenem Schilfrohr besteht und je nach Bedarf 10—20 m lang gemacht wird. Das riesige Schilfbündel wird so auf den Boden des Einbaumes gelegt, daß es über den vorderen Bootsrand ein Stück hinausragt, dieses Vorderende wird dann angezündet, und nun rudert man in den See hinaus. Draußen wird das Boot mittels eines an einem Baststrick befestigten Steins verankert, worauf die kleinen Fische in Scharen nach dem Feuerschein schwimmen und durch wiederholtes Auswerfen und Einziehen des Netzes zu Hunderten und Tausenden gefangen und in

das Boot ausgeschüttet werden. Die noch kleineren umuschischja-Fischchen, kleine Krebstierchen und anderes winziges Getier werden mit einem unseren Handnetzen ähnlichen Schöpfnetz gefangen (Nr. 19, S. 426 und Taf. 45).

Diese beiden kleinen Fischsorten, akahuso und umuschischja, werden lebend oder tot, wie sie gerade aus dem Boot kommen, auf dem Platz vor und zwischen den Hütten in einer großen dünnen Schicht ausgebreitet und trocknen schnell an der Sonne und Luft. Mitten hinein wird ein Gefäß mit Wasser gestellt, das dem Imana geweiht ist und dem Fischfang die Gunst des Gottes erhalten soll (Nr. 19, S. 427). Auch haben die See-Barundi, nach v. d. Burgt, einen besonderen Zauberer, der für erfolgreichen Fischfang durch allerlei magische Künste zu sorgen hat. Die getrockneten Fischchen, die sehr hübsch silberig und goldig schillern und nicht übel schmecken, erfreuen sich großer Beliebtheit bei den Eingeborenen. Auch nach dem Innern werden sie verhandelt, soweit man dort Fische ißt, namentlich nach Nordwest-Urundi. Ich traf Tanganikaleute mit großen Körben voll solcher Fischchen drei Tage weit vom See am Fuß der Nussigaberge.

Von der nächtlichen Fischerei am Tanganika bekommt jeder Reisende einen lebhaften Eindruck, viel mehr als von den anderen Fangmethoden. Von einem erhöhten Punkt am See, z. B. der Boma in Usumbura, sieht man nach Dunkelwerden von allen Seiten des Seeufers Dutzende von Lichtern ruhig in den See hinausschwimmen, sich draußen in langen Reihen anordnen und dann stundenlang an einem Fleck verharren, wo die Boote Anker geworfen haben. Drüben am fernen kongostaatlichen Westufer (Uvira) vollzieht sich dasselbe Schauspiel. So blinken oft Hunderte von Lichtern über das stille Wasser herauf, da eins verglimmend, dort eins frisch entzündet und neu aufleuchtend, wie eine festliche Illumination; dahinter die mächtige finstere Kulisse der westlichen Randberge und darüber das millionenfache Flimmern der Milchstraße, während ein leichter warmer Luftzug über Land und See hinweht und nur selten einmal ein tierischer Laut durch die große Stille der afrikanischen Nacht bringt.

Bei Tage fischen die Seeanwohner oft mit einem kegelförmigen Schleppnetz (itanda), das an einem Holzreifen befestigt ist und durch angebundene Steine unter Wasser gehalten wird. Man zieht es an zwei Stricken hinter dem Boot her und entnimmt ihm von Zeit zu Zeit seinen Inhalt, der sowohl kleine wie große Fische birgt. Eine sonderbare Methode der Netzfischerei hat Kandt bei den Barundi des Nord-Tanganika beobachtet, während ich und andere nichts Derartiges gesehen haben. Diese Methode besteht darin, daß von den sechs Insassen eines Bootes vier Mann gleichzeitig, das Netz in Händen, kopfüber ins Wasser springen und, nach 30—50 Sekunden mit ihrer Beute wieder auftauchend, sich von ihren Gefährten wieder in den Kahn ziehen lassen (Nr. 22, S. 333).

Die verschiedenen Netzarten sind sehr fest und gleichmäßig gearbeitet, obwohl sie ohne Knoten aus freier Hand geknotet werden. Die Schnüre werden aus den Fasern der Raphiapalme geflochten.

Auch in der Angelfischerei wenden die See-Barundi verschiedene Methoden an. Zum Fang großer Fische wird gewöhnlich eine lange Schnur verwendet, an der in kleinen Zwischenräumen zahlreiche starke Angelhaken (umugera) an kurzen Schnurstücken befestigt sind; das Ganze umuhungo genannt. An jedem Haken steckt eins der obengenannten kleinen akahuso-Fischchen als Köder. Die lange Leine wird vom Strand oder vom Boot aus ins Wasser geworfen, an beiden Enden fest-

gehalten und, sobald man das Anbeißen von Fischen spürt, von zwei Mann eingezogen und abgesammelt (Nr. 19, S. 426).

Mit Angelstock (isanga) und Leine (impungo) wird namentlich von den Knaben, aber auch von den Batwa gefischt. Am unteren Ende der Schnur hängen aber nicht ein Haken, wie bei unseren Angeln, sondern zwei bis vier Haken übereinander, die durch ein Holzstück als Schwimmer in der Schwebe gehalten werden. Oft hält ein Fischer zwei oder drei solcher Angelstöcke in der Hand. Ungeachtet der Krokodile stehen die Fischer oft mehrere Stunden lang bis an den Bauch im Wasser, und beißt ein Fisch an, so drehen sie langsam den Angelstock um seine Achse, so daß sich die Leine aufwickelt, denn bei schnellem Herausziehen würden die Haken, die keinen Widerhaken wie unsere Angeln haben, den Fisch abgleiten lassen.

Ein eigenartiger Apparat zum Fang mittelgroßer Fische ist ein vierseitiger kastenartiger Rahmen (uvusago) aus Palmblatt, in dessen Flächen mehrere Löcher angebracht sind, hinter welchen Heuschrecken oder Würmer als Köder befestigt werden. 30—40 solcher kleiner Fangkästen werden beschwert und rund um das Boot ins Wasser gesenkt. Ein hölzerner Schwimmer, der an jedem mit einer Schnur befestigt ist, zeigt sofort an, wenn ein Fisch, der nach einem Köder schnappen wollte, in einem der Löcher steckengeblieben ist. Der Erfolg dieser Fangmethode soll sehr reich sein.

Schließlich seien noch die aus Holzstäben geflochtenen Reusen (umugono) erwähnt. Sie haben die auch sonst häufige Gestalt eines langen Kegels, in dem ein trichterförmiges kleineres Geflecht steckt: System der Mausefallen. Durch die engere Öffnung des letzteren können die Fische zwar zu dem im Hauptkegel befindlichen Köder gelangen, aber nicht wieder hinausschwimmen. Die Reusen werden nahe dem Ufer mit Stangen auf dem Seegrund befestigt und alle paar Tage herausgezogen und ausgeleert.

Harpunen werden beim Fischfang nicht benutzt; ebensowenig wird Gift zur Betäubung der Fische angewandt. Bis zum Abrichten von Schwimmvögeln für den Fischfang, z. B. der Kormorane, die am Tanganikasee häufig sind und deren Gewandtheit im Fischen den Eingeborenen längst bekannt ist, haben es die Neger hier so wenig wie anderwärts in Afrika gebracht.

Bei der Nutzung der freien Tierwelt zur Nahrung muß auch das Fangen oder Sammeln von Heuschrecken und von Termiten erwähnt werden, das die Bahutu und Batwa gern betreiben. Heuschrecken werden in Menge gefangen, wenn die großen Wanderschwärme über das Land ziehen, durch Eindrücken des Brustkastens getötet und in Fett geschmort. Termiten fängt man, indem man die kleineren Termitenhaufen bis zur Bodenfläche abträgt und aus den so geöffneten Löchern und Kammern die Termiten in einen Topf sammelt, aus dem sie dann lebendig in siedendes Fett geworfen werden. Namentlich im steppenhaften Ost-Urundi bemerkte ich oft am Pfad die geöffneten handbreiten, röhrenförmigen, tief in den Boden reichenden Termitengänge, die von den Bahutu ausgeräumt waren. Gewöhnlich wird dann der Bau von den überlebenden Termiten wieder geschlossen, durch einen neuen Erdhaufen überdeckt und von neuem bevölkert.

Den Übergang von der jagdlichen Tiernutzung zur Tierhaltung in Domestikation bildet die Nutzung der wilden Bienen (urujuki) zum Honiggewinn. Das Ursprüngliche war auch hier das Aufsuchen von Bienenstöcken in der Wildnis und das Ausnehmen ihrer Honigwaben. Diesen Brauch üben noch die Batwa gelegentlich, während die Bahutu wie die anderen ostafrikanischen Neger es längst verstanden haben, die wilden Bienen durch Aufhängen von Bienenkörben in geeigneten Blütenbäumen der

Steppe und des Waldes zur Dienstleistung für den Menschen zu veranlassen. Am meisten pflegt man die Bienenzucht in den Außenlandschaften Ujogoma und Ufige, die noch am meisten Wald und Baumsteppe haben. Der Honig ist für die Barundi von großer Wichtigkeit, weil sie kein anderes Süßmittel haben. Vor allem brauchen sie ihn zur Herstellung von Honigbier (s. S. 61) und als Zusatz zu verschiedenen Speisen.

Die Bienenstöcke (umusingo) haben die Gestalt kurzer dicker Röhren von zirka $1^1/_2$ m Länge und $^1/_2$ m Durchmesser und werden entweder aus einem ausgehöhlten Stammstück oder, wo es nur wenig Bäume gibt, aus zusammengebundenen oder zusammengedrehten Papyrus- oder Sorghumstengeln verfertigt (Taf. 25b). Die beiden Rohröffnungen werden durch Scheiben aus Holz oder Strohgeflecht verschlossen, in deren einer ein Flugloch angebracht ist. Auch ein kleines Anflugbrett vor dem Loch fehlt nicht. Sobald ein junger Schwarm mit seiner Königin ausfliegt, wird er mit Staub und Wasser bespritzt, damit er sich nicht weiter verfliegt oder zu Boden fällt. Darauf wird der Schwarm mit der Königin sorgfältig in die herbeigeholte Röhre gekehrt, die Öffnung verschlossen und der Stock auf den Baum oder auf einen Pfahl gehängt, wo das kleine Flugloch geöffnet wird. Alle Stöcke hängen horizontal. Ohne Stiche geht die Prozedur natürlich nicht ab, aber durch Einhüllen des ganzen Körpers in Rindenzeug wissen sich die „Imker" doch ziemlich gut zu schützen.

Einfacher ist später die Entnahme des Honigs aus den Stöcken. Man öffnet nachts, wenn die Bienen nicht fliegen, die Rückseite der Röhre, führt einen glimmenden, stark rauchenden Strohwisch ein, vor dem sich die Bienen in die entgegengesetzte Ecke zusammendrängen, und schneidet die Honigwaben heraus, die dann in einem Topf verwahrt werden (Nr. 19, S. 3). Das Wachs findet mancherlei Verwendung im Hausrat der Barundi; seitdem es aber auch Absatz nach den Handelsplätzen gefunden hat, hat die Bienenzucht in den dem Handel zugänglichen Randgebieten merklich zugenommen. Sie kann und wird zweifellos noch viel größere Ausbreitung gewinnen, wenn erst das Land dem Verkehr erschlossen und größere Absatzmöglichkeit da sein wird. Wachs und Viehhäute sind schon jetzt die wichtigsten Handelsartikel Urundis.

2. Viehzucht

Oft liest man, daß im Mittelpunkt des Wirtschaftslebens der Barundi die Viehzucht stehe. Das ist nicht richtig. Die Barundi sind in erster Linie Ackerbauer, wie alle Bantuneger. Die Viehzucht aber ist der Lebensinhalt der hamitischen Herrscherklasse, der Batussi, und erst durch sie und größtenteils für sie befassen sich auch viele Bahutu mit der Wartung und Pflege des Viehes. Gemeint sind mit „Vieh" das Großvieh, die Rinder (inka), denn mit Kleinvieh, mit Ziegen und Schafen geben sich die Batussi nur wenig ab. Diese waren längst Bestandteile der Wirtschaft der Bantuneger, also hier der Bahutu, ehe die Batussi ins Land kamen, und werden noch heute hauptsächlich von den Bahutu für eigenen Bedarf gezüchtet, aber ihre Zahl ist verhältnismäßig nicht groß.

Die Rinder gehören wie in Ruanda alle der Rasse des großhörnigen Bahimarindes an, das die Batussi aus ihrer nordöstlichen Urheimat auf ihren Südwestwanderungen mitgebracht haben, und dessen Verbreitungsgrenzen sich genau mit denen der Bahima decken (s. S. 158). Es sind mittelgroße Rinder mit geradem Rücken und kleinem oder gar keinem Fettbuckel. Auf dem gedrungenen Kopf sitzen zwei riesige, bis über

1½ m lange, meist lyraförmig ausladende Hörner von oft enormer Basisdicke (Taf. 23). Die mächtigsten Hörner finden sich an sterilen Kühen. Die von mir mitgebrachten hat Prof. Joh. Neumann-Hamburg beschrieben: „Der Schädel des Batussirindes", in den Mitteil. a. d. Deut. Schutzgeb., 1913, Ergänz.-Heft 6, S. 113 ff. Außerdem ist für diese Bahimarinder eine starke Hautwamme zwischen den Beinen charakteristisch.

Am nächsten steht das Bahimarind dem sog. Sangarind Abessiniens, besonders dem Schlag, der von Südabessinien in die Gallaländer reicht, und zu denselben Formen gehören die Großhornrinder bei den alten Ägyptern, bei den Fulbe im Sudan, in Bornu, in Kamerun usw., bei den Stämmen des mittleren Sambesi bis zur Kapkolonie, bei den Hottentotten, in Damara- und Ovambolande, in Süd-Angola; also soweit wie hamitische Wanderungen reichen (Nr. 17, Bd. II, S. 620 ff.; Nachtigal, Sahara und Sudan, Bd. I, S. 682; Thorbecke, Im Hochland von Mittel-Kamerun, 1. Teil 1914, S. 70, mit guter Photographie eines Großhornstieres). Auch Stuhlmann entscheidet sich in der Frage, ob die Batussi diese Rinder mitgebracht oder in ihren jetzigen Wohnsitzen vorgefunden haben, für die erstere Auffassung (Nr. 28a, S. 695). Ganz Ruanda und Urundi haben Großhornrinder. Im Westen ist die Grenze dieser reinen Bestände der Große Zentralafrikanische Graben, im Süden und Südosten der Abfall des Zwischenseenplateaus nach Udjidji und Uha. Hier im Südosten fand ich die letzten Herden der Großhornrinder in den Urundi-Grenzdörfern westlich des Kisumabaches; östlich davon im niedrigeren Nord-Uha beginnt der Buschwald und die Tsetsefliege.

Die kurzhörnigen, kleineren Zebu- oder Buckelrinder des übrigen Ostafrika gibt es in Urundi und Ruanda gar nicht. Das Bahimarind ist dem Klima und der Lebensweise in den Hochländern des Zwischenseengebietes so angepaßt, daß es nur dort gedeiht. Sobald die Tiere in die tieferen Länder herabkommen, also nach Unjamwesi, dem Victoriasee oder gar in die Küstengebiete, verkümmern sie und gehen bald ein, auch wenn sie nicht von Tsetse gestochen werden. Also ganz wie die Batussi selbst, mit denen sie in einer Art Symbiose leben.

Als einstiges Hirtenvolk reinster Art haben die Batussi für ihre Rinder eine Wertschätzung, die dem Bantuneger ganz fremd ist. Sie geht weit hinaus über die Schätzung des Kapitalwertes, die im Rind nicht einen Fleischlieferanten, einen „Konsumartikel", sondern ein Stammkapital sieht, von dem nur die Zinserträgnisse (Milch, Butter, Zapfblut, Haare) verbraucht werden dürfen, während Kapitalsteile (einzelne Rinder) nur gegen andere hochwertige Vermögensobjekte, z. B. Weiber, eingetauscht werden dürfen. Die Rinder haben vielmehr hohen Affektionswert für den Mutussi. Sein ganzes Sinnen und Trachten dreht sich um die Rinder; sie sind ihm der Rückhalt seiner sozialen Ordnung, ja sogar Gegenstand einer Verehrung, die vielfach in die religiöse Sphäre übergreift, und demgemäß auch eines Kultus, der voll von Symbolen und mystischen Beziehungen ist. Die oberste Gottheit Imana ist in erster Linie Schutzherr der Rinder. Ähnliches finden wir in Ostafrika auch bei dem hamito-nilotischen Hirtenvolk der Massai. In allem, was das Rindvieh angeht, hat die Frau nicht mitzureden. Die gesamte Aufzucht und Wartung des Rindes, auch das Melken, ist Sache des Mannes. Zwar haben die Bahutu auch hierbei alle schwere Arbeit zu verrichten, wie das Reinigen der Tiere, das Hüten des Viehes auf dem Weidegang, das Melken der Kühe usw., aber der Mutussi tut die feinere Arbeit: er wählt die Zuchttiere aus, er ist Vieharzt, er bestimmt die Tiere zum Schlachten und Opfern, und diese Arbeit verrichtet er mit der ganzen Liebe des Sportsmannes zu seinem Sporttier.

Die Rinder des ganzen Landes gehören de jure dem König (oder dem Oberhäuptling), wie in Ruanda. Dieser überläßt einen großen Teil den Batussiunterhäuptlingen zum Nießbrauch, und von diesen wieder werden kleine Herden und Einzeltiere an die

niederen Batussi und an einzelne Bahutu zur Pflege, Weiterzucht und Nutznießung gegeben. Eine bestimmte geringe Anzahl aus der jungen Aufzucht verbleibt den Pflegern als unwiderrufliches Lehen.

Die beinahe mystische Hochschätzung, die den Rindern zuteil wird, geht in gewissem Grad auch auf die zeitweiligen Inhaber, Pfleger und Züchter der Rinder über. Wer mit Vieh belehnt wird, ist in eine höhere Sphäre gehoben worden. Der Muhutu, dem Rinder zum Nießbrauch und zur Zucht überlassen werden, wird dadurch gewissermaßen geadelt, er braucht keine Frondienste mehr zu leisten, kein Feld mehr für seinen Herrn zu bebauen. So hat der Rinderbesitz eine soziale Bedeutung, die nicht minder groß ist als die wirtschaftliche. Es sind nicht nur religiöse, sondern auch sozialpolitische Gründe, aus denen man in Urundi wie in Ruanda die alten und kranken Rinder so lange leben läßt, wie sie noch leben können, denn es kann immer noch jemand damit belehnt und durch solche Standeserhöhung enger an die Batussifürsten und den König gebunden werden. Der riesige Rinderbesitz des Königs ist auch aus diesem Grund eine starke Stütze der Batussiherrschaft.

Alle Rinder werden im Weidegang gefüttert (Taf. 23), Stallfütterung gibt es nur für ältere Kälber und für kranke Tiere. Nachts stehen die Rinder innerhalb der Umzäunung des Gehöftes. Sobald sie des Morgens nach Sonnenaufgang gereinigt und die Kühe gemolken sind, wird die Herde zur Weide getrieben (kwahura inka), deren Lage sich nach den Jahreszeiten und Futterverhältnissen richtet, und bleibt dort bis gegen Abend. Jedes sechste oder achte Rind hat eine Glocke (insogera) aus einem zusammengebogenen Stück Eisenblech (Taf. 45) oder aus Holz; in manchen Gegenden aber gibt es gar keine Viehglocken. Zweimal täglich wird die Herde in das nächste Bachtal zur Tränke getrieben. Wenn das Tal kein fließendes Wasser, sondern nur Grundwasser in gegrabenen Löchern hat, wie vielfach in den Trockenmonaten, werden neben den Wasserlöchern lange Tröge aus Lehm gemacht, in welche das Tränkwasser eingeschöpft wird. Die Hügelhänge sind durch das weidende Vieh, das beim Abgrasen möglichst in der bequemen Horizontale am Hang entlang schreitet, in zahllose kleine Stufen und Pfade zertreten, wie in unseren Alpen.

In den Monaten nach der Regenzeit kann sich das Vieh am grünen Grase satt fressen und sieht dann ziemlich schmuck aus, aber in den Trockenmonaten, wenn alles Gras graubraun verdorrt ist, werden die Rinder so mager, daß man alle Rippen zählen kann. Ich habe in den Monaten September und Oktober in Urundi fast nur stark abgemagertes Vieh gesehen. Bloß die Herden der Häuptlinge, denen die besten Weiden vorbehalten sind, behalten auch in der Trockenzeit ihr gutes Aussehen. Im allgemeinen hat man den Eindruck, daß in Urundi wie in Ruanda, die ja beide fast ausschließlich Grasländer sind, die gute, nahrhafte Weide doch eine recht beschränkte Ausdehnung hat. In den sterilen, dünnbewohnten Quarzitgebieten des Ostens wandert man tagelang über Hügelzüge und Flächen, wo der Graswuchs so schlecht ist, daß sich für die Eingebornen das Abbrennen gar nicht lohnt. Und da in den bewohnten Gebieten Mittel- und West-Urundis die Höhenrücken und die Talböden von den Gehöften und den Feldern besetzt sind, soweit die Täler nicht von Papyrussumpf erfüllt werden, bleiben für die Viehweide in der Hauptsache nur die Abhänge der Hügelzüge übrig. Da auf diesen aber alljährlich die dürren Grasflächen niedergebrannt werden, um baldigen grünen Nachwuchs zu erzielen und das dem Vieh schädliche Ungeziefer zu vertilgen, kann sich die Qualität, der Futterwert

2: Meyer FO42 Rundi

des Grases, nicht bessern. Und wenn sich die Herden stark vermehren, wie in den Nordwestlandschaften Urundis und in den meisten Gegenden Ruandas, so werden die Weiden bald überstockt. Kraftfutter aber, das den Mangel guter Weide ausgleichen könnte, wird von den Batussi und Bahutu nicht gebaut. Infolgedessen leiden die meisten Rinder an Unterernährung, und wird dann einmal eine Seuche eingeschleppt oder an Ort und Stelle durch infektiöses Ungeziefer u. dgl. verursacht, so fallen ihr die wenig widerstandsfähigen Tiere in Massen zum Opfer. Für die überlebenden aber genügt nun die vorhandene Weide wieder auf lange Zeit hinaus, bis die Herden wieder zu groß geworden sind, die Tiere deshalb wieder nicht genug zu fressen finden und die Auslese durch Seuchen von neuem beginnt. Diese Lage der Dinge wird sich erst bessern, wenn durch Europäer rationelle Viehzuchtsmethoden eingeführt sein werden.

Die Tierpflege wird tagtäglich sorgsam betrieben. In den Hürden wird der heimgekehrten Herde jeden Abend frische Streu gegeben, die Tiere werden mit Strohwischen sauber abgerieben und anfitzende Zecken oder andere Schmarotzer abgesucht. Die Euter werden jedesmal nach dem Melken gewaschen. Während die Rinder in den Kralen stehen oder an den Tränken saufen, werden sie sehr von Stechfliegen belästigt und beunruhigt; auch die Menschen haben von diesen blutgierigen Quälern zu leiden. Darum werden in den Kralen und bei den Viehtränken Feuer angezündet, deren Rauch die Fliegen vertreibt. Allerwärts sieht man morgens und abends solche Rauchsäulen aus den Gehöften aufsteigen. Von Zeit zu Zeit bekommen die Tiere salzhaltige Asche zu lecken. Auch auf der Weide ist der Hirte stets um seine Herde bemüht. Durch schrille Pfiffe weiß er ihr allerlei Befehle zu geben. Die Tiere sind infolge der guten Behandlung meist sehr gutmütig, sie stoßen nicht und halten still, wenn irgend etwas mit ihnen vorgenommen wird; im letzteren Fall pflegt einer der Hirten das Tier mit einem Rohr oder Stock sanft zwischen den hinteren Oberschenkeln zu streicheln. Mit ihren riesigen Hörnern richten die Rinder auch untereinander viel weniger Unheil an, als man erwarten könnte. Selbst wenn sie bei dem Aus- oder Heimtrieb auf den Wegen sich eng aneinanderdrängen, hört man wohl ein andauerndes dumpfes Klappern und Krachen der aneinanderschlagenden Hörner — das charakteristische Geräusch einer wandernden Urundiherde —, aber sehr selten kommen gegenseitige Verletzungen vor. Bei schweren Verletzungen und ernstlicher Erkrankung des Viehes wird, wenn der Besitzer nicht selbst zu helfen weiß — was er meistens versteht —, ein heilkundiger Mutussi oder Muhutu als Tierarzt gerufen, der sich für seine Hilfe dann ordentlich bezahlen läßt (Taf. 25a). Gegen epidemische Viehseuchen, namentlich die Rinderpest, sind die Batussi wie alle Afrikaner ganz machtlos, und furchtbar sind infolgedessen die Verheerungen, die eine einzige Epidemie im Viehbestand anrichtet. So hat die Rinderpest, die 1888 das ganze Zwischenseengebiet nebst Uganda und Unjoro heimsuchte, $^2/_3$ aller Rinder getötet, und da die Bahima hauptsächlich von Milch, Blut und Fleisch leben, so sind angeblich auch fast $^2/_3$ der Bahima Hungers gestorben (Nr. 17, Bd. II, S. 626).

Sind die Barundi gute Viehpfleger, so kann man sie doch eigentlich nicht gute Viehzüchter nennen, wie es oft geschieht. Dasselbe gilt von den Banjaruanda. Der Viehbestand leidet unter dem Mangel an Zufuhr frischen Blutes, unter der jahrhundertelang betriebenen Inzucht. Zwar nehmen die Barundi wie die Banjaruanda die Zuchtstiere stets aus einer fremden Herde, um Degeneration zu vermeiden, aber es ist doch immer nur ein Wechsel innerhalb desselben großhörnigen Schlages

und keine Blutauffrischung durch andere Rassen. Und da auch die meisten Bullen nicht verschnitten werden, obwohl man das Kastrieren kennt und ein besonderes Wort (kuschahura) dafür hat, so gibt es in den Herden oft schwache Bullen, die die Rasse verschlechtern. Auch der Umstand, daß infolge der wachsenden Handelsnachfrage nach Rindshäuten mehr Bullen aufgezogen werden, die man früher jung zu schlachten bzw. zu opfern pflegte, ist der Rassenverbesserung nicht förderlich. Die Degeneration zeigt sich namentlich auch darin, daß es auffallend viele sterile Kühe in Urundi wie in Ruanda gibt. Man erkennt sie in einer Herde sofort daran, daß sie die größten Hörner haben. Es scheint fast, als ob der Kräfteüberschuß, der sich nicht im Hervorbringen von Nachkommenschaft ausgeben kann, sich im Riesenwachstum der Hörner Luft mache. In wirklich guter Verfassung sind, wie in Ruanda, durch fortwährende Auslese und Austausch eigentlich nur die Herden des Königs und der Großbatwale. Es gibt weiße, braune, scheckige Herden. Das ist aber Luxusvieh, das für die allgemeinen Verhältnisse nicht maßgebend ist. Die für die Luxusherden des Königs oft gehörte Bezeichnung „heilige Rinder" ist ebenso unrichtig wie für die Herden des Musinga von Ruanda; auch insofern stimmt es nicht, als ihnen nicht einmal die Stiere für die Opfer entnommen werden. Dagegen gibt es heilige Rinder, die besonders für Opfer und zur Mitwirkung bei der Königswahl gehalten werden, und andre, die einem der Hauptgötter, Imana, Riangombe, Rikiranga, geweiht sind (s. S. 121, 184).

Wenn ein Kalb geboren ist, wird es mit Butter abgerieben. Sobald sich die Hörner zeigen, reißt der Besitzer die deckende Oberhaut mit seinen Zähnen ab und reibt die Hörnchen mit Butter ein, damit sie tüchtig wachsen. Das Kalb bekommt einen Namen je nach seiner Abstammung, Farbe oder sonstigen Eigenschaft oder auch in Erinnerung an ein verstorbenes Familienmitglied, an einen Häuptling, König usw. Sechs Monate werden die Kälber in der Hürde eingestellt, ehe sie auf die Weide kommen, und dann weidet das Jungvieh gesondert für sich. Früh und abends vor dem Melken der Kühe werden die Kälber zum Saugen herangelassen. Will eine Kuh ihr Kalb nicht saugen lassen, so reibt man sowohl das Euter wie auch das Kalb mit einem salzigen Wasser ein, worauf die Kuh das Kalb beleckt und sich das Lecken und Saugen des Kalbes am Euter gefallen läßt. Um ein Kalb zu entwöhnen, schmiert man die Zitzen mit Kuhmist ein (Nr. 19, S. 423).

Soll die Kuh gemolken (kukamma) werden, so läßt man erst das Kalb einige Augenblicke saugen. Dann kauert der Murundi am Euter nieder, hält mit der Linken das Milchgefäß unter und melkt mit der Rechten, wobei ziemlich viel Milch (amata) vorbeispritzt, da das Gefäß eine enge Öffnung hat. Einer unruhigen oder ausschlagenden Kuh werden beim Melken die Beine zusammengebunden. Wenn das Kalb stirbt oder geschlachtet wird, gibt die Kuh keine Milch mehr. In diesem Fall wird, wie in Ruanda, Ankole und anderen Bahimaländern, die Kuh dadurch zu weiterer Milchabgabe veranlaßt, daß man ihr das mit Stroh ausgestopfte Fell ihres Kalbes oder auch nur ein auf einen Stock gehängtes Stück des Felles, vor die Nase hält (Nr. 22, S. 287; Nr. 48, S. 141; Nr. 27, S. 95). Durch diesen plumpen, aber frommen Betrug lassen sich die Kühe gewöhnlich täuschen, belecken das Kalbfell und geben weiter Milch. Die Milchmenge der Großhornrinder ist überall im Zwischenseengebiet immer recht gering; selten mehr als 2—3 Liter täglich, früh und abends. Die Milchgefäße (itschjansi) sind stets aus Holz und haben meist eine zylindrische Form mit einem gerundeten Deckel. Ob in dieser Gestalt, wie v. d. Burgt

meint, die Nachbildung eines Stierphallus zu sehen sei, „als wäre dieses Emblem untrennbar von ihrem Kult", lasse ich dahingestellt sein. Täglich wird das Milchgefäß mit frischem Kuhurin (amaganga) ausgespült, von Zeit zu Zeit aber mit Menschenurin „gereinigt" (Nr. 19, S. 423). Möglicherweise liegt auch in diesem Brauch eine Kultbedeutung neben der praktischen Erfahrung, daß Urin eine leichte desinfizierende Wirkung ausübt. Wie dem auch sei, jedenfalls hat dieser auch bei vielen anderen Stämmen bestehende Brauch zur Folge, daß die Milch einen für europäische Nerven ekelerregenden Geruch und Geschmack hat. Will der Europäer genießbare Milch haben, so muß er sie direkt in seine eigenen Gefäße melken lassen.

Die Barundi trinken die Milch, wie die Banjaruanda und andere Bahima, entweder frisch oder geronnen als Dickmilch, aber niemals gekochte Milch. Ein großer Teil wird zum Buttern aufgehoben. Man läßt die Milch zu diesem Zweck 3 bis 4 Tage in einem großen Holzgefäße stehen, bis sie gerinnt, worauf sie in einem großen Flaschenkürbis (ikisabo) geschüttelt wird, bis sich die Butterflocken ausscheiden, die mit dem Löffel herausgefischt, zusammengepreßt und in einem Tongefäß, das mit frischen Bananenblättern zugestopft wird, verwahrt werden. Die abgegossene Buttermilch wird gern getrunken. Das Buttern ist bezeichnenderweise nicht Männerarbeit, wie alles andere, was mit den Rindern zusammenhängt, sondern Weiberarbeit, weil die Butter nicht als ein von der Kuh kommendes Genuß- und Nährmittel betrachtet wird, sondern lediglich als ein kosmetisches Mittel. Denn kein Murundi ißt Butter, niemand verwendet sie zum Backen, Braten, Kochen, sondern nur zum Einreiben des Körpers (s. oben S. 28). So tun auch die Banjaruanda, Banjamororó, Banjankole und andere Hamiten.

Mit Vorliebe genießen die Barundi und vor allem die Batussi Rindsblut. Sie verfahren dabei wie die Banjaruanda und ähnlich wie die Massai. Jeder Stier wird etwa alle drei Monate einmal zur Ader gelassen. Dazu benutzt man einen ad hoc hergestellten Pfeil mit kurzem breiten runden Blatt, das nicht tief in den Körper eindringen kann (Textbild 10). Der Pfeil wird, nachdem mehrere Männer den Stier bei den Hörnern gepackt haben, mit einem Bogen aus nächster Nähe in die Halsader geschossen, so daß das Blut stark herausspritzt. Der Pfeil fällt sofort ab, und das Blut wird in einem Tontopf aufgefangen. Wenn 2 bis 4 Liter entflossen sind, schließt sich die Wunde von selbst. Ein Teil des Blutes wird sofort warm getrunken, der größere Rest auf Feuer so lange gekocht, bis er fest geworden ist, wie in unseren Blutwürsten. Dann wird Salz, Bohnen, Erbsen oder andere Zutaten beigemengt und das wohlschmeckende Gericht (ikiremve) gierig verspeist (Nr. 19, S. 424).

Fig. 10. Pfeil zum Aderlaß der Rinder. (Museum für Völkerkunde, Berlin, Nr. 6546.)

Viel seltener ist begreiflicherweise der Genuß von Rindfleisch (injama). Da die Rinder nicht Nahrungsmittel, sondern Kapital sind, gibt es Rindfleisch nur zu essen, wenn ein Tier gefallen oder wenn es zum Opfern geschlachtet worden ist (vgl. S. 136). Bloß die Häuptlinge können sich von Zeit zu Zeit einmal den Luxus leisten, ein Rind zum Essen zu schlachten, und zwar sind es dann fast immer alte Stiere oder sterile Kühe. Niemals werden milchende Kühe oder

Stammtiere geschlachtet. Rindfleisch ist das einzige Fleisch, das die Batussi essen. Das gleiche gilt für alle Bahima von Ankole (Nr. 26, S. 146) bis nach Usipa. Die Bahutu, namentlich die am Tanganikasee, essen außerdem auch gelegentlich, aber selten, Hammel- und Ziegenfleisch, die Batwa auch Antilopen, Gazellen, Frankoline, Perlhühner, Enten u. a., aber ebensowenig Hühnerfleisch wie die Batussi und Bahutu (Nr. 19, S. 396). Das Rindfleisch wird entweder roh, möglichst noch warm, verzehrt oder am Feuer an Holzstäbe gesteckt und gebraten, sehr selten gekocht. Die fleischgewöhnten Europäer bekommen auf ihren Reisen durch Urundi und Ruanda immer nur sterile Kühe oder fehlerhafte Stiere zu kaufen oder als Gastgeschenk; und auch dann will es die Sitte, daß man dem Gastgeber oder Verkäufer eine Hinterkeule, die Haut und die Hörner zurückgibt: die Keule zum Essen, die Hörner als Kultgegenstand für die Hütte und die Haut als Lagerdecke oder zur Anfertigung von Kleidern, besonders der Weiber und der Batwa, oder zum Verkauf an die Händler.

Lebendes Vieh in größerer Menge zu exportieren, ist nach allen Erfahrungen unmöglich, da es bald nach dem Verlassen der Hochländer an Futterwechsel, Tsetsestich und anderen Infektionen, woran leider Ostafrika reich ist, eingeht. Jetzt kommen ziemlich viel getrocknete Rindshäute aus Urundi und Ruanda in Usumbura und Bukoba zum Versand, da die Nachfrage groß ist; aber die Häute stammen fast alle von gestorbenen Tieren oder von unbrauchbaren Stieren oder von sterilen Kühen, die deshalb jetzt in viel größerer Zahl geschlachtet werden als früher. Da andere Rinder aus den vorhin genannten Gründen nur selten geschlachtet werden, so liegt hierin für die Zukunft eine starke Beschränkung des Haut- und Fellexportes.

Zu den „abergläubischen", mit der Viehzucht verknüpften Bräuchen, deren praktischer Kern und Sinn nicht mehr erkennbar ist, gehört vor allem, daß der Murundi niemals Milch heiß machen oder gar kochen darf. Würde er es doch tun, so würde die Kuh, von der die Milch stammt, ein wundes Euter kriegen oder gar die Milch ganz verlieren. Auch bekäme die Kuh Geschwüre am Euter, wenn der Murundi an dem Tag, an welchem er Milch trinkt, Erbsen oder Erdnüsse äße; ein Verbot, das offenbar auch diätetische Gründe hat. Unverständlich dagegen ist wieder die Vorstellung, daß jemand, der eine Wunde am Bein oder anderswo hat, nicht beim Kalben einer Kuh zusehen darf; sonst würden seine Wunden viel größer werden (Nr. 19, S. 423).

Das ist sicher, daß die Barundi den von den Batussi importierten Glauben an besonders enge Beziehungen des Rindes zu der Hauptgottheit Imana haben. Das Rind ist das dem Imana geweihte, vom Imana „besessene" Geschöpf. Anstatt Imana wird auch oft Riangombe genannt. Anderseits wird berichtet, daß auch der „Teufel", also Rikiranga, der oberste der bösen Geister (s. S. 121), bei Mujaga eine Rinderherde mit zwei ihm geweihten Stieren besitze (Afrikabote 1904, S. 123). Wie weit aber diese religiösen Vorstellungen über die Rinder reichen, ist ganz unbekannt. Schließlich sei noch bemerkt, daß in den umständlichen Begrüßungen sehr oft die Formel „ischo-scho-amascho", d. h. „Rind, Rinderherde", wiederholt wird. In diesem echten Hirtengruß sieht v. d. Burgt, da alle Begrüßungen der Barundi einen religiösen Charakter hätten (s. S. 95, Begrüßungsarten), eine Art Beschwörung des Hauptgottes Imana, dem Begrüßten alles Glück zuteil werden zu lassen, als dessen Inbegriff eben das Rind gilt (Nr. 19, S. 530). Das ist möglich und sehr wahrscheinlich, wenn man den heiligen Ernst beobachtet, mit der die lange Be-

grüßungszeremonie von den Beteiligten vollzogen wird. Aber es ist zu bedenken, daß auch bei anderen ostafrikanischen Negerstämmen höchst feierliche lange Begrüßungen Brauch sind, die absolut keinen religiösen Inhalt haben, sondern nur aus dem allgemeinen Negerbedürfnis umständlicher Ansprache und würdevoller Begegnung hervorgegangen sind. Der „Rindergruß" ist auch, in kürzerer Form, den Banjaruanda eigen, die ihn ebenfalls von ihren Batusi übernommen haben. Selbst die Batwa, die doch nie Rinder besitzen, haben ihn sich zu eigen gemacht.

Nach dem Rind ist das wertvollste Haustier das Schaf (intama; Taf. 24a). Trotzdem ist es in Urundi weniger zahlreich als die Ziegen, weil seine Aufzucht schwerer und seine Nachkommenschaft geringer ist als die der Ziegen. Die Barundi haben zwei Schafrassen: ein mittelgroßes Wollschaf ohne Fettschwanz, und ein größeres Fettschwanzschaf; beide scheckig oder weiß, selten schwarz. Beide werden nur der Felle wegen gezüchtet, die entweder für eigenen Bedarf (Umhang, Schlafunterdecken usw.) verwendet werden oder im Handel zum Austausch gegen eiserne Hacken, Salz und andern Bedarf. In kleiner Zahl dienen sie als Opfer- und Orakeltiere. Das Fleisch wird weder von den Batusi noch von den Bahutu gegessen oder doch nur ausnahmsweise von Bahutu, aber gern von den Batwa.

Viel häufiger sind in Urundi die Ziegen (impene), eine hochbeinige, ziemlich kurzhaarige Rasse mit kurzem scheckigen oder gelbgrauen Haar (Taf. 24a). Der Schlag ist häufig, widerstandsfähig, sehr anspruchslos und sehr fruchtbar; ein Wurf mit 3 oder 4 Zicklein ist keine Seltenheit. Ziegen und Schafe werden oft zusammen gehütet; wo aber der Graswuchs schlecht ist, finden nur die Ziegen noch genügend Futter, während die Schafe mit den Rindern auf bessere Weideflächen getrieben werden müssen. Ziegenfleisch essen die Batusi ebensowenig wie Schaffleisch, auch die Bahutu nur sehr selten, aber Ziegenfelle sind ein wichtiger Artikel im Tauschhandel der Barundi, und deshalb sind seit Zulassung der Händler (1906) die Ziegenbestände furchtbar dezimiert worden. Zu Opferzwecken werden Ziegen nicht benutzt.

Das einzige Hausgeflügel der Barundi ist das Huhn (inkoko), dies aber auch nur in kleiner Anzahl. Man kann tagelang durch die Gehöfte Mittel-Urundis wandern, ohne ein einziges Huhn zu sehen. Weit mehr gibt es in Ussige, im Tanganjikagebiet, wo es ausschließlich Handelsware ist; es wird an die dort von der Araberzeit her und gegenwärtig durch die europäische Kolonisation zahlreichen mohammedanischen Küstenneger verkauft, die gern Hühner essen. Nicht nur Batusi und Bahutu, sondern auch die Batwa verabscheuen Hühnerfleisch; es ist ein uraltes, wahrscheinlich totemistisches Speiseverbot. Die Rasse ist die allgemeine ostafrikanische hochbeinige, vorwiegend schwarze. Gefüttert werden sie gar nicht, sondern sie müssen sich ihre Nahrung selbst suchen und sind deshalb immer mager. Ihre einzige Verwendung im großen Inner-Urundi ist wie in Ruanda die zum Opfern und Orakeln. Geopfert werden sie, wie Schafe und Rinder, den Manen verstorbener Familienmitglieder oder den Geistern Imana, Kiranga, Ntongombe (s. S. 135), bestimmte Hühner sind auch dem Imana geweiht (Nr. 19, S. 453). Zur Befragung des Orakels werden die Hühner geschlachtet und aus der Farbe und Lage ihrer Eingeweide die Zukunft oder Ungewißheiten der Gegenwart erkannt. Das besorgen die Zauberer oder Medizinmänner, die daraus natürlich lesen, was ihnen am besten paßt. Das Hühneressen der Europäer und mohammedanischen Küstenneger ist den Barundi ein Gruel. Ebenso verabscheuen sie das Essen von Eiern, und zwar wahrscheinlich auch aus totemistischen Gründen und nicht,

weil sie in den Eiern nur Exkremente der Hühner sehen, wie so oft angegeben wird und sie zuweilen selbst angeben; denn sie wissen natürlich sehr gut, daß im Ei der Keim des Hühnchens enthalten ist, der Eiesser also schon das Hühnchen ißt und damit gegen das Speiseverbot verstößt.

Einen anderen „abergläubischen" Brauch erwähnt v. d. Burgt: Wenn ein Huhn seine Eier auffrißt oder seine Küken tötet, wirft man die Eierschalen auf einen Kreuzweg, damit es das Huhn nicht wieder tue. Barundi, die den Weg passieren, hüten sich, die Schalen zu zertreten, da der Unvorsichtige dadurch krank würde (Nr. 19, S. 453).

An letzter Stelle ist unter den Haustieren der Hund (imbwa) zu nennen. Sein Daseinszweck erschöpft sich damit, daß er allen Unrat wegfrißt und daß Erwachsene und Kinder mit ihm spielen und ihn auch malträtieren. Daß er bei seltenen Gelegenheiten auch auf Treibjagden verwandt wird, wurde schon oben erwähnt (S. 36). Es sind körperlich und geistig höchst üble Köter, von denen man nicht begreift, daß sie in der langen Domestikation, die ihnen doch zugeschrieben wird, nicht bessere Fortschritte gemacht haben. Vielleicht ist ihre Domestikation gar nicht so alt, wie man annimmt. Was sollte dann freilich die einheimische wilde Stammform sein? Daß sie „tiennent du loup" (dem Wolf ähnein), wie v. d. Burgt sagt (Nr. 19, S. 104), kann nur ein Versehen des Beobachters sein, denn sie haben sehr viel mehr mit dem Schakal als mit dem Wolf gemein. Vielleicht ist der Schakal der Stammvater. Der Stamm hat sich aber in zwei verschiedene Rassen geteilt, falls nicht die eine Rasse eingeboren, die andere erst später, wahrscheinlich von den Bahima, eingeführt ist. Die eine ist gelbbraun und hat aufrecht stehende Ohren, die andere ist schwarz, weiß oder gefleckt und hat Hängeohren, aber auch Mischformen sind häufig. Beide Arten haben nur wenig Behang am Schwanz und fallen beim Trablaufen durch die steifen, stoßenden Beinbewegungen auf. Dieselben beiden Arten oder Varietäten habe ich auch in Kisiba und Ruanda verbreitet gefunden, und zwar werden sie in Ruanda in größerer Zahl gezüchtet als in Urundi, wohl weil sie dort mehr Verwendung zur Jagd finden als hier. Da die Hunde nicht gefüttert werden, haben sie selbst für ihren Unterhalt zu sorgen und sind unter diesem Zwang Omnivoren geworden. Sie sind immer hungrig und sehr mager, fressen sich aber zum Platzen voll, wenn sie einmal genug Freßbares finden. Die Eigenschaft, die uns an ihnen am meisten anwidert, den Barundi aber als ein Vorzug erscheint, ist die, daß sie den Menschenkot wegfressen. In dem Land, in dem es keine Schweine und nur wenige aasfressende Vögel gibt, die anderwärts in Ostafrika das Abfuhrgeschäft besorgen, sind also die Hunde hygienisch von Wichtigkeit. Sonst haben sie absolut keine sozialen Tugenden; sie sind bissig, feige, diebisch, sehr schlechte Wächter und miserable Kameraden. Groß ist aber ihre Fruchtbarkeit; unter 8 bis 10 Jungen in einem Wurf tut es selten eine Hündin. Es wird gewöhnlich behauptet, daß die Eingebornenhunde in Ostafrika nicht bellen, sondern nur heulen. Das ist nicht ganz zutreffend; sie bellen zwar nicht in kurzen, reinen Lauten, wie unsere Haushunde, aber sie heulen auch nicht bloß, sondern ihr Lautwerden ist stets eine Verbindung von beiden, indem auf einen langgezogenen Heulton 2 oder 3 kurze, ineinander verschwimmende Beller folgen, dann wieder ein langer Heuler und so fort.

Andere Haustiere als die genannten gibt es nicht in Urundi und in Ruanda.

3. Ackerbau

Trotz der Wichtigkeit, mit der in Urundi wie in Ruanda die Rinderzucht betrieben wird, ist die Grundlage des Wirtschaftslebens doch der Ackerbau (kurima). Acker-

bauer sind fast nur die alteingesessenen Bahutu und ein Teil der metamorphosierten Batwa, während die Batussi bei der Bodenbestellung nur selten mit Hand anlegen, sondern die Bahutu für sich, für die Batussi, arbeiten lassen. Bloß die niederste, ärmste Klasse der Batussi arbeitet auch auf dem Feld ordentlich mit. Der Ackerbau ist hier nicht das Arbeitsgebiet der Frau allein, sondern Männer, Weiber und Kinder beteiligen sich gleichermaßen daran. Nur bei den Batwa, also dem ältesten Bevölkerungselement, ist die Feldarbeit ausschließlich Weiberarbeit (Nr. 19, S. 19); sie sagen aber, daß sie die Bodenbestellung erst von den Bahutu gelernt hätten.

Das einzige Ackergerät ist die eiserne Hacke (ischuka, igembe), welche die in Ostafrika bekannte Gestalt eines Kleeblattes oder eines „gestielten Herzens" hat (s. Taf. 46). Ihre weite Verbreitung durch das ganze Zwischenseengebiet bringt es mit sich, daß die Feldhacke der Hauptgegenstand des internen Handels ist, ein Wertmesser, ein Geldstück. Da der Bedarf durch die Barundi- und Batwaschmiede nicht gedeckt wird, werden viele Hacken aus Ulpa, Usámbiro, Uwinsa usw. eingeführt. Das Blatt der Hacke ist ca. 30 cm lang und steckt mittels seines eisernen Dornes unter spitzem Winkel in einem Holzstiel, dessen keulenförmiges Ende zu diesem Zweck mit glühendem Eisen durchlocht ist. Der Stiel ist meist so kurz (zirka $^3/_4$ m), daß der Feldarbeiter immer in tief gebückter Stellung hacken muß; gewöhnlich wird die Hacke nur mit der Rechten gehandhabt, während die Linke die ausgehackten Steine oder Unkräuter aufliest und die Feldfrüchte aufsammelt. Doch sind auch Hacken mit $1^1/_4$ m langen Stielen im Gebrauch. Im nördlichen Nuanda und am Kiwusee gibt es vorwiegend solche langstieligen Hacken, die mit beiden Händen aus weniger gebückter Stellung geführt werden.

Um die Löcher für das Stecken von Bohnen, Erbsen, Mais und andern Früchten zu machen, benutzt man zuweilen ein hierzu abgebrochenes Stück Rohr oder Holz, ohne daß dieses die Bedeutung eines ständigen Gerätes, eines „Grabstockes", hätte, denn meist bohrt man die Löcher im weichen Erdboden mit dem Finger. Dagegen ist ein ständiges Gerät das kurze Beil (ischenjo) in Form eines Kreissegmentes mit dem der Boden von Gebüsch gelärt wird, und das charakteristische gebogene Zwischenseenhaumesser (umuhoro; s. Taf. 46), das man schon in der Hand des altägyptischen Erntegottes sieht; es ist auch hier Erntemesser, neben vielen anderen Verwendungen.

Der Feldbau der Barundi ist also lediglich Hackbau, ihre Feldfrüchte nur Hackfrüchte. Ihre Hauptfrüchte sind Bananen und Bohnen; die Bananen gedeihen überall, aber gut nur bis zur Höhe von zirka 2000 m, die Bohnen noch etwas höher, bis zuletzt Erbsen, die im Niederland ganz fehlen und im höheren Inner-Urundi sehr häufig sind, die Alleinherrschaft in den höchsten Lagen führen. Mais wird im Tanganikagebiet und im Russissital reichlich angebaut, im Innern aber viel weniger, als man gemeinhin annimmt; im trockenen Ost-Urundi, wo die Bananen sehr zurücktreten, wird oft Mais untermischt mit Bohnen auf den künstlich bewässerten Talböden kultiviert. Auch Erdnüsse sind im Russissi- und Tanganikagebiet häufig, im Hochland des Innern aber spärlich. Bataten gibt es überall, wo reichlich Wasser vorhanden ist, also im inneren Hochland wenig und nur in den Talgründen. Yams werden sehr wenig gebaut. Maniok dagegen, der ein gewisses Maß von Trockenheit und Wärme braucht, ist in den niederen Landstrichen und in den trockenen Quarzitgegenden des Ostens verbreitet, in den Bergen des Westens dagegen nur in den unteren, wärmeren Regionen. Sorghum gibt es in ganz Urundi, wenn auch nirgends sehr viel, am meisten im trockeneren, quarzitischen Ost-Urundi; Eleusine sehr wenig und meist in hohen Lagen. Reis aber wird nur an den

Tanganika-Ufern etwas angebaut und zwar von Nicht-Barundi, die ihn von Osten importiert haben; den Barundi ist der Reisbau fremd. Tabak wird überall in Urundi kultiviert, aber nur in einer Art primitiver Gartenkultur neben den Hütten, der auch die Riziusstaude angehört. Die Ölpalme schließlich wächst nur an den Tanganika-Ufern und an den zum See abfallenden Westhängen des Randgebirges.

Betrachten wir die wichtigsten Kulturgewächse und ihre Anbaumethoden im einzelnen genauer.

Die Banane (ikitoke) wird in Urundi wie in Ruanda in mehreren Varietäten kultiviert — in Urundi unterscheidet man 15 —, die in Geschmack und Verwendung recht verschieden sind. Ob es in den Bergen wilde Formen (musa ensete) gibt, ist eine offne Frage. Jedenfalls habe ich nicht selten im wilden Busch Bananen gesehen, die wohl verwilderte waren; sie tragen nach Angabe der Barundi ungenießbare Früchte und heißen ikiribu. Auch in Nord-Urundi bei der Mission Marienfee hat sie v. d. Burgt beobachtet. Überall, wo in Ostafrika Bananen als Hauptnährmittel gebaut werden, macht die Eigenschaft der Bananenkultur, daß die Pflanzen durch Wurzelschößlinge sich erneuern oder durch Stecklinge, die nicht weit transportiert werden können, vermehrt werden, und daß der einmal um die Gehöfte geschaffne Bananenhain von langer Dauer ist, die Bananenpflanzer zu außerordentlich seßhaften Stämmen. Anderseits erzieht die große Leichtigkeit der Bananenkultur die Volksstämme, die fast nur von Bananen leben, wie die Randbevölkerung des Victoriasees, zur Trägheit. Kulturfortschritte durch Arbeit werden dort der Bevölkerung nur durch ihre, den ebenfalls hamitischen Bahindageschlechtern angehörenden Häuptlinge (Kabigi, Mugarawa und andere) aufgezwungen. In Urundi und Ruanda dagegen, wo das Klima und die Oberflächengestalt des Landes die Menschen nötigt, außer Bananen auch noch eine ganze Reihe anderer Hackfrüchte zu bauen, die zum Teil sehr viel Arbeit verlangen, kann die beschränkte Bananenkultur keine träge machende Wirkung ausüben. Immerhin sieht man es den gegenüber anderen Fruchtfeldern stets vernachlässigt aussehenden Bananenpflanzungen an, daß sie auch ohne viel Arbeit gedeihen. Die nach der Abnahme der Fruchtbüschel absterbenden Stämme werden gewöhnlich noch lange stehen gelassen, die vertrockneten großen Blätter hängen gelassen, das Unkraut nur entfernt, wenn es sehr dicht wuchert. Vielfach gibt man sich nicht die Mühe, neue Stecklinge zu setzen, sondern läßt junge Schosse aus dem Wurzelstock austreiben. Dann schneidet man sie weg, bis auf 1 oder 2, die man weiterwachsen läßt, oder man läßt sie alle wachsen. Daher stehen oft in einer Pflanzung die Bananen nicht in einzelnen Stämmen, wie z. B. stets an der Küste, wo die Vermehrung und Erneuerung durch junge Stecklinge die Regel ist, sondern in riesigen Büschen von 4—6—10 aus demselben Wurzelstock getriebenen Stämmen. Häufig sind zwischen die Bananen niedrigere Kulturgewächse gepflanzt, die etwas Schatten vertragen, namentlich Bataten, Kürbisse, Bohnen, auch Mais und Sorghum.

Am besten gedeihen die Bananen auf dem Boden, der während des Wachstums der Pflanze recht feucht, während des Ansatzes und der Reife der Früchte aber trocken ist. Wo reichlich Regen fällt, wie im bergigen West-Urundi, sind deshalb die Bananenschamben nicht an eine bestimmte Lage gebunden, während sie im trockneren Ost-Urundi sich entweder in die Täler schmiegen, um genug Wasser zu bekommen oder auf freieren Lagen das Wasser durch lange Leitungen künstlich zugeführt erhalten (s. S. 55). In den Berggegenden wird es der Banane aber oberhalb

2400 m zu kalt; schon von 2000 m Höhe an wird sie sichtlich dürftiger. Auch in den sterilen Quarzitlandschaften Ost-Urundis wachsen nur wenig Bananen.

Die Bananenfrüchte werden zum allergrößten Teil unreif und grün abgeschnitten, geschält und in Wasser zu Brei gekocht oder an der Sonne getrocknet und zu Mehl verrieben. Reife Früchte werden nur als Leckerei und in kleiner Menge gegessen, da sie ungekocht schwer verdaulich sind. Künstlich gereift werden sie dagegen mit Feuer in Erdlöchern zum Bierbrauen (s. S. 60).

Nach Abschneiden der Fruchtbüschel geht der Stamm ein. Wenn es nötig ist, haut man ihn ab, zerstückelt ihn und häuft die Stücke als Gründünger um den Fuß der anderen Stämme. Auch als Futter für Jungvieh werden zerhackte Bananenstämme verwendet. In trockenen Gegenden preßt man den wässerigen Saft aus den Stämmen, um ihn zu trinken. Aus den Fasern der halbtrockenen Stämme macht man Schnüre, Stricke, Flechtwerk, mit den trockenen großen Blättern deckt man die Hütten, benutzt sie zum Einpacken verschiedenster Gegenstände usw.

Die **Bohnen** (ikiharage), die neben den Bananen die Basis der Ernährung der Barundi sind, werden im ganzen Land in großen Feldern angebaut, am meisten in den höheren oder in den trockeneren Gegenden, wo die Banane schlecht oder gar nicht mehr fortkommt. Noch zwischen 2000 und 2500 m Höhe gedeiht sie ganz gut. Man unterscheidet etwa 90 Varietäten, buschige, kriechende, kletternde, wärmeliebende, kälteliebende, mit Früchten verschiedener Größe und Farbe. Sie alle gehören der Spezies Phaseolus vulgaris an, die in das Zwischenseengebiet wohl zusammen mit der Batate und dem Mais, also wohl von Westen her, eingedrungen ist (Nr. 28a, S. 222). Die hochrankenden werden mannshoch und erhalten je einen Sorghumstengel oder einen Stock zum Anhaften wie unsere „Stangenbohnen". Gepflanzt werden sie in kleine, mit der Hacke gemachte Löcher, in die 2 oder 3 Bohnen gesteckt werden.

Ebenso verfährt man mit den **Erbsen** (uwusassja), von denen es etwa ein halbes Dutzend Varietäten der Art Pisum sativum gibt. Eine mit bläulichen Früchten soll von den Batussi aus ihrer Urheimat in den Gallaländern mitgebracht worden sein (Nr. 19, S. 283), wogegen Stuhlmann annimmt, daß die in Ostafrika nur auf den Hochländern des Seengebietes gebaute Erbse von Süden aus durch Portugiesen eingeführt und sich nordwärts über die Hochländer verbreitet habe (Nr. 28a, S. 225). Die Erbsen sind die einzige Feldfrucht in den oberen Gebirgsgegenden Urundis. Wie auf den hohen Vulkanen Ruandas und auf den Randgebirgen des Kivusees und des Russisigrabens, so leben auch auf den hohen Randbergen Nordwest- und West-Urundis bis fast 3000 m Höhe viele tausend Eingeborene fast nur von Erbsen. Überall, wo dort der prachtvolle alte Urwald bis zu den Wasserscheiden hinauf mit Feuer und Axt niedergelegt wird, macht er fast ausschließlich Erbsenfeldern Platz, die in dem humusreichen Urwaldboden natürlich wunderbar gedeihen. Immer weiter geht die Vernichtung des Waldes, immer weiter die Ausbreitung der Erbsenfelder, ein jämmerlicher Ersatz für den herrlichen und wirtschaftlich tausendfach wertvolleren Waldbestand, der im jetzigen Klima nie wieder zu seiner vorigen Größe heranzuschonen ist, wenn man das endlich einmal wollte!

Die Bohnen und Erbsen läßt man auf dem „Stock" völlig ausreifen. Erst wenn die Pflanzen gänzlich abgedorrt sind, so daß die Früchte auszufallen drohen, werden sie ausgerissen, in den Gehöften aufgehäuft, auf den Hüttendächern ausgebreitet und schließlich mit Ruten ausgedroschen. Das leere Stroh wird dann, soweit man

es nicht zur Steuer benutzt, auf den Feldern in zahlreiche Einzelhaufen, wie unsere Heuhaufen, verteilt und verbrannt, so daß die Asche das Feld düngt.

Erdnüsse (itschjoba) und Mais (ikigori) werden ebenso wie Bohnen in Löcher eingesät, richtiger gesagt: eingesteckt. Die Erdnüsse werden aber vorher enthülst, die Maiskörner einen Tag lang in Wasser gequellt. Von Erdnüssen scheint es 3 Varietäten zu geben, die man als itschjoba, itschjenna und itschjansa unterscheidet. Aus keiner von ihnen wird Öl gemacht, sondern sie werden nur als Zuspeise oder Nascherei, roh oder in der Asche geröstet, gegessen (Nr. 19, S. 41).

Mais (ikigori) ist in mindestens einem halben Dutzend Varietäten vertreten. Wo sich der Boden leicht bewässern läßt, sät man oft dreimal im Jahre Mais und hält davon immer riesige große Vorräte in den Getreideschebern. Die Kolben werden vom Stock geschnitten. Solange sie noch saftig und süßlich sind, werden sie entweder roh oder in der Asche geröstet verzehrt; größtenteils aber werden die ausgereiften Körner zu Mehl zerstampft und zu einer Art Polenta verarbeitet. Das Stroh dient als Brennmaterial.

Von Yams (iganame), Pfeilwurz (amateke) und Bataten (ikisumbu) werden die Knollen gesteckt und etwas Erde darauf gehäufelt. Namentlich die Bataten, von denen etwa ein halbes Dutzend Varietäten unterschieden werden (Nr. 19, S. 424), und der Pfeilwurz brauchen für das erste Wachstum viel Wasser und sind deshalb meist auf den Talböden, wo sie auch künstlich bewässert werden können, angebaut (Taf. 22b). Die reifen Pflanzen werden ausgegraben wie unsere Kartoffeln und die abgenommenen Knollen resp. Wurzelknöl: gekocht oder in Asche geröstet.

Maniok (umumbati) hingegen wird durch Stecklinge kultiviert, die man von den saftigen Maniokstauden abbricht und reihenweise in etwas aufgehäufelte Erde steckt. Die Pflanze wächst dann ohne weitere Pflege; sie ist die anspruchloseste aller Kulturgewächse Ostafrikas und bedeutsam in Urundi namentlich in den östlichen Quarzitlandschaften verbreitet. Man unterscheidet mindestens 6 Varietäten, von denen keine so giftig ist, daß sie, wie andere Varietäten Ostafrikas, erst durch Kochen oder Gären genießbar würde. Man ißt sie roh, gekocht, getrocknet, als Mehl zerrieben, in Klößform usw.; die Blätter gekocht als Gemüse.

Sorghum (inkka) spielt in Urundi eine viel geringere Rolle als in Ruanda, wo es an erster Stelle der Kulturpflanzen, noch vor den Bananen, steht. Auch Uha produziert vor allem Sorghum und versorgt in knappen Zeiten die Barundi damit. Immerhin ist in Urundi Sorghum in einigen zwanzig verschieden benannten Varietäten der weißen und roten Art vertreten (Nr. 19, S. 544). Zum Säen des Sorghum wird der Boden einfach umgehackt, meist ohne Furchenziehen, worauf man auf die ebene Erde die Körner mit schwingender Hand ausstreut und mit der Hand Erde über die Saat streut. Ebenso wird Eleusine (uwuro) gesät. Die reifen Ähren dieser beiden Hirsearten werden mit dem Messer einzeln von den Halmen geschnitten, wie auch der Mais und der Reis, und auf dem festen Erdboden vor den Hütten mit Ruten ausgedroschen. Ein Teil des Sorghum wird zu Mehl gemahlen, der größte aber zum Bierbrauen verwandt, während aus Eleusine hauptsächlich Mehl für den täglichen Ugalibrei (umudima) gemacht wird.

Tabak (itabi) bauen die Barundi, wie oben erwähnt, fast bei jedem Gehöft in kleinen Mengen an, aber die empfindliche Pflanze wird so schlecht gepflegt, daß sie nur ein mäßiges Produkt liefert. Besser ist der Urwiratabak, der im Tanganikagebiet viel

gehandelt wird. Die Barundi stecken den Tabaksamen in kleine, mit der Hacke gemachte Löcher und pflanzen die jungen Stauden nicht um, reinigen und bewässern aber den Boden von Zeit zu Zeit. Sobald die Pflanze blüht (rot, nicht weiß), pflückt man die Blätter, reiht sie auf Bastfäden und trocknet sie an der Sonne. Zur Fermentation und Aufbewahrung werden sie dann in Pakete aus trockenen Bananenblättern gesteckt. Trotz seines schlechten Aussehens riecht der Tabak nicht schlecht, ist aber so stark, daß ihn selbst die Barundi nur selten rauchen, meist bloß alte Männer und Weiber. Alle andern aber sind leidenschaftliche Tabakschnupfer (s. S. 59), wogegen in Ruanda nur selten Tabak geschnupft, aber sehr viel geraucht wird.

Wie alle Narkotika bei den Naturvölkern, so steht auch der Tabak bei den Barundi im Ansehen geheimnisvoller Kräfte. Daher der Brauch, daß man jemand, der ohnmächtig geworden, vor allem eine Prise Tabak in die Nase stopft; ferner daß der junge Ehemann seine Frau mit Tabakrauch anbläst, und andres mehr (Nr. 19, S. 557).

Ebenfalls im engen Gartenbau oder als Zwischenkultur zwischen Bananen oder Sorghum werden mehrere Arten von Kürbissen (imboga), namentlich eine etwa kopfgroße rundliche und eine kleinere gurkenartige, gebaut, die als Gemüse gegessen werden, sowie Flaschenkürbisse (ikisabo) mit verschieden gestalteten Früchten für den Bedarf an Gefäßen.

Die Ölpalme (ingasi), die in Urundi nur im Tanganikagebiet vorkommt, ist nicht eigentlich eine Kulturpflanze der Barundi, sondern ein wildwachsender, aus Westafrika herübergekommener Baum, dessen Früchte sich die Barundi zunutze machen. Etwa 12 km nördlich von Usumbura liegt der Ölpalmenwald von Mtara, der zirka 800 Hektar groß ist und 4—500000 Ölpalmen (Elaeis guineensis) hat. Näher bei Usumbura steht ein Wald von 2—220000 Palmen, und weiter südlich von Usumbura bis in die Nähe von Udjidji erstrecken sich weitere Bestände von 3—400000 Palmen. Erst die Europäer haben die rationelle Kultur der Ölpalme am Tanganika eingeführt, aber gegenwärtig werden die Wälder weder von Europäern noch von Eingebornen genutzt, weil sie der Hauptaufenthalt der Schlafkrankheitsfliege sind und deshalb möglichst gemieden werden. Der einzige Baum, den die Barundi in ihren der Baumkultur abträglichen Hackbau aufgenommen haben, ist der Rindenstoff-Fikus (s. oben S. 24, 31), der wirklich gepflanzt und gepflegt wird. Die Ölpalme aber wird von den Eingeborenen nur selten gesteckt und gepflanzt. Die Nüsse treiben, wie sie von den Bäumen fallen, leicht in dem feuchten Boden, auf dem die Ölpalmwälder zu wachsen pflegen. Von den jungen Bäumchen wird die Mehrzahl ausgerissen oder abgehackt und nur wenige stehen gelassen, die die abgestorbenen alten Bäume ersetzen sollen. Die abgeschnittenen reifen Früchte werden erst gebrüht und dann so lange in einem Mörser gestampft, bis alles äußere ölhaltige Fleisch losgelöst ist. Dieser gestampfte Brei wird mit der Hand in einem wassergefüllten Holztrog ausgequetscht, so daß das Öl auf dem Wasser schwimmt. Von da schöpft man es in einen irdnen Topf und bringt es schließlich in kleineren Töpfen auf den Markt. Das meiste wird nach Udjidji und nach dem Kongogebiet (Uwira) verkauft; das wenige, was die Barundi behalten, wird zum Ölen einiger Speisen und zum Braten der Fische benutzt, teilweise auch zum Einreiben der Haut und zum Heilen der von den Sandflöhen verursachten Wunden (Nr. 19, S. 291 und 411). Die Verwendung des Palmöls zur Seifenfabrikation kennen die Barundi ursprünglich

nicht; nur die Tanganikabevölkerung hat durch die Araber und Wasuaheli gelernt, durch Vermengung des Öls mit Aschensalzen Seife (kileke) zu machen, die in faustgroßen Kugeln verhandelt wird.

Außer den genannten Kulturgewächsen sammeln die Barundi und ihre Weiber und Kinder eine Anzahl wildwachsender Pflanzen resp. Teile derselben als Nähr- oder Genußmittel, so z. B. Brennesseln, deren Blätter als „Spinat" gekocht werden; Sauerampfer, der ebenfalls als Gemüse gekocht wird; Früchte der (verwilderten?) Eierpflanze (Solanum esculentum), die roh verzehrt oder geröstet wird; eßbare Pilze, die entweder roh oder gekocht genossen werden; roter Pfeffer (intore), mit dessen Schoten gewürzt wird; verschiedene Beeren, die von den Weibern und Kindern genascht werden, namentlich Brombeeren, die überall häufig sind.

Die Lage und die Anlage der Felder (umurima) ist in Urundi nicht viel anders als in Ruanda. Nur das fällt dem Beobachter bald auf, daß in Urundi, mit Ausnahme der westlichen Bergländer, die Terrassenfelder, die in dem viel bergigeren Ruanda ganze Berghänge bedecken und überall die Kulturlandschaft charakterisieren, viel weniger häufig sind als dort. In Urundi breiten sich die Felder vorwiegend auf den Flächen aus, sei es auf den breiten Rücken der Hügel und kleinen Plateaus, sei es im Grund der Täler; immer möglichst nahe den Hütten und natürlich auch dem Wasser. Die meisten Felder werden nicht mit Furchen durchzogen, sondern flach umgehackt. Geschieht dies auf noch unbearbeitetem Neuland, so werden die ausgehackten Gräser und Stauden an Ort und Stelle aufgehäufelt, getrocknet und verbrannt, um dann die Asche als Dünger mit einzuhacken. Auch an den Rändern der Papyrussümpfe verfährt man so, daß man nach dem Sinken des Wasserspiegels so weit, wie der oberflächlich trocken gewordene, äußerst fruchtbare Schwemmboden reicht, das Papyrusdickicht abhaut und die abgehackten Papyruswedel, sobald sie dürr geworden, verbrennt (Taf. 22a). Dann werden die Wurzelstöcke umgegraben, schmale Dränagegräben gezogen, die Pflanzenasche als Dünger über das Feld gebreitet und schließlich Bataten, Pfeilwurz und Bohnen in Grablöcher eingesteckt, die schnell aufgehen. Wenn aber Felder an einem Hügelhang angelegt werden, gibt man ihnen die Gestalt langer schmaler Streifen, die dem Abhang in der Horizontale folgen und durch Wegnahme des Bodens bergaufwärts und Anhäufung der Erde bergabwärts möglichst ausgeebnet werden, so daß bei mehreren übereinanderliegenden Feldern eine Stufenanlage entsteht. Jedes Feld ist von dem nächstunteren durch einen grasbewachsenen Erdrain getrennt, wie in Ruanda, selten durch aufgeschichtete Steinsetzungen. Auf diesen Terrassenfeldern bringt man einige breite Furchen an, um Abschwemmungen durch starke Regengüsse zu verhindern. In den Talniederungen aber und auf den künstlich bewässerten Flächen haben die Felder die Form hoher Beete, zwischen denen das Wasser zu- und ablaufen kann.

Da die Feldhacken nicht tief in den Boden eindringen, ist das Roden, Säen und Pflanzen immer ziemlich oberflächlich, so daß die immer wieder bearbeitete äußere Bodenschicht bald ausgesogen wird und „verarmt". Um dies zu verlangsamen oder ganz zu verhüten, wenden, wie mehrfach erwähnt, die Barundi — was nicht häufig im ostafrikanischen Ackerbau ist — Düngung der Felder an, und zwar entweder tierischen Mist (ikiragiriro) von Rindern, Ziegen, Schafen, Hühnern, oder Asche verbrannter Pflanzen (amase), vom Herdfeuer, von den ausgerodeten Wurzelstöcken des Grases, des Papyrus, oder Gründünger (Bananenstammstücke, Sorghumstengel) oder Küchen-

abfälle, Kehricht u. dgl. Diese Dungstoffe werden gleichmäßig über die Felder verteilt und mit der Hacke leicht eingehackt, gewöhnlich kurz vor Beginn der Regenzeit.

Sobald die ersten Regen fallen, fängt man mit der Felderbestellung an — Männer, Weiber und Kinder — und sät und pflanzt die verschiedenen Gewächse die ganze Regenzeit hindurch, also vom September oder Oktober bis März oder April. Bohnen, Erbsen und Mais sind das erste, worauf Sorghum und Eleusine folgen, dann kommen die Knollengewächse daran. Schon im November gibt es frische Bohnen und jungen Mais, aber die Haupternte (Bananen, Sorghum, Eleusine) findet im Juni statt. Von Juni bis September oder Oktober ist Trockenzeit, die Ruheperiode für die meisten Felder. Aber in den Fluß- und Bachtälern und in den Niederungen, wo es Wasser gibt, jedoch auch an vielen Stellen der Hügelhänge, wird das ganze Jahr hindurch geackert, gepflanzt und geerntet. Bananen, Bohnen, Mais, Bataten, Kürbisse grünen da auch in den trockensten Monaten.

Dies ist nur unter Zuhilfenahme künstlicher Bewässerung (uwutotsi) möglich, die von den Barundi ganz ähnlich betrieben und zu ähnlicher Entwicklung gebracht ist wie von den Banjaruanda. In den Talebenen und den Bachgründen wird das Wasser durch ein ganzes Netz von größeren und kleineren Kanälen und Gräben aus dem Hauptlauf abgelenkt und über die Fläche verteilt. Hier ragen dann die zahllosen Parzellen der Felder als hohe Beete über die Wassergräben empor (Taf. 22b). Um aber auch Felder auf Hügelhöhen zu bewässern, wird der Bach in seinem Oberlauf durch einen Damm aus Erde und Flechtwerk zu einem Weiher angestaut und von hier aus ein oft mehrere Kilometer langer Graben an den Berghängen entlang geführt, bis er das gewünschte Endziel erreicht hat. Von dieser Hauptader zweigen von Zeit zu Zeit kleinere Wasseradern ab und berieseln zahlreiche Felder an den Hügeln. Ist ein Feld genug bewässert, so wird sein Zufuhrgraben abgedämmt. Die letzten Felder bekommen nur noch wenig; alles Wasser ist aufgebraucht. Es ist erstaunlich, mit welchem Verständnis für die Laufgeschwindigkeit und den Druck des Wassers die Gräben nivelliert, eingedämmt und an den Talhängen mit allen ihren Ein- und Ausbuchtungen entlang geführt sind. Wird der Hang einmal durch eine tiefe Erosionsschlucht unterbrochen, die auch den Graben unterbricht, so hilft man sich durch einen oft von weither gebrachten langen Baumstamm, den man horizontal über die Schlucht legt und ihn auf der Oberseite als Rinne aushöhlt, durch die das Wasser fließen kann. Es gibt solche Baumleitungen von 30—40 m Länge (Nr. 19, S. 50). Der Bau der Wasserleitungen ist gemeinsame Männerarbeit der Anwohner, und jeder hat Anspruch auf seinen Anteil Wasser. Die gerechte Verteilung des Wassers wird vom Mutwale des Distriktes angeordnet und überwacht.

Ähnlich sorgfältige und mühsame künstliche Bewässerung, die jedem europäischen Gartenbauer Ehre machen würde, kenne ich aus Ostafrika nur noch von den Wadschagga des Kilimandjaro. Die in manchen Teilen von Usambara, Uluguru, Ussagara und mehreren anderen Bergländern stehen ihnen aber nicht viel nach.

Trotz alledem bauen die Barundi nicht mehr Nährfrüchte an, als sie gerade für den Jahresbedarf brauchen. Mit und ohne künstliche Bewässerung würde der Boden, der, außer in den sterilen steinigen Quarzitgebieten des Ostens, zum größten Teil eine fruchtbare Roterde oder in den Talniederungen ein dunkelgrauer Schwemmboden oder auch Humus ist, viel mehr hervorbringen, wenn mehr Feld unter Kultur genommen würde. Dem aber steht hauptsächlich der Mangel an Verkehr

entgegen, denn da es im großen Inner-Urundi weder Märkte noch organisierten Handel gibt — nur das Tanganikagebiet hat beides —, so könnte der Murundi eine über den eigenen Bedarf hinausgehende Produktion gar nicht verwerten. Mit Mißernten aber rechnet er nicht, er sorgt sich, wie fast alle Neger, nie um das, was kommen mag. Und da auch nicht einmal die Dauerfrucht Maniok, die selbst in den trockensten Jahren, wenn alles andere verkümmert, noch guten Ertrag bringt, in beträchtlicher Menge gebaut wird, so werden in schlechten Erntejahren weite Gebiete von Hungersnot heimgesucht. Das ist namentlich in dem unfruchtbaren quarzitischen Ost-Urundi der Fall, wo dann die Missionen (Mugera, Mujaga u. a.) und das Gouvernement durch Einfuhr von Getreide (Sorghum) aus Uha und Usambiro helfend einzugreifen pflegen, aber doch nicht hindern können, daß viele Menschen, vor allem Kinder, Hungers sterben.

Ein anderer gewichtiger Grund, der die weitere Ausdehnung des Ackerbaues hindert, liegt in den Eigentumsverhältnissen des Bodens, in der Vorherrschaft der vor allem Weideland für ihre Rinderherden beanspruchenden Batussi, worauf wir nachher zu sprechen kommen (S. 57).

Die auf den Äckern heranreifenden Feldfrüchte sucht man mannigfach gegen Schädlinge zu schützen. Unkraut wird gejätet, Raupen, Käfer, Schnecken abgelesen; Vögel werden durch Vogelscheuchen abgeschreckt, die man z. B. aus galgenförmig aufeinander gebundenen Sorghumstengeln und daranhängenden klappernden trockenen Früchten herstellt; große Tiere aber, wie in den Bergen West-Urundis die Wildschweine und Paviane, werden entweder durch Zäune abgehalten oder durch Wächter verjagt, die am Tag herumgehen und nachts von kleinen, im Feld stehenden hochbeinigen Pfahlbauhütten aus zeitweise lautes Geschrei erheben und mit Stöcken klappern. In den wasserreichen Tälern West-Urundis sind wie in denen Ruandas die dort sehr häufigen Kronenkraniche, Sporengänse und Nilgänse die ärgsten Feinde der Felder, da sie die jung hervorsprießende Saat der Bohnen, Bataten, Kürbisse, Hirse usw. abfressen. Mit Klappern und Geschrei suchen sich die Bahutu ihrer zu erwehren. Die ebenfalls in den Sumpftälern häufigen Ibisse, Reiher und Regenpfeifer schädigen die Saaten nicht, sondern grubeln in den Dränierungsgräben nach Fröschen, Würmern, Schnecken. Im trockeneren quarzitischen Ost-Urundi gibt es solche Sumpftäler und damit auch die genannten, den Feldern schädlichen Vögel nur sehr wenige.

Die eingeernteten Feldfrüchte werden teilweise in den Hütten selbst in Körben und Säcken aufbewahrt, größtenteils aber in den obenerwähnten korbförmigen Vorratshütten (s. S. 22) neben den Wohnhäusern. Namentlich mit Bohnen, Sorghum und Mais werden diese Korbhütten angefüllt, die Maiskolben aber in der Trockenzeit auch in großen Bündeln an den die Gehöfte umstehenden Fikusbäumen aufgehängt. Die Knollenfrüchte Bataten, Yams, Maniok, Pfeilwurz werden gewöhnlich nicht aufgestapelt, sondern so lange im Boden gelassen, bis man ihrer bedarf; weshalb auch die angebaute Menge nie groß ist, da sie sonst verderben würden.

Ich erwähnte vorhin, daß einer weitern Ausbreitung des Ackerbaues in Urundi die eigentümlichen Besitzverhältnisse entgegenstehen. Die Dinge liegen hier ganz ähnlich wie in Ruanda. Keiner der ackerbauenden Bahutu ist Eigentümer des von ihm bearbeiteten Grund und Bodens. Alles Land gehört dem König, der seine Groß-Batwale und diese wieder die kleineren Batussi-Batwale damit belehnen (s. S. 89). Der Mutwale vergibt die einzelnen Landparzellen an die ihm unterstehenden Bahutu

zu Lehen. Von ihm müssen die Bahutu in jedem Einzelfall die Erlaubnis zur Bearbeitung eines Stückes Land, zum Bau einer Hütte, zur Anlage von Feldern einholen, und an ihn zahlen sie eine einmalige Abgabe in Naturalien und einen jährlichen „Zehnten" als Lehnzins. Wird der Jahreszins zur Erntezeit nicht entrichtet, so kann der Mutwale den Säumigen sofort von der Scholle jagen. Auch kann er außerordentliche Abgaben, wie Geschenke an den Oberhäuptling, Karawanenverpflegung durchreisender Europäer u. dgl. von den Bahutu verlangen, ohne sie zu entschädigen. Die Gegengaben oder Zahlungen der Europäer steckt der Mutwale in seine eigene Tasche: Misera contribuens plebs!

Da nun aber das größte Interesse des Mutussi-Lehnsherrn nicht auf den Ackerbau der Bahutu gerichtet ist, sondern auf seine Rinderherden und deren Gedeihen, also vor allem auf die reichliche Weide der Tiere, so ist es ihm in den meisten Fällen sehr unangenehm, wenn ein Muhutu die ohnehin schon recht knappen Weidegründe durch Anlage neuer Felder noch mehr einengen will. Dieser Widerstreit der Interessen, der natürlich von den Batussi meist zugunsten der Viehweide und zuungunsten des Ackerbaues entschieden wird, wird freilich auch bestehen bleiben, wenn einmal das große Land dem Handel und Verkehr geöffnet sein wird und der Muhutu seine Bodenprodukte nach auswärts verkaufen kann. Der Konflikt der Interessen wird dann sogar noch viel schärfer werden, als er jetzt ist, da die Bahutu dann immer mehr anzubauen und abzusetzen sich bemühen werden. Da kann nur eine gründliche Änderung in den Weideverhältnissen, ein teilweiser Übergang zum Anbau von Kraftfutter und zur Stallfütterung, die Schwierigkeiten mildern. Das sind in der Praxis schwer zu lösende Fragen; aber sie werden nun, nachdem die Mittelbahn am Tanganika angelangt ist und die anliegenden großen volkreichen Länder produktiver gemacht werden sollen, unsere an leitender Stelle stehenden Kolonialpolitiker viel beschäftigen müssen. Schließlich wird man nicht umhin können, das auf diesen Ländern und ihrer Entwicklung lastende Grundübel, die Batussiherrschaft selbst, an der Wurzel zu fassen. Dazu gehören aber stärkere Machtmittel, als wir sie jetzt dort haben. Wird die Schutztruppe nicht vermehrt, so wird doch die Mittelbahn helfen, die Machtmittel schneller konzentrieren zu können als bisher, und die Bahutu werden schließlich mit uns gegen die Batussi sein, sobald sie sehen, daß wir stärker sind als jene.

Am Schluß dieser Übersicht über den Ackerbau der Barundi seien einige mit ihm zusammenhängende religiöse Bräuche kurz angeführt (Nr. 19, S. 20/21). Für jeden der großen Lehnsbezirke oder Provinzen befiehlt der dortige Oberhäuptling oder Großmutwale am Anfang der Regenzeit den Beginn der Feldarbeiten, nachdem er mit seinen Zauberern (abafumu) eine Menge Zeremonien ausgeführt und Opfer dem Hauptgott Imana als dem Segenspender dargebracht hat. Der Befehl des Oberhäuptlings wird von den Unterhäuptlingen an die kleineren Batwale und von diesen an die Bahutu weitergegeben. Auch diese bringen erst dem Gott kleine Spenden dar, und wenn sie dann das Feld zu hacken anfangen, tanzt am ersten Tag ein Zauberer (umufumu) mit Rufen und Gestikulieren vor ihnen her, um die bösen Geister zu bannen und die Saat zu segnen.

Nach Pater Gaßdinger verläuft in Zentral-Urundi (Muzaga) die Weihe der Feldbestellung etwas anders. Dort wird bei Beginn der Regenzeit, wenn das hohe Gras abgesichelt und mit den Hacken unter die Erdschollen untergegraben wird, die Arbeit mit einer Zeremonie begonnen, die den Segen Kirangas herbeiführen

soll. Die gelb und rot bemalten Männer stellen sich auf dem zu bearbeitenden Feld in Reihe und Glied mit den Hacken auf. Neben dem Feld sitzt Kiranga mit zwei Begleitern (ivisjego). Vor den Männern inmitten des Feldes steht ein bemaltes und reich geschmücktes Mädchen und beginnt nun zu springen, zu tanzen und zu singen, wobei sie das hohe Gras abschelt. Singend erbittet sie vom Kiranga gute Saat, verflucht die Zauberer und Hexen, die dem Felde schaden wollen, und läßt sich von den Männern reichliche Bieropfer für den Sommer versprechen. Die Männer schreiten ihr langsam nach und graben den Boden um, wobei sie in rhythmischem Takt die Hacken ins Erdreich schlagen. Kiranga wird je nach der Art der Saat mit einem besonderen Namen angerufen: Njamurini beim Säen des Sorghum, Njabaschi bei Erdnüssen, Numambo bei Mais usw. (Nr. 45, S. 316).

Vom vermutlichen Thronerben des Königs glaubt man, daß er bei seiner Geburt ein Samenkorn von jeder Feldfrucht Urundis in seinen geballten Fäustchen halte. Hat Hagel oder ein Wolkenbruch den Mais oder das Sorghum eines Feldes zu Boden geschlagen, so läuft der Muhutu, der den Acker bestellt hat, mit einer Viehglocke um das Feld herum und erinnert durch lautes Schellen den Gott, dem er geopfert hat, an seine Pflicht, das Feld gegen böse Geister zu schützen. Wenn dieses Schellen gehörig geschieht, richten sich die niederliegenden Pflanzen wieder auf.

4. Genußmittel

Narkotische Genußmittel kennt der Murundi nur zwei, den Tabak und den Alkohol (Bier). Die Kultivationsart des Tabaks (itabi) ist schon S. 53 besprochen worden, desgleichen die Tatsache, daß die Barundi außer alten Männern und

Fig. 11. Doppelte Tabakspfeifen aus schwarzem Ton, wahrscheinlich zu Vorlingwaden. (Museum für Völkerkunde, Berlin, Nr. [illegible])

alten Weibern (auch der Batwa) nicht viel Tabak rauchen, alle aber starke Schnupfer sind. Dieser auffallende Unterschied von den benachbarten Banjaruanda, die sämtlich, wie auch die Baganda und Banjoro, Männer und Weiber, leidenschaftliche Raucher sind, aber nicht Schnupfer, hat wohl seinen Grund in der Qualität des Urundibitabaks, der infolge geringer Pflege sehr schwer ist. Wo man bei den Barundi Tabakspfeifen sieht — und das ist hauptsächlich im Norden und namentlich im Nordwesten der Fall — sind es dieselben Formen wie bei den Banjaruanda, und wie dort werden sie von den Batwa aus schwarzem Ton hergestellt (Taf. 49 und Textbild 11). Das Pfeifenrohr ist ein Stück Schilfrohr. Am Tanganika sind auch

Wasserpfeifen aus Kalebassen mit seitlich eingestecktem tönernen Pfeifenkopf in Gebrauch, die von den kongolesischen Wawira übernommen sind.

Das Schnupfen (kusomera) hingegen wird von allen Barundi, Männern, Weibern und halbwüchsigen Kindern, so eifrig betrieben, daß es fast als ein nationaler Sport oder ein „Nationallaster" gelten kann (Taf. 28). Wenn nur nicht so unappetitlich dabei verfahren würde! Es ist nicht das gemütliche, fast zierliche, gefühlvolle Schnupfen der Wadschagga des Kilimandjaro, die aus einem kleinen perlenbestickten Büchschen ein wenig feingeriebenes Tabakpulver auf den Handrücken streuen und es kurz mit der Nase einziehen, als ob sie an einer Blume rröchen, sondern der Murundi schnupft folgendermaßen: Zunächst braucht er drei kleine Schnupfgeräte, ein kleines Ziegenhorn als Tabakbehälter (ihembe), das an einer Schnur um die Schulter getragen wird, eine Holzschale zum Anwässern des Tabaks (Textbild 12), und einen aus einem kleinen gespaltenen Holzstück verfertigten Nasenklemmer (umunengo), der etwa die Form einer Wäscheklammer hat und an einer Schnur um den Hals hängt (Textbild 13). Um nun zu schnupfen, tut der Murundi zunächst etwas Tabak aus dem Horn in die Holzschale, gießt ein wenig Wasser dazu und quetscht die Mischung so lange mit einem Stück Holz durcheinander, bis das Wasser zu einem braungrünlichen Tabaksaft geworden ist. Diese Sauce gießt er dann in die hohle Hand und schlürft sie mit wenigem Grunzen in die Nasenlöcher ein. Das alles geschieht meist im Hocken oder Sitzen (s. Taf. 28b). Da der Saft aber natürlich gleich wieder herauslaufen würde, setzt man den genannten hölzernen Kneifer auf die Nasenflügel oder hält sie sich mit Daumen und Zeigefinger von oben her zu. Die Prise ist gut, wenn sie so scharf ist, daß dem Schnupfer die Tränen aus den Augen kollern. So läßt er die beizende Brühe 3, 5 und mehr Minuten in der Nase. Hat er endlich genug von diesem Genuß, so beugt er sich vornüber, nimmt den Kneifer oder die klemmenden Finger weg und läßt die lange rotzige Sauce zur Erde laufen, worauf er den Rest mit den Fingern ausschneuzt und sich die Finger an den nackten Beinen abwischt. Die ganze Prozedur, die man täglich viele Dutzend Male beobachten kann, ist so widerlich, daß einem dadurch der Aufenthalt unter Barundi leicht verleidet werden könnte, wenn man sich nicht immer wieder sagte, daß man ein ethnologisches Studienobjekt vor sich hat, das als solches jenseits von Gut und Böse steht.

(Museum für Völkerkunde, Berlin, Nr. 5277.)

Fig. 13. Hölzerner Nasenklemmer für Tabakschnupfer.
(Museum für Völkerkunde, Berlin, Nr. 5276.)

Wenn aber einem Schnupfer plötzlich das Niesen ankommt, schneuzt er schleunigst den ganzen Saft mit den Fingern aus; sonst passiert Fürchterliches. Und wenn er genießt hat, wünschen ihm die Umstehenden „kira" (wohl bekomm's), und seine Antwort lautet „tukirane" (gehe es uns gut). Eine Prise anbieten und die an-

gebotene annehmen, gehört zum guten Ton. Nur die Batwa bekommen keine von den andern Barundi und bieten ihnen keine an (Nr. 19, S. 465).

Noch leidenschaftlicher als den Tabak lieben die männlichen und weiblichen Barundi aller Stammes-, Standes- und Altersklassen den Alkohol in Gestalt des Bieres (insoga). Man kann annehmen, daß mindestens die Hälfte der Jahresernte in Bier verwandelt wird. „Wenn die Barundi im allgemeinen ein nüchternes Volk sind, so sind sie es nicht aus Tugend, sondern weil sie nicht genug zu trinken und zu essen für ihren Appetit haben. Sie würden einen Ochsen auf einen Sitz auffressen, und wenn man ihnen Bier à discretion gäbe, würden sie sich vom Morgen bis zum Abend betrinken" (Nr. 19, S. 317). Trunkenheit gilt nicht für einen Fehler oder für ein Laster, sondern für einen Beweis von Wohlhabenheit oder von Freigebigkeit des Gastgebers. Die Monate nach der Hirse- und Bananenernte, also vom Juli bis September, sind die Zeit des Bierbrauens (kwenga insoga, kutoba), des Schlemmens und der allgemeinen Bezechtheit in ganz Urundi, d. h. solange der Vorrat reicht; oft ist schon nach vier Wochen der letzte Tropfen durch die Gurgel gejagt, und die durstigen Seelen müssen enthaltsam sein bis zur nächsten Ernte. In den Zechmonaten aber hallt aus den meisten Gehöften Gesang und Geschrei bis tief in die Nacht hinein, denn stille einsame Zecher gibt es nicht, da das Biertrinken immer Gesellschaftssache ist. Einer nach dem andern lädt Freunde und Verwandte zu gemeinsamem Gelage ein, und so kneipt man sich der Reihe nach durch alle befreundeten Familien durch, bis nichts mehr da ist. Außerdem werden volle Biertöpfe bei jeder passenden Gelegenheit als Geschenk dargebracht und gemeinsam vom Beschenkten und Schenker ausgetrunken. Und selbstverständlich gehört Bier, viel Bier zu jeder Art festlicher Veranstaltung, die auch gewöhnlich mit Tanz verbunden sind (s. S. 65, 128). Da das am meisten beliebte Bananenbier ziemlich stark stürmt und die Barundi von Natur leicht erregbar sind, geht es bei den gemeinsamen Gelagen im vorgerückten Stadium meist recht stürmisch zu, und regelmäßig kommt es zu heftigem Wortstreit, oft auch zu Prügelei, Lanzenstechen und Totschlag, was im letzteren Fall schlimme Folgen für die beteiligten Familien hat (s. S. 97, 105).

Bemerkenswerterweise ist das Bierbrauen bei den Barundi Sache der Frauen, und sie verstehen sich vortrefflich darauf; sie kneipen aber auch sehr wacker mit. Es gibt vier verschiedene Bierarten in Urundi. Am verbreitetsten, beliebtesten und kräftigsten ist das Bananenbier (insoga j'ivitoke). Zu seiner Herstellung werden zunächst grüne, unreife Bananen künstlich in einer Art Brutofen ausgereift. Dieser ist nichts anderes als eine in festem Erdboden gegrabene Grube. Sie wird unten mit grünen Bananenblättern belegt, darauf die Bananenbüschel geschichtet, hierüber wieder grüne Blätter gebreitet und oben dürre Bananenblätter darübergehäuft, die angezündet werden. Sobald sie brennen, wird das Ganze mit Zweigen und Erde zugedeckt. Nach 4—5 Tagen sind die Bananen ausgereift. Sie werden nun herausgeholt, geschält und in einen Holztrog getan, wo sie mit reinen Grasbüscheln, die man in der Hand hält, zerquetscht werden. Darauf wird Wasser zugegossen und alle festen Bestandteile herausgefischt. Der übrigbleibende Saft wird mit einer Kürbisschale in einen großen Tontopf geschöpft und etwas Sorghummehl zugesetzt, um es gären zu lassen. Nachdem er so 4—5 Tage gegoren hat, wird das nunmehrige Bier in kleinere Krüge gegossen und ist fertig zum Gebrauch.

Weniger umständlich ist das Brauen des Hirsebiers (insoga j'impeke), das aber auch weniger schmackhaft und weniger beliebt ist. Natürlich überwiegt es in den Landstrichen, wo mehr Sorghum als Bananen gebaut werden, wie z. B. im östlichen Urundi und in Uha. Das Brauverfahren ist folgendes: Rotes oder weißes Sorghum wird in kaltem Wasser zum Schwellen und Keimen gebracht. Nach einigen Tagen wird die Hirse in einen Korb gehäuft, und nachdem sie auch darin einige Tage geteimt hat, an der Sonne getrocknet und zu Mehl verrieben. Hierauf wird das Mehl in kochendes Wasser geschüttet und der Brei unter allmählichem Zugießen von kaltem Wasser beständig mit einem Holzbrettchen umgerührt. Wenn schließlich der große Kochtopf ganz von kaltem Wasser angefüllt ist, gießt man ein wenig saures Bananenbier zu und läßt nun den Brei sich auf den Boden des Gefäßes absetzen, wonach das darüberstehende fertige Bier in kleine Töpfe abgegossen wird. Es behält freilich immer eine etwas mehlige Farbe und wimmelt von schwimmenden Hirsekörnchen oder Keimchen.

Am besten schmeckt zweifellos dem europäischen Gaumen die dritte Art Bier, die man Bananenmost (umutobe) nennen könnte, da es nur mit Wasser vermischter Saft ausgedrückter reifer Bananen ist, der leicht angegoren ist. Das Getränk moussiert wie Sekt, schmeckt süß-säuerlich, ist sehr erfrischend und bekommt gut. Wegen seiner Harmlosigkeit wird es aber von den Barundimännern verschmäht und den Kranken, den Weibern und Kindern überlassen, die es überaus lieben (Nr. 19, S. 74).

Fig. 14.
Behälter für Saugrohre zum Biertrinken.
(Museum f. Völkerk., Berlin, Nr. 4875, 4391, 4882.)

Als vierte Biersorte ist das Honigbier (umutobe w'insuki) zu nennen, das einen limonadenartigen Charakter hat, aber doch etwas alkoholisch ist, so daß es auch die Männer gern trinken. Es wird aus $^1/_3$ Honig und $^2/_3$ Wasser zusammengemischt, die man kurz kochen läßt. Darauf wird es umgegossen, einige Tage nahe dem Feuer warm gestellt, ohne daß es sieden darf, und schließlich einen Tag lang an die offene Sonne gesetzt, wo es leicht gärt. Auch dies ist ein wohlschmeckendes gesundes Getränk.

Das Honigbier und der Bananenmost halten sich nicht lange, letzterer nur 4 bis 5 Tage, weshalb sie schnell weggetrunken werden müssen. Auch die an erster und zweiter Stelle genannten Bananen- und Sorghumbiere sind keine Dauerbiere, sondern werden um so schneller sauer, je wärmer sie stehen. In den kalten Gebirgsgegenden halten sie sich 5—6 Wochen lang, aber in den viel größeren wärmeren Plateauländern schlagen sie viel früher um, so daß schon aus diesem Grund die hohe Zeit des allgemeinen Kneipens auf nur wenige Wochen zusammengedrängt ist, diese aber um so intensiver ausgenossen werden.

Die Barundi trinken das Bier selten aus Töpfen oder aus offenen Kürbisschalen, wie die meisten anderen ostafrikanischen Neger, sondern gewöhnlich gießen sie es aus den Töpfen in Kalebassen und saugen es daraus mittels Strohhalme oder Schilfrohre (umukenke), etwa wie wir den Eiskaffee. Ebenso tun die Banjarwanda und Basiba. Auch auf Reisen und Märschen tragen sie Bierkalebassen mit den dazugehörigen, in geflochtenen oder geschnitzten Futteralen steckenden Saugrohren mit sich (Textbild 14).

Die eigentlichen Bierbrauer sind in Urundi, wie erwähnt, die Bahutuweiber. Im Trinken aber sind Bahutu und Batussi gleich stark, und zwar sind sie meist gewaltige Potatoren, die durchschnittlich 12—15 Liter täglich vertilgen. Auch die Batwa sind starke Biertrinker, wenn sie Bier haben. Gewöhnlich tauschen sie sich es gegen die von ihnen fabrizierten Tongefäße von den Bahutu ein, obwohl ihre Weiber nicht ungeschickt im Bierbrauen sind; die Bananen dazu kaufen sie ebenfalls von den Bahutu, da sie keine eigenen Bananenpflanzungen haben. Batussi und Bahutu trinken oft gemeinsam, aber nie mit den Batwa, die selbst für sich nicht trinken dürfen, wenn ein Muhutu oder gar ein Mutussi in der Nähe ist.

Daß es in einem noch recht verkehrsarmen Lande wie Urundi auch keinen von außen eingeführten Alkohol oder gar europäischen Schnaps gibt, bedarf kaum der Erwähnung.

Auch das Haschischrauchen ist den Barundi unbekannt, obgleich es bei den benachbarten Wanjamwesi sehr im Schwange ist und Hanf (urumogi) stellenweise in Urundi, bis weit im Innern, wächst (Nr. 19, S. 260). Ebensowenig kennen sie das Betelkauen, das leider durch Araber und Inder weit in Ostafrika verbreitet worden ist, oder irgendein anderes stimulierendes Genußmittel außer den obengenannten.

Fünftes Kapitel

Spiele, Tänze, Musik

Wie fast alle ostafrikanischen Stämme sind auch die Barundi, Kinder und Erwachsene, immer zu Spiel (uwukini), Tanz und Vergnügen geneigt; die Batussi, die sonst wenig oder nichts zu tun haben, obenan, aber auch die große Menge der Bahutu. Selbst die durch ihre Pariastellung niedergedrückten Batwa sind eifrige Tänzer.

Bei den Batussi und Bahutu beteiligen sich an den Spielen und Tänzen der Erwachsenen schon viele Kinder, denn die Kinder sind hier wie bei allen Negerstämmen schon mit 8 oder 9 Jahren fast ebenso reif wie die Erwachsenen. Niemals spielen Negerkinder, wenn sie über die ersten Jahre hinaus sind, mit so naiver Hingebung und Anmut wie unsere Kleinen. Eine ganze Reihe Spiele haben aber die Kinder, andere die Erwachsenen für sich. Unter den Kinderspielen steht voran das „Soldaten-

Fig. 15. Kinderspielzeug: Rohrflinte zum Abschnellen von Holzpfellen.
(Museum für Völkerkunde, Berlin, Nr. 6145.)

spielen" der Knaben, wobei sie sich, wie überall in der Welt, in zwei feindliche Heere teilen, einander zu überlisten suchen, allerlei Manöver machen und mit Bogen und Speeren aufeinander losgehen, ohne sich etwas Empfindliches anzutun. Ernster geht es schon beim Gefechtspielen zu: zwei Trupps bewaffnen sich mit leeren Maiskolben oder Steinen und beschießen sich damit so lange, bis die eine Partei genug Verwundete hat und die Flucht ergreift. Noch ernster wird der Zweikampf ausgefochten, bei dem zwei Knaben, die einander beleidigt und herausgefordert haben, so lange mit Stöcken aufeinander losprügeln, bis der eine ausreißt.

Über mehrere im Berliner Völkermuseum befindliche Spielsachen der Barundikinder hat K. Weule berichtet (Ethnolog. Notizblatt, Bd. II, Heft 1, S. 48—52). Als Spielsachen machen sich die Jungen kleine Schwerter, Bogen, Pfeile, Lanzen aus Holz oder Rohr, im Tanganikagebiet aber, wo man Gewehre kennt, auch kleine Flinten aus Sorghumstengeln oder Bambusrohr, aus dem ein federndes Stück Palmstengel einen Holzpfeil schleudert (Textbild 15). Ferner verfertigen sie sich aus einem röhrenförmigen Stück Baumrinde, die sie, wie bei unserem Pfeifenschneiden, vom Zweig lösen, ohne sie zu zerreißen, Knallbüchsen. Beide Öffnungen werden durch je einen Pfropfen aus nassem Bast verschlossen und der eine Pfropf dann durch ein Stöckchen

[p. 63]

2: Meyer FO42 Rundi

hineingestoßen, so daß die komprimierte Luft den anderen Pfropf mit lautem Knall hinaustreibt.

Ein beliebtes Spiel, an dem sich auch Erwachsene beteiligen, ist das Reifenwerfen (ulubangwe). Zwei Spielergruppen stehen einander gegenüber und werfen sich abwechselnd mit starkem Wurf einen Reifen zu, den die Gegenpartei in der Luft auffangen muß, aber nicht mit der Hand oder einem Stock, sondern mit einer Schnur, die sich vorn gabelt und an jedem Ende einen leeren Maiskolben angebunden hat. Der Reifen muß sich in dem ihm entgegengeschleuderten Schnurende verfangen. Die Partei, der dies am häufigsten glückt, hat gewonnen.

Kleine Flugdrachen werden aus Stücken federleichten Binsenmarkes gemacht, die durch ein Stäbchen zusammengehalten werden. Als Schweif dient ein Fetzen Rindenstoffes. Aber die Dinger fliegen ebenso schlecht wie die kleinen aus Zeitungspapier verfertigten Drachen unserer europäischen Kinder (Weule a. a. O., S. 51).

Knaben und Mädchen spielen gern Nußverstecken im Sand, das ganz ähnlich auch von unseren Kindern gespielt wird. Auf dem Erdboden sitzend, häufeln sie den Sand auf einen kleinen Haufen, stecken die kleine Nuß eines Baumes hinein und teilen den Haufen in 5—6 Segmente, deren eines die Nuß enthalten muß. Wer nun die meisten Segmente auseinanderkratzt, bis er auf das mit der Nuß kommt, der hat gewonnen.

Kreisel (ireve) machen sich die Kinder aus einem kleinen Kürbis oder einer trockenen Fruchtschale, in die ein Stöckchen gesteckt wird. Um das Stöckchen wird ein Bastfaden gewunden und dieser rasch durch ein mit der anderen Hand gehaltenes gespaltenes Holzstück abgezogen. Durch Löcher im Kreisel wird er zum Brummen gebracht (Nr. 19, S. 320 und Weule a. a. O., S. 51).

Die Knaben vergnügen sich mit Stockwettwerfen, indem jeder zwei Stäbe nimmt und einer nach dem anderen seine Stäbe wie Speere von demselben Platz aus nach derselben Richtung wirft. Jeder, der einen anderen Stock überworfen hat, nimmt nun diesen anderen Stock zu den seinigen hinzu, und wer schließlich die meisten hat, der hat gewonnen.

Zum Ballspiel werden Bälle aus allerlei elastischem Material verfertigt, die sich die Kinder einander zuwerfen oder mit dem Stock schlagen.

Versteckenspielen und Suchen, wobei der Gefundene nun seinerseits suchen muß, wird natürlich auch geübt; desgleichen wie bei den Banjaruanda das Springen über eine möglichst hoch aufgespannte Schnur oder Stock.

Den Mädchen wird weniger Zeit zum Spielen gelassen als den Knaben, denn sie werden von früh auf durch Heranziehen zur Hausarbeit, zum Behüten kleiner Geschwister, zum Wasserholen, Streuholen usw. an die all diesen Völkern eingewurzelte Auffassung gewöhnt, daß das Weib das eigentliche Arbeitstier ist. Immerhin haben auch sie freie Stunden, und die gehören dann meist dem Puppenspielen. Die Puppen (umwana) machen sie sich selbst aus einem der in der Mitte etwas eingeschnürten kleinen Kürbisse, indem sie auf dem einen Rundteil Augen, Nase und Mund durch ein paar eingekratzte Löcher andeuten, auf dem andern ein paar Striche als Arme und Hände anbringen. Oder aber sie nehmen die zapfenförmige rötliche Blüte der Bananenstaude zum gleichen Zweck. Oft wird noch ein Fetzen Bast als Kleid angebracht und dann die schöne Puppe auf dem Rücken getragen, wie die Mütter die Kinder tragen.

Die erwachsenen Männer vertreiben sich die arbeitslose Zeit, wenn sie nicht kneipen und nicht klatschen, mit Wettschießen von Pfeilen nach einem bis über 100 m weit aufgestellten Stock oder mit Wettwerfen von Lanzen nach irgendeinem entfernten Gegenstand. Als ruhiges Sitzspiel, an dem aber immer nur zwei teilnehmen können, ist im Tanganikagebiet das unserm Damenbrett ähnliche Brettspiel (ikisoro) viel im Gebrauch, das als mbao von den Wasuaheli bekannt ist und wohl von dort über Unjamwesi nach dem Tanganika importiert ist. Vom Tanganika ist es auch zu einigen Häuptlingen Inner-Urundis vorgedrungen. Das Brett ist an den Kanten abgerundet und hat in 4 Reihen 32 kleine napfförmige Aushöhlungen, die mit kleinen Steinen oder Fruchtkernen besetzt werden. Durch ein ausgeklügeltes System von Zügen und Gegenzügen bzw. Setzen und Wegnehmen, dessen Beschreibung hier zu weit führen würde und ohnehin aus dem ostafrikanischen Küstenland bekannt ist, gewinnt schließlich der eine Spieler sämtliche Steine des andern.

Das von Weule (a. a. O., S. 52) aus Usige, also vom Nordrand des Tanganikasees, beschriebene Geduldspiel ikifundo dürfte Import der Araber oder Wasuaheli sein. In Urundi selbst habe ich es nicht gesehen.

Auch andere verbreitete Spiele, wie z. B. Fadenabheben, habe ich weder bei den Kindern noch bei den Erwachsenen beobachtet.

Als teilweise bloße „Spiele" sind aber hier die Tänze (ivino, uruvino) anzuschließen. Freilich wird nur die Minderzahl bloß um des Tanzes willen zur Unterhaltung ausgeführt; die meisten haben Beziehung zur Feier irgendeines familiären, sozialen, kriegerischen oder religiösen Festes und werden bei diesen besonderen Anlässen getanzt. Aber sie alle gleichen einander in der Form und können deshalb gleich hier zusammen betrachtet werden, bis auf die religiösen, über die wir später im Kapitel „Religion" sprechen werden (s. S. 127).

Wie die Banjaruanda tanzen die Barundi mit größtem Vergnügen und bei jeder sich bietenden Gelegenheit. „Sich vergnügen, spielen, singen und tanzen sind synonyme Wörter. Sie tanzen gut, mit Eleganz (namentlich die Weiber), sogar kunstvoll. Vom zartesten Alter an üben sich die Knaben und Mädchen im Tanzen, und zwar unter den Augen der Eltern, die sie aufmuntern und unterweisen. Nicht ordentlich tanzen zu können, wäre eine Schande für einen Murundi guter Herkunft" (Nr. 19, S. 141).

Die Tänze sind meist Massentänze oder Gruppentänze, selten Einzeltänze; vorwiegend Schrittänze, selten Sprung- oder Drehtänze. In den meisten Tänzen wird gesungen, zu einigen auch Instrumentalmusik gemacht. Die große Mehrzahl der Tänze werden nur von Männern getanzt, die Weiber haben nur einen besonderen für sich und tanzen niemals mit den Männern zusammen. Die Batussi beteiligen sich an allen Tänzen der Bahutu; nur wo viele Batussi beisammen sind, wie am Königshof, tanzen sie für sich allein. Besonders anmutig und kraftvoll sind die Kriegstänze der Batussijünglinge, die am Königshof erzogen werden („Kadettenkorps"). Kein Mutwa darf mit den Batussi und Bahutu tanzen, noch nehmen die letztern auch an den Batwatänzen teil. Aber für sich tanzen die Batwa viel und gut.

Durch ganz Urundi und Ruanda wird von den Männern der gleiche „Nationaltanz" getanzt, der bemerkenswerterweise ganz frei von erotischem Einschlag ist, während die charakteristischen Nationaltänze der Nachbarvölker, namentlich der Wanjamwesi oder gar der Wawira am Tanganika, oft mehr als obszön sind. Dieser Haupttanz

der Männer ist eigentlich ein Kriegstanz (Taf. 31, 32), er wird aber auch bei allen möglichen anderen Gelegenheiten ausgeführt: entweder zum bloßen Vergnügen oder um einen Häuptling oder Europäer zu ehren oder um gewisse Jahres- oder Lebensfeste zu feiern. Die tanzenden Männer, den Speer in der Rechten, treten in 2, 3 oder 4 Reihen an und führen nun auf kurzes Kommando eines Anführers uno corpore eine Reihe von „Touren" in wohl eingedrillter Folge aus, die in der Mehrzahl Bein- und Fußtänze sind, während der übrige Körper wenig beteiligt ist; nur in einigen Touren wird der Oberkörper stark bewegt. Die Hauptkunst ist, daß die oft nach mehreren Hunderten zählende Schar im festen Takt und ganz bestimmten Fußwechsel den Boden stampft wie ein Mann, und daß das Tempo immer schneller, das Stampfen immer stärker wird, ohne in Unordnung zu geraten, bis plötzlich mit einem Stoß die Tour zu Ende ist. Der Lärm wird dadurch erhöht, daß man entweder kleine eiserne kauriförmige Schellen um die Fußgelenke bindet oder getrocknete, halb mit Steinchen gefüllte Fruchtschalen um den Gürtel befestigt, die bei jeder Bewegung rasseln. Eine packende Schilderung eines solchen Tanzes lesen wir in „Kreuz und Schwert", 1900, S. 67:

„Welch ein markerschütterndes Schauspiel! Man denke sich, daß mehrere Hunderte schwarzer Teufel mit gehobenen Lanzen und genau im Takt die unglaublichsten Körperbewegungen ausführen. Der Boden dröhnt unter dem fieberhaften Fußgetrampel und einem unheimlichen Waffengeklirr. Große Staubwolken hüllen alles in ein phantastisches Halbdunkel. Bald kommt die wilde Schar angestürmt wie eine Legion Besessener, bald rutscht die ganze Kolonne pfeilschnell rückwärts, so gewissenhaft in Reihe und Glied bleibend, als wäre die ganze Rotte nur ein Körper, der mit Windesschnelle über den Boden streift. Kurz, man glaubt sich in einem Traum; dermaßen ist man vom Taumel ergriffen. Diese Freudenfeste dauerten den ganzen Tag über, bis endlich manche, die von weit hergekommen, sich auf den Heimweg machten."

Eine andere anschauliche Schilderung verdanken wir R. Kandt (Nr. 22, S. 254):

„Eine besondere Freude bereitete es mir, wenn nachmittags, wie auf ein gegebenes Zeichen, die Hügel ringsum lebendig wurden und von allen Seiten die Warundi, einer hinter dem andern her, in vielfach geschweiften Serpentinen die Hänge herabliefen, sich in der Mitte des Lagers zu Hunderten ansammelten und, Leib an Leib gedrängt, unter der Ägide eines Vorsängers einen stummen Tanz aufführten, bei dem die Füße in immer wechselndem Rhythmus bald in Daktylen, bald in Anapästen, bald in Spondeen immer wilder den Boden stampften, bis zuletzt die schwarze, von einem Lanzenwald überragte Masse in eine fast undurchdringliche, dichte Staubwolke gehüllt ist, durch deren Schleier man das Weiße der Augen und die blitzenden Zahnreihen der lachenden oder ekstatisch zurückgeworfenen Köpfe schimmern sieht. Ein merkwürdiges Schauspiel, dem ich ohne Ermüdung eine Stunde und länger zuschaute, die unerhörte Disziplin bewundernd, mit der diese Masse, dem leisesten Wink des Vorsängers gehorchend, agierte und so sicher dem raschen Wandel der Rhythmen folgte, daß es klang, als erdröhne der Boden unter dem Tritt eines einzigen Riesen. Und selbst die kleinen nackten Bübchen von 6, 8 Jahren ahmten ihren Vätern und Brüdern so geschickt nach, daß nur selten einmal einer in diesem pedalen Salamanderreihen nachklappte, in welchem Falle den beschämt Errötenden der zürnende Spottruf oder die rauhe Hand eines erwachsenen Zuschauers in den Hintergrund drängte."

Ein anderer, seltener aufgeführter Tanz bewegt sich nicht in Reihen, sondern in einer Schlangenlinie. Alle laufen, den Speer in der Hand, einer hinter dem andern her, alle in gleichem Schritt, und alle machen den Takt des an der Spitze laufenden Führers nach, so daß ein Lärm wie ein schneller Pferdegalopp entsteht (Nr. 19, S. 142).

Noch seltener sind Einzeltänze der Männer. Die Bewegungen des Solotänzers sind viel lebhafter als bei den Gruppentänzen. Gewöhnlich schlagen die Zuschauer mit den Händen den Takt dazu, oder es wird Begleitmusik mit Rasselstöcken

oder auf der Zither (inanga) oder auf der Trommel dazu gemacht. In „Kreuz und Schwert", 1901, S. 212, ist ein solcher Tanz folgendermaßen beschrieben:

„Der Tänzer macht allerlei Luftsprünge, bald kommt er dem Instrument, das den Takt angibt, näher, bald entfernt er sich in gewaltigen Sätzen davon, bald nimmt er einen Anlauf, als wolle er über den Spielenden wegspringen, bald kriecht er auf allen Vieren von dannen, fällt rücklings auf den Boden, schnellt plötzlich wieder empor und fährt mit diesen Possen so lange fort, bis ihm der Atem ausgeht. Dann nimmt ein andrer seine Stelle ein und ergötzt abermals die Umstehenden mit seinen tollen Streichen. Ist einer auch in den tollsten Sprüngen, sobald das Instrument stockt, hält er plötzlich inne, denn ohne Instrumentbegleitung tanzt er nicht."

Die Weiber stellen sich zu ihren Tänzen immer im Kreis auf. Darin tanzt eine einzelne, gewöhnlich ein junges Mädchen (manchmal auch zwei), indem sie mit halb ausgestreckten Armen und aufwärts gebogenen Händen in dem Kreis hin und her läuft und allerlei symbolische Bewegungen macht, die außerordentlich anmutig sind; v. Trotha erinnerten sie lebhaft an die Tänze der Bajaderen (Nr. 8, S. 72). Sie zeigen nicht eine Spur von erotischer Bedeutung, sondern sind offenbar Nachahmungen charakteristischer Tiere. M. v. d. Burgt erklärt die Armhaltung für eine Nachahmung des Rindergehörns und schreibt deshalb dem Tanz eine ursprünglich religiöse Bedeutung zu (Nr. 19, S. 142), mir scheint aber, daß es in vielen Fällen, wie bei ganz ähnlichen Tänzen in Ruanda, Nachahmungen der ausgebreiteten Flügel des Kronenkranichs, des Charaktertieres der sumpfigen Ruanda-Urundilandschaften, sein sollen. Auch die übrige Körperhaltung und das Hin- und Herlaufen stimmt dazu. In Ruanda heißt der Tanz, an dem mit Vorliebe auch die Knaben und zuweilen auch Männer teilnehmen, „Kranichtanz".

Während die Solotänzerin (oder zwei) so ihre Künste zeigt, stampfen die umstehenden Weiber rhythmisch den Boden mit den Füßen und singen wohl auch dazu, indem eine Vorsängerin ganz kurze Strophen, oft nur ein Wort, ausruft, das dann vom Chor der übrigen so lange wiederholt wird, bis die Vorsängerin eine neue Strophe angibt.

Besondere Kostüme zu den Tänzen gibt es nicht. Pater v. d. Burgt erwähnt und bildet ab eine „couronne", eine Mütze aus Raphiafasern, von der hinten ein langer Faserschweif auf den Rücken herabhängt, und bezeichnet sie als Schmuck der Tänzerinnen (Nr. 19, S. 407 und Fig. 138), aber diese „Kronen" sind sehr selten. Maskentänze oder Tanzvermummungen anderer Art kennen die Barundi ebenfalls nicht oder doch nur bestimmte symbolische Kultkleidungen bei den bestimmte religiöse Tänze leitenden Zauberern oder Priestern (s. S. 124, 126, 131 und Taf. 25, 54); dagegen werden zum Tanz oft die Gesichter mit weißer und roter Erde angemalt (vgl. S. 127, 128).

Von den Tänzen der Batwa ist nur zu sagen, daß sie im allgemeinen den Tänzen der Bahutu gleichen, daß die Batwa sehr leidenschaftlich tanzen und hauptsächlich beim Einzeltanz die wunderlichsten Körperverdrehungen und Sprünge machen. Auch bei ihnen begleiten die Umstehenden den Tanz mit dem Geräusch der Rasselkürbisse und mit dem Gesang kurzer Strophen, aber lauter und wilder als die Bahutu und Batussi.

Es ist bereits von dem zitherartigen Musikinstrument inanga die Rede gewesen, mit dem die Barundi oft die Solotänze begleiten. Es ist eine flache längliche Rinden- oder Holzschale, über die 6—8 Saiten aus Schafdarm oder Sehnen gespannt sind; wir nennen sie Schalenzither (Taf. 47, Fig. 6). Das Holz ist gewöhnlich mit einigen einfachen Linienornamenten geziert und der Boden von mehreren Löchern durch-

bohrt, die den Ton klangreicher machen sollen. Bemerkenswerterweise wird die Holzschale des Instrumentes von den Batwa geschnitzt, während die Bahutu die Saiten aufziehen; v. d. Burgt schließt daraus, daß die inanga-Zither ursprünglich Kulturbesitz der Batwa war und erst von den Bahutu übernommen worden ist (Nr. 19, S. 387). Viel wahrscheinlicher aber ist sie ihrer Verbreitung nach als Kulturgut der Bahima anzusehen (s. S. 158); sie kommt im Norden des Bahimagebietes bei den Banjankole ebenso vor wie im Süden bei den Wasipa.

Die Zither wird im Sitzen gespielt, das Instrument auf die Knie gelegt und die Saiten mit beiden Händen gezupft, nachdem sie der Spieler vorher durch Anziehen oder Nachlassen richtig gestimmt hat. Das Stimmen richtet sich ganz nach dem Charakter des beabsichtigten Gesanges und nach der Stimmlage des Sängers. Eine bestimmte Tonfolge innerhalb der Tonleiter habe ich an den gestimmten Saiten nicht bemerkt.

Wie bei uns so spielen auch bei den Barundi viele auf den Instrumenten, aber nur wenige können es wirklich gut. Berufsmäßige Musikanten gibt es nur an den Höfen der Häuptlinge, wo sie — vorwiegend Batwa — das Spielen der Trommeln, Flöten und Zithern zu besorgen haben; ebenso in Ruanda.

Zum Zitherspiel wird fast immer gesungen, und zwar mit ziemlich leiser Stimme und meist in Moll, der Charaktertonart der Neger. Weder die Stimmen noch die Vortragsart sind gut. Der Gesang behandelt entweder in kurzen Strophen irgendeinen Vorgang in der Umgebung, ein Ereignis der Gegenwart, eine Person, ein persönliches Erlebnis u. dgl., oder es ist einer der traditionellen alten Barundigesänge, die im Ritkirundidialekt gesprochen werden (s. S. 148) und scheinbar nichts sind als eine Folge von unzusammenhängenden Substantiven, Adjektiven, Wünschen, Befehlen usw., deren Sinn weder die Sänger noch die Zuhörer mehr recht verstehen (Nr. 19, S. 97).

Eigentliches Kriegs- oder Alarmhorn ist das Rindshorn (ikihuha), das am dünnen Ende mit einem Loch versehen ist; also die Form, wie sie allgemein in Ostafrika üblich ist. Auch die Kavamoaen benutzen solche Signalhörner viel.

Viel seltener ist die lediglich als Musikinstrument dienende klarinettenartige Flöte (ikihunchama), ein $^1/_4$ m langer Tubus aus Holz mit trichterförmiger Öffnung, der am unteren Ende drei Löcher hat, um verschiedene Töne hervorzubringen (Taf. 47, Fig. 3, 4).

Weit häufiger hingegen ist eine kurze Querpfeife (umwirongo), die, wie unsere Querpfeifen, nahe dem einen Ende ein Loch zum Einblasen und nahe dem anderen Ende zwei oder drei Löcher zum wechselweisen Zuhalten hat. Flöten und Querpfeifen werden seltener allein gespielt als im Orchester zusammen mit Trommeln, von denen nachher die Rede sein wird (S. 70).

Mehr Kinderspielzeuge als Instrumente sind Rohrpfeifen mit verstopften Enden und einem Loch in der Mitte, die sich die Knaben schneiden, und Rasselbretter (urukajambo), die namentlich den Mädchen zur Tanzbegleitung dienen. Diese Rasselbretter werden aus Rohrstäben gemacht, die in zwei durch ein querliegendes Rohrstück voneinander getrennte Lagen angeordnet sind, so daß zwischen diesen ein leerer Raum entsteht. Dahinein werden trockene Maiskörner getan, die nun beim Schütteln des hufenförmigen Rasselbrettes ein scharfes Rasseln an den Rohrwänden verursachen. Auch Rasselstäbe, d. h. Stöcke, an denen rasselnde kleine Kürbisse befestigt

sind, werden oft gebraucht (Taf. 47, Fig. 1, 5). Einzelne Rasselkürbisse werden bei religiösen Zeremonien geschwungen (Taf. 25a).

Das seltenste, aber am höchsten geschätzte Instrument ist schließlich die Trommel (ingoma, inkiranji), die nicht bloß Begleitinstrument zum Tanz, sondern auch Hauptorchesterinstrument der Häuptlinge ist und teilweise hohe Kultbedeutung hat. Gar nicht hingegen dient sie zum Signal- und Nachrichtengeben; eine „Trommelsprache", wie in anderen afrikanischen Ländern, gibt es in Urundi nicht.

Die Trommeln werden aus einem auf einer Seite glatt abgeschnittenen, auf der anderen Seite abgerundeten Stück Baumstamm verfertigt, der mit Schnitzmessern bis auf die ziemlich dünne Außenwand ausgehöhlt und dann auf einen kegelförmigen Holzfuß gesetzt wird, so daß das Ganze annähernd die Form eines „Römerweinglases" hat; auch die Getreidemörser sind ähnlich geformt. Das obere offene Flächende wird mit einem Stück dünn geschabter Rindshaut überspannt, die vorher in warmem Wasser eingeweicht wird. Durch kleine, rings um den Trommelrand befestigte Holzpflöcke wird die Haut stramm angespannt (Taf. 47, Fig. 2). Die Trommelschlegel sind zwei hölzerne Stäbe.

Wenn man die Trommel einen Tanz begleiten soll — fast immer nur die Einzeltänze, nicht Massentänze —, so wird sie von zwei, drei oder vier Mann derart geschlagen, daß einer unmittelbar nach dem anderen mit seinen zwei Schlegeln einen bestimmten Takt auf die Trommel schlägt, jeder aber einen anderen Takt als der nächste und jeder immer nur seinen Takt, so daß bei vier Teilnehmern eine aus vier verschiedenen Takten bestehende Trommelstrophe entsteht, die so lange wiederholt wird, bis der „Vortrommler" mit einem neuen Takt eine neue Strophe beginnt. Je lauter das Dröhnen, desto besser. Nach kurzer Zeit springt plötzlich einer der Tambours auf, während die anderen weitertrommeln, macht allerlei Luftsprünge, stampft den Boden, schleicht vor, rennt zurück und fuchtelt mit seinen Trommelschlegeln in der Luft umher wie besessen. Ebenso plötzlich springt er wieder auf die Trommel los und setzt das Trommeln mit seinem Mitarbeitern fort. Darauf folgt ein anderer oder auch einer der umstehenden Zuhörer und so fort stundenlang. Fast nie wird zu dem Trommelkonzert und Trommeltanz gesungen (Nr. 19, S. 388).

Trommeln sind in Urundi und Ruanda so selten, daß ein erfahrener Beobachter noch 1901 schreiben konnte: „In Urundi sind Trommeln unbekannt" (Kreuz und Schwert, 1900, S. 212), und daß ich während meiner zweimonatigen Reise durch Mittel-Urundi nicht einen einzigen Trommelschlag gehört habe. Diese Seltenheit begreift sich in einem Land, wo es nur in wenigen, eng begrenzten Gebieten noch große Bäume gibt, aus denen man Trommeln (und Boote) verfertigen könnte. Hauptsächlich wohl wegen dieser Kostbarkeit hat man den Besitz von Trommeln zu einem Vorrecht der Häuptlinge und des Königs gemacht. Weder das „Volk" der Barundi (Bahutu oder Batutsi) noch die Batwa dürfen Trommeln haben. Eine besondere Rolle spielt die Trommel des Königs. Diese gehört mit der Lanze, dem Fingerring oder Armring (Handscheibe) und den heiligen, hölzernen Milchgefäßen zu den königlichen Insignien, die der Herrscher seinem Nachfolger vermacht (Nr. 19, S. 524). Diese „heilige" Trommel ist eine Art Palladium des Reiches und trägt als solches den Namen akarjenda; sie ist sehr groß und aus dem Holz eines besonderen Baumes geschnitzt. Man betrachtet sie als Sitz des Schutzgeistes des Reiches und schwört in feierlichen Reden bei diesem „Trommelgeist" akarjenda (Nr. 19, S. 388). Eigne Wächter sind mit

der Wartung der Königstrommel betraut (s. S. 187); sie wird stets am Aufenthaltsort des Königs aufbewahrt und begleitet den Herrscher auch auf seinen Reisen nebst den heiligen Speeren und den heiligen Milchgefäßen (Mitteil. von Hauptmann v. Langenn). Die Felle zu den heiligen Trommeln werden nur von Rindern der sogenannten „heiligen Herde" (s. S. 44) genommen.

Von einer Vereinigung mehrerer Trommeln und anderer Instrumente zu einem Orchester weiß weder v. d. Burgt noch ein anderer Beobachter zu berichten, aber es wurde mir von Eingebornen versichert, daß am Hof des Königs Mutaga ein solches Orchester bestehe und von Batwa gespielt werde. Mir ist dies sehr wahrscheinlich, da es auch in der Residenz des Ruandakönigs Musinga ein aus mehreren verschieden abgestimmten Trommeln und Flöten zusammengesetztes Orchester gibt, das von Batwa gespielt wird. Es klingt sehr melodisch und ist eindrucksvoll, wenn es, mit einer dumpfen Trommel beginnend, allmählich die anderen Trommeln in langer Rhythmusfolge aufnimmt, langsam zu voller Kraft anschwillt, wo dann auch die Flöten schrill einfallen, und ebenso allmählich abschwillt, eine Trommel nach der anderen schweigt, bis am Ende die dumpfen Taktschläge der Anfangstrommel leise verhallen. Aber in den Nächten kann der schlafbedürftige Europäer durch dieses Trommelorchester schier zur Verzweiflung gebracht werden. Jedem, der beim Musinga zu Gast gewesen, wird diese Nachtmusik im Gedächtnis bleiben.

Von der musikalischen Seite der zur Instrumentmusik und den Tänzen häufig gesungenen Gesänge ist schon oben die Rede gewesen (S. 68). Ich möchte hier noch einiges über den Inhalt der Gesänge anschließen, wie er von v. d. Burgt aufgezeichnet worden ist. Dieser sagt, daß die meist in zusammenhanglosen Altrundiwörtern (s. S. 124, 148) vorgetragenen Gesänge größtenteils nicht einmal von den Barundi selbst mehr ihrem ursprünglichen Sinne nach verstanden würden. Auf die Frage nach der Bedeutung erhält man die Antwort: „Es bedeutet nichts, es ist nur ein Gesang." Nur die von den Gelehrten, Zauberern, Priestern esoterisch Eingeweihten haben einige Vorstellung von dem richtigen Sinn der Gesänge (Nr. 19, S. 97).

So lautet z. B. ein zur Zither gesungenes Lied:

„Ntiwarima ny' umwaka, ntiwarima.
ninanga ntiwire. umugano utanimbe.
yagene ku' nama. ibengo irittachjiku.

(Deutsch: man bestellt das Feld nicht in diesem Jahr, d. h. man geht in den Krieg. Häuptling Ninanga bleibt hier. Der Wassergraben springt nicht, d. h. der Grenzgraben ist trocken. Er geht nahe dem Gehöft vorbei. Das Amulett ist zerbrochen, d. h. ein unglückliches Vorzeichen für den Krieg.)

Gegenüber diesen alten traditionellen Liedern sind die beim Tanz gesungenen improvisierten Gesänge meist auf die Gegenwart zugeschnitten und werden in der modernen Umgangssprache vorgetragen. Aber auch sie sind nicht ein zusammenhängendes Lied, sondern lauter kurze abgerissene Sätze und Gedanken.

Anders die religiösen Gesänge, die bei bestimmten festlichen Kulthandlungen gesungen werden. Wir kommen auf sie im Kapitel „Religion" zu sprechen (S. 127).

Gesang einfachster Art begleitet oft, nicht immer, die von mehreren gemeinsam ausgeführte Arbeit, um durch den Rhythmus die Einzelkräfte zu konzentrieren oder zu größerer Ausdauer anzuhalten; so beim Lastenbewegen, bei gemeinsamer Hackarbeit im Feld, beim Bootrudern, beim Holzfällen usw. Es sind meist nur zwei oder drei Wörter, die von einem Beteiligten vorgesungen und von den andern so lange nachgeplärrt werden, bis der Vorsänger ein neues Wort, eine neue „Idee" angibt.

7

Sechstes Kapitel

Verkehrsmittel, Handel, Handwerk

1. Verkehrsmittel

In einem Land von so geringem Verkehr im Innern und nach außen, wie in Urundi, sind natürlich auch die Verkehrsmittel sehr primitiv. Die Wege von Dorf zu Dorf, von Landschaft zu Landschaft, sind einfach getretene schmale Fußpfade, die alle Hindernisse rechts oder links umgehen, und da, wo dies nicht möglich ist, wie z. B. in den äußerst steinigen Quarzitgebieten Inner- und Ost-Urundis, auch niemals ein Hindernis aus dem Weg räumen, sondern darüber wegsteigen. Diese Quarzitpfade sind daher für die nichteingebornen Karawanenträger oder gar für Europäer äußerst mühsam zu begehen. Dies um so mehr, als alle Wege Urundis wie Ruandas bestrebt sind, auf möglichst kurzer Linie die im Lande vorherrschenden langgestreckten Hügelrücken und Plateauflächen zu erreichen, um dort leicht fortlaufen zu können. Deshalb sind bei der Steilheit der vielen tief eingeschnittenen Täler die gerade hinauf und hinab über die Talhänge steigenden Pfade ein wahrer Greuel für jeden Nicht-Murundi.

Dazu kommt noch ein anderer, die Märsche erschwerender Umstand: Ganz Urundi und Ruanda hat trotz der zahllosen Bäche und Flüsse fast gar keine Brücken (ikiraro). Der Hauptgrund für diesen Mangel ist das Fehlen von geeignetem Bauholz in diesen baumlosen Ländern. Aber auch wo es noch genügend Bäume gibt, baut man doch nur in den seltensten Fällen eine Brücke, weil die Täler fast immer in der ganzen Breite ihrer Sohle von Schilf- oder Papyrussumpf erfüllt sind, in dessen Mitte sich ein schmaler offener Wasserlauf entlang schlängelt; die Sümpfe sind zu breit zum Brückenschlagen.

Gewöhnlich watet man bis an die Knie oder Hüften im schwarzen, stinkenden Morast durch die sumpfigen Bachtäler. Seltener werden Papyruswedel und Röhricht bündelweise abgehauen, an- und aufeinandergelegt, so daß eine Art schwimmender Brücke entsteht, die ein allzu tiefes Einsinken der Passanten in den Sumpf verhindert. An breiten offenen Flüssen, wie dem Ruvuvu, dem Akanjaru, Luwironsa u. a., sucht man bekannte Furten auf und watet hindurch, indem man, oft bis an die Schultern im Wasser, sich gegen den Strom mit einem Stock oder Speer stützt und alles, was nicht naß werden soll, in einem Bündel auf dem Kopf trägt. Dabei wird viel Geschrei gemacht, um die Krokodile zu verscheuchen. Wenn aber der Fluß zu tief ist, wird man von Einbäumen übergesetzt, womit die Anwohner sich einen Erwerb

[A71]

machen, oder man ist, wenn nur wenige Personen und leichte Lasten übergesetzt werden müssen, auf primitive Flöße (likitebo) angewiesen, die aus einigen Lagen zusammengebundener getrockneter Papyrusstangen hergestellt sind (Taf. 26b) und ein paarmal benutzt werden können, bis sie zuviel Wasser eingesogen haben. Am Mlagarassi sind auch große Kübel aus Baumrinde im Gebrauch, die einen Mann oder eine Last tragen können, während zwei oder drei Männer mitschwimmen und das Vehikel mitziehen und mitschieben (Nr. 19, S. 448).

Nur wenn gerade ein großer Baum an einem tiefen Bach, der nicht durchwatet werden kann, gestanden hat, wird er zu einem Steg umgewandelt, indem man ihn so abhaut, daß er fallend sich über die Bachränder legt; eventuell ist neben ihm noch eine lange Lianenleine hinübergespannt, an der man sich beim Übergang das Gleichgewicht halten kann. Solche Stege habe ich mehrmals in Uha angetroffen, wo es mehr Baumwuchs gibt als in Urundi. Hängebrücken gibt es nicht.

Wirkliche von den Eingebornen selbständig errichtete Brücken habe ich aber im ganzen Zwischenseengebiet nicht gesehen, während v. d. Burgt eine solche beschreibt: Einige gabelförmige Pfähle werden nebeneinander im Bachbett eingerammt und über die Gabeln ein paar lange Stämme gelegt, die einander annähernd parallel von Ufer zu Ufer reichen. Auf diese werden zirka 2 m lange Querhölzer in großer Zahl befestigt und schließlich hierauf Bündel von Rohr- oder Papyrusstengeln gebunden, so daß man bequem hinübergehen kann.

Wo die Missionen oder die Schutztruppe Wege angelegt haben, gibt es solide Holzbrücken nach europäischem Muster oder, wenn der Weg Sümpfe überschreitet, Erddämme oder Knüppeldämme. Im übrigen wird die Holzarmut des Landes immer dem Brückenbau hinderlich sein.

Das Vieh lassen die Eingebornen stets durch das Wasser schwimmen oder durch die Sümpfe waten, auch wenn Brücken vorhanden sind. Auch da werden etwa vorhandene Krokodile durch Geschrei verscheucht.

Da die Barundi wie die Banjaruanda keine Reit- und Lasttiere haben, müssen nicht nur alle Lasten, sondern auch Menschen, die nicht gehen können oder wollen, von Menschen getragen werden. Die Lasten werden in kleinen oder großen, meist mit trockenen Bananenblättern umschnürten Bündeln oder in großen aus Bast geflochtenen Körben frei auf dem Kopf getragen, zur Abwechslung auch einmal auf der Schulter, aber nie auf dem Rücken in einem Traggurt oder Tragnetz, wie z. B. in Kisiba oder in Ulsámbiro.

Kranke Menschen hingegen, die nicht gehen können, oder Vornehme, die nicht gehen wollen, werden auf einer Bahre (isjugi) befördert, die von zwei Männern auf den Schultern getragen wird. Auch der König bedient sich bei einigermaßen weiten Entfernungen einer solchen Bahre. Es sind aber keine bequemen, schön geflochtenen Tragkörbe, wie sie in Ruanda beim Musinga und den Batessigroßen üblich sind, sondern meist nur zwei starke Stangen, die durch Querhölzer verbunden sind und auf diesen eine Schicht Stroh oder auch ein Schaffell tragen, auf dem der Reisende liegt oder mit untergeschlagenen Beinen sitzt. Der alte, halb blinde König Kisabo reiste auf diese Weise oft mehrere Tage lang (Taf. 13a). Indessen kommen auch in Urundi geflochtene große Korbbahren vor.

Der Boote (ubwato) habe ich schon beim Fischfang kurz Erwähnung getan (S. 37). Es sind fast durchweg Einbäume; nur sehr selten und nur im äußersten

Often kleine Rindenkanus, die offenbar bloß zum Übersetzen über die sommerlichen Regenflüsse gebraucht werden, in der Trockenzeit aber zersprungen neben den trockenen Bachbetten liegen. Sie dienen also immer nur für eine Regenzeit und müssen jeden Sommer neu gemacht werden. Es sind nur drei mit Baumbast zusammengeflickte große lange Rindenstücke, deren eins den Boden, die beiden andern die Seitenwände bilden. Mehr als zwei Personen können sie nicht tragen.

Die Einbäume hingegen sind solide, wenn auch technisch höchst mangelhafte Gebilde und von langer Dauer. Die Art ihrer Herstellung betrachten wir später im Abschnitt „Handwerk" (S. 82), hier nur ihre Verwendung und Handhabung. Im inneren Urundi, an den Flüssen, sind die Einbäume selten und, dem Mangel an großen Bäumen entsprechend, klein und schlecht (Taf. 5b). Oft sind sie ganz krumm, so daß sie kaum das Gleichgewicht halten. In waldigen Gegenden, wie in Nord-Urundi, am Tanganika und Russisi, sind sie besser, größer und zahlreicher. Kanus von 15 m Länge und 1,50 m Breite sind keine Seltenheit am See; die besten kommen vom Westufer aus Uwembe, wo der hochstämmige Wald gutes Holz liefert, und werden an die Barundi für Ziegen oder für Perlen im Wert von 6—10 Rupien verkauft.

Die Boote sind meist vorne und hinten etwas abgeschrägt und zugespitzt, so daß sie gut auf flache Ufer auflaufen. Kein Boot hat ein Steuer, sondern es wird von einem der Ruderer gesteuert. Im seichten Wasser, z. B. nahe dem Tanganikastrand, benutzt man keine Ruder, sondern lange Bambusstangen, mit denen die Boote gestakt werden (Taf. 26a). Im tiefen oder stark strömenden Wasser dagegen wird mit ziemlich kurzen, zirka $1^1/_2$ m langen „Riemen" (ingaffi) gerudert, deren herzförmiges Blatt leicht gebogen ist, so daß es das Wasser gleichsam löffelt. Die Ruder werden nicht in Schlingen eingehängt oder in Löcher eingesteckt, sondern frei gehandhabt, und die Ruderer oder Staker stehen meist aufrecht im Boot, das Gesicht in der Fahrtrichtung. Ist nur ein Mann im Boot, so steht er hinten; sind zwei darin, so stehen sie im hinteren Drittel; sind drei darin, so stehen zwei hinten, einer vorne; sind vier darin, so stehen zwei hinten, zwei vorne. Nur auf langen, ermüdenden Fahrten setzen sie sich ins Boot auf Querhölzer. Wer nicht mit rudert, hockt sich auf den Boden des Kanus nieder.

Als Anker dient ein schwerer Stein, der an einen Baststrick festgebunden ist. Maste und Segel gibt es nicht, auch keine Ausleger. Kein Boot ist durch Schnitzereien oder Malereien verziert. Eingedrungenes Wasser wird mit Kürbisschalen oder mit kleinen hölzernen Schippen ausgelöffelt. Wenn aber ein Boot einen Riß oder ein Leck bekommen hat, bindet oder „näht" man durch Löcher, die mit einer glühenden Eisenspitze in die Ränder des Lecks gebrannt werden, ein brettförmiges Stück Holz durch Bastschnüre fest darauf und kalfatert von innen und außen mit Baumbast oder Schilf; auch benutzt man dazu Bitumen, das am Tanganika nicht selten ist.

Die Batwa besitzen keine Boote, aber sie verstehen sich gut auf deren Anfertigung im Dienst der Barundi (Nr. 19, S. 66).

Die Mangelhaftigkeit der Einbäume verbietet lange und weite Fahrten auf dem Tanganikasee. Höchst selten einmal fährt ein großes Boot mit mehreren Ruderern quer über den See von Usumbura nach Uwira. Die allermeisten halten sich in 100 bis 200 m Entfernung von der Küste und fahren auch von Usumbura nach Uwira an der Nordküste des Sees entlang. Häufig werden Einbäume vom Gouvernement in Usumbura nach Udjidji geschickt und umgekehrt. Diese bleiben ebenfalls immer in Küstennähe, so daß sie auf der ganzen Fahrt staken können, was schneller geht als Rudern.

und brauchen für die Zurücklegung der in Luftlinie zirka 180 km langen Strecke 5 Tage, wobei sie aber gegenwärtig nur in der Nacht fahren, da am Tage vielenorts am See die Glossina palpalis, die gefürchtete Schlafkrankheitsfliege, schwärmt.

Auf solche mehrtägigen Reisen wird gewöhnlich der Proviant vom Ausgangsort mitgenommen; meistens Bataten, die einfach auf den Boden des Bootes geschüttet und an den Rastplätzen abgekocht werden.

Das Schwimmen (kuoga) lernen die Seeanwohner als Kinder, gehen aber nicht weit ins Wasser wegen der Krokodile. Im Innern, wo die Flüsse viele Krokodile haben, wird nur wenig geschwommen. Die Schwimmbewegungen sind die aller ostafrikanischen Neger: man wirft sich mit weit ausholendem Arm von einer Seite auf die andere und rudert immer nur mit einem Arm.

2. Handel, Geld, Maße, Gewichte

Nennenswerten Handel gibt es im großen Urundireich nur im Tanganikagebiet. In ganz Inner-Urundi, das ja aus politischen Gründen vom Gouvernement für den allgemeinen Handel und Verkehr mit der Außenwelt gesperrt ist und wo nur Wanderhändler in geringer Zahl zugelassen sind, beschränkt sich der Handel in der Hauptsache auf den Austausch von Landeserzeugnissen der Eingebornen unter sich, der, mit Ausnahme von Salz, nicht auf weite Entfernungen, sondern von Nachbarschaft zu Nachbarschaft stattfindet.

Während im Tanganikagebiet Urundis unter dem Einfluß der kongolesischen Nachbarschaft an vielen Orten täglich Märkte (akaguriro) abgehalten werden, kennt man diese nützliche Einrichtung in Inner-Urundi gar nicht; außer bei den Missionsstationen und der neuen Residentur Gitega. Aber der Besuch einiger dieser Märkte am Tanganika, namentlich Usumburas, durch Barundi des Innern und die Handelsgänge von Tanganikaleuten nach Inner-Urundi, um dort Viehhäute und Wachs zu kaufen und nach Usumbura zu bringen, haben in den letzten Jahren sehr zugenommen, trotz der Schlafkrankheit.

Unter sich tauschen die abgelegenen Barundi des Innern Bodenfrüchte gegen andere Bodenfrüchte oder gegen Ziegen, Schafe, Felle, Rindenzeug, Töpfe, Eisenhacken usw. aus, an deren Erzeugung die Batwa stark beteiligt sind (S. 72). Die einzige von weither kommende Handelsware ist das Salz, das in Urundi selbst nirgends gewonnen wird und früher größtenteils vom benachbarten Uha eingeführt wurde, jetzt aber in viel besserer Qualität aus der europäisch betriebenen Saline Gottorp, am unteren Mlagarassi, über Usumbura ins Innere Urundis verhandelt wird (Taf. 27a).

Im Tanganikagebiet war früher Palmöl der Haupthandelsartikel (S. 53), aber seitdem die furchtbare Seuche der Schlafkrankheit allen Handel und Wandel im Tanganikagebiet gelähmt hat, ist auch der Ölhandel sehr zurückgegangen. Das Öl geht zum kleinsten Teil nach Inner-Urundi, größtenteils nach Udjidji und nach der kongolesischen Westküste des Sees. Bananen, Pombebier, Butter, Fische, Ziegen, Schafe werden sowohl nach Inner-Urundi als nach Udjidji und Ostkongoland ausgeführt. Vom Kongogebiet kommt dafür hauptsächlich Kautschuk, etwas Elfenbein und wiederum Vieh. Weitaus der meiste Handel mit dem Kongogebiet ist Schmuggel.

Während in unserem Gebiet Ein- und Ausfuhr frei sind, haben die Kongolesen Import und Export mit nicht unbeträchtlichen Zöllen belegt, die aber von den Eingebornen mit großer Findigkeit umgangen werden. Namentlich über die sehr schwer kontrollierbaren Passagen durch die Sumpfdickichte des Russisi wird fast alles geschmuggelt.

Aus Inner-Urundi kommen nur Wachs und Rindshäute zum Export, wofür hauptsächlich Perlen, dicker Draht (Eisen, Kupfer, Messing), verhältnismäßig wenig Baumwollstoffe, aber viel Salz genommen werden. 1911 rechnete man 18—20 000 Rindshäute, die jährlich aus Inner-Urundi nach Usumbura kamen, zum Preis bzw. im Wert von 8 Rupien pro Frasila. Die Wachsausfuhr betrug 500—600 Frasila jährlich à 18—20 Rupien. Die Häute stammen meist von gefallenen Tieren, da zum Essen und Opfern nur wenige geschlachtet werden (S. 45). Lebendes Großvieh wird gar nicht ausgeführt, weil sich die Batussi als Eigentümer der Rinder sehr schwer von ihnen trennen und die Absatzmöglichkeit nur gering ist, solange sie nicht per Dampfer und Eisenbahn an den europäischen Abnehmer gebracht werden können. Auch ist es ein schweres Hindernis für den Vieherport, daß ganz Urundi mit Ausnahme der Nordseite (gegen Ruanda) und der Richtung nach Udjidji hin von einem mächtigen Gürtel der dem Vieh verderblichen Tsetsefliege umgeben ist, der aber vielleicht einmal von der Eisenbahn durch besondere Schutzeinrichtungen durchbrochen werden kann.

Die Ausfuhr dieser beiden fast ausschließlich für den Handel in Betracht kommenden Landeserzeugnisse, Viehhäute und Wachs, bewegt sich zum größten Teil von Usumbura über Kigali nach Bukoba oder aus Ost-Urundi über Uffuwi nach Bukoba; nur wenig geht über Udjidji, da von dort der Landtransport zur Küste zu weit und zu teuer ist, woran auch die Tanganikabahn mit ihren hohen Frachten zunächst kaum etwas ändern wird. Ein Lastträger, der 60—70 Pfund und noch mehr trägt, bekam 1911 für die Strecke Usumbura-Kigali 4—5 Rupien, für den Weg Usumbura-Bukoba 8—9 Rupien und für den Rückweg Bukoba-Usumbura, auf dem er keine so unförmige Last wie die getrockneten Rindshäute zu schleppen hat, 7—8 Rupien. Der Handelsweg von Usumbura durch das Russisital nach dem Kiwusee ist wegen der Schlafkrankheit gesperrt.

Unter den Wirkungen der Schlafkrankheit hat natürlich auch der Verkehr auf den Märkten stark gelitten. Während man um 1900 noch über ein Dutzend gut besuchter Märkte im Umkreise von 3 Stunden um Usumbura zählte, von denen der Usumburamarkt täglich von etwa 5000 Personen frequentiert war, haben jetzt in dieser Gegend nur noch zwei Märkte einige Bedeutung: Usumbura selbst (Taf. 27b) und Kajaggo am Nordzipfel des Sees. Dazu kommt neuerdings im Innern bei der neuen Regierungsstation Gitega ein Markt von wachsender Bedeutung. Kleine Märkte für bloßen Lokalbedarf gibt es daneben eine ganze Reihe. Den Usumburamarkt, der wie alle anderen von früh 6 bis 10 Uhr oder 11 Uhr abgehalten wird, besuchen immer noch über 1000 Personen täglich, und unter behördlicher deutscher Aufsicht geht es sehr geordnet dort zu; sogar eine Markthalle in Gestalt eines großen Wellblechdaches zum Sonnen- und Regenschutz ist da. Unter ihm und im Freien vor ihm hocken die Verkäufer, meist Weiber, in langen Reihen; jeder hat seine Ware in Körben oder auf Matten oder Bananenblättern ausgebreitet vor sich. Die von v. d. Burgt vor 15 Jahren aufgestellte einheimische Warenliste gilt noch heute: Öl, Salz, Bier, Baumwollstoffe, Fische, Matten, Töpfe, Krüge, Tabakbündel, Schnupftabak, Seifenkugeln, Hirse,

Mais, Mehl, Bananen, Erdnüsse, Zuckerrohr, Bataten, Yams, Maniok, Kürbisse, Rindfleisch, Ziegen, Schafe, Hühner, Netze, Speerstäbe, Bambusstangen, Schilfrohr, Feuerholz, Stricke, Bindfaden, Hacken usw. Außerdem sieht man da heutzutage allerlei billige europäische Industrierzeugnisse, wie grellbunte baumwollene Decken, verschiedene bedruckte Baumwollstoffe, Petroleum, Zigaretten, Glasperlen, Eisen-, Kupfer-, Messingdraht, Eisenwaren, Porzellangeschirr.

Auch v. Trotha bezeichnete die Märkte als „das am meisten Charakteristische der Gegend. Hier wird alles gehandelt, was nur möglich ist, unter Geschrei vertauscht oder mit Perlschnüren und Zeug bezahlt. Der Markt von Mamkasa an der Nordostküste des Tanganikasees wies Tausende von feilschenden und schreienden Menschen auf, aber alles geht in Ordnung und ohne Streit ab. Ein Weib kauft man für 10 Schnüre roter Perlen, und wenn man sie nicht mehr mag, bringt man sie wieder auf den Markt und vertauscht sie wieder gegen Perlen." (Nr. 8, S. 77.) Das Weiberkaufen auf dem Markt hat freilich jetzt aufgehört und dürfte wohl schon 1896 zur Zeit der Trothaschen Reise sehr selten gewesen sein.

Der Markt ist der Ort, wo „man" sich trifft, guckt, schwatzt, Neuigkeiten hört und mitteilt, Pombe trinkt, Geschäftliches und Ungeschäftliches bespricht und viel anderes Nützliches und Überflüssiges tut. Auch wenn sie nichts kaufen oder verkaufen wollen, gehen viele Barundi auf den Markt, um sich zu unterhalten. Geht es in der Bierecke zu lebhaft zu oder entsteht eine Prügelei, so schafft die Marktpolizei unter Mitwirkung der friedlichen Elemente schnell Ruhe.

Auf den Hauptmärkten Usumbura, Kajagga und Gitega ist der deutsch-ostafrikanische Heller die kursierende Münze; silberne Rupien, $^1/_2$- und $^1/_4$-Rupienstücke sieht man seltener. Auf den anderen Märkten des zu Urundi gehörenden nördlichen Seegebietes sind neben den Hellern noch allerlei andere Geldsurrogate im Umlauf, aber ins große innere Urundi ist das Hellergeld noch nicht gedrungen oder wird doch nur an den wenigen Stationen und Hauptverkehrswegen der Missionen und des Gouvernements gekannt, aber ungern genommen. Dort herrscht noch überall die Perle als Tauschmittel, wie sehr sich auch das Gouvernement bemüht, das Heller- und Rupiengeld einzuführen und dadurch nicht nur den Verkehr flüssiger zu machen, sondern auch der künftigen Steuererhebung vorzuarbeiten. Erfolg werden diese Bemühungen erst haben, wenn Urundi wirklich unter Verwaltung genommen und die Hütten- oder Kopfsteuer eingeführt sein wird, die in Geld entrichtet werden muß. Dasselbe gilt für Ruanda, wo aber durch den schon lebhafter gewordenen Außenhandel und durch die seit Jahren im Zentrum gelegene Residentur Kigali mit ihrer Händleransiedlung der Geldverkehr sich bereits sehr ausbreitet.

In Urundi ist das gebräuchlichste Kleingeld die rosafarbige Perle simsim oder samsam, von denen eine zirka 30 cm lange Schnur (kete, Kette?) die Münzeinheit im Wert von 3 Hellern bildet. 10 Schnüre sind 1 ifundo, 10 ifundo = 1 ingoje, 10 ingoje = 1 akanono (Nr. 19, S. 111). Die Samsamperle dient daneben als hauptsächlicher Halsschmuck der Männer und der Weiber.

Wertvoller ist eine längliche violette, weißgestreifte Perle, inganga, von denen eine gleich einer kete Samsam gilt, und noch wertvoller die dicken weißen Perlen amaguru, von denen eine zweimal um den Hals reichende Schnur den Wert von 10 kete Samsam hat. Außerdem gibt es namentlich im Seegebiet noch mittelgroße blaue und lackglänzende rötliche und weiße Perlen sowie große spindelförmige weiße mit roten Ringeln u. a., aber alle diese und andere Sorten haben keinen festen Münz-

wert wie die obengenannten, sondern wechselnden Tauschwert. Gelbe, grüne und schwarze Perlen werden nirgends genommen.

Natürlich schwankt auch der Wert der „Geldperlen" nach dem Vorrat an Perlen und nach Angebot und Nachfrage der Ware. Im allgemeinen galten früher im Innern folgende Wertmaße: 5 Bananen = 1 Heller, 1 Traube von zirka 20 Bananen = 1 kete, 2 Doppelhand Mehl = 1 kete, 1 Handvoll Salz = 1 kete, 1 Topf Bier = 3 kete, 1 Eisenhacke = 6 kete, 1 Topf Honig = 1 ifundo, 1 Ziege = 3 ifundo, 1 Schaf = 4 ifundo, 1 Stier = 5—10 ingoje, 1 Kuh = 20 ingoje. Heute aber kostet im Innern 1 Ziege bereits 3 — 4 Rupien, und entsprechend sind alle andern Preise gestiegen.

Baumwollstoffe, die früher von den Häuptlingen streng verboten waren, werden jetzt im Innern sehr gern genommen, am liebsten das gewöhnliche weiße „amerikani", von dem 1 Gora von 30 Ellen im Innern ungefähr 12 Rupien wertet. Auch die mit braunen Mustern bedruckten „Lesso" oder „Kanga", wie sie in Ruanda beliebt sind, verbreiten sich allmählich in Urundi.

Das allgemein übliche Hohlmaß für Mehl, Getreide, Bohnen usw. ist die doppelte Hohlhand (kumaschi) oder auf den Märkten eine ihr gleich große Kürbisschale. Größere Gegenstände, wie Maniokwurzeln, Bataten, Bananen u. a., werden nach der Stückzahl verkauft. Einheimische Gewichte gibt es gar nicht. Erst der Verkehr mit den Fremden hat im Außenhandel, z. B. für Rindshäute, Elfenbein, Wachs, das seit der Araberzeit in ganz Ostafrika gebräuchliche Frasila (35 Pfund engl.) auch hier eingeführt.

Die Kaurimuschel als Geld ist weder in Urundi noch in Ruanda bekannt.

Handwerk

F. Stuhlmann sagt in seinem ausgezeichneten Buch „Handwerk und Industrie in Ostafrika", Hamburg, L. Friederichsen & Co., 1910: „Es ist zu betonen, daß in Afrika das Handwerk fast überall nur Nebensache ist; die Grundlage der Volkswirtschaft bildet die Landwirtschaft" (S. 3). Dies trifft auch für Urundi zu; und zwar ist hier das Handwerk größtenteils „Hauswerk", d. h. die Rohprodukte werden im Haus für eigenen Bedarf verarbeitet und nur der Überschuß gegen Erzeugnisse anderer vertauscht. Hausindustrie, d. h. Herstellung größeren Umfanges im Hause für fremden Bedarf und Verkauf nach auswärts als Lebensunterhalt, gibt es nur für Töpferei und Schmiederei. Dagegen ist das „Lohnwerk", in welcher der Handwerker gegen Lohn im Haus des Bestellers die vom Besteller gelieferten Rohstoffe verarbeitet (Stör), mehrfach in Übung, z. B. in der Herstellung von Rindenstoff, im Hüttenbau, in der Holzschnitzerei. Natürlich gibt es in jeder Technik und in jeder Familie Geschickte und Ungeschickte, und die Arbeiten der ersteren werden selbstverständlich den Erzeugnissen der letzteren vorgezogen, aber nur in der Töpferei und der Schmiederei vererbt sich der Beruf vom Vater auf den Sohn und Enkel. In erster Linie sind es die Batwa, die diese beiden Handwerke von Generation zu Generation ausüben, aber auch unter den Bahutu gibt es Familien, in denen das Töpfer- oder das Schmiedehandwerk erblich ist (Nr. 19, S. 369). Das Schmieden, das Holzschnitzen, die Rindenstofftechnik sind ausschließlich Männerarbeit, die Flechterei nur Frauenarbeit. Auch die Töpferei wird bei den Bahutu nur von Frauen be-

trieben, bei den Batwa ebenfalls hauptsächlich von Frauen, aber auch von Männern (Nr. 19, S. 451).

Die Töpferei (inkono, Topf) wird natürlich vorwiegend da ausgeübt, wo der Boden den geeigneten Ton enthält. Das ist in den Tonschiefergebieten Urundis und Ruandas an vielen Stellen der Fall, wo sich aus verwittertem oder auch abgeschwemmtem Tonschiefer guter Töpferton (uwumba) gebildet hat. Er ist meist dunkelgrau bis schwarz. So kommt es, daß an solchen Stellen ganze Dörfer von Töpfern angesiedelt sind; ein Vorgang, der durch die Stammesabsonderung der pariaartigen Batwa noch sehr erleichtert wurde und wird.

Der von den Männern gegrabene Ton wird mit Wasser durchgeknetet und mit einer Keule geschlagen, bis er von gröberen Teilen befreit und geschmeidig geworden ist. Dann wird auf eine Topfscherbe als Unterlage ein kleiner runder, mit der Hand etwas flachgedrückter Tonklumpen gelegt und auf dessen Rand ein wurstförmiger Tonwulst aufgesetzt, so daß eine Art Schale entsteht (Taf. 7b). Dieses An- und Übereinanderfügen von langen Tonwürsten wird nun fortgesetzt, indem sie mit der nassen Hand flachgedrückt und miteinander verstrichen werden, und dabei wird das Ganze auf der unterliegenden Scherbe (urudsjo) fortwährend hin und her gedreht (primitive Drehscheibe) und mit der Hand unter Wasserspritzen geglättet, bis der Topf die gewünschte Höhe und Form erreicht hat. Der Rand wird darauf mit einem Baumblatt ebenmäßig abgestrichen. Das eigentliche Glätten außen und innen wird aber erst vorgenommen, nachdem das Gefäß ein wenig an der Luft getrocknet ist. Man benutzt dazu ein Stück Kalebasse, ein Hölzchen, ein Stück Rinde oder einen kleinen flachen Stein. Und schließlich werden mit einem spitzen Holz- oder Eisenstück einfache Linienornamente (Wellenlinien oder zickzackförmige Reihen kurzer Striche) unter dem Hals eingekratzt. Färben der Töpfe oder Einritzen von Figuren oder gar Glasieren gibt es nicht. Van der Burgt glaubt, in den Wellen- und Zickzacklinien der Topfornamente geheimnisvolle Symbole der „Blitze Imanas", des obersten Gottes, sehen zu sollen, also „eine Art Hieroglyphenschrift" (Nr. 19, S. 452). Ich glaube nicht an solchen Tiefsinn der Töpfer, sondern halte die Muster für eine rein mechanische Äußerung des Schmucktriebes, wie mir auch die Barundi und Batwa selbst eine tiefere Bedeutung verneinten. Dieselben einfachen, durch die primitive Technik mitbestimmten Ornamente haben auch unsere steinzeitlichen Tongefäße.

Der nunmehr fertige Topf wird erst an der Sonne getrocknet und dann gebrannt. Zu diesem Behuf wird als Unterlage eine größere Zahl bereits gebrannter Töpfe mit der Mündung nach unten auf den Erdboden gestellt, darauf eine Reihe gekreuzter Mais- oder Sorghumstengel gelegt und auf diese die neuen Töpfe dicht nebeneinandergestellt. Oben darauf häuft man trockenes Gras, da man nur selten Brennholz hat, zündet es an und fügt immer weiter dürres Gras hinzu, bis die Töpfe gründlich gebrannt sind. Aus der Asche werden endlich die nun fertigen Töpfe herausgenommen und durch Wasserspritzen abgekühlt, aber die anhaftenden Aschenteilchen werden nicht entfernt, denn sie sind das Kennzeichen, daß der Topf noch nicht gebraucht ist; einen schon gebrauchten würde ein Murundi nie von einem Mutwa kaufen.

Die Barundi und namentlich die Batwa machen Tongefäße verschiedener Form und Bestimmung (Taf. 48): kleine längliche, enghalsige Krüge zum Holen und Aufbewahren von Wasser und Bier; große kugelrunde oder dickbauchige Töpfe mit größerer Öffnung zum Kochen; Näpfe und Schalen zum Trinken; bauchige Töpfe mit kegel-

förmigem Deckel zur Aufbewahrung von Butter; weite Trichter zum Einfüllen von Flüssigkeiten; selten auch Gefäße mit zwei Öffnungen und Tabakspfeifen mit zwei Köpfen zu Votivzwecken, wie in Ruanda (Nr. 19, S. 452 und Textbild 11; Nr. 48, S. 318). Große dreibeinige Töpfe werden nur für den religiösen Kultus angefertigt (S. 127).

Die Tabakspfeifen (inkono j'itabi, injungu) verdienen besondere Erwähnung, obgleich sie in der hauptsächlich „schnupfenden" Barundibevölkerung nur eine geringe Rolle spielen; sie werden nämlich nur von Männern gemacht und sind viel sauberer und zierlicher als die übrigen Töpferwaren der Barundi. Die Grundform ist dieselbe wie in Ruanda, aber im einzelnen variieren die Formen zwischen spitz trichterförmigen und fast kugeligen Köpfen je nach Laune des Verfertigers oder des Bestellers (Taf. 49).

Kein einziges Tongeschirr der Barundi hat einen flachen Boden oder einen Henkel, höchstens einen Wulst zum Anfassen. Sie müssen deshalb beim Hinstellen immer durch Steine gestützt oder in eine Erdvertiefung oder einen Strohring gesetzt werden. Im Tanganikagebiet sieht man zwar nicht selten Gefäße mit Henkeln oder Schnabelausgüssen oder Füßen, aber dies sind stets Fabrikate der Wawira vom kongolesischen Westufer und meist auf besondere Bestellung so geformt. Die einfachen Urundigefäße sind sehr billig: in Usumbura wird ein großer Kochtopf für 1 Heller, im Innern zwei Töpfe für 1 kete Perlen verkauft.

In der Flechterei (kudsjischa) sind die Barundi kaum weniger geschickt als die Banjaruanda, aber in der Musterung und Ornamentierung stehen sie weit hinter jenen zurück. Man kann in der Flechterei drei Arten unterscheiden: Bindetechnik, Webetechnik, Näh- oder Schlingtechnik (Nr. 32a, S. 42). Die Bindetechnik ist die einfachste; sie besteht darin, daß Rohrstengel oder Papyrusstreifen oder Grosbüschel oder Binsen nebeneinandergelegt und durch einige querlaufende Bastschnüre miteinander verbunden werden. So macht man Matten, offene Körbe, Siebe, aber dieses Flechtwerk ist so wenig dicht, daß es nur beschränkte Verwendung finden kann. Matten gibt es ohnehin im innern Urundi nur sehr wenige; selbst die Häuptlinge setzen sich gewöhnlich auf den bloßen Fußboden oder auf ein Fell. In einigen Gegenden braucht man aber solche aus langen Gräsern geflochtene Matten, um sich zum Schlafen nackt darein einzuwickeln (N. 19, S. 390). Viel mehr Matten findet man im Tanganikagebiet, wo ihr Gebrauch vom Kongo und von Norden (Ruanda) her sich eingebürgert haben mag. Bemerkenswerterweise sind es in Urundi fast immer die Männer, die die Matten flechten, auch die Batwa, während in Ruanda die oft wunderhübsch gemusterten, fein geflochtenen Bodenmatten, Bettjalousien, Bettmatten, die großen Wandschirme u. dgl. nur von Frauen geflochten werden.

Eine viel breitere Ausdehnung findet die Webetechnik in der Verfertigung von Körben, Tellern, Beuteln, Säcken u. a. m. (Taf. 51). Gewöhnlich werden zwei Lagen feiner Baststreifen rechtwinkelig ineinander verflochten wie ein Gewebe, und je nach dem Material ist das Flechtwerk fest und elastisch oder weich und geschmeidig, aber immer sehr dicht. Die dazugehörigen Instrumente sind nur ein dünnes Holzstäbchen, das die Masche zum Durchschieben des Flechtfadens lockert, oder eine eiserne Nadel ohne Öhr, aber mit einem Vorsprung, um den der Bastfaden zum Durchziehen geschlungen wird. So macht man große und kleine, runde und eckige, hohe und niedrige, offene und Deckelkörbe, lange enge Behälter zum Aufbewahren von Biersaugröhren, sehr große als Reisekoffer dienende Deckelkörbe, Mehlschwingen, Speiseteller, Getreidesäcke, bisweilen auch Pfeilköcher u. a. m. Seiten werden durch

Einflechten schwarz gefärbter Baststreifen einfache lineare Muster erzeugt. Diese Webetechnik ist in Urundi ausschließlich Frauenarbeit; nur die großen flachen Mehlschwingen werden von den Männern gearbeitet (Nr. 19, S. 577), vermutlich weil diese Geflechte mit Kuhdünger gedichtet werden, also mit einem Erzeugnis der Rinder, mit denen sich die Weiber prinzipiell nicht befassen dürfen.

In der Näh- oder Schlingtechnik endlich werden die Flechtwerke aus langen, dünnen, umwickelten Stroh- oder Bastwulsten hergestellt (ähnlich wie die Bienenkörbe unserer Bauern), die spiralförmig übereinander verlaufen und miteinander durch den die Wulste umwickelnden Bastfaden eng verbunden werden; daher auch Spiraltechnik genannt (Taf. 50). Diese Technik liefert Körbe und Schüsseln mit dickeren, gegen Druck und Stoß widerstandsfähigeren Wänden als die vorige; ferner wasserdichte Becher, die langen Zipfeldeckel der Kürbisflaschen für Bier, die oft sehr hübschen kranzförmigen Ringe zum Aufstellen von Gefäßen und zum Tragen von Lasten auf dem Kopf. Auch diese Technik ist nur Frauenarbeit. Stuhlmann nimmt an, daß sie hamitischen Ursprungs sei (Nr. 32a, S. 44), was ja ihre Hauptverbreitung und hohe Vollendung in den Batussistaaten erklären würde, und auch F. von Luschan macht darauf aufmerksam, daß sie von den Somal bis zu den Ovambo charakteristisch für hamitische oder hamitisch beeinflußte Stämme ist (Nr. 40, S. 252).

Schließlich seien die durch einfache kreuzweise Verknüpfung gedrehter Bastschnüre hergestellten Tragnetze erwähnt, in denen Kalebassen und andere Gegenstände in den Hütten aufgehängt werden (Taf. 51). Diese Netze sind den Barundi unentbehrlich, denn Flechtwerk kann auch in den Hütten nicht auf dem Fußboden stehengelassen werden, weil es von den Termiten angefressen wird.

Fischnetze werden von den See-Barundi des Tanganikagebietes in ähnlicher Weise mit weiten oder mit engen Maschen geflochten, aber dies scheint eine von den kongolesischen Wawira und Wabemba gelernte Kunst zu sein (Nr. 19, S. 577).

Das Weben von Gewandstoffen ist den Barundi unbekannt, denn sie tragen Rindenstoff- und Fellgewänder und erst neuerdings europäische Baumwollgewebe.

Die Holzschnitzerei (uwuwasi) tritt begreiflicherweise in einem so äußerst baumarmen Land wie Urundi hinter der Töpferei, Flechterei und Metalltechnik zurück. Das meiste Schnitzwerk wird in den westlichen Berggegenden hergestellt, wo es noch Reste hochstämmigen Urwaldes gibt, und von dort in die holzarmen zentralen Landstriche verhandelt. Namentlich die Batwa sind gute Holzschnitzer, und zwar sind es bei ihnen, wie bei den Bahutu und den Batussi, nur die Männer, die der Holzschnitzerei obliegen. Die gewöhnlichen hölzernen Gegenstände im Haushalt, wie Pfähle, Stäbe, Getreidestößer, Hackenstiele, Messergriffe u. dgl., verfertigt jeder selbst, da sie keine besondere Kunstfertigkeit erfordern, aber andere Holzarbeiten, die eine gute technische Kenntnis und Übung verlangen, wie Lanzenschäfte, Bogen, Pfeile, Köcher, Handscheiben, Meltgefäße, Blasebälge, Schilde, Getreidemörser, werden von Spezialisten hergestellt, die ihre Erzeugnisse vertauschen oder verkaufen (Taf. 52). Charakteristisch ist auch für die Holztechnik der Barundi und Banjaruanda, was Stuhlmann an aller afrikanischen Holztechnik hervorhebt (Nr. 32a, S. 28), daß nämlich die Gegenstände immer aus einem Stück Holz herausgearbeitet werden. Zusammengesetzte Werkstücke sind äußerst selten: in Urundi wie in Ruanda nur die aus zwei flachen zusammengebundenen Brettchen bestehenden Messer- und Dolchscheiden. Eine Verbindung von Schnitzerei und Flechtwerk ist die eine Art der in Urundi äußerst seltenen Schilde

(ingabo), deren längliche Holzplatte mit Streifen von Fikusrinde oder von Rotang überflochten ist, die bloß den zentralen Holzbuckel unbedeckt lassen (Taf. 53). In Ruanda sind diese beflochtenen Schilde, die Stuhlmann dem Kulturkreis der Bahima zuschreibt (Nr. 32a, S. 30), häufiger, aber auch nur vereinzelt; erst nach Uganda hin werden sie häufig.

Als Handwerkszeug zur Holzbearbeitung haben die Barundi kein Spezialinstrument, sondern nur die beiden kleinen Hacken, das sichelförmige langstielige Haumesser (Taf. 46, Fig. 4), die wir schon bei Besprechung des Ackerbaues kennengelernt haben (S. 49), sowie die kurzen und langen Messer, die zu allem möglichen im Tagesgebrauch dienen (Textbild 16). Um Lanzenschäfte zu runden und zu glätten, steckt man auf ein kleines zweischneidiges Messer ein Stückchen Holz und fährt mit dem dadurch gebildeten Winkel so lange auf dem Stab schabend hin und her, bis er die gewünschte Form erreicht hat. Auch die hölzernen Armscheiben werden, nachdem sie aus dem Holzklotz herausgeschnitten sind, mit dem Messer so lange geschabt und mit Fikusblättern (die wohl stark kieselig sind) so lange gerieben, bis sie die elegante, mathematisch korrekte Form und die glatte Oberfläche haben, die wir an ihnen bewundern müssen.

Fig. 16. Arbeitsmesser der Barundi.
(Museum für Völkerkunde, Berlin, Nr. 4366.)

Die hier und dort auf Holzgeräten und Kalebassen angebrachten einfachen Ornamente paralleler Linien werden selten eingeschnitzt, meist eingebrannt in einer Art Brandmalerei. Es werden nämlich hierzu auf einem alten Messer oder einer alten Lanzenspitze kleine Scharten ausgebrochen, so daß mehrere sägeartige Spitzen entstehen. Fährt man nun mit diesem glühend gemachten Eisen über das Holz, so brennen diese Spitzen lauter parallele Linien ein (Nr. 19, S. 367). Im übrigen sind Sägen zum Zerteilen des Holzes ebenso unbekannt wie Bohrer und Nägel. Löcher werden deshalb ebenfalls mit glühenden Eisenspitzen ins Holz gebrannt, und Bretter oder Bohlen werden, in Ermangelung von Sägen, wie überall in Ostafrika, aus dicken Stammstücken herausgearbeitet, indem der Verfertiger von beiden Seiten des Klotzes so lange Späne und Splitter weghaut und -schneidet, bis ein Brett von der gewünschten Dicke übriggeblieben ist. Man kann daher in diesen Ländern den Häuptlingen kaum etwas Willkommeneres schenken als eine starke Handsäge, einen festen Drehbohrer, Hämmer, eiserne Nägel und sonstiges Handwerkszeug.

Tierische oder menschliche Figuren habe ich in Urundi wie in Ruanda nirgends gesehen, weder eingeritzt noch eingeschnitten noch in plastischer Schnitzerei. Erst bei den See-Barundi am Tanganika findet man geschnitzte Holzfiguren als eine aus dem Kongogebiet übertragene Kunst. Erwähnenswert ist schließlich noch die Verzierung

vieler der hölzernen Handscheiben — nicht aller — mit eingelegten eisernen, kupfernen oder messingenen Spiralen, eckigen und runden Blättchen und Stiften (Taf. 34, 35). Zuweilen ist die ganze Oberfläche von solchen dünnen Metallauflagen fast lückenlos überzogen. Sie werden befestigt, indem man die Umrisse der Metallstückchen in das Holz einritzt, die Fläche innerhalb der Umrisse etwas vertieft auskratzt, sie mit Wachs ausstreicht und dahinein die Spiralen und Blättchen eindrückt. Es sind nur wenige Künstler, die sich auf diese Technik verstehen. In Ruanda sieht man solche Metallauflagen nur an wenigen Handscheiben und an den zum Tanzschmuck gehörenden Umhängehörnern (Zink- oder Bleistreifen).

Das größte und am mühsamsten herzustellende Holzschnitzwerk der Barundi ist das Boot, der Einbaum (ubwato). Wie wir oben (S. 73) gesehen haben, sind Einbäume in dem baumarmen Lande selten und auf einige der größeren Flüsse sowie auf den Tanganikasee mit dem Russisi beschränkt. Sie werden im Auftrag und auf Kosten der Häuptlinge verfertigt, in deren Gebiet das Boot Fährdienste tun soll, oder auf dem See im Auftrag zahlungsfähiger Fischerfamilien. Die besten Bootbauer sind die Batwa, zu deren Spezialität diese Technik gehört (Nr. 19, S. 367). Die beiden dazu nötigen Instrumente sind die zweihändige Hacke mit querstehendem Blatt und das kürzere einhändige Beil mit längsstehendem Blatt. Der Baumstamm — je dicker und je gerader, desto besser — wird durch Tausende von Kerbhieben zu Fall gebracht, mit den Äxten entrindet und zunächst roh auf die gewünschte Länge und Dicke des Bootes zugehauen. Dann wird ihm die äußere Form mit den bauchigen Seiten, dem rundlichen, kiellosen Boden und den etwas zugespitzten Vorder- und Hinterteilen gegeben und zuletzt erst der innere Trog ausgehöhlt. Auch diese Arbeit wird lediglich mit den Äxten und Messern ausgeführt. Die Zuhilfenahme von Feuer, die anderwärts in Ostafrika darin besteht, daß man durch kleine, auf der Oberseite des Stammes angelegte Feuer den Stamm allmählich nach unten und innen verkohlt und die verkohlten Teile von Zeit zu Zeit auskratzt, bis nur noch die Außenwand stehengeblieben ist, kennen die Barundi nach eigener Aussage nicht. Wenn das Werk im großen und ganzen fertig ist, füllt man das Boot, ehe es von Stapel gelassen wird, innen mit Wasser, um seine Dichtigkeit zu prüfen. Sind etwaige Risse dicht gemacht, so wird der Einbaum unter Beteiligung einer großen Menschenmenge mit festlichem Lärm ins Wasser geschoben und gezogen.

Oft muß das über eine weite Landstrecke geschehen, was mehrere Tage dauern kann. Da geht ein Umufumu (Zauberer) voraus und streut heilbringendes Pulver auf den Weg, um das Boot unbeschädigt zu Wasser zu bringen. Sobald es schwimmt, singen und tanzen die Festteilnehmer auf beiden Flußufern. Dann setzt man einen mit Flußlehm beschmierten Topf Bananenbier in das Boot, und die Nächstbeteiligten trinken daraus und spucken in den Fluß, um die bösen Geister mild zu stimmen. Mit dem Lehm aber beschmieren die Leute sich und ihren Angehörigen die Stirne, um sich beim Gebrauch des Bootes gegen Unfall zu schützen. Dann fährt das Boot an das andre Flußufer, wo von den dortigen Leuten dieselben Zeremonien vollführt werden. Ein Tanz der Abafumu (Medizinmänner) und eine allgemeine Kneiperei schließt die Weihe des Bootes ab. (Nr. 19, S. 66.)

Fehler in der Schwimmfähigkeit und Balancierung des Bootes, die sich nun herausstellen, sucht man nachträglich durch weiteres Schnitzen mit Messer und Beil und durch Einlegen von Ballaststeinen zu korrigieren. Daß die Einbäume weder Sitze noch Steuer haben, wurde schon oben (S. 73) erwähnt, desgleichen die Art ihrer Fortbewegung.

Die sehr einfache Technik der Rindenstoffabrikation (Fikusbastfilz) habe ich ebenfalls schon oben (S. 31) besprochen.

Auch die Technik der Fell- und Lederbearbeitung ist sehr einfach. Da die Barundi nur selten ein Fellstück als alleinige Kleidung tragen und sonst Häute hauptsächlich als Decken benutzen, die Batwa aber die Fellkleidung vor dem Rindenstoff bevorzugen, sind auch die Batwa die geschicktesten Lederarbeiter (abaharra). Die Technik ist aber dieselbe bei den Batwa und den Bahutu. Wenn es sich nur um Herstellung von festem, hartem Leder zu Gefäßdeckeln, Pfeilköchern, Bindungen, Befestigung von Pfeilspitzen usw. handelt, wird die Haut einfach reingeschabt und an der Sonne getrocknet. Soll jedoch weiches, biegsames Leder (urusato) zu Gewändern und Decken fabriziert werden, so muß es gegerbt werden. Da man in Urundi aber die Loh- und die Weißgerberei ebensowenig kennt wie ursprünglich im ganzen übrigen Afrika (Nr. 32a, S. 47), so wird hier das Fell nach der Art der Sämischlederfabrikation bearbeitet. Zuerst wird die Haut mit vielen durch die Ränder gesteckten Pflöcken auf dem Boden straff ausgespannt und mit einem Messer die Haare und die noch ansitzenden Fleisch- und Fettrunzeln glatt abgekratzt. Fast trocken, wird die Haut dann abgepflöckt, mit Fett oder Butter eingerieben und tüchtig mit beiden Händen Stück für Stück durchgewalkt, bis sie geschmeidig und weich geworden ist (Nr. 19, S. 425). Schließlich reibt man sie mit etwas weißer Verwitterungserde (Kaolin) ein, um ihr ein hübsches Aussehen zu geben. Felle für Decken werden ebenso behandelt, aber die Haare nicht entfernt.

In der Eisenindustrie sind die Leistungen der Barundi gut, zum Teil sogar hervorragend. Dies ist eigentlich verwunderlich, da die Schmiedetechnik angeblich erst zur Zeit des Ruandakönigs Ruganza, also vor etwa zwei Jahrhunderten, aus Nordosten, wohl aus Kissaka, durch eine sagenhafte Persönlichkeit, Kigwe, nach Urundi eingeführt sein soll. „Vorher habe man sich", wie mir v. d. Burgt schreibt, „zur Bodenbearbeitung der Holzhacken bedient, ebenso wie man Pfeile und Lanzen aus Holz gehabt hätte." Ein alter Mutwa hat v. d. Burgt erzählt, daß er selbst in seiner Jugend noch solche Holzgeräte gesehen habe. Jetzt gibt es, wie auch ich beobachtet habe, keine hölzernen Waffen und Hacken mehr, aber wenn v. d. Burgt meint, die Rückständigkeit der Eisenindustrie der Barundi komme daher, daß es im Boden Urundis keine Eisenerze gebe (Nr. 19, S. 250), so irrt er sich. Ich habe an vielen Stellen ausgezeichnetes Eisen (itschjuma) in Gestalt von Brauneisenstein und von Eisenglanz gefunden. Dagegen kann ich bestätigen, daß die Barundi nicht verstehen, diese einheimischen Eisenerze abzubauen und zu verhütten. Schmelzöfen wie in Ruanda, wo ich sie in voller Tätigkeit sah, gibt es in Urundi nicht. Die Barundischmiede verarbeiten lauter von auswärts eingeführtes Eisen, teils solches, das in Form von Hacken aus Ufindja (Südvictoriasee) durch Vermittlung der Baha und Bassuvi importiert wird, teils europäischen Eisendraht, der vom Tanganika her ins Land kommt. Dieses eingeführte Eisen verarbeiten die Bahutu- und Batwaschmiede zu den landesüblichen Formen der Hacken, Messer, Haumesser, Speerspitzen, Pfeilspitzen, Armringe usw.; Bahutu und Batwa in derselben Weise, und zwar sind die Batwa offenbar die geschickteren Schmiede. Eine besondere Gilde bilden in Urundi die Schmiede nicht, aber das Handwerk ist in bestimmten Familien erblich. Die Schmiede wohnen und leben mit den anderen Barundi und genießen wegen ihrer Kunst eine hohe Wertschätzung. Es sind also doch berufsmäßige Fachhand-

werker, die für den Verkauf arbeiten. Nebenbei betreiben sie aber wie in Ruanda oft auch Ackerbau.

Die Werkstatt (uruganda) ist eine kleine, allseits offene Rundhütte, in deren Mitte eine Vertiefung im Erdboden das Kohlenfeuer enthält. Da sie Holzkohlen zu ihrem Handwerk brauchen, sitzen sie in dem holzarmen Land meist in der Nähe der Waldreste und der Uferbüsche der Flüsse. Nach dem Innern werden aus den Randbergen Holzkohlen in langen Bananenblattbündeln verhandelt. Neben der Feuerstelle liegt der Blasebalg, ein Gefäß- oder Schalenblasebalg (umuvuba) in Form eines großen hölzernen Doppellöffels, über dessen beide Öffnungen je ein Ziegenfell lose gespannt ist (Taf. 45, Fig. 2). Ein in der Mitte jedes Felles angebundener Holzstab dient als Stempel, durch dessen Auf- und Abbewegen die Luft aus dem Gefäß in die gemeinsame Endröhre getrieben wird. Der Bläser steht oder hockt hinter dem Blasebalg, hat in jeder Hand einen Stempel und bewegt diese abwechselnd schnell auf und ab. Dieselbe Gebläseform ist in Ruanda gebräuchlich, wo sie auch zum Anblasen der Schmelzöfen benutzt wird. In Urundi soll (nach Stuhlmanns Kärtchen in Nr. 32a, S. 62) noch eine andere Form, der Schlauch- oder Sackblasebalg vorkommen; ich habe aber darüber nichts erfahren können. Der beschriebene üblichere Gefäßblasebalg ist aus einem Stück Holz geschnitzt und mündet in eine kurze trichterförmige Tonröhre, die direkt in die glühenden Kohlen gesteckt wird und diese anblasend in Glut erhält. Von Zeit zu Zeit wird der glühende Kohlenhaufen mit Wasser bespritzt.

2: Meyer FO42 Rundi

Auf der anderen Seite der Feuerstelle liegt ein harter Stein als Amboß (Textbild 17). Mit einem nassen klammerförmigen Holzstück oder einem spitzen Eisenstift schiebt man das zu bearbeitende Stück Roheisen in die Kohlenglut und holt es damit wieder heraus. Auf dem Amboß wird es nun mit dem Hammer (injondo) bearbeitet, einem schweren mehrkantigen Eisenstück, das keinen Holzstiel hat, sondern an einem Ende griffartig verlängert ist, so daß es fest gepackt werden kann. Das Eisen wird so lange gehämmert und wieder geglüht, bis alle Schlacken herausgetrieben sind. Dann wird es mit dem Hammer zur Form des gewünschten Gegenstandes ausgeschmiedet. Als Hilfswerkzeuge dienen dabei ein dicker abgerundeter Bolzen, über dessen runden Kopf das glühende Eisenstück zu Hohlformen, z. B. Glocken, Düsen der Speerspitzen usw., gehämmert wird; ein kurzes spitzes Eisenstück, mit dem einfache Punktmuster in die Armringe, Haumesser und andre Gegenstände gepunzt werden; ein altes Messer, mit dem glühende Eisenstücke entzweigehauen werden, indem man es als Keil daraufsetzt und mit dem Hammer daraufschlägt; eine Feile, bestehend aus einem gekerbten Eisenstück mit Holzgriff, mit dem an den erkalteten Schmiedearbeiten die Unregelmäßigkeiten abgerafpelt werden; und schließlich einige harte glatte Steine zum Polieren.

Ob die Barundi auch das Drahtziehen verstehen, habe ich nicht erfahren können. Zum Umwickeln der Armspangen und der Messerscheiden mit Eisen-, Kupfer- oder Messingdraht benutzen sie eingeführte europäische Drahtsorten.

Die Verwendung von Kupfer (umurinda) und Messing ist in Urundi sehr gering, mit Ausnahme des Tanganikagebietes, wo seit langer Zeit das vom Kongo (z. B. Katanga) herüberkommende Kupfer und Messing vielerlei Verwendung findet. Im großen Innern Urundis wird kein Kupfererz gewonnen, und das wenige vom Tanganika her in Drahtform eingeführte Kupfer wird kalt ausgehämmert, um einfache Armspangen, kleine Glöckchen als Anhängeschmuck, kleine Plättchen zum Einlegen in die großen hölzernen Armringe u. dgl. zu verfertigen. Das Gießen von Metall in Gußformen ist in Urundi wie in Ruanda unbekannt.

Siebentes Kapitel

Politisches; Recht, Soziales; Clans, Totemismus

1. Krieg, Königtum, Lehnswesen

Die Geschichte der Barundi — soweit sie eine geschichtliche Überlieferung haben — zeigt, daß dieses Volk unter starken, energischen Königen außerordentliche kriegerische Taten vollbracht hat, die das Land lange Zeit vor der Bedrückung schwarzer oder arabischer Eroberer (Ruanda, Mirambo, Wangoni, Rumalisa) bewahrt hat. Erst der Niedergang der Dynastie in den letzten Jahrzehnten und der Mangel einer großen herrschenden Persönlichkeit hat auch den kriegerischen Geist und die kriegerische zusammenfassende Organisation geschwächt, so daß die deutsche Okkupation nicht auf besondere Schwierigkeiten gestoßen ist. Die heutigen Barundi, d. h. Batussi, Bahutu und Batwa, sind trotz ihrer reizbaren, zu Streit und Prügelei neigenden Natur und trotz ihrer zahllosen inneren Fehden nicht kriegerisch nach außen. Sie sind friedlich, wenn man sie in Frieden läßt.

Auch früher in ihrer politisch starken Zeit führten die Barundi nicht große Kriege zu expansiver Eroberung wie die Wangoni und die Wahehe, sondern an der Tagesordnung war der innere Kleinkrieg des einen Murundihäuptlings gegen den andern, die ewige Clan- und Familienfehde im Lande selbst. Nur wenn fremde Eroberer eindrangen, wurde es bitterer Ernst; dann erhob sich nach verschiedenen kleineren Abwehrversuchen schließlich das ganze Volk unter seinem führenden König und warf den Eindringling hinaus. So z. B. den Araberführer Rumalisa mit seinen sklavenjagenden Banden (S. 165).

Bei den inneren Zwistigkeiten und Kleinkriegen, wie sie auch heute noch oft genug vorkommen, ohne daß sich unsere Regierung viel einzumischen genötigt sähe, geht es selten sehr blutig zu. Wenn ein Häuptling gegen seinen Nachbar Anlaß zu Streit und Klage hat, sucht er ihn erst friedlich durch „Zauberer" zum Nachgeben zu bewegen. Bleibt dies erfolglos, so schickt er ohne Kriegserklärung seine Leute gegen ihn aus. Der Kriegshaufe besteht fast nur aus Bahutu und Batwa, während die Batussi einige Anführer stellen, sich aber gewöhnlich vorsichtig zurückhalten. Der Bedrohte bekommt durch seine Freunde schnell Kunde von der nahenden Gefahr und weicht ihr entweder aus oder sucht nun durch seine Leute den Gegner an Habe und Gut zu schädigen. Jeder ist bestrebt, seinem Feind soviel Rinder wie möglich wegzunehmen, soviel Männer zu verwunden oder zu töten wie möglich und durch nächtlichen Überfall die Gehöfte auszurauben, niederzubrennen und die Weiber gefangen wegzuführen. Selten kommt es zu offenem Kampf der beiden feindlichen Parteien, und selten werden in einem solchen Krieg mehr als ein Dutzend Menschen

getötet (Nr. 19, S. 276). Hauptsächlich bekämpft man sich, wie die Helden Homers, durch gegenseitige Beschimpfungen oder durch Zauberei, die dem Feind par distance schaden oder ihn töten soll. Die eigenen Leute aber schützt der Medizinmann durch besondere Zaubermittel (Steinchen, Pflanzenstückchen, Knochenstückchen, die alle angehängt werden) gegen Verwundung und Verzauberung.

Bei Fehden großer Häuptlinge gegeneinander oder bei Kriegen des Königs gegen eindringende äußere Feinde — als welche bis vor wenigen Jahren auch die Deutschen angesehen wurden — ist natürlich das Aufgebot und der Aufwand größer. In diesem Fall müssen alle Männer und alle hinreichend kräftigen Jünglinge unter die Waffen treten, während die Weiber, Kinder und Rinder in sichere Verstecke gebracht werden. Zuerst ist immer die Leibwache (abagendanji) zur Stelle, die sich jeder große Häuptling auch im Frieden hält. Es sind ausgesuchte Leute, die vom Häuptling mit Rindfleisch genährt und mit einer Art Uniform in Gestalt eines weißen Fellschurzes bekleidet werden; ihr Führer, der stets ein Mutussi ist, ist durch einen besonderen Schild ausgezeichnet. Häufig besteht die Leibgarde nur aus Batwa. Alle anderen Krieger eilen auf das Dröhnen der Kriegstrommel herbei, jeder mit 2 Speeren, 1 Bogen und 4—5 Pfeilen bewaffnet. Um den Feind zu schrecken, bemalen sich die Krieger das Gesicht, den Schädel und viele Teile des übrigen Körpers mit weißen und roten Linien, Flecken und Schnörkeln aus pulverisierter Tonerde, und verleihen sich dadurch wirklich ein greuliches Aussehen. Auch jetzt mischt sich natürlich der Medizinmann mit allem möglichen Zauber ein, um dem Feind zu schaden. Der Häuptling oder der König zieht nur in wirklich großen Kriegen, wenn es sich um Existenzfragen handelt, mit ins Feld. An den Grenzbächen — die Grenzen sind meistens Bäche — wird den Schutzgeistern geopfert, auf den Pfaden der Feinde werden schädliche Pulver ausgestreut, in den Eingeweiden von Hühnern und Schafen wird die Zukunft gelesen und demgemäß Vorkehrung getroffen. Wenn es geht, läßt der Zauberer sogar ein geweihtes Rind (ingabe) gegen den Feind anlaufen. Rennt es durch die feindlichen Reihen, so ist es ein gutes Zeichen, dem sich sogar der Feind selbst unterwirft; kehrt es aber vor dem Feind um, so bedeutet es Übles, so daß man sich auf Friedensverhandlungen einläßt (Nr. 19, S. 277).

Wenn trotz alledem einmal ein offener Kampf zustande kommt, reißt sehr bald die eine Partei aus, nachdem einige Mann durch Speerwürfe und Pfeilschüsse gefallen oder verwundet sind. Die Sieger fallen dann über die Gehöfte her, sengen und brennen und schleppen alles weg, was Wert für sie hat, vor allem das Vieh. Heimkehrend werden sie dann mit jubelndem Trillergeschrei der Weiber empfangen, und es beginnt ein großes Tanz-, Kneip- und Fleischfreßfest, das oft Wochen dauert, solange der Häuptling Bier und Rinder dazu spendet. Wenn aber der feindliche Häuptling gefangen worden ist, wird er gewöhnlich getötet. Wirklichen Friedensschluß gibt es selten. Meist vererbt sich die Feindschaft der Häuptlinge nach dem ungeschriebenen Gesetz der Blutrache auf Sohn und Enkel, so daß eine ewige Beunruhigung im Land herrscht, wenn nicht eine stärkere Faust eingreift. Das hat denn auch unsere Schutztruppe wiederholt tun müssen und mit Erfolg getan, wenn es sich um gefährliche Störungen des Landfriedens unserer Kolonie handelte. Aber in die kleinen inneren Streitigkeiten darf sich nach einem sehr richtigen Gouvernementserlaß der deutsche Resident nicht einmischen; ebensowenig wie der Resident von Ruanda in die dortigen oft genug blutigen inneren Krakeele. Diese werden daher noch lange andauern,

bis sie mit der fortschreitenden wirklichen Besetzung des Landes durch unser Militär völlig zur Ruhe kommen werden.

Urundi war jahrhundertelang, bis zur deutschen Okkupation, ein einheitliches Königreich; freilich nur der historischen Entwicklung und dem Namen nach, denn in Wirklichkeit hatte sich eine ganze Reihe der Großen des Landes mehr oder minder unabhängig vom König gemacht. Das Gouvernement hat, wie wir im geschichtlichen Überblick sehen werden (S. 166), nach dem Tod des alten Königs Kisabo die Unabhängigkeit einiger dieser Großen vom König anerkannt, aber auch dort gilt im Volk der freilich fast schemenhaft gewordene ferne König noch in mancher Beziehung, namentlich im religiösen Kult, für das Oberhaupt des Reiches.

Ideell herrscht der König absolut über ganz Urundi, und wer sich ihm nicht fügt, ist abtrünnig und revolutionär. Dieser Anspruch auf die königliche Obergewalt gründet sich in letzter Linie darauf, daß der König dem alten Herrscherstamm der Baganwa entsprossen ist und selbst als ein halb göttliches Wesen angesehen und verehrt wird. In dieser Eigenschaft ist er das Haupt der nationalen Religion und das religiöse Haupt der Nation, einerlei, welcher Art der gegenwärtig herrschende König persönlich ist. Vereint sich mit diesem religiösen Ansehen ein kluger Kopf und ein starker Wille, so ist es dem Träger der „Krone" nicht schwer, seinem Anspruch auf die absolute Alleinherrschaft im ganzen Urundireich Geltung zu verschaffen. Das lehrt die Geschichte Urundis.

Der offizielle Titel des Königs lautet in Urundi wie in Ruanda und auch in Usipa (Nr. 47, S. 29) umwami, d. h. der zur Herrschaft Emporgestiegene; auch spricht man vom Urundikönig als dem njen' ingoma, d. h. Besitzer der (heiligen) Trommel, oder umvijéji, d. h. Vater, Herr.

Die dem König am nächsten stehende Persönlichkeit ist der umufumu w'umwami, der „Hauskaplan", Oberpriester; meist ein hervorragend kluger Mann, der dem halbgöttlichen König stets beigeordnet ist und ihn auch in weltlichen Dingen zuerst beratet. Diesem steht ein „Hof-kiranga", ein Obermagier oder Zauberer, zur Seite. Unter den Beamten des Hofstaates gibt es Küchenmeister, Fleischer, Brennholzbewahrer, Stallmeister, Wasserversorger, Kuhmelker, Nachtwächter, Leibgarde u. a. m. Als politische Persönlichkeiten leben in der Umgebung des Königs Vertreter der großen Chefs, der Provinzgouverneure, ähnlich wie am Hof des Musinga von Ruanda. Wie dort sind es aber auch hier vielfach die Gouverneure selbst, die zeitweilig oder dauernd an den Königshof gezogen werden, weil sie der König aus irgendeinem Verdachtsgrund in seiner unmittelbaren Nähe und Aufsicht haben will.

Diese Provinzgouverneure sind in Urundi fast durchweg Mitglieder der Königsfamilie (abaganwa) oder einer der vier mit dem Königshaus verschwägerten Sippen des hohen Bahimaadels (s. S. 91, 101, 182), während in den Unterbezirken der Provinzen einfache Batussi als Regierungsbeamte (abatware oder bátwale) eingesetzt sind; mitunter, namentlich im Südosten, gibt es auch Bahutu als Batwale. Dieses Amt ist in den eingesetzten Familien erblich, aber der König kann nach dem Tod des Mutwale die Erbfolge des Sohnes kassieren und auch sonst jederzeit einen anderen Mutwale einsetzen (Nr. 19, S. 267).

Dieselbe Beamtenorganisation besteht auch in Ruanda. Desgleichen ist in Ankole das ganze Land aufgeteilt an 9 dem König verantwortliche Gouverneure oder Großbatwale, die dort den Namen Bakungu führen und sämtlich dem Königsclan der Abahinda an-

2: Meyer FO42 Rundi

gehören. Jeder Mutunga hat mehrere Distriktschefs unter sich, die aber lauter Vertreter von Bahima-Clans sind, und deren jeder von seinem Clan gewählt wird, also Clanälteste ist. Diese besitzen die niedere Gerichtsbarkeit über ihre Clangenossen, während Streitigkeiten verschiedener Clans vom Mutunga entschieden werden. Das Amt des Mutunga ist erblich. (Nr. 27, S. 98.)

So fest fundiert wie in Ruanda (König Musinga) ist aber das Königtum in Urundi nicht oder noch nicht, was vor allem seine Ursache in dem viel lebhafteren Unabhängigkeitssinn der Barundi und in der noch sehr starken Clanorganisation der Batussi und der Bahutu hat; aber die Könige Urundis und ihre mächtige Sippe, der Clan der Baganwa, haben es doch im Lauf der letzten zwei Jahrzehnte durchgesetzt, daß fast überall im Land an Stelle der Clanältesten, die früher das Heft in der Hand hatten, die Beamten und die Lehnsleute des Königs getreten sind, die der absoluten Herrschaft des Königs Vorschub leisten.

Wie in Ruanda und den anderen Bahimastaaten, von Unjoro im Norden bis Ukipa im Süden (Nr. 47, S. 74), so gehört auch in Urundi alles Land und Volk und Vieh dem König vermöge seines angestammten Erbererrechtes. Er verteilt das ganze Land an die Mitglieder seiner Familie und seines Clans, der Baganwa, zu Erblehen, das er aber jederzeit widerrufen kann, wenn er mit dem Inhaber unzufrieden ist. Diese großen Lehnsleute oder Groß-Batwale teilen ihr Gebiet wieder in viele kleineren Lehen an ihre Gefolgschaft auf, und diese wieder weiter, so daß das ganze Land von einem riesigen Netz von Lehnsleuten des Königs überzogen ist (s. S. 171), die sehr überwiegend Batussi sind, und deren geringste etwa die Stellung von Dorfschulzen haben. Die unterste territoriale Einheit dieser großen Verwaltungsorganisation ist der Berg, der Plateaurücken (umutumba, umurambi), denn in dem von Sumpftälern außerordentlich zerschnittenen Hochland ist nicht das Tal, sondern der Berg der Träger der Siedelungen. Die Grenzen der Provinzen und ihrer Untergebiete sind darum fast überall die Bach- und Flußtäler, denn diese sind die ausgeprägtesten und wirksamsten natürlichen Trennungen der Landschaften und ihrer Bewohner. Die großen Lehen bilden freilich nur selten geschlossene Komplexe in einer Landschaft, sondern bestehen fast immer aus zahlreichen kleineren, auf verschiedene Provinzen verteilten Landstücken, damit die großen Lehnsmänner dem König nicht zu mächtig werden.

Alle Lehnsleute haben natürlich dem König bestimmte Leistungen zu machen, aus denen dieser seinen riesigen Haushalt bestreitet, seine Beamten bezahlt und seine Kriege führt. Nach der Art der Verpflichtungen gibt es drei Arten von Lehen: 1. Landlehen, deren Inhaber dem König regelmäßig bestimmte Anteile aus dem Ertrag der Felder abzuliefern haben; 2. Viehlehen, die monatlich eine bestimmte Anzahl Rinder sowie Milch und Butter liefern müssen; 3. Kriegslehen, deren Inhaber eine bestimmte Kriegerschar stets schlagfertig zu halten und auf Befehl des Königs sofort zu stellen haben. Zuweilen sind die genannten drei Lehnsarten in einer Landschaft auf einen Lehnsmann vereinigt, was die Verwaltung wesentlich vereinfacht; öfters aber bekommt der Lehnsmann zwar den Berg zu Lehen und die daselbst wohnenden Bahutu als seine Leute, aber nicht zugleich alle Gerechtsame, sondern auf demselben Berg kann ein anderer Mutussi das Kriegslehen erhalten, d. h. die Pflicht, für den Kriegsfall die dortigen Männer zusammenzubringen, oder es kann einem dritten Mutussi auf diesem Berg die Verteilung des Weidelandes unterstellt

sein usw. Durch diese Einrichtung wird bezweckt und erreicht, daß jeder der Berechtigten den anderen eifersüchtig überwacht und daß der König die Zügel der Regierung überall fest in der Hand behält.

Der mit einem Lehen begabte Mutwale ist aber in seinem Lehnsbereich Herr über die untergebenen Bahutu und Batwa. Insbesondere bestimmt er die Arbeitsleistungen seiner Leute und übt die gewöhnliche Gerichtsbarkeit aus. Die Stellung der Untergebenen ist jedoch keineswegs etwa sklavisch, sondern die Leute genießen eine Menge Freiheiten und zugestandene Rechte und haben immer einen Rückhalt an ihrer Sippe, ihrem Clan, der wirkliche Gewalttaten der Batwale wie jeglicher andern Person in Heimlichkeit blutig zu rächen pflegt. Es ist eine Art Feme, vor der auch die größten Batussi-Batwale Respekt haben. Übrigens hat jeder Muhutu das Recht, seinen Lehnsherrn, der ihn schlecht behandelt, zu verlassen und sich einen andern Herrn zu suchen. Da aber das Ansehen und der Reichtum eines Mutussi hauptsächlich von der Zahl seiner Leute abhängt, so hat er selbst das größte Interesse daran, daß seine Leute nicht wegen schlechter Behandlung weglaufen.

Um die großen Lehnsmänner und Batwale nicht allzu selbständig werden zu lassen, läßt sie der König stets von Spionen umgeben. Im übrigen sorgen schon Eifersucht und Neid dafür, daß jeder Mutwale von seinen Nachbarn gründlich kontrolliert wird. Natürlich wird kolossal intrigiert und denunziert. Erweist sich die dem König gemachte Anzeige der Untreue oder des Hochverrats als richtig, so schreitet die königliche Justiz schnell mit Speer und Gift. Trotzdem haben es mehrere Groß-Batwale verstanden, im Lauf der Jahrzehnte ein großes Maß von Selbständigkeit zu erringen; namentlich die in den exponierten Grenzbezirken nach Ruanda und nach Uffumi hin wohnenden. Sie entrichten zwar noch einen bestimmten Naturaltribut an den König, können aber sonst tun und lassen, was sie wollen, falls sie nicht den Landesfrieden brechen und nicht das militärische Einschreiten unsres Residenten nötig machen.

In der Regel wird der König oder der prinzliche Gouverneur an dem Lehnsverhältnis nichts ändern, wenn der Lehnsmann regelmäßig seine Abgaben entrichtet, seine Untertanen in Ordnung und in furchtsamer Abhängigkeit hält, in Kriegsfällen schnell die nötigen Mannschaften stellt und dienstwillig und königstreu bleibt. Von den Batwale hängen schließlich in den einzelnen Ortschaften oder Gehöftgruppen Kommunalbeamte (bisonga) ab, die die Steuern eintreiben, Fronarbeiten verrichten lassen, die niederste Gerichtsbarkeit ausüben usw.

Zur Beratung wichtiger Angelegenheiten steht dem König wie auch den Provinzgouverneuren und den Batwale ein Staatsrat resp. Gemeinderat zur Seite, der aus den angesehensten und vermögendsten Männern des Landes, resp. der Landschaft, worunter namentlich die Clanältesten (abagabo) vertreten sind, vom König oder dem betreffenden Gouverneur ernannt wird. Der König oder der Mutwale sitzt dem bei wichtigen Anlässen einberufenen Rat vor, ist aber in seinen Entschlüssen nicht an die Beratung gebunden (Nr. 19, S. 267). Die Batwale sind dem König für alle Vorgänge in ihrem Verwaltungsbezirk verantwortlich, haben aber über die ihnen unterstellte Bahutu- und Batwalebevölkerung fast absolute Gewalt, die auch das Recht der Tötung einschließt. Von einem ungerechten Mutwale können die bedrückten Untertanen zwar an den Provinzgouverneur oder an den König selbst appellieren, aber sie kommen sehr selten zu ihrem Recht, denn „der Zar ist fern und

2: Meyer FO42 Rundi

der Himmel ist hoch". Der absolute, halbgöttliche König hat natürlich immer recht und alles Recht, ihm gehört alles Land und alles Vieh, und er gibt davon zu Lehen, an wen er will, wieviel und wann er will, und er nimmt Besitz und Leben von jedem Untertanen, wie es ihm gut dünkt.

So ist es de jure, und so ist es auch in praxi, wenn der König ein willensstarker Mann ist, wie deren Urundi eine ganze Reihe gehabt hat. Ist er aber ein Schwächling, entbehrt er der verschlagenen Klugheit und des Grades von furchterregender Gewalttätigkeit und Grausamkeit, die zu den nötigen afrikanischen Herrschertugenden gehören, wie z. B. der gegenwärtige schwache König Mutaga, so ist sein Absolutismus nur Schein, und die wahren Herrscher sind die Häupter der königlichen Sippe, die Baganwa oder Abaganwa, die die Königspuppe nach ihren Wünschen tanzen lassen. Das sind dann Zeiten, in denen sich einzelne Provinzgouverneure selbständig und unabhängig machen, andere Landesteile unter die Botmäßigkeit fremder Nachbarsultane (z. B. Ujogoma zeitweilig unter Uffumi) geraten und im ganzen Reich eine mehr oder minder große Anarchie herrscht. Über die Entwicklung dieser Verhältnisse und über die gegenwärtige Lage der Dinge vgl. das Kapitel Geschichte, S. 151 ff.

Das gegenwärtige Daniederliegen des Königtums, die Schwächung der zentralen Gewalt, den Zerfall des früheren starken Einheitsreiches hat die deutsche Kolonialregierung im eigenen Interesse sanktioniert, indem sie gleichzeitig versucht, das Regiment des deutschen Residenten allmählich an die Stelle der obersten Königsgewalt zu setzen. Das Königtum selbst kann sie nicht beseitigen, wenn sie nicht den Kampf gegen das gesamte Bateffitum aufnehmen will; dazu ist unsre Macht noch zu gering. In Zukunft wird aber sehr viel davon abhängen, was für ein Mann aus der alten Herrscherdynastie Nachfolger des jetzigen schwachen Scheinkönigs Mutaga werden wird, und wie sich unsere Regierung zu ihm stellt.

Die Thronfolge regelt sich in Urundi nach der Erstgeburt, falls der König oder Großhäuptling keine besondere Bestimmung getroffen hat; und zwar folgt ihm von Rechts wegen der älteste Sohn der Hauptfrau. Gewöhnlich aber bestimmt der König einen seiner vielen Söhne, der ihm der geeignetste erscheint, zu seinem Nachfolger und hinterläßt ihm die Zeichen der Königswürde, d. i. die heilige Trommel, seinen Speer, seinen Armring. Erfolgt diese Bestimmung zu Lebzeiten des Königs, so ist sie gefährlich für den bevorzugten Königssohn. Er hält es daher für geraten, sich der Eifersucht seiner Brüder und Verwandten zu entziehen und versteckt sich in der Ferne, bis seine Zeit gekommen ist. Ist er noch ein Kind, so verbirgt ihn seine Mutter fern vom Bereich seiner Verwandten. In der Ferne hält sich aber auch der junge Prinz auf, der nach dem Glauben der Barundi vom Schicksal zum König von Urundi bestimmt ist. Sie glauben, daß dieses prädestinierte Königskind, das von irgendeiner der Frauen des Königs geboren worden ist, bei der Geburt daran kenntlich sei, daß es in seinen Händchen Körner aller Arten von Früchten des Urundibodens halte, und daß wegen dieser verräterischen Vorzeichen die Mutter mit dem Kind vor den ihm durch die Verwandten drohenden Gefahren ins benachbarte Ausland fliehe, bis der regierende König gestorben ist. Sukzessionsfähig ist aber ein königlicher Prinz nur, wenn er beim Thronwechsel noch nicht verheiratet ist und wenn seine Mutter noch lebt (S. 184). In jedem Fall entsteht, wenn der zur Thronfolge Berechtigte nach des Königs Tod aus der Ferne zurückkehrt, um seine Ansprüche zu erheben, Streit und Kampf der verschiedenen Parteien, der mit dem Sieg der einen

Partei und ihres Prätendenten endet, worauf der vom Rat der Baganwa und Abafumu nach rituellem Wahlakt (S. 184) ausgerufene neue König gewöhnlich seine gesamten Brüder und nächsten Anverwandten töten oder in sichere Verbannung bringen läßt (Nr. 19, S. 524).

Bei der Erbfolge der großen und kleinen Batwale geht es weniger gewaltsam und blutig zu. Auch hier bestimmt der Vater noch zu Lebzeiten einen seiner Söhne zum Nachfolger im Erblehen (oder eine Tochter, wenn er keinen Sohn hat), gewöhnlich den ältesten, aber der König kann die Bestimmung zugunsten eines anderen umstoßen. Nach dem Tod des Häuptlings wird der neue Mutwale vom Rat feierlich in Amt und Würden eingesetzt. Es werden ihm die Insignien des Verstorbenen übergeben, ihm die Rinder, die Weiber und der Kral seines Vorgängers, kurz alles Familiengut überliefert (Nr. 19, S. 550). Er schaltet und waltet nun in seinem Lehensgebiet wie ein souveräner Fürst, muß aber pünktlich die ihm aufliegenden Abgaben an den König entrichten und seine sonstigen sehr wenig drückenden Lehnspflichten erfüllen; sonst riskiert er Absetzung, Bekriegung, Verbannung, Tod.

2. Rechtspflege, soziale Verhältnisse

In den Familien der nichtbeamteten, einfachen Barundi (Batussi, Bahutu und Batwa) ist der älteste Sohn (oder Tochter) der ersten Frau der profane und religiöse Haupterbe seines Vaters. Er erbt (kuraga) von dem vorhandenen Familienbesitz den größten Teil, während die Mutter und die übrigen Kinder zu gleichen Teilen erben. Ist die Mutter schon gestorben und sind die Kinder noch klein, so muß der älteste Sohn als Haupterbe für sie Sorge tragen. Wenn aber ein Murundi kinderlos stirbt und eine Witwe zurückläßt, teilen sich seine Brüder in seinen Besitz, während die Witwe zu ihrer Familie zurückkehrt. Eine Witwe mit Kindern hingegen wird die Frau des nächsten Bruders des Verstorbenen (Leviratehe) und bleibt gewöhnlich in der bisherigen Behausung mit ihren Kindern wohnen. Die Familie bleibt beisammen bis zur Verheiratung und eigenen Familiengründung der Kinder (Nr. 19, S. 285). Nach v. Langenn erben nur die Söhne, welche dann die Mutter und Schwestern unterhalten; sind keine Söhne vorhanden, so erbt die Witwe resp. die Töchter.

Der älteste Sohn erbt auch die religiösen und die fachmännisch beruflichen Eigenschaften und Fertigkeiten des Vaters. Wenn der Vater Priester (kiranga) oder Zauberer, Medizinmann (uniufumu) oder Schmied (umususi) usw. war, wird oder bleibt es der älteste Sohn, indem er vom Vater außer den Kenntnissen auch die Abzeichen und die Werkzeuge erbt. So bleiben bestimmte Berufe bestimmten Familien eigen. Hat die Mutter solche Eigenschaften, so vererben sie sich auf die älteste Tochter.

Wenn aber jemand ohne Angehörige und Anverwandte stirbt, erbt der Mutwale des betreffenden Bezirks den Nachlaß (Nr. 19, S. 568). Da es geschriebene Gesetze irgendwelcher Form nicht gibt, ist alles Recht Gewohnheitsrecht, Tradition, Brauch; aber jeder erwachsene Murundi kennt diesen Brauch, und wenn jemand dagegen verstößt, so ist es eine strafbare Rechtsverletzung. Selbst der König hält sich gegenüber den Batussi für daran gebunden und setzt sich nur ausnahmsweise

2: Meyer FO42 Rundi

darüber hinweg. Das Recht ist natürlich ein die Batussi in jeder Weise bevorzugendes Herrenrecht, demgegenüber die Bahutu als Hörige nur wenig Recht haben und die Batwa fast ganz rechtlos sind. Den Bahutu und Batwa gegenüber erlauben sich namentlich die Batussi-Batwale oft schwere Rechtswidrigkeiten, ohne deshalb zur Verantwortung gezogen zu werden. Nur die Furcht vor Blutrache schränkt ihre Willkür ein.

Die ethischen Vorstellungen der Barundi über das, was recht und unrecht ist, sind wie bei allen Naturvölkern schwer zu fassen. Auf dahingehende Fragen bekommt man entweder keine Antwort oder sie sagen: „das wissen wir nicht" oder „der Verstand sagt es so" oder „die Eltern, die Vorgesetzten, der König wollen es so" u. dgl. (Nr. 19, S. 381). Wohl nie hört man, daß es das „Gewissen" so vorschreibt, oder daß es die Geister, Manen, Götter so wollen. Was hierüber ausgesagt wird, dürfte von den Fragestellern, namentlich Missionaren, erst in sie hineingefragt sein. Um so klarer sind die konkreten Rechtsbegriffe. Sie knüpfen hauptsächlich an die Eigentums- und sozialen Verhältnisse an und heißen etwas recht oder unrecht, je nachdem es den Interessen dieser traditionell gewordenen Verhältnisse nützt oder schadet.

Grundsätzlich ist, wie oben erwähnt (S. 91), der König alleiniger Eigentümer des gesamten Grundes und Bodens und alles Viehs im Lande. Die Batwale und die kleinen Bezirkschefs, fast immer Batussi, haben, wie oben ausgeführt (S. 86), große oder kleine Teile dieses königlichen Eigentums zu Lehen und überlassen ihrerseits wieder kleinere Teile an die nichtbeamteten Batussi und an die Bahutu zum Nießbrauch. Was diese aber aus dem Boden und aus dem Stammvieh produzieren, gehört von Rechts wegen ihnen als Eigentum, nachdem sie den Lehensinhabern die schuldigen Abgaben daraus entrichtet haben. Auch die Hütten und der Hof, die er auf der ihm überlassenen Scholle gebaut hat, gehören dem Murundi zu eigen. Er kann aber von Haus und Hof und Feld vertrieben werden, wenn er etwa seine Abgaben nicht zahlt oder wenn er gemordet oder gestohlen hat, oder auch wenn der Lehensinhaber einen anderen an seine Stelle setzen will, der mehr zahlt oder ihm sonst genehmer ist (Nr. 19, S. 469). Gewöhnlich pflegen aber die Familien Generationen hindurch auf demselben Grund und Boden, der vor den Zeiten der Batussi wohl meist Eigentum des Bahutu-Clans gewesen ist (s. S. 104), sitzenzubleiben und ihn zu bebauen, für sich und teilweise für den Lehnsherrn. Die von den Batussi selbst bewohnten Gehöfte stehen meist etwas abseits von denen der Bahutu und außerhalb der Felder im Weideland.

Wie die Hütten, so gehört auch alles, was in den Hütten ist und was die Bewohner an sich tragen, diesen als Eigentum. So können Männer, Weiber und Kinder Eigentum haben, und Objekte des Eigentums können sein: Hütten, gepflanzte Bäume, auf den Feldern stehende sowie abgeerntete Feldfrüchte, aufgezogenes Vieh, Mobiliar, Arbeitsgeräte, Kleidungsstücke, Waffen, Schmucksachen, Handelswaren u. a. m.

Vergehen gegen das Eigentum, also Beschädigungen und Diebstähle (uwivi), sind nicht selten. Wenn aber jemand aus seiner Hütte fortgeht und sie unbewacht stehen läßt, genügt meist das Verstellen der Türöffnung durch einen geflochtenen Schirm, um ungebetene Besucher abzuhalten. Die Kraale sind zwar von starken Zäunen umhegt und die Pfade zwischen den Feldern oft von hohen Euphorbienhecken gesäumt (Taf. 20), aber diese sind nicht zum Schutz gegen Diebe errichtet, sondern zum Einpferchen oder Zurückhalten des Viehs. Stiehlt jemand etwas aus

dem Gehöft oder Feldfrüchte auf den Äckern, so wird er vor den Mutwale gebracht und zu schweren Leibesstrafen verurteilt, wenn er nicht sehr reichlich Schadenersatz leisten kann, von dem sich aber der Mutwale die Hälfte aneignet (Nr. 4, S. 224).

Der Mutwale, oder in kleinen Bezirken der Dorfchef, ist der Richter, der in allen Fällen Recht spricht. Die Batwa regeln ihre Rechtsstreitigkeiten gewöhnlich unter sich, ohne ihren Murundi-Mutwale darum anzugehen, aber die Batussi und die Bahutu bringen alles, was sie nicht im Familienrat ordnen können, vor ihren Mutwale. Der Kläger bringt womöglich mehrere Zeugen mit, zugleich aber auch ein Geschenk für den Richter, das nicht ohne Einfluß auf das Urteil ist (Nr. 19, S. 472). Körperstrafen werden an dem Verurteilten meist durch die Familienmitglieder des Geschädigten ausgeführt oder durch die Leibwache des Häuptlings, falls er eine hat. Über die Strafarten siehe S. 97.

Die zweite große Rechtssphäre sind die sozialen Verhältnisse. Zunächst einiges über die Standesgliederung, indem ich die Verhältnisse der Sippe und der Familie einem eigenen Kapitel vorbehalte (S. 98, 106). Wie schon oben erwähnt, ist die Standesgliederung durch die drei das Barundivolk zusammensetzenden Rassenelemente gegeben: hamitische Batussi, Bantu-Bahutu, Urbewohner-Batwa. Die Batussi sind der Adel kraft ihres Eroberrechtes, die Bahutu sind die Unfreien oder nur bedingt Berechtigten, die Batwa die rechtlosen Heloten. Abgesehen von den Batwa-Parias gibt es keine Sonderung in sich voneinander abschließende Kasten. Wohl aber haben die Priester (kiranga), die Zauberer und Medizinmänner (abafumu) und teilweise auch die religiösen Brüderschaften (ababandwa) eine Vorzugsstellung vermöge ihrer magischen Kräfte, die den anderen fehlen. Auch die Berufshandwerker, namentlich die Schmiede, haben eine besonders geachtete Stellung, sofern sie Batussi oder Bahutu sind; die der Batwa nie. Und wie überall, so genießen auch in Urundi die Reichen vor den Armen eines höheren Ansehens und Einflusses.

Batussi und Bahutu verkehren trotz des großen Standesunterschiedes, trotz des rechtlichen Abstandes und trotz des Hochmutes der Batussi meist auf freundschaftlichem Fuße miteinander, wie der Herr mit einem brauchbaren fügsamen Diener. Wenn der Mutussi ein auch noch so kleiner Mutwale oder Lehnsinhaber ist, vergißt der Muhutu doch nie, daß er in ihm den Herrn vor sich hat; täte er es, so würde er sehr empfindlich daran erinnert werden. Dem besitzlosen Mutussi gewöhnlichen Schlages aber betrachtet sich der „bessere" Muhutu sozial ebenbürtig. Mitunter, wiewohl selten, kommen sogar Ehen zwischen Batussi und Bahutu zustande, wiewohl sie nicht vollgültig sind (s. S. 101, 109). Auch soll, wie in Ruanda, ein Muhutu durch Gnade des Königs in die bevorrechtete Klasse der Batussi aufgenommen werden können.

Aber die Batwa stehen ganz für sich, außer und unter den anderen. Sie sind nicht Sklaven, die zu Dienstleistungen gezwungen wären, sondern Ausgeschlossene, Verworfene, die von den Batussi und Bahutu verachtet und verabscheut, als Tiere, nicht als Menschen angesehen werden (Nr. 19, S. 541). Man bezieht zwar von ihnen allerlei Gewerbeerzeugnisse, namentlich Töpfe, und gebraucht sie gern als Medizinmänner, Musikanten, Wächter, aber tritt nie in engere Beziehung zu ihnen. (In Ruanda macht man viel eher eine Ausnahme, namentlich am Königshof.) Niemals betritt ein Mutussi oder Muhutu eine Mutwahütte, nie ißt oder trinkt er mit einem Mutwa, nie benutzt er ein Gefäß oder Gewand, das schon ein Mutwa be-

mußt hat. Nur eins läßt man zu: daß der Mutwa den Murundi grüßt, und erwidert auch seinen Gruß, wiewohl anders als den eines Murundi.

Die Grußformen der Barundi sind außerordentlich verschieden nach der sozialen Stellung des Grüßenden und des Begrüßten, aber immer wird der Gruß mit einer gewissen zeremoniellen Feierlichkeit dargebracht und erwidert, so daß manche Beobachter darin eine Art religiöser Handlung sehen wollen. Auch der Inhalt der stereotypen Grüße deutet öfters religiöse Beziehungen an (s. S. 46). Vielleicht deshalb, wahrscheinlicher aber wegen der dem Murundi angeborenen oder anerzogenen großen Höflichkeit betrachtet jeder Murundi das Unterlassen des Grußes oder des Gegengrußes als eine beleidigende Grobheit. Entsprechend der sozialen Gliederung des Volkes lassen sich drei große Gruppen von Grüßen unterscheiden: 1. Begrüßung des Königs. Der Grüßende kniet nieder, beugt sich zum König vor, klatscht ihm entgegen in die Hände und ruft „uganse umwami" (gebiete, König) oder „ugire umwami" (sei gesund, König). Auch die Mitglieder der königlichen Familie, die Baganwa, die großenteils als Oberhäuptlinge die Provinzen regieren, werden ähnlich begrüßt. — 2. Begrüßung der Batwale aus nicht königlichem Geschlecht und der kleineren Gemeindechefs. Der Grüßende neigt sich dem Mutwale entgegen und ruft „amahoro umutwale" (Friede, Mutwale) oder „mwakeje umutwale" (bist du gesund erwacht, Mutwale?), worauf der Angeredete einfach „amahoro" oder „mwakeje" antwortet, oder der Grüßende ruft „turakuje ubwatsi" (wir bringen dir Gras dar) oder „sjinde awansi" (besiege deine Feinde). Dabei rupft der Begrüßende eine Handvoll Laub oder Stroh- oder Grashalme ab und legt sie dem König oder dem Mutwale zu Füßen; ein Symbol der Unterwerfung, denn das Gras oder Stroh ist das Sinnbild des Erdbodens und alles dessen, was auf ihm wächst (Nr. 14, S. 48; Nr. 22, S. 254; Nr. 4, S. 79). Die „Grashuldigung" ist bei den hamitischen Hirtenvölkern weit verbreitet und spielt auch bei den Galla eine zeremonielle Rolle (A. Werner, The Galla of East Africa; Journ. of the African Society, Bd. 13, S. 275). — 3. Begrüßung gewöhnlicher Barundi untereinander. Diese Begrüßungsarten sind außerordentlich zahlreich, je nach Tageszeit, nach Gelegenheit, Persönlichkeit usw. Auch hier hört man zuerst meist „mwakeje" oder „amahoro", dann aber einen ganzen Schwall von hin und her gehenden Phrasen. Zum Abschied ist der Zuruf „ibaba" oder „akababa" sehr gebräuchlich, den auch die Wanjamwesi haben (Nr. 19, S. 529).

Umarmungen und Küsse als Gruß kennen die Barundi nicht. Aber eine merkwürdige Art Akkolade ist als Begrüßung unter Verwandten und Freunden üblich, die sehr umständlich ausgeführt und von vielen Redewendungen begleitet wird (Nr. 23, 1904, S. 36). Wenn nämlich jemand einen Verwandten oder guten Bekannten trifft, guckt er ihn erst einige Zeit stumm an und geht dann auf ihn zu, ihm die gefalteten Hände entgegenstreckend. Der andere nimmt diese gefalteten Hände zwischen die seinigen und streicht dann sanft auf den Armen des Begrüßenden auf und ab, wobei sich Brust und Kopf der beiden einander nähern, als ob sie sich umarmen wollten. Während dieser Gesten entströmen zahlreiche Grußformeln in Anrede und Antwort den beiderseitigen Lippen, worunter sehr häufig die Worte „ischo, scho, amascho" (d. h. Rinder, Rinderherde) sind und bedeuten, daß man sich gegenseitig das höchste Gut und Glück, nämlich Rinder, wünscht. Ein sehr charakteristischer Hirtengruß, der zweifellos von den Batussi eingeführt ist (s. S. 46).

2: Meyer FO42 Rundi

Eine große Rolle im sozialen Verkehr spielt das Geben und Nehmen von Geschenken (isimano, ingawano). Auch dies geht in den mannigfaltigsten Formen vor sich, die durch die gesellschaftliche Stellung der Geber und Empfänger und durch den Anlaß der Schenkung bestimmt sind. Man beschenkt sich außerordentlich häufig in Urundi, aus Freundschaft oder Hochachtung, aus Höflichkeit oder zum Zeichen der Unterwürfigkeit; aber nur selten ist der Schenker selbstlos, sondern meist zielt er auf ein Gegengeschenk ab, das ihm nach der Sitte auch zusteht, oder, wenn er den Mutwale beschenkt, auf die Erlangung seiner Gunst in obrigkeitlichen Entscheidungen. Das Aufhören des Geschenkaustausches bedeutet Feindschaft, die Zurückweisung eine schwere Beleidigung. Zuerst wird die mitgebrachte Gabe, seien es Feldfrüchte oder Honigtöpfe oder Ziegen oder Bierkrüge oder sonst etwas, dem zu Beschenkenden vor die Füße gelegt, wobei der Geber nicht versäumt, von den Lebensmitteln etwas zu kosten, um zu zeigen, daß sie weder vergiftet noch verzaubert sind. Dann hält der Geber eine feierliche Ansprache, in der er den andern seiner Liebe und Verehrung versichert und auch von ihm freundliche Gesinnung erheischt und schließlich offen um ein schönes Gegengeschenk bittet; so will es die Sitte. Der Beschenkte antwortet ebenso feierlich und verspricht am Ende sein Gegengeschenk oder läßt es gleich anbringen, worüber der Empfänger häufig in Freudengeschrei ausbricht und wie besessen tanzt. Auch will es die Sitte, daß man vom Geschenk sogleich dem Geber etwas wieder zurückgibt, was die Darbringung des Geschenkes natürlich sehr erleichtert (Nr. 19, S. 87). Auch die Batwa üben diese Geschenksitten unter sich, aber ihren Barundichefs dürfen sie nur Töpfe, Eisengerät, Waffenstücke, Tabakpfeifen, Brennholz darbringen, niemals Bier, Honig oder andere Lebensmittel, da ein Murundi diese, die von einem Paria kommen, nie genießen würde.

Ein wichtiger Bestandteil in der gesellschaftlichen Gliederung und im Wirtschaftsleben sind die Haushörigen, die Dienerschaft. Sklaverei gibt es in Urundi nicht oder nicht mehr, ebensowenig in Ruanda. Die Batussi brauchen ja auch keine Sklaven, denn die Bahutu insgesamt sind Hörige der Batussiherren und leisten ihnen alle Dienste, die anderwärts in Ostafrika von Sklaven verlangt werden. Dagegen bestand bis um die Wende des Jahrhunderts ein recht lebhafter Sklavenhandel aus Urundi nach auswärts unter dem Einfluß der Araber und der Küstenleute und durch Vermittlung der an den West- und Ostgrenzen Urundis wohnenden Wawira, Bassuwi, Wassumbwa, Wanjamwesi. Als Sklaven wurden von den Barundi nicht nur die in den inneren Kriegen gefangengenommenen Landsleute, namentlich die Weiber und Mädchen, verkauft, sondern auch Waisen von ihren Verwandten, ja selbst Kinder von ihren Eltern (Nr. 19, S. 212). Der Kaufpreis wurde in Salz, Perlen, eisernen Hacken entrichtet, und am höchsten wurden die hübschen Batussimädchen bezahlt, die in die Harems der Araber, der vermögenden Küstenneger oder Wanjamwesi wanderten. In Uha (Heru) und in Usambiro wurden noch um 1900 öffentliche Sklavenmärkte abgehalten, wo hauptsächlich Sklaven aus Ruanda (Kissaka) und Urundi verkauft wurden. Damals schrieb ein Zeuge: „Alle Wege sind mit Sklavenzügen bedeckt, fast lauter Frauen und Mädchen. Unter 10 Sklavinnen gehen 8 zugrunde, denn jene Bergkinder ertragen schwer ein anderes Klima" (Nr. 14, 1900, S. 178). Heute haben diese Scheußlichkeiten mit dem Fortschritt der deutschen Okkupation aufgehört, oder es wird doch nur noch selten und geheim einmal ein Mädchen oder Kind aus Urundi in die Nachbarländer verkauft.

In Urundi selbst aber gibt es im Haushalt vieler einflußreicher Familien, namentlich der Batussi, anstatt der Hausſklaven hörige Hausdiener oder Knechte und Mägde (abaschumwi), die zwar persönlich frei sind, aber für den Herrn arbeiten müssen und nur Unterhalt und Wohnung bekommen. Sie gehen aus einer Art Adoption hervor, indem jemand, der keine Verwandten hat oder aus irgendeinem Grund seine Familie verlassen will, sich einem vermögenden Murundi oder einem Mutwale zu dauernder Dienstleistung anbietet. Dieser nimmt ihn in sein Gehöft auf und behandelt ihn wie ein Familienmitglied (Nr. 19, S. 13). Der Adoptierte tut Hausarbeit, hütet Vieh, bestellt das Feld, kann sich aber kein Eigentum erwerben. Wenn er aus dem Dienst ausscheiden und sich einem andern Herrn anbieten will, steht es ihm jederzeit frei, doch hat der bisherige Herr so viele indirekte Mittel, ihn zum Bleiben zu zwingen, daß die meisten einmal Adoptierten ihr ganzes Leben bei demselben Herrn zubringen.

Aus diesen Haushörigen, aus verarmten Verwandten und schmarotzenden Freunden, aus glückjagenden Schmeichlern, wirtschaftlich oder politisch Abhängigen verschiedener Art setzt sich die Klientel, die Gefolgschaft jedes wohlhabenden und einflußreichen Murundi zusammen, die ihm täglich im Kral ihre Huldigung darbringen und ihm auf seinen Ausgängen das Geleite geben. Je größer das Ansehen des Herrn, desto zahlreicher sein Gefolge; einen hochstehenden Mutussi sieht man selten mit weniger als einem Dutzend, oft mit 20—30 Begleitern einherschreiten. In Urundi heißt das Gefolge mafuatano, in Ruanda, wo dieselbe Einrichtung besteht, bagaragu.

Eine Schuldſklaverei gibt es in Urundi nicht. Für Rechtsverletzungen an Eigentum, Leib und Leben haben aber die Barundi verschiedene sehr drastische Strafen (ikihano). In den meisten Fällen kann der Schuldige oder seine Angehörigen oder sein Clan das Vergehen oder Verbrechen durch eine mehr oder minder große Zahlung in Naturalien, in Vieh, Salz, Perlen, Eisen usw., sühnen. Über das Maß entscheidet der Mutwale als Richter (S. 94). Wenn es sich aber um ein schweres Verbrechen, um Totschlag, Mord, schwere Verwundung handelt, tritt Blutrache der Sippe, des Clans (s. S. 105) in ihr Recht, und zwar unter Mitwirkung der Obrigkeit. Der Geschädigte oder, wenn er erschlagen ist, seine Sippe bemüht sich auf jede Weise, des Missetäters habhaft zu werden. Flieht dieser in eine Nachbarprovinz, unerreichbar dem rächenden Arm der geschädigten Sippe, so sucht man eines oder mehrere seiner Weiber, Kinder, Geschwister, nahen Verwandten oder Clangenossen an seiner Statt abzufangen. Der Gefangene wird gebunden und eingesperrt, bis ihn die Seinigen um hohes Lösegeld freikaufen. In den meisten Fällen geschieht dies; wenn sie es aber nicht tun, so schreiten die Geschädigten mit Einwilligung des Mutwale zur Exekution. Sie führen den Gefangenen an einen abgelegenen Ort und schneiden ihm zuerst die Hände, dann die Füße, eventuell auch die Ohren, Nase, Zunge ab. Darauf wird das unglückliche Opfer mit vier Pfählen durch die Arme und Schenkel hindurch auf den Erdboden festgenagelt, wo es endlich den Todesstoß in die Brust empfängt (Nr. 19, S. 472). Eine andere Exekution besteht darin, daß dem Gefangenen ein spitzer Pfahl vom Anus aus durch den Leib bis zum Hals getrieben und der so Gepfählte an einem öffentlichen Ort aufgestellt wird. Ganz ähnliche Formen hat die Blutrache bei den andern Bahima, bis zu den fernsten im Süden, in Ufipa (N. 47, S. 108—111). Auch Viehdiebstahl und Hexerei werden in Urundi so grausam bestraft.

Selbstmörder, die in Urundi wie in Ruanda durchaus keine unbekannte Größe sind, bringen sich gewöhnlich durch den Strang oder durch Ertränken ums Leben.

Der Eid (indahiro), das Anrufen der Gottheit oder der Manen oder des Königs zur Bekräftigung der Aussage, scheint bei den Barundi, die im übrigen sehr viel „schwören, fluchen, zaubern, lügen oder trügen", als Rechtsmittel nicht zugelassen zu sein. Dagegen wird vom Richter häufig das Gottesurteil über einen Angeklagten zur Offenbarung der Wahrheit verhängt, namentlich wenn es sich um die Beschuldigung der Hexerei und Zauberei handelt (Nr. 19, S. 405). Die üblichste Form ist die Speerprobe; sie besteht darin, daß der Beschuldigte mit einer glühenden Speerspitze in den Arm gestochen wird. Wenn Blut spritzt, ist er schuldig, andernfalls unschuldig. Auch die Wasserprobe wird angewandt, indem man den Angeklagten die Hand in ein Gefäß voll kochenden Wassers stecken läßt. Wenn er sich verbrüht, ist er schuldig, sonst nicht. Desgleichen wird unter Umständen die in ganz Afrika gebräuchliche Giftprobe gemacht. Natürlich gibt es allerlei Mittel, wie Einfetten, Einpulvern, Gegengifte u. a., die das Gottesurteil einigermaßen zu korrigieren wissen.

3. Clans, Exogamie, Totemismus

Im ganzen Zwischenseengebiet steht neben der durch die verschiedenen ethnischen Volksschichten gebildeten Standesgliederung, deren Oberschicht die Bahima-Eroberer oder Batussi sind, die Gliederung nach blutsverwandten Sippen oder Clans als untere Ordnung. Ihrer Natur nach gibt es Clans der Batussi, der Bahutu und der Batwa. Der Clan als Zusammenfassung der blutsverwandten Familien ist die Basis der ganzen sozialen Organisation Urundis wie auch Ruandas, Karagwes, Kisibas, Ankoles usw., während der politische Staat auf dem Lehnswesen aufgebaut ist. Nur wissen wir leider bloß wenig von den Clans der Barundi, da meine Vorgänger dieser Einrichtung gar keine Beachtung geschenkt haben und die Eingeborenen über diese Verhältnisse hauptsächlich aus Scheu vor der vermeintlich verhängnisvollen Namennennung (s. S. 111, 112) noch weniger gern Auskunft geben als über ihre religiösen Vorstellungen. Viel klarer liegen diese Dinge in Ruanda, wo Czekanowski mit Hilfe der Missionare und christianisierter Eingeborener zahlreiche interessante Aufschlüsse über die Clanverhältnisse gewinnen konnte (Nr. 48, Kap. 11). Was ich im nachstehenden mitteilen kann, danke ich, außer meinen Erkundigungen im Land, den Auskünften der Herren Hauptmann v. Langenn, Steinkeller und Pater v. d. Burgt.

In seinem Dictionnaire Français-Kirundi spricht v. d. Burgt von einigen priviligierten Batussigeschlechtern, aus denen die Könige ihre Weiber zu nehmen pflegen (s. S. 99, 101, 182,, aber von einer Gliederung des ganzen Volkes in Clans, die von einschneidender rechtlicher, sozialer und politischer Bedeutung ist, sagt er nichts. Auf meine direkte Anfrage erteilte mir Pater v. d. Burgt folgenden Bescheid: „Ich habe früher lange gemeint, daß das Clanwesen in Urundi überhaupt nicht bestehe. In Unjammesi wie in Kisiba (Nr. 31, S. 5) hört man fortwährend die Leute von ihren luganda (Familien, cognatio) und ihrem kisse (Plur. visse) = Clan reden; z. B. fast immer, wenn man eine Frau nach ihrem Namen fragt, sagt sie erst ihren Clannamen, z. B.: „ich bin eine Magana" oder eine „Njamurega" oder eine „Kundwa" usw. Aber in Mittel-Urundi habe ich nur einmal ein Weib sagen hören, daß sie eine Magana sei. Also so ausgesprochen wie in Unjammesi, Ussumi, Kisiba usw. besteht das Clanwesen in Urundi nicht. Ein Wort wie „Kisse" in Usambiro kenne

ich in Urundi nicht, aber die Warundi reden viel von ihrem „umurjango", was ebenfalls Sippe, Clan bedeutet. In Ruanda scheint das Clanwesen wieder stark ausgeprägt zu sein. Auch in Nord-Urundi (Mission Marienseen), wo viele Wanjakissaka eingewandert sind, hört man von ihren Clans sprechen, nicht aber bei den dortigen Warundi.

„Ob es in Urundi solche Clans viele gibt oder wenige, weiß ich nicht. Ich habe die hier folgenden Namen herausgefunden, garantiere aber nicht, daß es echte Urundi-Clannamen sind, sondern glaube eher, daß sie von der Peripherie des Landes stammen: Wajango, Wamagana, Wassindi, Waschambo, Wasinga, Wajambo (Wanjambo), Wasigawa (Wasigaba) u. a. m. Wenn übrigens die Bevölkerung in Clans gegliedert ist, so wohnen die Glieder überall verstreut ohne Regel, ohne Beschränkung, also nicht lokalisiert."

Ferner nennt v. d. Burgt (s. S. 183) als die der Königsfamilie am nächsten stehenden Geschlechter die Wakundo, Warwanda (Wawanda, Babanda?), Wenengwe, Wanjakarama, Wasigaba, Waterwa (Watoirwa?). Herr Hauptmann v. Langenn gibt mir dagegen als die vornehmsten Batussigeschlechter die Banjakarama, Benengwe, Banjakissaka, Baschunguka, Boschoka an, denen sich in zweiter Linie die ebenfalls sehr vornehmen Bawanda, Bahondogo, Bassawu, Bawejuru, Baschama, Bega, Bawankundu, Babile, Basindakire u. a. anreihen. Einige dieser Geschlechternamen, wie die Bega, die Bawanda, die Bakundo, die Baschama, wurden mir in Urundi selbst wiederholt genannt, dazu die Baschambo, Basito, Bagessera, Bakango, Balenge, Baransi, Balesi, Bakono, Bassekе, Bassabu, Bajosi, Barire.

Vergleichen wir diese Namen mit den von Czekanowski in seine Clantabellen aus Unjoro, Toro, Ankole, Mpororó, Kjamtwara, Kisiba und Ruanda eingetragenen (Nr. 48, S. 41, 88, 233—251) und mit den von Kandt, v. d. Burgt, van Thiel, Stuhlmann, P. Schumacher, Meldon, Roscoe, Rehse u. a. genannten Geschlechternamen, so finden wir mehr als die Hälfte der Barundinamen auch in jenen Ländern wieder, namentlich in Ruanda, wohin also die nächste Verwandtschaft der Barundigeschlechter deutet; als die ältesten Sippen werden dort von der Legende bezeichnet die Basinga, Bagessera und Basigaba (s. S. 153). Wahrscheinlich sind die gleichnamigen Clans in Urundi und den nördlicheren Bahimastaaten nur Abzweigungen desselben, ursprünglich einheitlichen Clans, die sich infolge starker Vermehrung oder kriegerischer Bedrängung abgetrennt und durch Wanderung weiter verbreitet haben. Am verbreitetsten durch Urundi, Ruanda und die nördlichen Länder des Zwischenseengebietes bis nach Unjoro hinein sind die Bawanda, Bega, Bakango, Baschambo, Bagaia, Basindi, Basinga, Basito, Bajango, Basigaba, Bajubu u. a.; wogegen die Bahondogo, Bassabu, Baschunguka, Babile, Basindakire, Barire, Bassekе auf Urundi beschränkt zu sein scheinen, wenn sie nicht von späteren Forschern auch noch anderwärts gefunden werden. Vielleicht sind ihre Bluts- und Namensverwandten mehr im Süden und Westen als im Norden zu suchen.

Die Mehrzahl der genannten Clans sind solche der Batussi, aber die Bamagana, Bajango, Bassekе, Basjubu, Barire u. a. sind Bahutu, und dazu kommen noch zahlreiche Clans der Batwa, die ich aber nicht erfragen konnte. Manche Clannamen betreffen sowohl Batussi- als auch Bahutuclans; ja einige, wie z. B. die Bagessera und Basinga, erstrecken sich sogar auf Batussi-, Bahutu- und Batwaclans. Die Art der Clangliederung, die innere Organisation und Ordnung der Clans, ihre soziale Wirksamkeit und ihre gegenseitigen Rechtsverhältnisse scheinen bei den Batussi nur in wenigen Beziehungen wesentlich anders zu sein als bei den Bahutu und bei den Batwa, und zwar namentlich in den Einrichtungen, die auf die Reinhaltung des Batussiblutes, auf die exklusive Stellung ihrer Rasse und damit ihrer Herrschaft

L. Meyer FO42 Rundi

abzielen. Es haben sich bei ihnen noch Reste einer früheren Endogamie erhalten (s. S. 101), während sonst die Clans streng exogam sind. Wahrscheinlich haben sich die Batussi, wie in vielen andern Sitten und Institutionen, so auch in der Art der Clanorganisation den älteren Volkselementen Urundis allmählich angeglichen; aber dennoch haben die Batussi viel dazu beigetragen, daß das alte Clanwesen immer mehr an Bedeutung verlor, denn je stärker das Königtum wurde, je mehr Macht und Rechte die vom König eingesetzten Batwale und die selbständigen Batussihäuptlinge beanspruchten und ausübten, desto weniger konnten sie das Weiterbestehen der Autorität der bisherigen Clanobersten oder Clanältesten dulden, desto mehr drängten sie die bisherigen Clanbefugnisse zurück und setzten dafür die Verwaltungsorganisation des heranwachsenden Batussi-Lehnsstaates ein. Am meisten ist die öffentlich-rechtliche und die soziale Tätigkeit der Clans in dem streng monarchischen Ruanda zurückgedrängt und eingeengt, aber auch in dem weniger stark monarchischen, mehr differenzierten Urundistaat haben die Clans den größten Teil ihrer früheren Rechte an die Häuptlinge und den König abgeben müssen und ihren festen Zusammenhang verloren. Trotzdem bestehen die Clans als natürliche Gliederung des Volkes neben und unter der künstlichen des Staates weiter und haben nicht nur in ihrer Organisation und ihren Sitten eine Menge Überreste aus alter Zeit bewahrt, sondern üben auch noch viele auf ihrer Organisation fußende Tätigkeiten aus, namentlich familienrechtliche, die auch von allgemeiner sozialer Bedeutung und Wirkung sind.

Als Hauptpunkte der Clanorganisation sind aus früherer Zeit in Geltung geblieben: Der patriarchalische Charakter seines Verbandes; die Exogamie der Clans untereinander; die totemistische Eigenart jedes Clans und damit im Zusammenhang die seine Genossen treffenden Gebote und Verbote (abasiru), namentlich Speiseverbote, wodurch die Clans scharf voneinander geschieden werden; der Kommunismus der Clangenossen; der Schutz des Sippengenossen durch seinen Clan, nötigenfalls durch Blutrache, was auch unter der Batussiherrschaft ein Korrektiv gegen Gewalttaten der Batussibeamten ist.

Überblicken wir kurz diese Hauptpunkte, wie sie Czekanowski auch für Ruanda skizziert. Jeder Clan rekrutiert sich durch Patriarchat, Vaterfolge; jedes Kind gehört von Geburt dem Clan (umurjango) seines Vaters an. Nur ausnahmsweise werden auch Fremde in den Clan aufgenommen, sind aber nicht vollberechtigt. Je mehr männliche Sippengenossen ein Clan hat, desto schärfer ist er nach innen und außen, desto kräftiger schützt er den einzelnen, desto mehr nützt er ihm; daher namentlich der heiße Wunsch jedes Familienvaters, möglichst viele Söhne zu bekommen und sie seinem Clan zuzuführen.

Ehen zwischen Angehörigen desselben Clans sind verboten, ein Clangenosse darf sich eine Frau nur aus einem andern Clan holen. Es herrscht also strenge Exogamie. C. Meinhof führt den Anfang dieser bei den afrikanischen hamitischen Hirtenstämmen besonders ausgeprägten Sitte darauf zurück, daß die Frau wohl ursprünglich nicht dem einzelnen Mann, sondern der ganzen Sippe, allen Clangenossen des Mannes gemeinsam gehörte, daß also jedesmal der ganze Clan des Mannes das Weib heiratete, das eben darum aus einem andern Clan sein mußte (Nr. 41, S. 84). Deutliche Reste dieser Gruppenehe sind noch bei vielen dieser hamitischen Stämme wie auch bei den Massai in der Sitte vorhanden, daß der Mann seine Frau jedem ihn besuchenden Clangenossen für die Zeit des Besuches überläßt und daß die

verheirateten Weiber auch sonst für die Männer ihres Clans so zugänglich sind, daß es daneben bei diesen Stämmen fast gar keine Prostitution gibt und daß der Begriff Ehebruch nur für den illegalen Verkehr außerhalb des Clans Geltung hat. In beschränktem Maß gilt dies auch von den exogamen Ehen der Barundi (s. S. 107). Aber niemals geht ein Mitglied eines Batussiclans eine vollgültige Ehe mit einem Mitglied eines Bahutu- oder gar Batwaclans ein, niemals kommen vollwertige Mischehen von Angehörigen der Bahutu- mit denen der Batwaclans vor. Der Rassengegensatz unter den drei großen Bevölkerungsgruppen ist stärker als die exogamischen Vorschriften. Zwar kommen nicht selten Batussi in Bahutuclans und Bahutu in Batussiclans vor, aber diese stammen entweder aus Konkubinaten mit Bahutuweibern oder aus andern, durch besondere Verhältnisse entstandenen unebenbürtigen Verbindungen und werden nicht als vollgültige Clanmitglieder betrachtet.

Die Exogamie der Clans scheint aber keine unbeschränkte zu sein, ein Clan der Batussi scheint nicht mit allen andern Batussiclans, ein Clan der Bahutu nicht mit allen andern Bahutuclans in die Ehe treten zu können, sondern es scheint, daß der Angehörige eines Clans in der Wahl seiner Ehefrau resp. des Ehemanns, auf eine bestimmte Zahl von andern Clans beschränkt ist, höchst wahrscheinlich auf die, welche mit ihm das gleiche Totem (umusiru) haben. Wie bei andern Völkern mit totemistischer Exogamie dürften es auch hier alte, auf gemeinsamen animistischen Vorstellungen beruhende totemistische Kultgemeinschaften gewesen sein, die miteinander in Eheverbindung getreten sind (Nr. 43, S. 162); es dürfte auch hier der Eheverkehr sich auf Clans beschränken, die das gleiche Totem haben oder befreundeten Totemgruppen angehören. Bei andern ostafrikanischen Stämmen, z. B. den Wagogo, Wahehe, Basipa, Banjoro, Baganda wird die Ehe durch Totemgleichheit wenigstens nicht ausgeschlossen (Nr. 49, S. 164). In jedem Fall ist nicht die Gleichheit des Totems, sondern nur die Zugehörigkeit zu derselben Sippe, also die Blutsverwandtschaft, maßgebend für die Exogamie. Exogame und totemistische Gruppe haben offenbar verschiedene Entstehung, auch da, wo sie sich decken (Nr. 49, S. 166).

Im übrigen Ostafrika finden wir die Gliederung in exogame, totemistische Clans bei den Sulu (Nr. 30, Bd. II, S. 380), den Wangoni (305), Wagogo (402), Wahehe (404), Wahela (406), Wapaa, Mafua, Matembe (406), Massai (408), Watakomba (420), Nandi, Suk, Turkana, Karamojo, Kamasia (426), Wakawirondo (448), Basoga (457), Baganda (472), Banjoro (513), Batoro (531), Banjankole (535), Galla (540), Basipa (Nr. 31, S. 5—6), Basipa (Nr. 47, S. 131—135), Wakamba, Wataweta, Wakihnu, Wahena, Wanjamwesi, Wasukuma, Wasango, Wawemba u. a. m. (Nr. 49, S. 122—124). Wo bei diesen Stämmen nicht die Clans selbst exogam sind, wie bei den Wahehe und den Massai, sind es die Subclans, in welche die Clans zerfallen. Häufig ist die Vierzahl der Clans, und fast überall heißt das Totem musiro oder umusiru (Plur. abasiru).

In Urundi ist nur die Königssippe, der Clan der Baganwa, nicht streng an die exogamen Vorschriften gebunden. Ihre Mitglieder können sich mit andern Clans des hohen Batussiadels verheiraten (Exogamie), aber auch mit Baganwa (Endogamie). Der Urundikönig selbst heiratet stets exogam aus einem der vier (oder sechs?) höchsten Clans (S. 99, 182). Aber ausnahmsweise darf resp. muß in Urundi wie in Ruanda der König sogar seine eigene Schwester oder Tochter heiraten (s. S. 182).

Auch bei den Bahima Ankoles, Unjoros, Ulipas, bei den Baganda und den Galla oder Oromo dürfen die Könige und die Prinzen aus königlichem Geblüt endogam in der Königssippe, ja sogar ihre Schwestern heiraten, während die übrigen Clans exogam sind (Nr. 30, Bd. II, S. 523, 538, 541; Nr. 27, S. 105; Nr. 47, S. 49, 132; Emin Bey, Peterm. Mitteil. 1879, S. 120).

Die Schwesternheirat als Extremform der Endogamie findet sich aber in Ostafrika nur als Notfall, wenn das Herrschergeschlecht die Reinhaltung seines Blutes nicht durch eine andere Verbindung besser zu wahren vermag, und sie findet resp. fand sich wahrscheinlich auch bei anderen Völkern der Gegenwart und Vergangenheit nur in Herrschergeschlechtern, die, wie die Bahima, als ein ursprünglich landesfremdes Element friedlich eingewandert oder erobernd eingedrungen sind und sich gegen alle Vermischung mit den Unterworfenen abschließen (Nr. 43, S. 150).

Aus dem Umstand, daß immer mehrere Clans das nämliche Totem haben, läßt sich wohl mit Recht schließen, daß diese Clans ursprünglich einem Stamm angehört haben, der sich später infolge allzu großen Wachstums in zwei und dann in mehrere Sippen oder Clans geteilt hat, während sie das früher gemeinsame Totem beibehalten haben. Die Clans haben nach der Trennung verschiedene Namen angenommen, aber nicht ist bei den Bahima und Bahutu Ostafrikas, wie bei den nordamerikanischen Indianern, der Totemname als Name des Clans selbst angenommen worden, sondern wie bei den Australiern sind Clanname und Totemname verschieden, während sich der Totemkult und seine Genossenschaft, wenn auch in abgeschwächter Form, erhalten haben (vgl. Nr. 43, S. 142 bis 143). Nur in wenigen Einzelfällen sind die Namen der Sippen mit dem ihres Totems bei den Basoga, Basiba, Banjoro identisch, wogegen die Sippen der Baganda durchweg nach ihrem Totem benannt sind (Nr. 49, S. 155).

Kultobjekt ist das Totem (umusiru) des Clans oder der Clangruppe in Urundi wie in Ruanda immer noch, und sei es auch nur im passiven oder negativen Sinn, insofern als alles, was mit dem Totem zusammenhängt, von seinem Clan streng gemieden werden muß. Ein aktiver Kult aber wird dem Totem nicht gewidmet, weder bei den Barundi noch bei einem andern Bahimavolk (vgl. auch Nr. 47, S. 133, 134 und Nr. 49, S. 145, 147). Nur Opferspenden werden ihnen gelegentlich dargebracht (s. S. 118). Das Totem ist bei den allermeisten Barundiclans ein Tier oder Teil eines Tieres, viel seltener ein Gegenstand, wie z. B. das kleine Kissen, mit dem Lasten auf dem Kopf getragen werden, oder der Korb, in dem Bataten aufbewahrt werden, noch seltener Pflanzen oder Pflanzenteile, Blumen, Steine. Das starke Überwiegen des Tiertotems hängt, wie bei allen totemistisch gegliederten Völkern, wohl damit zusammen, daß das Totemtier ursprünglich als das „Ahnentier" galt. Das scheint aber bei den Barundi und Banjaruanda nicht zu bedeuten, daß diese Tierspezies als der Stammvater oder die Stammutter des betreffenden Clans angesehen wird, sondern daß die Seele jedes Clangenossen nach seinem Tod in ein Tier dieser bestimmten Art übergehe. Es besteht offenbar der Glaube an eine Verwandtschaft zwischen der Menschensippe und der Totemtierspezies ohne die Vorstellung einer gemeinsamen Abstammung von demselben Ahnentier, und diese Verwandtschaft erneuert sich bei jedem Todesfall eines Sippengenossen durch den Übergang seiner Seele in ein Tier seiner Totemspezies. Denselben Glauben haben in Mittelafrika viele Stämme des nördlichen Kongobeckens und des westlichen Sudan (Nr. 49, S. 140—142).

v. d. Burgt glaubt, daß die Königsfamilie der Barundi kein Totem habe (Brief). Nach anderen Angaben ist es aber wahrscheinlich die große Pythonschlange (s. S. 118), die ja auch „Seelentier" der Könige ist; so auch bei den Basiba (Nr. 31, S. 107, 130) und den Baganda (Nr. 30, Bd. II, S. 500). Nach dem Glauben der Banjankole gehen die Seelen der Könige in Löwen, die der Prinzen in Schlangen über (Nr. 26, S. 151; Nr. 27, S. 102); bei den Banjaruanda die der Könige in Leoparden.

Die eine Wurzel des Totemismus ist also hier der Glaube an eine Verwandtschaft zwischen Clangenossen und Totemtier, die andere ist derselbe Animismus, aus dem auch die Scheu und Furcht vor dem in einem Tier oder einem andern Objekt hausenden Dämon eines Verstorbenen und damit im Zusammenhang der ehrfürchtige Ahnenkult hervorgehen (vgl. Nr. 49, S. 169). Die Totemtiere sind daher mit vielen der allgemein als Sitz menschlicher Seelen aufgefaßten „Seelentiere" (s. S. 118) identisch, und zwar sind es auch hier bezeichnenderweise solche Tiere, die sich durch große und rasche, der vorgestellten Hauchseele entsprechende Beweglichkeit auszeichnen, wie z. B. Schlange, Eidechse, gewisse Fische und Vögel, Fischotter, Wiesel, Zwergantilope, Meerkatze, oder die ein unheimliches Aussehen oder sonst schlimme Eigenschaften haben, wie z. B. Chamäleon, Stabheuschrecke, Leopard, Büffel, Flußpferd. Aber auch Haustiere besonderer Art, wie die schwarzen, weißgestreiften oder in anderer bestimmter Weise gezeichneten Kühe oder bestimmte Varietäten der Schafe, sind Totemtiere mancher Clans; während die Verehrung des Rindes überhaupt, das nicht als Arbeits- und nicht schlechthin als Schlachttier benutzt wird, darauf hindeutet, daß es einst als Kulttier des Bahima-Hirtenvolkes gehalten wurde, was es teilweise noch heute ist. Wenn von manchen Tieren nur Leber, Herz, Eingeweide als Totem einiger Clans bezeichnet werden, wie auch bei vielen anderen Bahima- und Bantustämmen, so sind sie das wahrscheinlich teils deshalb, weil der Mutterclan sich in mehrere Totemgruppen gespalten hat, teils weil diese Organe des Tierkörpers mit am liebsten als Träger der Seele betrachtet werden, teils aus dem praktischen Grunde, weil man sich nicht den Fleischgenuß des ganzen Tieres versperren wollte. Einfach das Rind als solches zum Totem zu wählen, wie etwa die Hyäne oder das Chamäleon, wäre für den Clan eines Hirtenvolkes unmöglich gewesen, weil der Clan sonst vor dem Tabu seines Totems hätte hungern müssen.

Dem Clangenossen ist sein Clantotem, sein Umufiru, ein Gegenstand der Scheu, weil es ihm entweder als Angehöriger einer früheren Generation seiner Sippe Ehrfurcht oder aus andern Gründen Widerwillen erweckt; es ist ihm tabu, weil es ihm entweder wegen seiner hohen Eigenschaften heilig oder wegen seiner niederen, häßlichen Eigenschaften unrein erscheint. In der Rückwirkung auf das Verhalten des Clangenossen zu seinem Totem sind diese beiden Gefühlsregungen gleich: das Umufiru wird scheu gemieden, jede Verletzung oder gar Tötung des Totemtieres, jede Berührung oder engere Beschäftigung mit dem Totem oder mit einem Teil von ihm gilt als ein Vergehen, von dem man sich nur schwer reinigen kann, der Genuß seines Fleisches, seines Blutes, seiner Milch ist verboten. Aus diesem strengen Speiseverbot entwickelte sich die jetzt überwiegende Anschauung, daß das Fleisch, Blut, Milch und andre Teile dieses Tieres unrein und dem Clangenossen schädlich seien. Die Verunreinigung kann nur durch umständliche Zeremonien beseitigt werden, wobei der umufumu (Medizinmann) je nach der Schwere des Falles die Höhe der Buße bemißt. Außerdem strafen sich Übertretungen des Totemverbotes, insbesondere des Speiseverbotes, von selbst auf magischem Wege durch Erkrankung des Übeltäters oder gar durch seinen Tod (vgl. Nr. 49, S. 152, 153).

Da nun aber die Mitglieder anderer Clans ohne Scheu und Folgen von diesem Totemtier essen, so erscheinen auch sie dem Clan dieses betreffenden Totems unrein. Es errichten also diese Eßverbote eine nach mehreren Seiten trennende Scheidewand zwischen den Clans der verschiedenen Totems. Wenn z. B. Angehörige des Clans der

Bawanda (Babanda), die die Zwergantilope als Totem haben, mit Angehörigen des Clans der Baschama (Totem: Klippschliefer) oder des Clans der Bagessera (Totem: Bachstelze) zusammen sind, meiden sie ihre gegenseitige Berührung und dürfen nicht zusammen essen. So auch in Ruanda. Auch das allgemeine Verbot, daß die Batussi nicht mit den Bahutu und Batwa, die Bahutu nicht mit den Batwa essen dürfen, hat außer dem rassenhaften Kastengeist wohl solche totemistischen Gründe, schon deshalb, weil manche Bahutu und Batwa gelegentlich Ziegen- und Schaffleisch essen, das die Batussi verabscheuen. Auf die Kinder sollen sich die totemistischen Speiseverbote nicht erstrecken, ebensowenig wie in Ruanda (Nr. 48, S. 240), wohl aber auf die Frauen.

B. Ankermann läßt die Frage nach dem Alter und der Herkunft des Totemismus in Afrika offen, gibt aber der Vermutung Raum, daß die Hamiten als Träger des Totemismus anzusehen seien, weil in vielen Stämmen eine nicht totemistische Unterschicht von einer totemistischen Oberschicht beherrscht werde, die hamitisch sei. In Urundi wie in Ruanda ist sowohl die Unterschicht, die Bantu (Bahutu), wie auch die herrschende hamitische Oberschicht, die Batussi, totemistisch; ja auch die pygmoiden Urbewohner, die Batwa, sind in totemistische, exogame Clans gegliedert. Ich möchte deshalb und aus andern Gründen, die mit dem allerwärts offenbar sehr hohen Alter der Totemkultur zusammenhängen, mich bezüglich der Barundi und Banjaruanda viel mehr der von Ankermann für die wahrscheinlicher angesehene Hypothese anschließen, daß schon die Urneger, aus denen die Sudanneger und die Bantu hervorgegangen sind, totemistisch waren (Nr. 49, S. 176—178), und daß da, wo totemistische Neger von totemistischen Hamiten beherrscht werden, wie in Urundi und Ruanda, die Hamiten ihren eigenen mitgebrachten Totemismus mit dem der Unterworfenen vermischt haben, wie sie wohl auch ihre mitgebrachte eigene Clanorganisation und andere Kulturelemente mit jenen der unterworfenen Bantu vermengt haben (s. S. 100).

In der inneren Organisation und im inneren Leben des Clans kommt das starke Solidaritätsgefühl seiner Genossen vor allem im weitgehenden Kommunismus zum Ausdruck. Wo die Clans noch nicht durch das Königtum und seine Staatsorganisation aufgelöst und die Clanmitglieder in die verschiedensten Lehnsbezirke des Batussistaates zerstreut worden sind (s. S. 89), sondern sich ihren alten Zusammenhang und ihre Autonomie großenteils noch bewahrt haben, wie namentlich in den mehr oder minder unabhängigen Grenzprovinzen Urundis (und Ruandas), da bilden die Clans, und zwar naturgemäß vor allem die vor der Batussiherrschaft ansässigen Bahutuclans, kleine oder große Gemeinden, die unter einem selbstgewählten Clanältesten (umugabo) stehen. Oft ist die Würde dieses Umugabo erblich. Der kommunistische Kernpunkt der Organisation dieser Clans ist das gemeinsame Eigentum am Grund und Boden, auf dem der Clan sitzt. Das Land gehört dort der Clangemeinde, wohl weil es ursprünglich vom gesamten Clan in Besitz genommen und nutzbar gemacht worden ist, während der einzelne Clangenosse nur den Nießbrauch an dem von ihm bestellten Boden oder Weidestück hat. Wirkliches Eigentum des einzelnen ist nur die Hütte, die er darauf baut, das Inventar an Geräten, Werkzeug und Waffen, und das Vieh, das er aus den ihm zu Lehen gegebenen Rindern aufzieht (s. S. 93).

Missionar E. Johanßen, der 1907 die ersten evangelischen Missionsstationen Dsinga und Kirinda in Ruanda gegründet hat und ein vorzüglicher Kenner der Banjaruanda ist, sagt über die soziale Bedeutung der Ruanda-Clans: „Diese Sippenverbände überliefern die alten Sitten und Gebräuche von einem Geschlecht aufs andere und bewahren insofern die nationale Eigenart vor Vermischung und Untergang. Je leichter es ist, durch Auflösen der Ehe und durch Wiederheiraten den Familienverband im engeren Sinn zu lockern, um so

wichtiger ist der feste, unauflösliche, religiös bestimmte Verband der Sippe. Mit der Zerstörung dieses Verbandes würde das ganze Volk auseinanderfallen und sich in einzelne auflösen, die jedem Einfluß ausgesetzt wären. Der Sippenverband als Träger der Überlieferung und der religiösen Sitte (Totem, Speiseverbot, Opfergemeinschaft) hat unzweifelhaft bis jetzt eine große volkserhaltende Bedeutung gehabt." (Nr. 39, S. 73.) Diese Charakterisierung trifft auch auf die Clans der Barundi zu.

Die Clanorganisation hat aber einen mächtigen Feind im Königtum der Batussi. Die wachsende Macht der Batussikönige hat, wie oben gezeigt, den gesamten Grund und Boden und alles Vieh als Eigentum des Königs in Anspruch genommen, der es in großen oder kleinen Parzellen an seine Batussigefolgschaft zu Lehen gibt (s. S. 89). Der Lehnsmann des Königs teilt sein Lehen wieder in kleineren Parzellen an seine Leute zur Nutznießung auf, und der bisherige Clanälteste wird gewöhnlich zum Mutwale des Königs eingesetzt und treibt für ihn die Steuern und sonstigen Abgaben ein, wovon ihm ein Anteil zufällt. So wird unter dem erobernden Königtum der Clan sozial und wirtschaftlich ziemlich schnell zerrüttet und geht in der politischen Lehngemeinde des Staates auf, während er seinen Clannamen, seine alten Sitten, manche seiner Einrichtungen, sein Totem noch lange beibehält.

Ein Element der alten sozialen Clanorganisation haben aber die Clangenossen auch in der politischen Neuordnung des Batussikönigtums bewahrt, weil es ihnen einen starken Rückhalt gegen Übergriffe ihrer Herren gibt: die Blutrache (kuhora). Sie war das ursprünglichste, kräftigste Mittel zum Schutz des sich solidarisch fühlenden Clans gegen Existenzschädigung durch andere Clans und ist noch heute die stärkste Schutzwehr des einzelnen, obgleich die öffentliche und private Sicherheit unter der festen Hand der Königsbatwale erheblich zugenommen hat. Trotz der staatlichen Strafrechtspflege der Batwale wird die Blutrache doch immer noch von den Clangenossen als wirksamste Selbsthilfe und als schützendes Schreckmittel der politisch Schwächeren ausgeübt. Wer den Angehörigen eines Clans tötet oder verwundet, wird von den Genossen des geschädigten Clans ebenfalls getötet oder verwundet (s. S. 97), und wenn dies nicht gelingt, trifft die Blutrache ein anderes Mitglied des verbrecherischen Clans. Ja, noch mehr: manche Clans begnügen sich nicht mit der gleichen Vergeltung, sondern rächen sich für den Verlust eines Genossen durch den Totschlag zweier oder mehrerer des gegnerischen Clans. Früher war dadurch ein permanenter Kriegszustand im eigenen Volk geschaffen, der kein größeres politisches Gemeinwesen aufkommen ließ und die Widerstandskraft der Barundi gegen äußere Feinde außerordentlich schwächte. Ebenso war es in Ruanda (Nr. 48, S. 238). Erst das starke Königtum der Batussi hat in seinem eigenen Interesse diesem fortwährenden inneren Kleinkrieg ein Ende gemacht. Aber nun üben die Clans die Blutrache zum Schutze ihrer Genossen im geheimen aus; aus dem offenen Kleinkrieg ist der hinterhältige Mord geworden, vor dem auch der mächtigste Mutussi-Mutwale nicht sicher ist, wenn er sich blutige Gewalttaten gegen einen Clan hat zuschulden kommen lassen. Die Wirkung dieser vergeltenden Volksjustiz und ihr Ansehen beim Volk ähneln jenem unserer mittelalterlichen Feme, wie sehr auch sonst beide verschieden sind.

Achtes Kapitel

Ehe, Geburt, Tod

1. Eheschließung, Frau, Kinder

Die Barundi heiraten (kurongora) meist in recht jugendlichem Alter; die Männer, sobald sie die Mitgift zahlen können, die Mädchen oft schon mit 12 Jahren und noch jünger, falls sie eher mannbar werden. Freiwillig bleibt sehr selten ein Mann unverehelicht. Wenn einer spät zum Heiraten kommt, liegt es nur daran, daß er die Mitgift, d. h. den Kaufpreis für die Frau, nicht aufbringen kann. Die Ehen sind exogam, Heiraten innerhalb desselben Clans kommen nicht vor (s. S. 100). Brautraub als Eheschließungssitte ist unbekannt und wird, wenn er im Einzelfall einmal vorkommt, als gemeiner Diebstahl behandelt (Nr. 19, S. 358). Konkubinat kommt namentlich dann vor, wenn der Sohn eines Mutwale oder Häuptlings auf das Herangewachsen eines ranggleichen Mädchens warten muß, das ihm die Eltern zur Ehefrau bestimmt haben; dann nimmt er sich für die Wartezeit eine Konkubine aus niederem Stand. Gewöhnlich lassen aber die Eltern den Söhnen freie Wahl.

Wenn ein junger Mann Gefallen an einem Mädchen findet, trägt er ihr, ohne zunächst jemand anders zu befragen, die Ehe an. Willigt sie ein, so bittet der Jüngling seine Eltern um die Zahlung der „Mitgift", und wenn diese ihre Zusage gegeben haben, schickt der Jüngling einen Brautwerber zu den Eltern oder, falls diese gestorben, zu den nächsten Verwandten des Mädchens. Gibt ihm der Vater oder, wenn dieser tot ist, die Mutter eine Absage oder erklären sie, daß das Mädchen schon versprochen sei, so ist die Sache erledigt, und die beiden Ehekandidaten müssen aufeinander verzichten. Etwaiger außerehelicher Verkehr gegen das Verbot der Eltern setzt nicht selten das Mädchen schweren körperlichen Züchtigungen aus, und wenn sie etwa gar schwanger werden sollte, wird völliger gesellschaftlicher Bann über sie verhängt, denn sie hat dadurch ihre Eltern um den Kaufpreis betrogen und andere Mädchen um die Aussicht gebracht, an ihrer Stelle um die Ehe befragt zu werden.

Wenn aber der Vater resp. die Mutter des Mädchens die Werbung annehmen, hat der Werber weiterhin um den Kaufpreis (inkwano) für die Braut zu verhandeln. Dieser schwankt in seiner Höhe sehr nach der Person, der Stellung, dem Vermögen des Bräutigams und der Braut. Bei der großen Menge der Unbemittelten genügen ein paar Stränge kleine Perlen und einige Töpfe Pombebier. Bei Wohlhabenderen kostet die Braut außer Bier und Perlen noch eine oder mehrere Ziegen, eventuell auch ein oder zwei Rinder (Nr. 4, S. 221). In den Familien

[A106]

der Großen, der Baganwa, ist eine Braut selten unter einem Preis von 10—15 Rindern zu haben. Es gibt aber auch Brautkauf auf Anzahlung eines Teiles des vereinbarten Preises, während für den Restbetrag der junge Ehemann haftet, ihn aber nicht zu entrichten braucht, falls die Ehe bald wieder geschieden wird.

Die Objekte des vereinbarten Kaufpreises werden alsbald vom Bräutigam durch den Brautwerber den Brauteltern überbracht, und sobald sie abgeliefert sind, folgt die Braut dem Werber zur neu erbauten Hütte des Bräutigams, wo nun die Hochzeit durch Geschenke der Familienmitglieder, durch festliches Essen und Trinken und Tanzen gebührend gefeiert wird. Mit der Hochzeit tritt die Frau in die Familie des Mannes (Patriarchat) ein. Am Hochzeitstag muß die junge Frau große Betrübnis heucheln und sich das Haupt verschleiern, der Mann ihre Trauer durch Geschenke zu lindern suchen. Sieben Tage bleibt das junge Paar ungesehen in der Hütte, aber auch an den folgenden Tagen geht die Frau nur verschleiert aus (Nr. 4, S. 222; Nr. 19, S. 359).

Auf Jungfräulichkeit der Braut wird Wert gelegt. Wenn nach der Hochzeitsnacht die Schlafmatte der jungen Frau Blutspuren aufweist, schickt der Ehemann dieses Attest dankend an die Eltern der Frau und fügt eine Feldhacke als Geschenk hinzu.

Ehehindernisse gibt es eine ganze Reihe. Vor allem dürfen Blutsverwandte in direkter und in Seitenlinie, Angehörige desselben Clans, derselben Totemgruppe nicht einander heiraten: Exogamie ist oberstes Gebot (s. S. 100).

Auch bei den Batwa Urundis ist die Ehe unter nahen Verwandten unstatthaft. Verboten oder doch nur in seltenen Ausnahmen mit königlicher Erlaubnis gestattet ist die Ehe eines Muhutu mit einem Mutussiweib, denn der Rassestolz der Batussi will es nicht. Auch wo man duldsam ist, dürfte geschlechtlicher Umgang von unverheirateten Angehörigen derselben Rasse nicht häufig vorkommen, da die Barundimütter auf ihre heranwachsenden Töchter ein wachsames Auge haben. Von grundsätzlicher Gewährung der Freiheit vor der Ehe kann bei den Barundi nicht die Rede sein.

Auf eheliche Treue hält aber der Mann, falls er nicht absichtlich sein Weib dem Clangenossen preisgibt; während er es mit der eigenen Treue nicht so genau nimmt. Zwar wird heimlich begangener Ehebruch nicht von Rechts wegen bestraft wie Diebstahl, als welcher eigentlich auch der Ehebruch bei den Barundi gilt, aber der betrogene Ehemann hat die Befugnis, die Schuldigen in flagranti zu töten (Nr. 19, S. 14). Meist begnügt er sich damit, die Ehebrecherin aus dem Haus zu jagen. Eine solche Lazheit der ehelichen Sitte wie in mehreren anderen Bahimastaaten, z. B. Ankole, und bei den Massai, wo der Mann sein Weib jedem zu Gast kommenden Sippengenossen zu überlassen pflegt, ist in Urundi nicht allgemein, aber auch in Urundi erlauben sich die verheirateten Weiber der Batussi viel größere Freiheiten mit anderen Batussimännern als die unverheirateten, namentlich mit Sippengenossen; nur nicht mit Bantumännern (s. S. 101).

Scheidung und Trennung der Ehe (uwuhakanji) sind aus diesem und aus vielen andern Gründen sehr häufig. Leute, die fünf- oder sechsmal verheiratet waren, sind gar nicht selten. Da der Brautpreis im Durchschnitt sehr gering ist und auch ohne Schwierigkeit zurückgezahlt werden kann, benutzen die Männer und Weiber oft den geringsten Anlaß, um sich voneinander zu trennen. Behandelt der Mann die Frau schlecht, so läuft sie ihm weg und kehrt zu ihren Eltern oder Angehörigen zurück, die dann den erhaltenen Kaufpreis an den schuldigen Ehemann nicht zurückzugeben

brauchen. Wenn aber der Mann die Frau wegjagt, weil sie faul, boshaft oder gar ehebrüchig ist, so müssen die Eltern der Frau dem Mann den bezahlten Brautpreis zurückerstatten. Die Geschiedenen können sich jederzeit wieder verheiraten. Kleine Kinder verbleiben der Mutter, von den größeren folgen die Knaben dem Vater, die Mädchen der Mutter (Nr. 19, S. 174).

Nach dem Tod des Ehemannes geht seine Witwe (umufakasi) in den Besitz des Bruders des Verstorbenen oder seines nächsten Verwandten über (s. S. 92), denn sie war mit der Hochzeit in die Familie des Mannes aufgenommen worden.

Diese sog. Leviratsehe ist in Ostafrika auch bei den Sulu, den Wagogo, den Massai, den Turkana, Kamasia, Galla, Baganda, Banjankole, Banjarwanda u. a. üblich (Nr. 30, Bd. II, S. 384, 403, 412, 419, 428, 538, 541).

Gibt es weder Brüder noch nächste Verwandte des Verstorbenen, so kehrt die Witwe in ihre eigene Familie zurück und nimmt ihre unmündigen Kinder mit. Die erwachsenen Kinder bleiben in der Familie des Mannes und sorgen für die verwitwete Mutter. Kinderlose Witwen aber schaffen sich Lebensunterhalt, indem sie für die Nachbarn arbeiten oder indem sie betteln.

Die Stellung und das Ansehen der Frau in der Ehe ist höher als bei den meisten andern ostafrikanischen Negern. In Haus- und Familienangelegenheiten steht die Ehefrau dem Manne ziemlich gleich. Beide teilen sich in die wirtschaftlichen Arbeiten des Tages, ausgenommen die Viehwartung, die lediglich Sache des Mannes ist, und die Acker- und Gartenpflege, bei der die Hauptarbeit der Frau zugewiesen bleibt, wenn auch der Mann in allem mithilft, und die Zubereitung des Essens, die nur von der Frau besorgt wird. Dazu kommt noch für die Frau die Besorgung der Kinder und der Hütten. Die soziale Gleichstellung beider Geschlechter kommt auch in der bei keinem andern ostafrikanischen Volk bestehenden Sitte zum Ausdruck, daß Mann und Frau gemeinsam essen (s. S. 26). Auch von den nördlichsten Bahima in Unjoro berichtet Emin Pascha ausdrücklich, daß die Frauen mit ihren Männern essen, was die dortigen Bantu nicht tun (Peterm. Mitt. 1879, S. 222). In allen wichtigen Angelegenheiten wird in Urundi die Frau und namentlich die Mutter mit zu Rat gezogen, und ihre Meinung gibt oft den Ausschlag. Weibliche Häuptlinge sind zwar seltener als bei den östlicheren Stämmen, den Wassumbwa und Wanjamwesi, kommen aber, durch Erbgang eingesetzt, vor und treten nur nicht so an die Öffentlichkeit wie bei den Wanjamwesi. Den größten Einfluß hat die Mutter des Königs, die während ihrer ganzen Lebenszeit mitregiert (s. S. 185); eine Ehrfurchtsstellung, die sich auch in den anderen Bahimastaaten bis zum südlichsten, Usipa, erhalten hat (Nr. 47, S. 90).

Am stolzesten unter den Barundifrauen sind natürlich die der Batussi, wogegen die Frau bei den Batwa mit Arbeit überladen und gering geachtet ist und keine Stimme im Familienrat hat.

In der großen Mehrzahl sind die Barundi monogam. Sie sind nicht vermögend genug, um sich mehr als ein Weib kaufen, mehr als einen Hausstand unterhalten zu können. Wer es sich aber leisten kann, lebt in Polygamie, um Arbeitskräfte für die Bewirtschaftung seines Besitzes zu haben, um seine soziale Stellung hochzuhalten, um sich während der Unnahbarkeit der einen Frau in der Geburtszeit an die andere halten zu können, und aus anderen Gründen mehr, die aber stets viel

mehr im praktisch wirtschaftlichen als im erotischen Gebiete liegen. Deshalb haben sehr viele Batussi zwei Frauen, die größeren Häuptlinge drei oder mehr, der König eine ganze Schar. Die Batwa hingegen sind aus Armut fast alle monogam (Nr. 19, S. 447).

Sehr selten scheint in Urundi die bei den Bahima Ankole und Kissaba häufige polyandrische Sitte vorzukommen, daß mehrere Brüder, die zu arm sind, als daß sich jeder eine Frau kaufen könnte, ihre Mittel zusammenlegen und sich gemeinsam ein Weib kaufen, deren Kinder dann dem ältesten der Brüder gehören (Nr. 27, S. 105). Aber die Brüder einer Familie sind in Urundi oft allzu vertraulich mit den Weibern ihrer Brüder.

Jede Frau hat in Urundi ihre Hütte und ihren Hausstand in einem besondern Kral. Bei den vermögenden Batussi wohnen zwei Frauen sehr selten innerhalb einer Umzäunung, sondern gewöhnlich liegen ihre Gehöfte weit voneinander ab, möglichst auf verschiedenen Bergen. Der Mann ist einmal bei der einen, einmal bei der andern zu Gast. In polygamen Familien ist die zuerst geheiratete Frau die Hauptfrau, und ihre Kinder haben im Erbfall den Vorrang vor denen der übrigen Frauen. Neben den regelmäßigen Ehen gibt es Konkubinate mit Weibern niederer sozialer Stellung. Die Konkubine (umukeda, umugensi) ist zwar sozial anerkannt, kann aber jederzeit entlassen werden und hat für sich und ihre Kinder kein Erbrecht. Da die Bahimaweiber wenig fruchtbar sind, nehmen viele Batussimänner zur Verstärkung ihres Haushaltes Bahutuweiber zu Konkubinen, die viel fruchtbarer sind. Das geschieht auch in den anderen Bahimaländern häufig, und überall ist deshalb dort eine ziemlich starke Mischung der Bantu mit Bahimablut die Folge (Nr. 17, S. 631). Heiraten auf Zeit oder auf Probe kennen die Barundi nicht; die Ehen werden ja so leicht geschlossen und gelöst, daß solche provisorische Bindungen unnötig sind. Auch gewerbsmäßige Prostitution ist deshalb in Urundi so gut wie unbekannt (s. auch S. 101). Ob die Barundi „Weiberbünde" mit eigener Organisation haben, weiß ich nicht; jedenfalls besitzen sie keine besonderen Weiberhäuser.

2. Geburt, Kindheit, Pubertät, Tod

Die Barundi sind, soweit die Bahutu in Betracht kommen, ein kinderreiches Volk; weniger die Batussi, was wohl eine Folge der langen Inzucht ist. Je mehr Kinder, desto besser, desto größer die Arbeitshilfe für die Eltern, desto größer die Aussicht, für die heiratenden Mädchen gute Brautpreise zu erhalten. Um die Fruchtbarkeit zu erhöhen, genießen Mann und Weib gelegentlich Aphrodisiaka aus Pflanzensäften (Nr. 19, S. 359). Sobald die Frau konzipiert hat, wird der Medizinmann (umufumu) gerufen, der ihr zum Schutz der Frucht gegen böse Geister Amulette gibt, die an dem besonders zu schützenden Unterleib getragen werden. Zum gleichen Zweck bläst der Mann die Frau von Zeit zu Zeit mit Tabakrauch an.

Wo aber die Konzeption unwirksam gemacht werden soll, sei es aus Bequemlichkeit der Weiber, sei es um die Folgen unerlaubten Verkehrs zu beseitigen, wird der künstliche Abortus (kukorora) durch starke Massage und durch Einnehmen bestimmter Pflanzenabgüsse herbeigeführt. Der Gebrauch dieser Mittel ist eine Art Geheimwissenschaft der Weiber, von der die Männer keine Kenntnis zu haben scheinen. Ihre Anwendung gilt für verbrecherisch und wird vom Chef oder Häuptling bestraft

(Nr. 19, S. 62). Dagegen ist das Fruchtabtreiben durch Decoctte von Pflanzen in Uffumbwa und Unjamwesi enorm verbreitet. „Ziel der Barundi-Eheleute ist, möglichst viele Kinder zu haben. Oft sieht man Väter ihre Kinder besorgen, tragen, füttern usw., nie in Uffumbwa oder Unjamwesi. Unfruchtbarkeit (ingumba) gilt für ein Unglück und Grund zur Ehescheidung. Es kommt oft vor, daß eine Urundimutter nach einem Jahr wieder gebiert. In Uffumbwa dauert es mindestens zwei Jahre, da erst das Kind entwöhnt sein muß, ehe neuer Verkehr erlaubt ist; nicht so in Urundi. Die Kindersterblichkeit ist auch in Urundi groß. Auch dort bleiben von den Kindern bis zu 13—15 Jahren nicht zwei Drittel am Leben. Oft hört man Weiber sagen, daß sie zehn Kinder verloren haben, aber bei der großen Fruchtbarkeit bleiben noch genug übrig" (v. d. Burgt, Kol. Rundschau, 1913, S. 721—722).

Wenn die Geburt (uwurjasi) naht, werden ein paar Nachbarinnen zur Unterstützung der Kreißenden gerufen; nur in schwierigen Fällen eine „weise Frau" oder der Medizinmann, der mit allerlei Zauber, aber auch mit wirklich wirksamen Mitteln und Eingriffen, von pflanzlicher Medizin und leichter Massage bis zum Kaiserschnitt (s. S. 140, 142) operiert (Nr. 19, S. 9, 363). Wie der letztere ausgeführt wird, weiß ich nicht; vermutlich nur an der Toten, um noch das Kind zu retten oder es zu entfernen, wie dies Emin Pascha ausdrücklich von den Bahima Unjoros bemerkt (Peterm. Mitteil. 1879, S. 393). In Ruanda, Uffumi, Kisiba, Uganda kennt man den Kaiserschnitt auch (Nr. 48, S. 228). Während der Geburt liegt das Weib auf ihrem Schlafsager oder kauert auf dem Boden, den Rücken gegen einen Hauspfeiler gestützt oder von hinten gehalten, während die Männer die Hütte verlassen. Sobald das Kind geboren ist, wird es mit kaltem Wasser gewaschen und mit Butter eingesalbt. Die Nachgeburt wird in der Hütte unter dem Bett der Mutter vergraben, die Nabelschnur mit einem Holzspan durchgeschnitten und als Amulett von der Mutter aufbewahrt. Das Neugeborene aber wird nun von der Mutter am ganzen Körper zurecht gedrückt und gezogen, um dem Kopf und den Gliedern die richtige Form zu geben (Nr. 19, S. 9). Deformation des Schädels wird jedoch nicht ausgeübt.

Nach der Geburt wird die Wöchnerin mit warmem Wasser gewaschen und der Leib äußerlich mit Pflanzensäften eingerieben. Sie bleibt 4 oder 5 Tage in der Hütte, je nachdem sie ein Mädchen oder einen Knaben geboren hat, und wenn sie wieder ausgeht, hat sie den Schädel frisch rasiert und trägt ein breites Stirnband aus Baumbast; wohl als Symbol der Fruchtbarkeit und als Amulett.

Die Mutter stillt ihr Kind, solange sie Milch hat und der Körperzustand des Kindes es zu verlangen scheint, nicht selten 3 bis 4 Jahre lang. Vom Ehemann bleibt sie nach der Geburt getrennt, bis wieder die Menses eintreten. Bleiben diese aber aus, so wird die Trennung bald wieder aufgehoben.

Mit gemischten Gefühlen wird die Geburt von Zwillingen (amahasa) begrüßt. B. d. Burgt meint, daß man erfreut darüber sei, weil die Barundi der Zwillingsgeburt eine religiöse Bedeutung beimessen, weil sie sie für „ope incubi" ansehen helfen (Nr. 19, S. 325); Gehlinger hingegen sagt, daß man eine Zwillingsgeburt als unglücklich ansehe, weil Zwillinge Lieblinge Kiranges seien und deswegen bald von ihm weggeholt (sterben) würden, wenn sich die Eltern nicht durch große Opfer loskaufen (Nr. 45, 1914, S. 314). Ich lasse dahingestellt sein, welche Auffassung richtig ist; aber Tatsache ist es, daß eine Zwillingsgeburt mit außergewöhnlichen Riten, Opfern und Festen gefeiert wird, und der letzte Grund

hierfür wird wohl die Erfahrung sein, daß Zwillinge gewöhnlich schwächlich sind und von der Mutter nicht genügend genährt werden können, so daß sie (oder eines) meist sterben, wenn ihnen nicht Kiranga durch besondere Opfer gnädig gestimmt wird. Auf die Nachricht von der Geburt eines Zwillingspaares laufen die Nachbarn und Freunde in Scharen herbei, singend, Geschenke bringend und Mengen von Nahrungsmitteln zusammentragend, die aber nur für die Geister bestimmt sind und in der Nacht verschwinden. Der herbeigerufene Priester (kiranga) vollzieht zunächst mit seinen Gehilfen und zahlreichen Teilnehmern die Zeremonie des „heiligen Speeres" (s. S. 134), um in der Verehrung dieses Symbols seinem Inhaber, dem großen Geist Kiranga, dem Herrn über alle materiellen Güter, Dank zu bezeugen und ihn um besondere Gunst für die Zwillinge und die Eltern anzurufen (Nr. 19, S. 516, 324, 216). Dann führen die jungen Männer, rot und gelb im Gesicht bemalt, im Hof der Hütte unter Rasselbegleitung rituelle Tänze auf, die vier bis sechs Stunden hintereinander dauern und die Tänzer in wahre Leidenschaft versetzen; sie schließen einen Kreis, springen und winden sich schweißtriefend und singen rhythmische Lieder in kurzen Strophen. Ein Kreistanz der Mädchen, die ebenfalls angemalt und mit Laub geschmückt sind, löst sie ab. Dazwischen werden Mengen von Bier vertilgt. So geht es zwei, drei Nächte und noch länger fort, und am Ende wird vom Priester nochmals die große Zeremonie des heiligen Speeres vollzogen, wobei zwei kleine Lämmer dem Gott geweiht werden, zur Stellvertretung für die beiden Zwillingskinder. Die Lämmer dürfen nicht geschlachtet werden und können herumlaufen und fressen, wo und was sie wollen. Die Tänze aber und die Zecherei dauern oft noch 2—3 Wochen fort (Nr. 19, S. 325; Nr. 45, 1914, S. 315).

Kindsmord (kumuniga umwana) ist bei den Barundi nicht häufig, kommt aber vor, hauptsächlich weil die Mutter die lange Arbeit des Aufziehens und Nährens scheut. Das Verbrechen steht nominell unter Strafe, wird jedoch selten gesühnt, da die Absicht der Tötung (Ersticken) schwer nachzuweisen ist. Von Rechts wegen wird ein Kind durch den Medizinmann getötet, wenn es mit Zähnen auf die Welt kommt oder wenn ihm die oberen Schneidezähne zuerst wachsen (Nr. 4, S. 221). Das gleiche berichtet Lechaptois aus dem südlichsten Bahimastaat, Ufipa (Nr. 47, S. 138). Auch die Batwa töten solche Kinder.

Sobald dem Kind die Haare wachsen oder sobald es laufen kann, bekommt es einen Namen (isina) durch den Vater. Mutter und Freunde fügen noch andere Namen hinzu, so daß jeder Murundi mindestens zwei oder drei hat. Besondere Feierlichkeit ist mit der Namengebung nicht verbunden. Die Namen haben die größte Mannigfaltigkeit und bedeuten entweder besondere Eigenschaften des Kindes oder gewisse Vorkommnisse in seinem jungen Leben oder irgendeine Laune des Namengebers, z. B. kitwe = Dickkopf; mbiriko = Holzspan; ntarija = es weint nicht; kimina = es geht aufrecht; kiriwate = Rindshaut; mawa = Großmaul; mawamba = Weiße; yamirwa = Bier; inambu = Hunger; tunguru = Vogelname. Andere, höfische Barundinamen, die Pater Gaßdinger irrtümlich mit der Furcht vor dem Tod zusammenbringt, sind: mujimbwa = Hundehütte; sembwa = Hundevater; inangurube = Schweinemutter; kabwebwe = Schakal; kaharagasza = Floh; somojindi = Menschenkot. Andere lauten: ruteratschuma = Er schleudert das Eisen; ndaruanse = Ich habe getroffen; ntamavukiro = Heimatlos; rurihasi = Er ist nahe; rurondna = Er ist der Verderber; rutakaje = Er ist verloren ge-

gangen (Nr. 46, 1913, S. 13). Außer dem persönlichen Namen führt jedes Kind noch den Namen seines Clans und einen oder mehrere Spitznamen, die auch der Erwachsene beibehält. Fremden Leuten nennt man ungern die richtigen Namen von Kindern oder Erwachsenen, da jene möglicherweise durch die Kenntnis des Namens magische Gewalt über den Namensträger erlangen und sie zu seinem Schaden mißbrauchen könnten (s. S. 133).

Ernährung und Aufzucht des Kindes sind gänzlich Sache der Mutter. Sie nährt es bis ins 3. und 4. Jahr, und es sieht drollig aus, wenn ein strammer kleiner Bengel vom Spiel herbeigerannt kommt, ein paar erquickende Züge an der Mutterbrust tut und dann schnell wieder zu seinen Gespielen läuft. Die Kinder werden sauber gehalten und täglich gebadet. Da es Körbe oder Wiegen zum Absetzen der Kleinen nicht gibt, wird das Kind, solange es nicht ordentlich laufen kann, fortwährend von der Mutter auf dem Rücken in einem aus Ziegen- oder Hammelfell verfertigten Tragleder (impetso) mit umhergetragen, aus dem oben der Kopf, rechts und links die Beine herausgucken. Auch bei der Feldarbeit und selbst beim Tanz behält die Mutter gewöhnlich das Kind auf dem Rücken, dessen Kopf und Beine dann von den heftigen Bewegungen herumgeschlenkert werden, wie bei einer Gliederpuppe; selten schreit es deshalb. Von Zeit zu Zeit wird das Kind aus dem Tragleder durch seitliche Lüpfung herausgenommen und „abgehalten". Wenn es aber dennoch einmal seine Bedürfnisse im Rucksack verrichtet hat, wird dieser nebst Kind und Mutter einfach abgewaschen. Größere Kinder werden rittlings auf die linke Hüfte der Mutter gesetzt und mit dem linken Arm von hinten umfaßt.

Nachts liegen die Kinder auf Fellen zu ebener Erde und werden mit dem aus weichem Fikusrindenstoff bestehenden Obergewand der Mutter zugedeckt. Ganz kleine Kinder liebkost die Mutter bisweilen mit Küssen. Sonst kennen die Barundi den Kuß nicht (Nr. 19, S. 63). Um es einzuschläfern oder auch um es am Tag zu beruhigen, klopft sie es leicht auf den Rücken und singt wohl auch ein monotones „Wiegenlied". V. d. Burgt teilt ein solches mit, in dem mit der bösen Schwiegermutter gedroht wird: „Sei ruhig; sonst werde ich dich zur Schwiegermutter tragen; sie wird dir nur Wasser geben. Wenn die Kühe kommen und gemolken werden, wirst du Hunger leiden. Die Schwiegermutter wird dich nicht gegen die Sonne schützen und gegen den Hunger" (Nr. 19, S. 71).

Geistig und moralisch wachsen die Kinder wild auf. Von Abgewöhnung übler Eigenschaften ist so wenig die Rede wie von der Anerziehung guter. Solange die schlechten Eigenschaften der Kinder die Eltern nicht schädigen, haben diese sogar oft ihre Freude daran, die Kinder zu Zornesausbrüchen, zu Prügeleien, zum Stehlen usw. anzureizen. Auch praktische Unterweisung in bestimmten Arbeiten und Handwerken gibt es nur ausnahmsweise. Was die Kinder lernen, lernen sie durch Zusehen, Zuhören und Mithelfen. Helfen müssen sie aber von früh an in allen Verrichtungen der Eltern und werden dadurch, da sie von Natur geweckt und lebhaft sind, sehr bald erstaunlich selbständig.

Die Geschlechtsreife (kukura) tritt bei den Knaben im Alter von 12 bis 15 Jahren, bei den Mädchen schon früher ein. Lange vorher schon sind sie über das Sexuelleben aufgeklärt und haben von den älteren auch manche garstigen Dinge aus der sexuellen Sphäre gehört. Nicht, daß sie sehr früh schon kohabitieren, aber Onanie und Masturbation sind verbreitete Laster.

Über die letzteren sagt v. d. Burgt (Nr. 19, S. 301): „Puellae praesertim horribili huic vitio valde doditae sunt, sub praetextu quidem, ut magis aptae fiant matrimonio et viris placeant. In actu ipso nefando quoddam juramentum vel potius imprecationem pronuntiant: witsche inka nisakura ndaty'inka. Insuper variis modis utuntur ad majorem voluptatem sibi procurandam. Media generatim sunt plantae, vel radices plantarum arborumve, quibus labia perfricantur". Brieflich fügt mir v. d. Burgt hinzu: „His perfricationibus labia extenduntur, ut flavescentes praetent et volumen vel longitudinem extraordinariam adipiscantur. Haec consuetudo generalis tanquam nationalis considerari potest non solum in Urundi et Ruanda, sed etiam generatim inter tribus Africae interioris, paucis exceptis v. Wasukuma. Ergo primo loco non voluptas procuranda intenditur, sed puellae volunt ‚pulchras se facere', quia permulti adolescentes nunquam puellam in matrimonium ducerent, quae talia labia non habet. Post matrimonium se abstinent ab illa manipulatione."

Über Pubertätsfeste, die sicherlich gefeiert werden, konnte ich nichts erfahren. Auch v. d. Burgt weiß nichts davon (Nr. 19, S. 394). Jedenfalls werden weder die Knaben beschnitten noch die Mädchen infibuliert. Nur die Batwa, bei denen im Gegensatz zu den Batussi und Bahutu Deformation der Zähne üblich ist, nehmen das Zuspitzen der beiden oberen Mittelzähne mittels Messerschlages als Akt der Pubertätserklärung vor (Nr. 19, S. 105, 155).

Ferner konnte ich nicht feststellen, ob die zur Pubertät gelangten Jünglinge sich zu einem gesellschaftlichen Verband zusammenschließen, zu einer besonderen „Altersklasse", wie wir sie bei mehreren ostafrikanischen Stämmen finden. Sollte diese soziale Einrichtung bei den Barundi bestehen, so spielt sie doch gar keine Rolle im öffentlichen Leben und kennt auch keine besonderen Junggesellenhäuser oder -kraale für einen solchen Altersverband, während unter den anderen hamitischen oder hamitisch beeinflußten Völkern Ostafrikas, wie z. B. den Massai, den Wapokomo, den Galla, diese Altersklassen die Hauptgliederung des ganzen sozialen Lebens darstellen.

Bei den Massai sind es die drei Altersklassen der bei den Eltern wohnenden Knaben, der in eignen Kraalen zusammen hausenden unverheirateten Jünglinge (der Kriegerklasse) und der verheirateten, friedlichen Männer; bei den Wapokomo und Galla ebenfalls erfassen die Knaben, zweitens die verschiedenen Jahrgänge der gleichzeitig Beschnittenen oder Laua und drittens die Klasse der älteren oder Gada. (A. Werner, The Galla of East Africa; Journal of the African Society, Bd. 13, 1914, S. 262 ff.) In Ruanda legt die jugendliche Kriegerschar, die am Hof des Mufunga bei festlichen Gelegenheiten zu erscheinen und Kriegstänze aufzuführen pflegt, den Gedanken an eine solche „Altersklasse" der unverheirateten Jünglinge bei den Batussi nahe, aber vielleicht ist es auch nur eine Art Kadetten- oder Pagenkorps des Königs (s. S. 65).

Alte Leute, die ihre körperliche und geistige Regsamkeit eingebüßt haben, sieht man selten, weil sie innerhalb der Gehöfte bleiben. Sie werden von den Ihrigen bis zum Tode (ukufa) gepflegt, vielleicht weniger aus Pietät als aus Furcht, daß sie sich sonst nach dem Tod als Geister für schlechte Behandlung rächen würden. Um den Sterbenden ist gewöhnlich die Familie versammelt. Sobald er verschieden ist, erheben die Weiber des Hauses und der Nachbarschaft lautes Wehklagen, während die Männer dem Toten die Augen zudrücken, ihm die Arme und Beine einbiegen und festbinden (Hockerstellung), um ihm resp. seinem Geist die Wiederkehr unmöglich zu machen, und sofort die Beerdigung vorbereiten.

Begräbnis in Hockerstellung ist auch in Ruanda, in Bukoba, Mpororo, Ankole und anderen Bahimahamiten üblich, desgleichen bei den Massai und den Galla. (A. Werner, The Galla of East Africa. Journal of the African Society, Bd. 13, 1914, S. 283; und Nr. 47, S. 158.)

Mit Ausnahme der getöteten Verbrecher, deren Leichname den Hyänen zum Fraß in den Busch geworfen werden, werden alle Barundi begraben (kuhamba). Baumanns Angabe, daß „die Angehörigen allen Toten den Bauch aufschneiden, um darin den bösen Zauber, der sie getötet hat, zu suchen" (Nr. 4, S. 222), habe ich weder durch Erkundigung im Lande selbst noch bei v. d. Burgt oder anderen bestätigt gefunden. Die Leiche wird nicht gewaschen, sondern in ihren gewöhnlichen Gewändern und mit ihren Amuletten ins Grab gelegt; bestenfalls eingewickelt in eine alte Matte. Andere Grabbeigaben werden nicht hinzugetan. Schon wenige Stunden nach dem Tod findet die Beerdigung statt.

Das Grab (isjobo) wird innerhalb des Hofes neben der Umzäunung gegraben oder, wenn der Tote der Familienvater ist, inmitten des Hofes gegenüber dem Eingang der Haupthütte (Nr. 19, S. 203); nach O. Baumann aber in der Hütte selbst (?), die hierauf verlassen werde (Nr. 4, S. 223). Während die Leiche zum Grab getragen wird, erheben die Weiber von neuem großes Klagegeschrei; sie tun so, als ob sie sich der Beerdigung widersetzen wollten, und rufen dem Toten Abschiedsworte nach. Ist es ein Familienvater, so kauert die Witwe vor der Beerdigung neben ihm nieder, salbt ihm das Haupt mehrmals mit Butter und sagt ihm allerlei Gutes nach, um seinen Geist den Familienmitgliedern günstig zu stimmen. Dann wird die Leiche so in das mit Blättern ausgepolsterte Grab gelegt, daß sie in Hockerstellung auf der rechten Seite liegt, darauf das Grab mit Erde zugefüllt und über ihm ein kleiner Tumulus aufgehäuft, auf den verschiedene Gegenstände, die der Tote benutzt hat, wie z. B. Tongefäße, alte Körbe, der Geflechtsschirm, der den Hütteneingang verschließt, u. a. m. gestellt werden. Nach kurzer Zeit werden diese weggenommen, der Tumulus eingeebnet, und nichts läßt mehr die Grabstätte erkennen.

Totenfeste werden nur bei der Bestattung des Königs veranstaltet, aber bestimmte Trauerbräuche werden bei jedem Todesfall eingehalten, die je nach der sozialen Stellung des Verstorbenen mehr oder minder umständlich sind. Wenn der Verstorbene ein gewöhnlicher Murundi und Familienvater ist, trauert die Witwe (oder die Witwen) mit den Kindern 7 Tage, indem sie das Gehöft nicht verlassen. Wahrscheinlich fürchten sie so kurz nach dem Tode den Geist des Toten außerhalb der Behausung. In den Hütten aber nehmen sie zahlreiche Neuerungen und Veränderungen vor, als ob sie den Geist des Toten irreführen und ablenken wollten, falls er zurückkommen sollte. In der Wohnhütte wird der Eingang nach einer andern Seite verlegt, die Herdstätte erneuert, die Bettstelle beseitigt, alle Geräte umgestellt u. a. m. Nach dem 7. Tag badet sich jedes Familienmitglied gründlich in einem Bach, wohl um sich sinnbildlich von der durch den Toten verursachten Verunreinigung zu befreien. Dann lassen sie sich als Reinigungs- und Trauersymbol alle den Kopf rasieren und gehen für die nächsten 2 Monate in Trauergewändern aus, d. h. in Rindenstoffen, die weder, wie sonst allgemein, schwarz gefärbt noch mit Mustern bemalt sind (Nr. 19, S. 163), also ihre rotbraune Naturfarbe haben; so wird hier Rot zur Trauerfarbe. Der Name des Verstorbenen wird nicht mehr genannt, um nicht seinen böswilligen Geist herbeizurufen, und alle denselben Namen tragenden Personen oder Dinge werden umgetauft.

Einem verstorbenen Mutwale wird natürlich höhere Ehre erwiesen als einem gewöhnlichen Murundi. Vor dem toten Mutwale vollführt der Kiranga die Zeremonien des „heiligen Speeres" (s. S. 134), und auf sein Grab pflanzt man

einen Gedenkbaum (imana), der unverletzlich ist. Die Familie des Toten aber verläßt das Gehöft und siedelt sich an einer anderen Stelle an, während die Hütten des Verstorbenen zerfallen und verschwinden und die Fikusbäumchen der Umzäunung allmählich zu stattlichen Bäumen heranwachsen, von denen niemand bei Todesstrafe Holz holen darf (Nr. 19, S. 205). Durch diese im Kreis der ehemaligen Hofumzäunung stehenden Bäume fallen einem die einstigen Häuptlingssitze in Urundi wie in Ruanda überall in der Landschaft auf (Taf. 29a). Die Trauer um einen Mutwale dauert zwei bis drei Wochen.

Die höchsten Ehren aber werden dem toten König zuteil (s. S. 185). Zunächst wird die Leiche in Häute und Rindenstoffe eingewickelt, aber nicht begraben, sondern über einem rauchenden Feuer so lange getrocknet, bis sie zur völligen Mumie geworden ist. Der erste aus dem Leichnam herauskriechende Wurm („Seelenwurm") wird in einen Milchtopf gelegt und gefüttert, bis er eines Nachts den Topf verläßt und nun zur Riesenschlange (isato) wird, in welcher fortan der Geist (umusimu) des Königs haust. Ein Einbalsamieren des Toten findet nicht statt; auch wird die Leiche des Königs nicht in Hockerstellung eingebogen, wie die gewöhnlichen Barundi, sondern behält Arme und Beine ausgestreckt (Nr. 19, S. 204), wogegen in Ankole die Leiche des Königs ebenfalls in Hockerstellung in Kuhhaut eingebunden und begraben wird (Nr. 27, S. 101). Dann wird in Urundi der tote König mitten im Gehöft auf einem hölzernen Gestell aufgebahrt und bleibt hier so lange liegen, bis die Füße des Gestelles von den Termiten abgefressen sind. Das kann unter Umständen Monate dauern. Der König Kisabo soll ein ganzes Jahr so gelegen haben, ja es soll, wie mir ein dortiger Missionar erzählte, dem Toten sogar ein junges Weib „angetraut" worden sein, die ihn zu behüten und täglich mit Speise und Pombe zu versorgen hatte. Während dieser ganzen Zeit der Aufbahrung kommen die Untertanen aus allen Gegenden herbeigezogen, flehen seinen Geist um Gunst an, essen und trinken in feierlichem Totenschmaus neben der Bahre und loben den Verstorbenen. Die große Zeremonie des „heiligen Speeres" fehlt natürlich hier erst recht nicht. Die offizielle Trauer um den König dauert einen Monat. Schließlich wird die Mumie von den nächsten männlichen Verwandten des Königs, unter Begleitung der Medizinmänner und Priester und gefolgt von einer wehklagenden Volksmenge, fortgetragen, Tagereisen weit bis auf den Berg Ganso im nordwestlichen Grenzgebirge gegen Ruanda, südlich von der Rumuvuquelle, wo im Wald, zu dem nur die Mitglieder der Königsfamilie (Baganwa) und die Priester Zutritt haben, die Leiche endlich begraben wird; nach v. d. Burgt aber nicht begraben, sondern nur in einer Hütte beigesetzt (s. S. 186). Auch die anderen Barundikönige ruhen dort (Nr. 4, S. 223). Burgt gibt dagegen einen Ort Wanjange am Zwangaberg als Bestattungsplatz an (s. S. 185).

Auch von den Bahima (Wahuma) Urundi berichtet Emin Pascha, daß dort der Leichnam des Herrschers auf einem Gerüst geräuchert und oft jahrelang in seiner Hütte aufbewahrt wurde, bis ihn endlich sein Nachfolger begrub (Petern. Mitt. 1879, S. 307).

In Urundi wird das Gehöft des verstorbenen Königs verlassen, wie jene der verstorbenen Batwale; es zerfällt, und nur die im großen Kreis der einstigen Umzäunung stehenbleibenden Bäume verraten dem Fremden die frühere Bedeutung des Platzes. Daneben aber wird ein Wächter in eine Hütte gesetzt, der dafür zu

sorgen hat, daß niemand die Stätte betritt und daß der Geist des verstorbenen Königs, den man sich, wie erwähnt, hauptsächlich als eine große, am Ort hausende Schlange (Totemismus, S. 102) vorstellt, regelmäßig seine Trank- und Speiseopfer erhält (Nr. 19, S. 205).

Von der Burgt berichtet, daß zu Ehren des toten Königs „Hekatomben von Menschenopfern" dargebracht werden (Nr. 19, S. 204) und daß manche große Batwale und hochstehende Barundi getötet würden, „um die Manen des Königs zu beruhigen". Vermutlich sind hauptsächlich die Unglücklichen damit gemeint, die sofort nach dem Tode des Königs der Politik seines Nachfolgers oder Thronprätendenten zum Opfer fallen, sowie die vermeintlichen Zauberer und Hexen, die den Tod des Königs verursacht haben — denn natürlichen Tod kennen die Barundi nicht — und nun von den Medizinmännern ausfindig gemacht und hingerichtet werden (s. S. 132, 140). Aber auch einige junge Mädchen und Große des Landes wurden früher bei der Bestattung des Königs getötet, um den Verstorbenen „ins Jenseits zu begleiten" (s. S. 186).

Neuntes Kapitel

Religion, Mythus, Kultus, Mission

1. Die Götter

Die Religion der Barundi läßt sich wohl am besten als Animismus und Totemismus bezeichnen, denen zahlreiche Elemente von Fetischismus (Talisman), Manismus (Ahnenverehrung) und Heroenkult beigemischt sind; der letztere ist in mancher Beziehung schon zum Götterkult geworden. Diese Mischung von Bestandteilen des „totemistischen Zeitalters" mit dem „Zeitalter der Helden und Götter" (Nr. 43, S. 116, 278) ist zweifellos die Folge der Mischung der alteingesessenen Batwa und Bantu mit den hamitischen Eroberern, die ihre totemistische Clangliederung und den Kult ihrer zu Stammesgöttern gewordenen Heroen dem Clansystem und dem Animismus und Fetischismus der Bantu und Batwa hinzugefügt haben. Alle diese sozialen und religiösen Elemente haben einander durchdrungen, teils in bloßem Nebeneinanderbestehen, teils in gegenseitiger Verschmelzung und Veränderung, so daß es meist schwer ist, die einzelnen Bestandteile rein herauszulösen und ihren Ursprung zu erkennen.

Den breitesten Raum in den religiösen Vorstellungen der Barundi nehmen der Animismus und der Dämonenglauben ein. An ihnen sind sowohl die Batwa und Bahutu als auch die Batussi beteiligt, aber die Batussi offenbar in viel geringerem Maß. Allem Anschein nach haben die Bahima hier wie im ganzen übrigen Zwischenseegebiet höhere religiöse Ideen aus ihrer nördlichen Heimat mitgebracht, die den wüsten Dämonen- und Zauberglauben der Bantuneger teilweise zurückgedrängt und dem Ahnenkult größere Bedeutung gegeben haben. Freilich hängt die große Volksmasse der Bahutu dem alten niedern Dämonen- und Zauberglauben, der der Geistesrichtung der Bantu so gut entspricht, an wie zuvor. Die Barundi denken sich alles beseelt. Wie bei den meisten noch im Stadium des animistischen Denkens befindlichen Naturvölkern, knüpfen ihre Vorstellungen von einer immateriellen Seele an die Beobachtung an, daß im schlafenden Körper etwas lebt, was nicht ruht, sondern denkt, sieht und herumschweift, denn im Traum sieht dieser unser immaterieller Teil nicht nur die Welt, so wie wir mit unsern Augen, sondern er begegnet auch den Verstorbenen, die also auch nach ihrem Tod immateriell fortbestehen. Wenn dieses immaterielle Etwas, die lebenerzeugende Seele, den Körper dauernd verläßt, stirbt der Mensch.

Die von W. Wundt und E. Meinhof für den totemistischen Gedankenkreis als charakteristisch bezeichnete Unterscheidung zwischen der Körper- oder Schattenseele und

[A117]

der Hauch- oder Atemſeele (Nr. 43, S. 203; Nr. 41, S. 32—34) ſcheint für die Vorſtellungen der Barundi zuzutreffen, denn der Murundi unterſcheidet den dämoniſchen Geiſt des Verſtorbenen, den umusimu, genau von der im Lebendigen wirkenden Seele umutima, die im Todesaugenblick mit dem pulſierenden Herzen, indihagusi, vernichtet wird (Nr. 46, S. 15). Es ſcheint mir ferner gewiß, daß die Barundi ſich alle Dinge, jedes Organiſche und Anorganiſche, beſeelt denken; nicht nur die Menſchen und Tiere, ſondern auch Pflanzen, Steine, Geſtirne, Feuer, Quellen, Flüſſe uſw.; und zwar gelten dieſe nicht nur als gelegentliche Wohnſitze vormaliger Menſchen- und Tierſeelen, ſondern als ſelbſtbeſeelt. Alſo der dornige Buſch, der den Jäger blutig ritzt, tut das nicht oder nicht nur, weil er der Sitz einer einſtigen boshaften Menſchenſeele iſt, ſondern weil er ſelbſt eine boshafte „Buſchſeele" hat. Die Quelle labt den durſtigen Wanderer nicht oder nicht nur deshalb, weil in ihr der Geiſt eines einſtigen mildtätigen Menſchen wohnt, ſondern weil ſie eine eigene milde „Quellſeele" birgt.

Umusimu iſt aber nicht nur die Bezeichnung für den Geiſt des Verſtorbenen, ſondern auch die für den Gegenſtand oder das Tier, das ſich der Geiſt des Verſtorbenen zum Sitz erwählt hat; es können deren viele verſchiedene ſein. Sehr oft ſind es kleine längliche Steinchen (inguru) von den Feldern des Verſtorbenen. Dieſe Steinchen werden von den Hinterbliebenen geſammelt, in eine Holzmulde gelegt und ins Opferhüttchen geſtellt, wo ihnen Bieropfer geſpendet wird (Nr. 46, S. 16). Oft hauſt die Seele eines verſtorbenen Menſchen auch in einem Gegenſtand nahe beim ehemaligen Wohnſitz des Toten in einem Baum, Zaun, Felſ; oft auch in einem Tier, das durch ſeine flüchtige Beweglichkeit die Vorſtellung von der hauchartigen Flüchtigkeit der Seele hervorruft, alſo namentlich in Schlangen, Eidechſen, Vögeln, oder auch in unheimlichen Tieren wie Kröten, Krokodilen, Hyänen u. a. Die Angehörigen beſtimmter Clans ſcheinen alle in Tiere einer beſtimmten Art, das Totemtier (umusiru) des betreffenden Clans, überzugehen (ſ. S. 102). Gemeinhin wird der erſte Wurm, der den verweſenden Körper des Menſchen verläßt, als Träger der Seele angeſehen, bis dieſe einen anderen definitiven Aufenthalt gewählt hat. Die erſte Made aus der Leiche eines Murundikönigs wird deshalb, wie S. 115 erwähnt, mit Milch genährt, bis ſie ſich in eine große Pythonſchlange verwandelt, der man göttliche Verehrung zollt. Die Seelen der großen Batwale gehen aber in andere Schlangen, Löwen, Leoparden über, die dann in den heiligen Hainen (imana) bei den Gräbern hauſen. Die Schlangen pflegen von dort aus die Hütten der Familie zu beſuchen und werden von den Familienmüttern als Seelentiere der verſtorbenen Angehörigen betrachtet und mit Milch gefüttert. So auch bei den Galla, den Maſſai und den Kaffern Südafrikas (Nr. 41, S. 36; Nr. 19, S. 354). Die Idee einer göttlichen Strafe, einer Läuterung und ſühnenden Seelenwanderung, wie ſie beſonders von Miſſionaren in dieſer Verſetzung der Menſchenſeelen in Tiere geſehen wird, iſt den Barundi urſprünglich gewiß fremd; vielmehr iſt der Grundgedanke ſolcher „Seelenwanderung" die totemiſtiſche Verwandtſchaft der Menſchenſippe mit einer beſtimmten Tierſpezies (ſ. S. 102). Gar nicht aber ſtört die Barundi in dieſen Vorſtellungen der innere Widerſpruch, daß dann das von der abgeſchiedenen Menſchenſeele okkupierte Tier, Baum, Felſ, Waſſer uſw. zwei Seelen haben müßte; Negerlogik iſt nicht Europäerlogik.

Die Frage nach der Unſterblichkeit der Seele, die natürlich vom chriſtlichen Miſſionar mit in den Vordergrund ſeiner Lehre geſtellt wird, bewegt den nicht chriſtianiſierten Murundi ebenſowenig tief wie alle anderen oſtafrikaniſchen Neger. Seiner Vorſtellung

und seinem ethischen Bedürfnis genügt es, daß die Seele den Tod überdauert, aber wie lange diese Fortdauer währt, kümmert ihn nicht weiter. Wahrscheinlich denkt er wie andere Afrikaner sich die Sache so, daß die Seelen nicht in alle Ewigkeit leben, sondern allmählich schwächer und kleiner werden und schließlich ganz vergehen (Nr. 41, S. 41), oder daß, wenn sie in Tiere übergegangen sind, sie mit dem Tod dieser Tiere verlöschen.

Die Geister der Verstorbenen sind durchweg mehr oder minder böse, den Lebendigen feindlich, auch wenn sie im Leben relativ gut gewesen sind. Denn der Tote hat alles, was ihm im Leben lieb und wert war, zurücklassen müssen und ist deshalb von Neid gegen die Überlebenden, Besitzenden erfüllt. Diese neidischen, den Menschen übelgesinnten, ihnen Krankheit, Mißwachs, Viehsterbe und anderes Unheil verursachenden Geister sind die gefürchteten abasimu oder imisimu (Sing. umusimu), um deren Abwehr, Fesselung, Besänftigung, Gewinnung sich zum größten Teil das Sinnen und Trachten der Barundi im täglichen Leben dreht. Unter demselben Namen abasimu oder imisimu finden wir diese niederen bösen Geister bei allen Bahima wieder, auch im südlichen Verbreitungsgebiet, in Ufipa (Nr. 47, S. 167/8). Der Neid und die Feindseligkeit der Abasimu werden besänftigt und gemildert, indem man dem Toten wertvolle Stücke seines Besitzes auf das Grab legt und indem man möglichst oft Teile von dem, was man genießt, oder von dem, was man aus dem ehemaligen Besitz des Toten benutzt, als Opfer darbringt (s. S. 136). Der immaterielle Geist genießt oder benutzt von diesen Opfern auch nur den immateriellen Teil, also den „Geist" des dargebrachten Bieres, Fleisches, Hirsebreies, der Krüge, Messer, Pfeile, Hacken usw. Die Opfer sind nichts anderes als Prämien auf größere Sicherheit gegen die Feindseligkeit der Abasimu und keineswegs pietätvolle Weihgeschenke an die verehrten oder geliebten Vorfahren. Nur weil er die Manen fürchtet, opfert ihnen der Murundi. Noch viel wirksamer als das Opfern ist aber der Eintritt in den religiösen Geheimbund, die religiöse Brüderschaft der Ababandwa, von dem nachher Näheres zu berichten sein wird (S. 124). Diese Ababandwa nehmen nach ihrem Tod eine bevorzugte Stellung im Geisterreich ein. Sie kommen, wenn ihr Bundesverhältnis für richtig befunden worden ist, zu Riangombe, wo sie als imandwa eine Art Leibgarde des Gottes bilden. Sie sind sozusagen die Heiligen des Barundihimmels.

Über den niederen Geistern der zahl- und namenlosen Abasimu und über den Imandwa steht eine Schicht von höheren, benannten Geistern, wie die Herrenkaste der Batusi über den Bahutu (Nr. 19, S. 213). Es sind lauter persönliche Wesen, die wir schlechthin Götter nennen können. Eine ganze Reihe von ihnen tragen dieselben Namen wie einstige historische Persönlichkeiten der Barundi oder ihrer Nachbarvölker. Alles, was von ihnen ausgesagt wird, beweist, daß diese Götter ursprünglich Helden, Häuptlinge, Könige des Volkes gewesen sind, die infolge ihrer übermenschlich erscheinenden Eigenschaften und Taten als Heroen verehrt und allmählich zu Göttern erhoben worden sind. Der Heros ist nicht nach dem Bild des Gottes geschaffen, sondern der Gott nach dem Bild des Helden (Nr. 43, S. 280). Ebensowenig sind diese Götter Personifikationen großer Naturerscheinungen, wie etwa der Sonne, des Mondes, der Wolken, des Gewitters. In diesen Erscheinungen sieht auch der Murundi nur die Sitze und die Äußerungen der darin wohnenden Abasimu, aber nicht die Verkörperung persönlicher Götter (Nr. 43, S. 358 ff.).

Die benannten, mit dem Merkmal der übermenschlichen Persönlichkeit und der

Unvergänglichkeit ausgestatteten Heroengötter der Barundi sind, wie man an den ihnen beigelegten Eigenschaften und Geschichten erkennt, zum Teil Volksgötter der alteingesessenen Bantu und Batwa, zum Teil Import der hamitischen Eroberer, zum Teil Mischlinge aus beiden Elementen. Van der Burgt glaubt nicht, daß die vergötterten Heroen Hamitenfürsten gewesen sind, sondern betont (briefliche Mitteilung), daß „die meisten Götternamen der Bantureligion angehören und Bantuwörter sind". Wie die Sprache hätten die Batussi auch die Götter der Bahutu angenommen, aber die Batwa hätten einige eigene Götter, z. B. Indagarra. Unter den 30 Namen von Barundigöttern, die v. d. Burgt aufzählt (Nr. 19, S. 214), erscheinen mir jedoch die folgenden hamitischen Ursprungs oder wenigstens nicht reine Bantugötter zu sein: Riangombe, Umugassa, Wamara, Kagoro, Ruwambo, Ruhanga, Rugaba. Von ihnen ist Riangombe (Ejangombe, Djangombi) auch in den Bahimastaaten Ruanda, Kisiba, Mpororó, Ankole u. a. göttlich verehrt; er soll ein Ruanda-Mutussi, Schüler des ersten Ruhinda, gewesen sein und sich durch starke Zauberkräfte ausgezeichnet haben (s. auch S. 188). Umugassa, Mugascha, der auch in Uganda („Mukessa", s. Anthropos III, S. 214), in Ankole, Kisiba, Karagwe (Mugascha-See), Kissala, Ussuwi als Gott der Gewässer und des Regens verehrt wird, war nach der Tradition der Basiba ein früherer König der Sesse-Inseln im nördlichen Victoriasee (Nr. 31, S. 128; Nr. 27, S. 110; Nr. 34, S. 518/19). Wamara wird in Ankole und Kisiba als Geist der abgeschiedenen Seelen verehrt und war nach der Banjankoletradition ein König der Batschwesi in Baera (Uganda), eines von den Bahima verschiedenen Hamitengeschlechts, und eroberte Ankole; nach Rehse „früher ein großer weltlicher Fürst, dem die Reiche von Nyansa bis in den Kongostaat untertan waren" (Nr. 31, S. 126/7; Nr. 34, S. 520). Kagoro gilt in Kisiba als Enkel Wamaras (Nr. 31, S. 133). Rugaba, Lugaba, der in Kisiba und in Ankole als Schöpfer des Menschen und des Rindes verehrt wird (Nr. 27, S. 108), war nach v. d. Burgt „der älteste König der Wahinda" (Nr. 19, S. 219). Was Rehse von den Göttern der Basiba sagt, daß „die Schilderung dieser Geisterwelt die älteste Geschichte Kisibas sowohl wie die der sämtlichen zentralafrikanischen Länder darstellen würde", das gilt auch von den Heroengöttern der Barundi. Diesen religiösen Quellen nachzugehen, wäre eine dankbare Aufgabe, namentlich für Missionare!

Wie die Basiba einen obersten Gott Rugaba als Weltschöpfer und höchsten Gnadenspender verehren, ihm aber niemals Opfer darbringen (Nr. 31, S. 125), so die Barundi und Banjarwanda (Nr. 28, S. 1—13) den Imana. Auch ihm wird nie geopfert, nie zu ihm gebetet, gleichsam als einem unnahbar hohen Wesen. Man wendet sich lieber an die den Menschen näher stehenden, einst selbst Menschen gewesenen Götter Riangombe, Kiranga, Wamara u. a. Obwohl als persönlicher Weltschöpfer und Weltordner gedacht, ist Imana doch der einzige im Götterhimmel der Barundi, dessen Namen man bisweilen als eine Gesamtbezeichnung der Geisterwelt gebraucht. Imana ist „das Göttliche", „die Gottheit" schlechtweg. Imana ist auch die Bezeichnung für alles dem Murundi Heilige: für die heiligen Bäume, den heiligen Stier, den König, die Amulette, die Orakeltiere, die heilige Lanze usw. (Nr. 19, S. 214). Ebenso in Ruanda (Nr. 44, S. 284; Nr. 39, S. 102, 109). Je nach seinen verschiedenen Eigenschaften und Tätigkeiten legt man dem Imana zahlreiche verschiedene Namen bei oder identifiziert ihn mit anderen Göttern; ebenso in Ruanda. Kinder werden oft mit Namen belegt, in denen Imana vorkommt: Kaimana = kleiner

Imana, Mbonimana = Geschenk des Imana, Ndorimana = Erscheinung des Imana, Keschimana = Schmuck des Imana (Nr. 23, 1913, S. 308). Männer und Frauen tragen ein impusu y'Imana, ein Imanakleid aus rötlichem schwarzgeringelten Rindenstoff, wenn sie sich Nachwuchs wünschen. Imana ist das Oberhaupt aller Manen, aller Ahnengeister, und bekommt dadurch den Charakter eines alten Nationalgottes.

Wiewohl Imana als einziger Weltschöpfer hoch über den anderen Göttern steht, wird man doch diese Vorstellung der Barundi nicht eine monotheistische nennen können, wie es manche Missionare tun (Nr. 44, S. 283). Ebensowenig ist es zutreffend, in dem Umstand, daß die Barundi neben Imana zwei Hauptgötter haben, Nikiranga und Niangombe, die sie oft mit Imana identifizieren oder verwechseln, eine Art „Dreieinigkeit" sehen zu wollen (Nr. 19, S. 214). Das sind christliche Hineindeutungen und Auslegungen, die dem Gedankengang der Barundi fremd sind.

Dem Imana am nächsten scheint Kiranga, Nikiranga, zu stehen. Wenn Imana das Oberhaupt der hohen Ahnengeister genannt wird, bezeichnet man Kiranga als den Herrn aller niederen Dämonen und aller materiellen Dinge. Van der Burgt nennt ihn deshalb eine Art logos payen (Nr. 19, S. 216). Er ist der Gott, der in allen irdischen Angelegenheiten zuerst um Beistand angerufen wird. An ihn wendet sich vor allem der priesterliche Kultus der Menge, ihm ist die Zeremonie des „heiligen Speeres" geweiht (s. S. 134), nach ihm nennt sich der Oberpriester selbst Kiranga, denn er ist von ihm „besessen", sein Medium (S. 123). Allem Anschein nach ist es eine Gottheit der alten Bantubevölkerung und noch ziemlich frei vom Batusseinfluß. Kiranga ist es, von dem die Missionare als dem „Teufel" sprechen (Nr. 23, 1904, S. 123), der bei Mujaga in Mittel-Urundi zwei große Rinderherden besitze, an deren Spitze zwei heilige Stiere stehen. Auch habe er einen heiligen Berg, den eine Priesterin verwalte. Diese habe großen Einfluß und sei sogar der Gewalt des Königs entzogen, obwohl dieser sie stets bewachen lasse, damit sie ihren Kultverpflichtungen nachkomme. Vernachlässige sie aber ihre Obliegenheiten, so werde sie mit ihren nächsten Verwandten auf Befehl des Königs getötet. Ihr Amt beginne mit der Regierung des Königs und ende auch damit, denn nach des Königs Tod müsse sie Gift nehmen.

Pater Gaßdinger nennt Kiranga den „Allesverderber", den Luzifer der Barundi. Ihn rufe man zuerst in aller Trübsal, Not und Angst an, ihm seien die meisten Opferhüttchen (akararo) neben den Wohnhütten gewidmet, und darin stehe regelmäßig ein großer dreibeiniger und dreimündiger Tontopf, der das Opfer aufnehme. Außer Bier werden hauptsächlich Getreidehalme in den Hüttchen hergebracht und die Hörner von Rindern darin als Opfer verbrannt (Nr. 45, 1913, S. 359 ff.).

Bezeichnend für die verworrenen Vorstellungen der Barundi von den verschiedenen Persönlichkeiten ihrer Götter und Geister ist es, daß sie oft die Begriffe durcheinanderwerfen und die Namen verschiedener Götter einem und demselben beilegen. So hört man sie z. B. sagen: „Niangombe ist mächtig, er ist Kiranga; auch Kagoro ist Kiranga, er ist Sengoga." Auch Rugaba, Nahenga, Inganje, Nsabaski, Indagarra, Nakiza wird der Kiranga genannt oder auch diese Namen als Beinamen des Imana bezeichnet und das Wort Imana als Mehrheitsbegriff gebraucht (Nr. 45, 1913, S. 363). Unter diesen angeführten Namen sind mehrere, die wir, wie eben (S. 120) gesehen, bereits als Namen ganz bestimmter Götter und Geister von anderen Bahimastämmen kennen. Ihre Gestalten scheinen in Urundi verblaßt zu sein, so daß sie mitein-

ander verwechselt werden, und ihre Begriffe sich zu bloßen Attributen oder Beinamen des Imana verflüchtigt zu haben, der ohnehin schon mehr ein Kollektivbegriff „Heilig" oder „Göttlich" ist als ein persönlicher Gott.

Als dritter in der Götterreihe ist zu nennen Riangombe, das Oberhaupt aller guten Geister (imandwa), den Imana beauftragt hat, die Menschen zu lenken und sie gegen die bösen Geister (abasimu) zu schützen (Nr. 44, S. 286). Ihm ist in Ruanda der religiöse Bund des Kubandwa geweiht (s. S. 124), und er ist nach dem Tod der Menschen der Richter über Gerechte und Ungerechte. Daher spielt er im ethischen Interessenkreis, im Gefühlsleben der Barundi eine so große Rolle wie kein anderer Gott; ebenso in Ruanda. Dies spricht sich auch darin aus, daß Riangombe (oder Imana) der Schutzherr des Wertvollsten ist, was der Murundi und der Munjarwanda besitzt: der Rinder (s. S. 46).

Riangombe war nach der Ruandatradition in seinen menschlichen Lebzeiten ein Muhima aus der privilegierten Sippe der Bega, des höchsten Adels neben dem Königsgeschlecht der Banjeginja. Sein Vater Babinga war das religiöse Oberhaupt Ruandas, und Riangombe wurde sein Nachfolger als Chef der Ababandwa, der religiösen Brüderschaft, während der weltliche Ruandakönig Luganfu war, der ihn erst befehdete, dann aber anerkannte und ehrte (Nr. 44, S. 281). Imana war dem Hohenpriester Riangombe zu Lebzeiten sehr geneigt. Als dieser starb, führte ihn Imana auf den hohen Vulkanberg Muhawura, wo Riangombe nun seine Herde weidete und seinen Tabak baute (die großblätterigen Senecien); aber die Pflanzungen wurden vom bösen Geist Niragongo, der den gleichnamigen Berg bewohnt, zerstört. Da zog Riangombe, von Imana unterstützt, gegen Niragongo, zerstörte dessen Wohnsitz und setzte den Berg in Flammen (Vulkan Niragongo). Ungestört wohnt nun Riangombe abwechselnd auf dem Muhawura und auf dem Karissimbi, wo er seine große heilige, milchende Rinderherde weidet und von den Imandwa, den Geistern der verstorbenen Mitglieder des religiösen Bundes der Ababandwa, bedient wird. Diese allein gehen in sein „Paradies" ein, wogegen die Seelen der nichtgeweihten Profanen (abansigo) als Dämonen (abasimu) zu Namlagira und Niragongo verwiesen werden, wo sie in der „Hölle" der Vulkane ein sklavisches Schattendasein führen. Soweit die Ruandatradition, nach Pater Arnoux (Nr. 44). Das Wesentliche aus ihr hat sich auch bei den Barundi erhalten; ja sogar die Angabe, daß Riangombe nach seinem Tod auf dem Berg „Vurunga wa niangombe" in Ruanda beigesetzt sei, findet sich hier noch (Nr. 19, S. 216), obwohl den Barundi die Virunga-Vulkanberge Nordruandas gänzlich unbekannt sind. Die Vorstellung von Paradies und Hölle (Karissimbi und Niragongo) ist in Ruanda wohl lokal entstanden; in Urundi gibt es nichts Derartiges (v. d. Burgt, briefliche Mitteilung).

Wie in Urundi gilt Riangombe auch in Kisiba hauptsächlich als Schutzherr der Rinder. Er wird dort nur von den Bahima verehrt, und auch sein Priester ist immer nur ein Muhima. In Ankole dagegen nimmt er keine Ausnahmestellung ein (Nr. 34, S. 520). Da er ferner aber in Ruanda und Urundi (neben Kiranga) im Mittelpunkt der Verehrung der religiösen Brüderschaften (ababandwa) steht und in Urundi sogar von den Batwa als ihr Hauptgott verehrt wird (Nr. 19, S. 216), so kann man folgern, daß dieser offenbar mit den Bahima eingewanderte Hirtengott allmählich in seiner neuen Heimat vernegert ist und sich in der alten Negermythologie der Bahutu und Batwa festgesetzt hat.

Anderer Meinung ist allerdings Pater Loupias, der annimmt, Riangombe sei ursprünglich eine Gottheit der Bahutu oder vielleicht der Batwa, und angibt, daß in Ruanda weder der König noch die „großen" Batutsi Mitglieder des dem Riangombe geweihten Ordens der Imandwa werden (Nr. 28, S. 6). Letzteres ist aber auch in Urundi der Fall und kann ebensogut als aristokratische Zurückhaltung der Batutsi-Großen gegen nahe Gemeinschaft mit den Bahutu oder gar mit den Batwa gedeutet werden.

Unter den übrigen, oben noch nicht genannten Gottheiten der Barundi können wir die folgenden sehr wahrscheinlich als altreinheimische Götter der ackerbauenden Bahutu und der Batwa ansehen: Indagarra ist der namentlich von den Batwa verehrte Gott der Zeugungskraft, ein „Priapus"; Njamurimi gilt als Schutzherr der Felder; Njankuru ist der Nationalgott der Basige in Nordwest-Urundi; Inganfse scheint eine Art Zeitgott, „Chronos" zu sein; Wandamutoni ist die Frau des Imana; Ikifjego der Sohn des Imana; Tusara der Gott der dienstbaren Hausgeister, „Kobolde"; Kwiguka der Gott der Unzucht u. a. m. (Nr. 19, S. 216—220).

2. Kultus

Jeder dieser Götter hat seine bestimmten Kultformen, jeder seinen bestimmten Priester, in den er von Zeit zu Zeit „hineinfährt", ihn „besessen" macht, wahrsagen und zaubern läßt. Es gibt männliche und weibliche Priester. Die weiblichen bleiben angeblich unverheiratet. Göttliche Kraft und Inspiration, die Anlage zur Besessenheit geht meist vom Vater auf den Sohn oder Tochter über; ebenso wie die Heil- und Beschwörungskraft der Medizinmänner (abafumu).

In Urundi heißen diese Priester Ivíranga (Sing. Kiranga), in Ruanda Imandwa, in Kisiba Wabandwa. Der Kiranga hat unter den Personen, die dem Götter- und Geisterkult obliegen, am meisten den Charakter und die Funktionen eines Priesters in unserem Sinn. Er hat denselben Namen wie der Gott Kiranga (vom Wortstamm kira = in Ordnung bringen) und gilt für den Repräsentanten und den wandelnden Wohnort des Gottes selbst. Ein Mann oder Weib wird Kiranga entweder dadurch, daß Vater oder Mutter Kiranga gewesen sind und nach deren Tod ihm die Eigenschaft vererben, oder dadurch, daß der resp. die Betreffende vom Blitz, dem Gewaltzeichen des Gottes, niedergeworfen, aber nicht getötet worden ist (Nr. 19, S. 253), oder dadurch, daß er beim Fest des Kubandwa oder des „heiligen Speeres" (vgl. S. 134) vom Geist gepackt wird und in einen manischen Zustand der Besessenheit verfällt. Vom Eintritt solcher Ereignisse oder Zustände an wird die betreffende Person für Kiranga erklärt und hat in allen, bei so vielen Anlässen aufgeführten Zeremonien des heiligen Speeres den Kultus mit zu leiten (Nr. 19, S. 462/63) und den Verkehr der leidenden oder von metaphysischen Bedürfnissen erfüllten Menschen mit den Geistern und Göttern zu vermitteln.

In Ruanda sind, wie erwähnt, diese ekstatischen Vermittler der Geisterwelt Imandwa genannt. Sie sind männliche oder weibliche gotterwählte Medien eines der Hauptgeister, also entweder des Riangombe oder des Binego oder des Mugasse usw., und haben je nach dieser Zugehörigkeit eine von den anderen verschiedene Art sich aufzuputzen und sich brummend oder zischend oder heulend zu äußern; auch eine besondere Geisterspracke ist dabei im Gebrauch. Gewöhnlich geraten sie nach reichlichem Biergenuß in ihre religiöse Ekstase, in welcher der Geist selbst aus ihnen

spricht, wahrsagt, orakelt. Auch sind sie dann nicht mehr verantwortlich für alles, was sie in diesem spiritistisch-mediumistischen Zustand tun, seien es auch die gröbsten Überschreitungen der Gesetze und des Anstandes (Nr. 39, S. 100). Von dieser Freiheit machen denn auch die Besessenen reichlich Gebrauch, so daß man darin wohl mit Recht ein Hauptmotiv für die ganze Einrichtung des Imandwawesens erblicken kann.

Auch in Unjoro heißen die Medizinmänner Abandwa, die „Magie treiben, indem sie Tiere töten oder gewisse Kräuter verwenden" (Nr. 9, S. 377).

Aus Kisiba kennen wir diese, von je einem bestimmten Gott besessenen und dort Wabandwa genannten genauer durch A. Vix und B. Struck (Nr. 34 und 36) und durch Rehse (Nr. 31, S. 107, 132). Auch dort sind sie nach der Art ihres Gottes oder Dämons verschieden, äußern aber alle ihre Kraft in „hysterischen, durch Autosuggestion entstehenden Anfällen". Der eine ist Spezialist im Regenmachen, der andere im Pestheilen, der dritte in Ackerbausachen, der vierte in Rinderkuren usw. Wenn der Geist über sie kommt, bekleiden sich diese Gottbegnadeten mit einem Leopardenfell, das ihnen der Häuptling liefert, und mit einer Fellmütze, behängen sich mit Amuletten, tanzen mit langen Stöcken und Rasselkürbissen (Taf. 54). Sie sind aber nicht zu einer Genossenschaft vereint.

Eine Berufsgenossenschaft, einen religiösen Zweckverband oder religiöse Brüderschaft bilden dagegen die Ababandwa in Ruanda, von denen sich auch in Urundi viele Anklänge finden. Das sind nicht die vorgenannten, von einem Gott besessenen Priester (kiranga) und nicht die Magier und Medizinmänner (abakumu), sondern die aus Sorge um ihr irdisches Wohl und um ihr künftiges Seelenheil sich dem Gott weihenden Frommen, die sich zu einer, durch feierliche Zeremonien gebundenen Brüderschaft, einer Kultgemeinde zusammentun und auch gemeinsame Opfer bringen.

Van der Burgt hält die ababandwa, die wachwesi, die iviranga, die ivisjego u. a. nicht auseinander (Nr. 19, S. 220, 292, 463, 516), so daß man hieraus kein klares Bild von der Art des Kubandwawesens der Barundi bekommt; aber was er mitteilt, entspricht im wesentlichen den Schilderungen, die uns Pater Arnoux und Missionär Johanßen von dem Imandwa-Geheimbund Ruandas geben (Nr. 44 und Nr. 39, S. 96—101), so daß wir uns dort für Urundi manche Aufklärung holen können. Mit Recht weist aber v. d. Burgt auf die ähnlichen Kulte der „Watschwesi"- (Batschwesi-) Brüderschaften in Uffuwi, Uffumbwa, Usindja und Unjamwesi hin, wo in nächtlichen Orgien sich die letzten Spuren religiöser Kulte und Kultgenossenschaften erhalten haben, die sich in Urundi, Uha, Ruanda noch als nationale Einrichtung in der Öffentlichkeit abspielen. Den alten Zusammenhang lassen auch die bei solchen Festen der Watschwesi in Unjamwesi, Usindja und Osturundi gesungenen Hymnen erkennen, die merkwürdigerweise in der alten Kirundisprache lauten (Nr. 19, S. 220 und 463).

Von Ost-Uffumi berichtet auch Pater van Thiel, daß dort bei der Zeremonie des Kubandwa, der Aufnahme in den Bund der Ababandwa, eine luchwesi genannte rituelle Sprache gebraucht wird, von der er einige Dutzend Wörter aufzählt, z. B. bulege Bogen, milam Pfeil, migasi Fleisch, muto Feuer, masugunu Milch, muyara Kopf, manono Zähne, agawesa Augen (Nr. 24, S. 57). Es wird zu erkunden sein, ob dieses luchwesi mit dem Alt-Kirundi übereinstimmt (vgl. S. 70, 148). Von der Geheimsprache der Babandwa in Ruanda teilt Czekanowski einige Proben mit (Nr. 48, S. 316—317).

Von den Ababandwa in Ruanda aber wissen wir folgendes: Der Sage nach hat der historische Oberpriester Mangombe vor seinem Tod den Wunsch geäußert, er wolle

2: Meyer FO42 Rundi

ohne Unterschied der Kasten von den Batussi sowohl wie auch von den Bahutu und Batwa verehrt werden. Daher weihen sie sich ihm im Kubandwa ohne Unterschied. Diese Tradition scheint aber nur eine Erweiterung der Brüderschaft durch Ausdehnung auf die Batussi zu bedeuten, denn nach anderen Überlieferungen bestand die Brüderschaft der Ababandwa längst vor dem historischen Riangombe; sie ist höchstwahrscheinlich ein uraltes Element der Negerreligion, das sich in Ostafrika noch rein in Urundi, Uha, Ruanda, Karagwe, Ostkongoland (Bunjabungu) erhalten hat (Nr. 44, S. 291), entartet in Unjamwesi, Uffumbwa ist und sehr viele Parallelen in den Geheimbünden der Bantu und Sudanneger von Loango, Kamerun, Togo, Goldküste usw. hat. Nach v. d. Burgt gehört der Kubandwakultus in Urundi der Bantureligion der Bahutu an und ist von den Batussi übernommen. Der König aber darf an dem Kult nicht teilnehmen, während die Batwa dem Kult, besonders dem des Kiranga, sehr ergeben sind. Burgt nennt in seinem Diktionär die Ababandwa eine société religieuse et secrète (Nr. 19, S. 220, 463), aber nach einer neueren, brieflichen Mitteilung betrachtet er das Kubandwa nicht als eigentlichen „Geheimbund", sondern als Vereinigung zu einer geheimnisvollen Kulthandlung, zu der nicht jedermann, z. B. Kinder, zugelassen ist. Hauptmann v. Langenn dagegen hält es für einen religiösen Geheimbund, in dem alte Zauberer die Hauptrolle spielen; die Aufnahme erfolge durch besondere Zeremonien. Auch Missionar Johansen nennt die analoge Einrichtung in Ruanda eine „Gemeinschaft der Eingeweihten oder Medien", die mit der Geisterwelt in Verkehr stehen und nach dem Tod zu Riangombe kommen, in Gegensatz zu den Laien, den Insigo, die von dieser Gemeinschaft ausgeschlossen sind (Nr. 39, S. 96). Und ebenso nennt Pater van Thiel die Eingeweihten des Kubandwakultes in Ostussuvi eine „société secrète", deren Meister der Zauberer sei (Nr. 24, S. 49).

An der Spitze der Ababandwa steht in Ruanda ein Oberpriester (kiranga), der vom König eingesetzt wird, aber auch abgesetzt werden kann. In Ruanda sind zu seinen Helfern vom König die mpara bestellt, eine Gruppe von Ababandwa, die das Vorrecht haben, im Kral des Königs selbst dem Riangombe zu opfern, und die bezeichnenderweise nur aus Bahutu bestehen; also wahrscheinlich ein Zugeständnis an die alte Bantuherkunft des Kubandwakultus. Diese Mpara sind zusammen mit den am Hof des Königs lebenden Batwa (s. S. 13) die Wächter und die „Behüter des königlichen Schlafes", genießen also ein hohes Vertrauen (Nr. 44, S. 292).

Hauptgründe zum Kubandwa pflegen folgende zu sein: Befolgung der Aufforderung eines Zauberers; der Wunsch, von einer durch die bösen Geister verursachten Krankheit oder schlimmen Lage befreit zu werden; die Absicht, sich durch die Ordensgemeinschaft bevorzugte Stellung oder materielle Vorteile aller Art zu verschaffen; die Erfüllung eines den Ahnen gegebenen Versprechens oder Gelübdes; die Beibehaltung der Familientradition u. a. m. Also lauter Beweggründe, in denen das positive Nützlichkeitsprinzip stark überwiegt.

Die Folge aber des Kubwandwa ist die, daß der Umubandwa nun nicht mehr zur gemeinen Menschheit gehört, sondern zu einer höheren Adoptivfamilie, die ihre Angehörigen schützt und fördert, also eine Art Freimaurerloge. Die Aufgenommenen verpflichten sich mit Schwüren, die Geheimnisse des Kubwandwa nicht zu verraten oder zu verletzen. Tut das einer dennoch, so wird er von den Ababandwa zu allen Leiden verflucht, und Riangombe erfüllt den Fluch (Nr. 44, S. 294).

Die Zeremonien des Kubandwa, der Aufnahme in den Bund, sind außerordentlich umständlich; sie sind aber für die Batusi, Bahutu und Batwa die gleichen. Soviel ich erfahren konnte, stimmen sie in den Hauptpunkten mit dem in Ruanda üblichen Verfahren überein. Dort verläuft der Vorgang folgendermaßen: Zuerst teilt der Aspirant (nsigo) einem der Zauberer (umufumu) die Absicht, in den Bund aufgenommen zu werden, mit. Dann brauchen die Abafumu wochen- und monatelang, um die Geister durch allerlei Zauber um ihre Zustimmung zu befragen: sie lauschen auf ihre inneren Stimmen, sie beobachten schwimmende Butter- und Holzstückchen, sie lesen in den Eingeweiden der Hühner, Hammel, Bachstelzen usw. (Nr. 44, S. 530). Und während all dieser Zeit muß der Kandidat dem Umufumu ein Geschenk nach dem anderen machen: Schafe, Ziegen, Bohnen, eiserne Hacken, ja sogar Rinder (von den Batusi); während gleichzeitig den Geistern in den kleinen Opferhüttchen Bananen, Fleisch, Pombe und andere genießbare Dinge geopfert werden. Endlich sind die Geister mit der Aufnahme des Kandidaten einverstanden. Die Abafumu wählen ihm nun aus ihrem Kreis einen Paten, der den Kandidaten bei den Ababandwa einzuführen hat. Und nun beginnt im Kral des Kandidaten die eigentliche Aufnahme in den Orden durch die Bundesbrüder unter zahllosen Formeln, Handreichungen, Anrufungen des Niangombe, Gesicht- und Körperbemalungen, Essen, Trinken, Bekleidungen, Handhabung des heiligen Speeres, Wechselgesang, Schellen- und Kürbisrasseln, wovon jedes eine symbolische Bedeutung und Beziehung hat (Nr. 44, S. 539—558).

Gegen Ende dieser Zeremonie legt der Pate des Kandidaten die Insignien des Niangombe an (Leopardenfell, Kopfputz mit Kuhschwanz und anderes) und verwandelt sich damit in Niangombe selbst, der nun in eigener Person die Aufnahme des Neulings durch eine Art Examen und Belehrung vollzieht. Es sind aber keine tiefsinnigen Geheimnisse, in die der Novize eingeweiht wird, keine „esoterische Weisheit", wie in den antiken Mysterien, sondern nur rituelle Äußerlichkeiten, und wenn der Novize schwören muß, daß er die Geheimnisse des Kubandwa wahren will, so erstreckt sich dies nur auf die äußeren Zeremonien, denn etwas anderes weiß er nicht, so wenig wie alle Ababandwa. Zum Schluß werden Niangombe und die ihm assistierenden Ababandwa vom Neuaufgenommenen wieder mit Geschenken beehrt, worauf Niangombe dem Novizen einen neuen Namen verleiht, den er künftig allein zu führen hat: in Ruanda z. B. „der Kleine, der den Stein zerschlägt" oder „der, welcher Sahne verschlingt", oder „der, welcher die Mutter beschützt", oder „der, welcher die Hunde flieht" (Nr. 44, S. 870). Damit ist der Neuling ein ordentlicher Bundesbruder geworden. Die Ababandwa ziehen hierauf, mit den Abzeichen ihrer Geister angetan, im Land umher, sammeln überall Lebensmittel und verprassen diese am Ende in einem gemeinsamen Mahl und Trinkgelage (Nr. 44, S. 110). Der neuaufgenommene umubandwa muß nun aber seine jüngst erworbene Kraft öffentlich erweisen. Er wird von einem in irgendeiner schwierigen Lebenslage befindlichen Munjaruanda gebeten, ihm bei der Anrufung Niangombes oder eines anderen Gottes oder Schutzgeistes (wie Kirenga, Mafera, Bimego, Kagere, Magasse) beizustehen. Dies geschieht durch umständliche Beschwörung des Gottes um Erfüllung der Bitte und durch Schlachten einer sterilen Kuh, eines alten Stieres oder eines Hammels zu seinen Ehren, an deren Verspeisung die Ababandwa der ganzen Gegend teilnehmen

2: Meyer FO42 Rundi

(Nr. 44, S. 123 ff.). Die Hörner der geschlachteten Rinder werden bei dieser Gelegenheit wie bei jedem anderen Rinderopfer neben den Hütten aufgehängt oder aufgestellt oder halb eingegraben, so daß nur die Spitzen herausstehen. Am Eingang von Musingas Empfangshütte in Njansa fallen jedem Besucher solche halb vergrabenen Hörner auf.

Mit dieser Amtshandlung der Gebetshilfe, die erfolgreich sein muß, wenn nicht „höhere Kräfte" dagegen sind, ist die lange Zeremonie des Kubandwa zu Ende.

Von den Zusammenkünften der Ababandwa in Urundi, von ihren Kulthandlungen, Gesängen, Tänzen wissen wir einiges durch den Pater Gaßdinger (Nr. 45, S. 309—314). In Urundi gelten aber die Zeremonien meist dem Gott Kiranga, der ja in Urundi eine viel größere Rolle spielt als der in Ruanda vorwiegend verehrte Niangombe und oft mit Niangombe identifiziert wird (s. S. 121). So ist auch in den von Gaßdinger beschriebenen Riten nicht Niangombe, sondern Kiranga der Herr und Protektor des Geheimbundes der Ababandwa.

Wenn eine vermögende Murundifamilie im Lauf des Jahres Krankheit oder andere Drangsal durchgemacht hat, veranstaltet sie nach der Getreideernte, sobald die Speicher gefüllt sind und das Bierbrauen begonnen hat, ein Kubandwafest, zum Kult des Kiranga, wozu alle Ababandwa der Gegend geladen werden. Zuerst wird ein befreundeter Umubandwa, in dessen Hof die Zeremonie zuletzt stattgefunden hat, gebeten, bei dem Fest als Hierophant, als Stellvertreter Kirangas, zu fungieren. Dieser bereitet sich durch Isolierung und Fasten auf das Amt vor. Sobald er in seiner Hütte nachts zu brummen und zu gröhlen anfängt, ist es das Zeichen, daß er nun vom Kiranga besessen ist, und das Fest kann beginnen. Langsam finden sich die geladenen Ababandwa, Männer und Weiber, im Hof des Festgebers ein. Das Geisterhüttchen Kirangas wird mit jungen Fikuszweigen geschmückt, um das Hüttchen herum frisch geschnittenes Gras sauber ausgestreut und darauf vor dem Hüttchen ein Klotz oder niedriger Holzschemel hingestellt. Neben den Schemel setzt man einen der riesigen dreifüßigen Biertöpfe, die beim Kirangafest benutzt werden, und in die Hofmitte stellt man eine weite geflochtene Wanne mit zauberwirkenden Kräutern und Blättern. Unterdessen haben sich die Ababandwa mit weißgelbem Ton breite und schmale Streifen über das Gesicht geschmiert, die Weiber außerdem Haar und Arme mit Blättern und Binden verziert. Jeder bewaffnet sich mit langstieligen Rasselkürbissen oder Eisenschellen; alles schweigt.

Da kommt langsamen Schrittes aus der Hütte heraus Kiranga selbst, das Gesicht bis zur Unkenntlichkeit mit Ton beschmiert und die Augen geschlossen. Mit beiden Fäusten hält er eine lange Lanze, den heiligen Speer, umklammert und läßt sich von vier Assistenten (ivinjego) geleiten; einer von ihnen ist der Hausherr, der Festgeber. Feierlich läßt sich Kiranga auf dem Schemel nieder, während die Ivinjego zu seinen Seiten hocken. Nun setzt sich eine Prozession der Ababandwa zu ihm in Bewegung. Sie nehmen aus der vorhin genannten Flechtwanne Grasbüschel, legen sie beim vor Kiranga nieder und rufen ihm zu „Kiranga umwami wi Barundi!" (Kiranga, du bist der König der Barundi). Auf ihre Plätze zurückgekehrt, beginnen sie ihre Rasselkürbisse in bestimmtem Rhythmus und in streng eingehaltenem Takt zu schütteln und dabei im gleichen strammen Takt den Boden zu stampfen. Ein Vorsänger stimmt nun die althergebrachte Kubandwahymne an:

Hai yeye wohima ye!
Ababandwa n'ivisjego!
Hiye yee, he he, eee hiye,
Ruheye ye, Rangombe ye usw.

deren Refrain „Hai yeye wohima ye" alle mitsingen (ganz ähnlich bei Burgt, Nr. 19, S. 292).

Die Hymnen, die Anrufungen Kiranga's, die Verwünschungen und die übrigen zur Zeremonie gehörenden Äußerungen werden auch hier nicht im gewöhnlichen Kirundi gesprochen, sondern „in einem verstümmelten Kauderwelsch, das Kiranga und seine Untertanen allein verstehen". Statt imoga (Bier) sagt man inganda; amata (Milch) heißt hier amafuro (Schaum), amukobwa (Mädchen) heißt amaschenge; statt kubita (schlagen) sagen sie kubomagura (mit Mäctel bewerfen) usw. Diese besondre Kirundi-Terminologie ist ja auch den religiösen Geheimbünden der Nachbarvölker eigen und scheint hauptsächlich aus Elementen des sonst fast vergessenen Alt-Kirundi zu bestehen. (Vgl. S. 148.)

Sobald Tanz und Gesang der Männer in fanatischer Begeisterung geendet haben, treten einzelne Festgenossen vor den Kiranga, verbeugen sich, klatschen in die Hände (Begrüßungsform vor dem König, auch in Ruanda und in Kisiba) und tragen ihm allerlei Bitten vor; der eine wünscht sich die Genesung seiner Rinder, die andere einen Mann, der dritte eine Frau usw., und Kiranga verheißt ihnen Erfüllung, wenn sie ihm brav Bier und Vieh opfern.

Nun beginnt ein Tanz der Mädchen unter Leitung einer Vortänzerin. „Die Arme sind seitwärts ausgestreckt, die flachen Hände bewegen sich in den Gelenken weich und graziös. Lächelnd bewegen sich die Tanzenden in Reihen einander entgegen, der Kopf wiegt sich in verschiedenen Richtungen, immer lebhafter werden die Gestikulationen, der ganze Körper neigt sich vor-, seit- und rückwärts in unglaublichen Verdrehungen mit taumelndem Schritt. Der Tanz regt die Veranstalter und die Zuschauer auf. Mit hauchender Stimme improvisiert die Vortänzerin einen Lobgesang auf Kiranga; die anderen nehmen ebenso leise den Refrain auf. Düster und heimlich wirbeln die kleinen Trommeln und Rasseln der Männer mit, die inzwischen dem Bier kräftig zusprechen. Endlich sind die Mädchen müde, brechen jäh den Tanz ab und begeben sich unter wildem Beifallsgetöse auf ihre Plätze. Aber auch Kiranga ist ermüdet und ernennt einen Nachfolger, eine Frau, die mit lebhaftem Beifall begrüßt wird" (Nr. 45, 1913).

Die Weiber pflegen sich auf diese Rolle besonders gut zu verstehen. Die Erwählte setzt sich eine Art Krone aus Muscheln auf den rot beschmierten Kopf; das Gesicht zuckt in nervöser Aufregung. Es ist ein schauerlicher Anblick. Nachdem sie sich ein paarmal mit ausgestreckten Armen im Kreis gedreht hat, läßt sie sich auf den Schemel Kirangas nieder und schreit sofort mit heiserer Stimme haßerfüllt: „Alle Nichtgekommenen sollen Hungers sterben." Hundertstimmiger Beifall der vom Bier und von der Erregung trunkenen Festgenossen. Das Weib schreit von neuem: „Alle Weißen und ihre Freunde sollen unter der Lanze sterben." Jubelnd wiederholt der ganze Kreis die Flüche. Weiter: „Alle Feinde sollen mit geschwollenen Bäuchen verrecken" (also wie krankes Vieh), und so geht es in zahllosen wüsten Verwünschungen fort. Wenn sich der Sturm gelegt hat, taumeln wieder einzelne Bittsteller vor das thronende Weib, begrüßen den „König" überschwenglich und erflehen seine Hilfe bei der Bekämpfung der Hexen und Zauberer, die ihnen Übles zugefügt haben. Das Weib verspricht es und fordert mit Furienstimme zum Bekenntnis an Kiranga auf.

Die Ivisjego springen auf, und unter ihrem Vortritt wird nun ein so toller Tanz mit Lärmen aller Instrumente, mit tausendfachem Fluchen und Schreien aufgeführt, daß am Ende alle in Schweiß gebadet sind.

Es folgt ein wüstes Zechgelage der Männer und Weiber, wobei dem auf dem Schemel sitzenden Kiranga immer wieder zugeschrien wird: „Bleib auf dem Herrscherthron immerdar, König von Urundi; Kiranga ist König." Und danach wird das rasende Reihentanzen und Lärmen fortgesetzt, bis das den Kiranga darstellende Weib selbst durstig geworden ist und einem männlichen Nachfolger Platz macht, der nun der Festgeber selber ist. Natürlich wird auch dieser mit ungeheurem Jubel auf den Thron gesetzt. Und so geht es mit Trinken und Tanzen, Anrufen des Kiranga und Verfluchen der Feinde die ganze Nacht fort bis zum frühen Morgen. Da bricht mit einem Male die ganze Gesellschaft auf, läuft im Gänsemarsch mit Schellengerassel zum nächsten Bach, wo sich alle waschen, und damit ist die Feier beendet, jeder geht heim. Von diesem Augenblick an darf keiner der Festteilnehmer den anderen mehr kennen, das ganze Kubandwa muß geheimgehalten werden. Der Festgeber aber, der zuletzt den Kiranga „gespielt" hat, gehört von nun an zu den bevorzugtesten Gottbegnadeten.

Da zu diesen Kultfesten wie zu allen anderen Festen der Barundi vor allen Dingen viel Bier gehört und dieses nur nach der Erntezeit, also von Juli bis Ende Oktober, vorhanden ist, spielen sich die Feste fast nur in diesen Monaten ab. Allnächtlich, besonders aber bei Mondenschein, ertönt dann in allen Bananenhainen der Lärm der Zechenden und Tanzenden, und wenn es auch gewöhnlich nur Trinkgelage ohne weitere Bedeutung sind, die in die Nacht hinausschallen, sind doch auch oft Kultversammlungen der Ababandwa darunter, an denen lediglich die Bundesbrüder teilnehmen dürfen. Die Brüderschaft der Ababandwa, die zu einem religiösen Zweck Männer und Frauen, Batussi, Bahutu und Batwa aufnimmt, wenn sie ihr geeignet erscheinen (d. h. wenn sie die hohen Aufnahmekosten zahlen können und Einfluß haben), ist auch von großer sozialer Bedeutung in diesen Ländern, wo durch die dreifache Rassenscheidung in Batussi, Bahutu und Batwa, durch die Gegensätze der Eroberer-kaste zu den Unterworfenen, durch die scharf gegliederte Clanorganisation tiefe Spaltung in der Gesellschaft besteht. Der Orden der zum Riangombe- oder Kirangakultus vereinten Ababandwa bildet diesen Gegensätzen gegenüber einen sozialen Ausgleich, indem er seine Mitglieder schützt und fördert, einerlei welcher Rasse, welcher Kaste und welchem Clan sie angehören.

Eine andere Gruppe der zu den Geistern in näherer Beziehung stehenden und von ihnen mit übernatürlichen Kräften ausgestatteten Menschen sind die Zauberer, Medizinmänner, Magier, die unter dem Namen abafumu (Sing. umufumu) zusammenzufassen sind. Dieses Wort ist ein Bantuwort, das auch in Unjamwesi üblich ist, und bedeutet jemand, der magische Heilmittel und Amulette anwendet (Nr. 19, S. 461). Die Abafumu sind die Ärzte, welche gegen Unglück und Krankheiten, die ja alle durch den übernatürlichen Einfluß böser Geister verursacht sind, mit übernatürlichen Kräften und Mitteln angehen (s. Medizin, S. 140).

Der Umufumu ist zweifelos die mächtigste Person in seiner Gemeinde, sehr oft mächtiger als der Beamte des Königs, der Mutwale. „Er ist zugleich Arzt und Apotheker, Beschwörer, Berater und Priester, gern gesehener Familienfreund und universeller Nothelfer. Ihm ist es gegönnt, in die Karten zu schauen, die Imana und

Kiranga mit seinen Gesellen über die armen gewöhnlichen Sterblichen schlägt; seine Augen sind schärfer und durchdringen besser den Schleier der Übernatur, ihm offenbart der unsichtbare Gott seine Wünsche, er ist dessen Liebling und Vermittler." „Der moderne Europäer sieht in allem nur Natur und will sie nur mit Natürlichem bezwingen; der Murundi hält alles, was nicht gerade Wasser und Gras heißt, für Wirkungen von Übernatürlichem, das er auch entsprechend behandeln muß" (Nr. 65, 1913, S. 46). Der gewöhnliche Fall ist der, daß sich das Umufumuhandwerk vom Vater auf den Sohn vererbt. Aber auch besondere Ereignisse oder Erlebnisse können einen Murundi, der bisher noch keine Anlage zum Umufumu in sich gespürt hat, veranlassen, plötzlich das Zauberhandwerk zu betreiben (kuragusa), z. B. unverhoffte Errettung aus Todesgefahr. Dann heißt es: „Du bist ein Auserwählter Kiranges und mußt uns helfen, mußt vermitteln. Suche dir die nötigen Gegenstände, wir werden kommen." Ist nun jemand auf diese Weise ohne sein Zutun in den Stand der Abafumu erhoben worden und übt lange Jahre eine von zahlreichen Leidenden gesuchte Praxis aus, so bewirkt der Erfolg begreiflicherweise oft eine Art Autosuggestion und Selbstbetrug. Um so mehr wird der Umufumu allmählich an seine eigene magische Kraft glauben, als er ja auch an den Zauber Kiranges glaubt und als ja auch sehr oft wirkliche, wirksame Arzneien in seinen Heilkuren zur Anwendung kommen. Dem frommen Glauben mischt sich aber in den meisten Fällen ein gut Teil bewußter Schwindel bei.

Vorzüglich schildert Pater Gaßldinger die Vielseitigkeit der Abafumu in der Erfindung und Verfertigung ihrer Amulette und ihre in jede Lebenslage des Murundi eingreifende magische Tätigkeit: „Kaum ist der winzige Weltbürger glücklich auf die Erde gesetzt, da läuft der Bruder oder Onkel oder Neffe zum Umufumu, er möchte mit seinem isatu, seinem Zauberstock, kommen. Der läßt sich's nicht zweimal sagen, steckt eine gehörige Portion der wunderlichsten Hölzchen und Beinchen in den Sack und ist flugs an der Seite des neuen Erdenpilgers. Die Familie ist reich, da heißt's weit ausholen und große Anstrengung für großen Lohn sich kosten lassen. Zuerst verweilt er lang bei allerlei Schabernack. Ist er damit fertig, so holt er mit andächtigen Zügen die eigentlichen ivilheko heraus: ein fingerlanges Holzstäbchen, rund geschnitzt, mit Butter und roter Erde beschmiert, in der Mitte durchlochert, dann ein paar Fruchtkörner eines heiligen Baumes, die mit gedrehten Strohhalmen geschickt umwickelt sind; ein kleines Antilopenhörnchen, mit Ocererde gefüllt, worin kleine Holzstäbchen und Kuhenhaare stecken; zwei Leopardenkrallen; ein Stück Schlangenhaut, mit Ruß beschmiert; ein kleines Büchschen aus getrockneter Kürbisschale, darin ein Stück Nabelschnur und Haare des Neugeborenen selbst, gemischt mit Bohnenmehl und Asche von Wildschweinknochen usw. Diese 20 bis 30 kleinen Amulette werden dem Kinde um den Hals gehängt. Um die Lenden gürtet der Umufumu ein weiteres Band, woran ebenfalls ein gutes Dutzend solchen Plunders baumelt: ein Amulett gegen Eingeweidewürmer, ein anderes gegen den Biß, wieder eines, um schnell zu wachsen, ein weiteres gegen Durchfall, das folgende gegen Schlangenbiß, wieder eines gegen Hautausschlag, ein letztes, um dick und stark zu werden. Unter Anhauchen und kouvulsivischen Armverdrehungen und unter heftigem Schellengeschüttel segnet und heiligt der Umufumu die einzelnen ivilheko; denn die Barundi glauben nicht an die Kraft dieser Hölzer und Haare und Hörnchen selber, sondern an die Weihe und Salbung des Umufumu, die er in die Dinge hineingeheiligt hat. Diese Kraftwirkung ist um so größer, je mächtiger der Umufumu selber ist und je feiner das Substratum, der Träger der Heiligung, ist. Kein anderer Negerstamm hält so viel auf die ivilheko oder trägt sie in solcher Zahl wie die Barundi.

„Ist das Kind einigermaßen gewachsen und gediehen und fängt an, sich einen primitiven Bogen und dementsprechende Holzpfeile zu schnitzen und sich im Schießen auf Vögel zu üben, so suchen ihm seine Eltern noch kräftigere ivilheko, besonders ein Gegellerhörnchen mit magischem Pulver gefüllt, darin einige Eisenspitzen; das gibt Kraft für die Jagd, sichert die Pfeilrichtung und lenkt tödliche Geschosse ab. Will der Wildling sich dann ein Ehegespons suchen, so hilft ihm dabei wieder eine andere Serie von ivilheko. Nach der Hochzeit sichert er sich die Treue seines

Wachsen und die heilige Gebrauchs prächtiger Gewächse durch weitere Umstände. In Kundschaft und bösen Gerüchten sucht er Trost im Gebrauchmacher auf ganz besonders starken Gebieten, vorzugsweise, wenn es gegen Gerüchten geht. Eigenes Gerücht trägt der Mwambi auf der Welt, besonders hat er in die Gewegnahme des Gebiet gebracht, wieder andere hängen über seinem Bette, weitere sind zur Abhängigkeit verbunden und besonders heiligen in die Erde neben dem Bett eingegraben. Manche Kräfte sollen durch Gebäude gemacht, verschiedene Gebäude durch die ihnen eigenen Gerüchte verwendet haben; bei Krieg und Kampf schützt der Mwambi vielfach vorher auf seinem verschiedenen Gebäuden, und mit seinem Gebäude legt man ihn nach Bad Gruh.

„Bei der Rückgabe des Mwambi geht, besonders gibt es noch, das Gebäude zu halten. Da die Lange wird ein weiteres Gerücht beschäftigt oder aber in der gleichen Hand mit der Lange noch ein besonderer, dem Umsumu gehaufter Gerücht gebunden aber in das Ilpa ein Zauberpfahl eingeritzt. Da die Gegenstände immer abwechselt oder ein weiteres Gerücht. In der Zeit schlägt wird am Eingang in die Erde ein Kurzes Gerücht eingegraben, über den Eingang wird abwechselt einer gebracht, wer allein aber sich die Schlüssel und Schwerter mehr an den Hof Zerschlagen angebracht. Weitere Gerüchte haben wir auf dem Feld, gegen Kugel und Stangenbüchse, gegen Kopfschmerzen und anderen Dingen; sehr häufig erblickt Gerücht sich auf den Wegen, besonders auf denen, die in die Bananenhaine oder gar Zelte führt führen. Gibt man nicht acht, so kann man leicht über die am Boden stehenden, 5 cm weit hervorschauenden, oderver gefärbten Kälber stolpern; das ist eben auch der Zweck, nämlich der Gerücht soll auf dem Weg fallen und sich dadurch als Zauberer (Gebrauchs Kopen verhindern oder unbemerkbaren Gefährlichkeit) verraten." (Nr. 45.)

Die magische Kraft des Umsumu vererbt sich in den Familien nicht nur durch die Blutsverwandtschaft, sondern auch durch Übertragung der den Umsumu kennzeichnenden Insignien, die hauptsächlich in einem Leopardenfell, einem Kopfschmuck aus Kuhschwanz (Tafel 56) und Ziegenhaaren, einem Rasselkürbis, einem Stab mit Zaubermitteln, einer bestimmten Art Gesichts- und Körperbemalung mit hellfarbigem Lehm und Fett und dergleichen mehr bestehen (Nr. 19, S. 461).

Einen besonderen Rufes erfreuen sich die Abesumu der Batwa; sie werden von den Barundi wegen ihrer starken magischen Kräfte gefürchtet, aber auch zu Heilzwecken gern herangezogen. Das Haupt aller Medizinmänner residiert jedoch in Ilpa (Nr. 19, S. 462). Er wohnt in der nördlichen Landschaft Ilpunga und hieß früher Kuvunga, wie einer der Geister des Zwischenseegebietes; wahrscheinlich ist er das Medium dieses Gottes gewesen. Dieser Obergezauberer war eine Art delphisches Orakel für das ganze Zwischenseegebiet und genoß einen so hohen Rufes, daß die Könige von Urundi und Ruanda oft Gesandtschaften zu ihm schickten, um seinen Rat zu erfahren. Auch von den Herrschern Ussindjas wird dies öfters berichtet (Nr. 35, S. 498, 506). Von den Zauberern Urundis, Kissaas, Ussumbwas und anderer angrenzender Länder wissen wir, daß sie zeitweilig nach Ilpa gehen, um von den dortigen berühmten Abesumu die höhere Magie zu erlernen. Andererseits finden wir Baha-Medizinmänner als „Hexenbanner" bei verschiedenen Stämmen des Zwischenseegebietes; auch des Urundiländchens Matuga einflußreicher Hexenbanner ist ein Mahuta aus Ilpa, er heißt Kiburua (Mundi) und ist vom König nach Bukahat (Mitteil. v. Langenn). Alle diese Hexenbanner scheinen Bahuta, Bantu zu sein, was wiederum mit dem gerade dem Bantuhexenbanner eigenen Hang zum Mystischen und mit dem gegenüber der Bahimaniumwanderung viel höheren Alter der Bantubevölkerung zusammenhängt. Eine Zauberschule, wo man von einem „Rat der Weisen" die geheimen Lehren und ihre Praktiken lernen könnte, gibt es in Urundi und Ruanda nicht, sondern die Kraft und Weisheit vererbt sich, wie erwähnt, in der Familie, und wer sie geerbt hat und noch vermehren will, muß anderen Magiern ihre Kräfte abzugewinnen suchen.

Die Tätigkeit des Umufumu ist, wie aus den oben von Gaßdinger angeführten Beispielen ersichtlich ist, außerordentlich vielseitig, sie erstreckt sich auf alle denkbaren Nöte des Leibes von Mensch und Vieh und wendet zu ihrer Linderung und Heilung zahllose natürliche und übernatürliche Mittel an. Die natürlichen Mittel wirkt aber nach Auffassung der Barundi nicht durch ihre natürlichen Eigenschaften — denn was versteht er von physikalischen und chemischen Eigenschaften, von Physiologie des Körpers, von Kausalität usw. —, sondern übernatürlich durch die magischen Kräfte, die ihnen der Umufumu einflößt. Entsteht doch auch die Krankheit gewöhnlich durch den übernatürlichen Einfluß der bösen Geister (abarosi), wenn nicht durch direkte Vergiftung. Zwar gibt es eine Menge einfacher Mittel, die der Murundi im Hausgebrauch nach Großväterrtradition anwendet, ehe der „Fall" so besorglich wird, daß der Umufumu herangezogen wird, aber diese Mittel sind eine Sache für sich (S. 140); hier sei von dem Zauber, den magischen Mitteln und ihrer Anwendung die Rede.

Welcher Art die Mittel auch seien, zunächst versucht der Murundi ihre Wirkung durch äußerliche Anwendung. Auch solche, die nur innerlich wirken können, werden zuerst äußerlich auf den leidenden Körperteil aufgebunden oder aufgestrichen, weil man auch von ihnen eine magische Wirkung wie von einem Amulett erwartet. Selbst europäische, zum Einnehmen bestimmte Medizinen, wie Pillen, Pulver, Tabletten, wickelt der Murundi zunächst in ein Blatt ein und bindet sie sich auf das kranke Organ; erst wenn er davon keine Wirkung verspürt, entschließt er sich zum Verschlucken oder Trinken.

Unzählig sind die eigentlichen Amulette (ivitheko), die in den verschiedensten Gestalten und in verschiedenstem Material, aber immer in kleiner kompendiöser Form am Körper getragen werden (Taf. 55). Wir haben ihrer schon eine ganze Reihe oben kennengelernt (S. 130). Gewöhnlich hängen sie an Fäden um den Hals, oft aber sind sie auch auf den Kopf, auf den Bauch, auf die Genitalien usw. gebunden. Zuweilen sind sie einzeln an Fäden befestigt, zuweilen in Dutzenden verschiedener Art halskettenartig auf ein einziges Band gereiht. Auf das Material, das zum Amulett verwendet ist, kommt es nicht so sehr an als auf den Zauber, mit dem der Umufumu dem Gegenstand übernatürliche Kräfte beilegt; aber zumeist ist das Amulett ein Stückchen Holz von 3—6 cm Länge, schon weil es sich am leichtesten herstellen und tragen läßt. Ferner sieht man Klauen von Leoparden, Katzen, Ziegen, Schafen; Knöchlein von Vögeln, Stückchen von Schlangenhaut oder Wildfell, getrocknete Früchte, Muscheln, Steinchen von auffallender Gestalt, am häufigsten aber Pulver von verschiedenen Erden, Asche von verbrannten Knochen oder von Tierhörnern, Mehl von Getreidearten (Nr. 19, S. 29). Diese pulverigen Zaubermittel werden gewöhnlich in ein kleines Rinds-, Ziegen- oder Antilopenhorn gefüllt, das mit Wachs verschlossen wird. Auch ausgehöhlte Fruchtschalen werden dazu benutzt und sind dann oft mit Draht oder Perlenreihen kunstvoll umwickelt. Je nach der vom Umufumu dem Amulett beigelegten Zauberkraft gibt es Schutzamulette gegen bestimmte Unfälle, gegen bestimmte Krankheiten, gegen Bosheiten übler Geister, gegen Hexerei zauberkräftiger Menschen, oder Glücksamulette zur Herbeiführung guter Ernten, gesunden Viehstandes, glücklicher Reisen, kräftigen Familienzuwachses usw. Reiche Leute, die sich den Luxus vieler, kostspieliger Amulette leisten können, tragen sie in so großer Menge um den Hals, daß die ganze Brust davon bedeckt ist wie die von einer Ordensfassade überschüttete Brust eines europäischen Diplomaten. Die meisten haben natürlich die großen Häuptlinge und Batussibatwale, die ja gewöhnlich selbst gefürchtete Medizinmänner sind.

Ein Beispiel gibt folgende Schilderung: „Der alte Zauberer Nsenge schwitzt, sich auf einen riesigen Stab stützend und mit einer unhörbaren Lunge hervorstoßend, unter seinen Drohen umher wie ein jähzorniger Bänger. Nichts unterscheidet ihn von den anderen als die Zahl von Amuletten, die seinen Leib, Brust, Rücken, seine Hüften, Arme und Beine schmücken. Er ist bekannt als ein überaus mächtiger Zauberer und deshalb noch mehr von den Leuten gefürchtet. Der mächtige Gebrauch, den er von seinem mächtigen Rudepel macht oder machen läßt, verleiht seinen Worten besondere Kraft" (Kreuz und Schwert 1900, S. 70).

Die meisten Amulette der Barundi werden von den Batwa verfertigt, aber auch die anderen Abafumu sind sehr produktiv in der Amulettfabrikation, und natürlich ist diese eine ihrer einträglichsten Einnahmequellen.

Eine weitere wichtige Aufgabe der Abafumu ist es, die der Hexerei fundigen Menschen, die ihren Mitmenschen auf die verschiedenste Weise Übel und Unheil anhängen, ausfindig und unschädlich zu machen. Diesen abarosi (Sing. umurosi) genannten Hexen und Schwarzkünstlern wird zunächst die Schuld zugeschoben, wenn ein Mensch erkrankt oder stirbt, wenn Unwetter die Felder verwüstet, wenn Vieh verunglückt oder von Seuchen befallen wird, wenn Weiber unfruchtbar bleiben, Kinder mißraten, Viehställe vorkommen usw. Oft werden die Aborosi durch Gift, das in Urundi wie in Ruanda gern angewandt wird (Nr. 48, S. 319), meist aber durch Zauberkräfte. Die magische Gewalt über andere Menschen oder über deren Vieh und anderen Besitz gewinnen diese Aborosi dadurch, daß sie sich ein Stückchen vom Körper des anderen, also etwas vom Haar, vom Fingernagel, Sputum, Semen, Urin aneignen oder vom Mist der Rinder, vom Stroh der Hütte, vom Erdboden der Felder, denn mit alledem bekommt er ja auch ein Stück „Seele" des anderen in seine Gewalt. Daher auch die große Scheu, mit welcher der Murundi, wie jeder andere ostafrikanische Neger, ein Bild von sich aufnehmen oder Körpermessungen an sich vornehmen läßt oder dem Fremden seinen und seiner Angehörigen Namen nennt. Helfen gegen die schwarzen Künste der Aborosi die Medizinen und die abwehrenden schützenden Amulette nichts, so rückt der Umufumu dem Missetäter, dem Umurosi, selbst auf den Leib. Durch Inspiration und durch Befragung seiner Zauberrasseln und anderer Apparate lenkt sich sein Verdacht auf gewisse Personen; meist sind es alte Weiber! Sie werden angeklagt, vom Mutwale festgenommen und vom Umufumu, wenn kein anderes Beweismittel da ist, einer Art Gottesurteil mit Feuer, Gift oder kochendem Wasser unterworfen, das meist zuungunsten des oder der Angeschuldigten ausfällt (Nr. 19, S. 405). In leichten Fällen werden die Schuldigen an Gut und Körper gestraft, in schweren einfach totgeschlagen und in den Busch geworfen (s. oben S. 97).

Auch auf andere Dinge richtet sich die Divinationsgabe des Umufumu, wenn es von einem Interessenten gewünscht und honoriert wird. Er ruft durch besondere Zeremonien Regen für die Felder herbei oder verscheucht den Regen, wenn es der Äcker zu viel ist (Nr. 19, S. 443). Für das im Ackerbau so wichtige Regenmachen gibt es besondere kundige Spezialisten, die abavurati, die aber sehr in Abnahme begriffen sind, weil sie für jeden Mißerfolg schwer von den Mutwale bestraft werden (Nr. 45, 1913, S. 50).

Der Umufumu sucht ferner die Zukunft vorauszusagen und unbekannte Vorgänge kundbar zu machen, also wahrzusagen. Das geschieht unter großem Aufwand von gutgläubigem Hokuspokus, indem aus verschiedenen Kalebassen viele kleine Gegenstände ausgeschüttet werden und aus ihrer zufälligen Anordnung der Gang und die Lage der Dinge gedeutet werden. Die Barundi meinen, daß die Abafumu meistens richtig wahrsagen, was ja, wenn der Zauberer ein findiger Mann ist, nicht allzu schwer sein wird.

Keinesfalls darf man den Umufumu, den Medizinmann, mit dem Umuroſi, dem hexenden Unhold, verwechseln. Den Unterſchied zwiſchen beiden kann man folgendermaßen charakteriſieren: Die Abafumu ſind im Vorurteilsglauben die guten helfenden Medizinmänner, die aus dem Banniſuch des böſen Zauberers, des Umuroſi, befreien; ſie ſind die amts- und berufsmäßigen Entzauberer, die Uburoſi dagegen die gelegentlich verhexenden böſen Verzauberer. Denſelben Namen umfumu bzw. murosi oder mulosi haben die guten bzw. die böſen Zauberer in Ruanda wie im äußerſten ſüdlichen Bahimaſhoat Uſipa (Nr. 47, S. 179, 183—186; Nr. 48, S. 319). In Wirklichkeit iſt der Umufumu, der gewöhnlich ein heller Kopf und ein geſchickter Kerl iſt, eine Miſchung von Gutgläubigkeit und betrügeriſchem Schwindel; der verfolgte Umuroſi meiſt ein unſchuldiges Menſchenkind, das entweder durch perſönliche Sonderlingseigenſchaften den Verdacht der Mitmenſchen auf ſich gezogen hat oder, was noch häufiger der Fall iſt, durch reichen Beſitz oder Glück den Neid der anderen erregt. Die größten und berühmteſten Abafumu aber ſind faſt durchweg abgefeimte Verbrecher, die vor keiner Schandtat zurückſchreuen und namentlich deshalb ſo unheilvoll wirken können und ſo große Macht haben, weil ſie ſtets mit den Häuptlingen im Bunde ſind und durch ihre Tätigkeit als Ärzte und Berater in allen Familien genau Beſcheid wiſſen. Das ganze Volk ſeufzt unter dem Terroriſmus der mit den Häuptlingen verbündeten großen Medizinmänner, und niemand wagt, die Schandtaten an den Miſſetätern ſelbſt zu rächen, denn wenn ein ſolcher erſchlagen oder infolge einer Anzeige beim deutſchen Reſidenten hingerichtet würde, wäre die ganze Sippe des Häuptlings oder des Umufumu zur Blutrache verpflichtet und würde ſie ſehr gründlich an der Sippe des „Verräters" vollziehen (Nr. 45, 1913, S. 83—84).

Weder der Umufumu noch der Umubandwa werden von den Barundi zu den eigentlichen Kulthandlungen des Volkes, zu den „Gottesdienſten" herangezogen, ſondern dies iſt Sache des Prieſters, des Kiranga. Obwohl ihr ganzes Leben nur eine Reihe von Erfüllungen religiöſer, in alle Vorkommniſſe des Daſeins eingreifender Vorſchriften iſt, legen die Barundi doch zwei Kulthandlungen eine beſonders hohe Bedeutung bei; ſie müſſen deshalb vom Kiranga geleitet werden. Die eine iſt die Zeremonie des „heiligen Speers", die andere iſt die Errichtung der Ahnen- und Götterhüttchen ivigabiro, akararo, ivitabo (Nr. 19, S. 498/99).

Die Zeremonie des heiligen Speers wird bei allen wichtigen Geſchehniſſen im Leben des Murundi ausgeführt, wo die Abwehr der böſen Geiſter beſonders erwünſcht erſcheint. Der Familienvater veranſtaltet die Zeremonie und honoriert den zelebrierenden Kiranga; die Verwandten, Freunde und Nachbarn aſſiſtieren. Der Ritus hat ſtatt z. B. bei der Geburt eines Kindes, namentlich von Zwillingen, bei ſchweren Krankheitsfällen, bei Hochzeiten, bei freudigen Feſten, bei Begräbniſſen u. a. m. (Nr. 19, S. 516). Es iſt alſo eine Zeremonie, die von jedem Murundi veranſtaltet werden kann, der die Koſten zu tragen vermag, und nicht die oben S. 124 beſchriebene Kultverſammlung der Ababandwa, die ebenfalls unter Leitung des Kiranga ſtattfindet und ganz ähnliche Formen hat, aber lediglich von dem Geheimbund der Ababandwa ausgeführt wird.

Iſt ſchon die gewöhnliche Lanze des Murundi in gewiſſem Sinn heilig gehalten, da ſie das Symbol der väterlichen Gewalt und der Autorität der Ahnen iſt, ſo iſt der vom Prieſter in Verwahrung gehaltene „heilige Speer" ein Gegenſtand hoher Verehrung, denn in ihm, und zwar in ſeiner Spitze, wohnt wirklich der Geiſt Kiranga

oder Indogarra oder Kiangombe, je nachdem der Speer dem einen oder dem anderen geweiht ist; zumeist ist es Kiranga. Der Speer ist wie jeder andere gestaltet, aber sein Blatt ist zur Hälfte ungeschliffen, schwarz. Wünscht nun jemand, daß die „Zeremonie des heiligen Speers" zu seinen Gunsten gefeiert werde, so ladet er seine Freunde und den Priester (kiranga) des Bezirkes nebst seinem Speer ein. Der Kiranga kommt mit zwei oder drei Assistenten (ivisjego) männlichen oder weiblichen Geschlechts, und die ganze Festgesellschaft nimmt in der Hütte Platz. Der Priester sitzt in der Mitte, in der Hand den heiligen Speer, auf dem Kopf eine Kappe aus Leopardenfell, dessen Schwanz ihm auf den Rücken herabreicht. Die Assistenten halten in der Hand je eine Astgabel, an deren Enden kleine, teilweise mit Getreidekörnern oder Steinchen gefüllte Kalebassen festgebunden sind. Diese Rasselstäbe werden in einem bestimmten Rhythmus geschüttelt, und zu ihrem Gerärsch singt die ganze Versammlung andante und in Moll eine althergebrachte Hymne, die in großenteils unverständlichen Ausdrücken der alten Kirundisprache (s. S. 148) zur Verherrlichung der Geister Kiranga, Rugondo, Kiangombe u. a. auffordert (Nr. 19, S. 517 und 292). Während des Gesanges rafft jeder etwas Stroh vom Boden auf, legt es opfernd vor dem heiligen Speer nieder und klatscht huldigend in die Hände, wobei er an den in der Speerspitze wohnenden Geist Kiranga eine Reihe Bitten richtet, die den Wünschen des Festveranstalters entsprechen. Hierauf zieht die ganze Gesellschaft singend aus dem Haus zum benachbarten Geisterhüttchen (ikitabo) und legt es mit frischem Stroh oder Gras aus. Wieder ins Haus zurückgekehrt, wird die Versammlung vom Priester mit Wasser bespritzt (Reinigungssymbol?) und trinkt am Ende gemeinsam eine große Krule „Opferbier" aus. Damit ist die Zeremonie beendet, der Priester bekommt sein Honorar (Perlen, Getreide, Rindenstoff u. a.), und jedermann geht wieder heim. Ganz ähnlich wie in Urundi wird die Zeremonie des heiligen Speeres auch in Ruanda und Uha gefeiert (Nr. 19, S. 518).

Die andere bedeutungsvolle Kulthandlung, zu welcher der Priester regelmäßig zugezogen wird, ist die Errichtung und Einweihung der kleinen Geister- und Opferhüttchen (Taf. 18a). Solcher Hüttchen gibt es zwei verschiedene Arten: die einen sind die öffentlichen, den Göttern Imana, Kiranga, Kiangombe gewidmeten (ikitabo, akararo), die anderen sind die privaten, den Familienahnen gewidmeten (ikigabiro).

Die öffentlichen, der gemeinsamen Göttervereehrung dienenden Kultstätten werden da errichtet, wo ein Blitz in den Boden gefahren ist, sei es, daß er einen Menschen oder ein Stück Vieh verwundet oder getötet hat, sei es, daß er ohne weiteres die Erde getroffen hat, denn der Blitz ist eine Sendung des Gottes Imana selbst (Nr. 19, S. 253). An dieser Stelle wird eine 2—3 m breite runde Fläche ausgeebnet, mit Stroh belegt und ringsumher mit Maniok oder Fikuszweigen umpflanzt. In der Mitte aber wird vom Kiranga unter Ausführung der Zeremonie des heiligen Speeres ein Bananenstamm oder ein junger Fikusbaum gepflanzt, der als zeitweiliger Wohnsitz des Gottes Imana-Kiranga-Kiangombe angesehen wird. Jeder Vorübergehende legt vor dem Bäumchen etwas ausgerauftes trockenes Gras zur Begrüßung des Gottes nieder (s. Grasgruß S. 95), und die Kranken werden auf dem Fleck niedergelassen, um sich hier von Gott Genesung zu erbitten (Nr. 19, S. 564). Auch zum Erbitten von Regen für die Felder und Herden sollen diese Huldigungen gut sein. Gewöhnlich werden auf oder neben dem Opferplatz noch kleine Grashüttchen errichtet, in denen dem Gott Speise und Trank geopfert werden, oft aber fehlen solche Hüttchen.

Die zweite Art Kult- und Opferstätten, an deren Einweihung der Kiranga teilnehmen muß, sind die den Geistern der Verstorbenen (imisimu oder abasimu) gewidmeten privaten Opferhüttchen (ivigabiro). Häufig wird aber auch dem Gott Kiranga in einem dieser Privathüttchen geopfert; es heißt dann akararo ka rugabo, d. h. das kleine Nachtquartier des großen Herrn (Nr. 46, S. 18). Sie werden innerhalb des Krals neben den Wohnhütten errichtet und haben meist die Gestalt der Wohnhütten, sind aber nur $^1/_2$—1 m hoch (Taf. 18a). Stets sind sie nachlässig gebaut, ja oft müssen einige Zweige oder ein paar Büschel Stroh oder Schilf genügen, die in den Boden gesteckt und bogenförmig zusammengebunden sind. Darunter wird etwas Stroh ausgebreitet und auf dieses einiges Werkzeug zum Opfern gestellt; z. B. ein Stück Imangaholz, das zu Amuletten dient, ein schalenförmiges Stück Flaschenkürbis zur Aufnahme von Speise, ein alter Topf zur Aufnahme von Bier, eine alte Tabakspfeife u. a. In manchen Teilen Urundis, z. B. in Usige, haben die Hüttchen zwei Türöffnungen, der darin stehende Topf zwei Ausgüsse, die rituelle Tabakspfeife zwei Köpfe, wahrscheinlich weil sie dem Geist des Ahnen und seiner Frau dienen sollen (s. Textbild 11). Van der Burgt deutet diesen Brauch als eine Beziehung auf die vermutliche Zweigeschlechtigkeit der Manen (Nr. 19, S. 564), wofür ich aber keine Belege habe.

Selten begnügt sich der Murundi mit nur einem Ikigabiro, gewöhnlich sind es deren drei oder vier für die Geister der ihm am nächsten stehenden drei oder vier verstorbenen Familienmitglieder. Ja, einmal habe ich solcher Opferhüttchen nicht weniger als acht in einem Kral gezählt.

Die Einweihung der Hüttchen erfolgt durch den Kiranga unter der Zeremonie des heiligen Speeres. Während der Zeremonie essen die Familienmitglieder neben der kleinen „Votivkapelle" mehrere Speisen zu Ehren des Ahnen, dem das Hüttchen geweiht ist und setzen von jeder Speise und vom Bier ein wenig in dem Ikigabiro nieder. Diese Darbringung wiederholt sich später jedesmal, wenn aus irgendeinem Grund die Speerzeremonie in der betreffenden Familie gefeiert wird. Es bleibt aber nicht bei Hirsebrei und Pombebier, sondern in „guten" Familien besteht das Opfer auch aus Fleisch von Hühnern, Ziegen, Hammeln und sogar Rindern.

Nach der Überzeugung der Barundi bezieht der Ahnengeist die ihm errichtete Hütte entweder zu ständigem Aufenthalt oder doch als gelegentliches Abstiegequartier und läßt sich dann zuweilen auch als Gespenst in der Nähe sehen. Die dargebrachten Speisen glaubt der Murundi von dem Geist aufgegessen, wenn sie in Wirklichkeit von den Hunden oder Ratten oder Vögeln gefressen worden sind; bleiben sie aber unberührt, so tröstet sich der Murundi mit dem Gedanken, daß der immaterielle Geist nur die immateriellen Teile der Speisen, des Bieres, des Tabaks genossen habe.

Außer den beiden vorgenannten Kultstätten gibt es nach v. d. Burgt noch eine dritte Art, die aber sehr selten zu sein scheint. Das sind 2—3 m große geschlossene Hütten in der Nähe der bei alten Königskralen gelegenen heiligen Haine. Die von v. d. Burgt gesehene war den Manen des Königs Ntare geweiht (Nr. 19, S. 565) und beherbergte angeblich eine große Pythonschlange als Behältnis des Geistes des verstorbenen Königs, die von eigenen Wächtern behütet und gefüttert wurde. Von solchen offiziellen Heiligtümern habe ich auch in Ruanda und Kisiba sprechen hören, wo sie ebenfalls von einer großen Schlange bewohnt seien, die als Träger der Seele des Königs gelte und von dem Priester regelmäßig mit Milch gefüttert werde. (Vgl.

auch Nr. 31, S. 107, 130.) Gewöhnlich aber entbehren die heiligen Haine solcher geweihten Hütten.

Der heilige Hain (imana, iteka, intatenwa) ist schon an sich für den Murundi ein Gegenstand tiefster Verehrung (Nr. 19, S. 77). In dem größtenteils waldlosen Urundi und noch mehr in dem sehr baumarmen Ruanda sind die kleinen Gruppen von hohen Fikusbäumen, die weit verstreut auf Hügelrücken aufragen, ein sehr charakteristischer Zug im Landschaftsbild (Taf. 29a). Sie bezeichnen überall die Stelle, wo einst die Residenz, der Kral (lugo, urugo) eines Königs oder eines Häuptlings gestanden hat und wo vielleicht sogar der einstige Herr selbst begraben liegt. Nach dem Tode des Besitzers wird sein Gehöft verlassen, die Hütten zerfallen, und nur die Fikusbäume, die den Zaun des Kraals gebildet hatten, wachsen ungehindert weiter und dürfen fortan von niemand berührt oder gar abgehauen werden; sie sind, wie die ganze einstige Wohnstätte, dem Volk unheimlich, heilig (= imana = tabu). Es ist nicht Pietät gegen den Verstorbenen, die diese Bäume seiner einstigen Behausung schützt, denn solche schöne Herzensregungen kennt der Murundi nicht, sondern es ist die Furcht vor dem Zorne der Geister der Toten, aus deren Gräbern vielleicht die Bäume herausgewachsen sind, was den Menschen die Schonung des doch sonst so sehr begehrten Brennholzes aufzwingt. In dem Dickicht haust allerlei Getier und darunter die Schlange, die sich der Geist des verstorbenen Großen zu weiterem Aufenthalt auserkoren hat. Der Priester des Distriktes opfert hier zuweilen dem Geist, indem er der Schlange Speisen und Milch spendet.

Daß die Barundi keinerlei figürliche, plastische oder gezeichnete Darstellungen ihrer Geister, Dämonen und Götter haben, ist ein Beweis nicht gegen die Lebendigkeit ihrer religiösen Vorstellungen, sondern für den Mangel an künstlerischer Gestaltungskraft, die auch in ihrem ganzen übrigen Kulturbesitz zum Ausdruck kommt. Dasselbe gilt für die meisten anderen Ostafrikaner. Nur in ihren religiösen Tänzen (s. S. 127) stellen die Barundi die gedachten Geister selbst dar, bekleiden sie mit bestimmten symbolischen Emblemen und erweisen ihnen ihre aus Furcht und Berechnung gemischte Huldigung.

Religiöse Vorstellungen und Empfindungen spiegeln sich schließlich auch in vielen „abergläubischen" Gebräuchen wider, von denen das Leben der Barundi voll ist; meist Bräuchen, die der Abwehr der bösen Geister dienen und die, wenn sie sich auf Speisevorschriften, Körperpflege u. dgl. erstrecken, oft genug dem europäischen Beobachter wie hygienische Maßnahmen erscheinen. Speisegebote und -verbote (umuniro) gibt es eine Menge. Rindfleisch dürfen, wie oben erwähnt, alle Barundi essen; freilich kommt es selten genug an sie (S. 46). Ziegen genießen nur die Batwa, selten einmal ein Muhutu. Niemand aber darf das Fleisch von Hühnern, von Wild und zahlreichen aus den verschiedensten Gründen für unrein angesehenen Tieren essen, wozu noch das Speiseverbot der Totemtiere der verschiedenen Clans kommt (S. 103). Schaffleisch wird nur von sehr wenigen genossen, Fische nur von den Anwohnern des Tanganikasees. Die Schmiede, bei deren Arbeit übrigens kein Weib zusehen darf, müssen sich des Genusses von Schweinefleisch ganz enthalten (Nr. 23, 1914, S. 111ff.). Einem schwangeren Murundiweib ist der Genuß von Fleisch, Bohnen, Bataten, Bier, Salz verboten und nur der von gekochtem Maniok, heißem Maisbrei, reifen Bananen, Erdnüssen erlaubt, während ein schwangeres Mutwaweib essen und trinken kann wie sonst. Verboten ist jedermann das Wärmen und Kochen von Milch, da sonst die Kühe krank werden, auch darf niemand, der Erdnüsse oder Erbsen ißt, an demselben

Tag Milch trinken, da die Kühe ertranken würden, und niemand Milch und Vegetabilien zusammen genießen, da dies den Kühen, von denen diese Milch stammt, schaden würde. Denselben Aberglauben haben die Banjarwanda, Banjankole, Banjampororo, Banjoro (Nr. 30, Bd. II, S. 514, 534; Nr. 19, S. 6). Nach dem Tod eines Familienvaters essen in Urundi die Witwe und ihre Kinder kein Salz bis zum Ablauf der Trauerzeit und schneiden sich nicht das Haar.

Besondere Vorschriften betreffen den Wasserverbrauch. Das für den Wasch- und Trinkbedarf im Haus vorhandene Wasser darf niemals ganz aufgebraucht werden. Man läßt abends immer ein wenig in einem Kruge stehen, damit sich die Manen des Nachts daran laben können, und nennt es amasi y'Imana. Mit diesem Wasserrest wäscht sich am nächsten Morgen die Familie (Nr. 19, S. 6). Einen Fluß darf man nicht überschreiten, ohne sich mit dem Schlamm des Ufers einen Strich auf die Stirn zu machen.

Zahlreiche Vorschriften greifen in das Familienleben ein. Der Vater betritt nie das Haus seiner Schwiegertochter, er darf auch seine verheiratete Tochter, solange diese noch kein Kind hat, nur verschleiert sehen (Nr. 19, S. 6). Eine Wöchnerin darf nicht vor dem dritten Tage ausgehen, da sonst das Kind krank wird, nicht sie selbst. Wenn aber Zwillinge geboren werden, muß eine religiöse Zeremonie veranstaltet werden (s. S. 110), weil sonst die Kinder sterben würden. Der Schwiegersohn muß die Schwiegermutter, die Schwiegertochter den Schwiegervater meiden. Bei unerwarteten Begegnungen müssen die jungen Leute vor den Alten fliehen oder wenigstens ihnen den Rücken zukehren. Es ist der Ausdruck höchsten Respektes, dessen Außerachtlassung eine schwere Beleidigung wäre und zur Lösung des Verlöbnisses führen würde. Im Grund genommen ist es freilich wohl hauptsächlich die Scheu vor dem mit exogamen Vorstellungen zusammenhängenden Tabu der nahen Verwandtschaft, dessen Verletzung als schadenbringend und verunreinigend von vielen Völkern Ostafrikas streng vermieden wird; z. B. von den Wangoni, den Wagogo, Massai, Wakamba, Basoga, Baganda u. a. (Nr. 30, Bd. II, S. 400, 403, 412, 420, 461, 508). Erst wenn das junge Ehepaar Kinder hat, fällt in Urundi jene Verpflichtung zum Vermeiden der Schwiegereltern fort, aber dafür müssen sich nun die Jungen der größten Dienstfertigkeit gegen die Alten befleißigen. Oft gehen die Ansprüche der Alten so weit, daß die Jungen kaum Zeit genug zur Besorgung ihres eigenen Hausstandes und Feldes haben (Nr. 23, 1914, S. 122).

Mit eigentümlicher Vorsicht muß das Tragpolster (ingata) behandelt werden, das zum Lasttragen auf den Kopf gelegt wird. Man darf sich nicht darauf setzen, denn das würde den Tod des Unbedachten oder seines Vaters verursachen; ein Kind, das sich aus Versehen darauf setzt, wird nicht mehr wachsen, wenn es nicht zur Abwehr des Übels auf das Kissen spuckt (Nr. 19, S. 553). Wahrscheinlich liegen dieser Scheu totemistische Vorstellungen zugrunde.

3. Die Mission

Der grenzenlose Rassenhochmut und Rassenstolz der Batussi ist der Hauptgrund, weshalb die christliche Mission in Urundi wenig Erfolg hat. Die Lehre von der Brüderlichkeit aller Christenmenschen, die dem Mutussi zumutet, sich mit seinen „Sklaven", den Bahutu, gleichzustellen oder gar mit den verachteten Parias, den

Batwa, brüderlich zu verkehren, lehnt er von vornherein schroff ab, nicht aus religiösen, sondern aus sozialen Gründen. Und selbstverständlich wird jeder Watussi den ihm unterstellten Bahutu den Eintritt in eine Glaubensgemeinde verbieten, deren Lehren die tiefe soziale Kluft ausgleichen wollen, auf der gerade die politische Herrschaft der Batussi über die große Masse der Bahutu beruht. Unter den Bahutu aber hat die Mission scharfe und zähe Gegner in den Priestern (kiranga), Medizinmännern (abafumu) und Mitgliedern geheimer religiöser Gesellschaften (z. B. ababandwa), die das Geistes- und Gemütsleben ihrer Volksgenossen beherrschen und über das ganze Land hin ihre vielverzweigten Beziehungen und Organisationen haben. Die Mission ist daher trotz ihrer mehr als 30jährigen Tätigkeit im Land immer noch hauptsächlich auf die Ärmsten und Verlassenen angewiesen, die sonst keinen Anschluß an ihre Volksgenossen haben; wie v. d. Burgt schreibt: „Der Hauptzulauf der Mission sind die Hungernden während der häufigen Hungersnöte und die Greise und Greisinnen, die von den Ihrigen verstoßen werden. Es wäre ein leichtes, binnen einiger Wochen ein Greisenasyl mit Hunderten von Bewohnern vollzupfropfen, denn viele werden von den Ihrigen im nächsten Fluß ertränkt; das Vieh ist dem Murundi viel mehr ans Herz gewachsen als seine greisen Anverwandten" (Nr. 23, 1905, S. 178). Im übrigen sind es nur sehr wenige Barundi, die aus innerem Beweggrund zum Christentum übergetreten sind.

Aus all den angeführten völkischen, sozialen und politischen Gründen werden die Batussi auch den Islam ablehnen, wenn dieser einmal versuchen sollte, in dem bisher dem Außenverkehr sehr verschlossenen Land Fuß zu fassen. Die Erinnerungen an die Kämpfe mit den arabischen Sklavenjägern werden diese Ablehnung nur verstärken.

Trotz der geringen Aussicht, dem Evangelium unter den Barundi einen breiten Boden zu gewinnen, solange die Batussi herrschen, arbeitet die Mission unverdrossen weiter. Wirklich bewundernswert ist solcher Idealismus und solche Glaubensstärke. Lange Jahre waren nur die katholischen „Weißen Väter" tätig, die 1896 die erste Station in Mujaga (Ost-Urundi; Taf. 29b) und nachher weitere Stationen in Mugera (Mittel-Urundi), Marienberg (West-Urundi), Mariensee (Nordost-Urundi) gründeten. Erst 1910 begann die evangelische Neudettelsbacher Mission ihre Tätigkeit in Ikuzwara, Nordwest-Urundi, worauf 1912 die Gründung einer zweiten Station in Nordwest-Urundi folgte.

Auch die auf die eigentliche Missionierung vorbereitende und sie begleitende Kulturarbeit, wie die Unterweisung in den elementaren Schulkenntnissen, die Anleitung zu handwerklichen Fertigkeiten, die Verbreitung von Verbesserungen im Ackerbau und Viehzucht usw., ist bei der größtenteils ablehnenden Haltung der Barundi noch sehr gering. Am meisten scheint noch die ärztliche Tätigkeit der Missionare für die Gewinnung des Vertrauens zu wirken.

Ähnlich sieht es um die Missionsarbeit in den so lange nach außen abgeschlossenen Batussistaaten Ruanda und Uha, während in den dem fremden Einfluß schon viel länger zugänglichen angrenzenden Ländern Ussumbwa, Usindja, Ihangiro, wo die Kasten- und Rassengegensätze das Volk viel weniger zerspalten und es keine straffe Batussiherrschaft gibt, die Mission weit erfolgreicher ist. Nur die Zeit kann lehren, ob sich auch in Urundi die Aussichten für die Christianisierung günstiger gestalten werden; sehr wahrscheinlich wird sie kommen, wenn einmal die Macht der Batussiherren gebrochen sein wird.

Zehntes Kapitel

Medizin, Zeitrechnung, Rechnen, Sprache

1. Medizin

Über die religiösen Grundelemente in den Vorstellungen der Barundi von aller Krankheit und von deren Heilmitteln haben wir schon oben gesprochen (S. 132). Jede Krankheit ist ihm Bezauberung durch einen Dämon, die nur durch einen Gegenzauber geheilt oder gebessert werden kann. Dieser Gegenzauber kann entweder durch den Zauberer, Medizinmann (umufumu) vermöge der ihm innewohnenden magischen Kräfte ausgeübt werden, indem er durch gewisse Manipulationen oder Beschwörungen oder aber durch Talismane und Amulette, denen er seine Kräfte eingeflößt hat, auf den Krankheitsdämon wirkt, oder indem er gewisse natürliche Substanzen, Kräuter, Säfte, Erden, tierische Körperteile, denen von Natur bestimmte magische Kräfte innewohnen, mit klugem Bedacht und reifer Sachkenntnis auswählt und für den jeweiligen Fall als spezifisches Heilmittel anwendet.

Gerade diese letztere Art von Anwendungen möchte ich als eigentliche medizinische Beeinflussung des Kranken bezeichnen, denn das Entscheidende dafür liegt eben darin, daß es Mittel sind, die ihre magische Kraft und Wirkung nicht erst von außen durch den Zauberer hineingetragen bekommen, sondern sie schon ursprünglich in sich enthalten. Ob diese Kraft als die Äußerung einer dem betreffenden Ding innewohnenden Seele oder als Ausstrahlung der dem Ding als solchem eigentümlichen Eigenschaften (im Sinne des von Karutz gelehrten „Emanismus"; Zeitschrift für Ethnol. 1913, S. 545ff.) von den Eingebornen angesehen wird oder von uns anzusprechen ist, läßt sich ohne eindringende Untersuchung nicht feststellen. Für unseren vorliegenden Zweck kommt diese Frage erst in zweiter Linie in Betracht. An Stelle des Zauberers können solche a priori mit Heilkraft begabten Heilmittel auch von jedem anderen klugen Mann oder Weib wirksam angewendet werden, wenn der Betreffende nur ihre spezifischen magischen Eigenschaften kennt und sie richtig auszuwählen versteht. Diesen innerlich und äußerlich gebrauchten Heilmitteln schließen sich solche an, die bestimmte mechanische Einwirkung bezwecken, wie z. B. Massage, Lavements, heiße und kalte Bäder, und weiter eine kleine Reihe chirurgischer Operationen von der einfachen Geschwüröffnung bis (angeblich) zum Kaiserschnitt (s. oben S. 110). Die schwierigen Fälle werden von einem erfahrenen, geschickten Umufumu behandelt, aber für den gewöhnlichen Bedarf hat jeder Familienvater eine Reihe von Hausmitteln im Gebrauch, deren Kenntnis sich vom Vater auf den Sohn vererbt und nötigenfalls auch dem erkrankten Nachbar zugute kommt.

[p.140]

2: Meyer FO42 Rundi

Zuerst pflegt man meist nach Wasser, kaltem oder heißem, zu greifen. Man benutzt es zu stark frottierenden Abreibungen oder zu langen Bädern bei Hautkrankheiten, Gliederschmerzen, Schlaflosigkeit, Fieber. Der Murundi badet gern und so oft wie er reichlich Wasser hat, worauf er aber baldigst wieder den Körper mit Butter einsalbt. Natürliche Thermalbäder gibt es in Urundi mehrere, die nicht bloß von den Umwohnenden gebraucht werden, z. B. beim Ort Kisagara nahe der Missionsstation Mugera, wo eine 47° heiße starkfließende Quelle entspringt, und eine andere nördlich von Tschiwitole im Russisital. Eine Art Dampfbäder wird bei Fieberkranken angewandt, indem der Kopf und die Glieder des Kranken nacheinander über einen Topf kochenden und dampfenden Wassers gehalten werden (Nr. 19, S. 183). Viel gebräuchlich sind Klistiere aus warmem Wasser mit einem Zusatz von Pflanzensaft. Sie werden so angebracht, daß erst ein hohler Rohrstengel oder ein röhrenförmig zusammengerolltes starkes Blatt mit einem Ende in den After eingeführt wird und dann der Behandelnde einen Mund voll Wasser durch das andere Ende dieser Röhre in den Darm bläst (Nr. 19, S. 331). Erwachsene bringen sich oft selbst ein Klistier bei, indem sie einen der langhalsigen Flaschenkürbisse mit Wasser füllen, das dünne Ende des langen Halses in den After stecken und dann die Kalebasse so aufrichten, daß das Wasser durch sein eigenes Gewicht eindringt. Klistiere werden angewandt gegen Leibschmerz jeder Art, Verstopfung, Diarrhöe, Fieber u. a. m.

Fig. 18. Schröpfkopf aus Rindshorn.
(Museum für Völkerkunde, Berlin, Nr. 643.)

Zahllos sind die Medizinen aus anorganischen, vegetabilen und animalischen Substanzen. Eine verhältnismäßig geringe Rolle spielen darunter die Gifte; kennen doch die Barundi nicht einmal die Anwendung von Pfeilgiften, während die Batwa ihre Pfeile oft sehr wirksam vergiften. Trotzdem ist es wohl neben magischen Vorstellungen die Furcht vor Vergiftung, weshalb die meisten Medizinen zunächst oberflächlich auf die Haut eingerieben oder in Umschlägen getragen werden. Erst wenn diese Art nichts hilft, entschließt man sich zu innerlichem Einnehmen. (vgl. auch S. 132).

Zur äußerlichen Medizin zählt man auch das Brennen der Haut (Kauterisation) an kranken Körperteilen, das sehr im Schwange ist. Zu diesem Behuf schmiert man erst etwas eingefettete Holzasche auf die betreffende Stelle und betupft dann mit einem glühenden Eisenstäbchen diese Stelle, worauf zur Linderung des Schmerzes etwas Butter eingerieben wird (Nr. 19, S. 91). In anderen Fällen tritt an Stelle des brennenden Eisens das schneidende Messer, um besonders starke Reize auszuüben und um zugleich Blut zu lassen. Es ist ein ähnliches Verfahren wie beim Tätowieren (S. 29). Bis zum eigentlichen Aderlaß, zum Anschlagen einer Vene, versteigt sich der Murundi beim Menschen nicht, obwohl er sehr oft die Rinder mit einer Pfeilspitze zur Ader läßt, um ihr Blut zu genießen (S. 45). Aber man öffnet oberflächliche Geschwüre mit der Nadel oder dem Messer und macht häufig in die Haut schmerzender Glieder eine Reihe kleiner Einschnitte mit dem einheimischen Rasiermesser, worauf gewisse heilsame Salben oder Pulver in die Wunden gerieben werden. Auch das Schröpfen ist nicht unbekannt und wird ausgeübt, indem man ein Stück Rindshorn (Textbild 18),

das an der Spitze durchbohrt ist, auf die Hautreinschnitte setzt und durch das Loch die Wunde ansaugt, bis genügend Blut in das Horn geflossen ist (Nr. 19, S. 527).

Vor tieferen Einschnitten haben die Barundi große Scheu, auch wenn sie der Europäer macht; und niemals führt der Warundiarzt Amputationen von Gliedern aus. Gebrochene Arme oder Beine werden aber mit viel Geschick und Sorgfaltigkeit „geschient", indem man sie zwischen flache Holzstücke legt und mit Rindenzugstreifen unbeweglich bandagiert. Ob bei dieser Abneigung gegen chirurgische Eingriffe die Barundi wirklich eine so schwierige Operation wie den Kaiserschnitt an lebenden Frauen ausführen, wie v. d. Burgt kurz erwähnt (Nr. 19, S. 363), scheint mir doch höchst zweifelhaft zu sein. Wahrscheinlich handelt es sich wie in Ruanda, Usiumi, Rüsha (Nr. 31, S. 117; Nr. 48, S. 228; Peterm. Mitt. 1879, S. 393) nur um Kaiserschnitt an sechen gestorbenen Frauen, um das Kind zu retten oder es wenigstens aus dem Leib zu entfernen und gesondert zu begraben (J. S. 110, 140). Trepanation kennen die Barundi nicht.

Unter den Krankheiten der Barundi sind ziemlich viele endemisch, z. B. Malaria, Rückfallfieber, Lepra, Sandfloh, aber nur wenige treten epidemisch auf, wie z. B. Pocken und Schlafkrankheit; diese jedoch um so furchtbarer, als die Barundi keinerlei Gegenmittel kennen und anwenden. Van der Burgt gibt eine lange Namenliste vorkommender Krankheiten (Nr. 19, S. 350/51), die aber oft mehrere Namen für eine und dieselbe Krankheit in ihren verschiedenen Stadien enthält. Hauptsächlich dürften die folgenden aufzuzählen sein: Syphilis, Fieber, Furunkeln, Augenentzündung, Bein- und Armgeschwüre, Epilepsie, Krämpfe, Lepra, Band- und Eingeweidewürmer, Lungenschwindsucht (ikihaha), Dysenterie, Husten, Abszeß an der Vulva, Diphtheritis (?), Hodenentzündung, Gonorrhöe, Rheumatismus, Kopfgrind, Fadenwürmer (Filarien), Nabelbruch, Elefantiasis, Blattern, Pocken, Wahnsinn, Zahnausfall, Steinleiden, Paralyse, Stirnhöhlenkatarrh, Keuchhusten, Wassersucht, Bluturin, Taubheit, Brüsterentzündung, weißer Fluß, Blennorrhöe.

Am gefürchtetsten von allen Krankheiten sind die Pocken (akaranda, akandbe). Epidemisch auftretend, entvölkern sie ganze Landstriche, so Anfang der 90er Jahre, als nicht nur in Urundi, sondern auch in Ruanda, in Karagwe und in anderen Ländern des Zwischenseegebiets viele Tausende dahingerafft wurden. Auch gegen Ende des Jahrhunderts scheint nach den Berichten der Eingebornen eine schwere Pockenseuche das Land heimgesucht zu haben. Weniger epidemisch, aber ebenfalls sehr gefürchtet sind die verschiedenen Formen der Halsentzündung (ikiwa), die als Angina, zum Teil vielleicht auch als Diphtheritis, anzusprechen sind und oft schnell zum Tod des Infizierten führen. Sehr verbreitet, aber weniger gefährlich sind eiternde Beulen und Blasen (ikihoro, ikinutsi, amosi, ikivimba), die zum Teil vermutlich mit Frambösie zu identifizieren sind; namentlich die Kinder sind sehr häufig davon befallen. Die Kranken leiden weniger durch Schmerz als durch Behinderung ihrer Beweglichkeit, und da sie die Wunden sehr unsauber halten, heilen sie schwer. Nicht zu verwechseln sind diese Geschwüre mit denen der Syphilis (ikikatschji), die glücklicherweise in Urundi wie in Ruanda noch sehr selten ist. Auch die durch den Sandfloh (infunza) erzeugten Geschwüre sieht man nicht häufig in Urundi, außer in der vom Verkehr viel berührten Tanganikagegend. In Ruanda ist dieses Leiden weit mehr verbreitet. Noch seltener habe ich Leprakranke (umuwembe) in Urundi gesehen, zweimal am Tanganika und einige Fälle bei der Mission Mugera, wo den Lepräsen ein besonderes kleines Isolierhaus gebaut worden war. Elefantiasis (iwamba) ist mir auf der ganzen Urundireise

nur zwei- oder dreimal vorgekommen, ebenso selten in Ruanda. Phthisis soll es nach v. d. Burgt in einigen Distrikten geben, aber ich bezweifle, daß die von ihm ikihaha genannte Krankheit unsere europäische Lungenschwindsucht ist. Bubonenpest, die rings um den Victoriasee, in Uganda, in Kaiwirondo, im Maasadistrikt, in Kisiba endemisch ist, scheint in Urundi ganz zu fehlen, während sie in Ruanda als masseke-Krankheit nicht selten sein soll.

Sehr viele Barundi leiden an Eingeweidewürmern, namentlich Kinder sterben oft daran. Auch heftige Diarrhöen sind häufig, und die gefährliche Dysenterie nimmt zeitweise epidemischen Charakter an, z. B. 1908. Gonorrhöe und Fluor albus sind nach Angabe der Missionare vom Osten her eingeschleppt, aber nicht sehr verbreitet. Selten sind Augenkrankheiten, außer an kleinen Kindern, an deren Augen die infizierenden Fliegen in Menge zu sitzen pflegen.

Malaria (injonko, indurwe) gibt es, wie in Ruanda, überall in den warmen sumpfigen Niederungen, an denen diese Länder reich sind. Ich habe Anophelesmücken in den sumpfigen Bergtälern Süd-Ruandas und Nordwest-Urundis noch in 1600—1700 m Höhe, einmal sogar in 2140 m Höhe östlich von Usumbura, gefangen und Fieberkranke unter den dortigen Eingebornen gesehen und mit Chinin behandelt. Auch von meinen Karawanenleuten infizierten sich einige daselbst. Schwarzwasserfieber hingegen scheint nicht oder nur sehr selten vorzukommen. Besonders gefürchtet sind von den Hochland-Barundi wegen der Malaria die Niederungen des Akanjaru und Ruwuvu im Norden, die sumpfigen Seen im Nordosten und das tiefe warme Küstenland des Tanganika mit dem anschließenden Russisital, während die dort ansässigen, relativ wenigen Barundi großenteils immun zu sein scheinen.

Gegen klimatische Veränderungen auf Wanderungen oder Wohnsitzwechseln sind die Hochland-Barundi außerordentlich empfindlich. Früher, als die Nachbarländer, wie z. B. Ussumbwa, noch Sklavinnen aus Urundi bezogen, rechnete man damit, daß unter zehn Gefangenen acht zugrunde gingen, weil sie das Klima nicht vertrugen (Nr. 14, 1900/1, S. 178); und die Missionare in Mariahilf in Uschirombo berichten, daß sie im dortigen Missionswaisenhause immer sehr viele Kinder aus Urundi und Ruanda haben, die sich nicht an das (keineswegs besonders schlechte) Klima Uschirombos gewöhnen können und fast immer krank sind. Auch den aus Urundi und Ruanda kommenden Frauen geht es in Uschirombo so. Nicht wenige sterben, andere magern zu Skeletten ab. Etwa nach einem Jahr erholen sich viele dieser Kranken, bleiben aber schwächlich (Nr. 14, 1900/1, S. 288). Ich möchte hinzufügen, daß nach meinen Beobachtungen nicht der Klimawechsel allein an diesen Erkrankungen schuld ist, sondern wesentlich auch die veränderte Nahrung, z. B. Mangel an Milch, und das schlechtere Wasser. Jedenfalls sollte die fast in ganz Ostafrika durch die Erfahrung bestätigte Tatsache, daß die Bewohner der kühlen Berg- und Hochländer, wie Ruanda, Urundi, Uhehe, Usambara u. a., den Aufenthalt in tieferen, wärmeren Landstrichen, z. B. in Unjamwesi, Ugogo, Useguha, Küstenland, nicht vertragen, uns eine ernste Warnung sein, aus den Hochländern größere Menschenmengen zur Arbeit in den Plantagen des Tieflandes heranziehen zu wollen oder, wie das Schlagwort heißt, die großen „Menschenreservoire" jener Hochländer für die an chronischem Arbeitermangel leidenden Plantagen zu öffnen. Der Versuch würde in seinen Folgen sich nicht viel von einem großen Massenmord unterscheiden.

Schreckliche Wirkungen hat das Eindringen der Schlaftrankheit aus dem Ostkongoland in die westlichen, niederen Gebiete Urundis gehabt. Die Russissniederung bis in die Nähe des Kivusees, der noch frei davon ist, und das ganze große Becken des Tanganikasees bis nahezu hinauf an den Rand seiner Gebirgsumrahmung sowie die dem See zugewandten Bach- und Flußtäler bis ins östliche Hochland hinein, z. B. das Tal des Mugaruffi, sind vom Träger der Schlaftrankheit, der Stechfliege Glossina palpalis, verseucht. Nach den amtlichen Berichten über die Entwicklung unserer Schutzgebiete 1912/13 liegen die Dinge am Tanganikasee so, daß infolge der großen Ausdehnung des infizierten Gebietes, der Unzugänglichkeit der Bevölkerung und des schwer zu kontrollierenden Verkehrs mit den Infektionsgebieten der Kongokolonie die Bekämpfung der Seuche noch längere Zeit in Anspruch nehmen wird. Von den Behörden sind 1913 3303 neue Fälle gegen 3560 im Jahr 1912 beobachtet worden. Im ganzen mögen im Tanganikagebiet 200 000 Menschen schlaftrank sein.

Ich bin 1911 durch die heimgesuchten Landstriche der unteren Russissniederung und am nordöstlichen Tanganika gezogen und war entsetzt über die Verheerungen, die von der Seuche unter der früher ziemlich dichten und lebenslustigen Bevölkerung angerichtet worden sind. Ganze Dörfer sind ausgestorben, die Bewohner weiter Landstriche sind weggezogen oder von der Regierung anderwärts angesiedelt worden, und die von der Regierung in wohlbewachten Sammellagern untergebrachten Kranken siechen dahin, ohne daß ihnen mit irgendeinem der versuchten Mittel (Atoxyl, Salvarsan u. a.) wirksam geholfen werden könnte. Alle wirtschaftliche Tätigkeit liegt danieder, aller Verkehr und Handel stockt, und die vordem vorhandenen europäischen Firmen haben bis auf wenige entweder bankerott gemacht oder sind weggezogen. Nachdem die Eisenbahn den See erreicht hat, wird man der weiteren Ausdehnung der Schlaftrankheit im Tanganikagebiet mit viel größeren Mitteln und mit besserer Aussicht auf Erfolg entgegenarbeiten können, aber es wird Jahrzehnte dauern, bis die Schäden einigermaßen geheilt sein werden.

Glücklicherweise hat sich die Seuche bisher nicht auf das eigentliche große Urundi östlich vom Tanganika ausgedehnt und wird sich wohl auch nicht dahin ausdehnen, weil es in den Hochländern von Urundi, Ruanda, Uha zu kühl für das Gedeihen der Glossina palpalis ist und weil die Fliege ihre Existenzbedingungen, fließendes Wasser und schattigen Busch am Wasser, nur stellenweise in den sehr überwiegend grasbewachsenen Hochländern findet. Dagegen scheint mir die große Gefahr immer näher zu rücken, daß sich die Seuche nach der nunmehrigen Vollendung der Tanganikabahn auch in die zentralen Gebiete Ostafrikas verbreitet. Sehr leicht können infizierte Exemplare der Glossina palpalis, die jetzt die trockenen Steppenländer östlich des Tanganika nicht durchfliegen können, durch Eisenbahnzüge passiv verschleppt werden, wie so manche andere epidemische oder endemische Krankheit in anderen Ländern durch Bahnen und Schiffe verschleppt worden ist. Wenn dann diese infizierten Fliegen irgendwo an der Bahn im Osten geeignete Daseinsbedingungen finden, werden daselbst neue Schlaftrankheitsherde entstehen. Noch viel gefährlicher aber wird die Situation, wenn die in den Ostländern ungeheuer verbreitete Glossina morsitans, die eigentliche Tsetsefliege, die Infektion von der Glossina palpalis übernimmt und weiterträgt. Schon ist aus dem Süden unserer Kolonie bestimmt nachgewiesen, daß die Glossina morsitans die echte Schlaftrankheit übertragen kann. Würde nun das ungemein große Verbreitungsgebiet der Glossina morsitans vom Tanganikasee her durch

Vernichtung der Saat infiziert, so wären allerdings die Folgen für die Bevölkerung Deutsch-Ostafrikas unabsehbar. Es ist gut, dieser uns von West-Urundi und dem Tanganjikagebiet drohenden Gefahr rechtzeitig entgegenzusehen, um nicht eines Tages von der Wirklichkeit allzusehr überrascht zu werden.

2. Zeitrechnung, Zählen, Rechnen

Die astronomischen Beobachtungen und Kenntnisse der Barundi sind recht dürftig. Die Sonne (izuba) ist ihnen ein wandelndes Feuer des Imana, des Hauptgottes, das am Abend im Westen zu den Wabemba niedersinkt. Diese aber sind Anthropophagen und fressen die Sonne bis auf ein kleines Stück auf, das ihnen entflieht, nach Osten zurückkehrt, dort wieder wächst und am Morgen von neuem aufsteigt (Nr. 19, S. 53).

Eine größere Wichtigkeit hat in den Vorstellungen der Barundi der Mond (ukwezi), denn nach den regelmäßig wiederkehrenden Mondphasen haben sie ihre Zeitrechnung eingerichtet. Der Mond ist ein männliches (oder hermaphroditisches?) Wesen, der Abendstern sein Lieblingsweib, die anderen Sterne seine Kinder und Diener, die Sterne des „großen Bären" seine Konkubinen, die des Orion seine ältesten Söhne (Nr. 19, S. 54). Die Erscheinung der ersten Mondsichel nach dem Neumond wird, wie bei allen Negern, mit Frohlocken begrüßt, aber einen besonderen Kultus widmen die Barundi der Wiederkehr des Mondes nicht. Der Name ukwezi = Mond hat dieselbe Wurzel wie das Suahelimort mwezi; es ist der Glänzende, Kräftige, Mächtige. Daher wohl auch der Name Mwesi für den einen König der Barundi (s. S. 162). Unter Unjamwesi ist eigentlich das Land des Mwesi, also Urundi, zu verstehen, aber die Araber haben bei ihrem Eindringen (1840) nach dem Seengebiet diesen Namen auf das ganze Land südlich vom Victoriasee und östlich vom Tanganika angewandt, nach dem mächtigsten der dortigen Herrscher, dem von Urundi; und so ist er denn an dem von den Arabern mit Tabora besetzten Gebiet des heutigen Unjamwesi haften geblieben, während das eigentliche Mwesiland (Urundi) den Arabern verschlossen geblieben ist.

Nach dem Lauf und dem Wechsel des Mondes richtet sich alles in Urundi, das Jahr ist ein Mondjahr; aber man teilt nicht das Jahr bewußtermaßen in 12 Monate und hat für das Jahr (umwaka) kein festes Zeitmaß, sondern man weiß nur, daß ein Jahr um ist, wenn die beiden Hauptjahreszeiten, die Trocken- und die Regenzeit, abgelaufen sind, und rechnet innerhalb dieses Rahmens nach den verschiedenen Handlungen des Ackerbaues, die zur Zeit bestimmter Mondphasen in der Regen- oder Trockenzeit vorgenommen werden müssen, also z. B. folgendermaßen: Beginn der Regenzeit (Ende Oktober) Aussaat des Mais, Ende der Regenzeit (Ende Mai) Auspflanzen des Maniok; Geburt eines Knaben Vollmond nach Aussaat des Mais, Tod eines Verwandten Neumond nach Auspflanzen des Maniok u. dgl. Mehr als 8—10 Jahre zurück weiß niemand zu zählen und diese nur in der Form, daß es heißt: Wir haben so viel mal Sorghum geerntet (Nr. 19, S. 377). Niemand weiß genau, wieviel Jahre er alt ist, sobald die ersten 8—10 Kinderjahre vorüber sind. Wenn er bei der Erzählung eines Ereignisses von 20, 30, 40 Jahren spricht, will er damit nur sagen, daß es sehr lange her ist.

Im einzelnen aber haben die im Verlauf des Jahres regelmäßig wiederkehrenden, bestimmte Geschäfte des Ackerbaues bezeichnenden Jahreszeiten feststehende Namen, die man Monatsnamen des Feldbaues nennen könnte. Von der Burgt zählt deren eine

ganze Reihe auf (Nr. 19, S. 377); z. B. uratsi = Zeit des Grashrießens (Ende September und Anfang Oktober); umwirima = Beginn der Regenzeit, Beginn der Feldbestellung und Aussaat (Ende Oktober, November); umwirawura = Aufgang der Saat (Dezember); umukurwesi = Mais setzt Kolben an, Bohnen blühen (Ende Dezember); ikigarama = Bohnen sind reif (Anfang Januar); ikidida = Bohnen werden gepflückt (Ende Januar); akataschi = Sorghum wird gepflanzt (Anfang Februar); urunchuma = Mais ist reif (Ende Februar, Anfang März); umunjanjo = Sorghum treibt Kolben (Ende März); urusasa = Sorghum ist fast reif (Anfang April); akawuno = Ernte des Sorghum (Ende April); urukechi = Ende des Regens, Bestellungen des Maniok, Ernte des Mais (Ende Mai); itsi = Trockenzeit, Zeit des Wiertriebens, des Fischfangs (Juni bis Oktober); umuhukura = Wiederkommen des Grases (Juni, Juli, August); akanjabirana = Zurichten der Felder (Oktober).

Den Tag teilen die Barundi natürlich nicht in 12 Stunden ein, sondern in Abschnitte nach dem Stand der Sonne und nach regelmäßigen Erscheinungen des Tageslichtes. Um im Gespräch eine Tageszeit anzudeuten, zeigen sie mit ausgestreckter Hand die entsprechende Stellung der Sonne am Himmel an, wie fast alle Neger tun. Dasselbe geschieht, wenn sie die Dauer eines Marsches, die Entfernung bis zu einem bestimmten Ort angeben wollen. Feststehende Ausdrücke haben sie für folgende Tageszeiten: Erstes Krähen des Hahnes, Beginn der Morgendämmerung, Zeit der Morgenröte, Erwachen der Vögel, Sonnenaufgang, halber Vormittag, Mittag, halber Nachmittag, Beginn der Abenddämmerung, Sonnenuntergang, Eintritt voller Dunkelheit, Zeit des Schlafengehens, Mitternacht, sehr spät, sehr früh. Der Begriff Woche ist unbekannt.

Beim Zählen und Rechnen (kuharura) bedient sich der Murundi der Finger einer Hand oder zweier Hände, nicht auch der Zehen und Füße. Wie alle Bantuneger zählen sie, indem sie die Finger in verschiedener Zahl und Gruppierung zusammenlegen oder umbiegen. Das Zahlensystem ist also das dezimale. Die Zahlwörter 1—10 sind die der Bantusprache: 1 = umwe, 2 = iwili, 3 = itatu, 4 = inne, 5 = itano, 6 = itandatu, 7 = indwi, 8 = umunane, 9 = tschjenda, 10 = tschjumi. Aber ebenso oft hört man in Zusammensetzungen mit 5 zählen, also 6 = 5 + 1, 7 = 5 + 2, 8 = 5 + 3, 9 = 5 + 4. Die Fingerzahl der Hand ist also die rechnerische Einheit, die stets in Gestalt der geschlossenen Faust beim Rechnen mitspielt. Die Einzelzahlen werden mit den Fingern folgendermaßen verdeutlicht: 1 = ausgestreckter Zeigefinger der rechten Hand bei umgebogenen übrigen Fingern, 2 = ausgestreckter Zeige- und Mittelfinger bei umgebogenen übrigen Fingern, 3 = ausgestreckter Zeige-, Mittel- und Ringfinger bei umgebogenen übrigen Fingern, 4 = Zeige-, Mittel-, Ring- und kleiner Finger bei umgebogenem Daumen, 5 = Faust der rechten Hand, 6 = Faust der rechten Hand mit daran gelegtem kleinem Finger der Linken, 7 = Faust der rechten Hand mit daran gelegtem kleinem und Ringfinger der Linken, 8 = Faust der rechten Hand mit daran gelegtem kleinem, Ring- und Mittelfinger der Linken, 9 = Faust der Rechten mit daran gelegtem kleinem, Ring-, Mittel- und Zeigefinger der Linken, 10 = 2 Fäuste aneinandergelegt. Um 11 darzustellen, schlägt man einmal die Fäuste zusammen und streckt dann den Zeigefinger der Rechten = 1 aus usw. bis 19. Für 20, 30, 40 schlägt man 2, 3, 4 mal die Fäuste zusammen und zählt: 2 Zehner (amatschjumi awili), 3 Zehner (amatschjumi atatu) usw. Besondere Zahlwörter über 10 hinaus gibt es nicht (Nr. 19, S. 114/115).

Wenn der Murundi im praktischen Leben mit Gegenständen rechnen muß, z. B. wenn er eine größere Menge Süßkartoffeln oder Maniok oder Perlen kauft, gruppiert er den Vorrat immer in Häufchen von 5 zu 5 Stück, fügt diese zusammen und addiert

die 2, 3, 4 Zehner usw. Über 100 hinaus wird ein Murundi kaum jemals zählen, sondern die Menge sich jedesmal durch Teilgruppen veranschaulichen, so z. B. beim Zählen von Vieh oder von Kriegern oder von Untertanen eines Mutwale.

Ein Zahlwort zur Bezeichnung des Begriffes „viel" oder „sehr viel", wie z. B. 40 bei den Turkvölkern oder 600 bei den Römern, hat der Murundi nicht; er drückt „viel" mit dem Bantuwort inschi (Kisuaheli ingi) aus.

3. Die Sprache

Alle Barundi, also sowohl die Urbevölkerung der Batwa als auch die später angesiedelten Bahutu wie die jüngsten, hamitischen Eroberer, die Batussi, sprechen ein und dasselbe Bantudiom, das Kirundi. Kirundi gehört zu den agglutinierenden Sprachen; sein Bau ist derselbe wie der aller Bantusprachen. Sein Verbreitungsbezirk erstreckt sich über das ganze Zwischenseegebiet, es wird gesprochen in Urundi und mit dialektischen Abwandlungen in Ruanda, in Uha (Ujungu, Ufchingu, Heru, Urugeru), in Ubjidji. Die Idiome von Ufindja, Uffumi, Karagwe, also das Kifindja, Kimuera, Kinjambo, ähneln ihm sehr, und nahe verwandt sind ihm die Sprachen von Uganda und Unjoro (Nr. 19, S. 329). Auch in den Kinjamwesidialekten wie Kiffumbwa, Kiziwa, Kifulama, Kitulama findet man viele Kirundiwörter, die hauptsächlich für Bezeichnungen der Regierungs- und Verwaltungseinrichtungen und der religiösen Gebräuche üblich sind. Die religiösen Geheimbünde (Wasiwesi, Batschwesi) dieser Völker haben eine besondere Kirunditerminologie (Nr. 18, S. 1; vgl. auch oben S. 124).

Die charakteristischsten Eigenschaften des Kirundi sind: 1. Fehlen des Geschlechts; 2. Fehlen der Deklination, aber Gruppierung der Hauptwörter in verschiedene Klassen mit besonderen Präfixen für Einzahl und Mehrzahl; 3. Beherrschung der Satzteile durch die Hauptwörter mittels bestimmter Präfixe oder bezeichnender Silben (Nr. 18, S. 2).

Die Substantive lassen sich in zehn Klassen unterbringen. Gewisse Substantive werden verdoppelt, um die Bedeutung zu verstärken oder um dem Ausdruck einen familiären Sinn zu geben. Wie alle Bantusprachen ist Kirundi arm an Adjektiven, aber es ersetzt sie durch Partizipformen von Zeitwörtern, durch Substantive, durch Gattungsbegriffe u. a. m.

Am schwierigsten ist im Kirundi der Bau und das System des Zeitwortes. Zwar ist das Verbum an sich einfach und von logischer Konstruktion und Anwendung, aber die Zahl und Art der Formen, von denen es Grundformen, Hilfsformen, Bindeformen, passive, kondisionale, kausative, gegensätzliche, einschränkende und andere Formen gibt — über 50 — ist so groß, daß eine Gleichsetzung einer Kirundiform in eine entsprechende europäische äußerst schwer ist (Nr. 18, S. 32—33). Dagegen ist die Zahl der Konjunktiva sehr klein; die meisten werden durch Hilfsverba ersetzt. Da der Murundi auch diese wegläßt, wenn sie nicht durchaus nötig sind, ist die Satzform sehr kurz, die Redeweise klingt abgehackt. Aus einem eleganten deutschen oder gar lateinischen Satz würde ein Murundi, wenn er ihn verstände, wenigstens zehn Sätze in Kirundi machen.

Außer der Kürze der Sätze ist auch die Schnelligkeit des Sprechens für die Barundi bezeichnend, während die Banjaruanda viel langsamer und mit etwas singen-

dem Tonfall sprechen. Sehr wichtig für den Sinn eines Wortes ist seine Betonung, d. h. die Akzentuierung einer bestimmten Silbe und die Höhe der Stimmlage, in der diese Silbe gesprochen wird. Dies gilt auch für ganze Sätze. Der hierauf nicht scharf achtende Europäer wird, selbst wenn er sonst ganz gut Kirundi versteht und spricht, deshalb sehr oft den Murundi mißverstehen oder von ihm mißverstanden werden. Im allgemeinen aber wird die vorletzte Silbe der Wörter länger betont als die anderen, also wie bei uns. Zur Vermeidung von Härten im Klang und in der Aussprache der Wörter läßt der Murundi nie zwei Konsonanten oder zwei Vokale in einer Silbe aufeinanderfolgen, sondern trennt jene durch einen Vokal, diese durch einen Konsonanten oder durch Elision des einen Vokals.

Neben dem heute in Urundi allgemein gesprochenen Kirundi gibt es dort aber noch ein vulgäres und sakrales Altkirundi, dessen Gebrauch beschränkt ist und, wo es gesprochen wird, meist nur bruchstückweise dem modernen Kirundi beigemischt wird. Für die meisten Dinge und Begriffe haben die Barundi zwei, drei oder mehr Ausdrücke, von denen die einen dem guten Ton der Umgangssprache, die anderen der vulgären Sprechweise des Altkirundi angehören, die der Pöbel, alte Weiber und auch die Batwa gebrauchen, wenn sie unter sich sind (Nr. 19, S. 330), oder in den religiösen Hymnen, festlichen Gesängen und zeremonialen Gesprächen angewendet werden (s. S. 70, 124 u. 128). Ebenso gibt es eine „lubandwa" genannte rituelle Geheimsprache in Ruanda (Nr. 48, S. 315) und eine solche „luchwesi" genannte in Ussumi (Nr. 24, S. 57).

Die Haupt- und Zeitwörter des Altkirundi sind in ihren Wortstämmen und ihrer Umbildung ganz verschieden vom modernen Kirundi der Verkehrssprache; sie gleichen auch keiner anderen Bantusprache. Vermutlich ist das Altkirundi die ursprüngliche Sprache der in diesen Hochländern von alters her wohnenden Batwa, von denen sie die späteren Einwanderer gelernt haben und nun teils selbständig neben ihrem eigenen Idiom, teils untermischt mit diesem gebrauchen. Auch die Batwa sprechen natürlich neben ihrer Ursprache das moderne Bantukirundi (Nr. 18, S. 106/7).

Einige Beispiele mögen die drei in Urundi nebeneinander bestehenden Sprachelemente illustrieren:

Wort	Kitwa	Altkirundi	Neukirundi
Sonne	irijotwa	irijotwa	inuba
Mond	ukurabwa	ukurabwa	ukwezi
Leopard	uwuhama	uwuhama	ingwe
Sorghum	ururerema	ururerema	inkoko
jagen	kutamagisa	kutamagisa	kuhiga
schmieden	kunaga	kunagura	kunuza

Auch in Ruanda kennt man, nach Czekanowski, diese Kitwawörter; sie sollen dort einem „Lokaldialekt" angehören. Wieder eine andere Mundart scheint aber die der Batwa des Vullangebietes in Nordruanda zu sein, die sogar einem so guten Kenner Ruandas wie Pater Barthélemy unbekannt war (Nr. 48, S. 131), und einer dritten Gruppe scheint das Idiom der Batwa des Ituri anzugehören, deren von Stuhlmann aufgezeichnete Sprachproben dem Kitwa Urundis nicht gleichen (Nr. 19, S. 330).

Sehr auffallend ist es, daß, soviel wir wissen, die erst vor etwa vier Jahrhunderten nach Urundi aus Norden und Nordosten eingedrungenen hamitischen Batusi

(s. S. 7), die alle das moderne Bantu-Kirundi sprechen, zwar das Alttirundi verstehen, aber von ihrer eigenen hamitischen Ursprache nicht einmal Reste bewahrt haben. Allem Anschein nach ist, bevor sie nach Urundi kamen, ihr Aufenthalt in nördlicheren Bantuländern von so langer Dauer gewesen, daß sie mit der Preisgabe vieler ihrer ursprünglichen hamitischen Sitten und mit der Annahme vieler Bantusitten und Bantuvorstellungen auch ihre hamitische Sprache zugunsten des Bantu-Kirundi restlos aufgegeben haben. Dieser Vorgang ist um so merkwürdiger, als die Batussi bis auf den heutigen Tag mit äußerster Strenge und Konsequenz auf die somatische und soziale Reinheit ihrer Rasse gegenüber den von ihnen beherrschten Bantuvölkern gehalten haben. Nur die Mitglieder der Königssippe, die Baganwa, sollen nach Hauptmann v. Langenn noch alte hamitische Sprachreste bewahrt haben, aber v. d. Burgt weiß davon nichts (briefliche Mitteilung). Auch Missionar Roehl erklärt die in der Literatur oft wiederkehrende Behauptung, daß die Ruanda-Batussi eine besondere Sprache hätten, für einen Irrtum (Nr. 47a, S. 274). Hauptmann Weiß berichtet hingegen von einer eigenen Sprache der Bahima Ruandas und Mpororós, die ihm und seinen Leuten unverständlich gewesen sei, führt aber keine Proben davon an (Nr. 33, S. 70). Künftige Forscher werden solchen hamitischen Sprachresten besondere Aufmerksamkeit zu schenken haben, da man daraus wertvolle Aufschlüsse über die frühere Sprache und damit über die Herkunft der Batussi wird gewinnen können.

Vergleiche werden anzustellen sein mit den nilo-hamitischen Sprachen der Massai, Teso, Bari, Latuka und namentlich mit jener der Nandi im Ugandaprotektorat, die dem reinen hamitischen Sprachtypus am nächsten von den afrikanischen Idiomen zu kommen scheint, da die Nandi sehr wahrscheinlich Reste einer früheren Gallainvasion sind. (A. W. Crabtree, The Languages of the Uganda Protectorate; Journal of the African Society, January 1914, S. 158 ff.)

Auch ein genaues Studium der eigentümlichen Art, wie die Batussi das Bantuidiom Kirundi sprechen und aussprechen, wird manchen Anhalt und Hinweis nach dieser Richtung geben, denn schon dem aufmerksamen Laien fällt auf, daß die Batussi das Kirundi anders akzentuieren, einzelne Laute anders aussprechen, die Silben anders verbinden als die Bahutu. Im allgemeinen schien es mir, daß sie, wie auch in Ruanda, das Kirundi viel weicher sprechen und die Vokale der Endsilben gern verschlucken. An Stelle des s oder ss der Bahutu setzen sie mit Vorliebe ein ganz weiches sch oder tsch, anstatt Munjahaß sprechen sie Munjahasch', anstatt Lanongo: Lanong', anstatt Lubassa: Lubasch', und schwer ist oft zu unterscheiden, ob der ausgesprochene Endvokal ein a, o oder e ist. Auch zwischen r, l und d hört man meist keinen Unterschied.

Beispiele des modernen Kirundi hier anzuführen, erübrigt sich, da wir hiervon das umfangreiche „Dictionnaire Français-Kirundi" von Pater J. M. v. d. Burgt und das kleine, für den engeren Missionsgebrauch eingerichtete „Dictionnaire Français-Kirundi et Kirundi-Français" des Paters F. Ménard besitzen (Nr. 29). Einige Beispiele von Erzählungen, Fabeln, Liedern, Hymnen mit Interlinearversion gibt v. d. Burgt in seinem Dictionnaire S. 96, 292/3, 332—334, 339—342 wieder; ich weiß deren keine hinzuzufügen. Doch seien zum Schluß einige Sprichwörter angeführt, die sich durch gute Beobachtung und Kürze des Ausdrucks auszeichnen (Nr. 19, S. 470):

1) Ivintu vy'ukwibwa viraguma.
Sachen des Gestohlenwerdens (sind) hart.

2) Kukenura n' ukuvina.
Arbeiten ist tanzen (spielen).

3) Ischano irasje ujumunsi, irindi risosa hanjuma.
Unglück kommt heute, andres wird kommen später.

4) Invura irahedsje, isuba risosa.
Regen beendigt, Sonne wird kommen.

5) Infisi iravuga, iraschaka kutwara umyntu.
Hyäne schreit, will fortschleppen Mann.

6) Aravjutse, ari mubi.
(Wenn) er ist aufgestanden, er ist ärgerlich.

Elftes Kapitel

Geschichte, Kolonialpolitisches

1. Geschichte der Barundi

Die Geschichte der Barundi beginnt für uns erst mit der Mitte des 19. Jahrhunderts. Als die Araber (1845) bis Udjidji vorgedrungen waren, erhielten wir die ersten Nachrichten über Urundi und seine Bewohner, worauf durch die Reisenden Burton und Speke (1858), später durch Livingstone und Stanley (1871 resp. 1876) weitere kurze Mitteilungen folgten. Aber alle diese Reisenden haben nur die äußerste Westperipherie Urundis gestreift; erst als in den 80er und 90er Jahren die katholischen „Weißen Väter" im eigentlichen Urundi von Westen und Osten her Fuß gefaßt hatten, begann 1892 mit Oskar Baumann die wissenschaftliche Erforschung Urundis, an der sich auch die nun auf den Stationen Mujaga, Mugera und Marienheim angesiedelten Weißen Väter erfolgreich beteiligten. Vor allem hat sich Pater J. M. M. van der Burgt um die Geographie, Ethnographie und Geschichte Urundis verdient gemacht und die Ergebnisse seiner in langjährigem Aufenthalt gewonnenen Beobachtungen und Forschungen in einer Reihe wertvoller Arbeiten, namentlich seinem Dictionnaire Français-Kirundi, niedergelegt.

Unser Wissen von Urundi und seiner Geschichte ist also erst wenig über ein halbes Jahrhundert alt. Alles, was davor liegt, kennen wir nur bruchstückweise aus der Tradition der Eingeborenen, und zwar nur des Teiles der Eingeborenen, der erst vor wenigen Jahrhunderten eingewandert ist und heute die Herrschaft führt, der hamitischen Batussi, während die altringesessenen Bahutu (Bantu) und die noch älteren Batwa (Pygmoiden) gar keine Tradition zu haben scheinen. Auch im übrigen liefert uns das Land selbst so gut wie gar kein Material zur Aufhellung der früheren Geschichte, denn es gibt keine Bauteruinen, keine Inschriften, keine vor der Batussizeit liegenden Königsgräber u. dgl., und es können solche in Anbetracht des niederen Kulturstandes der ältern Bantu und Batwa auch nicht erwartet werden. Das einzige, was als „prähistorische" Überbleibsel gedeutet werden könnte, sind alte Steinwerkzeuge, die der Pater Grün in Nordost-Urundi (Bugusi) beim Häuptling Russengo wie auch in Kuragwe gefunden haben soll und im missionarischen Sinn für semitischen Ursprungs aus der salomonischen Zeit (Ophir!) hält, aber Genaueres ist darüber nicht bekannt. Wahrscheinlich ist es alteinheimisches, der afrikanischen neolithischen Kulturperiode angehörendes Steinwerkzeug, wie es auch sonst in Mittelafrika nicht gerade selten ist.

[p. 15]

Aus dem Gesagten ergibt sich, daß die Geschichte Urundis, wie sie aus den vorhandenen Quellen zu erschließen ist, nicht viel anderes sein kann als eine Geschichte des eingewanderten herrschenden Batussivolkes. Beim Versuch, einen solchen historischen Abriß zu entwerfen, wird man des öfters auf Quellen zurückgreifen müssen, die außerhalb Urundis liegen und über den Zusammenhang der Batussi Urundis mit ihren außerhalb Urundis sitzenden Stammesgenossen und über die Wanderungen dieses Volkes vor ihrem Eindringen nach Urundi einiges Licht werfen. Im folgenden sei dieser Versuch gemacht, obgleich darin noch viele Lücken klaffen und noch manches Hypothetische stehenbleiben muß.

Die älteste Bevölkerungsschicht in Urundi wie im ganzen Zwischenseegebiet sind die Batwa. Von der Geschichte dieses in kleinen Stammessplittern über das Land zerstreuten pygmoiden Bevölkerungselementes ist gar nichts bekannt. Sie hängen, wie wir bereits früher zeigten (S. 7), ethnisch und somatisch mit den ähnlich gearteten Batwa Ruandas zusammen und haben viel Blut von der großwüchsigen Bantubevölkerung ihrer Umgebung aufgenommen, während sich die Wald-Batwa des nordöstlichen Kongogebietes (Ituri), denen sie verwandt sind, noch rein erhalten haben. Hier wie dort sind sie im Verschwinden begriffen. Es ist deshalb die höchste Zeit, daß diese, wenn auch nicht mehr reinrassigen, Reste eines uralten Pygmäenvolkes methodisch von einem ethnographischen Fachmann besucht und untersucht werden. Die Hauptzüge ihrer Körperbeschaffenheit haben wir oben (S. 10) kennengelernt.

Die Mehrzahl der Batwa in Urundi wie in Ruanda trägt neben ihrem pygmoiden Grundcharakter zahlreiche Bantumerkmale. Und zwar sind es, wie Czekanowski anführt (Nr. 48, S. 48, 130), Merkmale der Wald-Bantu, also hauptsächlich der Bantuvölker des benachbarten Kongowaldlandes, was sich aus der durch zahlreiche pflanzen- und tiergeographische Erscheinungen gestützten Annahme erklären läßt, daß einst das ganze, heute von Grasfluren und Buschparzellen bedeckte Zwischenseegebiet von Wald bedeckt war, der mit dem großen Kongowald zusammenhing und dieselbe Bevölkerung von Wald-Bantu hatte wie jener (vgl. S. 9). Dem Einfluß dieser Wald-Bantu sind die Batwa sehr lange ausgesetzt gewesen und haben sich ihnen kulturell und körperlich stark angeglichen. Wie jene Wald-Bantu sind die Batwa Nordwest-Ruandas sogar Anthropophagen (nach v. Götzen, v. Parish, Czekanowski). Als dann von Osten her durch vordringende andere Bantustämme (Zentralbantu K. Meinhof), die vom Unjamwesi und vom Victoriasee her kamen, der Wald des Zwischenseegebietes immer mehr ausgerottet wurde, um für andere Wirtschaftsformen Raum und Boden zu schaffen, zogen sich sowohl die Waldbantu als auch die Batwa immer weiter nach Westen zurück und sind nur noch parzellenweise im Zwischenseegebiet sitzen geblieben oder von den wirtschaftlich und numerisch stärkeren Zentralbantu-Eindringlingen allmählich absorbiert worden. Soweit sich zwischen ihnen in Urundi und Ruanda noch Batwa erhalten haben, haben sie nun auch von den Zentralbantu des Zwischenseegebietes viel Beimischung bekommen und demgemäß ihren Typus noch weiter abgewandelt (s. oben S. 9).

Diese Zentralbantu, deren somatischen und geistigen Charakter wir oben (S. 11, 13) kennengelernt haben, bilden die heutige große Masse der Bevölkerung von Urundi wie der von Ruanda, Mpororo, Ankole, Toro, Kuragwe, Uha, Usiaba, Usindja; also fast des ganzen Zwischenseegebietes. In Ruanda, Uha und Urundi sprechen sie Dialekte des Bantuidioms Kirundi, in den genannten anderen Staaten Kinjoro.

In Urundi und Ruanda heißen sie **Bahutu**; in Karagwe und Mpororó: Banjambo; in Ankole, Kisiba, Usindja: Bahiru. Ihren ethnischen Charakter haben diese Zwischenseebantu aber nicht ganz rein erhalten können, denn sie wurden überlagert von den aus Norden eindringenden hamitischen Bahima-Batussi, die sich zu ihren Herren aufschwangen und ihnen viel von ihrem Blut, ihrer Denkart und ihren Sitten einimpften.

Von der Geschichte dieser jüngeren Bantu, der Bahutu Urundis und Ruandas, wissen wir so gut wie nichts aus der Zeit vor der Herrschaft der Batussi. Erst die **Bahima-Batussi** werden die Träger der Geschichte Urundis und Ruandas, erst mit ihnen treten auch die von ihnen unterworfenen und heute beherrschten Völker in den historischen Geschichtskreis ein.

Nach v. d. Burgt und Hptm. v. Langenn beginnt die erste Dynastie der hamitischen Beherrscher Urundis, die v. d. Burgt Bahinda nennt (vgl. S. 158), um das Jahr 1500. Es ist aber, wie Czekanowski nachgewiesen hat (Nr. 48, S. 49ff.), als sicher anzunehmen, daß schon lange Zeit vorher die hamitischen Bahima (Wahuma), deren heute in Urundi wie in Ruanda herrschender Zweig Batussi (Batutsi) heißt, ihre Rinder im Zwischenseengebiet geweidet haben. Die Bahima-einwanderung Ugandas verlegt Czekanowski sogar in die ersten Jahrhunderte unseres Milleniums (Nr. 48, S. 49).

Bezeichnend für die Auffassung, welche die Batussi selbst von ihrer Herkunft haben, ist die nach Pater Loupias in Ruanda fortlebende Legende: Vater der Bogesfamilie ist Lututsi, der „auf Erden gemachte" (!) Sohn des Gottes Imana, während der ebenso gemachte andere Sohn des Imana, Kigwa, der Vater der Banjeginjafamilie ist, die in Ruanda herrscht. Kigwa, Lututsi und ihre Schwester Nimabatutsi (d. h. Mutter der Batutsi) wurden aber von Imana aus seinem „Paradies" vertrieben und fielen in Buganda, alle am Mubafikke in Ruanda, nieder. In Ruanda wohnten jedoch bereits drei große Familien, die Basinga, Bogessera und Basigaba, außerdem die Batwa in den Wäldern. Alle diese Menschen oder ihre Vorväter waren früher von Imana aus dem „Paradies" gejagt worden. Kigwa wurde ihr König, heiratete seine Schwester (Endogamie!) und wurde Stammvater der Ruanda-Batutsi (Banjeginja), während Lututsi nach Karagwe ging und Stammvater der Bega wurde. Später siedelte auch er nach Ruanda über. Seitdem geben die Banjeginja ihre Töchter den Bega und diese ihre Töchter jenen zu Frauen (Exogamie!). Alle Batutsifamilien kommen von ihnen her. (Nr. 28, S. 1—13.)

Die Bahima Urundis wollen von Norden und Nordosten aus einem Bergland Igitára oder Ikitara gekommen sein (Nr. 19, S. 288, 614), und auch die Bahima Ruandas nennen als frühere Heimat ein Land im Nordosten, „wo große Berge seien und wo der Mond aus deren Spitzen neue Kraft und sein schönes weißes Licht schöpfe" (Langheld, Über einen Zug nach Ruanda; Deutsches Kolonialblatt 1895, S. 73). Igitára oder Ikitara ist zweifellos identisch mit dem Land **Kitára** anderer Berichte, dessen Hauptgebiet das spätere Unjoro war. Die verbreitete, schon von Speke (Nr. 1, Bd. I, S. 273) geäußerte Auffassung, daß Kitára einst ein politisch starkes Reich gewesen sei, bestreitet Stuhlmann; der Name bezeichne nur das Heimatland der Wahumahäuptlinge (Nr. 5, S. 651, Anmerk.). In der Tradition der Ruanda- und Urundileute scheint jedenfalls die Erinnerung an **Unjoro** fortzuleben und an die Bergländer zwischen Unjoro und ihrer jetzigen Heimat, nicht aber die Erinnerung an eine viel ältere Urheimat im Nordosten des Erdteils, als die man wohl die Galla-Länder anzusehen hat. Man ist jetzt überwiegend der Meinung, daß die Bahima auf die Borana-Galla zurückzuführen sind, mit denen sie auch somatisch die meiste Verwandtschaft haben.

Außerhalb des Zwischenstromgebietes dürften die nilotо-hamitischen Massai, Nandi, Teso, Latuka, Bari, von denen die Nandi auch in ihrer Sprache am meisten Reinhamitisches haben und als Reste einer früheren Galla-„Infiltration" angesehen werden (Journal of the African Society, Bd. XIII, S. 160), Verwandte der Bahima sein und wie sie Zweige der Galla-Expansion, die sich einst schon weit nördlich vom Victoriasee gegabelt hat und den einen Wanderstrom östlich, den andern westlich des Victoriasees allmählich nach Süden getrieben hat. Schon die Tatsache, daß die vorgenannten Nilotohamiten homogene Sprachzonen trennen, läßt auf ihre spätere Einwanderung in diese Gebiete der Sudan- und Bantuneger schließen (Nr. 38, S. 25). Wie die Bahima sind auch sie hauptsächlich Hirten und bevorzugen deshalb die grasigen Hochländer. Aber im Gegensatz zu den Bahima haben sie ihre Rasse nicht rein vom Blut der umwohnenden Negerstämme erhalten, während sie ihre hamitischen Sprachen und Sitten viel strenger bewahrt haben als die Bahima. Lange bevor die fremden Rasseneinflüsse auf die Hamiten stattfanden, muß eine frühe hamitische Einwanderung Unjoro okkupiert haben.

Schon Speke, dem wir die ersten Nachrichten über die „Wahuma" verdanken, schreibt, daß einst im Norden des Victoriasees fremde Hirtenstämme, „wahrscheinlich Abessinier oder möglicherweise Galla[1]", aus Nordosten nach Uganda und Unjoro eingedrungen seien und dort „das große Königreich Kittara gründeten, wo sie ihre Religion verloren, ihre Sprache vergaßen, ihre untern Schneidezähne wie die Eingeborenen ausgezogen, ihren Nationalnamen in den der Wahuma änderten und sich nicht mehr der Namen Kuschi oder Galla erinnerten, obgleich selbst die jetzt regierenden Könige eine eigentümliche Tradition bewahren, daß sie einst halb weiß, halb schwarz gewesen seien". „Die Fürsten von Unjoro werden Wawitu genannt und zeigen nach Norden, wenn sie gefragt werden, wo ihr Land Uwitu läge." (Nr. 1, Bd. I, S. 272/3.)

Über diese Einwanderung in Unjoro hörte Emin Bey im Lande selbst folgende Überlieferung: „Unjoro bildete einst mit Usoga, Uganda, Ulidi und Karagwe ein großes Land, bevölkert von den Witschwesi. Da kamen auf dem fernen Nordosten Leute mit weißer Haut und brachten den Fluß (Somerset); ihre Zahl war sehr groß, und die Einwohner flüchteten sich vor ihnen, denn die weißen Leute waren valabantu (Menschenfresser). Als nun die neuen Ankömmlinge alle über den Fluß gekommen, versammelten sie sich in Mafuan (einem noch heute existierenden Orte südöstlich von Mrooli) und beschlossen, eine Kolonne nach Unjoro, eine andere nach Gibbe (Uganda usw.) zu senden und sich dieser Länder zu bemächtigen. Die Eindringlinge nannten sich Wawitu (Leute von Witu), ein Name, der heute nur den herrschenden Geschlechtern gebraucht; das Volk aber nannte sie Wahuma (Leute von Norden), in Uganda auch Bachuli. Sie waren und sind Hirten, während die Witschwesi Ackerbauer waren. Als nun die Wawitu immer weiter vordrangen, zogen sich die Witschwesi vor ihnen immer weiter nach Westen; ein großer Teil von ihnen ertrank im Mwutan-Nzige (Meer der Heuschrecken) oder Albert-See, weil sie keine Kähne besaßen. Der Rest wurde zu Sklaven gemacht; aus ihrer Vermischung mit den Ankömmlingen entstand die heutige hellfarbige Rasse. Wo die Einwanderer sich ganz rein erhielten, sind sie noch heute rein weiß, wie in Toro und Gambalagalla; wo die Witschwesi rein blieben — und viele von ihnen durchziehen noch heute das Land als fahrende Sänger und Zauberer — sind sie rein schwarz. Die Einwanderer adoptierten die Sprache der Ureinwohner, unter sich aber sprechen sie noch heute (1878) die Sprache der Wahuma. In Unjoro ist heutigen Tages der Name Witschwesi gleichbedeutend mit Leibeigener, so wie in Uganda das Wort mudsu (eigentlich Bewohner von Mdsu) heute Sklave bedeutet. Ich gebe die verkürzte Erzählung genau so, wie ich sie hier im Distrikt gehört." (Emin Bey, Journal einer Reise von Mrooli nach der Hauptstadt Unjoro. Petermanns Mitt. 1879, S. 182.)

Ph. Paulitschke faßt 1886 die Angaben der bisherigen Forscher über die Völkerbewegungen der Gallastämme und das Ergebnis seiner eigenen Untersuchungen zusammen: Die Orono-Galla saßen einst im ganzen Ostsudan Afrikas. Durch die Ausbreitung der Somal wurden sie nach Süden gedrängt. Dort stießen sie teils auf eine Gegenbewegung der Bantuvölker, teils auf den Widerstand der Massai und Wakwafi; schließlich wandten sie sich nach Nordwesten ins abessinische Bergland südlich von Harrar, während sieben Stämme nach Westen und Südwesten zum mittleren Nil und ins Seengebiet vordrangen. Bei allen Somal- und Gallastämmen findet sich noch

diese Wanderungen. Der letzte große Abschnitt dieser Völkerwanderung vollzog sich seinem historischen Nachrichten zufolge vom Anfang des 16. Jahrhunderts an (Nr. 3a, S. 7—11). — Um diese Zeit fanden auch neue heute nachweisliche Völkerbewegungen im Zwischenseengebiet und hamitische Dynastiegründungen in Urundi statt, wie wir weiter unten (S. 157) sehen werden.

F. Stuhlmann nimmt an (Nr. 5, S. 713), daß eine der ersten Bahimaeinwanderungen, die vom fernen Nordosten her durch Unjoro, Ankole, Toro nach Süden zogen, „diejenige der Ruhinda gewesen sei, ein Name, der offenbar der vornehmsten Familie dieser Einwanderer angehört und von einem Häuptling Muhinda abgeleitet wird". Diese Ruhinda seien durch nachrückende Bahimascharen, zu denen auch die Wawitu gehörten, nach Süden gedrängt worden, wo sie neue Reiche gründeten, und zwar habe die Abwanderung der Ruhinda aus Unjoro etwa im 17. Jahrhundert stattgefunden, wie auch Speke annähernd berechnet hat (Nr. 1, Bd. I, S. 275).

Die vorstehend angeführten Mitteilungen und Ansichten Spekes, Emins, Pauliteschkes, Stuhlmanns und anderer lassen sich kurz so zusammenfassen: In Unjoro und Uganda saßen vor der ersten Bahimaeinwanderung die Bantustämme der Witschwesi. Diese wurden vor mehreren Jahrhunderten durch eine aus Nordosten (Galaländer) eindringende nomadische Bahimainvasion überrannt, deren erste Ankömmlinge sich Ruhinda (Stuhlmann) und deren später folgende Hauptmasse sich Wawitu (Speke und Emin) nannten. Während die ackerbauenden Witschwesi größtenteils im Lande blieben und sich den Bahima unterwarfen, wichen die Ruhinda vor den Wawitu etwa im 17. Jahrhundert nach Süden aus und gründeten im südlichen Zwischenseengebiet neue, noch heute bestehende Reiche.

Dieser Auffassung gegenüber haben die neueren Forschungen J. Czekanowskis zu einem ganz andern Ergebnis geführt. Er tut dar, daß die Angabe Emins von einer Witschwesi genannten Urbevölkerung Unjoros ein Mißverständnis ist. Batschwesi (Watschwesi, Witschwesi) sind in Unjoro die alten Bahima- oder Bahindaherrscher, deren Geistern noch jetzt göttliche Verehrung gezollt wird: Wamara, Mugascha, Kisiba u. a. m. Darum bedeutet dort Batschwesi soviel wie Manen. Dieselbe Erklärung gibt auch H. H. Johnston: Batschwesi sei ein Synonym für die alten Bahimaeinbringlinge Unjoros und für die Ahnengeister der Häuptlinge jener Eroberer; nach letzteren seien aber auch die Priester, die den Kultus dieser Geister leiten und sich im Kult mit den Geistern identifizieren, Batschwesi genannt, und hiervon ist wohl der Name auf die Zauberer und Medizinmänner der Bahimaländer des Zwischenseengebietes übergegangen und hat sich bis nach Unjamwesi ausgebreitet. Bemerkenswert ist, daß die Bahima Ankoles noch heute in Unjoro Batschwesi genannt werden (Nr. 17, Bd. II, S. 588/9, 592, 594). Die Urbevölkerung Unjoros und des ganzen Zwischenseengebietes sind vielmehr die Batwa und die Bantustämme (z. B. die Batonjo und Bafita), die mit den Waldnegern des Ostkongolandes sehr viel Gemeinsames haben. In diesen kamen als eine der ältesten Einwanderungen die Bahimastämme der Batusi. Die Zeit dieser Einwanderung ist unbekannt, aber jedenfalls liegt sie viel weiter zurück als die Tradition der gegenwärtigen Bahimastämme, und zweifellos kamen die Eindringlinge aus Nordosten und verbreiteten sich über Uganda, Unjoro, Toro, Ankole usw., wo sie überall die eingeborenen Bantu unterwarfen und ihnen viel von ihrem Blut mitteilten, während sich ihre eigenen Stämme rein von Bantublut hielten. In Uganda dürften sie im Anfang unseres Jahrtausends eingefallen sein. Mehrere Jahrhunderte lang haben sie in Uganda geherrscht, als aus Norden eine neue Völkerwoge eindrang und vom Land Besitz ergriff; es waren die nilotischen Madistämme der Baganda, deren Ankunft etwa auf den

Anfang des 15. Jahrhunderts angesetzt werden kann, da seitdem 22 Herrschergeschlechter gezählt werden (Nr. 48, S. 49). In Unjoro aber ereignete sich vor 18 Generationen, also um die Mitte des 16. Jahrhunderts, ein neuer Völkereinbruch aus Osten, aus Bukedi vom Tschogasee her, und auch da waren es diesmal nicht Bahima, nicht Hamiten, sondern Schuli oder Atschuli; sie nannten sich Babito oder Wawitu (die mit Mwitu, Mombassa, gar nichts zu tun haben). Ihre von Emin auf die Witschwesi zurückgeführte Sitte des Ausbrechens der untern vier Vorderzähne ist Schulisitte und im Unjorosprachgebiet nur auf die Einflußsphäre der Babito (Wawitu) beschränkt. Nur die aus Bantu, Hamiten und Nilnegern gemischte Hauptrasse Unjoros, die große Masse der Banjoro, pflegt diese Sitte (Nr. 17, Bd. II, S. 581); südlich von Unjoro kommt sie nicht vor. Eine andere Woge dieses Schuliwanderstromes ist auf der Ostseite des Victoriasees nach Süden vorgedrungen, wo ihm die heutigen Wakawirondo und Wagaia angehören.

Die beiden Invasionen nilotischer Stämme in Uganda (Baganda-Madi) und in Unjoro (Babito-Schuli) haben die dort eingesessenen Bahimadynastien (Batschwesi) beseitigt. In Uganda wurden damit alle Bahima ihrer Privilegien beraubt, so daß sie dort heute nur einfache Hirten sind, während in Unjoro die Bahima eine bevorzugte Stellung als Adelskaste beibehielten (Nr. 17, Bd. II, S. 592). Die neuen, nilotischen Herrschergeschlechter haben sich aber vielfach mit den zurückgebliebenen Bahima vermischt, so daß in den jetzigen dortigen Fürstengeschlechtern viele Bahimagestalten, die aber meist ganz dunkelhäutig sind, erscheinen. Das jetzige Fürstengeschlecht Unjoros, die Bakama, geht zurück auf den Babitofürsten Lukedi, d. h. den Mann aus Bukedi, dem Land der Nackten und Schwarzhäutigen (Schuli), der noch elf Nachfolger gehabt hat, worunter zuletzt der in der Entdeckungsgeschichte viel genannte Kabarega (Nr. 17, Bd. II, S. 596/7). Da der Einfall der Babito in Unjoro, die Auswanderung der Batschwesi aus Unjoro und die Gründung der Bahindadynastien in Ankole, Karagwe, Kisiba, Usindja zeitlich zusammenfallen, und da die Tradition der Bahinda auf Unjoro zurückgeht, so kann man wohl annehmen, daß die ausgewanderten Batschwesi und die Gründer der Bahindadynastien identisch sind (Nr. 48, S. 50—66).

Das Fazit dieser Erörterungen ist also dies, daß die Witschwesi (Batschwesi) nicht die Bantu-Urbevölkerung Unjoros sind, sondern die Herrschergeschlechter der ersten Bahimaeinwanderung in Unjoro, und daß die Wawitu (Babito) nicht die ersten in Unjoro erobernd eingedrungenen Bahimanomaden, sondern die, lange nach den letzteren, Unjoro unterwerfenden Nilotenstämme sind; ebenso die Baganda in Uganda. Ich schließe mich dieser wohlbegründeten Ansicht Czekanowskis an.

Wir haben also nun anzunehmen, daß die Bahima-Hirtenstämme sich auf ihrer großen Nordsüdwanderung allmählich von Unjoro über weite Grashochländer des westlichen Zwischenseengebietes verbreitet haben, wo sie den Namen Batussi tragen, und daß schließlich die in Unjoro zurückgebliebenen Bahimageschlechter der Batschwesi durch einfallende Nilotenstämme (Babito, Wawitu) aus der Herrschaft verjagt und zum Teil nach Süden gedrängt wurden, wo sie unter dem Namen Bahinda (nach ihrem Stammherrn Ruhinda oder Muhinda) neue Dynastien im östlichen Zwischenseengebiet gegründet haben.

Je weiter nach Süden, desto geringer wird die Zahl der Bahima im Verhältnis zu den von ihnen beherrschten Bantu, desto reiner aber finden wir die Bahimarasse,

deren Körperbeschaffenheit im 1. Kapitel (S. 8) kurz skizziert ist, erhalten. In Mpororó, wo sie zahlreicher als die dortigen Bantu sind, haben sie ziemlich starke nilotische Beimischung; in Ruanda, wo sie sehr in der Minderzahl sind, wenig, in Urundi und Uha gar keine. Nach Czekanowskis Messungen wächst der Schädelindex von Norden nach Süden immer mehr. Die südlichsten Bahima, also die Batussi in Urundi, Uha, Udjidji usw., sind Glieder der reinsten, ältesten Bahimageschlechter, aber wahrscheinlich erst beträchtlich später ins Land gekommen als die Bahima Ankoles, Mpororós und Ruandas in das ihrige (S. 160). Schon nach den ersten Berichten des Grafen Götzen über die Batussi Ruandas hat Schweinfurth den richtigen Gedanken ausgesprochen, daß diese südlichsten Bahima den „ältesten und ursprünglichsten Zustand der Rasse darstellen, und daß die anderwärts in Afrika durch Isolierung des Typus bedingte Reinhaltung des Typus hier durch die Steigerung der ethnischen Gegensätze bedingt worden ist, dem Verhalten von Öl und Wasser gleich" (Verhandl. d. 7. Intern. Geogr. Kongr. Berlin 1899, Bd. I, S. 192).

Seit ihrem ersten Erscheinen im nördlichen Zwischenseengebiet sind die Bahima immer weiter nach Süden vorgedrungen und haben sich bis in die Gegenwart auch über die Grenzen des Zwischenseengebietes hinaus nach Westen (Ostkongoland), nach Süden (Unjamwesi und Tanganika-Randgebirge) und Südosten (Ussukuma) vorgeschoben. Auf dem südöstlichen Randhochland des Tanganika beherrscht eine vor vielen Jahren aus Norden eingewanderte reinrassige Bahimafamilie die große Landschaft Ufipa (Nr. 11, S. 321).

Nach Bischof Lechaptois haben diese südlichen Bahima die Tradition bewahrt, daß ihre Vorfahren vom Norden des Tanganika aus einem unbekannten Lande gekommen seien. Sie nannten sich Watwaki, was wahrscheinlich der Name ihres Stammes (Clans) sei. Sie seien aus einer sehr fernen Gegend in großer Zahl ausgewandert, aber viele seien unterwegs in verschiedenen Ländern sitzen geblieben. Nur drei Weiber seien schließlich bis nach Urungu und von dort nach Überschreitung der Berge bis nach Ufipa vorgedrungen, wo sie sich durch Klugheit, Zauberei (Mufimu) und Tücke in den Besitz der Oberherrschaft gesetzt haben. Sie wählten sich Ehemänner aus dem Stamm der Wampika, aber ihre Kinder blieben Watwaki (Matriarchiat!), und fortan hielten die Watwaki ihre Rasse rein von fremdem Blut, indem sie nur unter sich heirateten und selbst Ehen zwischen Brüdern und Schwestern gestatteten. (Nr. 47, S. 44—50.)

Diese Überlieferung läßt erkennen, daß die Bahimaeinwanderung nach dem südöstlichen Tanganika ohne kriegerische Eroberung stattgefunden hat und daß die durch ihre geistige Überlegenheit zur Herrschaft gelangte Sippe durch strenge Endogamie die Superiorität ihrer Rasse bewahrte. Es ist also der nämliche Vorgang, den wir auch von den anderen nach Süden wandernden und sich die Eingeborenen untertan machenden Bahimageschlechtern kennen oder vermuten können. Lechaptois zählt in seiner Königsliste von Ufipa 17 Bahimaherrscher auf und bemißt die Gesamtzeit ihrer Herrschaft auf etwa 150 Jahre, so daß der Beginn ihrer Einwanderung auf ungefähr die Mitte des 18. Jahrhunderts anzusetzen wäre; er fügt hinzu, daß nicht der Sohn dem Vater in der Königswürde folgt, sondern der Bruder dem Bruder oder der Neffe dem Oheim. Auch dies also ein Kennzeichen des Matriarchates.

Ferner sei erwähnt, daß H. Johnston einzelne reinblütige Bahima auch entlang der Westküste des Tanganika, auf dem Njassa-Tanganikaplateau und sogar zwischen den Bantu des mittleren Sambesi sah (Nr. 17, Bd. II, S. 616). Die Anwesenheit der Bahima unter anderen Stämmen ist auf den ersten Blick zu erkennen, da sie sich in den Gebieten, wo sie die Herren des Landes sind (also nicht in Unjoro und

Uganda), niemals mit den Bantuvölkern ihrer Umgebung vermischt, sondern ihr Hamitenblut durchaus rein erhalten haben. Wie oft glaubte ich bei ihrem ersten Erscheinen die hochgewachsenen scharfnasigen Leute von der Galla- oder Somaliküste Nordostafrikas vor mir zu haben, die ich von früher kannte, und wie oft wurde ich an die Typen altägyptischer hamitischer Herrscher erinnert, wie sie uns auf den Bildwerken der ägyptischen Königs- und Tempelbauten und in manchen Königsmumien des Bulakmuseums so eindrucksvoll entgegentreten.

Unverkennbar sind die Bahima aber auch durch die wichtigsten Elemente ihres Kulturbesitzes. Sie sind Hirtenvölker reinster Ausprägung und haben überall, wo sie hingekommen sind, das Großhornrind mitgebracht, das von den Rinderrassen der Bantu außerordentlich verschieden ist (s. S. 41). Auch die nur bei ihnen vorkommende windhundartige Hunderasse, die Bienenkorbhütte, die Spiraltechnik ihrer Korbflechterei, die sog. Schalenzither als Musikinstrument u. a. m. scheint für sie charakteristisch zu sein. Ob ein hamitischer Wanderzug — der wohl viel älter gewesen sein müßte als die, welchen die jetzigen Bahima des Zwischenseengebietes angehörten — wirklich Südafrika erreicht hat, wo die Hottentotten von manchen Ethnographen als ein mit Bantu vermischter Hamitenstamm angesprochen werden, bedarf noch der näheren Untersuchung.

Das ausschließliche Vorhandensein des großhörnigen Bahimarindes bei den Hottentotten, Herero und Ovambo und die für die Bahima charakteristische Spiraltechnik der Korbflechterei bei den Ovambo sprechen sehr dafür. Hamitische Typen sind unter den Hottentotten nicht selten, und bei den westlichen Kaffern beobachtete v. Luschan etwa 1/8 Proz. Hamitentypen: schmales Gesicht, schmale Nasen, hohe Nasenrücken, dünnere Lippen, hellere Haut, feineres und weicheres Haar (Anhang II zu Nr. 40, S. 252). Die Schnalzlaute der Hottentotten sind nach Meinhofs Forschungen Lehngut von den Buschmännern, aber die Grammatik der Hottentottensprache ist rein hamitisch.

Bei ihrem ersten Eindringen in das nördliche Zwischenseengebiet werden die Bahima wohl meist mit kriegerischer Eroberung vorgegangen sein, wie wahrscheinlich auch früher in den weiter nordöstlichen und nördlichen Ländern. Später aber verbreiteten sie sich weiter über das Zwischenseengebiet und die angrenzenden Länder wohl meist durch friedliches langsames Dazwischenschieben zwischen die alteingesessenen Bantu-Ackerbauer; so noch jetzt, wogegen auch die deutsche Regierung nichts einzuwenden hat. Von Nordosten und Norden her erfolgten jedoch im Lauf der Jahrhunderte noch mehrere Bahimainvasionen in das Zwischenseengebiet nacheinander. Während in Uganda nach der in den ersten Jahrhunderten unseres Jahrtausends stattgehabten Bahimaeinwanderung die Einwanderung der Baganda um den Anfang des 15. Jahrhunderts und danach die der Babito um die Mitte des 16. Jahrhunderts sich aus Norden vollzog, und die Baganda und Babito die Herrschaft der Bahima vernichteten, sind in den Zwischenseenstaaten Ruanda, Urundi, Uha die Bahima-Batussi die herrschenden Geschlechter geblieben, aus denen auch die Könige hervorgingen. In den östlichen Ländern des Zwischenseengebietes dagegen haben die Bahima die Herrschaft den Geschlechtern der ebenfalls hamitischen Bahinda überlassen müssen, die heute allein diesen Ländern die Könige geben und mit ihren wenigen, aber starken Familien die Herrschaft ausüben.

Wahrscheinlich waren die Bahinda ein bevorzugtes Bahimageschlecht, das ursprünglich in Unjoro saß und mit andern Clans Mitte des 16. Jahrhunderts von dort durch die von Nordosten eindringenden nilotischen Babito verdrängt

wurde (s. oben S. 156). Diese verdrängten Bahimageschlechter Unjoros sind offenbar nach Süden und Südosten ausgewichen, denn um dieselbe Zeit der Bahitoinvasion in Uganda und Unjoro, Mitte des 16. Jahrhunderts, werden in Ankole, Karagwe, Ihángiro, Usindja neue Dynastien von eindringenden Bunjoro-Königssöhnen gegründet, und der dem Königsgeschlecht der Bajango angehörende Held Ruhinda oder Muhinda dehnte die Herrschaft weiter nach Süden und Südwesten aus (Nr. 48, S. 54). Seine Nachkommen, die Bahinda, bilden mit den Bajango denselben Clan und dürfen deshalb einander nicht heiraten (Oberl. Richter, Der Bezirk Bukoba, Mitt. Deut. Schutzgeb. 1899, S. 69). Die Bahinda sind also höchstwahrscheinlich eine jüngere, kleinere, aber kriegerische Hamiteninvasion, ein vornehmes zahlreiches Bahimageschlecht, das, aus Unjoro verdrängt, sich neue Herrschafts- und Weidegebiete im mittlern und südlichen Zwischenseengebiet eroberte und sich in den Ländern Toro, Ankole, Mpororó, Karagwe, Kisiba, Ost-Ussuwi, Usindja, wo teilweise schon die älteren Hamiteneinwanderungen der Bahima-Batussi zu Besitz und Herrschaft über die einheimische Bantubevölkerung gelangt waren, zu despotischen Königs- und Fürstengeschlechtern aufschwang. Überall, wo Bahinda herrschen, ziehen ihre Geschlechter scharfe soziale Grenzen zwischen sich und der Menge der gewöhnlichen Batussi, über denen sie sich hoch erhaben dünken, wiewohl sie jene als blutsverwandte Rasse, als Adel gegenüber der Plebs der Bahutu und Batwa anerkennen und privilegieren. Nach der Clantabelle Czekanowskis gibt es Bahinda in Unjoro, Toro, Ankole, Mpororó, Kjamtwara, und später fügt er hinzu: Buhaja, Ihángiro, Karagwe, Ost-Ussuwi, Busindja (Nr. 48, S. 42). In Ankole wird der Königsclan der Abahinda ausdrücklich auf den dortigen ersten Bahimastammkönig Ruhinda zurückgeführt (Nr. 27, S. 97, 99).

Aber weder in Ruanda noch in Urundi kommt der Clan der Bahinda vor. Zwar bezeichnet v. d. Burgt die Könige von Urundi als „Wahinda" und führt als ersten Urundikönig einen Ruhinda an, aber weder kommt dieser Name je wieder in der späteren Königsliste vor, noch wissen andere Landeskenner etwas von Bahinda in Urundi. Hauptmann v. Langem-Steinkeller erklärte mir ausdrücklich, daß es in Urundi keine Bahinda gebe, sondern daß alle Könige dem Geschlecht der Baganwa oder Abaganwa angehören. Das wird auch von andern Kennern bestätigt, z. B. Hauptmann Goering (Deutsch. Kol.-Blatt 1911, S. 552), und so habe ich es im Land selbst wiederholt von den Eingeborenen gehört. Es scheint also in diesem Fall bei v. d. Burgt ein Irrtum vorzuliegen, was ich auch deshalb annehme, weil er sonst gar nichts weiter über die Bahinda mitteilt, als daß sie eine „race dynastique, superbe, noble" seien (Nr. 19, S. 4, 629). Auch seine Angabe, daß die Bahinda wie in Urundi so auch in Ruanda regieren, trifft nicht zu, denn auch in Ruanda gibt es keine Bahinda, sondern die dortigen Könige gehören dem edlen Bahimageschlecht der Banjeginja an. Desgleichen schreibt Pater van Thiel, daß der Ruandakönig kein Muhinda, sondern wahrscheinlich ein Mutussi sei (Nr. 35, S. 517). Nach einer neuern brieflichen Mitteilung v. d. Burgts an mich ist „Wahinda" in Urundi keine ethnische Bezeichnung, sondern ein „Ehrenname, der am besten durch Herrscher, Beschützer oder Eroberer wiedergegeben ist. Auch der Sultan von Usámbiro, dessen Dynastie sicher aus Unjoro stammt, und seine Verwandten nennen sich Wahinda, die Frauen Wahindakasi. Die Waganwa Urundis nennen sich selbst aber nie Wahinda".

Am wahrscheinlichsten ist es mir, daß die Bahinda ihre um die Mitte des 16. Jahrhunderts beginnenden Eroberungszüge niemals bis nach Ruanda, Urundi und Uha

ausgedehnt haben. Die Bewohner dieser, damals wohl schon großenteils von älteren Batussieinwanderern besetzten und beherrschten großen Länder werden den Bahinda zu kriegerisch gewesen sein, oder wenn sie eine Invasion versucht haben sollten, sind sie vermutlich mit blutigen Köpfen zurückgeschlagen worden. Ich halte es daher für sicher, daß die herrschenden Geschlechter Ruandas, Urundis und Uhas reine Bahima der älteren Einwanderung sind, ebenso wie die Mehrzahl der dem Königsgeschlecht nicht angehörenden Batussi. Über die Königsgeschichte wird nachher mehr zu sagen sein (S. 163, 180).

Die Ausbreitung der Batussi über die großen Hochländer zwischen den Seen wird wohl in der Hauptsache so vor sich gegangen sein, daß die jüngeren Einwanderungen sich an den bereits festgesetzten älteren vorbeigeschoben haben und so in immer weiter südliche Gebiete vorgedrungen sind, oder daß die jüngeren Generationen der sich stark vermehrenden Ansässigen nicht mehr genug Raum in der Heimat fanden und deshalb in die noch nicht oder wenig von Batussi okkupierten südlicheren Länder sich ausbreiteten. Demzufolge wären also die südlichsten Batussistaaten die jüngsten. Oft wird es aber auch zu blutigen Kämpfen zwischen den Altangesessenen und den Neuankömmlingen gekommen sein, infolge deren dann und wann die Älteren vor den aus Norden eindringenden Jüngeren nach Süden auswichen. Dies nimmt auch v. d. Burgt für Urundi an (briefliche Mitteilung). Dann sind zwar die südlicheren Ansiedlungen und Staatenbildungen jünger als die nördlichen, aber ihre Menschen gehören den älteren Einwanderergenerationen des Zwischenseengebietes an (vgl. S. 158). In allen Fällen wird der Grund für alle diese Wanderungen der Batussihirten der Expansionstrieb wegen starker Volksvermehrung und damit im Zusammenhang die Suche nach neuen Weidegebieten für das Vieh gewesen sein und noch sein.

Sehr auffallend ist es, wie ganz anders sich die Bahima bei ihren Verbreitungen zu den von ihnen unterworfenen alteingesessenen Bantuvölkern verhalten haben als andere erobernde Wanderstämme Afrikas. Für afrikanische Auswanderer im allgemeinen nimmt v. Luschan an, daß, wenn sie fortzogen, um sich unter einem fremden Volk eine neue Heimat zu suchen, „es in der Regel ausgesucht kräftige, vielleicht überwiegend junge Leute sind. Sie brechen die Brücken hinter sich ab und befinden sich im neuen Land den alten Bewohnern gegenüber numerisch in der Minderheit. Gewöhnlich haben sie nur wenige oder gar keine Frauen mitgeführt. Infolgedessen nähern sie sich in ihren körperlichen Eigenschaften allmählich den neuen Nachbarn an. Die geistigen Eigenschaften werden aber von der neuen Umwelt nicht beeinflußt, sondern im Kampf derselben siegt immer die bessere: also die bessere Sprache, die bessere Religion, die bessere Schrift usw. So haben sich z. B. die hamitischen Massai körperlich den Ostsudanesen und Niloten angeglichen, aber in der Sprache und geistigen Kultur sind sie hamitisch geblieben. Anders die Bahima. Diese waren von vornherein streng auf Reinhaltung ihres Blutes bedacht und haben fast niemals einheimisch Frauen in ihre Sippen aufgenommen (weil sie selbst genug hamitische Weiber aus der Urheimat mitgenommen hatten). Daher hat sich ihr alter Typus vielfach wunderbar rein erhalten. Viele sehen wie alte Ägypter aus; als wären alte Pharaonen aus ihren Gräbern auferstanden. Aber überall haben sie die Sprache ihrer Bantuuntertanen angenommen. Die alte Sprache scheint restlos verschwunden zu sein." (Nr. 40, Anhang II, S. 247 bis 251.)

Auf welchen Zugstraßen die Einwanderungen der Batussi nach Ruanda, Urundi und Uha sich vollzogen haben, ist nicht mehr festzustellen. Sie aus den jetzigen stärksten Ansammlungen von Batussi in verschiedenen Landschaften rekonstruieren zu wollen, wie es Czekanowski tut (Nr. 48, S. 123), scheint mir gewagt, da die Verteilung der Familien im Lande schon seit langer Zeit ganz abhängig davon ist,

2: Meyer FO42 Rundi

wie und wo diese und jene Familie vom König mit Land belehnt wurde oder wird. Aus diesem Grunde kann auch die Verteilung und Verbreitung der verschiedenen Clans im Zwischenseengebiet nur für die Wanderungen von Staat zu Staat, vom Herrschaftsbereich des einen Königs zu dem des andern Anhalte und Aufschlüsse geben, nicht aber für die freiwillige Ausbreitung in einem bestimmten Staat (Ruanda oder Urundi oder Uha), da innerhalb seiner Landesgrenzen der König willkürlich über die Verteilung der Clans resp. der zu einem Clan gehörenden Familien bestimmt. Im allgemeinen wird man annehmen können, daß die von Norden nach Süden vordringenden Wanderzüge sich auf Bahnen bewegt haben, wo sie die geringsten Widerstände bei den Menschen und in der natürlichen Landesbeschaffenheit fanden, und wo es für ihre Rinderherden, an deren Existenz sie als reine Hirtenvölker gebunden waren, genug Futter gab. Das werden zuerst die Landstriche östlich und westlich vom mittleren Kagera, also das östliche, niedere Ruanda, Kissaka, Karagwe, Uhimba, Ussuwi, Ujungu, Nord-Uha gewesen sein, wo die Einwanderer offenes Land ohne schwierige Gebirge, leichte Übergänge über die Flüsse und allerwärts gute Weide für die Rinderherden fanden. Uha, obwohl weit südlich gelegen, dürfte in diesem Zug der frühen Bahimawanderungen schon mit am ersten von Batussi besetzt worden sein, weil es eben unschwer zu erreichen war.

Erst von dieser östlichen Achse aus werden die Batussi in Nordost-Südwest- und in Ost-West-Richtung, wie die wenigen Überlieferungen sagen, sich in die bergigen, von Bächen und Flüssen stark zerschnittenen Länder von Hoch-Ruanda und Hoch-Urundi vorgeschoben haben. Je weiter nach Westen, um so langsamer wird dies gegangen sein, weil dort noch weite Gebiete vom Urwald bestanden waren; aber mit ihrem Eindringen wird sich die Waldrodung durch die unterjochten ackerbauenden Bahutu doppelt schnell vollzogen haben, weil nun auch immer größere Weideflächen für die Herden der Eroberer geschaffen werden mußten. An Stelle des Waldes trat Grasland. Den Endverlauf dieses Prozesses, den Schlußakt des Waldverwüstungsdramas, sieht man gegenwärtig auf dem Randgebirge von West-Ruanda und Nordwest-Urundi sich abspielen, wo die letzten Reste des herrlichen alten Urwaldes in wenigen Jahrzehnten verschwunden sein werden, wenn sie unsere Regierung nicht zu Reservaten erklärt und die Häuptlinge für den Waldschutz verantwortlich macht.

Von Zentral-Ruanda aus scheint die Expansion der Batussi erst vor wenigen Generationen nach Nord-Ruanda in das Gebiet der Virungavulkane und ein Stück darüber hinaus gelangt zu sein, und ebenso von West-Ruanda und Nordwest-Urundi aus über den zentralafrikanischen Graben westwärts in die Grenzregionen der Kongokolonie. Noch im Mbogaland auf der Westseite des Semliki und an mehreren Stellen der Westküste des Albertsees gibt es Bahima (Nr. 17, Bd. II, S. 610); in den grasigen Baleggabergen auf dem Südwestrand des Albertsees sind die Häuptlinge Bahima wie die Aristokratie in Unjoro und seinen südlichen Nachbarländern (Bright, Geogr. Journ. 1909, Bd. 34, S. 140). Aber diese Bahimageschlechter am Albertsee entstammen nicht der von Ruanda aus nach Norden und Nordwesten vordringenden Völkerwelle, sondern einer älteren Strömung, die direkt aus Nordosten und Osten dorthin gekommen ist.

In den oben bezeichneten Außensäumen ihres von Ruanda ausstrahlenden südlichen Verbreitungsgebietes sitzen dagegen die Bahima-Batussi nur vereinzelt oder

2: Meyer FO42 Rundi

in verstreuten geschlossenen Dörfern als Viehzüchter neben der Menge der ackerbauenden Bantubevölkerung (Nr. 22, S. 456) und keineswegs als Herrscher oder als dominierende Adelskaste, sondern eigentlich als geduldete Fremdlinge, von deren Viehzucht die Ackerbauer mancherlei Nutzen haben. Für den Ruandakönig sind die Grenzgebiete seines Reiches ein Gegenstand beständiger Sorge, denn immer ist die dortige Bantubevölkerung aufsässig gegen die Batussibeamten (Batwale) des Königs, und Mord und Totschlag ist an der Tagesordnung. Sowohl im Norden, im Gebiet der Virungavulkane, besonders in der Landschaft Mulera, als auch im Randgebirge des Westens sind die Batussi noch dünn gesät und steht die Herrschaft des Ruandakönigs Musinga noch auf schwachen Füßen.

Ähnlich ist es mit der Batussiherrschaft in den Grenzgebieten Urundis bestellt. In Nordwest-Urundi hat sich der Häuptling Kilima seit langen Jahren erfolgreich gegen die Ausbreitung der Batussi und gegen die Machtansprüche des Königs von Urundi, früher Kisabo, jetzt Mutaga, gewehrt. Kilima soll zwar königliches Blut in sich haben, denn er sei ein Sohn Kihanamasangos und damit ein Enkel des Urundikönigs Ntare III., aber seine Mutter war eine Bantufrau aus Unjambungu, westlich vom Russisigraben, und er selbst hat von ihr ganz den Bantutypus geerbt (vgl. unten S. 188 und Taf. 17). Bei der Thronfolge seines Onkels Kisabo nach Unjambungu vertrieben, wuchs er in Bantuanschauungen und in Bantuhaß gegen die Batussi und die Sippe des Urundikönigs auf, so daß er, als er erwachsen mit einem starken Banjambungugefolge nach dem heimatlichen Nordwest-Urundi zurückkehrte, dort im Grenzgebiet bei den Bahutu schnell Anhang gewann und in kurzem alle vorhandenen Batussi niedermachte, weshalb er den Namen „Batussischlächter" bekam. Heute gibt es in seinem Land, das sich vom oberen Akanjaru (Urundi-Ruanda-Grenze) süd- und westwärts bis über den oberen Ruwuvu erstreckt, nur noch zwei oder drei Batussifamilien, die mit Kilima verschwägert sind; alle andern sind ausgerottet. (Briefliche Mitteilung des Hauptmanns v. Langenn.)

Wie in der für unsere Kenntnis historischen Zeit der Bahimageschichte, so wird sich wohl auch in den vorausgegangenen Zeiten die Ausbreitung der Bahima im Zwischenseengebiet teils friedlich, teils kriegerisch vollzogen haben; kriegerisch wahrscheinlich immer dann, wenn ein energischer Bahimafürst aus dem Bedürfnis dynastischer Machterweiterung seinen Anhängern und Lehnsleuten neuen Boden zu verschaffen bestrebt war. Eine wirkliche planvolle Eroberungspolitik trieben aber erst die großen, zu absoluten, despotischen Herrschern gewordenen Könige von Ruanda und Urundi.

An der Spitze des Herrschergeschlechtes, d. h. des Baganwa-Clans, von Urundi steht nach der unten (S. 194) wiedergegebenen Tabelle v. d. Burgts (Tabelle M) der sagenhafte Ruhinda, ca. 1500 bis 1530. Ihm folgen in steter Wiederholung die Königsnamen Ntare (= Löwe), Muwesi (= der Leuchtende, Mond), Mutaga (= der Morgen, aufgehende Sonne), Muwambutsa (= Furt?). Nach Hauptmann v. Langenn ist die immer gleichbleibende Reihenfolge der Königsnamen: Mutaga, Muwambutsa, Ntare, Muwesi; aber von einem Dynastiegründer Ruhinda in Urundi weiß v. Langenn nichts. Beide Angaben decken sich bezüglich der Aufeinanderfolge der Könige, müssen aber, da sie innerhalb derselben mit verschiedenen Namen beginnen, auch verschiedene Lebens- und Regierungszeiten der einzelnen Könige annehmen. Für diese halte ich mich an v. d. Burgt, da er seine Genealogie mit vielen Details zu stützen weiß. Die von

Czekanowski für die Bahimastaaten Ankole, Kisiba, Karagwe, Ihángiro, Kjamwara, Kjanja, Ost-Usfuwi, Usindja aufgestellten genealogischen Tabellen (Nr. 48, S. 67—70) enthalten für Urundi nichts.

Alle von Czekanowski angeführten Stammbäume der Bahindaherrscher werden eröffnet von Ruhinda I., worauf in Ankole, Karagwe, Ihángiro, Ost-Usfuwi ein Ntare I. folgt. Die Namen Ruhinda und Ntare kommen dann in den Herrscherlisten von Ankole, Karagwe und Ihángiro noch öfters vor, nicht aber in den andern, in Ankole auch der Name Mutembusa, der zweifellos mit dem Mwambutsa der Barundi identisch ist, wenn er auch sehr wahrscheinlich einer anderen Persönlichkeit angehört (Nr. 27, S. 97); doch steht Ruhinda II. an der Spitze der Genealogie all der kleinen Herrschaften von Usindja. Wenn nun der v. d. Burgtsche Stammbaum der Urundiherrscher ebenfalls mit Ruhinda anfängt, dessen Regierungsbeginn ins Jahr 1500 gesetzt wird, später aber der Name Ruhinda nicht wieder vorkommt, sondern nur Ntare, so dürfte dieser Ruhinda-Stammvater, von dem die Urunditradition nichts weiter anzugeben weiß, während die Existenz des Bahindageschlechts für Urundi entschieden bestritten wird, apokryph sein; vermutlich nur übertragen aus den Genealogien der Mehrzahl der Zwischenseenstaaten, wo wirklich die Bahindageschlechter herrschten und großenteils noch herrschen (S. 159).

Über die Geschichte des historischen Ruhinda I., der von Uganda aus allmählich Ankole, Karagwe, Kjamtwara, Ihángiro, Usindja eroberte und durch Heirat seiner Töchter und Söhne auch Ost-Usfuwi und Kissaka in seinen Herrschaftsbereich zog, hat uns Pater van Thiel eingehend berichtet (Nr. 35, S. 497—520). Daß er sein Regiment bis nach Urundi ausgedehnt habe, wird nirgends bestätigt. Dagegen ist verbürgt, daß Ost-Urundi (Ujogoma) früher zu dem damals viel mächtigeren Nachbarreich Uha gehört hat, in dem es keine Bahindaherrscher gegeben hat. Nach Uha flohen gewöhnlich die von den Bahindaherrschern Usindjas, Ost-Usfuwis und Karagwes beim Thronwechsel gefährdeten und verfolgten Familien der vom Thronerbe Ausgeschlossenen und fanden dort bei den Batussiherrschern Schutz. Mehrmals fielen die Baha zugunsten ihrer Schützlinge in das Nachbarland ein und besiegten die Basindja, so daß die späteren Uhaherrscher oft Ansprüche auf Usindja erhoben. Auch vom Urundikönig Ntare (II. oder III.) wird berichtet, daß er, im Kampf gegen die aus Nordosten eindringenden Wahondogo besiegt, sich nach Uha geflüchtet habe, wo er die Tochter des Königs Kihumbi geheiratet habe (s. S. 181). Uha war offenbar der Zufluchtsort für diejenigen Bahimafürsten und Bahimagroßen der Nachbarländer, die von ihren Feinden bedrängt waren; es war ein starkes, wahrscheinlich beträchtlich älteres Bahimareich als die meisten anderen des Zwischenseengebietes und umfaßte nicht nur im Westen das später zu Urundi abgefallene große Ujogoma bis zum Ruvuvu, sondern auch im Osten die jetzigen Ufumbwastaaten bis zur Landschaft Msalala (Nr. 10, S. 124).

Von der auf den sagenhaften Ruhinda folgenden ersten und zweiten Dynastie Urundis, die nach v. d. Burgts Aufstellung das 16. und 17. Jahrhundert ausfüllen, ist wenig mehr als die Namen überliefert. Es sind in der ersten Dynastie 4 Könige: Ntare I., Mwefi I., Mutaga I., Mwambutsa I.; und in der zweiten Dynastie dieselben Namen, denen wir zur chronologischen Bestimmung die Zahl II beifügen. Die ersten Jahrhunderte scheinen ganz erfüllt gewesen zu sein von Fehden und Kämpfen im Innern und von Krieg nach außen; im Innern waren es vor allem die durch Blut-

L: Meyer FO42 Rundi

roche in Permanenz erklärten Fehden der von alters her straff organisierten Bahutuclans gegeneinander, ferner die Kämpfe der sich ausbreitenden Batussi gegen die alte Clanorganisation der Bahutu, die in dem Maß geschwächt und zersetzt wurde, in dem sich die Macht der Batussihäuptlinge und die Staatsgewalt des Königtums befestigte, und endlich die Kämpfe der erstarkenden Batussihäuptlinge gegeneinander sowie der Mitglieder der Königsfamilie um die Erbfolge. Namentlich nach dem Tode Ntares I. (ca. 1550) soll der innere Erbfolgekrieg blutig und lang gewesen sein, bis Mwesi II. (Rufuku) obsiegte. Erst von Ntare III. (ca. 1720—1750) an fließen die geschichtlichen Quellen reichlicher. Von ihm ist überliefert, daß er die aus Osten in Urundi einfallenden Wahondogo (Abahondogo), die rothäutig gewesen seien und lange Fellgewänder, Bogen und Speere getragen haben (Nr. 48, S. 288), in mehrjährigem Krieg besiegt und samt ihrem Oberhäuptling Nsoro nordwärts nach Bugessera und Kissaka verdrängt habe, wo noch heute Nachkommen des Nsoro als gewöhnliche Batussi leben. Van der Burgt meint, daß diese Abahondogo vielleicht Watuturu gewesen seien; ich möchte eher annehmen, daß es ebenfalls eine aus Nordosten kommende hamitische Völkerwoge war, also ebenfalls nomadische Bahima, auf welche die Angaben der Rothäutigkeit und der Fellkleidung schließen lassen. Einen vornehmen Batussiclan der Abahondogo gibt es noch heute in Urundi. Im Anfang waren ihnen die Barundi unterlegen, denn Ntare mußte vor ihnen nach Uha flüchten (s. S. 181). Schließlich aber überwältigten die Barundi ihre Feinde nahe beim Königsgehöft Imbuje am Westknie des Muwarasi, und zur Erinnerung an dieses, das Schicksal Urundis entscheidende Ereignis ließ Ntare daselbst auf dem Berg Iwanga ein Siegesdenkmal in Gestalt einer ca. 1 km langen Doppelreihe von Steinhaufen errichten, die möglicherweise die Gebeine der gefallenen Barundi enthalten (s. S. 182).

Auf diese Ereignisse scheinen längere Kämpfe mit Uha um dessen große Westprovinz Ujogoma gefolgt zu sein, die mit der Einverleibung Ujogomas in das Urundireich endeten. Der Eroberer dürfte Ntare IV. (1830—1860) gewesen sein, der dort seinen Sohn Ruassa als Statthalter einsetzte. Vorausgegangen war ein Krieg gegen die mächtig aufstrebende Dynastie der Ruandaherrscher, deren Einfall der Urundikönig Mutaga III. (1780—1800) zurückschlug, wobei er aber selbst fiel. Seitdem ist der Akanjarufluß die von beiden Seiten respektierte Grenze. Uha jedoch versuchte unter seinem König Nkansa, Ende der 70er oder Anfang der 80er Jahre, das verlorene Ujogoma wiederzugewinnen. Nkansa rief den kriegerischen Urambohäuptling Mirambo zu Hilfe, aber auch dieser wurde von den Barundi am Muroleberg in Ujogoma in schwerer Niederlage geschlagen (1884). Und nicht besser erging es den von Mirambo unterstützten Watuta, jenem nördlichen Zweig der Salustämme, die, von Mitte des 19. Jahrhunderts an vom Njassasee aus mit ihren Viehherden auf den grasigen Hochländern des östlichen Tanganikarandes nordwärts ziehend, alle Widerstände niederwarfen, die durchzogenen Länder ausplünderten und bis nach Usindja am Victoriasee vordrangen. Von Ugomba aus, wo sie sich nach Übereinkunft mit Mirambo festgesetzt hatten, dehnten sie ihre Raubzüge in die umliegenden Länder aus und machten unter anderm einen heftigen Vorstoß durch Uha nach Südost-Urundi, wurden aber vom Barundikönig Mwesi IV. (Kisabo) am oberen Mlagarassi zu Paaren getrieben (1885), so daß sie sich nie wieder in Urundi sehen ließen. Aber erst 1895 wurden sie von der deutschen Schutztruppe dauernd zur Ruhe gebracht und ihre Reste im Buschwald

von Runsebbe (Ussumbwa) angesiedelt, wo sie jetzt, wie ich 1911 sah, friedliche Viehzüchter und Ackerbauer geworden sind.

Mwesi IV., mit dem Beinamen Kisabo (1860—1908), der Vater des jetzigen Urundikönigs Mutaga IV., ist der erste Urundiherrscher, von dem wir aus unserer Kolonialgeschichte Genaueres wissen. In seine halbhundertjährige Regierungszeit fallen heftige innere Kämpfe gegen aufsässige Unterhäuptlinge und gegen falsche „Mwesi", Kronprätendenten, die ihm mit starkem Anhang den „Thron" streitig machten. Namentlich Bugufi, im äußersten Nordosten des Urundireiches, war stets ein Herd revolutionärer, gegen den Mwesi gerichteter Bewegungen, und noch heute sind die Häuptlinge von Bugufi unabhängig vom König, und diese Selbständigkeit ist auch von unserem Residenten anerkannt worden (s. S. 170). Außerdem hat sich Kisabo mehrere Male im Norden an der Grenze von Bugessera und am Akanjaru der eindringenden Ruandakrieger erwehren müssen; teils hat er selbst wiederholt die südlichen Grenzländer Ruandas bekriegt. Die jetzige Ruandadynastie des Musinga mißtraut daher den Barundiherrschern, mit denen sie immer in Feindschaft gestanden hat, sehr und begünstigt deshalb im stillen den im Nordwesten Urundis sitzenden Häuptling Kilima (S. 162), der sich von Kisabo und seinem Nachfolger unabhängig zu erhalten gewußt hat. Im Volk von Süd-Ruanda aber lebt der Glaube, daß eines Tages ein großer König aus Urundi in Ruanda einbrechen und das Land erobern werde. Auch mit dem Häuptling Kassussura von Ussuwi, der seine Herrschaft westwärts bis an den Ruwuwu ausgedehnt und sich das nördliche Ujogoma tributpflichtig gemacht hatte, hatte Kisabo eine Reihe von Kämpfen, die aber zuungunsten Urundis ausgingen.

Mit viel gefährlicheren Feinden hatte es Kisabo jedoch mehrmals an der Westgrenze Urundis zu tun: mit den Arabern. Von Udjidji aus, wo sich der berüchtigte Sklavenhändler Rumalisa festgesetzt hatte, drangen die mit Feuerwaffen ausgerüsteten Banden der Wangwana zum Nordende des Tanganika vor und fielen von dort in das nordwestliche Urundi ein, um Sklaven zu rauben. Die Grausamkeit ihrer Kriegführung verbreitete lähmendes Entsetzen in der ganzen Grenzbevölkerung. Als sie sich aber weiter ins Land wagten, stellte ihnen Kisabo einen Hinterhalt und rieb sie 1885/86 in mehreren überraschenden Überfällen fast ganz auf; einmal am mittleren Russisi, das andre Mal bei Kibira, westlich vom Königssitz Muwukuje. Der Eindruck auf die Araber war so tief, daß sie sich nie wieder an die Barundi wagten.

2. Kolonialpolitisches.

Anfang der 90er Jahre endlich beginnt Urundi in das Licht unserer Kolonialgeschichte einzutreten. Zuerst friedlich. Nachdem Burton und Speke bereits 1858 mit den westlichen Grenzbarundi in Berührung gekommen waren, Livingstone und Stanley 1871, letzterer allein wieder 1876 die Küstenbarundi des Tanganika kennengelernt hatte, und vom Beginn der 80er Jahre an die katholischen Weißen Väter verschiedene verunglückte Versuche zur Gründung von Missionsstationen an der westlichen Urundigrenze gemacht hatten, führte Oskar Baumann im Herbst 1892 als erster Europäer einen Zug durch das nördliche Urundi von Osten nach Westen aus, um es geographisch zu erforschen (s. S. 1). Die freundliche Aufnahme, die er namentlich bei der großen Menge der Bahutu fand, weil diese in ihm einen langersehnten Befreier vom Joch der Batussi zu sehen glaubten — Baumann selbst

2: Meyer FO42 Rundi

verkannte das Motiv —, veranlaßte die katholischen Missionare, von neuem die Errichtung von Missionsstationen in Urundi zu versuchen, und diesmal waren sie erfolgreicher. In den Jahren 1895—99 durchzogen sie das Land in vielen Richtungen und gründeten 1896 die Stationen Usumbura (später nach Marienheim verlegt), Mujaga und Mugera, die heute ihre Hauptstützpunkte sind, ferner 1902 Marienheim, 1905 Marienseen, 1910 Bweru, 1912 Buhoro. Vor allem hat sich dabei der Pater van der Burgt, der nun in Europa lebende Nestor der Urundimission und gründlichste Kenner der Barundi, auch durch die geographische Erforschung des Landes verdient gemacht. Auch aus späteren Jahren verdanken wir v. d. Burgt viele wichtige Aufschlüsse über Urundi und sein Volk. Gleichzeitig mit der Festsetzung der Mission begannen die friedlichen Orientierungsreisen unserer Schutztruppenoffiziere, wobei es freilich schon zu vereinzelten kleinen Plänkeleien mit Batussihäuptlingen kam: 1895/96 reisten in Urundi Ramsay, v. Trotha; 1897 Ramsay, Langheld, Fonck; 1898 Kandt, Bethe.

Dieses Vorgehen der Europäer in dem bis dahin gänzlich gegen äußere Einflüsse abgeschlossenen Urundireich hatte den Batussihäuptlingen und dem alten König Kisabo bald die eigentlichen Absichten der Deutschen klargemacht; sie erkannten die Gefahr, die ihrer autokratischen Unabhängigkeit durch eine allmähliche deutsche Besetzung drohte. Daher machten sie im Mai 1899 einen offenen Angriff auf die im Zentrum des Landes befindliche Expedition Bethe, wurden jedoch von dieser geschlagen und gründlich bestraft (Deutsch. Kol.-Blatt 1899, S. 6—12). Die Feindseligkeiten setzten sich aber in den nächsten Jahren gegen die ins Land kommenden Expeditionen der Schutztruppenoffiziere fort, und wer von den Barundi es mit den Deutschen hielt, wurde vom König Kisabo getötet, seine Habe geraubt, sein Hof niedergebrannt. Auch die Lage der Missionen wurde kritisch. Da entschloß sich das Gouvernement im Frühjahr 1903, einen entscheidenden Schlag gegen Kisabo zu führen. Von Usumbura aus drang ein starkes Kontingent der Schutztruppe unter Hauptmann v. Beringe in Westurundi ein, schlug, mit Unterstützung des dem König feindlichen Häuptlings Kilima, Kisabos Anhänger in mehreren Gefechten, überrumpelte schließlich Kisabos Lager am Kihondoberg und zersprengte seine Kriegerschar vollständig. Der König selbst entkam, stellte sich aber bald in Ikiganda zu Verhandlungen, die damit abschlossen, daß er sich der deutschen Oberhoheit unterwarf, Geiseln stellte, sich zu regelmäßigen Leistungen verpflichtete und dafür vom Gouvernement als Oberkönig über ganz Urundi anerkannt wurde (Nr. 21, S. 6—12).

Die Anerkennung Kisabos als Oberkönig von Urundi nach seiner Unterwerfung erschien dem damaligen Residenten Urundis, dem Hauptmann Werner von Grawert, als eine politische Notwendigkeit. Solange dem Residenten nur eine kleine Schutztruppenmacht zu Gebote stand, war es unmöglich, das große Urundireich, das die schärfsten, einander widerstrebenden Gegensätze von Königtum und halb oder ganz unabhängigen Batussihäuptlingschaften, von dominierender, numerisch geringer Batussirasse und unterworfener Bahutumasse in sich barg, auch nur einigermaßen zu beherrschen; es war um so weniger möglich, als die in Usumbura ihren Sitz habende Residentur bis 1908 auch noch das große Ruanda mit umfaßte. Deshalb glaubte man, am besten zu verfahren, wenn man die Verhältnisse Urundis möglichst denen von Ruanda nachahmte, wo es der Resident nur mit einem angestammten Oberhaupt zu tun hatte. In Ruanda haben es die Vorfahren des jetzigen Musinga, na-

wenigstens sein Vater Ludongiri, verstanden, mit Gewalt und Klugheit sich die übrigen, früher selbständigen Häuptlinge im jetzigen Ruandareich botmäßig zu machen und das Ganze zu einem feßgefügten Lehnsstaat mit despotisch-monarchischer Spitze zusammenzuschweißen. Daher konnte in Ruanda der Resident (als welcher seit der 1923 errichteten selbständigen Ruandaresidentur Dr. Kandt amtiert) seine politischen Ziele, die hauptsächlich in der Anbahnung einer geordneten Verwaltung und in der Hebung des Handels und Verkehrs bestehen, bedeutend verfolgen, daß er in Hinsicht diplomatischer Behandlung auf die Person des Königs selbst einzuwirken suchte, aber anderen gegenüber die Autorität des Königs durch das eigene Auftreten des Europäers und deutschen Oberbeamten stützt; er spielt viel mehr die Rolle eines dem König entsandten Gesandten oder Botschafters einer befreundeten Großmacht als die eines fordernden oder verfügenden Verwaltungsbeamten. Das ist ja auch der Charakter der „Residenten" in den englischen und den holländisch-indischen Kolonien. Diese Einrichtung setzt natürlich voraus, daß der König den Vorteil, der ihm durch die Anwesenheit und die Beratung des Residenten erwächst, erkennt und sich nicht ablehnend gegen die Ratschläge und Wünsche desselben verhält.

Ruandi war unter den Vorgängern Mpakos und unter Mpako selbst noch lange nicht so bei einheitlichen staatlichen Entwicklung fortgeschritten wie Ruanda. Das Königtum hatte sich noch lange nicht eine so weit übergreifende Stellung und Gewalt gegenüber allen Bevölkerungen des Landes geschaffen wie in Ruanda, obgleich gerade Mpako mit großer Energie und viel Erfolg ein langes tatenreiches Leben darauf verwendet hatte. In dieser politischen Zersplitterung konnte der Resident von Ruandi nur dann auf das Ganze wirken und nachgehenden Einfluß zu gewinnen hoffen, wenn er, wie in Ruanda, nur mit einem Herrscher in dem großen Land zu verhandeln hatte und durch die Unterstützung dieses einen gegen die übrigen Häuptlinge die Oberherrschaft des Königs erweiterte und befestigte.

Demgemäß erkannte bereits der Resident v. Grawert den König Mpako, dessen Vorfahren bereits seit vier Jahrhunderten die Alleinherrschaft über Ruandi angebahnt hatten, als Oberkönig des Ruandireichs an, nachdem er ihn mit Waffengewalt dem Willen des Residenten gefügig gemacht hatte. Mpako siedelte sich in der Landschaft Nyaß bei Mugombo, zwei Tage östlich von Mugombo, unter der Aufsicht eines Militärpostens an, nachdem der Resident seinen Sitz in der am Tanganjikasee und damit am großen Verkehrsweg gelegenen Militärstation Mugombo bekommen hatte.

Mpako war gewiß nicht einer der bedeutendsten Herrscher in der Geschichte der Ruandi nicht war, sondern Ost- und Zentralafrikas überhaupt (Taf. 13). Wenn ihm auch zu der glücklichen Gestalt eines Mwambu, eines Mwezi, eines Ludongiri oder Mujenge der feurige kriegerische Geist und der unbeugsame, immer weitere Ziele verfolgende, von keiner Gewalttat zurückschreckende Wille fehlte, so fand er ihnen doch an Intelligenz, diplomatischer Klugheit, friedlicher Entschlossenheit und zähler Ausdauer nur wenig nach, und er übertraf sie vielleicht noch an Duldsamkeit und Milde. Wenn er der großen inneren Schwierigkeiten, die ihm namentlich seine französischen Nachbarn bereiteten, nicht völlig Herr wurde, so lag es nicht an seinen Fehlern, daß er in diesen Kämpfen nicht den höchsten Ehrgeiz, seine und der Seinen ganze Größe, zeigte. Als er 1903 [illegible], also sehr jung bereits für einen Mann, [illegible] hatten ihn die Ältesten des Landes zum Mitregenten. In seiner Jugend hatte er, entgegen dem Gebot, ein Weib verehren und hatte auch einen seiner vielen Königsöhne

ein lahmes Bein davongetragen, so daß er in den späteren Jahren sich nur schwer bewegen konnte. Seine äußere Erscheinung war nichts weniger als königlich, um so weniger, als er sich wie jeder gemeine Murundi nur mit einem Umhang aus Rindenstoff ohne besondere Abzeichen kleidete. Vorzüglich hat er es verstanden, sich mit einem mystischen Schleier des Unbekannten zu umgeben, teils um sein halbgöttliches Ansehen bei den ungemein abergläubischen Eingeborenen zu erhöhen, teils um sich vor der Annäherung Fremder möglichst zu schützen.

Als Kisabo von unserer Schutztruppe 1903 überwunden worden war, schrieb der in Urundi missionierende Pater Sweens über ihn: „Kisabo führt schon seit 40 Jahren das Regiment. Seine Regierung ist bis in die jüngste Zeit bezeichnet durch Kriege, Räubereien und Brandschatzungen. Der Karawanenweg durch sein Gebiet war sehr unsicher. Seit Jahren hat kein Europäer den merkwürdigen Landesvater ausfindig machen können, weder Offiziere noch Reisende, noch auch die Missionare. Keiner seiner Untertanen wollte den Aufenthaltsort des Königs verraten; jedenfalls hatten die wenigsten gewöhnlichen Sterblichen Kisabos Angesicht geschaut. So mußte dieser seinen Verbleib völlig verborgen zu halten, und ein ganzes Gewebe von Legenden umhüllte den unsichtbaren Herrscher. Da noch kein Europäer ihn zu Gesicht bekommen hatte, begannen wir schon zu glauben, er existiere überhaupt nicht, und manche sprachen bereits vom „sagenhaften Kisabo". Indessen zeugte alles, was in seinem Namen geschah, von einer Verschlagenheit, die auf einen raffinierten Bösewicht schließen ließ; es wurde eine Schandtat nach der andern begangen, und es war hohe Zeit, daß dem Unwesen ein Ende gesetzt wurde. Hauptmann von Beringe tastete nicht, bis er den gefürchteten Despoten, in dessen Namen und Auftrag alles geschah, lebendig in seinen Händen hatte ... So konnte dann das Land endlich zu Atem kommen. Jetzt ist, so hoffen wir, der Stolz der herrschenden Watussi gründlich gedemütigt. Die Wahutu, die die ursprüngliche Bevölkerung Urundis bilden, haben noch mehr Grund, ihren Befreiern dankbar zu sein, als alle anderen. Es läßt sich nicht beschreiben, wie ihre Unterdrücker sie bislang niedergehalten haben ...

„Kisabo ist wenig fürstlich gekleidet. Ein Stück Baumrinde, das so lange geklopft worden ist, bis man es biegen und falten kann, und stellenweise in eine Art Fransen ausläuft, bildet seinen Königsstaat, den er nach Art einer römischen Toga um die Schultern wirft. Über die rechte Achsel fällt eine lange Quaste aus seinem Grase herab, und das königliche Gewand ist über und über mit oben befestigten, lose herabfallenden Bindfäden verziert. Mitten auf dem Kopf prangt ein kleines Büschel Haare; der übrige Teil des Schädels ist kahl. Gerade über dem Puls trägt Kisabo ein doppeltes Armband aus seinem Elfenbein, ein dickes und ein dünneres; beide werden mittels eines Stückes Kupferdraht, das um den Unterarm gewunden ist, wie mit einer Feder in dieser Höhe festgehalten. Diese ganze Ausstattung nebst der unvermeidlichen Lanze bildet die Nationaltracht der Warundi ...

„Wenn der König reist, wird er auf seinem höchst einfachen Tragsessel getragen. Dieser ist aus einigen Balken zusammengezimmert, die durch Querhölzer verbunden sind; darüber wird ein Schaffell ausgebreitet, auf dem der Herrscher Platz nimmt. Ein großes Tuch entzieht sein Antlitz den Blicken der Leute und gewährt Schutz gegen die sengenden Sonnenstrahlen. Seine Leibwache sind durchweg hochgewachsene Kerle mit entschlossenen Zügen, bewaffnet mit Lanzen, Pfeil und Bogen. Sein Gefolge macht einen durchaus kriegerischen Eindruck." (Nr. 23, 1904, S. 240ff.)

Die nächsten fünf Jahre nach der Unterwerfung Kisabos (1903) waren ausgefüllt mit den Bemühungen des Residenten, der Oberherrschaft Kisabos in ganz Urundi Geltung zu verschaffen. Aber diese Aufgabe war viel schwerer, als es anfänglich geschienen hatte. Einige der bisher selbständig gewesenen Fürsten und der sich ziemlich unabhängig gemacht habenden Großbatwale wehrten sich energisch gegen die vom deutschen Residenten gebilligten Machtansprüche des Königs und leisteten zum Teil sehr zähen bewaffneten Widerstand; am zähesten der vermutlich halbblütige, tatkräftige Häuptling Kilima im nordwestlichen Grenzgebiet (s. S. 162), der sich von jeher der Ausbreitung der Batussi mit grausamer Gewalttätigkeit entgegengestellt hatte (Taf. 17). Wiederholt zog deshalb die Schutztruppe gegen ihn zu Feld und warf ihn schließlich nieder; er wurde nach Neu-Langenburg am Njassasee deportiert, wo

er einige Jahre unter Militäraufsicht in Verbannung gehalten wurde. In Urundi trat aber keine Ruhe und Ordnung ein. Um die Lage zu verwickeln, gesellten sich zu den Autoritätskämpfen des Kisabo noch zahlreiche heftige Fehden der Großbatwale gegeneinander, so z. B. des energischen Russabiko gegen seinen Bruder Musasje in Ujogoma, und blutige Erbstreitigkeiten innerhalb derselben Sippe, und nur zu oft zeigte es sich, daß Kisabo und die Mitglieder der Königssippe, die Baganwa, mit der ihnen gewährten Unterstützung der Residentur schweren Mißbrauch trieben.

Durch alle diese Vorgänge schien die „Befriedung" des Urundireiches noch in weite Ferne geschoben, als der Resident v. Grawert ein anderes militärisches Kommando übernahm und erst Hauptmann Fonck interimistisch, dann Hauptmann v. Goering definitiv Resident von Urundi wurde. In dieser Übergangszeit starb plötzlich im August 1908 der 63jährige König Kisabo. Ein schnelles Eingreifen des Residenten verhinderte, daß das sonst bei den Thronwechseln in Urundi übliche schreckliche Interregnum von Mord und Totschlag unter den an der Erbfolge interessierten Königsverwandten eintrat. In kurzem wurde einer der jüngsten Söhne Kisabos, Mwikidje, den Kisabo noch vor seinem Tod zu seinem Nachfolger bestimmt hatte, als Mutaga (IV.) zum Umwami oder Mwami, zum König ausgerufen (siehe S. 183) und vom Residenten bestätigt. Mutaga war damals ca. 15jährig. Er ist der älteste Sohn von Kisabos Lieblingsfrau Ndirikumútima aus der Sippe der Banjakarama, während der von einer anderen Frau geborene, unter allen 42 Kindern Kisabos älteste Sohn den Namen Ntarugera, alias Seruschanja, führt. Diesen Seruschanja und einen andern Sohn Duumwe hatte Kisabo vor seinem Tode zu Vormündern des unmündigen Mutaga und zu Reichsverwesern ernannt. Diese beiden und die Mutter des Königs, die nach alter festgewurzelter Sitte der Barundi mitregiert und großen Einfluß ausübt, haben nun die Dauer der Vormundschaft weidlich ausgenützt, um sich und ihren Angehörigen nebst Freunden so viel Land- und Viehlehen wie nur möglich zuzuschieben; und wenn sie ein noch besetztes Lehen reizte, so machten sie es mit offener oder mit heimlicher Gewalt für sich selbst frei. Die Unruhe und Unordnung hörte deshalb im ganzen Reich nicht auf.

So ging es aber in Urundi bei jedem Thronwechsel zu, auch wenn der neue König nicht unmündig war und keine Vormundschaft bis zu seiner Großjährigkeit eingesetzt werden mußte, denn die Landessitte verbietet es, daß die Mutter des zukünftigen Königs aus demselben Clan wie die Mutter des bisherigen Königs ist. Dieses Gesetz hat ursprünglich wohl den Sinn, daß neben der Königssippe der Baganwa nicht noch eine der anderen vier, zur Lieferung der Königsmütter privilegierten und darin nacheinander abwechselnden Batusiclans (Banjakarama, Benengwe, Barwanda, Batumbo) zu hoch emporwachsen sollte; aber jetzt hat es die Wirkung, daß jedesmal nach dem Tode eines Königs die Sippe der Mutter des neuen Königs sich mit allen Mitteln Platz an der Sonne zu verschaffen und die Sippe der vorigen Königsmutter zu verdrängen sucht. Da nun die Mutter des jetzigen Königs Mutaga, die Ndirikumútima, eine Banjakarama ist, so sind gegenwärtig die Banjakarama obenauf und streben danach, sich neben und unter den überall im Land als königliche Statthalter sitzenden Baganwa, den Prinzen aus königlichem Stamm, in gute Lehnsposten einzuschieben und ihre Gefolgsleute unterzubringen. Daß dies alles aber nicht mehr, wie in den bisherigen Jahrhunderten, mit Gewalt und Totschlag vollführt werde, ist der energische Wille des deutschen Residenten, der alle wichtigen Streitigkeiten vor seine

2: Meyer FO42 Rundi

richterliche Entscheidung zwingt. Daher lassen die Sippengenossen des neuen Königs heutzutage an Stelle von Gift und Speer, womit sie früher sich Land und Vieh und Macht verschafften, mehr und mehr die Verleumdung und die falsche Anklage vor Gericht im „großen Schauri" treten; und der Resident, der in dem Gewirr von familiärer und politischer Intrige die richtige Entscheidung treffen soll, muß heute vor allem fragen, ob die Kläger etwa Banjakarama sind, um zu wissen, wie im Grund die Dinge liegen.

In diesen periodisch mit jeder Königswahl wiederkehrenden schweren Streitigkeiten kommen die ewigen Rivalitäten der engeren Familiengruppen der großen Königssippe, der Baganwa, unter sich. Fast von jedem der früheren Könige sind noch direkte Abkömmlinge am Leben, und ihre Zahl ist groß, denn jeder König hatte zahlreiche Frauen und von jeder Frau mehrere Kinder; Kisabo z. B. hatte 42, sein Vater 28. Im ganzen wird es etwa tausend solcher königlicher Prinzen geben, die als Großhatwale oder Statthalter das ganze Land wie mit einem Netz überziehen. Jede dieser prinzlichen Familien sieht in der andern einen Konkurrenten, und obgleich sie alle der Königssippe der Baganwa angehören, sind sie doch nichts weniger als einig und benutzen jede Gelegenheit, sich gegenseitig aus Besitz und Macht zu verdrängen. Diese zahllosen aus- und gegeneinander strebenden Interessen und Kräfte könnte nur ein König von ungewöhnlicher Energie und Umsicht niederhalten und zu gemeinsamem Dienst zwingen, wie es in Ruanda geschieht. Aber ein solcher Mann ist Mutaga nicht. Wenn es seinem willensstarken verschlagenen Vater Kisabo nicht möglich war, Ordnung im Reich zu schaffen trotz der vom Residenten geleisteten Hilfe, so vermag es Mutaga noch viel weniger.

In der Erkenntnis dieser Sachlage änderte die deutsche Regierung ihre Politik in Urundi grundsätzlich. Der Resident Hauptmann v. Goering verzichtete darauf, sich auf die Macht des einen Königs zu stützen, wie es in Ruanda mit gutem Erfolg geschieht, und verfuhr fortan nach dem Grundsatz „divide et impera". Dieser Wechsel in der Orientierung der Politik hat sich bewährt; sie wird vom jetzigen (1913) Residenten, Hauptmann von Langenn-Steinkeller, energisch fortgesetzt. Unsere Regierung hat eine Reihe der Großhäuptlinge, die sich bisher den Oberherrschaftsansprüchen des Königs widersetzten, als unabhängig anerkannt und kann nun den einen gegen den andern ausspielen, braucht dem König keine militärische Hilfe mehr zu leisten und vermag den König und seine Sippe besser im Zaum zu halten als vorher, ohne dazu einer größeren Truppenmacht zu bedürfen, die eben nicht vorhanden ist. Als selbständige „Großhatwale" gelten jetzt amtlich: Lussengo (in Bugufi), Lussokossa (Rusokosa), Bansabugabo, Tschoja, Muhini, Wisirakufura, Kilima. Den letzteren, den man aus der Verbannung von Neu-Langenburg zurückgeholt und in sein Heimatgebiet an der Nordwestgrenze Urundis mit allen Rechten eines selbständigen Häuptlings wiedereingesetzt hat, hat man dadurch zu einem festen Anhänger der gegenwärtigen deutschen Regierung gewonnen, der aus eigenstem Interesse den Mwami Mutaga und seinen Anhang im Schach halten mithilft. Von den anderen vorgenannten selbständigen Großhatwale sind auch Lussokossa und Bansabugabo grimmige Feinde Mutagas, während Lussengo, Tschoja und Wisirakufura sich dem Mutaga nicht fügen wollen, weil sie von dem Mutaga (III.) der vorigen Dynastie abstammen, also sich für gleichwertig dem jetzigen König Mutaga (IV.) halten.

Auf der beigefügten Übersichtskarte von Urundi, die ich der Güte des Residenten Hauptmann v. Langenn verdanke, ist die Verteilung der Gebiete der

Die Sitze der Groß-Batwale und Hauptlehnsleute in Urundi.

Bemerkung zur Liste der Groß-Batwale.

Nr. 19 ist der jetzige König Mutaga IV. Nr. 1, 7, 8, 9, 55 sind Abkömmlinge des früheren Königs Mutaga II., des Urur-Großvaters von Mutaga IV. Nr. 11, 22, 24, 31, 34, 39 sind Söhne des vorigen Königs Mwesi Kisabo, des Vaters von Mutaga IV. Nr. 14, 15, 20, 33, 36, 52, 54 sind Enkel des Mwesi Kisabo. Nr. 13, 16, 18, 35, 37 sind echte Brüder von Mutaga III. Nr. 2, 3, 17 sind Feinde des Mutaga. Nr. 57—65 sind Batwale im Russissi-Tal und mit der Königsfamilie nicht verwandt.

hauptsächlichen Batwale über ganz Urundi eingetragen. Die Kreise bezeichnen die Lage und Begrenzung der Gebiete natürlich nur schematisch, aber die Größe der Kreise entspricht annähernd der Bedeutung ihrer Inhaber. Es erhellt aus diesem Situationsplan, daß Mutaga mit seiner nächsten Verwandtschaft, d. h. mit seinen Brüdern, Stiefbrüdern und Neffen, das mittlere westliche Drittel des Landes zwischen dem Ruwuvu und dem Luwironsa sowie das ganze östliche Randgebirge des Tanganikasees innehat. Das sind die nach Bodenbeschaffenheit, Bewässerung, Klima und Wachstum besten Teile Urundis. Die entfernter verwandten Mitglieder der Königssippe und die von ihr abhängigen kleineren Batwale anderer Sippen nehmen die minder wertvollen Landstriche im Süden und Osten Urundis ein, während die unabhängigen Häuptlinge im Nordwesten und Nordosten sitzen. In den Niederungen des Russissitales endlich sitzen Batwale, die mit der Königsfamilie gar nicht verwandt, aber größtenteils Batussi sind. Auch unter den Groß-Batwale der andern Landschaften Urundis gibt es einige gewöhnliche Batussi und sogar „geadelte", vom König zu Batussi beförderte Bahutu, aber sie sind Ausnahmen in der großen Gruppe der Groß-Batwale königlichen Blutes, der Baganwa.

An dieser Verteilung der fast ganz der königlichen Baganwasippe angehörenden Groß-Batwale über das Reich etwas Wesentliches zu ändern, hat die deutsche Regierung weder einen zwingenden Grund noch die nötige Macht. Da der König Mutaga aber ein junger, jetzt (1912) etwa zwanzigjähriger und willensschwacher Mann ist, steht er ganz unter dem Einfluß einiger seiner in der Nähe wohnenden älteren Brüder, die mit ihrem Anhang die eigentlichen Herrscher Urundis sind. Daher hält sich der Resident mit seinen Verwaltungsmaßnahmen nicht an den König, sondern direkt an die einflußreichsten Groß-Batwale, um die Ordnung im Land aufrechtzuerhalten, und fährt recht gut dabei. Nur die in den entfernten Provinzen Süd- und Südost-Urundis sitzenden Baganwa-Batwale entziehen sich dem direkten Einfluß des Residenten wie der Autorität des schwachen Königs und glauben genug zu tun, wenn sie von Zeit zu Zeit Tribut und Naturalien an den König schicken.

Um seinen Anordnungen mehr Nachdruck zu geben und den Verkehr mit den Barundi zu erleichtern, hat der Resident v. Langenn 1912 einen wichtigen Schritt getan. Er hat den Sitz der Regierung, der bisher in Usumbura an der äußersten

Westgrenze des großen Reiches gewesen war, vier Tagereisen weit ins Innere verlegt, eine halbe Tagereise südlich der Missionsstation Mugera. Der neue Platz heißt Gitega. Er liegt im Herzen von Urundi und bietet die Möglichkeit, von hier aus mit allen Groß-Batwale direkt in Verbindung zu treten und mit dem Truppenkontingent schnell zur Hand zu sein, wenn und wo es nottut. Da von Usumbura bis Gitega ein guter Weg gebaut ist, können Europäer die Strecke in drei bis vier Tagen zurücklegen, flinke Postboten sogar in zwei Tagen durchlaufen. Usumbura am Tanganikasee wird immer der Stützpunkt und der Verkehrsanschluß für die Station Gitega bleiben, da es der nächste, beste Anlaufeplatz der Dampfer ist und nun auch mit dem Endpunkt Kigoma der Zentralbahn am Tanganika in schneller, regelmäßiger Dampferverbindung steht. Nach Osten wird von Zentral-Urundi aus der Verkehr stets schwieriger und langwieriger sein, auch wenn einmal eine Eisenbahn das Südknie des Kagera erreicht haben sollte, aber die östlichen und nordöstlichen Landschaften Urundis werden bald in den Wirkungskreis einer solchen Nordbahn einbezogen werden.

Die Lage Gitegas in Urundi hat, rein räumlich betrachtet, viel Ähnlichkeit mit jener der Regierungsstation Kigali in Ruanda. Auch dort sitzt der Resident nahezu in der Mitte des Landes und nicht zu weit vom Wohnplatz des Königs entfernt, auch dort hat er einen starken Stützpunkt (in Bukoba) am großen See und den Anschluß an den gesicherten durchgehenden Verkehr zu Wasser und weiterhin zur Bahn.

Die Verlegung der Residentur ins Landesinnere hat schon mehrere nützliche Folgen gezeitigt. Abgesehen davon, daß, wie gewöhnlich, mehrere Araber und Inder ihre Kramläden (duka) bei der Station errichtet haben, ist auch schon (1913) eine Niederlassung der Internationalen Handelsgesellschaft (Sitz Hamburg) in Gitega gegründet worden und haben sich einige Europäer unter dem Schutz der Boma angesiedelt. Nahebei ist nach dem Muster von Usumbura ein Markt eingerichtet worden, der von den Barundi zum Austausch ihrer Produkte stark besucht wird und viel zur Einführung und Verbreitung des Geldverkehrs beiträgt. Auch die Gerichtstage des Residenten werden hier im Innern viel eifriger und regelmäßiger von Bahutu, Batussi und selbst Baganwa besucht als im entlegeneren Usumbura, wo die Bergbewohner obendrein sehr ungern weilten, weil sie im Niederungsklima Fieber bekamen. Meist sind es Vieh-, Land- und Erbschaftsstreitigkeiten, die der Resident zu schlichten hat, und das Vertrauen zu seinen richterlichen Entscheidungen nimmt sichtlich zu und festigt seine Stellung auch in anderer Beziehung. Die Batwale stellen gegen Entgelt die nötigen Leute zur Ausführung öffentlicher Arbeiten, wie Straßenbau, Abholzung im Seegebiet für die Sanierung gegen die Schlafkrankheit, und zum Trägerdienst der Regierungskarawanen. Die Gegenwart des Residenten im Innern und die stete sichtliche Bereitschaft der Schutztruppe wirkt dämpfend auf die Streitlust der Batwale und auf die Neigung der kleineren und kleinsten Machthaber zu Übergriffen, der sie früher oft und gerne nachgaben. Sogenannte Wanderposten der Schutztruppe, die einmal da, einmal dort sich für einige Wochen niederlassen und einen widerhaarigen Mutwale bestrafen (meist durch Viehwegnahme) oder sein Tun genau kontrollieren, tragen ebenfalls zur Sicherung bei, wenn sie von einem verständigen deutschen Unteroffizier geführt werden, was meist geschieht. Den als selbständig anerkannten Häuptlingen im Nordosten und Nordwesten ist der Anlaß zu territorialen Streitigkeiten mit ihren Nachbarn und mit der Partei des Königs genommen, nachdem durch mehrere Expeditionen der Residentur

2: Meyer FO42 Rundi

die Grenzen ihrer Länder unter Mitwirkung der Beteiligten festgelegt worden sind. Natürlich ist ihr Verhalten zur Residentur von Urundi auch durch die Nähe des in Usumbura von der Residentur Bukoba errichteten starken Militärpostens beeinflußt.

Von den selbständigen Häuptlingen, wie vom König und seinen Batwale aus der Bagamwaspppe, verlangt die Residentur vorläufig weiter nichts, als daß sie unter sich und nach außen hin Frieden halten, sich den obersten richterlichen Entscheidungen des Residenten fügen, die durchziehenden Karawanen in Ruhe lassen, den Karawanen gegen Entgelt Nahrungsmittel liefern, am Wegebau und anderen öffentlichen Arbeiten mitwirken u. dgl. Von Steuerauflagen hat die Regierung in richtiger Erwägung ihrer geringen Machtmittel und des in den meisten Gebieten Urundis noch gänzlich mangelnden Geldverkehrs bisher Abstand genommen. Nur im Ort Usumbura sind Gewerbesteuern bei den Händlern eingeführt, während Zölle in unserm der Kongokolonie zugewandten westlichen Grenzgebiet gar nicht erhoben werden. Geringe Steuerleistungen, seien es Hütten- oder Kopfsteuern, könnten zwar schon jetzt im Urundi-Küstenland des Tanganika und im Russisital eingeführt werden, weil hier der Geldverkehr schon allgemein ist; aber der immer noch andauernde, durch die furchtbare Schlafkrankheitsseuche verursachte wirtschaftliche Tiefstand dieser Gebiete und ihrer Bevölkerung wird die Regierung wohl noch auf längere Zeit davon absehen lassen.

Wenn mit der Festsetzung der deutschen Regierung in Zentral-Urundi selbst und mit der seit mehreren Jahren verfolgten Politik der Anfang zur „friedlichen Durchdringung" und kolonialen Entwicklung Urundis gemacht ist, so sind dies doch eben nur Anfänge. Bei der Abgelegenheit und Unwegsamkeit des großen Landes und bei dem primitiven Kulturstand, der geringen Zugänglichkeit, der leichten Erregbarkeit und dem starken Unabhängigkeitsgefühl der Barundi — die viel lebhafteren Geistes und viel freiheitlicher gesinnt sind als die despotisch disziplinierten Banjaruanda — wird es noch Jahre dauern, bis die Regierung eine wirkliche, wenn auch noch so einfache Verwaltung Urundis einrichten kann. Darin deckt sich meine Meinung mit der aller guten Kenner des Landes. Selbst nachdem die Zentralbahn vollendet ist und von dorther der kulturelle Einfluß auf Urundi sowie unsere Machtentfaltung in Urundi noch viel größer werden wird als jetzt, wird eine weise Politik noch auf Jahre hinaus keine tiefgreifenden Änderungen vornehmen. Namentlich wird sie noch lange Zeit darauf bedacht sein, mit und durch die Häuptlinge und großen Batwale zu regieren, da diese auf alle ihre Hintersassen den entscheidenden Einfluß haben, obwohl das Verhältnis der Bahutu zu ihren Batwale keineswegs so unterwürfig ist wie in Ruanda. Nicht das muß das Ziel des nächsten Jahrzehntes sein, die Herrschaft der Bahima über die Bahutu zu brechen, denn dazu haben wir nicht die nötige Macht, sondern die herrschende Klasse an unsern Verwaltungsmaßnahmen materiell zu interessieren, wie es im Bukobabezirk mit Erfolg geschieht und in Ruanda beabsichtigt ist. Es heißt, daß die Regierung beabsichtige, in der Oberleitung Urundis an Stelle der bisherigen Militärs künftig Zivilbeamte zu setzen und die Residentur in ein Bezirksamt umzuwandeln. Ich würde einen solchen Versuch für außerordentlich verfrüht halten und kann nur üble Folgen davon erwarten. Die Entwicklung in Urundi ist noch lange nicht so weit wie in Ruanda, wo die inneren und äußeren Verhältnisse die Einrichtung einer organisierten Zivilverwaltung viel eher erlauben, sondern bedarf noch sehr der festen Hand, der schnellen Entschließung, des

scharfen Blicks und des kriegerischen Ansehens eines an leitender Stelle stehenden Soldaten; aber eines erfahrenen, des Landes und des Volkes kundigen Soldaten, dessen Posten nicht bloß als ein kurzfristiges „Kommando" betrachtet wird, sondern als ein Stück Lebensaufgabe.

Zwei Dinge verlangen in der künftigen Verwaltungspolitik Urundis die sorglichste Beachtung: die Öffnung des Landes für den Handel und die Arbeiteranwerbung für andere Länder der Kolonie. Diese beiden Forderungen werden schon lange von vielen und einflußreichen Interessenten erhoben, aber beide darf die Regierung nur unter den schärfsten Kautelen zugestehen, wenn das Land nicht schweren Schaden nehmen soll. Bis 1908 war das Land für den Außenhandel ganz verschlossen, da früher die Könige niemand hereinließen, um fremde Einflüsse abzuhalten, und dann die deutsche Regierung den Fremdhandel und die Fremdenansiedlung untersagte, weil sie nach den anderwärts gemachten Erfahrungen von der Tätigkeit der Fremden starke Beunruhigung des Volkes in dem ohnehin schwer zu ordnenden Land befürchten mußte. Ebenso war es von der Residentur in Ruanda gehalten worden. Seit 1908 hält nun zwar die Regierung das Verbot, das Land zu betreten, für die gefährlichsten Elemente wie Araber und Inder aufrecht und erlaubte nur die Errichtung einiger Kramläden unter den Augen des Residenten selbst, aber sie gestattete, daß Wasuaheli und andere Neger als Wanderhändler das Land durchziehen und Hausierhandel treiben (kutschurusa). Die Folge war, daß zahlreiche indische und arabische Händler sich an der Außenperipherie Urundis in Uffuwi, Usámbiro, Uha, Unjamwesi, Udjidji in kleinen Gruppen ansiedelten und von da aus Urundi mit einem ganzen Heer von eingeborenen Agenten überschwemmen, die vor allem Viehhäute, daneben auch gelegentlich andere Landesprodukte, wie z. B. Wachs, gegen Stoffe und Perlen einhandeln und sie ihren an den Grenzen sitzenbleibenden Herren zuführen, von wo aus sie teils nach Bukoba an den Victoriasee, teils jetzt nach der Zentralbahn gehen. Dieser Hausierhandel der eingeborenen Agenten hat sich bereits zu einer wahren Landplage ausgewachsen. Es sind meist schlimme Kerle, die bei ihrem Handel die Barundi betrügen, die Häuptlinge und Batwale durch Warenvorschüsse von sich abhängig machen, die Weiber belästigen, Gonorrhöe, Lues und andere bis dahin den Barundi ferngebliebene Krankheiten verbreiten, Vieh und Feldfrüchte stehlen und allerlei anderen Unfug treiben. Nicht selten greift da der gereizte Murundi zu seinem Speer; und wird in dem Streit einer der schwarzen Händler oder einer seiner Träger und Boys, die gewöhnlich ebensolches Gesindel sind, totgeschlagen, so muß die Schutztruppe mit einer Strafexpedition einschreiten, wobei wohl auch Unschuldige mit den Schuldigen leiden müssen. Die Schutztruppe muß drakonisch bestrafen, um aufständische Bewegungen zu verhindern, aber der Grund des Übels, das schlimme Gebaren der schwarzen Händler, wirkt weiter.

Und was ist der wirtschaftliche Erfolg dieser Öffnung des Landes für den Verkehr, dieser „Belebung des Handels"? Wird durch die gesteigerte Nachfrage die Produktionskraft der Barundi erhöht? Wird die Viehzucht intensiver betrieben, um dem Handel die vor allem begehrten Häute und Felle reichlicher liefern zu können? Nein, im Gegenteil! Der von den Indern, Arabern, Wasuaheli und Wanjamwesi mit oft sehr bedenklichen Mitteln betriebene Häutehandel hat die Barundi in vielen Gegenden des Landes bereits zu einer wahren Raubwirtschaft unter ihren Viehbeständen verführt. Wenn es so weitergeht wie jetzt, wird in wenigen Jahren der

Viehstand Urundis (und Ruandas), der bisherige Stolz des Landes, aufs schwerste geschädigt sein. Was darüber der beste Kenner des Landes, v. d. Burgt, in der Deutsch-Ostafrikanischen Zeitung, 1913, Nr. 84, geschrieben hat, ist im höchsten Grade lehrreich und beherzigenswert. Und meine im Lande gemachten Beobachtungen und Erfahrungen decken sich durchaus mit seinen Ausführungen. Am meisten sind von dem Raubhandel die Ziegenbestände betroffen, denn Ziegen werden von der großen Menge der Bahutu und Batwa gezüchtet und von vielen gegessen, während die Rinder den Baganwa und Batussi, die kein Ziegenfleisch essen, gehören, von ihnen als Kapital angesehen und zugleich aus religiösen Gründen so hoch geschätzt werden, daß nur die alten und kranken Tiere und die sterilen Kühe geschlachtet oder verkauft werden können (s. S. 46). Aber während man bis 1908 mit dem Schlachten der Rinder äußerst sparsam verfuhr und die Tiere nur zum Zweck festlichen Fleischgenusses oder zu Opfern tötete, wird jetzt unter allen möglichen Vorwänden in großem Maß geschlachtet, um die Häute an die Händler zu liefern, und vielleicht noch mörderischer wird mit den Ziegenbeständen aufgeräumt. Vor 1908 gab es mehrere Millionen Ziegen in Urundi, heute wird man kaum 1 Million zählen können; vor 1908 wurden die Rinder auf mindestens $^1/_2$ Million geschätzt, jetzt ist der Rindviehbestand innerhalb 5 Jahren unter $^1/_4$ Million herabgesunken (v. d. Burgt, a. a. O.). Lebendes Rindvieh kann glücklicherweise nicht oder doch nur bis in die nächsten Hochlandsgegenden ausgeführt werden, weil schon bald außerhalb Urundis die Verbreitungsgeviete der Tsetse beginnen, deren Stich die Rinder tötet (s. S. 41); aber Ziegen vertragen den Tsetsestich und werden deshalb lebend von den Händlern so weit ausgeführt, wie es sich lohnt.

Die aus diesen Mißständen erwachsende Gefahr für das ganze Wirtschaftsleben der Barundi ist ungeheuer groß. Sie muß die Regierung zwingen, sobald wie nur möglich die Grenzen des Landes wieder für den Wanderhandel der von den an den Grenzen sitzenden Indern, Arabern, Wasuaheli ausgesandten schwarzen Agenten zu sperren und die Batwale der Grenzdistrikte für die strikte Befolgung des Verbots verantwortlich zu machen. Gleichzeitig muß für die Einfuhr neuer Rinder-, Ziegen- und Schafrassen aus andern Ländern gesorgt werden, um durch Kreuzung das Blut des einheimischen Viehs aufzufrischen, das durch die lange Inzucht entartet ist. Denn erst, wenn sich der Viehstand wieder gekräftigt haben wird, ist die Zeit für geordneten Vieh- und Häuteexport unter europäischer Kontrole gekommen. Keinesfalls aber sollten in den Motiven, die in amtlichen und nichtamtlichen Schriften für die Notwendigkeit und Rentabilität einer Urundi-Ruanda-Bahn aufgezählt werden, die angeblich „nach vielen Hunderttausenden zählenden Viehherden jener Länder" genannt werden, die „der Ausnutzung harren".

Ebenso entschieden ist gegen ein anderes Argument Stellung zu nehmen, das in amtlichen und anderen Äußerungen für die Wünschbarkeit einer Ruanda-Urundi-Bahn stark betont wurde. Man hat diese volkreichen Hochländer des Zwischenseengebietes ausersehen, für die in den dünnbevölkerten küstennahen Gebieten gelegenen Plantagen die nötigen Arbeiter zu liefern. Aus den „großen Arbeiterreservoiren" Ruandas und Urundis soll den notleidenden Pflanzungen der Europäer im Küstengebiet, in Usambara, Ulugurn, am Kilimandjaro usw. die überall mangelnde Arbeitskraft zugeführt werden. Man braucht die Lage der Dinge nicht vom Standpunkt der Missionare zu betrachten, und man braucht kein grundsätzlicher Gegner der kapitalistischen Nutzung der Arbeitskraft der Eingeborenen zu sein, um sich mit aller Ent-

schiedenheit gegen die Arbeiterausfuhr aus Urundi und Ruanda zu wenden. Diese Völker sind Bergvölker, die das Klima der tieferen, wärmeren Lagen, wo Plantagenprodukte gedeihen können, absolut nicht vertragen. Auch ist der Murundi und Mumjaruanda an eine bestimmte Nahrung, in der die Milch eine große Rolle spielt, gewöhnt und hält an ihr auch aus religiösen Gründen fest (s. S. 103). Alle bisherigen Erfahrungen lehren, daß die Versetzung dieser Menschen aus ihren heimatlichen Hochländern nach anderen Gebieten sie in kurzem krank macht und bald ganz eingehen läßt. Auch erklären keineswegs sentimentale Kenner des Volkes, daß dabei die psychische Depression, das Heimweh, wie beim Tiroler, stark mitwirke. Es wäre meines Erachtens geradezu ein Frevel an dem Besten und Wertvollsten, was wir in unserer Kolonie haben, an der Volkskraft unserer Eingeborenen, wenn man jenen Wünschen gewisser Interessentenkreise nachgeben wollte. Die Hochlandsbewohner zur Lohnarbeit in die Tiefländer versetzen, wäre gleichbedeutend mit Massenmord, der sich an der Kolonie selbst am schwersten rächen würde. Es ist in dieser Hinsicht bereits schwer gefrevelt worden, indem man durch die organisierte Arbeiteranwerbung großen Gebieten unserer Kolonie, namentlich dem vormals von einer ziemlich dichten, arbeitswilligen Bevölkerung bewohnten Unjamwesi und Ussumbwa, für Plantagen, Bahnbau und andere europäische Unternehmungen so viele Männer entzogen hat, daß weite Landstriche völlig verödet sind, in anderen eine greuliche Sittenlosigkeit eingerissen ist, Syphilis und Kinderlosigkeit erschreckend um sich greifen, die Dörfer und Felder verfallen. Was ich und andere Beobachter in diesen Gebieten gesehen und zum Teil auch öffentlich mitgeteilt haben, bewegt mich, dringendst vor jedem Versuch zu warnen, die Arbeiteranwerbung auch auf die bisher noch in ihrer Volkskraft ungeschwächten Länder Urundi und Ruanda auszudehnen.

Sorgen wir für Ruhe und Ordnung in Urundi, helfen wir mit zur methodischen Entwicklung von Ackerbau und Viehzucht, sorgen wir für gute Verkehrswege, setzen wir arbeitsame deutsche Kolonisten in die kühlen Bergländer des Westens, soweit dort noch Platz ist, fördern wir die Tätigkeit eines geregelten, von deutschen Firmen ausgehenden und kontrollierten Handels und halten wir für jeden Fall unser Pulver trocken und unsere Truppe schlagfertig, so haben wir für die nächsten Jahrzehnte ein Arbeits- und Regierungsprogramm, dessen Durchführung für Urundi, die Barundi und uns selbst erfreuliche wirtschaftliche, kulturelle und politische Folgen haben wird.

Zwölftes Kapitel

Bemerkungen zur genealogischen Tabelle (s. Anhang I) der Barundifürsten

Von Pater J. M. M. van der Burgt

1. Ich war 1905—1908 in Nord-Urundi (Missionsstation Marienseen, Kaninja) sehr befreundet mit dem Großhäuptling (umuganwa) Muhini. Von ihm erfuhr ich alles, was mich interessierte. Besonders 1908, wenige Monate vor dem Tod des Königs Kisabo (Oktober 1908), als noch niemand vermuten konnte, daß der König, obwohl alt, so bald sterben würde, erzählte mir Muhini eine Menge Einzelheiten von der Barundidynastie, der Geschichte des Landes, von den beim Tod und Begräbnis des Königs üblichen Gebräuchen, von den Grundsätzen der Erbfolge, von der Wahl und Einsetzung des Königs usw.

Den größten Teil der Namen in der nachstehenden genealogischen Tabelle verdanke ich ebenfalls dem Muhini. Die Tabelle kann im ganzen als genau bezeichnet werden, obwohl im einzelnen Irrtümer nicht ausgeschlossen sind; sie ersetzt die Tabelle in meinem Buch „Un grand peuple de l'Afrique équatoriale", 1903. Damals hatte noch kein Europäer den Sultan Kisabo gesehen und gesprochen, vielleicht nicht einmal einen richtigen Muganwa (Mitglied des Königsgeschlechtes). Ich selbst war schon im Juli 1896 in nähere Berührung mit den Söhnen Kengeresas (Russabiko und Serjamurungu) gekommen, aber es war nicht möglich, damals etwas Vollständiges und Genaues aus ihnen über die Dynastie, die Geschichte des Landes, die Gebräuche usw. herauszubekommen. Später auf der Missionsstation Mugera (1899) bekam man höchstens Batussi zu sehen, besonders Wenengwe (s. S. 182), aber nur wenige Großhäuptlinge, die eine führende Rolle spielten. Diese großen Herren werden in ihrem Stolz und ihrem Mißtrauen nicht leicht intim und lassen sich schwer ausfragen, und doch kann man fast nur von ihnen etwas Genaues über Staats- und Familienangelegenheiten erfahren. Der gewöhnliche Murundi, sei er Mutussi oder Muhutu, weiß wenig oder gar nichts oder bringt nur Verworrenes, Unkontrollierbares zutage. Es ist bekannt, daß fast alle Neger sehr schwer dazu zu haben sind, die Namen der Verstorbenen zu nennen, aus Aberglaube oder Furcht vor den Geistern der Verstorbenen. Um so erstaunlicher ist es, daß Muhini zum Beispiel alle Namen der verstorbenen Fürsten ohne weiteres ausplauderte.

Das will aber nicht sagen, daß meine Liste vollständig und in allen Details genau ist. Zwar stehen darauf einige hundert Namen von Waganwa und Wamikasi bzw.

[p.178]

2: Meyer FO42 Rundi

Wenemwesi, also von königlichen Prinzen und Prinzessinnen, aber vielleicht nicht ein Zehntel der Gesamtzahl, denn die Gesamtheit dieser größeren und kleineren Waganwa bedeckt wie ein Netz ganz Urundi. Der größte Teil von ihnen sitzt in Nord-, Nordost- und Zentral-Urundi, während sie im Süden und westlich des großen Tanganika-Randgebirges minder zahlreich sind oder ganz fehlen. Dort gibt es nur Batussihäuptlinge, besonders der vier großen adligen Familien oder Sippen (s. unten). So ist z. B. auf der Regierungsstation Usumbura der bekannte Häuptling Kijogoma ein Munjakarama. Meine Liste ist aber doch wertvoll, besonders was Nord-Urundi betrifft, wo Muhinis Ahnen saßen und seine Verwandtschaft noch wohnt. Jetzt gilt es, die Liste zu vervollständigen, was hauptsächlich durch die Missionare geschehen kann, da diese länger im Lande sind, an verschiedenen Orten sich aufhalten, die Sprache beherrschen und auch das Vertrauen der Häuptlinge in höherem Maße besitzen als andere.

Ein großer Teil der Kinder des Sultans Kisabo, besonders der ältesten, haben jetzt schon Enkelkinder (Seruschanja) oder Großenkel (Seberiti); daher könnten schon jetzt Hunderte von Namen aus Nordwest-Urundi eingetragen werden. Muhini nannte mir stets ohne Zögern auch die Namen und Zahl der Töchter, Frauen und anderer weiblicher Verwandter, wie er sie auch gelegentlich gern vorstellte. Aber unter gewöhnlichen Umständen ist es sehr schwer, Genaueres über die Frauen zu erfahren. So hörte ich erst 1905 von Muhini, daß zwei seiner Schwestern mit meinem alten Freund Russabiko (1896) und später mit dessen Bruder Serjamurungu verheiratet waren. Man hat es also hier mit einer hochinteressanten Königsfamilie zu tun, die enorm zahlreich und fein gegliedert ist und sich jahrhundertelang durch die eigentümliche, streng durchgeführte Endogamie (s. S. 101, 182) sehr rein erhalten hat.

Viele Europäer, auch Offiziere, verwechseln noch immer die Batussi mit den Baganwa (abaganwa), was aber grundverschiedene Dinge sind. Muhini z. B. würde es als eine Beleidigung aufgefaßt haben, wenn seine Leute ihn einen Mutussi genannt hätten; er ist ein Muganwa, ein Prinz aus königlichem Blut. Diese Baganwa gelten fast als geheiligte Personen; sie zu töten, zu schlagen oder auch nur zu beleidigen, ist ein Sakrilegium und wird niemals vergessen. Unter den Batussihäuptlingen gibt es zwar auch größere mit viel Einfluß, aber sie nehmen doch stets eine untergeordnete Stellung ein, selbst wenn sie zu einer der vier oder fünf privilegierten adligen Sippen gehören, z. B. den Wenengwe oder den Wanjakarama. Es wäre von großem Wert, wenn solche Baganwa sich zum Christentum bekehrten. Bis jetzt ist nur ein einziger Christ, namens Buridzje in Kaninja, der mir 1905 wie ein gewöhnlicher Muhutujunge beim Bau der Missionsstation half.

Interessant wäre es auch, genealogische Tabellen von den Batussisippen anzufertigen, speziell den vier oder fünf großen privilegierten. Ich gebe nur eine einzige, von Suris Kindern.

Schließlich gebe ich auch noch die Namen von Russengos Ahnen (in Bugusi). Da dort möglicherweise bald der Pfiff der Lokomotive erschallen wird, wäre es wertvoll, dies Land zu studieren, ehe es zu spät ist. Pater Grün soll dort in Russengos Gebiet sehr alte bearbeitete Steinobjekte gefunden haben, wie auch in Karagwe; er glaubt an semitische Herkunft. Der Sage nach haben sich dort in Nordost-Urundi, Kissaka, Karagwe usw. vor 3—400 Jahren heftige Kriege abgespielt, z. B. zwischen dem legendenhaften Nsoro, den Wahondogo und dem Ruhinda oder Ntare. Vielleicht

2: Meyer FO42 Rundi

handelt es sich da um die Kämpfe einheimischer Fürsten (Nsoro) mit den aus Norden eindringenden Bahinda-Batussi-Eroberern. Mit diesen könnten die genannten Funde möglicherweise zusammenhängen.

2. **Chronologie.** In meiner Tabelle der Urundisultane von Ruhinda an bis Mutaga IV. habe ich Zahlen angegeben, die nur rechnerisch ermittelt sind. Beim Mangel fester Überlieferung ist es unmöglich, etwas Bestimmtes darüber zu erfahren. Ich habe diese Einteilung gemacht, um an das aus der übrigen Geschichte ziemlich feststehende Jahr 1500 heranzukommen. Statt drei Reihen von vier Königen, wie in meinem Buch „Un grand peuple de l'Afrique équatoriale", habe ich jetzt vier solcher Reihen aufgestellt. Da die Urundisultane sehr jung und unverheiratet ihr Amt antreten, so kann man eine lange Regierungszeit als das Normale annehmen, aber Muhini sagte mir, daß es auch Awami (Sultane) gegeben habe, welche nur kurz regierten. Der letzte, im Oktober 1908 gestorbene Mwesi Kisabo hat jedenfalls sehr lange, ca. 60 Jahre regiert. Er war noch ein Kind, das auf dem Rücken getragen wurde, als sein Vater starb; geboren ist er um 1840. Da um diese Zeit (1840 bis 1850) die Araber nach Tabora und Udjidji kamen, ist es wahrscheinlich, daß sie nach diesem damals zur Regierung gelangten jungen Mwesi das Land mit dem allgemeinen Namen Unjamwesi bezeichneten.

Kisabos Vater, Ntare IV., soll etwas älter gewesen sein, als er an die Regierung kam, und noch nicht alt, als er starb. Dagegen soll Mwambutsa III., der Vater von Ntare IV., sehr alt gestorben sein; dessen Vater Mutaga III. (oder II.?) jedoch noch jung im Krieg gegen Ruanda. Er hatte nur drei Söhne und keine Tochter.

Die Sultane von Urundi führen nur vier, immer in derselben Reihenfolge wiederkehrende Namen: Ntare, Mwesi, Mutaga, Mwambutsa. Dies ist auch anderswo in Negerdynastien üblich, z. B. in Uha, wo ebenfalls vier Namen immer wiederkehren, während es in Usambiro deren nur zwei sind. 1896/97 nannte man mir in Usumbura irrtümlich den Mwambutsa vor dem Mutaga. Daselbst behauptete der Häuptling Kijogoma, daß Mwambutsa (Ruhinda?) der Gründer der Dynastie gewesen sei.

Was passiert, wenn ein Umwami sehr jung ohne männliche Nachkommen stirbt, ist mir nicht bekannt; wahrscheinlich wird dann ein noch unverheirateter Bruder des Verstorbenen gewählt und führt dessen Namen, wie es z. B. in Usambiro Brauch ist.

3. **Geschichtliches.** Wie schon erwähnt, ist es schlechterdings unmöglich, viel wirklich Bestimmtes über die Geschichte ausfindig zu machen. Nach dem Tod des Ntare I. kam es zu großem Streit über die Erbfolge. Ntares Nachfolger war Mwesi II., der auch Rufuku genannt wurde. Allgemein wird ausgesagt, daß unter Ntare IV. (Kisabos Vater) das Land ruhig und glücklich gewesen sei, ohne Krieg, feindliche Einfälle, Krankheiten, wie solche z. B. unter Kisabos langer Regierung häufig waren (Rinderpest, Sandflöhe, Pocken, Heuschrecken usw.). Doch wird behauptet, daß Ntare IV. vergiftet worden sei. Es steht fest, daß in früheren Jahrhunderten das Land und seine Bevölkerung nur selten längere Zeit zur Ruhe kam wegen der ewigen Familienfehden und Streitigkeiten um die Erbfolge oder wegen der Kriege der Sultane und Großhäuptlinge untereinander. Diese Fehden dauerten bisweilen Jahrzehnte oder ein Menschenalter lang, wie unter dem König Kisabo. Kriege wie die des 1908 gestorbenen Kisabo mit dem Pseudo-Mwesi Kilima, mit seinen Brüdern und Neffen, oder die des Großhäuptlings Russabito mit seinem Bruder Musasje in Ujogoma, sind sicherlich keine Ausnahme in der Geschichte Urundis

gewesen, sondern vielmehr das Normale; wie bei uns im Mittelalter. Weiß Gott, wie viele Leute dabei zugrunde gegangen sind. Daß unter solchen schwierigen Umständen die Bevölkerung, auch die des Sultansgeschlechtes, für afrikanische Verhältnisse in Urundi und Ruanda so zahlreich ist, das spricht deutlich für die erstaunliche Lebenskraft und für den Kinderreichtum dieses starken Volkes. Es ist nicht zu verwundern, daß andere afrikanische Volksstämme aus solchen Gründen gänzlich in Verfall geraten sind, z. B. die 20 Sultanate des Wassumbwastammes. Was Pater van Thiel von der Bahindadynastie in Busindja geschrieben hat (Anthropos 1911, S. 497—520) ist ja nur ein Beispiel. Darum muß man es als einen großen Segen betrachten, daß die deutsche Regierung in dieser Beziehung Ordnung und Frieden schafft und derartige Fehden und Kriege, wie sie unter Kisabo üblich waren, allmählich unmöglich macht.

Früher war es in Urundi, wie fast überall in Ostafrika, die Regel, daß der neue Sultan seine nächsten Verwandten, besonders die älteren Brüder, durch Meuchelmord, Gift oder Krieg aus dem Wege schaffte. Wenn 1908 bei Kisabos Tod die deutsche Truppe nicht schnell zur Hand gewesen wäre, wäre sicherlich der kleine Mutaga (der jetzige Sultan) nicht unbehelligt von seinen Verwandten geblieben, und es hätte jahrelange kriegerische Streitigkeiten zwischen Seruschanja, Kilima, Kanoguno, Russokosa u. a. gegeben.

Von äußeren Kriegen ist in den Überlieferungen wenig die Rede, doch scheint Urundi nicht immer so groß gewesen zu sein wie heute. Die große Landschaft Ujogoma gehörte zu Nkansas Zeit noch zu Nord-Uha (Ujungu) und scheint vom Urundikönig Ntare IV. (1830—60) erobert und seinem Sohn Ruassa zugewiesen worden zu sein. Kisabo aber hatte viel mit Angreifern, die von außen kamen, zu tun, z. B. mit den Wangoni im Osten, die er bei Murole schlug, und mit den Arabern (Numalisa) im Westen. Mutaga III. (1780—1800) starb jung im Krieg gegen Ruanda. Es war ein Verteidigungskrieg, denn der Akanjarufluß scheint immer die Grenze gegen Ruanda gewesen zu sein. Die Ruandasultane der jüngeren Dynastie haben immer Eroberungsgelüste bei den Urundiherrschern vorausgesetzt und gefürchtet. Dort gibt es eine Sage, daß einmal ein großer König aus Urundi kommen werde, der ganz Ruanda erobern werde.

Ntare III. (oder II.?) soll Urundi nach Nordosten hin vergrößert haben und die Wahondogo unter Nsoro (Sohn des Sewukeje) endlich besiegt und nach Ruanda (Bugessera, Kissaka) gedrängt haben. Dort in Ruanda leben noch Abkömmlinge des Nsoro als gewöhnliche Batussi. Der Krieg muß heiß gewesen sein, denn die Alten reden viel von jenen Wahondogo. Im Anfang war das Kriegsglück offenbar auf seiten der letzteren, denn Ntare mußte nach Uha flüchten, wo er die Nionawa, Tochter des Kihumbi (des Vaters von Ruhaga und Großvaters von Nkansa) heiratete. Er wollte zwar Nsuriwakugwa, eine Schwester des Ruhaga, zur Frau haben. Dies wurde ihm aber verweigert, und aus Rache dafür soll er den Ruhaga getötet haben. Einen Monat später sei er zur Strafe für die Müssetat an den Pocken gestorben. Die Exogamie (s. S. 101) hat aber nichts daran ändern können, daß später unter Nkansa (1880?) Ujogoma für Uha verloren ging. Der schließliche Sieg des Ntare über die Wahondogo ist im Lande durch ein Denkmal verewigt, das für Mittelafrika sehr ungewöhnlich ist. Ende 1904 fand ich wenige Kilometer nördlich vom Sultanskral Mbuje am Berg Iwanga hinauf eine doppelte Reihe von Steinhaufen

2: Meyer FO42 Rundi

in regelmäßigen Abständen, wie eine „Siegesallee" von Kilometerlänge. Möglicherweise sind unter den Steinhaufen gefallene Krieger begraben, vielleicht enthalten sie Knochen, Schmuckgegenstände, Waffen.

Ich sprach von Beziehungen Urundis zu Uha. Uha scheint bezüglich seiner Geschichte, Ethnologie usw. ein sehr altes Land zu sein. Auch jetzt noch stehen die Ruanda- und Urundisultane in Beziehung zu den Uhazauberern und Hohenpriestern und schicken von Zeit zu Zeit Deputationen dorthin. Schon 1892 sagte mir der Pater Capus: „Dort in Uha (Nuguru) gibt es eine zentrale Akademie für Zauberer (Wafumu)." Das Wort Akademie klingt ja etwas feierlich, aber sicherlich ist dort ein Zentrum von Großwafumu und Geheimbünden, z. B. der Watschwesi, wie es ein zweites solches Zentrum in Kibija in Usukuma gibt. Viele Wafumu aus Unjamwesi, Ussumbwa, Usámbiro, Ussuwi usw. gehen nach Uha, um dort zu studieren, und holen sich dort ihre Weisheit und ihre Komplottgelüste. Denn der Unfug des Kihege in Süd-Uha (1909—10) ist zweifellos aus jenem Nest entsprungen.

Der Mwesi Kisabo wurde in Mugera in Mittel-Urundi, 3 Stunden südlich von der St.-Antonius-Mission, geboren. Deswegen kam es ihm und seinen Zauberern sehr ungelegen, daß gerade dort am 11. Februar 1899 die ersten Europäer (katholische Missionare) sich festsetzten. Der Mugeraberg gilt als ein heiliger Berg; sein Imana (Gruppe von alten heiligen Bäumen) ist berühmt. Kisabo durfte bei Lebzeiten den Boden dieses Berges nicht betreten. Kisabos Mutter ist in Wukeje begraben, und auch Mwambutsa, Kisabos Großvater, liegt dort begraben. Dort in Nordwest-Urundi, östlich des Gebirgshanges, gibt es eine besonders große Menge solcher Imanas oder Ivigabiros, d. h. geheiligter Plätze, die einst wohl Sultanskrale gewesen sind.

4. Die hohen Adelsgeschlechter der Batussi. Unter den zahlreichen Batussigeschlechtern Urundis gibt es nur vier (oder sechs?), welche das ausschließliche Recht und die Ehre haben, dem regierenden Sultan (umwami) die ebenbürtigen Ehefrauen zu liefern; mit andern Worten: aus diesen vier Geschlechtern (umurjango) wählt sich der Sultan seine Ehefrauen und niemals unter den Töchtern der Baganwa. Der obenerwähnte Fall, wo ein Sultan Ntare sich eine Prinzessin aus Uha (Kihumbis Tochter) holte, ist meines Wissens eine Ausnahme; es war wahrscheinlich nur eine politische, nicht ebenbürtige Ehe. Diese Regel scheint auch für die Söhne des Sultans zu gelten, wird aber nicht so streng durchgeführt. Die Töchter des regierenden Sultans werden jedoch niemals an Baganwasöhne verheiratet, aber stets an Batussi der vier privilegierten Geschlechter. Andererseits verheiraten die Baganwa ihre Töchter meistens an andere Baganwa. Aus demselben Grund der Reinhaltung des Blutes gibt es andere Negerdynastien, z. B. Msalala in Unjamwesi, wo nicht ein Sohn des verstorbenen Sultans regiert, sondern ein Sohn von einer der Schwestern seines Vaters oder auch seine eigene Schwester. So wird von Luabugiri, dem Vater Musingas in Ruanda, behauptet, daß er seine eigene Schwester oder gar seine Tochter zur Frau gehabt habe. Dies aber sei in den Augen der Bevölkerung verpönt gewesen. Die meisten Sultane prunken damit, Königstöchter aus weiter Ferne zu Frauen zu haben. So hatte z. B. der berühmte Sike von Unjanjembe (Tabora) eine Häuptlingstochter aus Usámbiro zur Frau; Mhimu in Ngaja (Msalala) eine Tochter des Sultans der Wangoni, wie auch Mirambo.

Die vier privilegierten, sozusagen hoffähigen Batussigeschlechter sind: die Wakundo, die Warwanda, die Wenengwe und die Wanjakarama, vielleicht

auch die Wasigawa. Ob der Urvater der Warwanda (Wawanda, Wabanda?) aus Ruanda stammte, bleibe dahingestellt. Der Urvater der Wakundo hieß Rukundo und war von mütterlicher Seite der Urvater des 1. Ntare; vermutlich stammte er aus Kissaka. Auch Ruruna, einer der Ahnen Schojas, war ein Wenerukundo. Die Wanjakarama nennen Senjakarama, der in Rugasi, Kungare, begraben ist, ihren Urahnen; und endlich die Wenengwe den Kenengwe. Manche behaupten, es gebe noch ein fünftes privilegiertes Geschlecht (umurjango), die Wasigawa, die wenigstens früher dem Sultan Ehefrauen lieferten (kuschingira). Dieses Geschlecht ist noch in Kissaka und auch in Uha häufig. So soll die Mutter des 1. Ntare, die aus Kissaka stammte, eine Musigawa mit Namen Nakafumba-Kaukomera gewesen sein. Endlich ist noch die Rede von einem sechsten privilegierten Geschlecht, den Waterwa (Watirwa), dessen Urahne Nuterwa gewesen ist. Zu diesem Geschlecht der Waterwa gehörte Tschiandore, dessen Vater Virengesi war.

Die Wenengwe-Batussi sind besonders zahlreich in Mittelurundi (Mugera) und waren seit fast einem Jahrhundert sehr rührig. Sie haben eine Menge führender Stellungen als Batwale inne. Dagegen traten die andern genannten Geschlechter, besonders die Wakundo und Wawanda, immer mehr in den Hintergrund, was übrigens nicht zu verwundern ist, da die Mütter der zwei letzten Könige (Ntare IV. und Mwesi Kisabo) Wenengwe waren. Mit den Wenengwe haben aber auch die Wanjakarama in der letzten Zeit mehr Einfluß gewonnen. Unter den 11 Frauen Kisabos zählte man fünf Wenengwe, vier Wanjakarama, eine Mukundo und eine Muwanda.

5. Thronfolge und Sultanswahl. Die Mutter des jetzigen Umwami Mutaga, also die Ninamutaga, ist eine Tochter des Sekawonji. Sie wurde geboren im Kral Katabo zu Musiramwanda (Provinz Wunoge, Nordost-Urundi); sie heißt Ndirikumútima und gehört zu den Wanjakarama-Batussi. Ihre älteste Schwester war die erste Frau des Muhimi. Sie soll noch jung und insobe (hübsch) sein und dazu sehr intelligent und energisch. Eines Tages ging die Prinzessin auf Besuch nach Wukeje zu einer ihrer Verwandten, nämlich der Mutter des Seruschanja, des ältesten lebenden geliebten Sohnes von Kisabo. Diese Verwandte, Umwamikasi, war auch eine Munjakarama. Dort lernte der alte Sultan Kisabo die Prinzessin kennen, und nach dem Tod von Seruschanjas Mutter nahm er sie zu seiner Favoritfrau. In wenigen Jahren schenkte sie ihm 13 Kinder, von denen 1908 noch acht am Leben waren, sechs Knaben und zwei Mädchen. Der älteste der Knaben, Mwikidzje oder Mwikidje, der jetzige Mutaga, war 1908 kaum mehr als 15 Jahre alt. In der ersten Zeit ihrer Ehe wohnte die Frau in dem Sultanskral Mutukura, aber bald darauf siedelte sie nach Ndago in Nordwest-Urundi über, wo auch die meisten ihrer Kinder, u. a. der Kronprinz Mwikidje, geboren sind. Alle Barundi sagen und glauben, daß der Mwikidje bei seiner Geburt als Zeichen seiner künftigen Herrschaft in seiner kleinen Hand die Samen von allen Getreiden und Pflanzenarten Urundis mit zur Welt gebracht habe. Als er von der Brust entwöhnt und mit zwei Jahren ein Mutschuku war, hat die Ndirikumútima ihren Erstling eines Tages feierlich dem Seruschanja und andern offiziellen Personen gezeigt, und so galt er von diesem Tag an als der zukünftige Umwami, jedoch ohne Wissen der andern Brüder. Von diesem Tage an ist er dann jahrelang in Mwirimwa südlich von Kigando bei vertrauten Batussi verborgen geblieben, angeblich um ihn vor der Vinjorokrankheit (Frambösie?) zu

schützen, in Wirklichkeit aber, um sein Leben gegen die Eifersucht seiner zahlreichen Brüder und Anverwandten zu sichern. Zur Zeit des Krieges des Hauptmanns v. Beringe gegen Kisabo (1903), als der letztere wie ein Flüchtling in seinem Land umherstreifte und die Mutter wie auch die anderen Reichsgroßen glaubten, daß es mit dem alten Mwesi zu Ende sei, ist der vorher bestimmte Kronprinz etwa neunjährig aus Mwirimwa zurückgeholt worden, um für alle Fälle bereit zu sein.

Was gehört nun dazu, um Sultan von Urundi zu werden? Wie erwähnt, fabelt die Menge davon, daß der künftige Thronfolger mit allerhand Samen von Landesfrüchten in seinen Händen geboren wird. Auch in anderen Negerstaaten besteht dieser Glaube. Eine zweite Bedingung ist die, daß er noch nicht verheiratet ist, und die dritte, daß seine Mutter noch lebt, denn ein Sprichwort sagt: „Ein Waisenkind regiert nicht". Diesmal mußte aber auch noch die Mutter eine Munjakarama sein. Wie gesagt, waren die Mütter der zwei letzten Könige Wenengwe, und wahrscheinlich gibt es hier eine bestimmte Regel für den Wechsel der privilegierten Familien, so daß schon hierdurch die meisten noch lebenden Söhne Kisabos von der Herrschaft ausgeschlossen waren, weil die Söhne schon verheiratet waren oder ihre Mütter nicht mehr lebten. Jedenfalls sagte mir Muhini schon 1905, daß nur die Kinder der Ndirikumütima in Betracht kämen, und daß unter diesen der Mwikidzje der Prädestinierte und Auserwählte (kutora, kutorwa) sei.

Es ist zu bemerken, daß in Urundi die Thronfolge zwar erblich ist, aber doch auch eine Wahl stattfindet. Man spricht immer von kutora (wählen). Gewöhnlich wartet man einen Monat nach dem Tod des Sultans ab. 1908 bei Kisabos Tod war aber Eile nötig. Der alte Kisabo starb nach einem Besuch der Militärstation Usumbura unweit von diesem Platz plötzlich auf dem Rückweg nach Wukeje. Dieses Mal verlief der große Wahlakt glatt. Wenn aber die Deutschen mit ihrem Militär nicht im Land gewesen wären, wäre es sicher zu einer großen Streiterei gekommen, wie nach dem Tod Ntares IV., und es hätten wohl besonders der Häuptling Kilima und die Baganwa im Osten ihre Stimme erhoben.

Der Wahlakt scheint keine bloße Formalität zu sein. In früheren Jahren sagte man mir, daß der Vater selbst seinen Nachfolger bezeichne, aber solcher Bezeichnung wird bei der Wahl häufig nicht Rechnung getragen. Daß auch die Mutter resp. die Mütter mitreden, versteht sich von selbst, obwohl sie nicht bei der Wahl gegenwärtig sind.. Sicherlich spielen auch die alten Bahima-Bafumu, die Zauberer, eine große Rolle bei dieser Gelegenheit

Wenn der Wahltag, der durch Opfer an die Geister (keterekera) festgestellt ist, gekommen ist, werden am frühen Morgen die Rinder aus dem Kral des Königs zur Tränke getrieben. Dies besorgen diesmal nur die Wahlmänner, nicht die gewöhnlichen Hirten; es sind alte vertraute Batussi, die Räte des verstorbenen Sultans, zusammen mit einer entsprechenden Anzahl von Bafumu (Zauberern). Auch der älteste Sohn des verstorbenen Umwami (diesmal Seruschanja) ist dabei, sonst niemand. Die Rinderherde ist eine auserwählte, denn es gibt sogenannte heilige Herden in Urundi. Beim Tränken der Tiere vollzieht sich nun die Wahl. Wie diese aber im einzelnen geschieht, ob aus dem Benehmen der Tiere bestimmte Weisungen abgeleitet werden, die zur Entscheidung des Wahlaktes führen oder ob andre Zeichen gedeutet werden, ist mir unbekannt und wird wohl noch für lange unbekannt bleiben. Denn der Vorgang wird mit großem Geheimnis umgeben. Die Batussi, die Baganwa und die ganze königliche

Familie üben ja einen wahren Rinderkultus aus. So ist auch das Zurtränketreiben der Rinder stets ein feierlicher Akt für die Batussi. Nachdem die Herde vom Wahlakt gekommen ist und die Kühe gemolken worden sind, fragt die versammelte Menge neugierig, wer der Erkorene sei, und feierlich antworten die Wahlmänner: „Umwami wimje, n'intuse" (d. h. der König herrscht, es ist N. N.). Nun geht der Jubel los. Die sogenannte Strohhuldigung (kukura ubwatsi) beginnt. Berge von trockenem Gras häufen sich an; man klatscht in die Hände (kukoma maschi), man beschmiert sich die Gesichter mit Kalkerde (ingwa), die Trommeln werden gerührt, und laut wird der Name des neuen Herrschers ausgerufen, indem man schreit: „Umwami aratasche, arasje", d. h. der König hat sich verabschiedet, er ist zurückgekommen. Man tanzt wie toll, und das ganze Hofpersonal nimmt an dem Tanz teil; man bringt zahllose Dankopfer dar, verschenkt Bier in Menge und schlachtet viele Ochsen an diesem Tag und in der nächsten Zeit.

Nur die Mutter des neuen Sultans ist anwesend, und auch ihr wird viel Ehre erwiesen. Die anderen Sultansfrauen dürfen nicht dabei sein, und möglichst werden auch die andern jungen Prinzen beiseite gehalten. Die ältern Sultansweiber läßt man leben, aber die jüngern, von denen man annimmt, daß sie sich noch einmal verheiraten könnten, werden getötet, wenigstens geschah dies früher nach der alten Sitte. Solange der Sultan noch jung ist, hat die Königsmutter einen großen Einfluß auf die Geschäfte, auch auf die politischen, und spielt eine fast ebenso große Rolle wie der Regent (damals Seruschanja). Bald nach der Wahl sucht man dem Umwami eine Frau aus den Töchtern einer der vier privilegierten Sippen aus. Beim jetzigen König Mutaga scheint die Sippe der Wenengwe in den Hintergrund treten zu müssen und die Wanjakarama, die Wakundo und die andern mehr in den Vordergrund zu treten. Früher war es eine der ersten und vornehmsten Beschäftigungen des neuen Königs, richtiger gesagt der Königsmutter, des Regenten und seiner Familie, die Wagome, d. h. die Aufständischen (meist Familienmitglieder), zu beseitigen. Künftig wird das nicht mehr möglich sein.

6. Tod und Bestattung des Königs, Trauergebräuche. Nach dem Tod eines Königs wird der Leichnam, so wie er ist, in den Kral (lugo) getragen, wo die Leute, besonders die Weiber, zusammenkommen, um ihn zu beweinen (kugandara). Dann werden die privilegierten Leichenträger (wanjange) bestellt, die zugleich die Wächter der Grabstätten der Urundifultane sind. Sie bilden einen eigenen Stand, sind Bahutu, keine Batussi, und wohnen in ihrem Dorf Wunjange südlich des Imangaberges. Dorthin wird nun der Leichnam in einem Trauerzug getragen, aber nur wenige Vertraute des Königs, darunter auch einige Dienerinnen (intschoreke), begleiten den Zug. Wunjange ist eine geheim gehaltene Örtlichkeit, die kein Murundi betreten darf. Dort angekommen, fangen die Wanjange an, den Leichnam zu präparieren, denn von einem eigentlichen Begraben kann nicht die Rede sein. Nachdem die Leiche von allem Schmuck, Amuletten usw. befreit ist, wird sie gewaschen und reichlich mit Butter eingesalbt. Diese Butter ist mit wohlriechenden Kräutern (imbasi), mit roter Erde (akahama) u. a. vermischt. Darauf wird der Leichnam in zahlreiche Häute, unter anderen in solche der Moorantilope (insobe) und in Fikusrindenstoffe eingewickelt und auf ein hölzernes Gerüst, das aus dem Holz des Murinsi-Baumes hergestellt ist, gelegt (kutarura). Zwei Monate lang wird unter dem Gerüst ein leichtes Rauchfeuer unterhalten und der Körper mehrmals umgedreht. Nach nicht

2: Meyer FO42 Rundi

langer Zeit kommt, wie alle Barundi glauben, ein dicker großer Wurm zum Vorschein (umusimu wa sultani), der nun durch die Wanjange mit Milch gefüttert und gepflegt wird (kurarira), bis er sich in einen Löwen oder eine Pythonschlange verwandelt. Wenn nach langer Zeit das Gerüst vermodert zusammenbricht, wird eine Hütte über die Trümmer gebaut, aber nichts wird berührt, alles, auch die Knochen, bleiben an ihrer Stelle liegen, selbst der neue Sultan darf nichts wegnehmen. Der Ort Wunjange ist die einzige Bestattungsstelle der Könige von Urundi, obwohl man sagt, daß Mwambutsa III. anderswo „begraben" sei. Der sorgsam geheimgehaltene Platz ist auch ein Freiplatz, d. h., wenn es vorkäme, daß zufällig ein zum Tode verurteilter Missetäter sich dorthin flüchten würde, dürfte er dort nicht belästigt werden. Möglicherweise wird er in den Bund der Wanjange aufgenommen. Bei der genannten Leichenhütte (ikigabiro) werden von nun an dauernd Opfer gebracht.

Die dienenden Frauen und Mädchen (intschoreke), die den Leichenzug begleitet haben, kehren nach zwei Tagen zurück, aber ein Mädchen, das vom Chef der Wanjange auserwählt worden ist, bleibt dort und wird die Frau des Wanjangechefs, welcher fortan den Namen Mwesi annimmt; ihre Kinder werden Awene Mwesi wu Wunjange genannt. (Bis zum Tode Kisabos gab es dort also einen überlebenden Ntare.) Alles, was das erwähnte Mädchen an Vieh, Hausgeräten usw. besitzt, wird dorthin geschafft. Stirbt sie, so wird sie nicht durch eine andere Person ersetzt.

In Wunjange gibt es noch einen zweiten Wanjangechef, der den Namen Mwesi w'inkoma oder Njamateke führt. Dieser Chef hat die Obhut der heiligen alten Getreide- und Fruchtsamen (imbuto ja masaka). Dieser Behüter der Getreidefrüchte wird beim Tod des Sultans getötet. Sonst werden, wie mir Muhini berichtete, bei Gelegenheit der Bestattung des Sultans keine jungen Mädchen oder andere jungen Leute mehr getötet oder geopfert, aber man wählt unter den Großen des Landes einen umuherekesi, welcher getötet wird, um den verstorbenen Sultan ins Jenseits zu begleiten (kuherekesa), und zwar wird diese Rolle als eine besondere Ehre angesehen.

Wie erwähnt, leben auf diese Weise durch Stellvertreter die Königsnamen Ntare, Mwesi, Mutaga, Mwambutsa fort, und die Barundi hegen keine Scheu, diese Namen auszusprechen, während sie sonst ängstlich vermeiden, die Namen der Toten, unter andern der Eltern, zu nennen; vielleicht werden die Barundisultane noch als lebend betrachtet. Jedenfalls ist diese Ausnahme von der Regel bemerkenswert. Im übrigen wird die Scheu vor den Verstorbenen so weit getrieben, daß sogar Berge und andere Gegenstände, die den gleichen Namen wie der Verstorbene haben, diesen ändern. Einer der Söhne Kisabos heißt z. B. Mafjuguru, d. h. Speer. Nach seinem Tod benennt man nun einen Speer nicht mehr mit dem Wort mafjuguru, sondern mit itschumu. Der älteste Sohn Kisabos hieß Namagongo. Nach seinem Tod wurde der große Bergsturz in Nord-Urundi nicht mehr Magongo, sondern Mukidja genannt. Ich möchte nebenbei bemerken, daß meiner Ansicht nach ein großer Teil der ostafrikanischen Bantunamen für Länder, Provinzen usw. von Personennamen herrührt. So spricht man z. B. in Unjamwesi immer von Ukundi, Upera, Usámbiro usw., was früher einfach die Namen der Könige waren, die in der betreffenden Landschaft herrschten.

Die Trauergebräuche der Barundi beim Tod der Könige sind sehr mannigfaltig. Ich kann nur von einem Teil Mitteilung machen. Die tiefe Trauer dauert

2: Meyer FO42 Rundi

nur einen Monat für die gesamte Bevölkerung, ausgenommen die Batwa, die keine Verpflichtung zum Trauern haben, weil sie keine Abantu (Menschen) sind. In der Umgegend der Sultanskrale dauert die Trauer fast ein Jahr. Während des vollen Monats der tiefen Trauer darf kein Murundi sein Feld bestellen, ackern, säen oder pflanzen. Jedes Geräusch wird vermieden oder bei Arbeiten, die nicht ohne Geräusch ausgeführt werden können, wenigstens sehr gemildert. Die Schmiede dürfen nicht schmieden, das Klopfen der Baumrinden zum Herstellen der Rindenkleider ist verboten, oder man darf das Zeug nur auf einem Holzblock oder auf dem harten Boden ganz leise klopfen. So muß auch beim Mehlmahlen der Weiber der Mahlstein statt auf eine steinerne Unterlage nur auf den Boden gelegt werden. Das Getreide darf nicht in Mörsern gestampft werden, sondern man darf die Körner nur leise auf dem harten Erdboden ausklopfen. Beim Bau einer Hütte dürfen die Löcher im Boden, in welche die Hüttenstützen gesteckt werden, nicht wie sonst mit einem eisernen Speerende ausgegraben werden, sondern nur mit einer Feldhacke, was weniger Geräusch macht. Das Buttermachen durch Schütteln in großen Kalebassen ist nicht erlaubt. Der geräuschvolle große Religionsakt des kubandwa darf während der Trauerzeit nicht ausgeübt werden. Getanzt darf nicht werden, aber es ist erlaubt, die inkindi, d. h. die als Tanzschmuck gebrauchten weißgegerbten Häute, zu tragen. Statt der üblichen schwarzen Rindenstoffe werden rotbraune, nicht geschwärzte, getragen, wenn man solche hat. Die Haarfrisuren (massunsu, urugori usw.) werden abrasiert, die Weiber verhüllen ihre kupfernen und eisernen Armbänder und Beinringe mit altem Rindenzeug usw.

Ein eigentümlicher Trauerbrauch ist der, daß bei den Rindern die männlichen Tiere von den weiblichen getrennt gehalten werden, dergleichen beim Kleinvieh, selbst beim Geflügel. Noch mehr: auch die Menschen sollen während der Trauerzeit einen Monat lang Abstinenz üben (warariama hasi); man glaubt sogar, daß der neue Sultan sterbe, wenn in dieser Zeit ein Kind gezeugt werde. Ein solches Kind komme zur Welt mit den Füßen voran und mit Zähnen an der Nase. Ein derartiges Monstrum (ikimuga) wird sofort im Fluß ertränkt.

Im allgemeinen verursachen nach dem Glauben aller Barundi Zuwiderhandlungen gegen diese Trauergebräuche allerlei großes Unglück. Die Übertreter werden zwar nicht getötet, aber ihre Handlungsweise wird als schwere Pietätlosigkeit oder gar als Majestätsbeleidigung angesehen. Wenn Bahutu z. B. ertappt werden, daß sie in dieser Zeit doch ihr Feld bestellen, werden ihre Hacken durch den Mutwale beschlagnahmt. Endlich behaupten die Barundi, daß in dem Trauermonat ein großer Hund oder anderes Ungeheuer (ikisuka) vom Königskral aus nächtlich das ganze Land durchstreift und die unverheirateten Frauen und Mädchen belästigt. Die Ärmsten müssen in dieser Zeit eine Menge zweifelhafter Witze hören.

7. Die heilige Trommel, das Paladium des Reiches. Die für heilig gehaltene Trommel des Sultans heißt akarjenda; sie stammt aus Mugera in Mittel-Urundi, wie auch die karinga genannte Trommel der Ruandasultane und ebenso die der früheren Sultane von Kissaka. Diese heilige Trommel wird nie geschlagen, sondern bleibt stets verhüllt in eine Menge Rindenzeug und Matten. An dem Tag, wo der Sultan für ganz Urundi die Erlaubnis gibt zum Aussäen des Sorghumgetreides (masakka), wird die Trommel etwas von ihrer Hülle befreit. Die akarjenda-Trommel empfängt fast göttliche Verehrung (kusenga); der Sultan in Person

bringt ihr eine Menge Rinder zum Geschenk. Zum Alarmschlagen gibt es noch eine zweite Trommel, rukinso genannt. Drei „Vestalinnen" sind angewiesen, die akarjenda-Trommel zu behüten und ihr die pflichtmäßigen Opfer zu bringen. Eine solche Vestalin wird umuka w' akarjenda, d. h. Frau des akarjenda genannt. Die erste im Rang, eine Mutussikasi, wohnte damals in Kagongo bei Ndaga unweit des alten Krals des einstigen Sultans Ntare; sie gehörte der Batussifamilie der Warima an. Die zweite hat ihren Sitz in Wukeje, die dritte in Itara. Die letztere war eine Muhutu aus dem Geschlecht der Wawaga. Diese drei Vestalinnen werden durch die Ältesten ihrer Familie ausgewählt. Sie müssen Jungfrauen (inkumi) sein und bleiben. Sie werden streng überwacht und, wenn es vorkommt, daß sie ihre Keuschheit verletzen, getötet.

Bei der Gelegenheit, als Muhini mir manches über die akarjenda-Trommel erzählte, kam auch die Sprache auf Riangombe, einen der Hauptgötter der Barundi (S. 120, 122, 126). Dieser Riangombe, wie auch der zweite Gott Kiranga, soll ein Mensch, ein gewöhnlicher Sterblicher gewesen sein. Dagegen wird Imana, der oberste Gott, als die Weltseele, die gebärende, befruchtende, lebenspendende Urkraft, eine Art Pandämonium, gedacht. Riangombe soll in Murinsi begraben sein. Der Name des geweihten Murinsiholzes in den Königskralen war wahrscheinlich früher der Name für einen Ort oder eine Landschaft. Mpumuti hat Riangombe getötet, aber Ruhanga hat seinen Vater Riangombe gerächt und den Mpumuti erschlagen. Die Sage geht, daß Riangombe eines Tages auf der Rhinozerosjagd durch Mpumuti, der die Gestalt eines solchen Tieres angenommen hatte, ermordet wurde. Darauf hätten seine sämtlichen Kinder Selbstmord begangen, ausgenommen Ruhanga, welcher die Tochter Mpumutis zur Frau nahm.

8. Der Urundiprätendent Kilima. In der genealogischen Tabelle habe ich den Häuptling Kilima, der dem rechtmäßigen Umwami Kisabo und auch der deutschen Regierung so viel zu schaffen gemacht und das Land immer in Unruhe gehalten hat, besonders aufgeführt. Von diesem Kilima, der auch Kitinwa (der Gefürchtete), Witaho oder Kirimamjambi genannt wurde, wird behauptet, er sei ein richtiger Muganwa, ein Sohn des Masango oder Kihanamasango (eines Sohnes des Ntare), der durch seinen Bruder Kisabo getötet worden sei. Andere behaupten, er sei identisch mit Kihanamasango. Kilima hat einen großen Anhang, der an seinen berechtigten Anspruch auf „die Krone" Urundis glaubt, aber nur in der äußersten Nordwestecke Urundis, auf der Westseite der Kibiraberge zum Russisisifluß hin und in geringerem Maß auch unter den Nachkommen Ndwjarjes in Ost-Urundi, Bweru. Daß der alte Kisabo den Kilima stets für einen Eindringling erklärte, ihn einen Inwubu (Nilpferd), einen Muhutu, sogar einen Mutwa nannte, könnte aus Neid oder Politik erklärt werden, aber die richtigen Baganwa, z. B. Muhini und Tschoja, der sicherlich kein Freund Kisabos war, haben mir stets bestimmt versichert, daß er ein Pseudo-Umwami, ein Pseudo-Muganwa sei. Sein Ahne (Vater?) soll Makasa, ein Sohn des Ntatschawukura, ein Mutwa des Ruandasultans Luabugiri gewesen sein. Nach anderen Aussagen folgen die Ahnen Kilimas aufwärts in nachstehender Reihe aufeinander: Ruabika (sein Vater), Materana, Makombe. Wahrscheinlich ist er einfach ein Munjambungu aus der großen Landschaft Unjambungu westlich des Russisisiflusses und soll durch Rutaganda, den Sultan von Unjambungu, aus politischen Gründen gegen Urundi ausgespielt worden sein. Kilimas Mutter war eine

2: Meyer FO42 Rundi

Ruhjambungu und seine erste Frau (Njavisaga) eine Muwira aus der Landschaft Uwira. Als seine Söhne werden u. a. genannt Kagijebuami, Ruassa u. a.

Kilima macht persönlich einen guten Eindruck, und es ist nicht zu leugnen, daß er von Anfang an (1896—1898) der deutschen Regierung und den Europäern überhaupt viel freundlicher gesinnt war als Kisabo und die alte konservative Batussipartei, welche früher und heute noch alle Europäer am liebsten aus dem schönen Land Urundi hinausgeworfen hätte. Aber das war von seiten Kilimas großenteils nur Politik; er wäre gern mit Hilfe der Deutschen in den Besitz von ganz Urundi gekommen. Jetzt ist Kisabo tot und sein Nachfolger Mutaga noch jung, aber es wird immer aufreizend auf die Sultansfamilie wirken und noch manche Wirren hervorrufen, wenn man den Kilima in der Nordwestecke dicht bei den uralten Königsheiligtümern (ivigabiro) und heiligen Bäumen (imana), die besonders zahlreich in Wukeje sind, wohnen läßt. Wenn man den Kilima beibehalten will, so wäre es klug, seinen Bezirk auf den Teil Urundis westlich vom Kiviragebirge bis nach Usumbura, dem Russisifluß und der Ruandagrenze hin zu beschränken.

Anhang I.

Genealogische Tabellen der Barundifürsten.

Von Pater J. M. M. van der Burgt.

Tabelle A.

Kinder des Ntare IV.

Tabelle B.

Kinder des Mbiujerje

Tabelle C.

Kinder des Mwesi Kisabo († 1908).

Söhne:

1. Rjangenge †: Sebiriri (hat Kinder) u. a.
2. Semubandi, † 1907 zu Bjanda
3. Rjimwaitenda oder Mahinga †, eine seiner Töchter verheiratet mit Mwisagarra
4. Rishgeri, † 1908
5. Seruschenja: hat Kinder und Kleinkinder
6. Setoborwa, † 1902 zu Kibinga
7. Ngumidjje
8. Nagema
9. Ntambali †
10. Kitschondo †
11. Nagwisa
12. Karamona
13. Bischinga
14. Mwamme
15. Kabondo
16. Majabo
17. Sangamana
18. Rjamunira †
19. Bitsinanintama †
20. Sitsabwa oder Mafyagura oder Matschumi, † im Krieg
21. Mwilidjje; jetzt König unter dem Namen Mutaga
22. Mongura
23. Ngangafe

Töchter:

24. Rjawalenda †, verheiratet mit Muschenji †
25. Mahutakaß †, verheiratet mit Sjewangandila, Vater des Mwisagarra
26. Rimalaherß †, verheiratet mit Mutawessi
27. Mutotschumarra †, verheiratet m. Mtembanji †
28. Mukritschondo } verheiratet mit Rumararifa,
29. Rjamije † } ein Mwenengwe, getötet
30. Rimaßaja, verheiratet mit Marigoma, ein Mwenengwe
31. Ramumumbo †, verheiratet mit Mwnjange, ein Murbwilikwa
32. Rambowanga, verheiratet mit Ntafangura, Sohn des Gori
32. † getötet durch ihren Mann, verheir. m. Mwnjahwaßja, Sohn d. Kagenja († in Ilfumbura)
34. †
35. †
36. Ramagengera
37. Rjangerera
u. a.

Nach den Müttern geordnet:

1. † eine Mukundo der Familie Warukundo rua Ntare ja Iera
   - 1. Rjagenge, ältester S.
   - 2. Semubandi
   - 3. eine Tochter
2. Mussaniwamo, Tochter des Bitabwa, eine Mwnjalarama
   - 1. Seruschenja
   - 2. Kitandaß
   - 3. Nagema
   - 4. Rambowanga, M.
   - 5. Mafaßa, M.
   - 6. Mpawije, M.
3. Rimawantu, Tochter des Rjamatega, eine Mwenengwe
   - 1. Setoborwa
   - 2. Setakwa
   - 3. Ngumidjje
   - 4. Rjawalenda, M.
   - 5. Rimalaherß, M.
4. Rimavirege, eine Mwenengwe
   - 1. Kabondo
   - 2. Majabo
   - 3. Rjamunira
   - 4. eine Tochter
5. †
   - 1. Kitschondo
   - 2. Mukritschondo, M.
6. Rimavisenge, Tochter des Sfenjafabe, eine Mwenengwe
   - 1. Rishgeri
   - 2. Mahinga
   - 3. Nagwisa
   - 4. Mahutakaß, M.
7. Rwimo (getötet durch Kisabo), Tochter des Ntabo, Sohn des Kitunß, eine Mwnjalarama
   - 1. Sangamana
   - 2. Bitsinanintama

Ihre Mutter (Bitsinanitore) war eine Tochter des Katamba, Großvater Mahinis.

So: Katamba:

Biratumganje Bitsinanitore

Mahini	Rwimo
Ntwere	Sangamana

8. Nbirihumatima, Tochter der Sekamonji, eine Mwnjalarama. Ihre Schwester war die erste Frau Mahinis.
   - 1. Karamona } verheiratet (1908)
   - 2. Bischinga } verheiratet (1908)
   - 2. Mwamme } verheiratet (1908)
   - 4. Mwilidjje, jetzt König Mutaga
   - 5. Mongura
   - 6. Ngangafe
   - 7. Rimawajengera, M.
   - 8. Rjangerera, M. und 5 Kinder tot

Noch lebende Frauen des Kisabo (Oktober 1908): Sollten nach der alten Sitte alle getötet werden, auf daß sie sich nicht wieder verheiraten (oder Nachwuchs bekommen):

1. Rimavirege, alt; Mutter des Majabo usw.
2. Nbirihumatima, Lieblingsfrau des alten Kisabo; Mutter des jetzigen Königs; eine sehr intelligente und energische Frau
3. Rambo „alte" (zu Mbuje wohnend, November 1904): ihre Tochter war erst verheiratet mit Mwnjahwaßja, später mit Ditari
4. Rishgeri: 1 Sohn: Wawangela
5. Rimawantu: 1 Tochter
6. † eine Mwenengwe: 1 Kind †

Töchter des Sekamonji (alle Großvater mutterseits des Mutaga): Mwnjahwawa Watoßß (obige) Ohya, eine der vier obigen Familien, welche dem König Frauen zur Heirat bringen: „Rukhingha wamami"

1. Mwisenge, die Alte
2. Rjajawaki
3. Nbirihumatima; ihre Mutter (Muallafa) war eine Mwenengwe, jetzt „Nimamiaga"
4. Rimawaßa, Gattin des Semubandi, Sohn Kisabos
5. Jamatama, die jüngste, † zu Mwage: war die erste Frau Mahinis; Mutter von 1) Majawa, 2) Ntwere, 3) Rjimbafaja

Tabelle D.

Kinder des Mutaga III. (oder II.?)

- 1. Abenzinginge
  - 1. Mussine
    - 1. Mukore, alle Kinder tot mit Ausnahme des Gewogi
    - 2. Katomba
    - 3. Magerorwa † alle Kinder tot, ohne Enkel ꝛc. zu hinterlassen
    - 4. Rugege
      - 1. Gonjakasana, Knabe
      - 2. Njanbura, Knabe
    - 5. Gazjo (s. Blatt J)
    - 6. Rusfera
    - 7. Rdinagira
      - 1. Njakabene
      - 2. Magurura
      - 3. Gussa
      - 4. Marindi
      - 5. Kulawire
    - 8. Rugema
      - 1. Gewogabo
      - 2. Manuma
      - 3. Rukeba
      - 4. Rugengege
      - 5. Greigori
      - 6. Gembertwa
      - 7. Gewahutu
    - 9. Kanjankiko
      - 1. Kirimanfra †
      - 2. Marawufu †
    - 10. Kindjori
      - Mawori †
  - 2. Gonjambili u. a.
- 2. Mwambussa
  - Mare IV.
    - Mwell (Kisabo) IV.
      - Mutaga IV. (s. die Blätter A (B) und C
- 3. Kibabwa
  - 1. Mikindu
  - 2. Musuma
  - Zwillinge
- 4. Mjungage, u. a. Mädchen

- 11. Rubamirisa
  - 1. Mpombase
  - 2. Kirosjagaraje
  - 3. Mjagagarra
  - 4. Mjoritambura
- 12. Gewitira
  - 1. Biterimanfa
  - 2. Birschurannra
- 13. Rusfonfera
  - 1. Rugambwa
  - 2. Rwowu
  - 3. Njawesebi
  - 4. Rugwisa
- 14. Rinawerege, M.
- 15. Waschengera, M.
- 16. Rusfanawagrni, M.
- 17. Rinawatoni, Mutter des Rutwa
- 18. Rinawamonje, Mutter des Biteri
- u. a.

- 1. Mrutungamje oder Rusfisja
- 2. Bichanja
  - 1. Ginamenji
  - 2. Maganja
  - 3. Rusfusumtra
  - 4. Rankamanjamma
  - u. a.
- 3. Bitschangabe †, (s. Blatt H)
- 4. Gewukunda †, (s. Blatt G)
- 5. Wugunga †, gefallen in Ruanda
  - 1. Mafumoja
  - 2. Bitungira †
- 6. Gewifarra †
  - 1. Rusfafu
  - 2. Jabjabe
- 7. Rugandabuje, (s. Blatt F)
- 8. Rutegarra
  - 1. Rampi
  - 2. Wartgaragaje, M.
  - 3. Rinaremba, M. †
- 9. Gewamenjje
  - Mfumbibuje und zwei Töchter
- 10. Kisfoge, (s. Blatt F)
- 11. Rgurifisje, M.
  - 1. Rufiganja, Kn.
  - 2. Gewwenda, Kn.

- 12. Rankumagi, M. †
- 13. Njandenja, M. †
- 14. Njafmorefe, M. †
- 15. Njamufcho, M. †
- 16. Mufja, M. †
- 17. Rufsaninjange, M. †
- 18. Rawahoma, M. †
- 19. Gissantintore, M. †
- u. a.

- 1. Gamatwajagga
- 2. Mubini, (s. Blatt E
- 3. Gefafingwa oder Gefanjerere, † ohne Kinder
- 4. Mbubuje, Tochter, verheiratet mit Gerjarwoja

4. Ntuntu	4. Mukujangembe, Schwester des Schoja
5. Kimana	5. Nawaganma
6. Nurakenjanja u. a.	6. Ninawunjegere
7. Kahiru, M., die älteste; noch nicht verheir. (1908)	7. Wavakure
8. Magrja, M.	8. Natamo, Schwester der Schoja
9. Muhimpundu, M. u. a.	

Tabelle G.

Kinder des Sewukunda (eine seiner Frauen: Ninandore; ihr V

1. Nunsaga †, Vater des Nukanjagura	2. Venjoa	3. Vikweto †, eine s. Frauen heißt Mumschengwa, Mutter von 3 Kindern	4. Ndawahagama †	5. Njavirere	6. Ntak
					Mutter Kasagg
	1. Sesamoja 2. Kanjandibu 3. Muburantschuti 4. Ruhombawana 5. Mutambananga 6. Bukuru } Mutt. Kajagge[1] 7. Toji	1. Njabubwa	1. Senjagari	2. Buridsje	3. Munanga 4
		2. Nwassa	3. Nutimburantschuro	4. Semahorovje	5. Jriri 6. N

[1] Kajagge, welche nach dem Tode des Ndawahagama sich mit Venjoa verheiratete.

Tabelle H.

Kinder des Vitschangando.

Söhne:	Mädchen:
1. Imbajiba	1. Kaburente
2. Kanjamagendo	2. Vikamakare
3. Wuhoma	3. Ntakafiriti
4. Vigomese	4. Nakigina
5. Kavamahanga	5. Njakasja
6. Ntakawassoba	6. Ntamanama
7. Kmenina	7. Nawusebe
8. Nwassa	8. Njarischahe
9. Ntiruhangura	9. Warasananije u. a.
10. Wandije	
11. Bisata	
12. Warantuntuje u. a.	

Vitschangandos Frauen[1]:

1. Simbaschiramanga
2. Ntivihirana[2]
3. Wakinga
4. Wukeje
5. Ninakatschanji
6. Njankurikije
7. Nsojihera
8. Kawandagaje

[1] Diese Frauen sind fast alle Wanuzafali, eine alte Bauernfamilie (wenige: Schoja), abstammend von Nawuna, siehe Liste K.

[2] Diese Ntivihirana, Mutter des Wuhoma, war eine Bufumbo, Tochter des alten Giathwaruha (in Kwanja), welcher den Nare (Kisabo Sohn) gefangen hat und mit diesem in den Krieg gegen Kazumba zog.

Tabelle F.

Kinder des Ruganbabuje:

1. Waranfata
2. Ntalagije
3. Nsikaruriho
4. Ermagwati
5. Ruganja
6. Vihege
7. Ngeragele
8. Sekandari
9. Wuhembe
10. Mpengjeri
11. Ruganga
12. Kalana, M.
13. Ndondere, M.
14. Ntimambarirwa, M.
15. Ninamagana, M.

Kinder des Kissiga:

1. Vinaffowutare
2. Waranfira
3. Fujagga
4. Irihanjuma
5. Ruffinana
6. Kibugu
7. Tschangufsi
8. Ntamufisa, M.
9. Namawuga, M.
10. Nanjalafura, M.
11. Mdawirinde, M.
12. Mudsjalafi, M.
13. Ntawaganira, M.

r Vater: Ruffengo; ihr Bruder: Ntimurfindimvi, Vater des Ruaffa)

ntalaguje	7. Nilalafje, M.	8. Muffehe, M.	9. Mawerwa, M.	10. Muschalawubi, M.	11. Nemissischiru, M.
ngge			Von einer anderen Frau		
a	4. Minani, M.	5. Kitimbir	6. Rugundana	7. Wenjawegurire	8. Mahongare, M.

6. Nijongere	7. Wajimba	8. Wambere	9. Toji	10. Wahimba	11. Wuturu	12. Minani	13. Ninamonge
			Mädchen				

Tabelle J.

Kinder des Gazjo

1. Vissirakuffura	2. Ntahogora	3. Viramba †	4. Ngembananga, Tochter	u. a.
			Nteguru	
1. Nsirajawabi	2. Ntahirabfja	3. Mashavu	u. a. (zahlreich)	

Tabelle K.

Kinder des Ntare III.

1. Ruvuna 2. Kabuje 3. Rukundo 4. Mawugifiro 5. Mwefi III. 6. Kissonga

1. Sankunda 2. Rutasama 3. Wansakafe, M.

1. Mutendo 2. Vijogoma 3. Wirwanji 4. Ngamussafji, M. 5. Tombajimuhana

1. Ruibfje 2. Kiwiri 3. Mussambere 4. Rugoraroka 5. Mwisa 6. Nangwizje, M. ?

1. Scheja[1]) 2. Ngassakuhunga † 3. Ruhinjura † 4. Njammessa † 5. Funguranji † 6. Ru

12. Ruvuna † 13. Mbomba † 14. Mawenganera, M. †, die älteste, gest. in Karehe; Frau des Sewakunda 15. Murehw gabo, S des Köni

1. Kafeje, Frau des Rukangirankoko, 3 Kinder 2. Semujange, Frau des Kalassigana 3. Mutoruwa, ? 8. Mussoni 9. Mukajimassgi, Frau d. Kominji in Nuand

[1]) Scheja behauptet, von Ntare III. (durch Ruvuna) abzustammen.

Tabelle L.

Kinder des Großhäuptlings Suri

(wird auch „Mugamwe" genannt, aber nur honoris causa, gehört in das adlige Bauerngeschlecht der Wanjakarama):

1. Sewuhume
2. Ntasangora
3. Njakatugu, seine Frau: Warigomerwa
4. Warigoro
5. Kafwa

Mutter: Njongere

1. Nakararire
2. Muwigiri
3. Sekivirise

6. Semuhe †: 1 Kind
7. Waranderese †, Frau des Kassassi; neu verheiratet mit Russengo
8. Namawumba, Frau des Sisetoborwa †, Sohn Kisabos
9. Warantschongo, Frau des Nianokare
10. Vigoro
11. Muhimpundu, Frau des Musasje (Russabikos Bruder)
12. Mutsiri
13. Nammikima, M.
14. Inawukere

u. a.

Tabelle N.

Geschlecht des Russengo, Sultan (umwami) von Bugufi,
Nordostecke Urundis.

1. Wodaja[1])
2. Schawakanga
3. Vitowahara
4. Waramba
5. Mpandana
6. Ruvubi
7. Russengo

[1]) Dieser Wodaja, Begründer der Dynastie, soll ein gewöhnlicher Muhutu gewesen sein, welcher aber nach der Sage beim Ntare I. (oder II.) bei Leber retirte und dafür eine Trommel (ingoma), Mukawwa genannt, und den Sultanstitel (umwami) und das Land Bugufi (und Mawoga?), gegrüt noch ganz bewaldet und unbewohnt, als Denkmal empfing. Gewiß ist Bugufi doch immer etwas abhängig; die Dynastie von Urundi ist geblieben.

194A

oinga 7. Ruhangula

ie

l. 7. Waschjamunda, M. 8. Toji, M.

. Rutsua 7. Munjiganiko 8. Ruwoganje 9. Serwenda 10. Ruwano † 11. Songojinka †

rskoa, M., Frau des Saran-
o, Sohn des Luabugiri, Vater
Königs Musinga von Ruanda

16. Natamo, M. 17. Jriwagiſa, M. 18. Mutujangombe, M.

Frauen des Muhini

ra, Frau des Senjawutschukku 4. Njampalaſi 5. Mutwischi 6. Munjawirori 7. Murenſi

uanda 10. Wenkeschja, M. 11. Mpajana 12. Rukutsa 13. Vilanga 15. Wojira, M. u. a.

Tabelle M.

Stammtafel der Könige (awami) von Urundi.

1500—1530 Ruhinda
1530—1550 Ntare I.
1550—1580 Mweſi I.
1580—1600 Mutaga I.

Zur Einführung

Am 1. November 1914 ist in Leipzig das Kgl. Sächs. Forschungsinstitut für Völkerkunde ins Leben getreten, dessen erste Veröffentlichung hiermit der wissenschaftlichen Welt vorgelegt wird.

Das neue Institut faßt, dem universalen Charakter des Leipziger Museums für Völkerkunde und dem an der Universität geübten Lehrbetrieb entsprechend, die Völkerkunde in ihrem ganzen Umfang ins Auge; sie schließt deshalb in sie neben der Ethnographie und der Ethnologie auch die Urgeschichte und die Volkskunde ein, soweit beide Wissenschaften Vergleichsmomente mit der Völkerkunde im engeren Sinn ergeben. Die Arbeitsteilung in Feldforschung durch Expeditionen mit Spezialaufträgen und in Institutsforschung mit der Untersuchung besonders wichtiger Probleme, wie sie das Bureau of Ethnology in Washington, das einzige Institut verwandter Art, seit Jahrzehnten so erfolgreich betrieben hat, ist auch für Leipzig die gegebene Methode.

Für die Veröffentlichung der Ergebnisse dieser Studien sind zunächst zwei Reihen von Abhandlungen vorgesehen:

Reihe I: Ethnographie und Ethnologie.

Reihe II: Urgeschichte und Volkskunde.

Die einzelnen Abhandlungen werden vom Unterzeichneten in zwangloser Folge herausgegeben. Sie erscheinen im Verlag der Firma Otto Spamer in Leipzig und sind durch jede Buchhandlung zu beziehen. Alle Zuschriften und Sendungen, die die Mitarbeit an den Forschungen und die Herausgabe von Abhandlungen betreffen, sind zu richten an das Kgl. Sächs. Forschungsinstitut für Völkerkunde, Leipzig, Grassimuseum.

Leipzig, im Herbst 1916.

Karl Weule.

080 **THE STRUCTURE OF THE BARUNDI COMMUNITY (RUANDA-URUNDI TERRITORY, CENTRAL AFRICA).**

By Georges Smets, Professor in the Université Libre de Bruxelles, Head of the Institut de Sociologie Solvay;
(communicated to the Royal Anthropological Institute, 25 September, 1945.

[p. 12 (A)]

122 **6** *Sources*

The subject of this address is Urundi rural life and, broadly speaking, Urundi social structure. Thanks to the Jacques Cassel Foundation, which was established to enable the teaching or scientific staff of the University of Brussels to carry on research in the colonies, I have had the opportunity of staying eight months of the year 1935 in the tropical African

[p. 12 (B)]

122 country that I shall attempt to describe to you in a few words.

000 On the other hand, I gratefully acknowledge my debt towards some former students of Barundi customs (viz. J. M. M. van der Burgt, *French and Kirundi Dictionary*, 1903—Hans Meyer, *Die Barundi*, 1916—and the author of an anonymous monograph inserted in the Belgian Government *Report on Ruanda-*

[p. 12 (c)]

800 *Urundi Administration* 1925—and Bishop (!) Gorju in several works dealing with Urundi, where he has been Vicar Apostolic. It lies N.E. of Tang. lake, 2 to 4 degrees S. of the Equator.

Ethnical conditions

563 The Urundi as well as the two neighbouring sultanates of Ruanda and Buha consist of three ethnical groups: (1) the tall, fine-featured, cattle-grazing Batutsi, of Hamitic stock, who constitute a ruling class of some fifty thousand; (2) the middle-sized, rough-featured, land-tilling Bahutu, the largest and main body of a population of over one and a half million; (3) the Pygmy hunting and pot-making Batwa, a mere handful of some thousands of outcasts.

I am reasonably satisfied that these three ethnical groups mix together more than one is generally inclined to believe: they rather seem to become social strata. At any rate there are impoverished Batutsi who till the land, Bahutu who possess cattle, and landless Batwa are not a frequent occurrence to-day. Many impoverished Batutsi have been considered as Bahutu, rich Bahutu as Batutsi. The reasons and theory I brought home were elaborated by Dr. Gerkens and seem to prove that each of the groups is of mingled stock.

Geographical conditions

133 The Urundi is a high country. The region between mountain to the west and the steppe to the east is a plateau, 5,000 feet high, often more, and almost completely without ligneous vegetation, except in the near proximity of habitations. Rivers and brooks have dug themselves deep into this plateau and their valleys have made it a country of more or less important hills, each of them with its own name. The bottom of the valleys is covered with swamps where papyrus grows unchecked (for native agriculture had not been successful there). The stony, grassy hilltops are merely meadow-land. The cultivated belt
[311] normally spreads on the hill-side, with the fenced cabins of the land-tillers in the middle of fields and banana-plantations. Only persons of rank dwell in the higher region.

311 Typical of Urundi scenery as seen from a favourable observation point are the three belts running along one another: below, the ashy green of the papyrus; above, brownish stones and light-coloured grass, sometimes with the rugo of a chief or of his deputy; in between the deep shining green of the banana-trees.
[161] Though the population often reaches 350 per square mile, the habitations of most land-tillers remain invisible amidst the banana-trees where they are hidden, and only at the time when meals are prepared does the peacefully ascending smoke betray their presence there.

[P. 13 (A)]

No villages

361 Characteristic of the country is the non-existence of villages. Though some habitations may be close to one another, they can never be said to be grouped. Isolated by the compact wooden fence that surrounds [417] them, shut from the outside world by a narrow, easily closing gate, they never look towards any central point that could distinguish some more or less important unit from similar units merely by its being oriented towards that central point. In fact, no such central point ever exists, but cabins appear sprinkled all over the country, in a denser or looser or sometimes discontinued dissemination it is true, but always without any well defined organic nucleus.

No markets

443 Not only in its not having villages is Urundi
439 different from most African countries: neither had it any markets. Before the colonization, markets were only held in the coastal sector of Tanganyika, where their presence can probably be related to the existence of a fishing population. In the interior, the [177] first markets originated with German colonists in the vicinity of administrative posts and missions. Foreign trading, concerned only with skins and salt, was in the vicinity of administrative posts and missions. Foreign trading, concerned only with skins and salt, was on a very small scale.

443 Now Africa is almost entirely a village country and it has also been said it is the favourite land for markets. Admittedly, village and market are far from coinciding in space: but they are not entirely unrelated. Village means daily meeting, market periodical meeting. This regular contact between inhabitants of one more or less important region is certainly less frequent in Urundi than elsewhere.

535 I am inclined to compare with this what can be ascertained concerning dancing. Except in the east (Kumosso), the west (Imbo), and the South (Buha), except with the Batwa, except with women and girls (which I confess is not negligible), dancing has neither the form nor the meaning usual with other populations; as the drum remains a privilege of the *mwami* [534] (sultan), there is no tom-tom; the chiefs themselves pick the carefully trained war-dancers from the whole of their district: such a dance is meant to exalt the chief, not to be a factor of unity for the male population of a district.

Cattle-breeding and agriculture

224 Except for the Batwa, hunting is of little import-
226 ance to the country's life: for the Batutsi, it is a mere sport without practical utility. The economic significance of fishing is not greater.

231 The social significance of cattle-breeding is considerable, yet its economic importance is smaller than

231 one might be inclined to believe. The cows yield
[234] little milk, and part of this milk is used for making
butter, which is employed not for food, but for a
cosmetic. Cattle-slaying is (or rather was) not frequent and only young steers, sterile cows, or old beasts are butchered. The cattle are lean, the pastures usually second-rate. And whatever the cattle-breeders themselves may say, they are mainly vegetarians: but the less immediately productive the cattle-breeders' occupation appears, the greater and the nobler the rank it confers to them. It is mainly
[556] an outward sign of wealth, with a superior social
standing attached to it that enables the higher classes to procure women and claim the devoted and faithful services of the males. It is worth remarking that the
[462] cattle are cared for by the men, not—save in exceptional cases—by the women.

241 Barundi economy is based on agriculture, which is mainly in the hands of the Bahutu, to whom we must add some impoverished Batutsi and most of the Batwa. Sorghum, beans and peas are the chief
[273] products, but cassava culture is spreading to-day.
Bananas are used for brewing beer. (The agricultural techniques are very primitive, though sometimes more advanced in some respects than might be expected: hardly any other implement than the hoe is commonly employed, and yet manuring and irrigation are
[462] known.) Agriculture uses male as well as female
labour, but the latter is more common. Among the Batwa only women till the land, and among the Bahutu there are men who take no part in agriculture.

000 This general information will enable us now to understand the chief subject of this address: the intercourse between the elements of the Barundi population where vicinity plays so small a part.

The position towards the political chiefs

643 The country's unity is chiefly based on the sultan's
796 personal power; his prestige is clearly visible in the
general mourning and the curious burial rites consequent on his death. Also characteristic was the annual recurrence of an important religious festival usually held in our month of December and called *umuganuro*, the sorghum festival, the sorghum desacralization: only after the festival could the people start sowing sorghum in their fields. The *umuganuro*, however, concerned other agricultural
[778] products, as well as cattle and game. It included the
exhibition of a sacred drum (*karyenda*) and a hierogamy—which the king achieved with the greatest secrecy. It involved, as well for the festivities themselves as for the preparation of the requisites the hereditary collaboration of men and women picked from every social level and every region, however distant. And so the festival created stronger ties

[p.14 (A)]

643 between the various elements of the people; it was
796 supposed to be a large contribution to the land's fertility and the country's welfare, and in all this the part played by the king was prominent.

643 Only in fact was the king's power limited. He
631 transferred the leadership of parts of his sultanates to some chiefs, almost in every case relatives (brothers, uncles, cousins), members of the royal family (*baganwa*). In their turn these would establish subchiefs chosen among their relatives, or the aristocracy (*bafásoni*), or even Batutsi commoners, but seldom among the Bahutu. The division reached very far and the last elements of it were not only single hills, but even parts of a hill. And although the ensuing intrication and divided hierarchy remind us forcibly of our own feudo-vassalic middle ages, and appear consequently most unstable, the Barundi system, if we set aside some violent revolutions, possessed some sort of stability and could carry on thanks to its practically hereditary organization. Chiefs, subchiefs and all who had availed themselves of the deep-seated division of authority were naturally possessed of rights over the common people and were entitled to demand from them various privileges, usually defined by local custom, and which ranged from a present of beer to well-determined contributions or vaguer corvées (services).

423 Some scholars have maintained that the *mwami*
661 definitely had a right of possession over the land of the whole of his sultanate. But the truth is that land was not an object of property for the *mwami* or for commoners and the *mwami* and his representatives simply had to allow its utilization and choose the people to carry it out. Such designations were, just as the political leaderships, more or less unstable, more or less precarious; there exists a heredity in fact; but it is possible for a chief, should he care to do so, to eject the tenants. Besides, the abandoned or untilled lands are at his disposal. The system in general enables members of the leading classes as well as members of the subject classes to constitute estates with the only difference that the former will possess large herds of cattle and have their lands tilled by people liable to unpaid service while the latter have only very few cows and must depend on their own labour and that of their families.

The political leader's say in agricultural matters also solves the difficult problem of proportioning field and pasture-lands. The chief will not allow the latter to be reduced, and the threat to the cattle-breeder is further avoided by the chief's right to use the sorghum fields for pastures after the harvest (*ibishaka-shaka*) either for themselves or for others.

423 The territory of an important chief, with its intermixing complex of herds, estates, revenues, and services, very often extended over large, sometimes

[p.14 (B)]

423 dispersed areas. The chief would have his *ingo* (plural of *rugo*, residence) built on several hills, and usually establish one of his wives in each of them, to direct the centre entrusted to her. This is a very typical estate organization : it is based on polygamy.

The position towards cattle-owners

422 We have said that the *mwami* did not possess the
661 land : neither has he any right of possession over the big cattle. The *mwami* would sometimes take cattle where he found them, but this was only a violent misuse of his tyrannical power. Batutsi and even Bahutu cattle-rearers are definitely the owners of their herds when, of course, the cattle are not simply entrusted to them.

231 These cattle can be given and this very thing adds a great deal to their worth, for those who desire them
43 are naturally attracted towards those who own them.
357 The king presents with cows the great who come to pay him homage. During the great annual sorghum festival, he ritually distributes cattle to some methodically chosen persons. The great men used to be surrounded, and are still, with a group of servants of various ranks : *ntore* (vassals who owed them a more important military aid than the average tenants), *bagendanyi* (young attendants charged to carry out their messages), *bakamyi* (young Batutsi entrusted with the milking of the cows), *abungere* (who watch over the cattle), *bakevvi* (cooks), *inshoreke* (female attendants and servants). The most esteemed among these followers (*ntore*, *bagendanyi*, *bakamyi*) hope to receive cows one day, the *bakamyi* especially, on the day when they will leave the service to get married.

231 There are also the so-called cattle-contracts. Here
675 are the most interesting of them : (1) A cattle-owner gives someone a cow, in exchange, the donee will later
425 return a calf after the cow has calved two or three times. (2) An important owner gives several cows
554 to a man who must in his turn permanently provide him with a milch-cow. (3) The owner of an important herd entrusts a man with the breeding of several cows which he may use for milk and manure ; one of the cows will be his if the herd has prospered.

In all these cases, the recipient becomes the liege of the donor (or the depositor). In some cases, the recipient is considered a near relative, even a son of the donor and marriage impediments ensue from the assimilation. On the other hand, the higher the donor is socially speaking, the less he tries to derive material profit from these transactions : his real profit is in the power he acquires over the person of the recipient.

423 *The relations between agriculturists*

425 Similar ties may exist between agriculturists. The

423 typical case is that of a man who has been allowed to
425 establish himself on a specified spot on a hill, that is, on the hill-side, between the stony higher belt and the swampy valley bottom; this gives him rights over the whole ground above and below him, up to the pasture-lands and down to the papyrus; now there may remain an uncultivated part in this vertical tract of land: if another agriculturist wishes to establish himself there, he will have to ask for the former occupant's permission, which as a rule can be received in exchange for a present. If the present is important, this will be equivalent to a kind of sale; if it is not, the new-comer will become the man, the *muhutu*, of the first-comer; he will have to obey him and carry out what commissions the other cares to entrust him with. The same relationship may arise if the occupant of an *itongo* (singular of *amatongo*) surrenders to a new comer lands that were already cultivated.

Relationship between craftsmen and other elements of the population

463 Industrial production is almost totally domestic, to the making of back-cloths (*impuzu*); there are however a few skilled handicraftsmen: potters, blacksmiths, makers of millstones, milkpots, bracelets, shell-jewels. Before markets were introduced, goods
435 used to be exchanged for food-stuffs or scrap-iron. This bartering was and still is practiced in the *ingo* as before.

But, besides this universal barter-system, there is
431 what I have thought fit to call 'baronial exchange': it is practised among members of the aristocracy
435 only; it consists in offering members of the ruling
565 class some specified goods, in exchange for a cow; but this cow is admittedly worth more than the presented goods. Consequently, the giver of the goods will feel bound to go on making presents, until the recipient of them judges he is indebted in his turn and it is appropriate to bestow another cow. Of course, the recipient of the cows becomes the *muhutu* of the donor. I have gathered several instances of this relationship based on inequality: it occurs among salt-makers, blacksmiths, copper bracelets, pedlars (*abayangayanga*).

Women's activities

462 The wives of the great live in almost complete inactivity; their *inshoreke* (attendants) do the
461 domestic work for them ('they sweep the floor') or more delicate work (as fine basket-work). Only women till the land and make pots in Batwa households. Bahutu women till the land, sometimes, but not always, with the help of their husbands; the husband may have another job when he lives among a chief's attendants, has a trade of his own or peddles goods across the country.

[p. 15(8)]

462 Consequently the men folk, even when they do not
461 cultivate their fields themselves, are reasonably certain, except in the case of famine, to find sufficient food to sustain their lives and this gives their activity a peculiar character. Their activities may be directed towards improving their situation, but their existence does not depend on them : if necessary, they will wait a long time and without impatience for expected grants from the great.

444 You see Barundi who buy goods on one market and sell them on another where those goods are dearer. You see also Barundi who sell agricultural wares on one market, and with the money buy a greater amount of the same wares on a market where it is cheaper. Result, a greater amount of wares and of money. It is a curious adaptation of the species of speculation to an old non-monetary economic system.

The evolution in progress

178 Most chiefs have been converted and have accord-
177 ingly adopted monogamy : the estate organization based on polygamy must consequently be modified. Belgian administration has deliberately simplified native political methods and considerably reduced its personnel. The numberless services demanded by local leaders have been abolished : some corvées are still enforced, the abolition of others has been made good by allowing to the chiefs a percentage of the taxes paid by their subjects. Considerably fewer followers are attached to the chiefs : already the *store*[1] have disappeared and the extension of the clerk (*karani*)-system is making the *bagendanyi*[2] obsolete. Markets are more and more numerous and
[436] money has a circulation wider every day because this circulation is necessary if taxes are to be paid. Purely commercial exchanges will eliminate barional ex-

[p. 16 (A)]

1 [a type of vassal — Analyst]

2 [messenger attendant — Analyst]

178 changes completely. Speculation is gaining ground.
177 Certain cultures are spreading rapidly (cassava, which
[241] grows all the year round and so excludes the threat of famine ; coffee which yields a profit in cash, and helps to pay the tax-collector).

178 Finally, some house-groups have appeared of a type,
177 closer perhaps to town than to village, in the neigh-
361 bourhood of *bomas* (colonial administration centres)
563 or markets. Their inhabitants it is true are mostly foreigners : Belgian officials, European traders (Greeks), Hindus and Arabs, *baswahili* (Islamized negroes). It remains however that they are an entirely new feature in a country with such a widely dispersed population.

Conclusions

361 I thought I could draw your attention to some
571 details of the curious Urundi organization : a dense population, widely dispersed over the cultivable and habitable land according to the geographic possibilities, without any orientation centres (the few habitations of the chiefs cannot be said to produce anything like demographic concentration) ; the small part played by neighbourhood relations, the predominance of intricate, but personal ties, creating man-to-man dependance, or in other words the primacy of the vertical over the horizontal relationships.

Such an organization was possible in a country almost completely closed to foreign influence, without either markets or money, with a hierarchical structure and must be related to conditions both ethnographical and geographical. This organization is
[177 giving way under the influence of European ad-
178] ministration, of the development of trade, and of a new economy based more and more upon monetary transactions.

THE KINGDOM OF RUANDA

By J. J. MAQUET

121 THE world-view of a people refers to a kind of reality which is not directly observable. We can observe things and behaviour, but not ideas or mental attitudes. These have to be inferred. Furthermore, although the concepts and propositions which make up the world-view of the Banyarwanda[1] are all arrived at by induction, they do not possess the same logical status. They are located, so to speak, on different levels of abstraction. Some are arrived at by immediate inference from observation, as when we say, for instance, that for Banyarwanda 'the invisible world is a fearful reality'. This statement may be immediately inferred from the behaviour of the Ruanda people: their words, when they tell us their beliefs about the action of the spirits of the dead, and their behaviour if they are threatened by them. On the other hand, a statement such as 'strictly contractual relationships are inconceivable for a Munyarwanda' is much more abstract because it is reached by successive stages from an analysis of the political organization of Ruanda. The validity of the two kinds of statement is not necessarily affected by their degree of abstraction. Even a proposition which seems very far removed from its factual foundation may be checked by the observation of other relevant facts.

Ideas concerning the place of man in the world, his destiny, his main values, his attitudes in relation to his fellow men, the rules of his behaviour, and the meaning of the invisible world, may find expression in many kinds of social phenomena. However, as might be expected, some of these phenomena are particularly significant, as, for instance, folk-tales concerning the creation of the world and the arrival of the Batutsi in the country, proverbs, and forms of cult. To these special attention has been given.

The validity of an unstated cultural premiss will, of course, be established with more certainty if it is found implied in several and very different cultural phenomena. For instance, an analysis of the political structure may lead to the discovery of the principle of the fundamental inequality of the three castes of ancient Ruanda. The same principle is also implied in tales explaining the origin of the three groups and the sources of their social roles.

121 This study refers to the period when the Ruanda cult had not yet been
177 subjected to the impact of Western culture. This is not very far back in time, for it seems that the first white man to be seen in Ruanda was Count von Götzen, who travelled through the country with a German scientific-military expedition in 1894. The first permanent occupation of the country was not more than fifty years ago, and important changes in the culture have

[1] The inhabitants of Ruanda.

[p. 164]

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

been brought only during the past thirty years. The present Ruanda culture has lost the coherence that existed in pre-European days. Those who have become more closely associated with alien activity, and have therefore felt its influence more constantly, now share a culture made up in part of their ancestral way of life and in part of their interpretation of the Belgian variety of Western culture as it operates in a colonial situation. Even those who have not been brought into direct contact with whites feel that their old patterns of life are losing their validity. But that more or less hidden part of the old culture, consisting of basic assumptions on the relationships of man with the world and with other men, has suffered the least change. To be sure, the legends of the descent of the first Batutsi meet with more scepticism than in the past, but the fundamental beliefs that this story reflects are still profoundly embedded in the Ruanda ethos. Even when new institutions, based on assumptions conflicting with the earlier ones, are imposed under external pressure and adopted, the principles shaping the older institutions will subsist and, if participation in the new institutions is unchecked, these will be completely reinterpreted in accordance with the former premises. Some manifestations of the continuing existence of the ancient assumptions in the contemporary context will be considered here, but we shall be mainly concerned with the Ruanda world-view as it was at the beginning of this century.[1]

Ruanda is a highland country in East Africa lying in the region delimited by lakes Kivu, Victoria, and Tanganyika. Its area is 24,500 square kilometres; its population amounts to almost 2 million inhabitants, the highest density in Africa south of the Sahara. Three socio-'racial' castes are to be

[1] Much of the material used in this study was collected by the author during two years' work (1950–1) in Ruanda as a social anthropologist of the *Institut pour la Recherche Scientifique en Afrique Centrale* (I.R.S.A.C.). The author was very much helped in his field research by Dr. E. Finoulst and Dr. G. De Clercq during their six-month course of training under his direction. Extensive and valuable information has been found in the published literature on Ruanda, especially studies by Father A. Arnoux, Abbé L. de Lacger, Abbé Alexis Kagame, the late Father A. Pagès, Mr. G. Sandrart, Father Schumacher, and Mr. J. Vanhove. The author is also grateful to the Abbé Kagame for having placed at his disposal some of his manuscripts. In formulating the conceptual and theoretical scheme used in this paper, the author has relied considerably on the teaching and works of Professor Clyde Kluckhohn of Harvard University. He is immensely indebted for his fundamental training in anthropology to the teaching staff of London University and particularly to Professor Daryll Forde. Mr. Lawrence Oschinsky has kindly corrected the manuscript. A short bibliography is given at the end, but it has not been felt necessary to document this study at every point, nor indeed was this possible, since it was written in the field with the use of a very restricted library.

This is an essay in the etymological meaning of the word. If the underlying configurations of a culture constitute its most important part, since they provide a key to the interrelatedness of apparently unconnected phenomena and to the meaning of apparently incomprehensible behaviour, they are also the most elusive realities. They evade direct observation and, often, direct interrogation. The anthropologist, therefore, must be sure that his inferences are logically acceptable not only to his own mind but also to the minds of the participants in the culture he studies. All this requires a thorough knowledge of the overt aspects of a culture and a long familiarity with them. The author is painfully aware that he has not gone very deeply into the ethos of Ruanda. This is only an attempt at a synthesis of the results so far obtained in researches which are still proceeding.

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

564 Three socio-'racial' castes are to be
distinguished among its peoples: pastoralist Batutsi[1] (about 10 per cent. of
563 the population), agriculturalist Bahutu (about 85 per cent.), and Batwa,
162 hunters and potters (about 5 per cent.).

Man and the Material World

773 The world in which men are placed and which they know through their
senses was created *ex nihilo* by *Imana*. The Ruanda word *kurema* means to
776 produce, to make. It is here rendered 'to create' because our informants say
that there was nothing before *Imana* made the world. This belief concerning the origin of the material world is universal and clear. To any question on this point, the answer is ready.

772 The Banyarwanda assert that we do not see the whole of the material
[823] world which was created at that time. The world of our experience is flat; its limits are far away and made of fences like the ones we see around kraals. On these fences there is a big rock which is the sky we see. Beyond the rock there is another world (*ijuru*) similar to our own, with hills, trees, and rivers. This world may be said to be heavenly only in the sense that it is above the sky: it is not a paradise but rather a richer duplicate of our world. Under the soil on which we tread there is yet another world (*ikuzimu*) also conceived as similar to our own. There is nothing infernal about it. The material universe is thus a kind of three-storied construction. It is not impossible to go from one floor to another: some people and animals came from the world above to the intermediate world and, according to some legends, one man at least went to the lower world.

821 In our world the moon and the stars (which are kinds of glow-worms)
stay high up in the sky. The sun rises in the morning and in the evening reaches the end of the world where a powerful man kills it and cuts it into pieces. Then he throws the main bone across the vault of heaven to the East where it grows up and the following morning the same process begins again.

773 In essentials our world was created as we see it now, but there have been
[823] some changes in the course of its history. Some hills were raised up by the kings of Ruanda; the formation of Kivu Lake is accounted for in different folk-tales. Cattle, which rank so high in the Ruanda scale of values, also made a special appearance on the intermediate world. The stories give more than one version of their origin but they agree on their arrival in a world already constituted and inhabited by men. According to some tales, crea-
[825] tures did not originally have the same bodily form as they have now. It is said, for instance, that horns were given to animals after they had been created.

772 This, and a belief that the world is now slowly degenerating, getting old
(people's stature is decreasing, cows give less milk), suggest that the Ruanda conception of the universe is not a wholly static one. The world does not remain the same, it is in process of evolution. However, when direct

[1] In this paper, following the common use, we have kept the prefixes of the Ruanda words, such as *mu* for the singular and *ba* for the plural.

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

questions are asked, it appears that this conception of the life of the universe has not been the subject of speculation and is not of great importance to the Banyarwanda. 772

Without *Imana* the world would not continue to exist and his action is necessary to maintain life. *Imana's* action, however, is not manifested in particular interventions; it is conceived rather as an underlying force which sustains the whole universe but does not interfere in the development of the life of nature. Seeds are put into the ground and after some time plants come up, the banana-trees produce their yields, the cows breed. All this is the normal course of things and we may expect the recurrence of these events at the proper times. This universal order, indeed, is not independent of *Imana*. He made plants grow and animals multiply, but he does not have to act to give fertility in each case. The scholastic distinction between prime cause and secondary causes can very well be applied to Ruanda conceptions. *Imana* acts as the prime cause of the universe and therefore any event may be imputed to him. On the other hand, nature itself includes the secondary causes which account for the regular unfolding of its course. 776 772

But this natural order is not unalterable. *Imana* remains master of the rules he has established. There are numerous stories of miracles worked by *Imana* (a stick becomes a cow, teeth are granted to a girl who had none, &c.). Other beings besides *Imana* may act on nature: the spirits of the dead and even some men, the sorcerers. They may prevent somebody's beans from growing, they may have a man or a cow struck down by lightning. In particular, rain, so important in this country where rainfall is very irregular, has been regarded as under man's control. There were rain-makers (*bavubyi*) who had the dangerous responsibility of regulating rainfall. [821 791]

Natural forces—rain, wind, hail, storms—are not considered as persons having desires and intentions that could be influenced by prayers or offerings. It seems that only thunder is personalized, and is regarded as a king (*mwami*). When a person has been struck by lightning, it is said that the Thunder-King has honoured his subjects with a visit and has taken one of them with him. Lightning receives the same salute as the king of Ruanda. 821 776

Banyarwanda implicitly distinguish between the regular course of nature and more or less unexpected events. Towards the former they assume a rational attitude. They do not look to the invisible world to account for the alternation of the phases of the moon, the growth of plants, the breeding of cattle. These phenomena are explicable on the level of secondary causes. Neither *Imana* nor the occult powers interfere in the normal course of material nature. It would be misleading to conceive of the Ruanda people as 'primitives' living in an irrational world where every phenomenon is an enchantment demanding explanation in terms of an intervention of the invisible world. They look at the world in its regular course in the same way as does a product of Western culture. 772

Of course, a Munyarwanda could not explain the interplay and the exact action of secondary causes as a Western scientist would do. But neither

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

could the great majority of people in our culture. They believe that some specialists know exactly how natural phenomena work, and they have an idea of the type of explanation the specialists use. Banyarwanda have fundamentally the same attitude.

In relation to natural phenomena which do not appear with such regularity that they may be expected at about this or that time, the ideas of the Banyarwanda are quite different. Because of their unexpectedness, these events resemble the consequences of human intention. As a man suddenly becomes angry and hits somebody, so thunder strikes. If an occurrence is clearly an exception to natural laws, as Banyarwanda know them, they are confused. If I have taken ordinary care of my banana-grove and it does not produce so many or such good fruits as the trees of my neighbours on the same hill, there must be some reason to be sought outside the normal order of the world. Moreover, these unexpected events may often be dangerous and detrimental. Since any Munyarwanda has, as we shall see later, many powerful enemies in the invisible world, he is easily led to suspect them. Consequently, when confronted with happenings in the material world which do not fit into their conception of the normal order of things, the Banyarwanda explain these events as due to a special intervention of supernatural forces. *Imana* himself may be responsible, but when the event is regarded as harmful, ghosts or sorcerers bear the blame.

In this interpretation of unusual events, the Banyarwanda differ significantly from the people of the West. First, it should be emphasized that for us, events which seem to be exceptions to the laws of nature are much rarer. Those who scientifically know a certain field of spatio-temporal reality can show that events unforeseen by laymen, such as a storm, are in fact completely in accordance with the order of nature. When the event seems inexplicable to the specialist, the uninitiated person is generally unaware of the fact and indeed often displays a greater belief in physical science than do scientists themselves. A basic assumption of our culture is that science (of the physico-chemical type) can explain any material phenomenon. Thus any event in that sphere of reality will be interpreted in accordance with that belief. The event may, however, be of such a type that a 'scientific' explanation does not seem possible. For instance, the unpredictable event (a storm, a famine) may happen several times in the same place and no reason can be found for that repetition. The Western mind will then usually have recourse to the concept of chance, by which is meant, that the numerous conditions which must be realized in order to produce the event may happen accidentally to coincide more than once. There is no inevitability in the repetition of that constellation of conditions, it may just happen. The concept of chance, by which we avoid recourse to the supernatural in such cases, is not used by Banyarwanda. For them a phenomenon of the material world is either a part of the normal course of nature and is explicable in itself, or it is extraordinary and must be understood as a supernatural interference.

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

Man and the Non-material World

Imana, the Creator

Imana, the creator, is a person. He is conceived as an intelligence, a will, an emotivity. He is extremely powerful: 'the plant protected by *Imana* is never hurt by wind', '*Imana* has very long arms', '*Imana* goes above any shield'. He is non-material. His action influences the whole world; but Ruanda is his home where he comes to spend the night. He is always invoked as 'God of Ruanda' (*Imana y'i Ruanda*). 776

Imana is essentially good: 'your enemy is digging a pitfall for you, *Imana* prepares your exit', '*Imana* gives, he does not sell'. This is why he takes care of men and why there is no cult in his honour. He is so good, I have been told, that he does not require any offering.

There is a special creative act of *Imana* at the beginning of each person's life. Impregnation in itself would not be sufficient to produce a new human being. This is why the young wife, at evening, leaves a few drops of water in a jar. *Imana*, as a potter, needs some water to shape the clay into a child in her womb. Then, after birth, *Imana* decides what life is to be for that individual: happy or unhappy. If, later on, a man is miserable, poverty-stricken, in bad health, it is said that he was created by *Ruremakwaci*. This way of speaking has led some observers to understand that besides *Imana*, there was another creator, perhaps subordinate, perhaps an evil spirit. As a matter of fact, *Ruremakwaci* is the name given to *Imana* when he does not create very successfully, when 'he is tired', or, for some inscrutable reason, decides that a certain destiny will be unhappy. This is consistent with the Ruanda linguistic habit of assigning different names to one cause according to its different effects. 776 842 776 777 [196]

Imana's influence is thought to be always beneficial for human beings. It happens very often that obstacles are placed in the way of his action by malevolent agencies of the invisible world, but from him only good things come. This is not completely consistent with the belief in an unfortunate predestination by *Imana*. It should be noted, first, that the theory of predestination has not a very deep impact on the attitude of Banyarwanda. A person who thinks himself unhappy, and might thus suspect that he has been predestined to a miserable life, does not seem to be submerged by a feeling of doom. Unless he is brought to despair by a situation from which there is no escape, he will go on living and trying to improve his condition. Secondly, this inconsistency will be better understood if we consider the attitude of Banyarwanda towards the king (the *Mwami*) in similar circumstances. The *Mwami*, the supreme authority is good, yet he may be harmful and cruel to some of his subjects. As his power is absolute, as he is magically identified with Ruanda itself, he may never be criticized. Thus the victims of some arbitrary royal decision, and their friends, go on saying that the king is good but that his favourite counsellor is very bad and is responsible for what they suffer. As might be expected, in Ruanda God is conceived [152] [143]

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

776 according to the image of the *Mfumu*, and thus when some misfortune
777 occurs, the blame is put on another name of God or on the ghosts or sorcerers.

The beneficent action of *Imana* is general and remote. *Imana* is the source of all gifts, but he does not interfere very much in individual lives unless he is invoked. He is not the vigilant deity whom no single detail of the lives of his creatures can escape and who, when he acts, takes into account all the antecedents of the situation. There is a story of a man who borrowed beans from different people. When repayment of the loans was demanded, he was always able by his wits to avoid fulfilling his obligations. One creditor—Death—insists on being paid and pursues him. The debtor, when fleeing, calls upon *Imana* who saves him.

Imana—as is illustrated by this tale—is not the guardian of ethics and social order. He is not offended when somebody is robbed, but only if the offence is directed against himself, as when somebody disobeys a particular order of his or abuses his name. Then he punishes the offender by sending him misfortunes during his earthly life.

The Spirits of the Dead

775 The spirits of the dead (*bazimu*), with whom *Imana* has no closer relationships than he has with living people, constitute the second category of non-material beings. They continue the individuality of living persons and have the same names. It is usual to say: 'when he will be a *muzimu*. . . .' Though non-material, they are localized by their activity, in contrast to *Imana* who, having a much wider range of action, cannot be so precisely localized. They live in the lower world whose ruler is *Nyamuzinda* ('the one with whom one is forgotten'). Banyarwanda have not elaborated a very detailed picture of post-mortem existence. Although, according to some informants, the deceased kings of Ruanda constitute a kind of governing body in the underworld, there are no social distinctions. Life is neither pleasant nor unhappy. The *bazimu* do not drink, eat, or mate but their existence in other respects is similar to that in the world of the living. The *bazimu* sometimes come back to this world, returning to the places where they used to live. An ancestor and some other spirits may stay permanently in the hut where their descendants live or in the small huts made for them in the enclosure around the dwelling.

775 Whatever their temper when they were in this world, the *bazimu* are bad.
769 Direct ancestors in both lines (although the system of descent is patrilineal) are believed to protect their living descendants, if they showed them proper filial behaviour when they were in this world, if they observe prohibitions and avoidances and if they do not forget to make offerings. But all other *bazimu* belonging to one's patrilineage (*mulyango*) are always harmful. The *bazimu* of other families are less detrimental except where there are feuds between the families. Ghosts are thus essentially malevolent towards the living. At best they are not actively injurious.

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

In order not to irritate the dead various observances and interdicts must be complied with. The 'cult' of the *bazimu* is accordingly aimed at appeasing them. They are frequently offered a few drops of milk or hydromel. Sometimes they require the immolation of a goat or even a bull. A girl spends some time in the small hut dedicated to a *muzimu* in order that he may enjoy having a woman. Other practices are, however, more difficult to interpret. Water may be given to the *muzimu* while at the same time he is told very loudly that it is milk. The explanation given by most informants is that *bazimu* are rather stupid and that these mock offerings are not given to the direct ancestors, who are respected, but only to collaterals who, as *bazimu*, are hated. However, it is not very clear how one can at the same time fear the powerful *bazimu* and deceive them so grossly.

Among the *bazimu*, a small group, *Ryangombe* and his *imandwa*, is particularly powerful and important. *Ryangombe* is said to have been the chief of a small band of friends and clients. He was accidentally killed by a buffalo during a hunting party. In order not to leave *Ryangombe*, his friends threw themselves on the bull's horns. *Imana* gave them a special place, the Karisimbi, a former volcano, where they have a notably more agreeable life than the other *bazimu*. To have the privilege of joining them there, Banyarwanda have to be initiated into the sect (*kubandwa*). The members of the sect believe that non-initiates go after death into an active volcano, the Nyiragongo, where they suffer torments of fire. We have here an interesting instance of conflicting ideologies in a non-literate society: the common belief that all *bazimu* reside in the underworld and the belief of initiates, who are extremely numerous, in a mildly paradisal life for themselves and a hell for other people. During their earthly sojourn the initiates have other advantages, for the powerful *imandwa* do not harm them and indeed protect them from the injurious activities of other spirits.

The relations between *Ryangombe* and *Imana* seem to be conceived as those between a client (*mugaragu*) and his patron (*shebuja*), persons who are linked by that typical Ruanda institution called *buhake*, in which a man in an inferior situation in the scale of wealth and social power asks another to grant him his protection and the possession of some cows; in return the client becomes his patron's man and owes him various services. *Ryangombe* is believed to be protected by *Imana* and to act more or less as his intermediary with regard to the initiates. But *Imana* is not present in *Ryangombe's* paradise. The cult of *Ryangombe* has importance as a force of social cohesion. Batutsi, Bahutu, and Batwa may all be initiated. This function is quite overtly stressed: *Ryangombe* has said himself that he should be called upon by everybody.

Diviners and Sorcerers

Two categories of men have special relations with the invisible world: diviners (*bapfumu*) and sorcerers (*barozi*). The former are interpreters of *Imana's* will, which they can discern in the figures made by knuckle-bones,

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

in the viscera of chickens, rams, and bulls, or even by intuition without the aid of any instrument. Some of them use a medium, usually female, possessed by *Biheko* (one of the *imandwa*) or are possessed themselves. Thanks to them it is possible to oppose a certain defence against the *bazimu*. They can identify the spirit who causes illness or sterility or is killing the cattle; they can tell what will appease him. Batutsi and Bahutu practise as *bapfumu*. It was formerly a very respectable calling; the techniques and methods of interpretation are often transmitted from father to son. Sorcerers (*barozi*), on the contrary, are criminals obliged to conceal their activities. If found they could be immediately killed. Some of them are believed to use poisons; for instance, a powder made from the lungs of a person who has died from tuberculosis is mixed in food. Others act by magical means: sending a *mazimu* to strangle somebody, acting through lightning or an animal, using spells. Besides a certain training in the formulae, they have to acquire a magical force handed on by another sorcerer.

Such, very sketchily drawn, is the non-material world of Banyarwanda. This world is dominated by *Imana*, essentially powerful and good. The century-old problem of evil in the world, particularly acute when there is a belief in the existence of a being who is omnipotent and infinitely good, has been solved by putting the responsibility for all evil and all suffering on agents other than *Imana*. These agents are mostly human, for *bazimu* are indeed human personalities and sorcerers are men. *Imana* himself does not cause any evil but he allows the causes of evil to act. As God's beneficent action is remote, we may say that the invisible world is on the whole malevolent. Under the serene reign of the prime cause, ill-willed secondary causes have a large freedom of action which they use to torture men. Compared with the earthly world, the invisible one is rather disquieting, our informants told us. When daily life is painful, when personal security is threatened by external dangers, the thought of the invisible world present in this one has not the psychological function of relieving anxieties.

But to what extent is the invisible world a permanent presence in the lives of Ruanda people? Not to a very great extent, it seems. Their existence is not permanently dominated by the fear of *bazimu* and sorcerers. As in the material world and its regular changes, Banyarwanda consider that there are 'natural' events in the human sphere, i.e. in the domain of human existence and the part of the world that man changes by his action (agriculture, cattle-rearing, hut-building, &c.). By 'natural' we mean that these events are understood without reference to the action of the supernatural world. Some antecedent events or acts are regarded as natural causes of others. To get a cold at the beginning of the dry or the rainy season is considered to be due to the change of weather. It is known that yaws can be got by contagion. Even death is very often accepted without seeking any magical explanation. It is expected, for instance, that people will die because of old age. If beans had been planted on poor soil, a bad crop would not mean that the field had been bewitched. Thus when recurrences have

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

been observed or when 'causes' have been discovered in the sphere of human phenomena, events happening according to these recurrences or following these causes are considered as intelligible without any reference to the supernatural world. But when events cannot be explained by reference to natural antecedents or causes, or are surrounded by peculiar circumstances, the intervention of ghosts or sorcerers is suspected and a diviner is consulted. If somebody has tuberculosis (*igitundu*) and none of his forebears or the people with whom he lives has suffered from that disease, it is thought that sorcery is the cause. If somebody dies from an illness usually considered 'natural', but the death occurs a few days after a theft of which he is the supposed culprit, he is said to have been magically stricken at the request of the robbed person.

This attitude is in fact quite coherent. When the natural cause is known, the event is attributed to it; when it is not known, or appears extraordinary on account of the circumstances, the explanation is given in terms of beliefs concerning the non-material world. Why do Westerners not use a magical frame of reference on similar occasions? First, their wider knowledge of natural sequences of antecedents and consequents makes the residuum of naturally inexplicable facts more restricted. For instance, a sudden death appears to them quite understandable for purely medical reasons. To Banyarwanda, on the contrary, a sudden death is an event of which the physical causes are completely unknown. Second, even for residual facts not scientifically explained, there is in Western culture a faith that, given time and effort, a scientific explanation will be found. The Munyarwanda has no such belief in positive science. Third, for the disconcerting circumstances which may be coincidental with illness or death, the concept of chance, which does not appear frequently in Ruanda culture, is resorted to. However, Western believers in a provident God see in these exceptional circumstances, not an accidental constellation, but a sign of the meaning God intends to give to the illness or death.

A threat permanently dominating the mind of the Bahutu was that of being accused of sorcery. This danger was connected with the invisible world but was objective enough, for such an accusation could result in being killed and, of course, merely to refrain from anti-social magic did not ensure immunity from being called a *muvusi*.

The Nature and Situation of Man

Kazikamuntu (which may mean Root-of-Men) is the common ancestor of all mankind. Created by *Imana*, he had, among other children, Gatutsi, Gahutu, and Gatwa who, as their names indicate, are the ancestors of the three Ruanda social and 'racial' groups. Gatwa killed one of his brothers and for that reason was cursed by his father. Gahutu, who had been chosen by his father as heir and successor, had been commissioned by him to accomplish an important mission. As a result of overeating, Gahutu fell asleep and could not collect the information his father wanted. Gatutsi, on the

4: Maquet E-5 (1950-1951) 1954FO42 Rundi FO42

other hand, got it by his sobriety and cleverness. Kazikamuntu then chose Gatutsi to be the chief of the brothers. There are numerous versions of this tale. Moreover, the stories concerning man's creation are often inextricably mixed with the legends about the arrival of the Batutsi in Ruanda. The same names appear sometimes in the creation, sometimes in the conquest stories. In general the latter are better known. The summary given above is thus only one of the various accounts of the origin of mankind.

According to a widely known folk-tale, Death, personalized as a sort of animal, was hunted by *Imana*. He told all men to stay at home in order that Death should not find a hiding-place. An old woman, however, went out to work in her banana-grove. Death, pursued by *Imana*, asked her protection. Moved by pity, she let the animal hide under her skirt. *Imana*, in order to punish her, decided then that death should stay with men. This story might perhaps suggest a belief that there was a time when men did not die. But we could not find other elements to corroborate that interpretation.

On the ontological character of man two points are certain. First, an adult human being is considered to be different from an animal by virtue of his faculty of speech (*kivuga*), his intelligence (*ubwenge*), and his will (*ugushaka*); but the difference, if any, between a small child and an animal is not quite clear. Second, no one of these attributes is equated with the surviving spirit (*muzimu*). There is something in the human being which, after his death, becomes *muzimu*, but there is no agreement as to what it is. According to a fairly common opinion, the *muzimu* is the metamorphosis of the *igicucu*, the shadow cast by the body in sunshine. But according to some informants, this shadow is only an image of the spiritual shadow which is the essence of the post-mortem spirit. In conformity with that opinion, the living man is said to be made of three components: the body (*mubili*) which, after death, becomes a corpse (*murambo*); life (*buzima*), which disappears; and the shadow (*igucucu*) from which the surviving spirit (*muzimu*) results.

The heart is believed to be the seat of intelligence and affectivity. It is conceived as a single organ although some ways of speaking suggest that it is double. For instance, it is frequently said: 'One heart told me this, one heart told me that.' This is another application of the habit of attributing opposed effects of the same cause to several causes, but this is only a verbal habit which does not deceive anybody.

These uncertainties regarding the nature of man indicate that Banyarwanda do not make any clear-cut distinction between the concepts of body and mind. Although they recognize parts in man, they prefer to consider the unit rather than its components.

Whatever the culture, human experience is made up of a sequence of events and activities, such as working, eating, sleeping, maturing, suffering, mating, getting old, and dying. What is the Ruanda attitude in face of these universals of human life? In many societies these happenings are considered not in their naked reality but in terms of the beliefs held as true in the particular culture. For instance, in a society with a Christian ideology, to

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

suffer is not only to be hurt but also to expiate one's sins, to purify one's soul, and to identify oneself with Christ. For serious Christians, suffering cannot be stripped of its religious meaning without being completely distorted. Banyarwanda, on the contrary, seem to take a very 'secular' view of the human condition. Their belief in the supernatural world does not greatly influence their attitude to the unavoidable hardships and pleasures of life. All our informants agree that to die means above all to quit life. They believe that they will become *bazimu* but that leaves them rather indifferent. Even initiates do not show any enthusiasm for the idea of joining *Ryangombe* and his *imandwa* at their feasts. To abandon his children, his herds, his friends, is a sad thing for a Mututsi. But it is accepted, without dramatizing it, as one of those facts which belong to the normal order of things.

If quitting this life is so unfortunate, is human existence such a cheerful experience for Banyarwanda? Enjoyments and the pleasant things of life are very unevenly distributed in Ruanda. The superior caste, the Batutsi, form about 10 per cent. of the population. But, by various means, principally by the institutionalized exchange of cattle for services and dues, Batutsi have been able to gather a much higher proportion of consumers' goods. They do no manual work and have leisure to cultivate eloquence, poetry, refined manners, and the subtle art of being witty when talking and drinking hydromel with friends. Bahutu, perhaps 85 per cent. of the population, do not enjoy such gracious living. They have to produce for themselves and for Batutsi. On a very poor soil, with technologically primitive implements, it is necessary to work hard to secure the surplus production required by the Batutsi. Moreover, the great social influence of Batutsi has given opportunities for the arbitrary exercise of power, so that there are many insecurities in a Muhutu's life. But exploitation has been kept within limits set by the wisdom and the interests of the Batutsi, and a system of protection has assured a minimum of security to the Bahutu. As to the Batwa, they are so low in the social hierarchy, and are considered so irresponsible that they have had a greater independence of action. Formerly they lived on the margin of Ruanda society. They had a reputation for grossly enjoying any opportunities for eating, drinking, making music, and dancing. It should be added that Banyarwanda, according to our standards, have been rather defenceless against disease, that starvation was a real threat for the majority when the rains failed, that ritual observances and interdicts were numerous, and that when somebody happened to be involved in a charge of sorcery he had good reason for great fear. Thus it seems that, for an ordinary Munyarwanda, life is objectively hard, often dangerous but bearable. This partly explains the Ruanda outlook upon the totality of life. It might be described as a mild optimism. As many of our informants put it: 'Existence for Banyarwanda was not easy, it was even often very painful, but on the whole, life was rather a good thing.'

As everywhere, some individuals were at some time of their lives plunged into circumstances which offered apparently no way out. A Mututsi who

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

154 had incurred the king's displeasure and was for that reason left without protectors, friends, or cattle was in a desperate situation; only with difficulty could he gain a bare subsistence. A Muhutu against whom an accusation of sorcery was repeated; an unmarried girl of a noble family whose pregnancy became publicly known; all these, if they failed to escape from their predicament by skill and rational behaviour (such as obtaining the king's mercy, denying the charge of sorcery and looking for the protection of a powerful man, using abortifacients or denying the pregnancy), would have recourse to the *bapfumu*, seeking to know what spirit or sorcerer was responsible for their misfortune and how to appease the malevolent being. If all the practices and offerings recommended by the diviner had no effect, then they called upon *Imana*, and if their prayers were unanswered, only drastic solutions remained, such as exile in a foreign country or suicide. But these tragic destinies were not numerous and they did not shake the belief of the majority in the moderate happiness of living.

812 There is a further reason for their generally cheerful acceptance of the conditions of their existence. Banyarwanda are not inclined to speculate about the inaccessible. Westerners are given to imagining how beautiful and good life might be if humanity and the universe were different from what they are. This trend of thinking is quite alien to Banyarwanda and, when it is suggested, appears futile to them. The usual, the normal (in the sense of what we are accustomed to, and what we have reason to expect) is often self-explanatory. When a particular event fits into the normal scheme of things, there are no questions to be asked. If everybody has to [761] relinquish this existence and die, death is no scandal or absurdity. It is the way *Imana* has arranged things. There is no further problem.

Cultural Values

181 Human action is determined partly by cultural values, partly by the socially recognized means of attaining them. By cultural values we mean the final or intermediate aims that are considered the proper purposes of human activity in a particular society.

181 In a stratified society, such as that of Ruanda, each layer is likely to have its own set of values, although some of those originating in one group may extend 354 to others. Let us begin with the Batutsi. When a Mututsi informant is asked what the people of his group wish for above all, the answer comes immediately: 'children and cattle.' 564 A further question, 'why?', discloses that these are not ultimate values sought for themselves, but intermediate ones, means to reach more abstract ends. The latter are power (*amaboko*) and reputation (*ugukomera*).

Power is understood here in connexion with persons (power over somebody) rather than with things (power to do something). It is, to paraphrase Lasswell's definition, the ability that a person, engaged in a human relationship with another, has to oblige the latter to do or not to do something (on pain of suffering severe privation). Power is essentially the capacity to

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

exert a significant pressure on somebody. In Ruanda, to be powerful is to be able to exact from others tribute in labour or in kind, or support for one's claims to some advantage to be obtained from the king. In the latter case pressure may remain undefined and indirect: for instance, a threat to withold backing which may later be necessary to the person who is now asked to support a request. We desire to have cattle, say our informants, because by giving one or two beasts to a Muhutu, he becomes our client (*mugaragu*) and then has to do, to a large extent, what we ask of him. We also like to have cattle in order to get as vassal another Mututsi who lacks them. The services expected from a vassal are not manual, but he will increase the influence of his lord by his family connexions and will be useful through his diplomatic shrewdness in dealing with his lord's intrigues. Finally, we desire to become ourselves the vassals of great chiefs, or even of the king, because we are then under the protection of somebody very important, we get more cows and that allows us to have more clients.

In order to become powerful it is important, almost indispensable, to have many children. Girls, by their marriages, extend one's family connexions and bring their fathers a few cows as bridewealth. Boys at an early age begin their military training which gives them a complete education in the skills, knowledge, and virtues pertaining to their noble condition. This training is given them as *intore* (chosen ones) at the royal court or at the court of an important chief. For a father to have a son at court would reinforce his influence: through his son he knows what is going on, and the king or the chief is constantly reminded of the father by the son's presence —an important security for the father. The boy could also increase the influence of his family by becoming the client of a powerful Mututsi, and thereby getting protection and cows for himself and his parents' family (*mulyango*). Finally, the marriages of his sons could create new links between the father and the families of his daughters-in-law.

In complex societies like our own the roads to power are many. In Ruanda it does not appear that power could be readily attained except through the possession of children and cows. As we shall see, warlike valour could confer very high prestige, but not necessarily power. Great warriors were often granted herds of cattle by the king as rewards for their prowess, and could then gain power by their cattle, but not directly.

If we press our analysis farther, we may say that from the point of view of power, the significance of children is to provide cattle or connexions. On the other hand, cattle give direct power (over the Bahutu clients) or ensure connexions. In relation to Bahutu labourers, cattle have many of the social functions of money in our culture. They enable the man who owns them to exert pressure on those who have few or none of their own and who try to acquire them in exchange for services. In order to facilitate comparison with other ways of life, we may use the term wealth (as a medium of exchange) instead of cattle. As for connexions, what is meant here is that type of relationship in which one party may require something from the

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

181 other under the threat of some sanction. In Ruanda, of course, it would be
554 considered very improper to give orders or to utter a threat, but beneath the
556 polite phrasing, the true meaning of the relationship is clear. Consequently
564 we may say that in Ruanda, the only means to power are wealth and relationships in which sanctions are implied.

181 The other ultimate value of Banyarwanda, reputation, is also closely con-
554 nected with children and cattle. First, because powerful men are greatly respected and everybody knows the significance of daughters, sons, and
233 cattle as means to power. Second, because cattle have also a high prestige-
564 value in themselves. Indeed to entertain friends properly and to maintain the superior style of living of the nobles, one must have plenty of milk. Milk
[272] is the beverage of the high caste. They also drink hydromel and banana-beer, but milk is more characteristic of the Mututsi way of life. It was considered a complete food, and true Batutsi were said to live on milk alone. As each cow did not produce much milk, it was necessary to have an important herd to provide for the needs of a well-to-do Mututsi family. Moreover, cattle had an important aesthetic value in Ruanda. To be expert in cattle-breeding was required of the nobility. A whole category of poetry was
[538] devoted to the praises of famous cows, individually identified. Very beautiful cows (called *inyambo*) were regarded as belonging to the king even if they had been produced in somebody else's herd. In many festivities cattle were presented to the king or to great chiefs. All this indicates that cattle were objects of keen interest and aroused feelings of pride similar to those associated in some Western sub-cultures with the ownership of hunters or luxury cars. Cattle were the privileged possession of the superior caste, just as in Europe, in the Middle Ages, a noble had to have some landed property. Without losing status, he could not exchange his real estate for gold or goods even if they were worth much more. Such being the feelings and emotions attached to the possession of cattle in Ruanda, their high prestige-value is readily understandable.

181 The antiquity of a family is highly valued in Ruanda. Almost any Mututsi
554 is able to give the names of his ancestors for six or eight generations. A family has property which is handed on from one generation to another,
564 common ancestors to be honoured, a set of traditions and legends. It is a living reality in which one is proud to participate. Against that background one may appreciate how children, and particularly sons, give prestige to the parents. To have many children ensures that family traditions will be maintained, that the importance of the family will increase, that its property will be kept and even enlarged, that the ancestors will be honoured. This not only makes the parents happy, but is recognized by other people and their esteem for the father is enhanced.

181 Besides recognition of their power, admiration for their cattle, and the
554 respect paid to them on account of their having many children, the Batutsi seek more specific reputations. They like to be recognized as courageous.
564 They came to Ruanda by conquest and, till the European occupation, their

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

main social function as a caste was to make war, more often offensive than defensive. Consequently military courage (*ubutwari*) was highly praised. There are numerous and interminable poems made by official bards, telling stories of battle and commemorating military prowess. The young Batutsi, during their training, were taught to compose such poems and even to invent imaginary doughty deeds. Special signs, or badges of honour, were granted to those who had killed seven or fourteen enemies during an expedition; there was a special ceremony to honour warriors who had killed twenty-one persons in a campaign. Some informants were still able to give the names of warriors who had received these marks of honour.

It is worthwhile to note, however, that even in a society so focused on military values, great warriors could gain an extreme popularity but not, at least directly, social power. Martial valour as such was not even considered a special qualification for becoming commander of the army (*mutware w' ingabo*). During battles, indeed, the chief of the army had to stay motionless in his headquarters. He was magically identified with his army: he could not move backwards without endangering the advance of the army. This type of command did not require much courage. An army commander was, on the other hand, very high in the power scale. Members of the army had to give him cattle on certain occasions (when he was taking up his duties, when he was reviewing the herds of the army members); the king granted him cattle in some circumstances, for instance, after a battle had been won, or he entrusted to the army the care of some herds. By these means the army chief had control of many beasts: he could then increase his clientship, and thus his social power, by gifts of cattle.

A Mututsi also greatly desires to be regarded as having *ubugabo*. This means the quality of being a man (*mugabo*); it includes trustworthiness in keeping promises, generosity in treating one's friends well, liberality towards the poor, moral courage in accepting one's responsibilities. In a society where relations of inferiority and superiority are predominantly personal, in the sense that authority is rarely abstract (a law, a principle) but generally identified with a person (chief, king, lord, &c.), emphasis is laid on fidelity in any personal relationship.

Another quality that the Batutsi are extremely proud to have is *itonde*. This may be translated as 'self-mastery'. To lose one's temper, to manifest violent emotion by crying is really shameful. Anger, in particular, should not be violently expressed. The demeanour of a Mututsi should always be dignified, polite, amiable, if a little supercilious. Batutsi manners have often been called hypocritical. This would be true if such behaviour were displayed in an extrovert culture where it is considered unethical not to express to a person exactly what one thinks about him. But in Ruanda it is taken for granted that only vulgar persons reveal all their attitudes and emotions. This is understandable in a strongly hierarchical society, where the authority of a superior is not restricted to certain specific domains of the life of his inferior, and where to express any disagreement with the superior

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

is thought inappropriate. This is the point of view alike of the inferior (and everyone in Ruanda, except the king, has a superior) and of the superior (and any Mututsi is the superior of a certain number of people). Bahutu are not, and are not expected to be, very self-controlled; they are correspondingly impressed by the external dignity of the Batutsi. An aristocratic caste usually emphasizes those differences which constantly remind others how far removed they are from the noble set.[1]

When inquiries were made as to the kind of reputation the Batutsi specially wanted to avoid, the answers given did not generally indicate qualities opposed to those thought desirable, but referred to reputations in which an external danger is involved. Above all, a Mututsi fears to be considered an enemy of the king. This is partly because he feels a genuine respect for the king, but mainly because to be reputed the king's enemy was formerly extremely dangerous. It could mean dispossesaion of all property, severance of all social relations, exile, or death. A Mututsi also fears to be considered a traitor to his chief. This is less dangerous but it involves sanctions: if a Mututsi has been disloyal to his lord (*shebuja*), the latter may take back from him all he gave him previously and eventually all his cattle.

All this relates to the good or bad reputations people desire or fear while living, but the Batutsi are equally concerned with their posthumous fame. To be remembered as a great warrior or a powerful cattle-owner was the normal ambition of any Mututsi. Some deaths were particularly glorious: for example, to be killed in battle or to lose one's life rather than surrender one's cattle, because this is to be deprived of the only means of living in a manner appropriate to one's rank.

The longing for fame after death seems to be deeper and commoner than in our culture. It is not unlike the Ciceronian concept of *gloria*. It is a desire to go on living in men's memory quite apart from a belief in a supernatural immortality and, like *gloria*, has nothing to do with mythological conceptions of the beyond. Banyarwanda do not think that the spirits of the dead will take pleasure from the great reputations they have on earth, or so at least our informants told us. 'If *bazimu* know perhaps the fame that the people from whom they come enjoy among the living, it is definitely not for that reason that we hope to be famous after our death.' It is possible, however, that it may be connected with the belief that the living will make more offerings to the *muzimu* of somebody who is widely remembered, though we did not find evidence of any belief that the spirits would suffer a kind of second death, and disappear completely if and when they were forgotten by the living.

To sum up, the ultimate values for the aristocracy are power and reputation. Children[2] and cattle are their main intermediate values in the sense

[1] There are, of course, other virtues that a Mututsi likes to be thought to possess, but the three we have mentioned seem the most important according to our informants.

[2] The preceding account might give the impression that for the Batutsi, children are only means to power and fame. This view would overlook the fact that people also enjoy

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

that they are the almost indispensable means for achieving these ends. 181
The originality of Ruanda culture does not lie in its high valuation of power 554
and fame. These are recognized ends in many cultures. What is distinctive 564
is the paucity and the indispensability of the means provided in that society for effecting these purposes.

An ordinary Muhutu could never hope to achieve a position of power over other men comparable to that which a Mututsi could attain without difficulty. A well-to-do Muhutu could acquire a few servants either by ensuring the subsistence of other Bahutu poorer than himself or, like a Mututsi, by the gift of cattle. But this was not common. Ambition for power is proper to people who do not have to worry about fundamental human needs such as food, shelter, &c. The ultimate value for Bahutu is security, for this means protection from the things our informants say they fear above all: accusations of witchcraft, starvation, and the arbitrary actions of the powerful. There are no direct methods of protecting oneself against the first of these threats. All that can be done preventively is to be a good neighbour, not to be envied by anybody, not to have enemies. . . . But there are ways of reducing the other two dangers and these are the intermediate values which the Bahutu earnestly seek: work, children, and patronage.

Bahutu till the soil from which they have to get subsistence, the tribute 181
demanded by the chief, and perhaps a surplus. This surplus is extremely 564
important because it will enable them to acquire some goats, sheep, even a 461
cow, to have the time to work for their lord, to store enough food to get a few servants who will then increase production. Surpluses may be obtained only by work. That is why, among Bahutu, the man or the woman who works hard and competently is highly considered. Work enables Bahutu to achieve some security against starvation and even to attain moderate wealth.

There is a Ruanda proverb that the dog is not feared because of his 181
fangs but because of his master. This is the main reason why a Muhutu 564
wants to have a patron. A peasant rich enough to own a couple of cows needs the protection of somebody more powerful than himself in order to avoid the arbitrary exactions of some member of the dominant class. Patronage was institutionalized by the *bukake* agreement mentioned above. Like the lord in medieval Europe, the patron was bound to protect his client in most of the dangerous situations of life. A second reason for seeking a patron lay in the material and moral advantages accruing from the possession of cattle.

If we wish to state Bahutu values in more abstract terms, we may say that they seek security through the production of agricultural goods and the protection of a powerful patron.

Although he is not indifferent to his reputation, the Muhutu does not 181
seem to stress its importance as much as does the Mututsi. The reputation 564
he desires reflects the values of his caste. He likes to be considered a 554

their children just because they are their children. This, of course, exists in Ruanda as in many other cultures. [854]

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

181 *mugabo* (a rich man) and a *mukungu*—a very rich man possessing a few
584 cows, many fields, goats, and bee-hives. He enjoys the recognition of his
554 fidelity to his master and his qualities as a labourer.

The Batwa never had the stability of peasants. They were hunters, potters, dancers, buffoons, and were regarded by their neighbours as being on the margin of society. They did not possess anything that others could envy. Consequently security from exactions was not such an important value for them. As people who lived a hazardous and unsettled existence, they greatly appreciated momentary and immediate satisfactions, and among these, food, especially during periods of scarcity, was the object of their activity. Their principal means of securing food varied according to their particular occupations. Hunters depended on their ability and their courage, of which they were very proud. Dancers, musicians, and buffoons relied on their talents and on the favour of their masters, their loyalty to whom was widely recognized. Indeed it is said that one could rely upon a Mutwa much more than on anybody else.

The social and economic situation of the Batwa explains and to some extent determines the value they attach to gratifying the basic need for food. Ability in their specialized occupations and a blind faithfulness to their masters were the best means to achieve that satisfaction, but skills and loyalty were also valued for themselves.

Rules of Human Action

517 These values, ultimate and intermediate, were eagerly sought by Banyar-
183 wanda but, as in any society, some means for realizing them were prohibited under certain circumstances. Stealing is rarely, if ever, culturally accepted as an ordinary practice for getting rich. Socially defined values are to be reached by socially approved means. We do not suggest that, in a particular society, the rules of action appear as merely social imperatives, or that the only basis for these rules is social. We would point out that some rules of action, whatever their origin and their philosophical foundation, are part of the collective heritage in any society. In Ruanda, as elsewhere, there are such rules of action. Murdering somebody who is not an enemy of one's family is prohibited. Women are forbidden to commit adultery and, among Batutsi and Bahutu, unmarried girls may not have sexual intercourse. When an order is issued by somebody in authority it has to be obeyed.

517 Does submission to the rules appear only as the rational behaviour of one
who wishes to avoid an external punishment or is it moral conduct? Does
626 a prospective offender refrain from wrong-doing simply in order to avoid very probable and unpleasant consequences, or is it his conscience which tells him that he should not follow his desire?

Of course this is not an either-or problem, but the question of degree or relative stress is important. Even in cultures which lay most stress on the moral motivation to action, external social sanctions are useful deterrents from prohibited behaviour. In Ruanda these external sanctions exist. Those

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

who steal cattle, or set fire to huts, or commit adultery are punished by the 577
political or family authorities. Social sanctions are not only physically en- 626
forced penalties, such as corporal punishment and compensations, but also the unorganized reactions of the people who know the delinquent: kin, neighbours, clients, and lord. For the Batutsi, for whom reputation stands high in the scale of values, this is extremely important. According to our informants, the fear of being considered a man without loyalty or without dignity, the dread of being despised by one's family, prevent many breaches of rules. To use Kluckhohn's terminology, we may say that Ruanda's is a shame-culture. But it is also a guilt-culture. When a Munyarwanda has transgressed some rule so secretly that there is not the slightest chance of his being found out and incurring punishment and shame, he nevertheless feels guilty and knows, our informants told us, that his action is bad. When a child has disobeyed his father without the latter's knowledge, he thinks not only of the unpleasant consequences that the discovery of his misbehaviour might produce but also (and some informants say 'mainly') of the wickedness of the act itself. The Ruanda word for conscience, *kamera*, means something that is internally felt. It is situated in the heart.

That the Banyarwanda have a 'conscience' will not be rated as a great discovery by some. But since some recent studies, such as Kluckhohn's on the Navaho, have stressed the fact that, in some cultures, submission to rules seems to be realized almost entirely through a rational concern to avoid punishment or shame, it does not seem superfluous to consider how far observance of rules is, or is not, linked to ethical principles and feelings of guilt.

Let us now attempt to indicate more precisely how moral wrong is con- 577
ceived in the Ruanda culture. As has been already mentioned, *Imana* is not 776
the guardian of the moral order. Sometimes he seems to be regarded as its 673
author in the sense that he might have decided that men should not steal; but it is clear that when a man steals another man's cows, *Imana* is not personally offended. Those who are offended are those who have been wronged by the action, or those who had issued an order which has been disobeyed. When *Imana* has not been directly injured (as by blasphemies), or when the injury done to another has not been specifically forbidden by him, he is not thought to be offended. The victim could, however, ask *Imana* to punish the wrongdoer and if he then became ill, it would be said that *Imana* had punished him.

The other agencies of the supernatural world have even slighter relations 577
with ethical values. The *bazimu* are naturally malevolent and punish only 776
those actions which they take to be directed against themselves. A way to 775
honour the spirit of somebody who had been a thief during his life was to simulate a robbery. *Ryangombe* and his fellows were not models of morality during their earthly existence and they did not care about the ethics of their followers. Nor was there any punishment after death. For those who believe that there are two kinds of life after death—happy or unhappy—the

4: Maquet E-5 (1950-1951) 1954FO42 Rundi FO42

577 qualification for the happy one is not to live a blameless life on earth, but to
776 undergo initiation into the *Ryangombe* cult.
775

Thus the ethics of the Banyarwanda are not integrated on a religious
577 basis such as the will of God. What is the principle of integration, or rather, we should first ask, are their ethical conceptions integrated? On the surface they consist, like any moral code, of a multiplicity of prohibitions, orders, and exhortations. Have they achieved a synthesis of these separate elements by reducing the multiplicity to one or a few principles? Or, what amounts to the same thing, could they give a definition of good and evil?

577 In Ruanda a great number of particular rules are subsumed under general
183 principles such as: do not do what is harmful to people of your group or of your country; do what people related to you would like; submit to your superiors. Principles such as these are already on a higher level of abstraction than the particular rules. When informants are asked to account for a given rule or principle they give as the final justification: 'It has always been done that way in Ruanda.' We may perhaps express the Ruanda definition of good and evil in these terms: That is good (or evil) which tradition has defined as good (or evil).

Tradition is indeed a powerful force in cultures which, as in Ruanda, have been isolated for centuries from world currents. Each generation is more conscious of the importance of what it has received from the preceding one than is possible when much of what constitutes its way of life comes not from its ancestors but from some other social tradition. Moreover, their relations with their neighbours whom they frequently subjugated have persuaded Banyarwanda of the excellence of the ways of life transmitted by their forefathers. In such a situation the traditional character of a rule appears to be sufficient justification. If the ancestors, who were so wise, behaved in that way it would be preposterous to question it.

But it would be misleading to picture the Banyarwanda as following blindly the moral rules framed in a remote past without having any idea of their purpose. Some old men have a clear understanding of the social significance of certain rules. They explained, for example, that the duality of the
[562 rules concerning adultery committed by the husband or by the wife was
837] accounted for by the importance of the wife's function in procreation. She has thus a greater responsibility than the husband for maintaining the integrity of the family.

577 Does this kind of thinking extend so far as independence of tradition?
Some informants told us that, apart from the authority of custom, some
183 actions were thought of as dishonourable in themselves. But these in-
177 formants were Christians and, apparently, very much influenced by their religion. Moreover, they could not quote a clear case of conflict between tradition and ethics.

577 No moral code can achieve an absolute character in all its precepts.
Prohibitions and commands frequently relate only to certain categories of
183 persons and situations. Even the Christian Western ethic, which realizes to
673

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

a very considerable extent universality and absoluteness, qualifies some of 577
its commands. The degree of absoluteness and universality of the Ruanda 183
rules of conduct is much lower. We might say that most of its precepts are 673
